FCMG0102 ACCOUNTING AND FINANCE

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- To familiarize the students with basic terms of accounting, accounting principles, concepts and convention.
- To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis: Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity
Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. Accounting for Management—Ashok Sehgal, Taxxman
2. Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI
3. Khan & Jain – Management Accounting, TMH.
4. Horngren ,Datar, Foster- Cost Accounting, Pearson.
5. Financial Accounting, Jain/Narang/Agrawal, Kalyani.
6. Basic Financial Accounting for Management, Shah, Oxford.
7. Financial Management by I. M. Pandey
8. Financial Management – Theory and Practice by Chandra
9. Financial Management – Text and Problems by Khan & Jain

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content**Unit: I**

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- They can use specialized knowledge in Operations Management to solve business processes.
- They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - “Operations Management”, TMH
- 2) Krajewski, Ritzman, Kansal, - “Operations Management”, Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - “Production and Operations Management”, PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - “Operations Management”, Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - “Production and Operations Management”, HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- The students will understand the various marketing approach in today’s competitive scenario.
- The students will learn the application of various marketing tools for solving business problems
- The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL), Porter’s five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP); What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning, Effective positioning strategies, Positioning of brands and repositioning, introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of

promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication
2. Marketing Mangement: Fourth edition- RajanSaxena
3. Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA

FCMG0108 INTRODUCTION TO RESEARCH

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

- To introduce the students about research, methods and techniques.
- To understand the process and apply in other areas.

Course outcome:

- Students will be able to understand the process of doing a research.
- Students will be able to write a research report.

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, Sampling: Census and sample survey, different types of sample design, Measurement: Measurement and scaling techniques, Methods of Data Collections: Experimentation, observation,

interview, Survey, case study; Data Analysis and Interpretation: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

1. Ranjit Kumar, 2011, Research Methodology: A Step by Step Guide, Sage South Asia Publication.

FCMG0113 INDIAN SOCIETY AND CULTURE

Pre – requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswatiand Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. Indian Society and Culture: Continuity and Change – by N. Hasnain
2. Social and Cultural History of India – O.M. Prakash
3. Makers of Modern India – RamachandraGuha

Introduction to Human Rights

Course	Code	Type of course	Credit
Introduction to Human Rights	FCMG1203	Workshop	2

Objective

- The course is an introduction to human rights. Human beings are rational beings. They by virtue of their being human possess certain basic and inalienable rights which are commonly known as human rights. Human Rights are defined as all those rights which are essential for the protection and maintenance of dignity of individuals and create conditions in which every human being can develop his or her personality to the fullest extent. The purpose of this course is for students to gain a holistic view of human rights and their implications.

Course outcome

- Develop an understanding of human rights, its history, characteristics and types,
- Gain a nuanced understanding of protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law
- Conflicts of Rights: Challenges of the past and Challenges for the future

Course outline

Module I	Introduction to Human Rights
Topic	Meaning and Definition, History, Principles, Characteristics, Types
Pedagogy	Example: lecture (ppt), videos, etc
Lab/Activity	
Assignment/practice	
No. of hours	6
Reference materials: Book/e-content/online source	

Module 2	Human Rights Law
Topic	Protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law
Pedagogy	Example: lecture, videos, Case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	8
Reference materials: Book/e-content/online source	

Module 3	Conflicts of Rights: Challenges of the past and challenges for the future
Topic	Persistence of discrimination, poverty, and inequality in the region, efforts in the search for justice for past violations, continued struggle for human rights and accountability

Pedagogy	Example: lecture, videos, case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	16
Reference materials: Book/e-content/online source

FCMG1201 DISASTER MANAGEMENT

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective		
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> • To provide students an exposure to disasters, their significance, types & Comprehensive understanding on the concurrence of Disasters and its management. • To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention, risk reduction and the basic understanding of the research methodology for risk reduction measures. • Equipped with knowledge, concepts, and principles, skills pertaining to Planning, Organizing, Decision-making and Problem solving methods for Disaster Management. • The course also facilitates students to globally share their views, ideas and information pertaining to Disaster Management on a common platform. • To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity. 		

GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT

A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments, presentations and written test.

COURSE CONTENT			
Module - 1			
UNIT I – Introduction to Disaster Management (2hrs)			
Session	Topic	Coverage	Reading/Reference
4hrs	Disaster & Emergencies : Concept & Fundamentals of Disaster Management	<ul style="list-style-type: none"> • Introduction/ Brain storming/ Group formation • History of Disasters • Concepts and Definitions • Hazard, Risk, Vulnerability, Capacity, Disaster & Equations of Disaster Management 	
		<ul style="list-style-type: none"> • Types & Classification of Disasters • Factors responsible for disasters like flood, 	

		cyclone and Earthquake.	
UNIT II – Effect and Impact of Disaster (4 Hrs)			
1hr	Effect and Impacts of Disasters (Group work)	<ul style="list-style-type: none"> Disasters Impact – Social, Economic, Political, Environmental, Health, Psychosocial, etc. Differential impacts- in terms of Caste, Class, Gender, Age, Location, Disability. 	Disaster Mgmt. and India: Responding Internally and Simultaneously in Neighboring Countries Kailash Gupta, BE (Elec.), MBA(IIMA)
1 hr	Disaster vs Development	<ul style="list-style-type: none"> Disaster is the causes of destruction Disaster leads to development 	
2 hrs	Global warming and climate change	<ul style="list-style-type: none"> Concept and understanding of global warming and climate change Causes and factors Remedial measures 	
Module – II		•	
UNIT III – Disaster Risk Management - (6 hours)			
2 hrs	Community Managed Disaster Risk Reduction And Village Contingency Plan (Group work) Role of Task force/ ODRAF/ NDRF for DRR at community level.	<ul style="list-style-type: none"> Hazard analysis and assessment Vulnerability analysis Resource capability assessment Mapping & Seasonality Calendar Structural and Non Structural assessment. Task forces with various roles for DRR. 	CBDRM for Local Authorities: PARTICIPANT’S WORKBOOK – adpc www.adpc.net
2 hours	Rapid Need Assessment Pre and Post Disaster (Group work and Practical demo)	<ul style="list-style-type: none"> Meaning and Importance Rapid Need Assessment in emergency and its significance Process and Methods 	
2 hrs	Stress Management	<ul style="list-style-type: none"> Causes and consequences of Stress What are the best ways to handle pressure Psychosocial Support 	

UNIT IV – Disaster Management (8 hrs)			
2 hrs	Disaster Management Cycle	<ul style="list-style-type: none"> • Disaster Management Cycle • Phases of Disasters • Prevention, Mitigation Preparedness, Warning, Response, Rehabilitation, Reconstruction 	
2 hrs	Fire safety (Practical)	<ul style="list-style-type: none"> • Practical 	
2 hours	First Aid & Driving Learning (Theory and Practical)	<ul style="list-style-type: none"> • ABCD of First Aid • Dressing and Bandages Practical session • Emerging need and importance of learning driving 	
2hrs	Building Rescue operation or Demonstration of ODRAF/NDRAF rescue materials	<ul style="list-style-type: none"> • Practical 	
Module – III		<ul style="list-style-type: none"> • 	
UNIT V – Humanitarian Charter and Minimum Standards in Humanitarian Response (4 hrs)			
2hrs	Sphere Standards (Group Work)	<ul style="list-style-type: none"> • The Humanitarian Charter • Protection Principles • Core Standards 	
2hrs	Restoring Life Line Services (WASH) (Group work)	<ul style="list-style-type: none"> • Water , Sanitation & Hygiene Promotion • Food Security & Nutrition • Health Services • Health Services • Shelter and Settlement 	The Sphere Project , Humanitarian Charter and Minimum Standards In Humanitarian Response
UNIT VI – Disaster Management Projects –(6 hours)			
6hrs	Seminars / Workshop	<ul style="list-style-type: none"> • Adapting Climate Change • Disaster Resilience Structures and Buildings • IT in Disaster Management • Inter-relationship between Disasters and Development • Urban Disaster 	

		<ul style="list-style-type: none"> • Rain Water Harvesting • Inclusions – Disability, Aged, Social etc 	
		<ul style="list-style-type: none"> • 	
		<ul style="list-style-type: none"> • 	

- Team of 10 – 15 members would be formed
- Each Team would take up a project work in one of the topics above or related topics with prior approval : 2 Weeks
- Each Team would organize one Seminar / Workshop during the session

FCMG1202MS Excel

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective		
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> • Indicate the names and functions of the Excel interface components. • Enter and edit data. • Format data and cells. • Construct formulas, including the use of built-in functions, and relative and absolute references. • Create and modify charts. • Preview and print worksheets. • Use the Excel online Help feature. 		
<p>Course Outcome</p> <ul style="list-style-type: none"> • Navigate your way around Microsoft Excel • Work with data analysis and presentation • Create and work with formulas and functions, understand and use formula cell • Use Excel for Business application 		
GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT		
<p>A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments and presentations.</p>		

Course Contents:

Unit 1: Excel Introduction, direct right, The Excel Interface, direct right, Basic Navigation and Editing,

Unit 2: Getting Going, Orientation & efficiency, Editing, Viewing, Spreadsheet Structure, Cell References, Named Ranges, Basic Macros, Design

Unit 3: Administration, Customising Excel, Housekeeping, Connecting Workbooks Documentation, Protecting and Sharing, Google Docs, Excel Troubleshooting, Data Handling, Sorting and Filtering, Controlling User Input, - Working with Dates & Times

Unit 4: U- Working with Text, Lookup and Reference, Logical Functions, Data Analysis, Working with Numbers, Summarising Data, PivotTables 1 - Simple Summaries, PivotTables 2 - Manipulating Data,

Unit 5: PowerPivot: Handling Big Data, Formula Auditing, Advanced Macros and VBA, Modelling, Presentation, Cell Formatting, Number Formatting, Conditional Formatting, Graphs and Charts, Page and print setup

Introduction to Gender

Subject Name	Code	Type of course	Credit
Introduction to Gender	FCMG1205	Workshop	2

Objective

- In the traditional social order women have been assigned a subordinate status in society for centuries. They have been deprived of many social privileges and suffered from discriminations that prevented them from contributing to the development process. They have remained marginalized in society. To remedy the prevailing situation, gender concerns have become increasingly important in the development agenda in the last few decades. In spite of special policies and programmes being implemented, gender based injustice continues to exist and hinder development

Course outcome

- Develop an understanding of perspectives on gender and development
- Discuss in detail the gender question in selected development sectors and globalisation
- Familiarise with the different tools and techniques for gender planning, analysis and evaluation in the development sector

The course has three modules covering these three aspects of gender and development.

Course outline

Module I

UNDERSTANDING AND CONCEPTUALISING GENDER RELATIONS

Module II

GENDER ISSUES IN DEVELOPMENT SECTORS

Module III

GENDER ANALYSIS, TOOLS, TECHNIQUES AND FRAMEWORKS

Gender issues in globalisation	1	Lecture		Lecture Notes and Articles
Module 3				

Harvard Analytical Framework	1	Lecture		Handouts and Book chapter
Gender Assessment Study and Gender Analysis Matrix	1	Lecture		Handouts and Book Chapters
Gender Empowerment Framework	1	Quiz 2 and Lecture		Handouts and Book Chapters
Gender and Organisations	1	Lecture		Handouts and Book Chapters
Student Presentations based on group projects	Extra classes			
Total (hrs)	15 hours +3 hours

Syllabus

Engineering Mechanics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Engineering Mechanics	ENFC0101	Theory	3-0-0	Nil

Objective

- To provide the students with a clear and thorough understanding on theory and application of principles of mechanics as applied in engineering problems.

Course Outcome

- Students will acquire knowledge and skill to analyze the effect of force and motion on rigid bodies to solve engineering problems through application of basic laws of mechanics.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (9 Hrs)

Coplanar Forces : Principles of Statics, Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Free Body Diagram, Equilibrium of Concurrent Coplanar Forces, Lami's Theorem (Case Studies : - Analysis of a Boom, Analysis of a Tripod Stand, Equilibrium Analysis of a Wall Bracket)

To Understand the Equilibrium of a Particle under the Action of Forces in a Plane using Gravesand's Apparatus or Coplanar Force Setup. (The theory can be taught in practice mode)

Module: II (6 Hrs)

Moment and Couple, Varignon's Principle of Moment, General Conditions of Equilibrium, Types of Supports and Support Reactions,

Friction :Equilibrium of Bodies on Rough Inclined Planes, Ladder Friction, Applications of Friction (Friction in Square Threaded Screw, Disc and Bearing Friction, Belt Friction)

To Determine the Coefficient of Static Friction between two given Material with the Help of an Inclined Plane. (The theory can be taught in practice mode)

Module : III (10 Hrs)

Center of Gravity : General Case of Parallel Forces in a Plane, Centre of Parallel Forces in a Plane, Centroid and Centre of Gravity, Axis of Symmetry, Centroid of Composite Plane Figures and Curves.

Moment of Inertia : Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Plane Composite Figures and Material Bodies.Determination of Moment of Inertia of a Flywheel. (The theory can be taught in practice mode)

Module : IV (6 Hrs)

Linear Motion : Motion under Gravity and Variable Acceleration, Principles of Dynamics such as Newton's Second Law, D'Alembert's Principle, Work-Energy Relation, Impulse-Momentum Relation, Law of Conservation of Momentum and Energy, Impact and its Types, Impact of a Body on a Fixed Plane.

Module : V (5 Hrs)

Concept of Stress and Strain :Types of Stresses and Strains, Hooke's Law, Stress-Strain Diagrams for Ductile and Brittle Materials, Analysis of Axially Loaded Bars. Stress Strain Curve of a Ductile Material (Mild Steel) using UTM.

Module: VI (5Hrs)

Bars of Varying Cross-section, Composite Bars, and Poisson are Ratio, Complimentary Shear Stress, Volumetric Strain, Elastic Constants and their Relationship. Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Module : VII (4 Hrs)

Principal Stresses and Strains : Transformation of Stress and Strain, Principal Stresses, Principal Strains, Mohr's Circle for Stress and Strain.

Text Books :

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons Strength of Materials by S.S. Rattan, Tata Mc-Graw Hill Publication. Reference Books : Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill. Online Source : NPTEL, You tube

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Principles of statics, law of transmissibility of a force, composition and resolution of forces	3	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Resultant and equilibrant, free body diagram	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Equilibrium of concurrent coplanar forces,	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Lami's theorem, (case studies : - analysis of a boom, analysis of a tripod stand, equilibrium analysis of a wall bracket)	1+2	Lecture + practice	Assignment	Engineering Mechanics by D.S. Kumar
Module II				
Moment and couple, Varignon's principle of moment, general conditions of equilibrium	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Types of supports and support reactions.	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Equilibrium of bodies on rough inclined planes, ladder friction	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Wedge friction, applications of friction (friction in square threaded screw, disc and bearing friction, belt	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar

friction				
Module III				
Center of Gravity : General case of parallel forces in a plane, centre of parallel forces in a plane, centroid and centre of gravity, axis of symmetry, centroid of composite plane figures and curves.	5	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Moment of Inertia : Rectangular and polar moment of inertia, radius of gyration, parallel axis theorem and perpendicular axis theorem, moment of inertia of plane composite figures and material bodies. Determination of moment of inertia of a flywheel.	5	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Module IV				
Linear Motion : Motion under gravity and variable acceleration, principles of dynamics such as Newton's second law, D'Alembert's principle, work-energy relation, impulse-momentum relation, law of conservation of momentum and energy, impact and its types, impact of a body on a fixed plane.	6	Lecture	Assignment	Engineering Mechanics by D.S. Kumar http : //vlab.amrita.edu/?sub=1 &brch=74&sim=189&cnt =4)
Module V				
Concept of stress and strain : Types of stresses and strains, Hooke's law,	3	Lecture	Assignment	Strength of materials by S.S. Rattan

stress–strain diagrams for ductile and brittle materials, analysis of axially loaded bars.				
Stress-strain curve of a ductile material (mild steel) using UTM	2	Practice		Strength of materials by S.S. Rattan
Module VI				
Mechanical properties of materials Rockwell and Brinell hardness tests	2	Practice		Strength of materials by S.S. Rattan
Bars of varying cross-section, composite bars, Poisson's ratio, complimentary shear stress, volumetric strain, Elastic constants and their relationship.	2	Lecture	Assignment	Strength of materials by S.S. Rattan
Longitudinal and hoop stress in thin-walled pressure vessels subjected to internal pressure.	1	Lecture	Assignment	Strength of materials by S.S. Rattan
Module VII				
Principal stresses and strains : Transformation of stress and strain, principal stresses, principal strains, Mohr's circle for stress and strain.	2+2	Lecture + Practice	Assignment	Strength of materials by S.S. Rattan
Total				45

Material Sciences

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Material Sciences	ENFC0102	Theory	3-0-0	Nil

Objective

- To study classification and properties of materials used in day to day life
- To understand the material application and it's needed.

Course Outcome

- Students will able to identify materials for engineering use.
- Students will able to select best materials for a specific design and production.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (8 Hrs)

Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminum & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys , Magnesium Alloys, Titanium Alloys, Super Alloys.

Module: II (7 Hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geosynthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, C64, Bucky Ball Structures, Graphene.

Module: III (5 Hrs)

Prefabricated Materials: Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module: IV (8 Hrs)

Electrical & Magnetic Materials: Classifications, Properties, Advantages & Applications, Photo Voltaic Material, Dielectric Materials.

Module: V (6 Hrs)

Solar Cell and Super Conductivity, Ferro Electricity, Electro-active Polymers, Piezoelectric Material, Magneto Electric Materials, Electrorheological Fluids.

Module: VI (6 Hrs)

Fiber Optic Sensors, Photoconductivity; Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses.

Module: VII (8Hrs)

Smart Material, Shape Memory Alloys, Piezoelectric Ceramics, Biomaterials, Bioactive Glass & Ceramic, Polymer & Composite, UHTC, Soft Materials, Energy Materials.

Text Books:

1. Materials Science and Engineering, W D Callister, 2014, 2nd Edition, Wiley India Private Limited, India.

Reference Books:

1. Material Science and Engineering, V Raghavan, 2013, 5th Edition, PHI publication, India.
2. Material Science and Engineering, S Chawla, 2011, 1st Edition, Dhanpat Rai & co Private Ltd., India.

Session Plan

Thermodynamics

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Thermodynamics	ENFC0103	Theory	3-0-0	Nil

Objective

- To know the Laws of Thermodynamics and Conditions for Energy Transformation.
- To get Familiar with Different Thermodynamic Properties of Pure Substances.

Course Outcome

- Students will be able to prepare Energy Balance Sheet.
- Students will be able to determine Efficiency of Various Thermal Devices.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I (6 Hours)

Introduction : Difference between Statistical Thermodynamics and Classical Thermodynamics, Concept of Continuum, Traceability of Thermodynamic Change, Concept of Reversibility, Concept of Equilibrium, Design of Thermometers with Three Different Liquids Having Different Coefficient of Thermal Expansion, To Explain Zeroth Law of Thermodynamics. Ideal Gas Temperature Scale and Calibration of Thermometers.

Module: II (9 Hours)

Work Transfer Calculations: Various Modes of Displacement Work. Calculation of Work for Various Processes & Cycles.

Application of First Law of Thermodynamics : Closed Systems & Open Systems. Concept of Internal Energy, Enthalpy & Its Calculation Using Specific Heats.

Module: III (3 Hours)

Energy Balance analysis: Sheet for Opens Systems and Closed Systems : Nozzle, Diffuser, Compressor, Turbine, Heat Exchanger, Throttling Devices, Boilers and Condensers.

Module: IV (10 Hours)

Second Law of Thermodynamics: Working of Refrigerator and Heat Pump. Kelvin Planck and Clausius Statement of Second Law, Corollaries, Clausius Inequality.

Entropy : Definition, Principle of Increase of Entropy. Change of Entropy of Perfect Gas in Various Processes.

Module: V (5 Hours)

Properties of Pure Substance :P-V, P-T, T-S, H-S Diagram for Steam, Triple Point of Water. Different Types of Steam.

Introduction to Steam Tables : Specific Volume, Pressure, Temperature, Enthalpy and Entropy.

Module: VI (6 Hours)

IC Engines :Working Of IC Engines. Classification of IC Engines : 2 Strokes & 4 Strokes Engine, Petrol & Diesel Engines. Engine Nomenclature.

Module: VII (6 Hours)

Gas Power Cycles : Carnot Cycle, Air Standard Cycles-Otto, Diesel, Dual Combustion.

Introduction to Gas Turbine Cycles : Open & Closed Cycle.

Text Books:

1. A Text Book of Engineering Thermodynamics: R K Rajput,4th Edition. Laxmi Publications
2. Thermodynamics an Engineering Approach, Y.A Cengel, M. A Boles, Tata Mcgraw Hill Companies

Reference Books:

1. Fundamentals of Thermodynamics, C. Borgnakke, R. E. Sonntag, Wiley Publication.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I (6 Hrs)				

Difference between statistical thermodynamics and classical thermodynamics.	1	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Concept of continuum. Traceability of thermodynamic change : Concept of reversibility. Concept of equilibrium.	2	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies
Design of thermometers with 3 different liquids having different coefficient of thermal expansion to explain zeroth law of thermodynamics.	2	CRT & Video presentation	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies <u>https : //www.youtube.com/watch?v=1nECy2s_qEo</u>
Ideal gas temperature scale and calibration of thermometers.	1	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module II (9 Hrs)				
Work Transfer Calculations : Various modes of displacement work.	5	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications.

Calculation of work for various processes & cycles.				Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Application of first law of thermodynamics to closed systems & open systems. Concept of internal energy, enthalpy & its calculation using specific heats	4	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module III (3 Hrs)				
Energy balance sheet for opens systems and closed systems : Nozzle, Diffuser, compressor, turbine, heat exchanger, throttling devices, boilers and condensers.	3	CRT & Video presentation	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch? v=Nv2G8Dpruxc</u> <u>https : //www.youtube.com/watch? v=-CRjNmIOdZo</u>
Module IV (10 Hrs)				
Working of refrigerator and heat pump.	3	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Kelvin Planck and Clausius statement	2	CRT	Assignment-	A text book of Engineering Thermodynamics : R K

of second law, corollaries.			II	Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Clausius inequality.	1	CRT & Video Presentation	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch?v=wd0Rghxmf3M</u> <u>https : //www.youtube.com/watch?v=MbyfTw5YFZs</u>
Entropy : Definition, principle of increase of entropy.	2	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Change of entropy of perfect gas in various processes	2	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module V (5 Hrs)				
Properties of pure substance : p-v, p-T, T-S, h-S	3	CRT & Video presentation	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi

<p>diagram for steam, Triple point of water. Different types of steam.</p>				<p>publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch?v=pP2HuLPkrkY</u> <u>https : //www.youtube.com/watch?v=pJM9Fh9Fp-I</u></p>
<p>Introduction to steam table with respect to specific volume, pressure, temperature, enthalpy and entropy</p>	2	CRT	Assignment-II	<p>A text book of Engineering Thermodynamics : R K Rajput, 4th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.</p>
<p>Module VI (6 Hrs)</p>				
<p>IC Engines :Working of IC engines. Classification of IC engines.</p>	2	CRT & Videopresentation	Assignment-III	<p>A text book of Engineering Thermodynamics : R K Rajput, 4th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch?v=emSXIjwGfQU</u> <u>https : //www.youtube.com/watch?v=Pu7g3uIG6Zo</u> <u>https : //www.youtube.com/watch?v=fD7GOrF7laY</u> <u>https : //www.youtube.com/watch?</u></p>

				<u>v=rhzgeNAXvfs</u>
2 strokes & 4 strokes engine, Petrol & diesel engines. Engine nomenclature.	4	PRA	Assignment-III	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module VII (6 Hrs)				
Gas Power Cycles : Carnot cycle, Air standard cycles- Otto, Diesel and Dual Combustion cycle.	4	CRT	Assignment-III	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.

Introduction to Communication Engineering

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Introduction to Communication Engineering	ENFC0104	Theory	3-0-0	Nil

Objective

- The objective of this subject is to impart the fundamentals of modern digital & analog communication systems.

Course Outcome

- Upon successful completion of this subject students should be able to : understand important concepts in communication engineering and an insight into modern communication standards.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (06 Hours)

Land Line Communication :

Evolution of telecommunications, simple telephone communication, basics of switching system, switching system parameters, signaling tones, electronic space division switching centralized and distributed SPC

Module : II (06 Hours)

Optical Communication:

Fiber-Optic Cable, Optical Principles, Optical Communication System, Fiber Optical Cables.

Module: III (07 Hours)

Elements of a Television System : Picture Transmission, Sound Transmission, Picture Reception, Sound Reception, Synchronization, Receiver Controls, Color Television.

Signal Transmission and Channel Bandwidth : Amplitude Modulation, Channel Bandwidth, Vestigial Sideband, Transmission, Transmission Efficiency Complete Channel Bandwidth, Reception of Vestigial Sideband Signals, Frequency Modulation, FM Channel Bandwidth, Channel Bandwidth for Colour Transmission, Allocation of Frequency Bands for Television Signal Transmission, Television Standards.

Module: IV (06 Hours)

Mobile Communication: Overview of Cellular Systems and Evolution of 2G/3G/4G/5G, Cellular Concepts – Cellular Systems, Hexagonal Cell Geometry, Frequency reuse, Co-channel and Adjacent channel Interference, Cell Splitting, Handoff, Blocking, GSM& CDMA Standards. WLAN, Bluetooth, Infrared Wireless, Wi-fi, Wi-Max.

Module: V (06 Hours)

Radar Communication : RADAR, Applications, Types, Frequency Bands, Basic Radar, RADAR range equation, Pulsed RADAR, CW RADAR, MTI RADAR, Tracking RADAR, Global Positioning System.

Module: VI (06 Hours)

Satellite Communication: Basic Satellite Systems, Indian Scenario, Satellite Orbits, Satellite Communication Systems, satellite link design,

Module: VII (08 Hours)

Internet Communication:

Data Communication Architecture, Link To Link Layers, End-To-End Layers, Switching Techniques for Data Transmission, LAN, MAN, ISDN, BISDN.

Text Books:

1. Telecommunication Switching Systems and Networks, Thiagarajan Vishwanathan PHI Publisher .
2. Fiber-Optic Communication Systems, 3ed Paperback – 2007 by Govind P. Agrawal.
3. Monochrome and colour television by R.R.Gulati
4. Satellite Communication by T. Pratt, C. Bostian and J. Allnutt. 2nd Edition, Joihn Wiley Co.
5. Radar engineering by G. S. N. Raju

Session Plan

Topic Coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I [06 hrs. Lecture]				
Evolution of telecommunications, simple telephone communication,	1	Lecture		Text Book-1
Basics of switching system,	1	Lecture		Text Book-1
switching system parameters,	1	Lecture		Text Book-1
signaling tones,	1	Lecture		Text Book-1
electronic space division switching	1	Lecture		Text Book-1
centralized and distributed SPC	1	Lecture		Text Book-1
Module-II [06 hrs. Lecture]				
Fiber-Optic Cable	1	Lecture		Text Book-2
Optical Principles	1	Lecture		Text Book-2
Optical Communication System	2	Lecture		Text Book-2
Fiber Optical Cables.	2	Lecture		Text Book-2
Module-III [07 hrs. Lecture]				
Elements of a Television System : Picture Transmission, Sound Transmission, Picture Reception	1	Lecture		Text Book-3
Sound Reception, Synchronization, Receiver Controls , Colour Television.	1	Lecture		Text Book-3

Signal Transmission and Channel Bandwidth : Amplitude Modulation , Channel Bandwidth	1	Lecture		Text Book-3
Vestigial Sideband ,Transmission , Transmission Efficiency	1	Lecture		Text Book-3
Complete Channel Bandwidth , Reception of Vestigial Sideband Signals , Frequency Modulation	1	Lecture		Text Book-3
FM Channel Bandwidth, Channel Bandwidth for Colour Transmission	1	Lecture		Text Book-3
Allocation of Frequency Bands for Television Signal Transmission, Television Standards.	1	Lecture		Text Book-3
Module-IV [06 hrs. Lecture]				
Overview of Cellular Systems and Evolution of 2G/3G/4G/5G	1	Lecture		Text Book-4
Cellular Concepts – Cellular Systems, Hexagonal Cell Geometry	1	Lecture		Text Book-4
Frequency reuse, Co-channel and Adjacent channel Interference	1	Lecture		Text Book-4
Cell Splitting, Handoff, Blocking, GSM & CDMA	1	Lecture		Text Book-4
Standards. WLAN, Bluetooth	1	Lecture		Text Book-4
Infrared Wireless, Wi-fi, Wi-Max	1	Lecture		Text Book-4
Module-V [06 hrs. Lecture]				
RADAR, Applications, Types, Frequency Bands	1	Lecture		Text Book-5
Basic Radar , RADAR range equation,	1	Lecture		Text Book-5
Pulsed RADAR,	1	Lecture		Text Book-5
CW RADAR,	1	Lecture		Text Book-5
MTI RADAR, Tracking RADAR	1	Lecture		Text Book-5
Global Positioning System.	1	Lecture		Text Book-5
Module-VI [06 hrs. Lecture]				

Basic Satellite Systems	1	Lecture		Text Book-4
Indian Scenario	1	Lecture		Text Book-4
Satellite Orbits	1	Lecture		Text Book-4
Satellite Communication Systems	2	Lecture		Text Book-4
Satellite link design	1	Lecture		Text Book-4
Module-VII [08hrs. Lecture]				
Data Communication Architecture	1	Lecture		Text Book-1
Link To Link Layers	1	Lecture		Text Book-1
End-To-End Layers	1	Lecture		Text Book-1
Switching Techniques for Data Transmission	2	Lecture		Text Book-1
LAN, MAN	1	Lecture		Text Book-1
ISDN	1	Lecture		Text Book-1
BISDN.	1	Lecture		Text Book-1
Total (hrs.)				45 hr.

Introduction to Aerospace Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Aerospace Engineering	ENFC0105	Theory	3-0-0	Nil

Objective

- To familiarize with the Basic Concepts of Flying, Aircraft Structures, Systems, Instruments and Power Plants used in Airplanes.

Course Outcome

- To Identify the Component of Flight and Suitable Materials for Aircraft Structure.
- To Perform Basic Calculation on Mechanics using Newton Law for Lift, Drag and Moment.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (08 Hrs)

History of Flight:

Early flying vehicles by Wright brothers, hot air balloons, Classification of flight vehicles, biplanes and monoplanes, developments in aerodynamics airplanes and Helicopters, Components of an airplane and their functions.

Module: II (06 Hrs)

Basics of Aeronautics: Physical properties and structure of the atmosphere, temperature, pressure and altitude relationships.

Module: III (08 Hrs)

Newton's law of motions applied to aeronautics - evolution of lift, drag and moment. aerofoils, mach number, subsonic, transonic, supersonic, hypersonic flows.

Module: IV (06 Hrs)

Airplane Structures and Materials :General types of construction, monocoque and semi-monocoque constructions, typical wing and fuselage structure.

Module: V (06 Hrs)

Airplane Structures and Materials:Materials used in aircraft metallic and non-metallic materials, use of aluminium alloy, titanium, stainless steel and composite materials.

Module: VI (06 Hrs)

Systems and Instruments:Conventional control, Powered controls, Basic instruments for flying, typical systems for control actuation.

Module: VII (08 Hrs)

Power Plants : Basic ideas about piston, turboprop and jet engines - use of propeller and jets for thrust production - comparative merits, principles of operation of rocket, types of rockets and typical applications, exploration into space.

Introduction to Computer Networks

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Computer Networks	FCEN0120	Theory	3-0-0	Nil

Objective

- This course introduces the architecture, functions, and components of the Internet and computer networks, the principles and structure of IP addressing and sub netting, the fundamentals of Ethernet, the architecture, components and operations of routers, routing protocols and switches in a network.
- Topics include TCP/IP, Ethernet, IPv4, routers, switches.

Course Outcome

- Upon successful completion of this course students will be able to define layers of the OSI model and identify the protocols, and services associated with each layer, identify the purpose, features, and functions of current common network hardware and the OSI layer with which each is associated
- Explain the operation principles of current common network hardware devices, describe current common protocols in terms of their function, routing, addressing schemes, interoperability, and naming conventions, justify information security issues in computer net works.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I Computer Networking Fundamentals

(8Hrs.)

Networking fundamentals, Internet, Access Networks, Physical Media, Switching techniques, Layered Architecture, Introduction to the Seven layers of the OSI model, concept of the OSI model, TCP/IP model and comparison with OSI model, the Application Layer, the Presentation Layer, the Session Layer, the Transport Layer, the Network Layer, the Data Link Layer & the Physical layer.

Module II (Part-1) Security Protocols - Application Layer (5 Hrs.)

Introduction to Protocol concepts, Important Protocols, File Transfer Protocol, Socket Secure OCKS), Secure Shell (SSH), Remote Terminal Control Protocol (Telnet), HTTP.

Module III (Part -2) Security Protocols - Application Layer (2) (4 Hrs.)

Transport Layer Security/Secure Sockets Layer (TLS/SSL), Extensible Messaging & Presence Protocol (XMPP), Wireless Application Protocol (WAP) & Internet Relay Chat (IRC), SMTP.

Module IV (Part-1)Transport Layer (4 Hrs.)

Introduction to Transport Layer, TCP/IP, User Datagram Protocol (UDP), Real-time Transport Protocol (RTP)

Module V (Part-2) Transport Layer (4 Hrs)

Datagram Congestion Control Protocol (DCCP), Stream Control Transmission Protocol (SCTP), Resource reservation Protocol (RSVP)&Explicit Congestion Notification (ECN)

Module VI Network Layer (8Hrs.)

Introduction to Network Layer, Internet Protocol Version 4 (IPv4), Internet Protocol Version 6 (IPv6), internet Protocol Security (IPSEC), Internet Control Message Protocol (ICMP) & Internet Group Management Protocol (IGMP)

Module VII: Data Link Layer (8Hrs.)

Introduction to Data Link Layer, Error correction and detection, CRC, the Address Resolution Protocol (ARP), Tunneling Protocol (Tunnels) &the Point to Point Protocol (PPP), HDLC.

Session Plan

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)</i>	<i>Assignment (project, assignment, field study, seminar, etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Module-1 Computer Networking Fundamentals (Total = 8hrs)				
Networking fundamentals, Internet,	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
Access Networks, Physical Media	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
Switching techniques, Layered Architecture,	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
Introduction to the Seven layers of the OSI model, concept of the OSI model, TCP/IP model and comparison with OSI model,	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
<ul style="list-style-type: none"> the Application Layer, the Presentation Layer, the Session Layer, 	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
<ul style="list-style-type: none"> the Transport Layer, the Network Layer, the Data Link Layer & the Physical layer. 	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
Module-2 (Part -1) Security Protocols - Application Layer (2) (Total = 5hrs)				
Introduction to Protocol concepts, Important Protocols	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
,File Transfer Protocol, Socket Secure (SOCKS), Secure Shell (SSH), Remote Terminal Control Protocol (Telnet). HTTP	3	Lecture + PPT	Assignment	Book,Online Sources,LMS

Module-3 (Part -2) Security Protocols - Application Layer (2) (Total = 4 hrs)				
Transport Layer Security/Secure Sockets Layer (TLS/SSL),	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
Extensible Messaging & Presence Protocol (XMPP), Wireless Application Protocol (WAP) & Internet Relay Chat (IRC), SMTP	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
Module-4 (Part-1) Transport Layer (Total = 4 hrs)				
Introduction to Transport Layer, TCP/IP, User Datagram Protocol (UDP), Real-time Transport Protocol (RTP)	4	Lecture + PPT	Assignment	Book,Online Sources,LMS
Module-5 (Part-2) Transport Layer (Total = 4 hrs)				
Datagram Congestion Control Protocol (DCCP)	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
Stream Control Transmission Protocol (SCTP),	1	Lecture + PPT	Assignment	Book,Online Sources,LMS
Resource reservation Protocol (RSVP)&Explicit Congestion Notification (ECN)	2	Lecture + PPT	Assignment	Book,Online Sources,LMS
Module-6 Network Layer (Total = 8hrs)				
Introduction to Network Layer, Internet Protocol Version 4 (IPv4), Internet Protocol Version 6 (IPv6),	4	Lecture + PPT	Assignment	Book,Online Sources,LMS
Internet Protocol Security (IPSEC), Internet Control Message Protocol (ICMP) & Internet Group Management Protocol (IGMP)	4	Lecture + PPT	Assignment	Book,Online Sources,LMS

Module-7 Data Link Layer (Total = 8hrs)				
Introduction to Data Link Layer, Error correction and Detection, CRC the Address Resolution Protocol (ARP), the Open Shortest Path First (OSPF), the Neighbor Discovery Protocol (NDP).	5	Lecture + PPT	Assignment	Book,Online Sources,LMS
The Tunneling Protocol (Tunnels) & the Point to Point Protocol (PPP), HDLC	3	Lecture + PPT	Assignment	Book,Online Sources,LMS
<i>Total (hrs)</i>	Total = 41 Hours (Theory)			

Computer Fundamental and Organization

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Computer Fundamental and Organization	FCEN 0118	Theory	3-0-0	Nil

Objective

- To explore the organization of computer system and its working.
- To understand the basics of computer networks.
- To use office packages like MS Office.

Course Outcome

- After completing the course students will able to
- Explain different components of computer system and their functions.
- Know the basics about computer networks.
- Use word processing, spreadsheet, and power point applications.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I (7 hrs)

General Features of a Computer: General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super computers. Computer applications – data processing, information processing, commercial, office automation, industry and engineering, healthcare, education, graphics and multimedia.

Module: II (6 hrs)

Computer Organization: Computer organization, central processing unit, computer memory – primary memory and secondary memory. Secondary storage devices – Magnetic and optical media. Input and output units. OMR, OCR, MICR, scanner, mouse, modem.

Module: III (5 hrs)

Computer Hardware and Software Computer hardware and software. Machine language and high level language. Application software, computer program, operating system. Computer virus, antivirus and computer security. Elements of MS DOS and Windows OS.

Module IV: (5 hrs)

Computer Arithmetic and Number System :Computer arithmetic, Binary, octal and hexadecimal number systems.

Module V: (6 hrs)

Logic Gates:Algorithm and flowcharts, illustrations, elements of a database and its applications
Basic Gates (**De Morgan's** theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions.

Module: VI: (5 hrs)

MS Office: Word processing and electronic spread sheet. An overview of MSWORD, MSEXCEL and MSPOWER POINT.

Module VII : (5 hrs)

Introduction to Networking: Network of computers. Types of networks, LAN, Intranet and Internet. Internet applications. World Wide Web, E-mail, browsing and searching, search engines, multimedia applications.

Operating System Building Blocks

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Operating System Building Blocks	FCEN 0119	Theory	3-0-0	Nil

Objective

- The operating system is the most important program that runs on a computer. Every general-purpose computer must have an operating system to run other programs.
- Operating systems perform basic tasks, such as recognizing input from the keyboard, sending output to the display screen, keeping track of files and directories on the disk, and controlling peripheral devices such as disk drives and printers.
- This course covers the concept of operating system and its applications.

Course Outcome

- After learning the fundamental concepts in Operating system including how OS has evolved over the years and different components of OS, students will continue to more significant functions of OS like Process management, storage and memory management etc.
- This will provide the necessary information for students to extract maximum benefits out of the OS while developing programs, working with applications etc.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I: (5 Hrs.)

Introduction to Operating System: Objectives and Functions of OS, Evolution of OS, OS Structures, OS Components, OS Services, System calls, System programs, Virtual Machines.

Module II: (8 Hrs.)**Process Management – Processes and Threads**

Processes: Process concept, Process scheduling, Co-operating processes, Operations on processes, Inter process communication, Communication in client-server systems. Threads : Introduction to Threads, Single and Multi-threaded processes and its benefits, User and Kernel threads, Multithreading models, threading issues. CPU Scheduling : Basic concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm Evaluation, Process Scheduling Models.

Module III: (6 Hrs.)

Process Management – Synchronization : Process Synchronization : Mutual Exclusion, Critical – section problem, Synchronization hardware, Semaphores, Classic problems of synchronization, Critical Regions, Monitors, OSS Synchronization, Atomic Transactions.

Module IV: (4 Hrs)

Deadlock Handling Deadlocks: System Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock, Detection, Recovery from Deadlock.

Module V: (8 Hrs.)

Memory Management: Memory Management: Logical and physical Address Space, Swapping, Contiguous Memory Allocation, Paging, Segmentation with Paging. Virtual Management : Demand paging, Process creation, Page Replacement Algorithms, Allocation of Frames, Thrashing, Operating System Examples, Page size and other considerations, Demand segmentation.

Module VI: (4 Hrs.)

Device and File Management File-System Interface : File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics. File-System Implementation: File-System structure, File-System Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery. Disk Management Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation.

Module VII : (4 Hrs.)

Protection and Security Protection : Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability- Based Systems, Language – Based Protection. Security : Security Problem, User Authentication, One – Time Password, Program Threats, System Threats, Cryptography, Computer – Security Classifications.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module - I (5 Hrs.)				
Introduction to Operating System : Objectives and Functions of OS, Evolution of OS	3	Lecture	Assignment	Book, Online Source

OS Structures, OS Components, OS Services	1	Lecture	Assignment	Book, Online Source
System Calls	1	Lecture	Assignment	Book, Online Source
Module - II (8 Hrs.)				
Process Management – Processes and Threads : Processes : Process concept, Process scheduling, Co-operating processes, Operations on processes	2	Lecture	Assignment	Book, Online Source
Inter process communication, Communication in client-server systems.	2	Lecture	Assignment	Book, Online Source
Threads : Introduction to Threads, Single and Multi-threaded processes and its benefits, User and Kernel threads, Multithreading models, Threading issues.	1	Lecture	Assignment	Book, Online Source
CPU Scheduling : Basic concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm Evaluation, Process Scheduling Models.	3	Lecture	Assignment	Book, Online Source
Module - III (6 Hrs.)				
Process Management – Synchronization Mutual Exclusion,	3	Lecture	Assignment	Book, Online Source

Critical – section problem, Synchronization hardware, Semaphores				
Classic problems of synchronization, Critical Regions.	3	Lecture	Assignment	Book, Online Source
Module - IV (4 Hrs.)				
Deadlock Handling : System Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance.	2	Lecture	Assignment	Book, Online Source
Deadlock Detection, Recovery from Deadlock.	2	Lecture	Assignment	Book, Online Source
Module - V (8 Hrs.)				
Memory Management : Logical and physical Address Space, Swapping.	3	Lecture	Assignment	Book, Online Source
Contiguous Memory Allocation	2	Lecture	Assignment	Book, Online Source
Paging, Segmentation with Paging.	3	Lecture	Assignment	Book, Online Source
Module - VI (4 Hrs.)				
Device and File Management : File-System Interface: File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics.	1	Lecture	Assignment	Book, Online Source
File-System Implementation: File-System structure, File-System	1	Lecture	Assignment	Book, Online Source

Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery.				
Disk Management: Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation.	2	Lecture	Assignment	Book, Online Source
Module-VII (4 Hrs.)				
Protection and Security: Protection: Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability-Based Systems, Language – Based Protection.	2	Lecture	Assignment	Book, Online Source
Security : Security Problem, User Authentication, One – Time Password, Program Threats, System Threats, Cryptography, Computer – Security Classifications	2	Lecture	Assignment	Book, Online Source
Total (hrs)	39 Hrs.			

Introduction to Biotechnology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction To Biotechnology	FCEN0115	Theory	3-0-0	Nil

Objective

- To introduce students basic knowledge about biotechnology

Course Outcome

- To impart a sound knowledge on the principles of Biotechnology involving the different application oriented topics required for all engineering branches.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Biochemistry: Component of the cell, structure and biochemical functions,

Module: II

Biomolecules-Carbohydrates, lipids, proteins, Nucleic acids, Structure and classification of enzymes

Module: III

Cell Biology Eukaryotic, Prokaryotic cells, Cell cycle – Mitosis and Meiosis,

Module: IV

Cell fractionation and flow cytometry.

Module: V

Introduction to nucleic acids: Nucleic acids as genetic material, Structure and physicochemical properties of elements in DNA and RNA, Biological significance of differences in DNA and RNA.

Module: VI

Immunology: Cells of immune system, Development, maturation, activation and differentiation of Tcells and Bcells, Phagocytosis process

Module VII

Biotechnology Applications: Industrial production, Drug discovery and development

Text Books:

1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. CBS publishers and distributors.
2. Murray R.K., Granner D.K., Mayes P.A. and Rodwell V.W. Harpers Biochemistry. Appleton and Lange ,Stanford ,Conneticut.

Reference Books:

1. Lodish, Harvey etal., “ Molecular Cell Biology,” 6th Edition. W.H.Freeman, 2008
2. Alberts, Bruce, “Molecular Biology of Cell”, 5th Edition, Garland Science, 2008.
3. Satyanarayana, U. “Biotechnology” Books & Allied (P) Ltd., 2005.
4. Friefelder, David. “Molecular Biology.” Narosa Publications, 199

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial	assignment	Book, Video, Notes
Component of the cell	1			
Cell structure	1			
biochemical functions	1			
Module II				
Carbohydrates	3			
lipids	3			
Proteins	3			

Nucleic Acids	3			
Structure of Enzymes	3			
Module III				
Eukaryotic, Prokaryotic cells	5	lecture, tutorial	assignment	Book, Video, Notes
Cell Cycle	5			
Nucleic acids as genetic material				
Module IV				
Cells of immune system	3	lecture, tutorial	assignment	Book, Video, Notes
activation and differentiation of Tcells and Bcells	3			
Drug discovery and development	2			
Module IV				
Cell fractionation and flow cytometry.	2	lecture, tutorial	assignment	Book, Video, Notes
Module V				
Nucleic acids as genetic material	1	lecture, tutorial	assignment	Book, Video, Notes
Structure and physicochemical properties of elements in DNA and RNA	2			
Biological significance of differences in DNA and RNA.	1			
Module VI				
Cells of immune system, Development, ,	1	lecture, tutorial	assignment	Book, Video, Notes
maturation, activation and differentiation of Tcells and Bcells	2			

Phagocytosis process	1			
Module VII		lecture, tutorial	assignment	Book, Video, Notes
Industrial production	1			
Drug discovery and development	2			
Total (hrs)	45			

Introduction to Biophysics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction To Biophysics	FCEN0116	Theory	3-0-0	Nil

Objective

- Learn the structures of biological molecules
- To understand the concept of structural analysis
- Learn the techniques for analysis and determination of structure of biomolecules.

Course Outcome

- To introduce the theories and concepts of biophysics of biomolecules which are considered important in biotechnology applications

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Structures of Biological macromolecules: Levels of structures in proteins, nucleic acids and polysaccharides - primary, secondary, tertiary and quaternary structures

Module: II

Conformational analysis of proteins: Polypeptide chain geometries, internal rotation angles, Ramachandran plot, potential energy calculations, forces that determine protein structure – hydrogen bonding

Module: III

Hydrophobic interactions, ionic interactions, disulphide bonds – prediction of protein structure.

Module: IV

Conformational analysis of Nucleic acid: General characteristics of nucleic acid structure – geometric Glycosidic bond – rotational isomers, ribose puckering–backbone rotation angles and steric hindrances – forces stabilizing ordered forms – base pairing and base stacking.

Module V

Techniques for the study of Biological structures, Electron Microscopy, Ultracentrifuge, Viscometry

Module VI

Molecular –sieve chromatography, electrophoresis, NMR and EPR. X-Ray crystallography

Module VII

X-ray fiber diffraction, light scattering, Neutron scattering

Text Books:

Biophysical Chemistry, Cantor and Schimmel, part I and II, W.H. Freeman and co 1997.

Reference Books:

1. Physical Biochemistry : David Friefelder, 5th Ed, PHI
2. Physical Biochemistry : Kensal E van Holde. PHI

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Levels of structures in proteins	2	lecture, tutorial	assignment	Book, Video, Notes
nucleic acids and polysaccharides	2			
primary, secondary, tertiary and quaternary structures	2			
Module II				
Polypeptide chain geometries,	2	lecture, tutorial	assignment	Book, Video, Notes
internal rotation angles, Ramachandran plot,	2			
potential energy calculations	2			

forces that determine protein structure – hydrogen bonding	2			
Module III		lecture, tutorial	assignment	Book, Video, Notes
Hydrophobic interactions,	2			
ionic interactions, disulphide bonds	2			
prediction of protein structure.	2			
Module IV		lecture, tutorial	assignment	Book, Video, Notes
General characteristics of nucleic acid structure – geometric	2			
Glycosidic bond – rotational isomers	2			
ribose puckering– backbone rotation angles and steric hindrances	2			
forces stabilizing ordered forms – base pairing and base stacking.	2			
Module V		lecture, tutorial	assignment	Book, Video, Notes
Techniques for the study of Biological structures	2			
Electron Microscopy, Ultracentrifuge	2			
Viscometry	1			
Module VI		lecture, tutorial	assignment	Book, Video, Notes
Molecular–sieve chromatography	2			
Electrophoresis	2			
NMR and EPR.	2			
X-Ray crystallography	1			
Module VII		lecture, tutorial	assignment	Book, Video,

X-ray fiber diffraction	2			Notes
light scattering	2			
Neutron scattering	1			
Total (hrs)	45			

Biosafety, Bioethics, IPR & Patents

Subject Name	Code	Type of course	T-P-PJ	Prerequisite
Biosafety, Bioethics, IPR & Patents	FCEN0117	Theory	2-0-0	Nil

Objective

- To introduce the biosafety regulations and ethical concepts in biotechnology
- To emphasize on IPR issues and need for knowledge in patents in biotechnology

Course Outcome

- This course creates awareness on the Biosafety, bioethics, Intellectual property rights and patenting of biotechnological processes.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Bioethics: Bioethics – Necessity of Bioethics, different paradigms of Bioethics – National & International. Ethical issues against the molecular technologies.

Module: II

Biosafety: Biosafety– Introduction to biosafety and health hazards concerning biotechnology.

Module: III

Good Laboratory Practices :Introduction to the concept of containment level and Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).

Module IV

Introduction to Patent: Objectives of the patent system - Basic principles and general requirements of patent law biotechnological inventions.

Module V

Patent Laws:Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions.

Module VI

Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

Module VII

Intellectual Property Rights:Intellectual property rights-TRIP- GATT-International conventions patents and methods of application of patents Legal implications-Biodiversity and farmer rights.

Text Books:

1. Singh K, Intellectual Property rights on Biotechnology, BCIL, New Delhi
2. Regulatory Framework for GMOs in India (2006) Ministry of Environment and Forest, Government of India, New Delhi

Reference Books:

1. Beier, F.K., Crespi, R.S. and Straus, T. Biotechnology and Patent protection-Oxford and IBH Publishing Co. New Delhi.
2. Sasson A, Biotechnologies and Development, UNESCO Publications.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial	assignment	Book, Video, Notes
Bioethics – Necessity of Bioethics,	1			
different paradigms of Bioethics – National & International	2			
Ethical issues against the molecular technologies	1			
Module II		lecture, tutorial	assignment	Book, Video, Notes
Biosafety– Introduction to biosafety	1			

health hazards concerning biotechnology.	2			
Module III		lecture, tutorial	assignment	Book, Video, Notes
Introduction to the concept of containment level	1			
Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).	2			
Module IV		lecture, tutorial	assignment	Book, Video, Notes
Objectives of the patent system	2			
Basic principles and general requirements of patent law biotechnological inventions.	2			
Module V		lecture, tutorial	assignment	Book, Video, Notes
Introduction to Indian Patent Law	2			
World Trade Organization and its related intellectual property provisions	2			
Module VI		lecture, tutorial	assignment	Book, Video, Notes
Intellectual/Industrial property and its legal protection in research, design and development.	2			
Patenting in Biotechnology, economic, ethical and depository considerations	2			
Module VII		lecture, tutorial	assignment	Book, Video, Notes
Intellectual property rights-TRIP	1			
GATT-International conventions patents and methods of application of patents	2			
Legal implications-Biodiversity and farmer rights.	1			
Total (hrs)	30			

Earth System Science

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Earth System Science	FCEN0111	Theory	3-0-0	Nil

Objective:

- To make the students have a clear knowledge on :
- Space Science
- Earth Dynamics
- Geological Oceanography
- Geological bodies and structure
- Hydrogeology
- Glaciology
- Earth's Atmosphere
- Biosphere
- Natural Resources

Course Outcome:

- Students will be able to understand the earth's interior, its composition, various dynamic processes, oceanography, hydrogeology, glaciology, structural geology earth's atmosphere, biosphere and the natural resources.
- A clear understanding of the basics of geology as a prerequisite for mining engineering.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline:

Module: I

Space Science: Solar System, Age of the Earth, Origin of Solar system. Meteors and Meteorites.
Earth Dynamics: Interior of the Earth, Composition of the Earth, Seismic waves, Seismograph, Plate Tectonics, Basics of Earthquake Engineering, Landslides, Volcanoes.

Module: II

Geological Oceanography: Sea waves, Tides, Ocean currents, Geological work of seas and oceans, Tsunami and its causes, Warning system and mitigation

Hydrogeology: Water table, Aquifer, Groundwater fluctuations and groundwater composition, Hydrologic cycle.

Module: III

Glaciology: Glacier types, Different type of glaciers, Landforms formed by glacier.

Geological bodies and their structures: Rock, mineral, batholiths, dyke, sill, fold, fault, joint, unconformity.

Module: IV

Earth's Atmosphere: Structure and composition of atmosphere, Atmospheric circulation, Geological work of wind, Greenhouse effect and global warming, Carbon dioxide sequestration.

Module: V

Steps to maintain clean and pollution free atmosphere with governing laws, precautionary measures against disasters.

Module: VI

Biosphere: Origin of life, Evolution of life through ages, Geological time scale, biodiversity and its conservation.

Module VII

Natural Resources: Renewable and non-renewable resources, Mineral and fossil fuel resources and their Geological setting, mining of minerals and conservation, effect of mining on surface environment.

Reference Book

1. W Kenneth Hamblin; Eric H Christiansen "Earth's dynamic systems" Publisher: Upper Saddle River, N.J. : Prentice Hall, Pearson Education
2. Jon P Davidson; Walter E Reed; Paul M Davis "Exploring earth: An introduction to physical geology" Upper Saddle River, NJ : Prentice Hall

Text Book:

1. Michael C Jacobson "Earth System Science: from biogeochemical cycles to global changes" London [England] ; San Diego, California : Academic Press

Session Plan:

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Solar System, Age of the Earth	1	Lecture	assignment	book
Origin of Solar system. Meteors and Meteorites	1	lecture	assignment	book
Interior of the Earth, Composition of the Earth,	1	lecture	assignment	book
Seismic waves, Seismograph, Plate Tectonics,	1	Lecture	assignment	book

Introduction to Mining

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Mining	FCEN0112	Theory	3-0-0	Nil

Objective:

<ul style="list-style-type: none"> ● Mines ● Types of mining methods ● Mineral deposits ● Types of mineral deposits ● Mine life cycle ● Overview of surface mining ● Overview of underground mining ● Transport system in mines ● Ventilation in mines ● Illumination in mines ● Support system in mines

Course Outcome

<ul style="list-style-type: none"> ● Students will be able to understand about mines, different types of mining methods and mineral deposits. ● A clear understanding of the basics of mining engineering.
--

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Mining: Definition and economic importance; Mine – definition, different types and classification;
 Mine life cycle,

Module: II

Mineral deposit-different types and their classification, Modes of entry to a mine- shaft, incline, decline, adit and box-cut.

Module: III

Overview of surface mining: Types of surface mines, unit operations, basic bench geometry,

Module: IV

Applicability&limitations, advantages and disadvantage

Module: V

Overview of underground mining: Different coal mining methods and their applicability & limitations

Module VI

Different metal mining methods and their applicability & limitations;

Module VII

Basic concepts of transportation, ventilation, illumination and support in underground mines.

Text Book:

1. D J Deshmukh “Elements of mining technology” Publisher: Ramdaspath, Nagpur : Vidyasewa Prakashan,

Reference Book.

1. Howard L Hartman; Jan M Mutmansky “Introductory mining engineering” Publisher: New York : John Wiley & Sons, 2002

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Definition and economic importance of mining	1	lecture	assignment	book
Mine – definition, different types and classification	2	lecture	Assignment, field study	book

Mine life cycle	1	lecture	assignment	book
Mineral deposit – different types and their classification	2	lecture	Assignment, field study	book
Mineral resources of India	2	lecture	assignment	book
Modes of entry to a mine – shaft	1	lecture	Assignment, field study	book
	1	lecture	assignment	book
incline, decline, adit and box-cut.	1	lecture	assignment	book
Overview of surface mining : definition	1	lecture	assignment	book
Types of surface mines,	1	lecture	assignment	book
Unit operation	1	lecture	assignment	book
basic bench geometry	2	lecture	Assignment, field study	book
applicability & limitations	1	lecture	assignment	book
advantages & disadvantage	1	lecture	assignment	book
Overview of underground mining : definition	1	lecture	assignment	book
Different coal mining methods and their applicability & limitations	2	lecture	Assignment, field study	book
Different metal mining methods and their applicability & limitations	2	lecture	assignment	book
Basic concepts of transportation	1	lecture	Assignment, field study	book
ventilation	1	lecture	assignment	book
illumination and support in underground mines	2	lecture	assignment	book
Total	27Hrs.			

Mine Development

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Development	FCEN0113	Theory	3 0 0	Nil

Objective:

<ul style="list-style-type: none"> ● To make the students have knowledge on : ● Opening-up of Deposits ● Vertical and Inclined Shafts ● Shaft Sinking Operations ● Insets ● Mechanized Sinking ● Shaft Boring ● Special Attributes ● Main Haulage Drifts and Tunnels ● High Speed Drifting/Tunneling ● Recent Developments ● Layouts
--

Course Outcome:

<ul style="list-style-type: none"> ● Students will be able to understand the choice of mode of entry their applicability, Number and disposition. ● Students will be able to understand vertical and Inclined Shafts ● Students will be able to understand methods and equipment of shaft boring. ● Students will be able to understand main Haulage Drifts and Tunnels. ● Students will be able to understand layouts of pit-top and pit-bottom, coal Handling Plant, Bunkers and Railway Sidings

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Opening-up of Deposits: Choice of mode of entry- adit, shaft, decline and combined mode, their applicability, number and disposition.

Vertical and Inclined Shafts: Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.

Module: II

Shaft Sinking Operations: Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.

Module III

Insets: Design, excavation and lining.

Mechanized Sinking: Simultaneous sinking and lining; slip - form method of lining; high speed sinking.

Module IV

Shaft Boring: Methods and equipment.

Special Attributes: Widening and deepening of inclined and vertical shafts; staple shafts, raised shafts.

Module V

Main Haulage Drifts and Tunnels : Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting.

Module VI

High Speed Drifting/Tunneling : Application of mechanized methods; road headers and tunnel boring machines.

Module VII

Recent Developments in shaft sinking and drifting/tunnelling. Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings

Text Book

1. D J Deshmukh "Elements of mining technology" Publisher: Ramdaspath, Nagpur : Vidyasewa Prakashan,
2. R Agor "A text book of surveying and leveling" Author:., Publisher: Delhi : Khanna Publication

Reference Book

1. B C Punmia; Arun Kumar Jain; A K Jain "Surveying. Vol.I" , Author:., Publisher: New Delhi Laxmi Publications

Alak De "Plane surveying" Publisher: S. Chand & Co

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Choice of mode of entry-adit, shaft, decline and combined mode, their applicability, number and disposition.	3	lecture	Assignment, field study	book
Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.	4	lecture	assignment	book
Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.	4	lecture	assignment	book
Insets : Design, excavation and lining.	2	lecture	assignment	book
Simultaneous sinking and lining; slip - form method of lining; high speed sinking. Shaft Boring : Methods and equipment.	4	lecture	assignment	book
Main Haulage Drifts and Tunnels : Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting	4	lecture	assignment	book
Application of mechanized methods; road headers and tunnel boring machines.	3	lecture	Assignment, field studies	book

Recent Developments in shaft sinking and drifting/tunneling. Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings	4	lecture	assignment	book
Total Hrs	28			

Mine Surveying - I

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Surveying - I	FCEN0114	Theory	3- 0- 0	Nil

Objective

- To make the students have knowledge on :
- Surveying
- Angular Measurement
- Leveling
- Total Station
- Plane Table Surveying
- Contours

Course Outcome

- Students will be able to understand the classification and principles of surveying
- Students will be able to understand linear measurement.
- Students will be able to understand angular measurement
- Students will be able to understand leveling instruments types, Leveling staves, Underground leveling

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Surveying: Definition, objective, classification and principles of surveying.

Module: II

Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.

Module: III

Angular Measurement: Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic

Theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments;

Module: IV

Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.

Module: V

Leveling : Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, crosssectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.

Module: VI

Total Station: Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.

Module VII

Plane Table Surveying: Methods Contours: Concepts; Characteristics of contour; Contour Interval; Methods of contouring and uses of contours.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Surveying : Definition, objective, classification and principles of surveying.	3	Lecture	Assignment, field studies	book
Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.	4	Lecture	Assignment, field studies	book

Angular Measurement : Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments; Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.	5	Lecture	Assignment, field studies	book
Leveling : Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, crosssectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.	6	Lecture	Assignment, field studies	book
Total Station : Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.	5	Lecture	Assignment, field studies	book
Plane Table Surveying : Methods Contours : Concepts; Characteristics of contour; Contour Interval; Methods of Contouring and uses of contours.	4	Lecture	Assignment, field studies	book
Total Hrs	27			

Workshop Practice

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Workshop Practice	ENFC0201	Practice	0-2-0	Nil

Objective

- To provide the students hands-on-experience on manufacturing processes like fitting, carpentry, plumbing, casting, turning, joining and machining.

Course Outcome

- Students will be able to choose manufacturing technique for a given product and can perform simple operations.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

Experiment 1 : Workshop Safety Practice, Use of Personal Protective Equipment.

Fitting:

Experiment 2: Marking & Sizing of a 5mm thick Rectangular Plate with given dimensions using Scriber, Caliper, Steel Rule, Hack Saw & Holding Vice.

Experiment 3 : Preparing an Open V Fitting Joint.

Plumbing:

Experiment 4 : Use of Pipe Vice, Wrench, Tap and Die to make External Threads in ½”PVC Pipe for Basic Pipe Fittings and to do a Leak Test.

Experiment 5 : Fabrication of a Rectangular Loop using basic Pipe Fittings.

Experiment 6 : Fitting of Flow Measurement Water Meter.

Casting:

Experiment 7 : Sand Mold Preparation with Pattern for Casting Aluminum .

Experiment 8 : Casting of Aluminum Spur Gear.

Welding:

Experiment 9: Safety to Connect a Welding Transformer, Tools and SMAW Arcing.

Experiment 10: Oxy Acetylene 3 Types of Flames & Torch Brazing.

Experiment 11: Preparation of a Study Stool of Square Section. (4 student in a group)

Turning:

Experiment 12: Aligning a 20mm Cylindrical Job in Conventional Lathe, Use of Dial Gauge.

Experiment 13: Facing and Plain Turning of 20mm M.S Stock.

Electrical & Electronic:

Experiment 14: Domestic & Staircase Wiring Circuit Practice.

Experiment 15: PCB: Designing and Making of Simple Circuits.

Experiment 16: Measurement Power Consumption by Incandescent, CFL and LED Lamps.

Experiment 17: Use of Transducer and Sensors, Strain Gauge, Photovoltaic Cell.

.Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Demonstration of Various Safety Practice, Measuring Tools and Equipments used in Workshop.	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology

Preparing an Open V Fitting Joint	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, Chapman, W A J, Arnold, E, Workshop Technology S K, HazraChaudhary
Use of Pipe Vice, Wrench, Tap and Die to make external threads in ½”PVC pipe for basic pipe fittings and to do a leak test	3	Job Working in groups	Group Assignment and Evaluation	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology
Fabrication of a Rectangular Loop using Basic Pipe Fittings	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Fitting of Flow Measurement Water Meter	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Sand Mold Preparation with Pattern for Casting Aluminum	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Casting of Aluminum Spur Gear	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Safety to Connect a Welding Transfer, Tools and SMAW Arcing	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Oxy Acetylene 3 Types of Flames & Torch Brazing	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Preparation of a Study Stool of Square Section	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary

Aligning a 20mm Cylindrical Job in Conventional Lathe, use of Dial Gauge	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Facing and Plain Turning of 20mm M.S Stock.	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Domestic & Staircase Wiring Circuit Practice	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
PCB : Designing and Making of Simple Circuits	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Measurement Power Consumption by Incandescent, CFL and LED lamps	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology
Use of Transducer and Sensors, Strain Gauge, Photovoltaic Cell	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Total (hrs)	48			

Geometric Modeling Lab

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Geometric Modeling Lab	ENFC0202	Practice	0-2-0	Nil

Objective

- To impart knowledge to students on conceptual design, 3D modeling, surface modeling and drafting through hands-on-practice mode using CATIA.
- To impart requisite knowledge and skills to the students on developing 3D assembly drawings and exploded views using CATIA.

Course Outcome

- Students will be able to study, understand and interpret engineering drawings used in industry
- Students will be able to use CATIA for creation of 3D models, assembly drawings and exploded view

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module: I (20 Hrs)

Part Modeling: Creation of Simple Solids, Parametric Modeling, Booleans and Functional Modeling, Rendering

Module: II (20 Hrs)

Assembly Modeling: Simple Assembly, Constraints, Digital Mockup

Module: III (20 Hrs) :

Drafting & Surface Modeling: Creation of Layout, Conversion of Part drawing to projection views, detailed drawing. Creation of Surfaces, Simple Surface Models, Converting Surface Models to Part Drawing.

(**Note:** All of the topics will be through learn by doing and laboratory mode.
Platform is CATIA)

MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED
TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Text Books:

Geometrical Modelling, M.E. Morteson

Session Plan

(Total 12 experiments out of 17 to be conducted)

Sl. No.	Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
1	Assembly of Quick Acting Hold Down Clamp	3	Lab practice		
2	Modeling parts of Quick Acting Hold Down Clamp Assembly	6	Lab practice		
3	Assembly of Pneumatic FRL	3	Lab practice		
4	Modeling parts of Pneumatic FRL Assembly	6	Lab practice		
5	Assembly of Roller Guide	3	Lab practice		
6	Modeling Parts of Roller Guide Assembly	6	Lab practice		
7	Assembly of Electrical Tower	3	Lab practice		
8	Modeling parts of Electrical Tower Assembly	6	Lab practice		
9	Assembly of Hitch Mount	3	Lab practice		
10	Modeling parts of Hitch mount Assembly	6	Lab practice		
11	Assembly of Trombon	3	Lab practice		

12	Modeling parts of Trombon Assembly	6	Lab practice		
13	Drafting all the parts of two Assemblies	6	Lab practice		
14	Production of Detailed Drawing of two Assemblies	6	Lab practice		
15	Surface Modeling of Automobile Tail Lamp	6	Lab practice		
16	Surface Modeling of Automobile Bonnet	6	Lab practice		
17	Conversion of Surface Model of Tail Lamp to Part Model	3	Lab practice		
Total (hrs)		60			

Introduction to Robotics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Robotics	ENFC0203	Practice	0-2-0	Geometric Drawing

Objectives

- To Provide An Overview To Students On Various Types of Industrial Robots and Their Configurations.
- To Educate The Students on Use Of DELMIA To Carryout Simulation Exercises of Various Types of Robotic Arms Suiting to Specific Applications.

Course Outcome

- Students Will Have Knowledge and Skill To Program Industrial Robots For Performing Various Tasks.
- Students Will Be Able To Undertake Simulation Exercises Of Various Types Of Robotic Arms As A Pre-Requisite Leading To A Safe, Cost Effective, Reliable And Optimum Design.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

List of Experiments (45 Hours)

DELMIA: Simulated Models of Various Types Industrial Robots &Its Architecture.

DELMIA: Simulation of Activities Like: Pick and Place, Coordinated Movement, Spot Welding and Arc Welding.

DELMIA: Designing Own Robotic Arm with Insight to Robot Kinematics.

- i) A Prismatic Robotic Arm.
- ii) A Revolute Joint Robotic Arm.
- iii) Articulated Robotic Arm
- iv) Spherical Robotic Arm

Robot Programming: Use of Brabofor Pick and Place Actions.

An Understanding of Different Sensors, Their Operation and Application. Demonstration of Use of Sensors for At Least 3 Applications of Robot.

Commanding A Robot To Achieve Tasks On The Basis Of Sensor Information, A Description Of Motors, And How Their Velocity Is Set, And Other Robotic Actuators.

Reference

Text Books :

M.P. Groover, Industrial Robotics, Second Edition, TMH Publishers.

S.R. Deb and S. Deb, Robotics Technology and Flexible Automation, Second Edition, TMH Publishers.

Reference Books :

Y Koren, Robotics for Engineers, TMH Publishers.

Session Plan

Sl. No	Topic coverage and Internal Test	No. of Sessions (in hr)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
1	Demonstration of various robotic arms available in DELMIA	3	Lab Demonstration	Collection of tutorials related various Robotic Arms	DELMIA help file
2	Robotic architecture. Demonstration of prismatic, revolute and SCARA	6	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of Application.	DELMIA help file
3	Robotic architecture. Demonstration of articulated robotic arm and Spherical robotic arm	3	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of Application.	DELMIA help file

4	Demonstration of application in spot welding and arc welding	3	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of application.	DELMIA help file
5	Demonstration of application in assembly line operation.	3	Lab Demonstration	Development of robotic arm in DELMIA & Demonstration of application.	DELMIA help file
6	Robotic Programming practice to do pick and place action.	3	Lab practice	Development of programs to do other actions like writing on the white board, Erasing the same with wiper. At least 3 such Activities	Brabo Manual
7	Demonstration of assignment Exercises	3	Lab practice	Recording of all assignments	BraboManual
8	Demonstration of application of sensors, At least 3 sensor based applications	3	Lab practice	Identifying different types of sensors that can be used in robot arm application	
9	Demonstration of use of sensors	3	Lab practice		
10	Demonstration of sensors to actuate motors and its speed control	3	Lab Practice		
11	Demonstration of sensors to actuate motors and its speed control	6	Lab Practice	A Mini project of designing to making a movement to robotic arm	

12	A mini Project Demonstration	6			
	Total (hours)	45			

3D Modelling

Course Title	Code	Type of course	T-P-PJ	Prerequisite
3D Modelling	ENFC0204	Practice	0-2-0	Nil

Objective

- The course covers modeling conceptual design, 3D modeling, Views and documentation of building drawing

Course Outcome

- 3D Solid Model and drawing
- 3D Building Model

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module I (12 Hrs)

Elements of planning building, fundamentals of Building Information Modelling (BIM). Generation of 2D (plan, section and elevation) and 3D modelling with detailed specification and dimensioning of the following using AutoCAD, Revit Architecture and CATIA :

Practice Session 1 : Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with same floor plans using Revit Architecture and CATIA.

Practice Session 2 : Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD for (practice session 1).

Practice Session 3 : Generation of section for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD, Revit Architecture and CATIA (practice session 1).

Module II (36 Hrs)

Practice Session 4 : Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with varying floor plans using Revit Architecture and CATIA.

Practice Session 5 : Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD (practice session 4).

Practice Session 6 : Generation of section for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD, Revit Architecture and CATIA (practice session 4).

Practice Session 7 : Generation of 3D modelling with detailed specification and dimensioning of a (G+5) shopping complex using Revit Architecture and CATIA.

Practice Session 8 : Generation of elevation for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD (practice session 7).

Practice Session 9 : Generation of section for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD, Revit Architecture and CATIA (practice session 7).

Practice Session 10 : Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hospital building using Revit Architecture and CATIA.

Practice Session 11 : Generation of elevation for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD (practice session 10).

Practice Session 12 : Generation of section for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD, Revit Architecture and CATIA (practice session 10).

Module III (12Hrs)

Practice Session 13 : Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hostel building using Revit Architecture and CATIA.

Practice Session 14 : Generation of elevation for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD (practice session 13).

Practice Session 15 : Generation of section for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD, Revit Architecture and CATIA (practice session 13).

Electrical Workshop Practice

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electrical Workshop Practice	ENFC0205	Practice	0-2-0	Nil

Objective

- To develop skills for troubleshooting of electrical wiring and appliances at household level

Course Outcome

- Enhances the skill of operating electrical instruments, hand tools and power tools.
- Comprehend the safety measures required to be taken while using the tools.
- Solving Electrical Problems at domestic level.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Lists of Experiments

1. To study safety precautions for electrical engineering, draw the electrical symbol and general electrical house wiring.
2. To study the various types of accessories and tools. Working of fuse and circuit breaker.
3. To setup a series, parallel and staircase wiring using the given lamps.
4. To study Earth-wire connection and Earth-wire measurement in electrical wiring.
5. To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.
6. Study of Multimeter, voltmeter, ammeter, wattmeter (both AC&DC)
7. Connection & fault analysis in Domestic appliances (Fan, electric iron)
8. Connection & fault analysis in Domestic appliances (Air Condition)
9. Connection & fault analysis in Domestic appliances (fluorescent tube)
10. Study of Industrial wiring in the workshop and study of bimetallic relay.
11. Study of a 11/4 KV transformer substation
12. Concept of efficiency (Star rating) of electrical appliances

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
To study safety precautions for electrical engineering, draw the electrical symbol and general electrical house wiring.	4	Lab Practice	Experiment Result & Viva	
To study the various types of accessories and tools. Working of fuse and circuit breaker.	4	Lab Practice	Experiment Result & Viva	
To setup a series, parallel and staircase wiring using the given lamps.	4	Lab Practice	Experiment Result & Viva	
To study Earth-wire connection and Earth-wire measurement in electrical wiring.	4	Lab Practice	Experiment Result & Viva	
To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.	8	Lab Practice	Experiment Result & Viva	
Study of Multimeter, voltmeter, ammeter, wattmeter (both AC&DC)	4	Lab Practice	Experiment Result & Viva	
Connection & fault analysis in Domestic appliances (Fan, electric iron)	4	Lab Practice	Experiment Result & Viva	
Connection & fault analysis in Domestic appliances (Air Condition)	4	Lab Practice	Experiment Result & Viva

Study of Industrial wiring in the workshop and study of bimetallic relay.	4	Field Studies	Viva	
Study of a 11/4 KV transformer substation	4	Field Studies	Viva	
Concept of Star rating of electrical appliances	4	Lab Practice	Experiment Result & Viva	
Total : 52 Hours				

Mine Surveying –I Lab

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Surveying - Lab	FCEN0214	Practice	0-2-0	Nil

Objective:

- To make the students have practical knowledge on :
- Linear measuring instruments & carrying out Chain Surveying
- Carrying out Compass Traversing
- Vernier theodolite
- Tilting level & carrying out Fly Leveling
- Auto level & carrying out Profile Leveling

Course Outcome:

- Enhances the skill of operating electrical instruments, hand tools and power tools.
- Comprehend the safety measures required to be taken while using the tools.
- Solving Electrical Problems at domestic level.

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module I

Study and sketch the linear measuring instruments & carrying out Chain Surveying Prismatic Compass and carrying out Compass Traversing; Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite; Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling; Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring; Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Study and sketch the linear measuring instruments & carrying out Chain Surveying	3	lab practice	assignment, field study	book
Prismatic Compass and carrying out Compass Traversing	3	lab practice	assignment, field study	book
Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite;	6	lab practice	assignment, field study	book
Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling;	6	lab practice	assignment, field study	book
Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring	6	lab practice	assignment, field study	book
Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.	6	lab practice	assignment, field study	book
Total Hrs	30			

Aerodynamics Laboratory

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Aerodynamics Laboratory	ENFC0208	Practice	0-2-0	Nil

Objective

<ul style="list-style-type: none"> To Predict Different Aerodynamic Propulsion in Aero Applications
--

Course Outcome

<ul style="list-style-type: none"> Ability to Use the Fundamental Dynamics Principles in Aircraft Applications.
--

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

1. List of Experiments

1. Application of Bernoulli's Equation – venturimeter and orifice meter.
2. Frictional loss in laminar flow through pipes.
3. Frictional loss in turbulent flow through pipes.
4. Calibration of a subsonic Wind tunnel.
5. Determination of lift for the given airfoil section.
6. Pressure distribution over a smooth circular cylinder.
7. Pressure distribution over a rough circular cylinder.
8. Pressure distribution over a symmetric aerofoil.
9. Pressure distribution over a cambered aerofoil.
10. Flow visualization studies in subsonic flows.
11. Calculation of drag over smooth cylinder
12. Calculation of drag over rough cylinder

List of Equipment for a Batch of 30 Students

S.N	Name of Equipment	Quantit	Experiment No.
1	Venturimeter	1	1
2	Orificemeter	1	1
3	Pipe friction apparatus	1	2, 3
4	Subsonic Wind tunnel	1	4, 5, 6, 7, 8, 9, 10, 11, 12
5	Models (aerofoil, rough and smooth cylinder, flat plate)	1	5, 6, 7, 8, 9

Engineering Metrology and Measurements

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Engineering Metrology and Measurements	ENFC0401	Theory + Practice	1-2-0	Nil

Course Objective

- To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- Analyze Measurement Requirement.
- Can Choose Transducer & Sensors for Products.

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module: I (6 Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice : (Laboratory Mode- Learn by Doing)

Calibration of Measuring Instruments Using Slip Gauge Blocks.

Module: II (9 Hours)

Limit System; Limits Fits & Tolerances; Allowances; Hole Basis & Shaft Basis Systems; Interchangeability; Gauge Design. (Class room Teaching and videos)

Practice : (Laboratory Mode- Learn by Doing)

1. Introduction to Metrology Laboratory (Steel Rule, Tape, Right Angle, Protractor, Surface Plate).
2. Gauges- Filler, Radius, Thread, Wire, Snap & GO-NOGO.

Module: III (9 Hours)

Standards of Measurement; Dial Indicators; Vernier Apparatus; Micrometers; Comparators (Mechanical, Electrical, Pneumatic).

Practice : (Laboratory Mode- learn by Doing)

3. Vernier Caliper- Inside, Outside, Depth Measurement & Height Gauge.
4. Micrometers, Outside, Inside Micrometer & Depth Micrometer.
5. Three Points Bore Micrometer

Module: IV (10 Hours)

Measurement of Angles & Tapers using Bevel Protractor; Angle Gauges; Sine Bars; Flatness Spirit Level & Surface Plate.

Practice: (Laboratory Mode- learn by Doing)

6. Sine Bar/Bevel Protractor-Measurement of Angles.
7. Flatness Test Using Sprit Level.
8. Use of Dial Indicators-in-lathe.

Module: V (9 Hours)

Gear Tooth Metrology; Inspection & Alignment Tests. Transducers; Variable Resistance Transducer; LVDT; Comparative Transducer; Piezoelectric Transducer; Photo Voltaic Cells; Devices for Pressure Measurement- Dead Weight Tester; Bourdon Tube Pressure Gauge; Diaphragm and Bellow Gauges.(Topics will be covered by explaining and fallowed by practice mode)

Practice: (Laboratory Mode- Learn by Doing)

9. Gear Tooth Metrology, Inspection & Alignment Tests.

Module: VI (10 Hours)

Low Pressure Measurements; Force Measuring Using Proving Rings; Torque Measuring Using Dynamometers; Strain Measurements; Profile Projector; Tool Maker's Microscope; Optical Flats; Laser Interferometers; Autocollimators.

Practice: (Laboratory Mode- Learn by Doing)

10. Optical Flat Use & Surface Plate Test Using Spirit Level & Dial Gauge.
11. Measurement of Template Using Profile Projector.

Module: VII (12 Hours)

Assessment of Surface Roughness; Machining Symbols for Surface Finish; Measuring Instruments; Tally-Surf; Screw Thread Measurement- Terminology; Precision Instruments Based on Laser Principles- Laser Interferometer Application; Coordinate Measuring Machine (CMM).

Practice: (Laboratory Mode- Learn by Doing)

12. Surface Finish by Taylor's Apparatus –LVDT.
13. Measurement of Tool angle in Tool Maker's Microscope.
14. Repeat Laboratory-1 or Test.
(50% of the topics will be covered by “Learn by Doing” principle and few video presentations)

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Introduction to metrology Importance and need for measurements and metrology	1	lecture	Assignment	https : //www.youtube.com/watch?v=xcvNl1HHY9o https : //www.youtube.com/watch?v=qXhOWXShH1w Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Need for Inspection	1	lecture	Assignment	https : //www.youtube.com/watch?v=YYrnjEo90fs Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051

Precision & Accuracy	1	lecture	Assignment	https : //www.youtube.com/watch?v=b38hFWvEjwI Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Errors in Measurement	1	lecture	Assignment	https : //www.youtube.com/watch?v=cGdbQeRSYTc Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Practice				
1.Calibration of measuring Instruments using slip gauge blocks	2	practice		
Module II				
Limit System, Limits Fits & Tolerances	2	lecture	Assignment	https : //www.youtube.com/watch?v=zxyERl8KnnM&list=PL0uwpDY0Y8Q2aoPhDuEZLI1PVuKKUGb90 https : //www.youtube.com/watch?v=zxyERl8KnnM&list=PL0uwpDY0Y8Q2aoPhDuEZLI1PVuKKUGb90&index=1 Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Allowances, Hole Basis & Shaft Basis Systems, Interchangeability	1	lecture	Assignment	https : //www.youtube.com/watch?v=AP_T7hf5Wv0&list=PL0uwpDY0Y8Q2aoPhDuEZLI1PVuKKUGb90&index=4 Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051

Design of Gauges- GO, NOGO	2	lecture	Assignment	https : //www.youtube.com/watch?v=uNOZ TmhsH1w https : //www.youtube.com/watch?v=mZH Hdim3hOY Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Practice				
2.Introduction to Metrology Laboratory(1hr) + Steel Rule, Tape, Right Angle Protractor, Surface Plate	2	Practice	field study	
3.Gauges- Filler ,Radius, Thread, Wire, Snap, GO- NOGO	2	Practice	field study	
Module III				
Standards of Measurement	1	lecture	Assignment	Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Dial Indicators, Vernier caliper &Micrometer	1	lecture	Assignment	https : //www.youtube.com/watch?v=FqSJh Y_lctc https : //www.youtube.com/watch?v=vkPlz malvN4 https : //www.youtube.com/watch?v=StBc5 6ZifMs Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051

Comparators Mechanical, Electrical, Pneumatic	1	lecture	Assignment	Mahajan, M, A Text Book of Metrology. 2010. Dhanpat Rai & Co (P) Ltd, ISBN 13 : 978-817700051
Practice				
Vernier Caliper- inside, outside, depth measurement, Height Gauge	2	Practice	Field Study	
5. Micrometers, Outside & Inside Micrometer, Depth Micrometer	2	Practice	Field Study	
6. Three point Bore Micrometer	2	Practice	Field Study	
Module IV				
Angular Measurements Measurement of Angles & Tapers using Bevel Protractor, Angle Gauges, Sine Bars	3	lecture	Assignment	https : //www.youtube.com/watch?v=oJFUI_FHlio https : //www.youtube.com/watch?v=F7uCEeipdCw https : //www.youtube.com/watch?v=u-PLC3uKICM
Spirit Level, Surface Plate	1	lecture	Assignment	https : //www.youtube.com/watch?v=H-F2C5F78aw
Practice				
7. Sine Bar/Bevel Protractor- Measurement of Angles	2	Practice		

8.Flatness test using Sprit Level	2	Practice		
9.Use of Dial Indicators-in –Lathe.	2	Practice		
Module V				
Gear Tooth Metrology	2	lecture	Assignment	https : //www.youtube.com/watch?v=fb278 VIHICU
Inspection &Alignment Tests	1	lecture	Assignment	https : //www.youtube.com/watch?v=utZVv 7QvRt8
Transducers, Variable Resistance Transducer, LVDT, comparative transducer, piezoelectric transducer, photo voltaic cells.	2	lecture	Assignment	https : //youtu.be/vuVFbKxsds
Devices for pressure measurement- dead weight tester, bourdon tube pressure gauge, diaphragm and bellow gauges.	1	lecture	Assignment	
Practice				
ar Tooth Metrology, Inspection & Alignment tests	3	Practice		
Module VI				
Low Pressure Measurements	1	lecture	Assignment	
Force Measuring Using Proving	2	lecture	Assignment	

Rings. Torque Measuring Using Dynamometers, Strain Measurements				
Profile Projector, Tool Maker's Microscope, Optical Flats, application.	1	lecture	Assignment	https : //www.youtube.com/watch?v=HGO9GXaeZFc https : //www.youtube.com/watch?v=hqsVXA5S2xM https : //www.youtube.com/watch?v=5JE7BV-XkSk
Laser Interferometers	1	lecture	Assignment	https : //www.youtube.com/watch?v=UA1qG7Fjc2A
Autocollimators	1	lecture	Assignment	https : //www.youtube.com/watch?v=XHEywuzl9sA
Practice				
tical Flat Use & Surface Plate test using Spirit Level & Dial Gauge	2	Pratice	Field study	
12.Measurement of template using Profile Projector	2	Practice	Field Study	
Module VII				
Assessment of Surface Roughness, Machining Symbols for	1	lecture	Assignment	https : //www.youtube.com/watch?v=omhoWIs2d-M

Surface Finish, Measuring Instruments, Tally- Surf,				https : //www.youtube.com/watch?v=VyeP ASErr5Q
Screw Thread Measurement- Terminology, Determination of Effective Diameter Using Two, three Wire Method	2	lecture	Assignment	https : //www.youtube.com/watch?v=N4pjg JMmk3A https : //www.youtube.com/watch?v=LjQf6 ISFISg
Coordinate measuring machine (CMM)	1	lecture	Assignment	https : //www.youtube.com/watch?v=844Ui RBVx1Y
Practice				
11.Surface Finish by Taylor's Apparatus	2	Practice	field study	
13.Measurement of Tool angle in Tool Maker's Microscope	2	Practice	Field Study	
14.Repeat Laboratory-1	2	Practice	field study	
15. Repeat Laboratory-2	2	Practice	field study	
Total Hours	65			

Basic Fluid Mechanics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Basic Fluid Mechanics	ENFC0402	Theory + Practice	2-1-0	Nil

Objective

- To make students understand flow characteristics and different types of flow and application of dimensional analysis, different flow and velocity measuring device.

Course Outcome

- Understand flow characteristics and different types of flow
- Understand kinematics and dynamics of flow
- Understand about application of dimensional analysis

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module I Fluid kinematics (9 Hours)

Types of flow, Continuity equation (in one, two & three dimension), velocity and acceleration, streamline, streakline, path line, velocity potential function and stream function, types of motion (Linear Translation and all deformations, rotation and vorticity, vortex flow).

Experiments:

1. Demonstration of different types of flow
2. Pressure Measurement

Module II Fluid Dynamics (7 Hours)

Rate of Flow Or Discharge, Euler's equation of motion along a stream line for ideal flow - Principle of conservation of energy Integration of Euler's equation along a stream line - Bernoulli's equation (**Derivation not to be included for external Examination**) - Practical applications of Bernoulli's Principle - Kinematics of free jets.

Experiments:

3. Bernoulli's experiment
4. Characteristics of free jet

Module III Principle of conservation of momentum (5 Hours)

Impulse momentum equation. Application of momentum principle for force on pipe bends and reducers. Angular momentum principle and its applications (Numerical problems on angular momentum principle not included. Only fundamental concepts.)

Experiments :

5. Impact of jet

Module IV Laminar Flow and Turbulent Flow : (6 Hours)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, HagenPoiseulle Equation for laminar flow through pipe (**Derivation not to be included for external Examination**), Darcy-Weisbach Equation for Turbulent flow through pipe (**Derivation not to be included for external Examination**)

Experiments :

6. Pipe friction
7. Reynolds's no calculation and identification of laminar and turbulent flow

Module V Flow through Pipes (8 Hours)

Loss of Energy-Friction loss & Minor losses, HGL&TEL, Pipes in series and Parallel, Equivalent Length of pipe, Power transmission through pipes and nozzle, Hydro dynamically smooth & rough boundaries, Moody's Diagram.

Experiments :

8. HGL& TEL through simulation
9. Hardy Cross Method

Module VI Dimensional Analysis and Similitude : (5 Hours)

Fundamental and derived units, Dimensional formulae for various geometric, kinematic and dynamic parameters. Rayleigh and Buckingham' methods for arriving group of dimensionless parameters. Similarity laws - Reynolds, Froude, Mach Laws. Geometric, Kinematic and Dynamic similarities. Distorted Models.

Module VII Flow Measurement(18 Hours)

Flow through small orifice, Mouthpiece, Time of Emptying tanks. Velocity Measurement using Pitot tube, Prandtl tube, Flow measurement in pipes-Flow Meters-orifice Plate-Flow Nozzle Meter, Venturi Meter, Flow rate Measurement in channel- Weir and Notches.

Experiments :

10. Flow Measurement through V-Notch
11. Flow Measurement through Venturi Meter
12. Flow Measurement through Small Orifice
13. Flow Measurement through Orifice Meter
14. Flow Measurement through Rota meter
15. Flow Measurement through Pitot Tube

LIST OF THE EXPERIMENT THROUGH SIMULATION : -

1. Bernoulli's Equation
2. Venturi Meter
3. Orifice Meter
4. Reynolds's Experiment
5. Impact Of Jet
6. Discharge through Weir.
7. Mouth Piece

All this Experiment can be done using the link given below

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE-1 FLUID KINEMATICS				
Types of flow, Continuity equation (in one, two & three dimension) video on types of flow	2	Lecture		
velocity and acceleration, streamline, streakline, path line	1	Lecture		
Velocity potential function and stream function, types of motion (Linear Translation and all deformations) rotation and vorticity, vortex flow.	2	Lecture		Video
Demonstration of different types of flow	2	Practice		
Pressure Measurement	2	Practice		
MODULE-2 FLUID DYNAMICS				
Rate of Flow Or Discharge, Euler's equation of motion along a stream line for ideal flow - Principle of conservation of energy Integration of Euler's equation along a stream line - Bernoulli's equation	1+2	Lecture+ Practice		
Practical applications of Bernoulli's Principle - Kinematics of free jets. Bernoulli's Principle	2+2	Lecture+ Practice		Video

MODULE-3 PRINCIPLE OF CONSERVATION OF MOMENTUM				
Impulse momentum equation. Application of momentum principle for force on pipe bends and reducers	2+2	Lecture+ Practice		
Angular momentum principle and its applications (Numerical problems on angular momentum principle not included. Only fundamental concepts.)	1	Lecture		
MODULE-4 LAMINAR FLOW & TURBULENT FLOW				
Reynolds's Experiment, Laws of Laminar and Turbulent Friction	1+2	Practice		Video
Hagen Poiseulle Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe	1+2	Lecture+ Practice		
MODULE-5 FLOW THROUGH PIPES				
Loss of Energy-Friction loss & Minor losses, HGL&TEL	1+2	Lecture+ Practice		
Pipes in series and Parallel, Equivalent Length of pipe	1+2	Lecture+ Practice		
Power transmission through pipes and nozzle	1	Lecture		
Hydrodynamically smooth & rough boundaries, Moody's Diagram.	1	Lecture		

MODULE-6 DIMENSIONAL ANALYSIS				
Fundamental and derived units, Dimensional formulae for various geometric, kinematic and dynamic parameters.	1	Lecture		
Rayleigh and Buckingham' methods for arriving group of dimensionless parameters.	2	Lecture		
Similarity laws - Reynolds, Froude, Mach Laws.Geometric, Kinematic and Dynamic similarities.Distorted Models.	2	Lecture		
MODULE-7 FLOW MEASUREMENT IN PIPES AND CHANNELS				
Flow through small orifice,MouthPiece,Time of Emptying tanks.	2+4	Lecture+ Practice		
Velocity Measurement using pitottube ,Prandtl tube	2+2	Lecture+ Practice		
Flow measurement in pipes-Flow Meters-orifice Plate-Flow Nozzle Meter,Venturimeter	2+4	Lecture+ Practice		
Flow rate Measurement in channel- Weir and Notches.	2+2	Lecture+ Practice		
Total (hrs.)	60			

Basic Surveying

Subject Name	Code	Type of course	T-P-PJ	Prerequisite
Basic Surveying	ENFC0403	Theory & Practice	2-1-0	Nil

Objective

- To make students able to understand the measurement techniques, equipment used in land surveying using Dumpy level, Theodolite and Total station.

Course Outcome

- Apply math, science, and technology in surveying activities.
- Measure horizontal distances across clear landscape and across obstacles.
- Prepare contour maps using Theodolite and Total station for projects (Road, Railway and water shade)

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module-I (2HRS)

Historical survey practice : Introduction to surveying : Classification, Basic Principle, List of Instruments used in surveying.

Module-II (8HRS)

Leveling: Use of dumpy level and leveling staff. Temporary and Permanent adjustment of dumpy level, Curvature and refraction error, types of leveling, reciprocal leveling, leveling difficulties and common errors.

Experiments:

1. Calculation of RL using HI and Rise and fall method.
2. Longitudinal and cross sectional Leveling
3. Check Leveling

Module-III (11HRS)

Theodolite: Use of theodolite, description, uses and adjustments – temporary and permanent, measurement of horizontal and vertical angles.

Experiments :

4. Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse.
5. Measurement of Inaccessible points.

Module--IV (13Hrs)

Total station: Introduction to Total station, Functions, working principles of total station applications, Use of all parts and all options inside the machines.

Experiments:

6. Basic operation, setting up the instrument
7. Measurement of angle and Measurement of Distance
8. Setting up instrument station, Co-ordinate system
9. Traverse adjustment (With help of software)
10. Area calculation using Total station

Module--V (6Hrs)

Contouring: Characteristics, methods and types of contouring.

Experiments:

11. Preparation of contour map using total station and surfer software.

Module--VI (10HRS)

Curves: Types of curves, Properties– simple, compound, reverse and transition curve.

Experiments:

12. Setting out of different curves (simple, compound, reverse and transition) using Total Station.

Module -VI (10HRS)

Setting out of work using Total station.

Experiments:

13. Setting out of Building
14. Setting out of culvert.

Text Books:

1. Surveying Vol I & II, III B C Purnima, Laxmi Publication.
2. Surveying, volume 1&2 BY S.K.Duggal, TMH publisher.

Lesson Plan

Module I

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Historical survey practice : Introduction to surveying : Classification, Basic Principle, List of Instruments used in surveying.	2	Lecture	Assignment	https://www.youtube.com/watch?v=-JgCfsooiu0)
Total (hrs.)	2			

Module-II

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Levelling : Use of dumpy level and levelling staff. Temporary and Permanent adjustment of dumpy level, Calculation of RL by HI and rise and fall method. Curvature and refraction error, types of levelling, reciprocal levelling, levelling difficulties and common errors.	2	lecture	Assignment	https : //www.youtube.com/watch?v=grvdEYmjSPc
Experiments : Calculation of RL using HI and Rise and fall method.	2	practice, field studies	field study	https : //www.youtube.com/watch?v=grvdEYmjSPc
Longitudinal and cross sectional levelling Check Levelling	4	practice, field studies	field study	https : //www.youtube.com/watch?v=grvdEYmjSPc
Total (hrs.)	8			

Module III

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Theodolite : Use of theodolite, description, uses and adjustments – temporary and permanent, measurement of horizontal and vertical angles.	2	(lecture, lab practice, field studies)	Assignment	https : //www.youtube.com/watch?v=A-kf1oX_xJ0&t=796s . https : //www.youtube.com/watch?v=XsxJD79MR0s)

<p>Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse. Experiments : Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse.</p>	3+2	Lecture ,lab practice, field studies)	Field study	https : //www.youtube.com/watch?v=A-kf1oX_xJ0&t=796s , https : //www.youtube.com/watch?v=XsxJD79MR0s)
<p>Measurement of Inaccessible points using theodolite. Experiments : Measurement of Inaccessible points.</p>	2+2	(lab practice, field studies)	Field study	https : //www.youtube.com/watch?v=eRiSShpqm3U)
Total (hrs.)	11			

Module IV

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Total station : Introduction to Total station, Functions, working principles of total station applications, Use of all parts and all options inside the machines. Electronic data recording & total station operation	3	Lecture	Assignment	<u>(https : //www.youtube.com/watch? v=hISmKTEfgXc)</u>
Experiments : 6. Basic operation, setting up the instrument 7. Measurement of angle and Measurement of Distance 8. Setting up instrument station, Co-ordinate system 9. Traverse adjustment (With help of software) 10. Area calculation using Total station	10	practice, field studies	field study	<u>https : //www.youtube.com/watch? v=hISmKTEfgXc</u> <u>https : //www.youtube.com/watch? v=zZL9MNsmSWo</u> <u>https : //www.youtube.com/watch? v=zZL9MNsmSWo</u>
Total (hrs.)	13			

Module V

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Contouring : Characteristics, methods and types of contouring	1	lecture	assignment	<u>https : //www.youtube.com/watch?v=50jrYYKKUCA</u>
Preparation of contour map using total station and surfer software Experiments : 11. Preparation of contour map using total station and surfer software.	5	lecture, lab practice, field studies	assignment, field study	<u>https : //www.youtube.com/watch?v=50jrYYKKUCA</u>
Total (hrs.)	6			

Module V

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Curves : Types of curves, Properties–simple, compound, reverse and transition curve. Experiments : 12. Setting out of different curves (simple, compound, reverse and transition) using Total Station.	10	lecture, tutorial, field studies	assignment, field study	https : //www.youtube.com/watch?v=aqN8uDJoXFA&t=2s https : //www.youtube.com/watch?v=hISmKTEfgXc
Total (hrs.)	10			

Module VI

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Setting out of work using Total station. Experiments : 13. Setting out of Building 14. Setting out of culvert.	10	lecture, tutorial, field studies	assignment, field study	https : //www.youtube.com/watch?v=XPbWIp56zxY
Total (hrs.)	10			

Basic Electrical Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Basic Electrical Engineering	ENFC0404	Theory & Practice	2-1-0	Nil

Objective

- Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency in the analysis of basic D.C. and A.C.
- Develop selection skill to identify the type of generators or motors required for particular application and highlight the importance of transformers in transmission and distribution of electric power.

Course Outcome

- Understand concept of electrical circuit and magnetic circuit configurations
- Understand fundamentals of single and three phase A.C circuits,
- Understand wiring schedule for residential, office and industrial loads, concept of earthing and will be acquainted with Distribution Transformer and LT lines to understand the fundamentals of distribution system.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module I

Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference, E.M.F, electric power, ohm's law, basic circuit components, Ideal and Practical Sources, Source Conversion, Induced EMF, Energy Stored in Inductor & Capacitor.

Practice:

1. Understanding working principle of DC potential (Lead-Acid battery). Specific gravity of electrolyte. Charging process of battery. Modern DC cells.
2. Plotting the V-I Characteristics of Incandescent lamp.

Module II

DC Networks : Laws and Theorems applicable to DC networks (KCL & KVL, Node voltage & Mesh current analysis, Delta-Star & Star-Delta conversion, Superposition principle, Thevenin's & Norton theorem), Transients in R-L and R-C circuits with DC excitation, Simple problems.

Practice:

3. Verification of Thevenin's theorem, Superposition and Nodal analysis (by experimental setup)
4. Verification of KCL and KVL in series and parallel circuits.
Observing current rise/fall due to transience in DC circuits in Oscilloscope.

Module III

Introduction to Electromagnetism : Magnetic Circuits, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. Methods of preventing such losses. Solenoids and field coils. Application of solenoids in different circuits in Automobiles in electrical protection Working principle of MCBs. Use of field coils in machines and instruments. Galvanometer.

Module IV**Practice:**

5. Study of operation of solenoids.
6. Study of operation of MCBs
7. Study of operation of field coils in machines.
8. Observation of generation of magnetic flux for different input current in a coil and plotting BH Curve.

Practice: Applications of electromagnetism.

9. Observing working of a coil, a Galvanometer.
10. Measurement of iron loss in a core from BH curve by using CRO
11. Observing Induction of Electro Motive Force in a DC generator with D.C Shunt Generator.

Module V

Single-Phase AC Circuits : Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor.

Practice:

12. Connection & Measurement of power consumption of a fluorescent lamp/LED.
13. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply.

Module VI

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.

Practice:

15. Measurement of power and power factor in a 3- \emptyset AC circuit by two wattmeter
16. Single-Phase Transformers : Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers
Calculation of No-Load losses of a 1- \emptyset Transformer.

Module VII

Only Practice

17. Domestic Wiring; Switch Boards, Distribution boxes
18. Workshop wiring : Study of the wiring of electrical machine lab.
19. Concept of Earthing.

Reference

Text Books:

1. D C Kulshrestha, “Basic Electrical Engineering”, Tata Mc-Graw Hill Education
2. P K Sathpathy “Basic Electrical Engineering” Oxford

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference.	1	Lecture	Assignment	Book
Emf, electric power, ohm’s law	1	Lecture	Assignment	Video
basic circuit components, Ideal and Practical Sources	1	Lecture	Assignment	Book
Source Conversion	1	Lecture	Assignment	Book
Induced EMF	1	Lecture	Assignment	Book
Energy Stored in Inductor & Capacitor	1	Lecture	Assignment	Book
DC Networks : Laws and Theorems applicable to DC networks (KCL & KVL)	4	Practice	Experiments	Book
Node voltage	1	Lecture	Assignment	Book
Mesh current analysis	1	Lecture	Assignment	Book
Delta-Star & Star-Delta conversion	1	Lecture	Assignment	Book
Superposition principle	2	Practice	Experiments	Book

Thevenin's & Norton theorem	4	Practice	Experiments	Book
Transients in R-L and R-C circuits with DC excitation	2	Lecture	Assignment	Book
Simple problems	1	Tutorial	Assignment	Book
Magnetic Circuits : Introduction to Electromagnetism, B-H curve	1	Lecture	Assignment	Book
Permeability, Reluctance, Solution of simple magnetic circuits	1	Lecture	Assignment	Book
Hysteresis and Eddy current loss	1	Lecture	Assignment	Book
D.C. Machines : Construction	2	Practice	Experiments	Book
Classification and Principle of operation of DC machines, EMF equation of DC generator	1	Lecture	Assignment	Video
Speed Equation of DC Motor	4	Practice	Experiments	Book
Single-Phase AC Circuits : Single-phase EMF Generation, Waveform and Phasor Representation	2+1	Lecture (using videos) and Practice	Experiments	Video
Average and Effective value of sinusoids, Peak factor & Form factor	2	Lecture	Assignment	Video
Complex Impedance and Power using j-operator, Power factor.	2	Lecture	Assignment	Video
Three-Phase AC Circuits : Comparison between single phase and three-phase systems, Three-phase EMF Generation	2	Lecture	Assignment	Video
Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.	1	Lecture	Assignment	Book
Single-Phase Transformers : Construction and principle of operation.	1+2	Lecture and Practice	Experiments	Book
EMF Equation, Transformation ratio	2	Lecture	Assignment	Book
Practical and Ideal transformers	1+2	Practice	Experiments	Book
Induction Motors :	2+2	Lecture and	Experiments	Book

Introduction to Three-phase and Single-phase Induction Motors, Concept of Slip		Practice		
Concept of Slip, Slip-Torque characteristics	1	Lecture	Assignment	Book
Measuring Instruments : Introduction, PMMC Ammeters and Voltmeters with extension of range	2	Lecture	Assignment	Book
Moving-Iron Ammeters and Voltmeters	1	Lecture	Assignment	Book
Dynamometer type Wattmeter, Energy meter	4	Practice	Experiments	Book
Domestic Wiring; Switch Boards, Distribution boxes	2	Practice	Experiments	
Workshop wiring : Study of the wiring of electrical machine lab.	2	Practice	Experiments	
Concept of Earthing.	2	Practice	Experiments	
Total- 68 Hours (Theory- 35 hours, Practice- 33hours)				

Electrical Machines

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electrical Machines	ENFC0405	Theory & Practice	2-1-0	Nil

Objective

- To introduce the students about principles of electromagnetism applied to AC & DC Machines and its importance.

Course Outcome

- Able to distinguish the constructional similarity and dissimilarity between various machines.
- Able to test and certify the machines as per BIS
- Able to select appropriate transformer and electrical machines
- Able to develop selection skill to identify the type of generators or motors required for particular application.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module: I

D.C. Machines: Construction, Classification and Principle of operation of DC machines, EMF equation of DC generator, Dc Motor Characteristics, Speed Equation of DC Motor. Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors and their Application. (Lecture & practice)

Practice:

1. Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
2. Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.

Module: II

Single-Phase Transformers: Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers, Transformer losses, Brief idea on Transformer Phasor diagram and transformer rating

Practice:

3. Calculation of No-Load losses of a 1-Ø Transformer.

Module: III

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply. Delta-delta, Star-delta, Delta-star, Zig-zag connections. Scott connection, Open delta connection. Auto Transformers

Module IV**Three Phase Induction Machines**

Constructional Features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors, Principle of Operation, and Slip Speed.

Practice:

4. Determination of Efficiency, Plotting of Torque-Slip Characteristics of Three Phase Induction motor by Brake Test.

Module: V

Three Phase Synchronous Generators: Synchronous Generator Construction (both Cylindrical Rotor and Salient Pole type), The Speed of Rotation of a Synchronous Generator, Induced voltage in A.C. Machines

Module: VI

Three Phase Synchronous Motors : Basic Principles of Motor operation, Construction, Starting Synchronous Motors, induction motor and Synchronous Motors, Synchronous Motor Ratings, Applications of synchronous motors(Class room teaching)

Module: VII

Single Phase Induction Motors: Starting of Single Phase Induction Motors, Speed Control of Single Phase Induction Motors, Circuit Model. Other types of Motors : Reluctance Motors.(Class room teaching)

Practice:

5. Determination of parameter of a single phase induction motor and study of

(a)Capacitor start induction motor

(b)Capacitor start and capacitor run induction motor

Text Books:

1. Electrical Machines – D P Kothari and I J Nagrath – Tata McGraw Hill.

Reference Books:

1. Electrical Machinery – P S Bimbhra – Khanna Publishers.

2. Electrical Machines - P. K. Mukherjee, S. Chakravarti, Dhanpat Rai & Sons

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
D.C. Machines : Construction	2	Lecture	Assignment	Book
Classification and Principle of operation of DC machines, EMF equation of DC generator	3	Lecture	Assignment	Video
Speed Equation of DC Motor	2	Practice	Experiments	Book
Characteristic for Speed Armature Current, Torque Armature Current	2	Lecture	Assignment	Book
Comparison between Different types of DC Motors and their Application.	1	Lecture	Assignment	Book
Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor	2	Lecture	Assignment	Book
Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.	2	Practice	Experiments	Book
Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.	2	Practice	Experiments	Book
Single-Phase Transformers : Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers, Transformer losses, Brief idea on Transformer Phasor diagram and transformer rating	2	Lecture	Assignment	Book
Calculation of No-Load losses of a 1- \emptyset Transformer.	3	Practice	Experiments	Book
Three Phase Transformers : Three-phase transformer connections- Star-star	1+2	Lecture (using videos) and Practice	Experiments	Video

Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating,	2	Lecture	Assignment	Video
T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply.	2	Lecture	Assignment	Video
Delta-delta, Star-delta, Delta-star, Zig-zag connections.	2	Lecture	Assignment	Video
Scott connection, Open delta connection.	5	Practice	Experiments	Book
Auto Transformers.	1	Lecture	Experiments	Book
THREE PHASE INDUCTION MACHINES : Constructional Features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors,	2	Lecture	Assignment	Book
Principle of Operation, Slip Speed	1	Lecture	Assignment	Video
THREE PHASE SYNCHRONOUS GENERATORS : Synchronous Generator Construction (both Cylindrical Rotor and Salient Pole type),	2+2	Lecture Practice	+ Experiments	Book
The Speed of Rotation of a Synchronous Generator, Induced voltage in A.C. Machines	3	Lecture	Assignment	Book
THREE PHASE SYNCHRONOUS MOTORS Basic Principles of Motor operation, Construction	2+1	Lecture Practice	& Assignment	Book
Starting Synchronous Motors, induction motor and Synchronous Motors, Synchronous Motor Ratings, Applications of synchronous motors(Class room teaching)	2	Lecture	Assignment	Book
SINGLE PHASE INDUCTION MOTORS : Starting of Single Phase Induction Motors, Speed Control of Single Phase Induction Motors, Circuit Model. Other types of Motors : Reluctance Motors.	3+6	Lecture Practice	and Experiments	Book

Determination of parameter of a single phase induction motor and study of (a)Capacitor start induction motor (b) Capacitor start and capacitor run induction motor				
Total : 57 Hours (Theory- 35 hours, Practice- 25 hours)				

Introduction to Automation

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Automation	ENFC0406	Theory & Practice	2-1-0	Nil

Objective

- To provide knowledge levels needed for PLC programming and operating.
- To train the students to develop a relay based control circuit.

Course Outcome

- Gain knowledge on Programmable Logic Controllers
- Understand different types of Devices to which PLC input and output modules are connected
- Provide the knowledge about understand various types of PLC registers

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module -: I (5 Hours)

Introduction to Automation

What is Automation, Brief history of Automation, Automation Uses, Automation - PLC Basics, Mechanical relays versus PLC, PLC Architecture, Functions of various blocks, and working principle of PLC?

Module: II (8 Hours)

PLC Hardware & Terminology

Various Types of Addressing Used within a PLC, PLC Programming input instructions

Practice:

Study of hardware of PLC.

Module: III (9Hours)

Programming PLC's

Differences between Types of Programming, construction of PLC ladder diagrams, Controlling Program Flow in a Ladder Logic Program.

Practice:

Basic programming using ladder logic program

Module: IV (11 Hours)

Timers and Counters

What is timers & Counters, Use of timers and counters within a ladder logic program, Basic concepts of function blocks.

Practice:

Study of latching and unlatching of motor.

Module: V (7 Hours)

PLC Communication

What are the common types of data communications and their characteristics and use of Ethernet TCP/IP protocol.

Practice:

Sequential operation.

Module: VI (5 Hours)

Introduction to SCADA

Introduction and SCADA Basics. Importance of SCADA in Industrial Automation.

Module: VII (15 Hours)

Basic operation of SCADA

Basic operations related to SCADA. How to work on windows property.

Practice:

Basic window property concepts of SCADA.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE I (Introduction To Automation) (Theory- 5 hours)				
What is Automation, Brief history of Automation	1	Lecture	Assignment	Text Book 1
Automation Uses, Automation - PLC Basics	1	Lecture	Assignment	Text Book 1
Mechanical relays versus PLC, PLC Architecture	1	Lecture	Assignment	Text Book 1
Functions of various blocks, working principle of PLC.	2	Lecture	Assignment	Text Book 1
MODULE II (PLC Hardware & Terminology) (Theory- 04 hours, Practice - 04 hours)				
Various Types of Addressing Used within a PLC	2	Lecture	Assignment	Text Book 1
PLC Programming input instructions	2	Lecture	Assignment	Text Book 1
Study of hardware of PLC.	4	Practice	Result of Experiments and Viva	Text Book 1
MODULE III (Programming PLC's) (Theory- 4 hours, Practice –05 hours)				
Differences between Types of Programming	2	Lecture	Assignment	Text Book 1
Construction of PLC ladder diagrams. Controlling Program Flow in a Ladder Logic Program.	2	Lecture	Assignment	Text Book 1
Basic programming using ladder logic program	5	Practice	Result of Experiments and Viva	Text Book 1

MODULE IV(Timers and Counters) (Theory- 06 hours, Practice –05 hours)				
What is timers & Counters,	4	Lecture	Assignment	Text Book 1
Use of timers and counters within a ladder logic program, Basic concepts of function blocks.	2	Lecture	Assignment	Text Book 1
Study of latching and unlatching of motor.	5	Practice	Result of Experiments and Viva	Text Book 1
MODULE V(PLC Communication) (Theory- 02 hours, Practice –05 hours)				
What are the common types of data communications and their characteristic sand use of Ethernet TCP/IP protocol.	2	Lecture	Assignment	Text Book 1
Sequential operation	5	Practice	Result of Experiments and Viva	Text Book 1
MODULE VI(Introduction To SCADA) (Theory- 5 hours)				
Introduction and SCADA Basics	3	Lecture	Assignment	Text Book 1
How to work on windows property	2	Lecture		Text Book 1
MODULE VII(Basic operation of SCADA) Theory- 04 hours, Practice –11 hours)				
Basic operations related to SCADA	2	Lecture	Assignment	Text Book 1
How to work on windows property	2	Lecture	Assignment	Text Book 1
Basic window property concepts of SCADA.	11	Practice	Result of Experiments and Viva	Text Book 1
Total- 60 Hours (Theory- 30 hours Practice-30 hours)				

Introduction to Web Technology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Web Technology	ENFC0407	Theory & Practice	2-1-0	Nil

Objective

- This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web and general grounding introduction to more advanced topics such as programming scripting. This will also explore expose students to the basic tools and applications used in Web publishing.

Course Outcome

- Students may also create web pages using XHTML and Cascading Style Sheets. Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas. Build interactive web applications using AJAX.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module : I (5 hrs)

What is Web? What is WWW, Web site - Static and Dynamic web site, Web application - Client-server, Web development Technologies- Html, CSS, Js, XML, Servlet & JSP, PHP and Ajax.

Module : II (7 hrs)

Introduction to Html, Html structure, Html Editors, Html element/tag & attributes, Designing simple page - Html tag, Head tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag, Frame tag, Div. tag, Html forms - Input type, Text area, Select, Button.

Module : III (5 hrs)

Introduction to CSS, Syntax, Selectors, Embedding CSS to Html, Formatting fonts, Text & background color, Borders & boxing

Module : IV (6 hrs)

Introduction to JS, Embedding JS into Html, Variables, Data types, Operators, Conditional statements, Looping statements, Strings, Arrays, Math Object, Date Object, Functions, Objects, Event Handling.

Module : V (3 hrs)

Introduction to XML, Difference b/w Html & XML, XML editors

Module : VI (3 hrs)

XML Elements & Attributes XML DTD, XML Schema

Module : VII (4 hrs)

XML Schema, XML DOM

E-content : LMS Content

Reference Books :

1. HTML, XHTML & CSS Bible, Brian Pfaffenberger, Steven M.Schafer, Charles White, Bill Karow- Wiley Publishing Inc, 2010 .
2. HTML Black Book by Steven Holzner 2011
3. Web Design with HTML, CSS, JavaScript and jQuery Set by Jon Duckett.
4. Beginning Java Script with DOM scripting and Ajax By Christian Heilmann- Apress Publisher, 2010.
5. Learning PHP & My SQL, Michele Davis, Jon Philips- O’Reilly Publisher, 2009.
6. PHP Cook book By : David Sklar, Adam Trachtenberg- O’Reilly Publisher, 2008

Introduction to Web Technology Lab List of Programs :

1. Create a simple web page using HTML
2. Create and HTML page with a table and a set of ordered and unordered list.
3. Use CSS in the above web page
4. Design a web page for a company XYZ
5. Develop a static web page that shows basic animation
6. Develop a web page for an audio company
7. Develop a dynamic web page
8. Develop a dynamic web page using DHTML and CSS
9. Consider a company ABC which is into selling movie CDs. Develop a web page for the company.
10. Create a web site in which you can navigate from one page to another
11. Create a dynamic web page for a college
12. Organize a set of data using XML

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

		etc.)		
Module-I (Total Theory = 5 Hours)				
What is Web?, What is WWW, Web site - Static and Dynamic web site,	2	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Web application - Client-server, Web development Technologies- Html, CSS, Js, XML, Servlet & JSP, PHP and Ajax.	3	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Module II (Total Theory = 7 Hour /Practical= 8 Hour)				
Introduction to Html, Html structure, Html, Editors, Html element/tag & attributes, Designing simple page - Html tag, Head tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Frame tag, Div tag ; Html forms - Input type, Text area, Select , Button.	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module III (Total Theory = 5 Hours / Practical= 7 Hours)				
Introduction to CSS, Syntax, Selectors	2+3	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Embedding CSS to Html, Formatting fonts, Text & background colour, Borders & boxing.	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module-IV (Total Theory= 6 hour / Practical = 7 Hour)				
Introduction to JS, Embedding JS into Html, Variables, Data types	2	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM

Operators, Conditional statements, Looping statements, Strings, Arrays, Math Object, Date Object, Functions, Objects	2+5	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Event Handling	2+2	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Module-V (Total Theory= 3 Hour/ Practical = 1 Hour)				
Introduction to XML, Difference b/w Html & XML	3+1	Lecture	Assignment	Book,Online Sources,SLM
Module-VI (Total Theory= 3 Hour/ Practical = 1 Hour)				
XML editors, XML Elements. XML Schema	3+1	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module-VII (Total Theory = 4 Hour/ Practical = 0 Hour)				
XML Schema, XML DOM	4	Class Room Teaching + PPT + Practical	Assignment	Book, Online Sources, SLM
Total (hrs)	Total = 57 Hours (Theory 33 Hours + Practical 24 Hours)			

Information Security-I

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Information Security-I	FCEN 0408	Theory & Lab	2-1-0	Nil

Objective

- Get a clear understanding of Types of Threats, Vulnerabilities, Risks and various terminologies in Information Security.
- Understand C I A of Security and Ease of Use Triangle in Information Security
- Understand Access Controls and Physical security measures to safeguard the Assets
- Understand System And Server Security And Internet Security
- Understand Cyber Law and its need

Course Outcome

- Students will understand the importance of CIA Traid (Confidentiality, Integrity and Availability) and advantage of Security
- The student will be able to safeguard their Assets

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module: I INTRODUCTION (7 Hours)

Security Definition, Why Security, Security and its need, Current Trends and Statistics, Basic Terminology, The C I A of Security the Relation : Security functionality and Ease of Use Triangle

Module : II USER IDENTITY AND ACCESS MANAGEMENT (4 Hours)

User identity and Access Management : Authentication, Account Authorization, Validation, Access Control and Privilege management.

Module : III HASHING AND CRYPTOGRAPHY (6 Hours)

Hashing and Cryptography- Encryption and Decryption

Module : IV SYSTEM AND SERVER SECURITY (9 Hours)

System Security, Desktop & Server Security, Firewalls, Password cracking Techniques, Key-logger, viruses and worms, Malwares & Spy wares, Windows Registry

Module : V INTERNET SECURITY (5 Hours)

Internet Security : LAN Security, Email Security, Hacking attacks, preventive measures

Module : VI RISK ASSESSMENT (6 Hours)

Vulnerability Assessment, Penetration Testing, Risk Assessment, Threat, Vulnerability

Module : VII CYBER LAWS (3 Hours)

Cyber Laws – India Context

E-content : LMS Content

Text Books :

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE 1 : Introduction (Theory- 7 hours, Practice- 8 hours)				
Security Definition, Why Security, Security and its need	2	Lecture	Assignment	Book, Online source,SLM
Current Trends and Statistics, Basic Terminology	2	Lecture	Assignment	Book, Online source,SLM
The C I A of Security the Relation : Security functionality and Ease of Use Triangle	3	Lecture	Assignment	Book, Online source,SLM
System Security Configuration in Windows 7 I & II	2	Practice	Experiments	Online source,Video
DOS attacks and its prevention	2	Practice	Experiments	Online source,Video
Password Based Authentication Process	2	Practice	Experiments	Online source,Video
Service Management of Windows 7 for prevention of attacks.	2	Practice	Experiments	Online source,Video
MODULE II USER IDENTITY AND ACCESS MANAGEMENT (Theory- 4 hours)				
User identity and Access Management : Authentication, Account Authorization	2	Lecture	Assignment	Book, Online source

Validation, Access Control and Privilege management.	2	Lecture	Assignment	Book, Online source
MODULE III HASHING AND CRYPTOGRAPHY(Theory- 6 hours, Practice- 3 hours)				
Hashing	2 + 1	Lecture + Practice	Experiment	Book, Online source
Cryptography- Encryption and Decryption	4	Lecture	Assignment	Book, Online source
Event logger analysis	2	Practice	Experiment	Book, Online source
Module IV SYSTEM AND SERVER SECURITY (Theory- 9 hours, Practice- 7 hours)				
System Security, Desktop & Server Security	2	Lecture	Assignment	Book,Online ,SLM
Firewalls	2+2	Lecture + Practice	Experiment	Book,Online ,SLM
Password cracking Techniques	2+2	Lecture + Practice	Experiment	Book,Online ,SLM
Key-logger	1+2	Lecture + Practice	Experiment	Book,Online ,SLM
viruses and worms, Malwares & Spy wares	1	Lecture	Assignment	Book,Online ,SLM
Windows Registry	1+1	Lecture + Practice	Experiment	Book,Online ,SLM
Module V INTERNET SECURITY (Theory- 5 hours, Practice- 0 hours)				
LAN Security	2	Lecture	Assignment	Book,Online,SLM
Hacking attacks, preventive measures	2	Lecture	Assignment	Book,Online,SLM
Security on E-mail	1	Lecture	Assignment	Book,Online,SLM
Module VI INTERNET SECURITY (Theory- 6 hours, Practice-2 hours)				
Vulnerability Assessment	2 +2	Lecture + Practice	Experiment	Book,Online ,SLM
Penetration Testing	2	Lecture	Assignment	Book,Online,SLM

Risk Assessment	1	Lecture	Assignment	Book,Online,SLM
Threat, Vulnerability	1	Lecture	Assignment	Book,Online,SLM
Module VII Cyber Law (Theory- 3 hours)				
Cyber Laws – Indian Context.	2	Lecture	Assignment	Book,Online,SLM
Importance of Cyber Law	1	Lecture	Assignment	Book,Online,SLM
Total (hrs) : 60 Hours (Theory- 40 hours, Practice- 20 hours)				

Programming in C

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Programming in C	ENFC0409	Theory & Practice	2-1-0	Nil

Objective

- To provide basic knowledge of programming tools and techniques.
- To familiarize the programming environment and syntax of C programming.
- To understand the working of basic programming constructs.

Course Outcome

- The students will able to apply programming skills to problem solving.
- The student will able to write 150 to 200 line programs without any error.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module I :Problem Solving Techniques (10Hours)

Problem solving techniques : Algorithm, flow chart; Structure of C program, Character set, Identifiers, Keywords, Data Types, Constants and Variables, Input-output statements, relational and logical operators, increment and decrement operators, conditional operator, bit-wise operators, assignment operators, expressions, type conversions, conditional expressions, precedence and order of evaluation.

Module II : Control Structures (7Hours)

Statements and blocks, if and switch statements, loops : -while, do-while and for statements, break, continue, goto.

Module III : Array(7Hours)

Arrays-concepts, declaration, definition, accessing elements, two-dimensional and multi-dimensional arrays, applications of arrays.

Module IV : Functions(15 Hours)

Designing structured programs Functions, parameter passing, user defined functions, recursive functions, storage classes- extern, auto, register, static, scope rules.

Module V : Pointern (15 Hours)

Pointers- concepts, initialization of pointer variables, pointers and function arguments, address arithmetic, Character pointers and functions, pointers to pointers, pointers and multidimensional arrays, dynamic memory management functions, command line arguments.

Module VI : Structures(11Hours)

Derived types-structures-declaration, definition and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self referential structures, unions,

Module VII : Files (10Hours)

Typedef, bit fields, C program examples. Input and output–concept of a file, text files and binary files, streams, standard I/O, Formatted I/O, file I/O operations.

Text Books :

1. E. Balaguruswamy “Programming in C”, Tata McGraw Hill 3rd Edition
2. Y. Kanetkar, “Let us C”, BPB Publications-9th edition.

Reference Books :

1. H. Scheldt, “C The Complete Reference”, Tata McGraw Hill
2. B.W. Kernighan & D.M. Ritchie, "C Programming Language", PHI.
3. Gotterfried, Schaum Series-“C Programming”.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I 5 hrs lectures + 3 hrs practice				
Problem solving techniques : Algorithm Problem solving techniques : flow chart	1	lecture	assignment	Book
Structure of C program Character set, Identifiers Keywords, Data Types, Constants and Variables, Input-output statements	1+1	lecture, quiz	assignment	Book

Relational and logical operators, increment and decrement operators	1	lecture	assignment	Book
Conditional operator, bit-wise operators, assignment operators	1+2	lecture, practice	assignment	Book
Expressions, type conversions Conditional expressions, precedence and order of evaluation	1	lecture		Book
Module II 4 hrs lectures + 5 hrs practice				
Statements and blocks, if and switch statements	2+1	lecture, practice	assignment	Book
loops : -while, do-while	1+2	lecture, practice	assignment	Book
for statements, break, continue, goto	1+2	lecture, practice	assignment	Book
Module III 5 hrs lectures + 5 hrs practice				
Arrays-concepts Declaration, definition, accessing elements, programs	1+2	lecture, practice, quiz	assignment	Book
two-dimensional arrays multi-dimensional arrays	2+2	lecture, practice	assignment	Book
applications of arrays	2+1	lecture, practice	assignment	Book
Module IV 5 hrs lectures + 4 hrs practice				
Designing structured programs : -Functions	1	lecture, practice	assignment	Book
parameter passing, user defined functions	2+2	lecture, practice	assignment	Book
recursive functions	1+1	lecture,	assignment	Book

		practice		
storage classes-extern, auto, register, static, scope rules	1+1	lecture, practice	assignment	Book
Module V 5 hrs lectures + 4 hrs practice				
pointers-concepts, initialization of pointer variables	1	lecture	assignment	Book
pointers and function arguments, address arithmetic, Character pointers and functions	2+2	lecture, practice	assignment	Book
pointers to pointers, pointers and multidimensional arrays	1+1	lecture, practice	assignment	Book
dynamic memory management functions, command line arguments	1+1	lecture, practice	assignment	Book
Module VI 6 hrs lectures + 5 hrs practice				
Derived types-structures-declaration, definition and initialization of structures, accessing structures	2+2	lecture, practice	assignment	Book
nested structures, arrays of structures	2+1	lecture, practice	assignment	Book
pointers to structures, self referential structures	1+1	lecture, practice	assignment	Book
unions	1+1	lecture, practice	assignment	Book
Module VII 4 hrs lectures + 6 hrs practice				
Typedef, bit fields Input and output–concept of a	2+2	lecture, practice	assignment	Book

file, text files and binary files, streams				
standard I/O, Formatted I/O	1+2	lecture, practice	assignment	Book
file I/O operations	1+2	lecture, practice	assignment	Book
Total (hrs)	34+32			

Desktop Operating System (Windows 10)

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Desktop Operating System (Windows 10)	ENFC0410	Theory & Practice	2-1-0	FCEN0119 Operating System Building Blocks

Objective

- To install and configure Windows 10 enterprise.
- Configure networks, security settings in Windows 10 enterprise.

Course Outcome

- Student will able to install windows 10 enterprise.
- Student will able to configure devices, security settings, firewall in Windows 10 enterprise.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module : I Installing, upgrading and managing Windows (4 Hrs.)

Gathering hardware devices, preparing to install windows, upgrading and migrating, Clean and Image based installation, Configuring Application Compatibility

Module : II Windows Features ,device drivers and disk managemnt (4 Hrs.)

Administrating windows features, Disk management, and installing and configuring device drivers.

Module : III File Access, Printers with Windows (4 Hrs.)

Introduction to Authentication and Authorization, Managing file access, Shared Folders, File compression, file archiving, managing printers

Module : IV Network connectivity with Windows (4 Hrs.)

Connecting windows client with server, configuring ipv4 & ipv6 connectivity, Implementing APIPA, Introduction to Name resolution, troubleshooting network issues, Overview of wireless network, configuring wireless network.

Module : V Securing, Optimizing and maintaining windows Client (5 Hrs.)

Overview of local security management, local security policy settings, EFS and Bitlocker, Application restrictions, UAC, Windows Firewall, Windows Defender.

Module : VI Configuring Browser and Mobile Computing in Windows (3 Hrs)

Administrating IE8, Configure Mobile computer and device settings

Module : VII Configuring Remote Access in windows (4 Hrs.)

Remote desktop, remote assistance, direct access, branch cache.

LAB EXERCISES : ANY TEN LABS

Navigating and Customizing the User Interface

Navigating the Windows 10 User Interface

Configuring Start

Configuring the Desktop

Installing Windows 10

Upgrading Windows 7 to Windows 10

Migrating User Settings

3 .Configuring Windows 10

Using the Settings App

Using Control Panel

Using Windows Power Shell

Using GPOs

Synchronizing Settings with One Drive

Connecting a Microsoft Account

Synchronizing Settings between Devices

Configuring Network Connectivity

Verifying and Testing IPv4 Settings

Configuring Automatic IPv4 Settings

Configuring and Testing Name Resolution

Managing Storage

Adding a Disk

Creating a Simple Volume

Compressing a Folder

Enabling Disk Quotas

Creating a Storage Space

Configuring and Managing Permissions and Shares

Creating, Managing, and Sharing a Folder

Using Conditions to Control Access and Effective Permissions

Installing and Managing a Printer

Managing and Using a Printer

Configuring Windows 10 Web Browsers

Configuring and Using Microsoft Edge

Configuring and Using Internet Explorer

Data Security

Using EFS

Using Bit Locker

Device Security

Creating Security Policies

Testing Security Policies

Configuring UAC Prompts

Configuring and Testing AppLocker

Network Security
 Creating and Testing Inbound Rules
 Creating and Testing Outbound Rules
 Creating and Testing Connection Security Rules
 Configuring Windows Defender
 Troubleshooting and Recovery
 Managing Device Drivers
 Using File History to Recover Files
 Using Previous Versions to Recover Files
 Recovering a Device with a Restore Point
 Using the Advanced Start-up Options to Recover a Device

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module : I Lecture=4 Lab Practice=2				
Installing, upgrading and managing Windows 10 : Gathering hardware devices, preparing to install windows.Up grading and migrating, Clean and Image based installation.Configuring Application Compatibility,	4+2	Lecture, lab practice	experiment	Book, Online source
Module : II Lecture=4 Lab Practice=4				

Configuring Application Compatibility, administrating windows features, Disk management, and installing and configuring device drivers.	4+4	Lecture, lab practice	experiment	Book, Online source
Module : III Lecture=4 Lab Practice=3				
Introduction to Authentication and Authorization, Managing file access, Shared Folders, File compression, file archiving, managing printers	2+1	Lecture, lab practice	Experiment	Book, Online source
File compression, file archiving, managing printers.	2+2	Lecture, lab practice	Experiment	Book, Online source
Module : IV Lecture=4 Lab Practice=2				
Connecting windows client with server, configuring ipv4 & ipv6 connectivity, Implementing APIPA.	2+1	Lecture, lab practice	Experiment	Book, Online source
Introduction to Name resolution, troubleshooting network issues, Overview of wireless network, configuring wireless network.	2+1	Lecture, lab practice	Experiment	Book, Online source
Module : V Lecture=5 Lab Practice=3				
Securing, Optimizing and maintaining windows 10 Client : Overview of local security management	1	Lecture		Book, Online source
local security policy settings.	1+1	Lecture, lab practice	Experiment	Book, Online source
EFS and Bit locker, Application restrictions. UAC,.	2+1	Lecture, lab practice	Experiment	Book, Online source

Windows Firewall. Windows Defender	1+1	Lecture, lab practice	Experiment	Book, Online source
Module : VI Lecture=3 Lab Practice=2				
Configuring Mobile Computing and Remote Access in windows 10 : Configure Mobile computer and device settings.	3+2	Lecture, lab practice	Experiment	Book, Online source
Module : VII Lecture=3 Lab Practice=2				
Remote desktop, remote assistance, direct access, branch cache.	3+2	Lecture, lab practice	Experiment	Book, Online source
Total (hrs)	46			

Principles of Biochemistry

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Principles Of Biochemistry	FCEN0408	Theory & Practice	3-2-0	Nil

Objective

- To study the structure and properties of carbohydrates.
- Discuss the structure, properties and reactions of proteins and amino acids
- Discuss the structure, properties of fats and lipids
- To study the composition, structure and functions of nucleic acids

Course Outcome

- Aims at providing an elementary knowledge of bio molecules and its application

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module : I

Biochemical Organization

Scope of clinical biochemistry, component of the cell, structure and biochemical functions, membrane structure and functions, transport through biological cell membrane

Module : II

Bioenergetics

Concept of free energy, determination of change in free energy from equilibrium constant and reduction potential, bioenergetics and biological oxidation – general concept of oxidation and reduction

Module : III

Electron transport chain, oxidative phosphorylation, uncouplers and theories of biological oxidation and oxidative phosphorylation.

Module : IV

Carbohydrates :

Classification, properties. Starch, glycogen, dextrin, inulin, cellulose, metabolism of carbohydrates, gluconeogenesis, glycogenolysis, glycolysis, citric acid cycle and its biological significance, role of sugar in nucleotide biosynthesis and pentose phosphate pathway.

Module : V

Lipids :

Classification, properties, sterols, essential fatty acids, eicosanoids, phospholipids, sphingolipids, metabolism of lipids, oxidation of fatty acids, α, β - oxidation and biosynthesis of ketone bodies, cholesterol, porphyrin biosynthesis, metabolism of bile pigments.

Module : VI

Amino acids and nucleic acids :

Classification, properties, biosynthesis of amino acids and proteins, essential amino acids, metabolism of amino acids and proteins, Nitrogen balance, genetic code, nucleic acids, and structure of DNA and RNA, purine biosynthesis and pyrimidine biosynthesis.

Module : VII

Macromolecules, Vitamins, Hormones, Enzymes

Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein, classification and their properties, occurrence, functions, requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties, hormones, Nomenclature, enzyme kinetics, Michaelis-Menten equation, classification and their properties, mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical importance.

LIST OF EXPERIMENTS (Any 8)

1. pH measurements and preparation of buffers.
2. Qualitative tests for Carbohydrates.
3. Estimation of sugars.
4. Estimation of proteins by Lowry's method / Biuret method.
5. Estimation of cholesterol by Zak's method.
6. Determination of saponification number of lipids.
7. Estimation of Amino acids.
8. Separation of amino acids - Thin layer chromatography.
9. Separation of sugars - Paper chromatography
10. Biochemical estimation of DNA /RNA using Spectrophotometer

Text Books :

1. Biochemistry by Jeremy M. Berg, John L. Tymoczko, Lubert Stryer, Fifth edition, W.H. Freeman and Company, 1514 pages.
2. Thomas M. Devlin. Textbook of Biochemistry with clinical correlations. Wiley Liss Publishers

Reference Books :

1. Burtis & Ashwood W.B. Tietz Textbook of Clinical chemistry. Saunders Company
2. Lubert Stryer W.H. Biochemistry. Freeman and company, New york.
3. Donald Voet & Judith G. Voet. Biochemistry. John Wiley and Sons, Inc.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Scope of clinical biochemistry	2			
component of the cell,	1			
membrane structure and functions, transport through biological cell membrane	2			
structure and biochemical functions	1			
Module II		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Concept of free energy,	1			
determination of change in free energy from equilibrium constant and reduction potential,	2			
bioenergetics and biological oxidation	2			
general concept of oxidation and reduction	2			
Module III		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Electron transport chain,	1			
oxidative phosphorylation, uncouplers	1			
theories of biological oxidation	1			
oxidative phosphorylation.	2			
Module IV		lecture,	assignment	Book, Video,

classification, properties. starch, glycogen, dextrin, inulin, cellulose	2	tutorial, lab practice		Online source
metabolism of carbohydrates, gluconeogenesis, glycogenolysis,	1			
glycolysis. citric acid cycle and its biological significance	1			
role of sugar in nucleotide biosynthesis and pentose phosphate pathway	2			
Module V		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Classification, properties. sterols, essential fatty acids, eicosanoids	1			
phospholipids, sphingolipids	1			
metabolism of lipids, oxidation of fatty acids	2			
α, β - oxidation and biosynthesis of ketone bodies	1			
cholesterol, porphyrin biosynthesis	1			
metabolism of bile pigments.	1			
Module VI		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Classification, properties, biosynthesis of amino acids and proteins,	2			
essential amino acids, metabolism of amino acids and proteins,	2			
Nitrogen balance, genetic code, nucleic acids, and structure of DNA and RNA,	1			
purine biosynthesis and pyrimidine biosynthesis.	2			

Module VII		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein	2			
classification and their properties, occurrence, functions, importance	2			
requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties,	1			
hormones, Nomenclature, enzyme kinetics,	1			
Michelles-Menten equation, classification and their properties,	2			
mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical	1			
Total (hrs)	45+20			

Cell Biology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cell Biology	FCEN0409	Theory & Practice	3-2-0	Nil

Objective

- To study cell structure and functions of organelle functions
- Exposure on transportations through cell membrane
- To focus on different receptors and model of signaling
- To introduce the concept of cell signaling

Course Outcome

- The course is aimed to make the student understand the basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module : I

Cell Structure and function

Origin and evolution of cells, molecular composition of cells, central role of enzymes, metabolic energy, biosynthesis of cell constituents, cell membrane

Module : II

Nucleus, Endoplasmic reticulum, Golgi apparatus and Lysosomes, Bioenergetics and Metabolism – Mitochondria, chloroplasts, Peroxisomes.

Module : III

Cell Division

Cell cycle – Mitosis, Meiosis, Molecules controlling cell cycle

Module : IV

Extra cellular matrix, role of matrix in cell enthore : Gap junctions, Tight junctions, Plasmodesmata.

Module : V**Transport across cell membrane**

Passive and Active Transport, Permeases, Ion channels, ATP pumps. Na^+ / K^+ / Ca^{2+} pumps uniport, symport antiporter system. Ligand gated / voltage gated channels, Agonists and Antagonists.

Module : VI**Signal Transductions**

Receptors – extracellular signaling, Cell surface / cytosolic receptors and examples, Different classes of receptors autocrine / paracrine / endocrine models, Secondary messengers molecules.

Module : VII

The Development and causes of cancer, tumour viruses, oncogenes, prevention and treatment

LIST OF EXPERIMENTS (Any 8)

1. Microscopic study of cell and cell organelles
2. Cell fractionation
3. Fixation, Dehydration, embedding and sectioning of tissues
4. Histology of extracellular matrix
5. Quantitative analysis of lipid classes by TLC
6. Isolation of microtubules
7. Isolation of actin and Myosin filaments
8. Isolation of Mitochondria
9. Nuclear staining
10. Stages of cell cycle.

Text Books :

1. The Cell : A molecular approach by Geoffrey M. Cooper. ASM Press, Pages : 673

Reference Books :

1. Molecular Biology of the Cell Edition 4, Roberts, Keith Alberts, Bruce Johnson, Alexander Raff, Martin Walter, Peter Lewis, Julian, Garland
2. Molecular Cell Biology, Lodish, Harvey Krieger, Monty Kaiser, Chris A. Berk, Arnold, W H Freeman & Co

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Origin and evolution of cells	2			
molecular composition of cells, cell membrane	1			
central role of enzymes, metabolic energy, biosynthesis of cell constituents	2			
Module II		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Nucleus, Endoplasmic reticulum	2			
Golgi apparatus and Lysosomes	2			
Bioenergetics and Metabolism	2			
Mitochondria chloroplasts	1			
Peroxisomes	1			
Module III		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Cell cycle – Mitosis	2			
Meiosis	2			
Molecules controlling cell cycle	1			
Module IV		lecture, tutorial, lab	assignment	Book, Video, Notes
Extra cellular matrix, role of matrix in cell enthore	2			

Gap junctions	1	practice,		
Tightjunctions, Plasmodesmata.	1			
Module V		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Passive and Active Transport,.	2			
Permeases, Ion channels,	2			
ATP pumps. Na ⁺ / K ⁺ / Ca ²⁺ T pumps uniport,	2			
Symport antiporter system	1			
Ligand gated / voltage gated channels	1			
Agonists and Antagonists	1			
Module VI		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Receptors – extracellular signaling	2			
Cell surface / cytosolic receptors and examples,	2			
Different classes of receptors antocrine / paracrine / endocrine models	1			
Secondary messengers molecules	2			
Module VII		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
The Development and causes of cancer	2			
tumour viruses, oncogenes,	1			
prevention and treatment	2			
Total (hrs)	45+20			

Programming for Problem Solving- Java

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Programming for Problem solving- Java	ENFC0412	Theory + Practice	1-2-0	Nil

Objective

- Learn problem solving using object-oriented concepts
- Implement object oriented programming using Java
- Analyze several alternative solutions to determine the best approach
- Create job opportunities in java application development area

Course Outcome

- Able to use object oriented concept to solve problems
- Write an error free program of minimum 200 lines of code.
- Acquire java coding skill which helps students in getting jobs in different IT firms

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Projects :

1. Simple Currency Converter
2. Designing a Calculator
3. Generating the mark sheet of a student
4. Create a phone directory and search a number
5. Create a tic tac toe game
6. Developing a library maintenance system
7. Desktop applications
8. Exam System (Without Database)
9. Create Country MAP and Different banners

Course outline

Module: I (10Hrs) :

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study.

Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program.

Object-Oriented Programming : Object Oriented Concepts, Java Programming Environment, Feature of Java, Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module : II(15 Hrs)

Classes : Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword.

Inheritance and Polymorphism: Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module :III (10 Hrs) :

Packages : Packages, Access Protection, Importing Package

Interfaces : Interface, Implementing Interfaces.

Module :IV (10 Hrs) :

String Handling : String, String Buffer, String Builder.

Exception Handling : Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, Multiple Catches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception.

Module :V (10 Hrs) :

Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util).

Module-VI (10 Hrs) :

Java.IO : I/O Streams, Serialization

AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module :VII (10 Hrs) :

Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components.

Text Books:

1. Mark Lassoﬀ, Java Programming for Beginners, Packt Publishing Limited, October 2017
2. Walter Savitch, “Java-An Introduction to Problem Solving & Programming”, 8th edition, Pearson, 2017
3. Herbert Schildt, “Java Complete Reference”, 10th edition, in McGraw-Hill Education, 2017

Reference Books:

1. Dr. Edward Lavieri, Peter Verhas, Mastering Java 9, Packt Publishing Limited, October 2017
2. Nell Dale, Chip Weems, “Programming and problem solving with Java”, in Jones and Bartlett, 2008
3. Bhave&. Patekar, “Programming with Java” in Pearson Education, 2008
4. H.M. Deitel& Paul J. Deitel, “Java How to Program” in PHI, 9th Edition, 2012

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Problem Solving Techniques : Ask Questions, Look for things that are familiar,	4	Lecture		Book

solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study				
Installation of JDK,Configure runtime environment and Visualizing Java programming Environment (architecture)	1+1	Practice		
What is Programming, Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program	1	Lecture	Assignment	Book
Constructing skeleton of Java Program, Object Oriented Concepts, Java Programming Environment, Feature of Java	2+2	Lecture, Practice	Assignment	Book
Share and execute India Map & CUTM Banner Sharing and Execute Calculator program	2	Practice	Assignment	

Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, more example	2	Practice	Assignment	Book
Conditional statement, looping statement,	2	Practice	Assignment	Book
Sharing and Execute calculate grade of students	2	Practice		
Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor With Examples	2+2	Lecture, Practice	Assignment	Book
Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword	2	Practice	Assignment	Book
Sharing and Execute area of shapes	1	Practice		
Inheritance and Polymorphism : Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch	1+2	Lecture, Practice	Assignment	Book
Abstract Classes, Inner Classes	1+2	Lecture, Practice	Assignment	Book

ToDo list where you can calculate the completed task vs. pending tasks.	1	Practice		
Packages, Access Protection, Importing Package, Interface, Implementing Interfaces	1+4	Lecture, Practice	Assignment	Book
StringHandling : String, StringBuffer, StringBuilder	1+2	Lecture, Practice	Assignment	Book
Create a phone directory and search for a number.	1	Practice		
Excepting Handling : Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, Multiple Catches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception	1+4	Lecture, Practice	Assignment	Book
Create a tic tac toe game	1	Practice		

java.io : I/O streams, Serialization	1+4	Lecture, Practice	Assignment	Book
Producer/Consumer Problem	1	Practice		
Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, using Different Thread Methods	1+2	Lecture, Practice	Assignment	Book
Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util)	1+2	Lecture, Practice	Assignment	Book
Developing a library maintenance system.	1	Practice		
Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components	1+2	Lecture, Practice	Assignment	Book
AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers	2+6	Lecture, Practice	Assignment	Book
Total (Hrs)	75	(Theory -24 hrs + Practice -51 hrs =75)		

Database Management System

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Database Management System	ENFC0414	Theory + Practice	1-2-0	Nil

Objective

- Introduce the fundamental concepts of database systems & their importance in practical life and the basic concepts necessary for designing, using and implementing database systems & applications
- Make the students understand the principles behind relational database management systems, including the database environment, the relational model, relational languages, develop simple SQL queries
- Create job opportunities in database design, development and administration.

Course Outcome

- Demonstrate the underlying concepts of database technology, identify the appropriate data model for the given problem
- Write SQL queries for performing database operations
- Design, implement and normalize a relational model for a given problem domain
- Obtain skills in designing, developing and administrating the relational database.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module: I

General introduction to database systems; Database - DBMS distinction, approaches to building a database, data models, database management system, three-schema architecture of a database, challenges in building a DBMS, various components of a DBMS.

File Based Systems and Database Systems : File Based Approach, Database Systems, File-oriented Systems vs. Database Systems Database Approach : Database, Database Management System (DBMS), Components of DBMS Environment, Advantages and Disadvantages of DBMS Roles in Database Environment : Database Users, Database Administrators(DBA)

Module: II

Database System Architecture: Three Level Architecture, External Level, Conceptual Level, Internal Level, Schemas, Mappings, Instances, Data Independence, Data Abstraction
E/R Model - Conceptual data modeling - motivation, entities, entity types, various types of attributes, relationships, relationship types, E/R diagram notation, examples.

Module: III

Relational Data Model: Concept of relations, schema-instance distinction, keys, referential integrity and foreign keys, relational algebra operators : selection, projection, cross product, various types of joins, division, example queries, tuple relation calculus, domain relational calculus, converting the database specification in E/R notation to the relational schema.

Module: IV

Database installation procedure: Database table creation & insertion of values Database Languages : SQL - DDL, DML, TCL, DCL

SQL - Introduction, data definition in SQL, table, key and foreign key definitions, update behaviors. Querying in SQL - basic select-from-where block and its semantics, nested queries - correlated and uncorrelated, notion of aggregation, aggregation functions group by and having clauses, embedded SQL.

Data Definition Language : Creating a Database, Table Operations (Create, Alter, Drop, Truncate, Comment and Rename), Creating and Removing an Index

Data Manipulation Language : Using different DML commands (Insert, Delete, Update, and Select), Sorting Results (Order By), Aggregate Functions, Join, Grouping Results (Group By)

Data Control Language & Transaction Control Language : Using different DCL commands (Grant, Revoke) & using different TCL commands (Commit, Rollback and Savepoint).

Module: V

Dependencies and Normal forms - Importance of a good schema design, problems encountered with bad schema designs, motivation for normal forms, dependency theory - functional dependencies, Armstrong's axioms for FD's, closure of a set of FD's, minimal covers, definitions of 1NF, 2NF, 3NF and BCNF, decompositions and desirable properties of them, algorithms for 3NF and BCNF normalization, multi-valued dependencies and 4NF, join dependencies and definition of 5NF.

Module :VI

Data Storage and Indexes - file organizations, primary, secondary index structures, various index structures - hash-based, dynamic hashing techniques, multi-level indexes, B+ trees.

Terminologies of Relational Model : Relational Data Structure, Relational Keys, Representing Relational Database Schema Integrity Constrains and Views : Nulls, Entity Integrity, Referential Integrity, General Constraints, Views, Purpose of Views

Module: VII

Transaction processing and Error recovery - concepts of transaction processing, ACID properties, concurrency control, locking based protocols for CC, error recovery and logging, undo, redo, undo-redo logging and recovery methods.

PL/SQL : SQL vs PL/SQL, Practice different basic PL/SQL programs

Text Book:

1. Raghuram Ramakrishnan, Johames Gerkhe “ Data Base Management Systems, Mc Graw Hill
2. Gaurav Gupta, Sarika Gupta “ Data Base Management Systems” Khanna Book Publisher

Electronics and its Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electronics and Its Application	ENFC0415	Theory & Practice	2-1-0	Nil

Objective

- The objective of this course is to provide a good understanding on the components used in today's electronics circuits and systems.

Course Outcome

- Describe active and passive components and their application.
- Explain the Working principle of different types of sensor and their application.
- Design and simulate deferent electronic circuits using software tools(ORCAD/MULTISIM/MATLAB)

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: RECENT TRENDS IN ELECTRONIC APPLICATION

(9 Hours)

Theory

a. Smart Electronics : Few Case Studies

- Wearable Electronic Devices / Wearable Technology
- Home Automation
- Driverless Car / Self-driving Car
- Inside a Smart Phone

b. Electronics in Transdisciplinary Applications

- Automotive
- Space
- Underwater
- Medical
- Mining
- Manufacturing

- Industrial Automation
- Robotics
- Agriculture
- Entertainment

c. New Trends

- Green Electronics
- Organic Electronics
- Bio-Electronics
- Nano Electronics
- Polymer Electronics
- Molecular Electronics

Practice

1. Familiarization with different components inside a smart phone

Module II: ELECTRONIC MANUFACTURING

(11 Hours)

Theory

Electronic Manufacturing:

- a. Semiconductor devices
- b. Integrated Circuits (IC)
- c. System-on-Chip (SoC)
- d. System-in-Package (SiP)
- e. Network on Chip (NoC)
- f. Printed Circuit Board (PCB)
- g. Single layer PCB, Double layer PCB, Multi-Layer PCB
- h. Aluminum Backed PCB
- i. 3D Printed PCB

Practice

2. Familiarization with different ICs.
3. Familiarization with PCB design software.
4. Familiarization with 3-D printer.

Module III: COMPONENTS FOR ELECTRONIC CIRCUITS

(12 Hours)

Theory

a. Passive Components :

Resistor, potentiometer, capacitor, inductor, connectors, switches and relays.

b.Active Components :

PN junction diode, Zener diode, Photo diode, Light Emitting Diode (LED), Bipolar Junction Transistor (BJT) and Field Effect Transistor (FET)

Practice:

5. Familiarization with different Components - Resistor, Potentiometer, Capacitor, Inductor, Connectors, switches & Relays. Measurement of Resistance and Capacitance.
6. Application of PN junction diode, Zener Diode
7. Application of LED and photodiode
8. Application of BJT and FET

Module IV: SENSOR & ACTUATOR**(4 Hours)****Theory****a. Sensors : Types and Applications**

- Analog Sensors
- Digital Sensors
- Special Sensors

b. Actuators

- Types of Actuators
- Applications

Practice

9. Familiarization with all types of available sensors.

Module V:SENSOR APPLICATION**(8 Hours)****Theory**

- a. Sensors and Smart Sensors
- b. Reading Sensor Input
- c. Sensor Wiring
- d. Understanding sensors and its application
 - **Infrared Reflectance Sensor.**
 - **Resistance Temperature Detectors**
 - **Temperature Sensor (LM35, Thermistor)**
 - **Motion Sensor**
 - **Limit Switch/Sensor**
 - **Touch Sensor Circuit**

Practice:

10. Sensor Wiring
11. Application of any of the above sensors.

Module VI:VOLTAGE REGULATOR & AMPLIFIER**(8 Hours)****Theory**

Assembling and Testing (Hardware/Multisim) for Different Circuits (Any one from each category by different groups)

a.Voltage Regulator

- Linear Regulators (LM723,78XX,79XX)
- Switching Regulators (LM2676)
- SMPS
- Hybrid Regulators

b.Amplifier

- Voltage Amplifier
- Current Amplifier
- Power Amplifier

Practice

12. Design of a voltage divider circuit
13. Design of an amplifier

Module VII: SWITCH & OSCILLATOR

(8 Hours)

Theory

Assembling and Testing (Hardware/Multisim) for Different Circuits (Any one from each category by different groups)

Switch

- Relay
- Diode as a Switch
- Transistor as a Switch

Oscillator

- Harmonic Oscillator
- Voltage Controlled Oscillator

Practice

12. Design of a switch
13. Design of an oscillator circuit

Practice will be through hardware implementation and software simulation using Multisim / OrCad PSpice/ Matlab.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module-I [7 hrs. Lecture + 2 hrs. Practice]				
Smart Electronics : Few Case Studies Wearable Electronic Devices Wearable Tech Home Automation Driverless Car / Self-driving Car	2	Lecture		Online source
Inside a Smart Phone [Familiarization with different components inside a smart phone]	2	Practice		Online source
Electronics in Transdisciplinary Applications : Automotive Space Underwater	1	Lecture		Online source
Medical Mining Manufacturing	1	Lecture		Online source
Industrial Automation Robotics Agriculture	1	Lecture		Online source
Green Electronics Organic Electronics Bio-Electronics	1	Lecture		Reference Book-1 + Online reference
Nano Electronics Polymer Electronics Molecular Electronics	1	Lecture		Reference Book-1 + Online reference
Module-II [5 hrs. Lecture+6 hrs. Practice]				
Electronic Manufacturing				
Semiconductor devices [Overview only]	1	Lecture		Text Book-3
Integrated Circuits (IC) [Familiarization with all	2	Practice		Text Book-3

available ICs in Lab]				
System on Chip (SoC), System on Package, Network on Chip [Overview and advantage]	1	Lecture		Text Book-3
Single layer PCB, Double layer PCB, Multi-Layer PCB, Aluminum Backed PCB [Overview of design software and application]	4	2hr. Lecture+ 2 hrs. Practice		Text Book-2 Chapter 15
3D Printed PCB	3	1hr. Lecture +2hrs. Practice		Text Book-2 Chapter 15
Module-III [4hrs. Lecture+8 hrs. Practice]				
Passive Components : Resistor, Potentiometer, capacitor, Inductor, Connectors, switches & Relays. [Definition, Function and Application]	4	2hrs. Lecture+ 2hrs. Practice		Text Book-2 Chapter 8 & 9, Text Book-1 Chapter 5
Active Components : PN junction diode, Zener diode, Photo diode, LED, BJT & FET [Function and application]	8	2hrs. Lecture+ 6 hrs. Practice		Text Book-2 Chapter 8 &9 , Text Book-1 Chapter 5
Module-IV [2hrs. Lecture+2 hrs. Practice]				
Sensors : - Types and Applications Analog Sensors Digital Sensors Special Sensors [Overview, Types and Applications]	3	1 hr. Lecture+ 2 hrs. Practice		Text Book-1 Chapter 8
Actuators : - Types of Actuators Applications	1	Lecture		Text Book-1 + online reference
Module-V [4hrs. Lecture+4 hrs. Practice]				
Sensors and Smart Sensors [overview]	1	Lecture		Text Book-1 + online reference
Reading Sensor Input, Sensor Wiring	3	1hr. Lecture + 2 hrs. Practice		Text Book-1 + online reference
• Infrared Reflectance Sensor	4	2hrs. Lecture +		Text Book-1 +

<ul style="list-style-type: none"> • Resistance Temperature Detectors • Temperature Sensor (LM35, Thermistor) • Motion Sensor • Limit Switch/Sensor • Touch Sensor Circuit <p>[Each group will practice any one of the above]</p>		2 hrs. Practice		online reference
Module-VI [4hrs. Lecture+4 hrs. Practice]				
Voltage Regulator Linear Regulators (LM723, 78XX, 79XX) Switching Regulators (LM2676) SMPS, Hybrid Regulators	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Amplifier : Voltage Amplifier, Current Amplifier, Power Amplifier	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Module-VII [4hrs. Lecture+4 hrs. Practice]				
Switch Relay, Diode as a Switch, Transistor as a Switch	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Oscillator Harmonic Oscillator Voltage Controlled Oscillator	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Total (hrs.)	60	29 hr. Lecture + 31 hrs. Practice		

Electronic Devices

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electronic Devices	ENFC0416	Theory + Practice	2-1-0	Nil

Objective

- The objective of this subject is to provide in-depth understanding on construction and characteristics of three major components of electronics-diode, BJT, FET.

Course Outcome

- Learn the construction and characteristics of different semiconductor devices.
- Design different rectifier, voltage regulator circuit and Filters.
- Design and analysis of different amplifier circuits.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I: INTRODUCTION

(4 Hours)

Theory

Various properties of conductor, semiconductor and insulator, n-type and p-type semiconductors. Formation of PN junction, depletion region, drift and diffusion.

Module II: SEMICONDUCTOR DIODE

(8 Hours)

Theory

Open-circuited, forward bias and reverse bias of p-n junction diode, Diode equation, Volt-ampere characteristics of p-n junction diode (forward and reverse bias), Temperature dependence of VI characteristic, Transition and Diffusion capacitances.

Practice

- Volt-Ampere characteristics of a Forward bias PN Diode.
- Volt-Ampere characteristics of a Reverse bias PN Diode.

Module III: SEMICONDUCTOR DIODE**(5 Hours)****Theory**

Breakdown mechanisms in semiconductor (Avalanche and Zener breakdown), Zener diode characteristics, LED and photo diode.

Practice

3. Volt-Ampere characteristics of a Zener Diode

Module IV: RECTIFIERS, FILTERS AND REGULATORS**(11 Hours)****Theory**

Half wave rectifier, full wave rectifier and ripple factor. Application of p-n diode as clipper and clamper. Simple circuit of a regulator using Zener diode, series and shunt voltage regulators.

Practice

4. Implementation of half wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values
5. Implementation of full wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values
6. Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.

Module V: TYPES OF FILTER**(10 Hours)****Theory**

Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter.

Practice

7. Implementation of clamper circuits using PN-junction diode. Tracing of waveforms at the clamper circuits output.
8. Design and implementation of a capacitor Filter.
9. Design and implementation of Voltage Regulator using Zener diode

Module VI: BJT CONSTRUCTION AND CHARACTERISTICS**(12 Hours)****Theory**

Bipolar Junction Transistor (BJT), Types, Construction and it's working principle., Transistor as an amplifier, Detailed study of currents in a Transistor, VI characteristics of transistor in Common Base (CB), Common Emitter (CE) and Common collector (CC) configurations; Comparison of CE, CB and CC transistor configuration. Relation between Alpha, Beta & Gamma.

Practice

10. Plot and verify VI Characteristics of BJT in CB configuration.
11. Plot and verify VI Characteristics of BJT in CC configuration.
12. Plot and verify VI Characteristics of BJT in CE configuration.

Module VII: MOSFET CONSTRUCTION & CHARACTERISTICS (10 Hours)**Theory**

MOSFET –Types, Construction, working Principle, characteristics (Enhancement and depletion mode), Symbols of MOSFET, VI characteristics of CS, CD and CG configuration; Introduction to SCR and UJT; Thermal run away and thermal stability

Practice

13. Plot and verify VI Characteristics of FET in CS configuration.
14. Plot and verify VI Characteristics of FET in CD configuration.
15. Plot and verify VI Characteristics of FET in CG configuration.

Practice will be done through hardware implementation and software simulation using OrCAD PSpice/ Multisim/ LTspice.

Text Book

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I [4 hrs. Lecture]				
Various properties of Conductor, Semiconductor & Insulator, n and p – type semiconductors, Formation of PN junction	2	Lecture	Assignment-1.1	Text Book-1
Depletion region, Drift and diffusion	1	Lecture	Assignment-1.2	Text Book-1
Diode equation	1	Lecture	Assignment-1.3	Text Book-1

Module II [4 hrs. Lecture + 4 hrs. Practice]				
Volt-ampere characteristics of p-n diode (Forward and Reverse bias)	4	Practice		Text Book-1 and Lab Manual
Temperature dependence of VI characteristic, Transition and Diffusion capacitances,	2	Lecture	Assignment-2.1	Text Book-1
Breakdown Mechanisms in Semiconductor (Avalanche and Zener breakdown)	2	Lecture	Assignment-2.2	Text Book-1
Module III [3 hrs. Lecture + 2 hrs. Practice]				
Zener diode characteristics	2	Practice		Text Book-1 and Lab Manual
LED and photo diode	3	Lecture	Assignment-3.1	Text Book-1
Module IV [5 hrs. Lecture + 6 hrs. Practice]				
Half wave rectifier	1	Lecture	Assignment-4.1	Text Book-1
Implementation of half wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values	2	Practice		Lab Manual
Full wave rectifier	1	Lecture	Assignment-4.2	Text Book-1
Ripple factor	1	Lecture	Assignment-4.3	Text Book-1
Implementation of full wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values	2	Practice		Lab Manual
Application of p-n diode as clipper	2	Lecture	Assignment-4.4	Text Book-1
Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.	2	Practice		Lab Manual
Module V [4 hrs. Lecture + 6 hrs. Practice]				
Clamper	1	Lecture	Assignment-5.1	Text Book-1

Implementation of clamper circuits using PN-junction diode. Tracing of waveforms at the clamper circuits output.	2	Practice		Lab Manual
Types of filter, Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter.	1	Lecture	Assignment-5.2	Text Book-1
Design and implementation of a capacitor Filter.	2	Practice		Lab Manual
Simple circuit of a regulator using Zener diode	1	Lecture	Assignment-5.3	Text Book-1
Design and implementation of Voltage Regulator using Zener diode	2	Practice		Lab Manual
Series and shunt voltage regulators	1	Lecture	Assignment-5.4	Text Book-1
Module-VI [6 hrs. Lecture + 6 hrs. Practice]				
Bipolar Junction Transistor, Types, Construction & it's working principle	2	Lecture	Assignment-6.1	Text Book-1
Transistor as an amplifier, Detailed study of currents in a Transistor	2	Lecture	Assignment-6.2	Text Book-1
VI Characteristics of transistor in Common Base (CB) configurations	2	Practice		Text Book-1
VI Characteristics of transistor Common collector (CC) configurations	2	Practice		Text Book-1
VI Characteristics of transistor Common Emitter (CE) configurations	2	Practice		Text Book-1
Comparison of CE, CB and CC transistor configuration. Relation between Alpha, Beta & Gamma	2	Lecture	Assignment-6.3	Text Book-1
Module VII [4 hrs. Lecture + 6 hrs. Practice]				
MOSFET –Types, construction, working principle	2	Lecture	Assignment-7.1	Text Book-1
Characteristics of MOSFET (enhancement and depletion mode). Symbols of MOSEET	1	Lecture	Assignment-7.2	Text Book-1

VI Characteristics of CS, configuration	2	Practice		Text Book-1
VI Characteristics of CD configuration	2	Practice		Text Book-1
VI Characteristics of CG configuration	2	Practice		Text Book-1
Introduction to SCR and UJT. Thermal run away and thermal stability	1	Lecture	Assignment-7.3	Text Book-1
Total (hrs.)	60	30hrs. Lecture + 30hrs. Practice		

Sensors and IOT

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Sensors and IOT	ENFC0417	Theory & Practice	2-1-0	NIL

Objective

- To teach how 'Internet of Things' works, how the Protocols Function, familiarization with different Sensors and their Working, how a Hardware Communicates with Internet and the way it Exchange Necessary Data Through Internet.

Course Outcome

- Students will gain knowledge on how 'Internet of Things' can be utilized and how different Sensors can help in making the System to Operate Effectively and Smartly.
- Students will develop skill in Designing Portable, Ease of Access, Smart, Effective and Efficient Systems to meet the need of Modern Society by using IOT and various Sensors.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I : SENSORS & IOT

(15 Hours)

Theory

What is Sensor? Types of Sensors, URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR, PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11), Stress Sensors, LoadSensors, Force Sensors, Wi-Fi modules

What is IOT, What Device makes it to IOT, IOT Platforms, What IOT means for the Developer, Challenges of IOT

Practice

- Interfacing and Testing the Ultrasonic Module, Relay and Infra-Red Module
- Interfacing and Testing PIR, Laser LED, and Accelerometer
- Interface the LPG Sensor, Monoxide Sensor, Temperature and Humidity Sensor
- Interfacing and Testing Stress Sensor, Load Sensor, Force Sensor, Wi-Fi Modules

Module II: ARDUINO ENVIRONMENT, WEB CONNECTIVITY (12 Hours)

Theory

Introduction to Arduino, setting up the Arduino Development Environment, Options for Internet Connectivity with Arduino, Interacting with Basic Sensors, Interacting with Basic Actuators, Configuring your Arduino Board for the IOT

Practice

5. Installing the Arduino IDE
6. Learning the steps to Interface the Controller Board to the System through the Interface
7. Connecting the Arduino to the Internet
8. Interacting of various Sensors to the Internet through the Controller Board
9. Interfacing Actuators to the Controller Board and Control through the Internet

Module III: DATA EXTRACTION (5 Hours)

Theory

Grabbing the Content from a Web Page, Sending Data to the Web, Troubleshooting Basic Arduino Issues

Practice

10. Extracting Data from a Web Page
11. Sending Data to a Web Page

Module IV: INTERNET DATA MONITORING (10 Hours)

Theory

Introduction, Internet of Things Platforms for Arduino, Posting the Sensor Data Online, Retrieving your Online Data, Securing your Online Data, Monitoring Sensor Data from a Web based Dashboard, Monitoring several Arduino Boards at once, Troubleshooting Issues with Web Data Monitoring

Practice

12. Posting the data to the Internet through Internet on-line
13. Monitor the Sensor output from a remote computer through Internet
14. Parallel Monitoring multiple Controller Boards connected to the Internet

Module V:WEB SERVICES

(7 Hours)

Theory

Introduction, Discovering the Temboo Platform, Tweeting from an Arduino Board, Posting updates on Facebook, Automation with IFTTT, Sending Push Notifications

Practice

15. Posting an update to Facebook
16. Sending a Push notification through the Controller by Internet

Module VI: INTERACTING WITH WEB SERVICES

(15 Hours)

Theory

Sending Text Message Notifications, Storing data on Google Drive, Troubleshooting issues with Web Services

Practice

17. Sending a Text Notification through Internet
18. Control Light and Fan via Internet. (prototyped as LEDs)
19. Operate a DC Motor and Servo Motor to Simulate the opening and closing of door

Module VII:MACHINE-TO-MACHINE INTERACTIONS

(11 Hours)

Theory

Introduction, Types of IoT Interaction, Basic local M2M Interactions, Cloud M2M with IFTTT, M2M Alarm System, Automated Light Controller, Automated Sprinkler Controller, Troubleshooting basic M2M Issues

Practice

20. Operate the Smoke Detector from Internet
21. Extract the reading of Temperature, Humidity and Monitoring through Internet
22. Automating the Control of Light, Sprinkler
23. Operate the Robot through Internet which has facility of Communication to and fro through Web and the Sensor Data

Session Plan :

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I [3 hrs. Lecture + 12 hrs. Practice]				
What is Sensor? Types of Sensors	1	Lecture	Assignment 1.1	Text Book(TB)-1, Reference Book(RB)-1
URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR	1	Lecture	Assignment 1.2	TB-1, RB-1
Interfacing and Testing the URM 37, Relay, IR Module	4	Practice		TB-1
PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11)	1	Lecture	Assignment 1.3	TB-1, RB-1
Interfacing and Testing PIR, Laser, Accelerometer, MQ2, MQ3, DHT-11	4	Practice		RB-1
Stress Sensors, LoadSensors, Force Sensors, Wi-Fi Modules	1	Lecture	Assignment 1.4	TB-1, RB-1
Interfacing and Testing stress Sensor, Load Sensor, force Sensor, Wi-Fi modules	4	Practice		TB-1
Background, What is IOT, What device makes it to IOT, IOT platforms, What IOT means for the Developer.	1	Lecture	Assignment 1.5	TB-1,
Module II [2 hrs. Lecture + 10 hrs. Practice]				
Introduction, Setting up the Arduino Development Environment.	2	Practice		TB-1

Interacting of various Sensors to the Internet through the Controller Board.	4	Practice		TB-1
Interacting with basic actuators, Configuring your Arduino Board for the IoT.	4	Practice		
Module III [1 hrs. Lecture + 4 hrs. Practice]				
Grabbing the content from a Web page, sending data to the Web, Troubleshooting basic Arduino issues.	1	Lecture	Assignment 3.1	TB-2 RB-1,2
Extracting data from a Web page.	2	Practice		TB-2
Sending data to a Web page.	2	Practice		
Module IV [2 hrs. Lecture + 8 hrs. Practice]				
Introduction, Internet of Things platforms for Arduino	1	Lecture	Assignment 4.1	TB-2 RB-1,2
Posting the Sensor data online, retrieving your online data, and Securing your online data, Monitoring Sensor data from a Web-based dashboard.	4	Practice		TB-2 RB-1,2
Monitoring several Arduino Boards at once, Troubleshooting issues with Web data Monitoring.	1	Lecture	Assignment 4.2	TB-2 RB-1,2
Parallel Monitoring multiple Controller Boards connected to the Internet.	4	Practice		TB-2 RB-1,2
Module V [3 hrs. Lecture + 4 hrs. Practice]				
Introduction, Discovering the Temboo platform, Tweeting from an Arduino Board. Tweeting from an Arduino Board	2	Lecture	Assignment 5.1	TB-2
Posting updates on Facebook, Automation with IFTTT, Sending push notifications.	1	Lecture	Assignment 5.2	TB-2
Posting updates on Facebook, Sending push notifications	4	Practice		TB-2
Module VI [1 hrs. Lecture +14 hrs. Practice]				
Sending text message notifications, Storing data on Google Drive.	2	Practice		

Troubleshooting issues with Web services.	1	Lecture	Assignment 6.1	Text Book-1, Reference Book-1,2
Control Light & Fan from the Internet.	4	Practice		
Remote Controlled door (opening & closing) using servo Motor.	4	Practice		
Smoke detector and Remote Control room temperature from Internet.	2	Practice		
Extract the reading of Temperature, Humidity and Monitoring through Internet.	2	Practice		
Module VII [3 hrs. Lecture + 8 hrs. Practice]				
Introduction, Types of IoT interaction, Basic local M2M interactions.	1	Lecture	Assignment 7.1	Text Book-1, Reference Book-1,2
Cloud M2M with IFTTT, M2M alarm system, Troubleshooting basic M2M issues.	1	Lecture	Assignment 7.2	Text Book-1, Reference Book-1,2
Automated light Controller, Automated sprinkler Controller,	4	Practice		
Introduction, choosing a robotic platform, Building a mobile robot, Configuring your mobile robot, Basic robot Control, Using distance Sensors, Controlling your robot from anywhere, Troubleshooting basic robotic issues.	1	Lecture	Assignment 7.3	Text Book-1, Reference Book-1,2
Operate the robot through Internet which has facility of communication to and fro through Web and the Sensor data.	4	Practice		
Total (hrs.)	75	15 hrs. Lecture + 60 hrs. Practice		

Problem Solving and Programming

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Problem Solving and Programming	ENFC0418	Theory +Practice	1-2-0	Nil

Objective:

- To introduce programming through Visual programming tool - SCRATCH
- To teach problem solving through Flow charting tool - RAPTOR
- To elucidate problem solving through python programming language
- To introduce function-oriented programming paradigm through PYTHON
- To train in development of solutions using modular concepts
- To teach practical Python solution patterns
- To enhance the problem analysis capability and problem solving techniques

Course Outcome:

- Develop a program controlled by a loop.
- Experiment with “costumes” to change the appearance of sprites
- Perform Input, Output Operations using scratch
- Perform computation using common mathematical formulas.
- Develop programs by passing messages between sprites.
- Build Mobile apps using App Inventor
- Select flowchart symbols for solving problems.
- Develop basic flowcharts for performing Input, Output and Computations
- Solve numerical problems using Raptor
- Analyze the different computational problems and give programmatic solutions.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I : SCRATCH (10 Hours)

Introduction to programming concepts with scratch, Scratch environment, sprites looks and motion, Angles and directions, repetition and variation, changing costumes, adding background, Input/Output, variables and operators. Working with sounds and sprite communication and

creating stories, App Generation.

Module II : RAPTOR (10 Hours)

RAPTOR: Flow chart symbols, Input/Output, Assignment, operators, conditional if, repetition, function and sub charts.

Module III : Programming Languages (9 Hours)

Various types of Programming Languages(PL), Types of PL, Characteristics of PL, Syntax, Semantics, Pragmatics Analysis Procedure based languages : General features, Data types, Abstract Data Types (ADT), Structuring, Syntax, Semantics, RAM model of computation, Example : C language

Module IV : Object Oriented Concepts (10 Hours)

Object based languages: Concepts of objects, Class vs ADT, control structures, methods, General features-inheritance, polymorphism, derived classes & information hiding, Example : C++ and Java, Difference with C.

Module V : Programming Concepts (12 Hours)

Logic programming: Predicate calculus- Logical operators, Propositional forms, Rules of inference, Logical equivalence, Quantification, Wellformed formula, Disproofs; Prolog- Syntax, Lists, Operators and arithmetic, Control, i/o, data structures. Functional programming : Lisp- Control constructs, List processing, Files and i/o, Generic functions, Objects,Exceptions.

Module VI : PYTHON Basic concepts (12 Hours)

Python – Numbers, Strings, Variables, operators, expressions, statements, String operations, Math function calls, Input/Output statements, Conditional If, while and for loops, User defined Functions, parameters to functions, recursive functions, Turtle Graphics.

ModuleVII : PYTHON Data Structures (12 Hours)

Lists, Tuples, Dictionaries, Strings, Files and their libraries.Beautiful Idiomatic approach to solve Turtle Bar Chart, Event Driven programming. Key press events, Mouse events, timer events.

Data Structures

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Data Structures	ENFC0419	Theory +Practice	2-1-0	Nil

Objective

- Understand and implement linear, nonlinear datastructures
- Implement various searching and sorting techniques.

Course outcome

- Acquire the knowledge about linear, non-linear datastructures.
- Able to implement various searching and sorting techniques.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module I (10 Hrs)

Definition, Classification of data structures: primitive and non-primitive, Elementary data organization, Time and space complexity of an algorithm (Examples)

Module II

(10 hrs)

Stack Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations, Conversion of an arithmetic expression from Infix to postfix, Applications of stacks.

Module III

(10 hrs)

Queue: Definition, Array representation of queue, Types of queue: Simple queue, Circular queue, Double ended queue (De-queue), Priority queue, Operations on all types of Queues

Module IV**(15 Hrs)**

Definition, Components of linked list, Representation of linked list, Advantages and disadvantages of linked list. Types of linked list: Singly linked list, doubly linked list, Circular linked list, Operations on singly linked list: creation, insertion, deletion, search and display.

Module V**(15 Hrs)**

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Tree terminology: Root, Node, Degree of a node and tree, Terminal nodes, Non-terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree: Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, In-order and post-order, Binary search tree, AVL tree.

Module VI (14 Hrs)

Basic Sorting and Searching Techniques: Sequential search: Iterative and Recursive methods, Binary search: Iterative and Recursive methods, Comparison between sequential and binary search. Sort: General background and definition, Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort, Radix sort, heap sort.

Module VII(10 Hrs)

Graphs, Graph terminology, Application of Graphs, Depth First search, Breadth First search, Topological sort.

Switching Theory & Logic Design

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Switching Theory & Logic Design	ENFC0420	Theory + Practice	2-1-0	Nil

Objective:

- The Objective of this Subject is to Provide Good Understanding on Digital Logic and Different Combinational and Sequential Circuits Design and their Implementations.

Course Outcome:

- Understand different number representation and conversion between different representations.
- Design various logic gate and simplify different Boolean equations.
- Design and analyze various combinational circuits.
- Understand the design of sequential circuits in terms of Algorithmic State Machines

Evaluation Systems:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: NUMBER SYSTEMS AND CODES (3 Hours)

Number Systems, Base Conversion Methods, Complements of Numbers, Codes- Binary Codes, Binary Coded Decimal Code and its Properties, Module Distance Codes, Alphanumeric Codes, Error Detecting and Correcting Codes.

Module II: BOOLEAN ALGEBRA AND LOGIC MINIMIZATION (9 Hours)

Basic Theorems and Properties, Switching Functions, Canonical and Standard Form, Algebraic Simplification of Digital Logic Gates, Properties of XOR Gates, Universal Gates, Multilevel NAND/NOR realizations

Module III: LOGIC MINIMIZATION AND COMBINATIONAL CIRCUIT DESIGN (13 Hours)

Introduction, The Minimization with theorem, The Karnaugh Map Method, Five and Six Variable Maps, Prime and Essential Implications, Don't Care Map Entries, Using the Maps for Simplifying, Tabular Method Partially Specified Expressions, Multi-output Minimization, Minimization and Combinational Design, Arithmetic Circuits, Comparator, Multiplexers, Code

Converters, Wired Logic, Tristate Bus System, Practical Aspects related to Combinational Logic Design, Hazards and Hazard Free Relations.

Module IV: SEQUENTIAL CIRCUIT DESIGN (9 Hours)

Introduction, Basic Architectural Distinctions Between Combinational and Sequential Circuits, The Binary Cell, Fundamentals of Sequential Machine Operation, The Flip-Flop, The D-Latch & Flip-Flop, The “Clocked T” Flip-Flop, The “ Clocked J-K” Flip-Flop, Design of a Clocked Flip-Flop, Conversion From One Type of Flip-Flop to Another, Timing and Triggering Consideration, Clock Skew

Module V: REGISTER AND COUNTER (10 Hours)

Introduction, State Diagram, Analysis of Synchronous Sequential Circuits, Approaches to the Design of Synchronous Sequential Finite State Machines, Design Aspects, State Reduction, Design Steps, Realization Using Flip-Flops Counters – Design of Single Mode Counter, Ripple Counter, Ring Counter, Shift Register, Shift Register Sequences, Ring Counter Using Shift Register.

Module VI: FINITE STATE MACHINE (8 Hours)

Finite State Machine-Capabilities and Limitations, Mealy and Moore Models-Minimization of Completely Specified and Incompletely Specified Sequential Machines, Partition Techniques, and Merger Chart Methods-Concept of Minimal Cover Table.

Module VII: ALGORITHMIC STATE MACHINES (8 Hours)

Salient Features of the ASM Chart-Simple Examples-System Design Using Data Path and Control Subsystems-Control Implementations-Examples of Weighing Machine and Binary Multiplier.

Operating Systems

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Operating Systems	ENFC0422	Theory + Practice	1-2-0	Nil

Course Objective

- Provide knowledge about the services rendered by operating systems
- Present details discussion on processes, threads and scheduling algorithms
- Discuss various file-system design and implementation issues
- Provide good insight on various memory management techniques
- Expose the students with different techniques of handling deadlocks
- Familiarize students with the basics of linux operating system and perform administrative tasks on Linux servers
- Provide skills in operating system abstraction, mechanism and implementation of operating system concepts

Course Outcome:

- Understand operating system structure and functions, services and system calls
- Differentiate between preemptive, non-preemptive and real time CPU scheduling
- Understand how to achieve mutual exclusion in uniprocessor systems
- IPC outcome
- Demonstrate the ability to implement various memory management techniques
- Illustrate various demand paging techniques.
- Understand file systems in various operating systems
- Analyse different disk scheduling algorithms
- Understand various schemes available for achieving system protection and system security
- Acquire skill in administrating Linux system

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module :I

Introduction:(8hrs)

Architecture, Goals & Structures of O.S, Basic functions, Interaction of O. S. & hardware architecture, System calls, Batch, multiprogramming. Multitasking, time sharing, parallel, distributed & real -time O.S.

Module: II

Process Management: (13hrs)

Process Concept, Process states, Process control, Threads, Uni- processor Scheduling: Types of scheduling : Preemptive, Non preemptive, Scheduling algorithms : FCFS, SJF, RR, Priority, Thread Scheduling, Real Time Scheduling. System calls like ps, fork, join, exec family, wait.

Module :III(12hrs)

Concurrency control :

Concurrency : Principles of Concurrency, Mutual Exclusion : S/W approaches, H/W Support, Semaphores, pipes, Message Passing, signals, Monitors, Classical Problems of Synchronization : Readers-Writers, Producer Consumer, and Dining Philosopher problem. Deadlock :Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, System calls like signal,kill.

Module :IV

Memory Management : (12hrs)

Memory Management requirements, Memory partitioning : Fixed and Variable Partitioning, Memory Allocation : Allocation Strategies (First Fit, Best Fit, and Worst Fit), Fragmentation, Swapping, and Paging. Segmentation, Demand paging

Module V

Virtual Memory :(8hrs)

Concepts, management of VM, Page Replacement Policies (FIFO, LRU, Optimal, Other Strategies), Thrashing.

Module :VI

I/O management & Disk scheduling : (8hrs)

I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering, Disk Scheduling (FCFS, SCAN, C-SCAN, SSTF), RAID, Disk Cache.

Module :VII

Inter Process Communication :(10hrs)

Basic Concepts of Concurrency, Cooperating process, Advantage of Cooperating process, Bounded- Buffer - Shared-Memory Solution, Inter- process Communication (IPC), Basic Concepts of Inter-process Communication and Synchronization.

Text Book:

Operating System Conceptsby Abraham Silberschatz , Peter B. Galvin , Wiley Publication

Big Data Analytics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Big Data Analytics	ENFC0423	Theory +Practice	1-2-0	Nil

Course Objective

- Learn understand and practice big data analytics approaches with the study of modern computing big data technologies and focus on industry application
- Conceptualize and summarize big data computing technologies machine learning, trivial data vs big data and scale of the approaches.
- Gain essential skills in data storage, process and data analysis

Course Outcome:

- Identify the characteristics of data set and compare trivial data and big data for various applications
- Recognize and implement different ways of selecting parameters and integrate with the mathematical and statistical tools
- Acquires skills in big data applications.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module: I Introduction to Big Data(10 hrs)

Big Data-definition, Characteristics of Big Data (Volume, Variety, Velocity, Veracity, Validity), Importance of Big Data, Patterns for Big Data Development, Data in the Warehouse and Data in Hadoop.

Module: II Introduction to Hadoop (10 hrs)

Hadoop- definition, Understanding distributed systems and Hadoop, Comparing SQL databases and Hadoop, Understanding MapReduce, Counting words with Hadoop—running your first program, History of Hadoop, Starting Hadoop - The building blocks of Hadoop, NameNode, DataNode, Secondary NameNode, JobTracker and Task Tracker.

Module: IIIMapReduce(10 hrs)

A Weather Dataset, Analyzing the Data with Unix Tools, Analyzing the Data with Hadoop, Scaling Out, Hadoop Streaming, Hadoop Pipes, Developing a MapReduce Application - The Configuration API, Configuring the Development Environment, Running Locally on Test Data, Running on a Cluster, Tuning a Job, MapReduce Workflows.

Module: IVHDFS(13 hrs)

Components of Hadoop -Working with files in HDFS, Anatomy of a MapReduce program, Reading and writing the Hadoop Distributed File system -The Design of HDFS, HDFS Concepts, The Command-Line Interface, Hadoop Filesystem, The Java Interface, Data Flow, Parallel Copying with distcp, Hadoop Archives

Module: VMapReduce Programming(12 hrs)

Writing basic Map Reduce programs - Getting the patent data set, constructing the basic template of a Map Reduce program, Counting things, Adapting for Hadoop's API changes, Streaming in Hadoop, Improving performance with combiners.

Module : VI MapReduce Advanced Programming (10 hrs)

Advanced MapReduce - Chaining MapReduce jobs, joining data from different sources, creating a Bloom filter, Passing job-specific parameters to your tasks, probing for task-specific information, Partitioning into multiple output files, Inputting from and outputting to a database, keeping all output in sorted order.

Module: VIIGraph Representation in MapReduce(10 hrs)

Modeling data and solving problems with graphs, Shortest Path Algorithm, Friends-of-Friends Algorithm, PageRank Algorithm, Bloom Filter, Parallelized Bloom filter creation in MapReduce, Map-Reduce semi-join with Bloom filters.

Text Books:

1. Anil Maheswari, “ Big Data” TMH Publication
2. Thomas Erl, Wajid Khattak, Paul Buchler “ Big Data Fundamentals: Concepts, Drivers & Techniques Prentice Hall

Block Chain & Smart Contracts

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Block Chain & Smart Contracts	EN FC0424	Theory +Practice	1-1-0	Nil

Course Objective

- This course aims to provide conceptual understanding of the function of Block chains as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable
- It covers the technological underpinnings of block chain operations as distributed data structures and decision making systems, their functionality and different architecture types.
- Able to build the career in block chain application development

Course Outcome :

- Understand the structure of a blockchain and why/when it is better than a simple distributed database
- Analyze the incentive structure in a blockchain based system and critically assess its functions, benefits and vulnerabilities
- Evaluate the setting where a blockchain based structure may be applied, its potential and its limitations
- Analyze to what extent smart and self-executing contracts can benefit automation, governance, transparency and the Internet of Things (IOT)
- Attain awareness of the new challenges that exist in monetizing businesses around blockchains and smart contracts.
- Acquires skills in design and program smart contracts and decentralized applications

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I

Introduction to Distributed system, Challenges in Centralized networks. Fundamentals of cryptography, Introduction to Hashing Algorithms, Family of SHA Algorithms and its applications. Course overview and logistics Bitcoin The big picture of the industry – size,

growth, structure, players. The key terms that are used. Bitcoin versus Cryptocurrencies versus Blockchain, Distributed Ledger Technology (DLT). Strategic analysis of the space – who are the major players (Block chain platforms, regulators, application providers, etc.) Bitcoin, HyperLedger, Ethereum, Litecoin, Zcash. Etc. The major application : currency, identity, chain of custody.

Module: II

Introduction to blockchain, Blockchain eco system, Introduction to consensus algorithms and its importance, Proof of work, Proof of stake. Mining, Rewards, Forking – hard and soft .Types of blockchain – Public, private, permissioned, permissionless.

Module: III

Smart contract – Writing a simple smart contract – deploying a contract. Applications of smart contracts – real time use cases in Banking & Insurance, Supplychain management.

Module: IV

Cryptocurrency, Introduction to tokens – Security Token, Utility token and payment tokens, ERC 20 and ERC 721. Case study on token usage in gaming and e-commerce industry. Creating our own virtual currency using smart contracts. Scaling Blockchain – reading and writing data. Differentiate nodes, sparse data and Merkle trees. Fixing on the fly – fixes to current implementations : Layer 2 solutions (Lightning and Ethereum state channels.) Bitcoin scaling debate (Segwit2x etc.). The realities of hard forks for scaling, and bugs.

Module: V

Case study on Blockchains – Ethereum, Hyperledger and EOS. Blockchain Dynamics, Public and private blockchains, Hard and soft forks, Sharding Side chains, Distributed Virtual Machines, Smart Contracts, Oracles

Module: VI

Basics of contract law. Smartcontracts and their potential Trust in Algorithms, the impact on society. How existing legal systems could be integrated? OpenZeplin, OpenLaw.

Module: VII

Assets (fiat currencies, property, equity, securities). Supply and demand. Inflation and deflation Valuations and bubbles. Cyrptoconomics – moving beyond its use in verifying the blockchain– motivating participants, creating investment funds, storing value Creating and using tokens and coins.

Text Book:

1. Melanie Swan “ Block Chain Blue Print for new economy” Keilly Publication
2. Tiana Laurence “ Block Chain for Dummies” Wiley Publication
3. Debajani Mohanty “ Block Chain” BPB Publication

Product Development

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Product Development	ENFC0601	Practice + Project	0-2-1	Nil

Objectives

- To educate the students on various stages of development of design of a product beginning from intent-to-actual design.
- Educate the students on usage of design software like ENOVIA, SIMULIA.

Course Outcome

- Students will have knowledge and skills to undertake design projects through making design decisions and evolve design of a product using the theoretical knowledge and hands-on-experience provided on design software.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module : I (08 Hours)

Intent, Impact, Import & Use of Core Mechanical Principles for Concept Design, Engineering Design, Problems Engineering can Solve, How to Identify Opportunities for Design, Needs Assessment & Problem Definition.

Module : II (10 Hours)

Defining Requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing Possible Design Solutions, Making Design Decisions.

Module : III (08 Hours)

Introduction to CAD Process through 3D Experience Free Modeling, Modeling & Managing Subassemblies in the Robot

Module : IV PLM through ENOVIA(09 Hours)

Modeling a Lathe Machine.Introduction to PLM through ENOVIA, Steps Involved in Controlling the Product Updates in ENOVIA.

Module : V (20 Hours)

Introduction to FEA in Industry, Pre-Processing Using SIMULIA.

Module : VI (15 Hours)

Understanding the Mathematical Modeling for Product in Physical Behavior

Module :VII (15 Hours)

Introduction to Design of Experiments, How to Use SIMULIA to Make an Incremental Design Decision.Type of Engineering Analysis.

E-content: Peer Learning Experience by Dassault Systemes.

Text Books:

1. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India.
2. Ulrich, K T, Eppinger, S D, Product Design & Development, 2016, 5th edition, Tata McGraw-Hill Companies, Inc.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I				
Intent, Impact, Import, Use of core Mechanical Principles for concept Design, What is Engineering Design, Problems Engineering can solve, How to	08	Tutorial	Project	

identify opportunities for design, Needs Assessment & Problem Definition,				
Module-II				
Defining requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing a possible design Solutions, Making Design Decisions.	10	Tutorial	Project	
Module-III				
Introduction to CAD Process through 3D Experience free modeling, Modeling & managing subassemblies in the Robot,	08	Tutorial , Practice	Project	
Module-IV				
Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps involved in controlling the product updates in ENOVIA.	09	Tutorial , Practice	Project	
Module-V				
Introduction to FEA in Industry, Pre-processing using SIMULIA, Understanding the Mathematical modeling for Product in physical behavior, Introduction to design of experiments, How to use SIMULIA to make a incremental design decision. Type of Engineering analysis. Projects such as Disc Brake analysis by DOE, Door trim Substrate by DOE, MBD of Suspension by DOE.	20	Practice, tutorial	Project	
Module-VI				
Consumer Sentimental Analysis, Behavior Loyalty Metric, Emotional Loyalty Metric, Understanding decision making dashboards in NetVibes,	15	Lecture, Practice	Project	
Interpreting the Real time social data, Creation of different metric for business condition in Net Vibes, Automate Business logic to respond.	15	Lecture, Practice	Project	
Total (hours)	85			

Artificial Intelligence Tools, Techniques and Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Artificial intelligence Tools, Techniques and Application	ENFC0603	Practice + Project	0-2-1	Nil

Objective

- Introduce fundamental concepts in AI
- Demonstrate the capability to create simple AI applications using Natural Language Processing, Audio engineering & Speech, Computer Vision, pattern recognition and machine learning.
- Present various modeling and formulation techniques to solve problems using AI techniques.
- Introduce state-of-art AI tools and techniques to solve various problems faced by Engineers in design and analysis.

Course Outcome:

- Understand the importance of AI.
- Explain the concepts of Natural Language Processing.
- Understand concepts of Machine Learning algorithms and their limitations.
- Compare different Machine Learning Algorithms
- Summarize applications of Speech Recognition and Synthesis.
- Develop the applications of, Computer Vision and Image Processing.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module :I Introduction to Artificial Intelligence(10 hrs)

Basics of AI.Applications of AI. Advanced search, Constraint satisfaction problems, Knowledge representation & reasoning, Non-standard logics, Uncertain and probabilistic reasoning

Conceptual introduction to **Machine Learning: Introduction** to Neural Networks, Supervised, Unsupervised, and Semi-Supervised Learning, Deep Learning, Reinforcement Learning, LinearRegression.

Module :II Conceptual introduction to Natural Language Processing : (10 hrs)

Natural language Understanding, Sentiment Analysis, Segmentation and recognition.Conceptual introduction to **Speech Recognition &Synthesis: Speech Fundamentals**, Speech Analysis,Speech Modeling, Speech Recognition, Speech Synthesis, Text-to-Speech

Module : III Conceptual introduction to Image Processing & Computer Vision : (10 hrs)

Introduction to Image processing, Image Noise, Removal of Noise from Images, Color Enhancement, Segmentation, Edge Detection, Optical Character Recognition, Feature Detection & Recognition

Module :IV BOT Technologies and Virtual Assistants : (10 hrs)

Chatbots: Introduction to a Chatbot, Architecture of a Chatbot. NLP in the cloud, NL Interface, How to Build a Chatbot, Transformative user experience of chatbots, Designing elements of a chatbot, Best practices for chatbot development. NLP components.NLP wrapper to chatbots.Audiobots and Musicbots.

Virtual Assistants :Architecture of a Virtual Assistant.

Module :V Image Processing & Computer Vision : (10 hrs)

Image - Definition and Tagging.Classification of images.Tagging.Image formation, Deep Learning algorithms for Object detection & Recognition. Face recognition, Instance recognition, Feature detection and matching, Segmentation, Recognition Databases and test sets Applications -- Feature extraction, Shape identification. Fane detection,.

Applications :Automation, Agriculture[Crop and Soil Monitoring, Grading farm produce, Predictive Analytics], Retail and Retail Security[Amazon Go], Autonomous vehicles,

Module: VI Reinforcement Learning(10 hrs)

Introduction to Reinforcement Learning, Game Playing [Deep Blue in Chess, IBM Watson in Jeopardy, Google's DeepMind in AlphaGo], Agents and Environment, Action-Value Function, Deep ReinforcedLearning

Module :VII Smart Applications (10 hrs)

Smart Manufacturing, Smart Agriculture, Smart Healthcare, Smart Education, Smart Grids,

Smart Transportation and Autonomous Vehicles, Smart Homes, Smart Cities

Text Books:

2. Prateek Joshi, Artificial Intelligence with Python, 1st Edition, Packt Publishing Limited, January 2017.
3. Stuart J.Russell, Peter Norving, Artificial Intelligence, Pearson Publishing, 2015

Note: 14 hrs will be assigned for Project.

Cloud Computing and its Applications Using Linux OS

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cloud Computing and its Applications using Linux	ENFC0602	Practice + Project	0-2-1	Nil

Course Objective

- To learn how to use Cloud Services.
- To implement Virtualization
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- Broadly educate to know the impact of engineering on legal and societal issues involved.

Course Outcome

- Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
- Acquires the skills in accessing cloud Storage systems and Cloud security and develop cloud application

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module: I Introduction to User Permissions

(10 Hours)

Users, Groups and Permissions, Using the bash Shell, Std. I/O and Pipes, Text Editor, Basic System Configuration Tools, Investigating and Managing Processes, Configuring the Bash Shell, Finding and Processing Files, Network Clients.

Module: II Basics Commands of OS

(15 Hours)

Basic Commands & OS Basics, browsing root and various directories, ext3 and ext4 file system, chmod, chgrp, bash, set, shell basics, less, more, tail, head, sort, cut, grep, awk, sed, tr, etc., vi, ps, kill, top, jobs, shell scripting – branching, looping, find, locate and advanced find, network related scripts, cron, tar, and additional tools

Module: III File System Management

(10 Hours)

Package Management, Kernel Services, and System Services, File system Management, User Administration, Network Configuration, Installation, and Troubleshooting, Minor Project for develop a file system, System Performance and Security, Web Service and website configuration,

Module: IV Commands of Linux

(10 Hours)

Rpm , yum, apt-get, lspci, lsmod, systemctl services, chkconfig, creating partition, format and mount, LVM useradd, userdel, groupadd, groupdel, passwd, chage, acl, raid, iscsi etc, Basic Installation and Configuration Breaking SU passwd, services check Electronic Mail Services, Account Management, Design and develop a network using packet tracer. Cloud Computing

Module: V Introduction to Cloud

(10 Hours)

Introduction to Cloud, Amazon EC2 and EBS, Amazon S3, RRS, Auto Scaling and load distribution in AWS, Route53, AWS VPC, IAM. Services and resources life cycle, AWS Architecture and Design, Cloud Migration and Implementation

Module: VI Introduction to Kali Linux(15 Hours)

Using Kali Linux - Footprinting and Reconnaissance - FP Terminology, What is FP, Why FP, Objectives of FP, Types of Threats, FP through Search Engines, Competitive Intelligence Gathering, Footprinting using google hacking WHOIS Lookup, DNS Information, Network FP, Traceroute, FP through Social Engineering, Pen Testing, FP Countermeasures. DN Analyzer Pro, Web Data Extractor.

Social Engineering : What is SE, Types of SE, Human-based, Computer-based and Mobile based SE, SE Countermeasures.

Module: VII Networking Concepts**(15 Hours)**

Scanning Networks : Identifying hosts, ports and services, Scanning Methodology, Checking Live Systems, Ping Sweep, Check for Open Ports, Scanning Techniques, scanning beyond IDS, Banner Grabbing, Scan for Vulnerability, Draw Network Diagrams, Prepare Proxies, Pen Testing. Sniffing: Wiretapping, Packet Sniffing, CAM Table, MAC Flooding Tool : macof -i eth0, Yersinia, DHCP Packet Format, Starvation Attack Tool. Rogue DHCP Server Attack ARP, ARP Spoofing Techniques, ARP Spoofing Attack, and Wireshark.

Problem Solving Using Python

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Problem Solving Using Python	ENFC0901	Theory +Practice	1-2-0	Nil

Objective:

- Learn core Python scripting elements such as variables and flow control structures.
- Understand the concepts of file I/O.
- Plot data using appropriate Python visualization libraries such as Numpy, Matplotlib and SciPy etc.
- To enhance the problem analysis capability and problem solving techniques using python

Course Outcome:

- Able to use object oriented concept to solve problems.
- To quickly and easily draw plot or visualize the information through visualization technique.
- Write an error free program of minimum 200 lines of code.
- Acquire python coding skill which helps students in getting jobs in different IT firms

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I : Familiarization of Python (12 Hours)

Features and Installation, Setting up Path, Working with Python Basic Syntax, Variable and Data types, Basic operators, Numbers, Array, Tuples, Dictionary, Date and Time. **String Manipulation** :Accessing Strings, Basic Operations, String slices.

List :Accessing lists, Operations, Working with lists List (Functions).

Decision Making Statement :Boolean Expressions, if-else Statement, Nested if Else Statement, elif Statement, Switch Statement. **Iteration Statement** :The while Statement, for Statement, Nested Loops, Break and Continue statement.

Module II : Functions Operation (10 Hours)

Types of Function, Function Arguments, Passby reference vs value, Recursion Function. Files Operation : Create Text & Binary Files, Different modes of opening a file, Reading and Writing into Files, FilePositions.

Module III : NumPy (10 Hours)

Arrays, Array indexing, Data types, Array math operation, Sequences, Repetitions and Random number, Broadcasting, Polynomial, unique items and the counts.

Module IV : Functional Programming (12 Hours)

Lists, Tuples, Dictionaries, Strings, stacks, queues, lambda function, Standard library functions, multithreading.

Module V : SciPy (12 Hours)

Numpy VS SciPy, File input/output, Special Function, Linear Algebra, Operation, Interpolation, Optimization and fit, Statistics and random numbers, Numerical Integration, Fast Fourier transforms, Image manipulation.

Module VI : GUI Programming (08 Hours)

Example GUI Program, Environment Variables, Label, Message Widget, Text Area, Button, Radio Button, CheckBox, Listbox/ DropDown Box, Frames, Menu Widget, Menu Button Widget, Scrollbar, Forms, Sliders, Database access, Sending email.

Module VII: Data Visualization (11 Hours)

Visualization Libraries, Data frame : Data types, Attributes, methods (mean(), median(), std(), var(), cor(), min()/ max(), describe()), groupby method, Selecting Column, Filtering, Selecting row and column, Missing values, Data read from excel, CSV and txt file. **Plotting using Matplotlib** :Basic plot(), Histogram, Bar Plot, Box Plots, Area Plot, Scatter Plot, PieChart.

Object Oriented Programming Using Java

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Object Oriented Programming using Java	ENFC0902	Theory + Practice + Project	1-1-1	Nil

Objective:

- To learn why Java is useful for the design of desktop and web applications.
- To learn how to implement object-oriented designs with Java.
- To identify Java language components and how they work together in applications.
- To design and program stand-alone Java applications.
- To learn how to design a graphical user interface (GUI) with Java Swing.
- To understand how to use Java APIs for program development.

Course Outcome:

- Able to understand the use of OOPs concepts.
 - Able to solve real world problems using OOP techniques.
 - Able to understand the use of abstraction.
 - Able to understand the use of Packages and Interface in java.
 - Able to develop and understand exception handling, multithreaded applications with synchronization.
- Able to **design** GUI based applications and **develop** applets for web applications.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outline

Module: I Problem Solving Techniques & OOP(10 hrs)

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, MeansEnds Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study. Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program.

Object-Oriented Programming: Object Oriented Concepts, Java Programming Environment,

Feature of Java, Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module : II Class & Characteristics of OOPs (12 hrs)

Classes : Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword. Inheritance and Polymorphism : Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module :III Package and Interface (12 hrs)

Packages : Packages, Access Protection, Importing Package Interfaces : Interface, Implementing Interfaces.

Module :IV String Handling and Exception Handling (10 hrs)

StringHandling : String, String Buffer, String Builder. Excepting Handling :Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, MultipleCatches, Throw, Throws, Finally, Java’s Built-In Exceptions, User-Defined Exception.

Module-V :Multi-Threading (10 hrs)

Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors(java.util).

Module-VI:Java.IO and AWT (10 hrs)

Java.IO : I/O Streams, Serialization AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module: VIIEvent Handling(10 hrs)

Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components

Web Technologies

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Web Technologies	ENFC0903	Theory + Practice + Project	1-1-1	Nil

Objective:

- Understand client server architecture and able to use the skills for web project development
- Create job opportunities as a web developer.

Course Outcome:

- Develop a static, interactive and well-formed webpage using JavaScript, CSS3 and HTML5
- Use PHP7 to improve accessibility of a web document.
- Gain necessary skills for designing and developing web applications

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outcome

Module: I HTML5:(10 hrs)

Editors, Attributes, Head, Meta, Body, Style, Paragraphs, Headings, Bold, Line Breaks, Horizontal Rule, Upload, Textarea, Charset, URL Encoding, XHTML, Semantics, Migration, Syntax, Canvas, SVG, Audio, Video, API's, Geolocation, Drag/Drop, Local Storage, Web Workers, App Cache

Module:II CSS3 (10 hrs)

Introducing CSS3,What is CSS3?,The History of CSS, Browser Support, Selectors and Pseudo Classes, Attribute Selectors, The Target Pseudo-Class, UI Element States Pseudo- Classes, Negation Pseudo-Class, Structural Pseudo-Classes, Fonts and Text Effects, Fonts on the Web, Font Services, Gradients, Rounded Corners, Box Shadow, Transitions, Transforms, and Animations, Transitions and Transforms, Transitions.

Module:III Java Script, XML (12 hrs)

Basics, Functional programming, Object oriented programming, Client-side applications, Server-side applications, Design patterns and Idioms, Popularframeworks.
XML Basics, SAX, DOM, Xpath, Digester, XUL, SOAP, WSDL

Module:IV PHP (12 hrs)

Introduction to PHP,Installation of PHP and mySql,PHP configuration in IIS & Apache Web Server and features of PHP,Writing PHP,How PHP code is parsed,Embedding PHP and HTML,Executing PHP and viewing in Browser,Data types,Operators,PHP variables : static and global variables,Comments in PHP,Control Structures,Condition statements,If...Else Switch,? Operator,Loops,While,Break Statement,Continue,Do... While,For,For each,Exit, Die, Return,Arrays in PHP

Module: V Advanced PHP(10 hrs)

Working With Data Form Element, Input Elements, Validating The User Input, Passing Variables Between Pages, Passing Variables Through A Get,Passing Variables Through A Post, Passing Variables Through A Request,Functions,Handling Sessions And Cookies, Concept Of Session, Starting Session,Modifying Session Variables, Unregistering And Deleting Session Variable,Concept Of Cookies,Handling Of Cookies, Introduction Of MySQL, Types Of Tables In Mysql,Query In Mysql : Select, Insert, Update, Delete,Truncate,Alias,Order By,Database Connectivity Of Php With Mysql

Module: VI Mysqli(10 hrs)

Data Definition Statements, Data Manipulation Statements, Transactional and Locking Statements, Replication Statements, Prepared SQL Statement Syntax, Compound-Statement Syntax, Database Administration Statements, Utility Statements, Connection with PHP and Mysql using PDOs

Module: VII CMS (10 hrs)

BootStrap, Joomla, Wordpress, Drupal with project implementation

Text Books

Software Engineering using Agile

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Software Engineering using Agile	ENFC0904	Theory + Practice + Project	1-1-1	Nil

Objective

- Explain the phases of Software Development.
- Teach the customer requirement gathering techniques.
- Familiarize with Agile software development methods.
- Demonstrate the testing techniques.
- Teach Software Design techniques
- Learn the skill principles and practices associated with agile development methods

Course Outcome:

- List the steps involved in software development.
 - Interpret the myths of software.
 - Analyze various software process models
 - Explain agile software development model
 - Identify the functional and non-functional requirements for software development
 - Analyse user requirements for a software
- Apply agile software development model (L3)
 Identify different requirement modeling strategies (L2)
 Design UML Diagrams for the given problem (L6)

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outline

Module: I Software Engineering Process: (10 hrs)

The Nature of Software, The Unique Nature of WebApps, Software Engineering, The Software Process, Software Engineering Practice, Software Myths, How It All Starts. A Generic Process Model, Process Assessment and Improvement, Prescriptive Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models, Process Technology.

Module: II Agility(10 hrs)

What Is Agility?, Agility and the Cost of Change, What Is an Agile Process?, Extreme Programming (XP), Other Agile Process Models, A Tool Set for the Agile Process, Software Engineering Knowledge , Core Principles, Principles That Guide Each Framework Activity, Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Requirements Model, Negotiating Requirements, Validating Requirements.

Module: III UML Models (12 hrs)

Requirements Analysis, Scenario-Based Modeling, UML Models That Supplement the Use Case, Data Modeling Concepts, Class-Based Modeling, Requirements Modeling Strategies, Flow-Oriented Modeling, Creating a Behavioral Model, Patterns for Requirements Modeling, Requirements Modeling for WebApps.

Module: IV Software Design (12 hrs)

Design within the Context of Software Engineering, The Design Process, Design Concepts, The Design Model, Software Architecture, Architectural Genres, Architectural Styles, Assessing Alternative Architectural Designs, Architectural Mapping Using Data Flow.

Module: VSoftware Design

What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Component-Level Design for WebApps, Designing Traditional Components, Component-Based Development.

Module: VI Software Interface (10 hrs)

The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, WebApp Interface Design, Design Evaluation, A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Test Strategies for Object-Oriented Software, Test Strategies for WebApps, Validation Testing, System Testing.

Module: VII Software Testing (10 hrs)

The Art of Debugging, Software Testing Fundamentals, Internal and External Views of Testing, White-Box Testing, Basis Path Testing

Internet of Things

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Internet of Things	ENFC1407	Workshop	0-2-0	Nil

Objective

- Introduce the fundamental concepts of IoT and physical computing
- Expose the student to a variety of embedded boards and IoT Platforms
- Create a basic understanding of the communication protocols in IoT communications.

Course Outcome:

- Explain IOT architecture.
- Interpret the design principles that govern connected devices
- Summarize the roles of various organizations for IOT
- Explain the basics of microcontrollers
- Outline the architecture of Arduino
- Acquire skills to develop applications using Arduino

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course Outline

Module: I

The Internet of Things : An Overview; The Flavour of the Internet of Things; The “Internet” of “Things”; The Technology of the Internet of Things; Enchanted Objects; Who is Making the Internet of Things?; Design Principles for Connected Devices; Calm and Ambient Technology; Privacy; Keeping Secrets; Whose Data Is It Anyway?; Web Thinking for Connected Devices; Small Pieces, Loosely Joined; First-Class Citizens On The Internet; Graceful Degradation ; Affordances

Module: II

Embedded Computing Basics; Microcontrollers; System-on-Chips; Choosing Your Platform; Arduino; Developing on the Arduino; Some Notes on the Hardware; Openness;

Module: III

Raspberry Pi ; Cases and Extension Boards; Developing on the Raspberry Pi; Some Notes on the Hardware; Openness; Other notable platforms; Mobile phones and tablets; Plug Computing ; Always-on Internet of Things

Module: IV

Internet Principles; Internet Communications : An Overview IP; TCP; The IP Protocol Suite (TCP/IP); UDP ; IP Addresses; DNS ; Static IP Address Assignment ; Dynamic IP

Module: V

Address Assignment; IPv6 ; MAC Addresses ; TCP and UDP Ports An Example : HTTP Ports ; Other Common Ports; Application Layer Protocols- HTTP; HTTPS : Encrypted HTTP ; Other Application Layer Protocols

Module: VI

Getting Started with an API; Mashing Up APIs; Scraping; Legalities; Writing a New API; Clockodillo; Security; Implementing the API; Using Curl to Test; Going Further;

Module: VII

Real-Time Reactions; Polling; Comet; Other Protocols ; MQ Telemetry Transport; Extensible Messaging and Presence Protocol; Constrained Application Protocol

Build Your Own Computer

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Build your Own Computer	ENFC1402	Workshop	0-2-0	Nil

Objective:

- Develop ability to understand the internals of Computer and peripherals
- To have an overall idea about networking concepts and devices
- To have an overall idea about secure computing

Course Outcome:

- Build your computing device
- Troubleshoot various faults in a computer system and network
- Construct small LAN for resource sharing

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course Outline

Module: I

Firmware upgrades/flash BIOS, BIOS component information, BIOS configurations, Built-in diagnostics, Monitoring. Sizes of cabinet, Expansion slots, RAM slots, CPU sockets, Chipsets, CMOS battery, Power connections and types, Fan connectors, Front/top panel connectors, Bus speeds, Resetbutton.

Module :II

Types of RAM, Single channel vs. dual channel vs. triple channel, RAM compatibility. Sound cards, Video cards, Network cards, USB cards, Firewire cards, Thunderbolt cards, Storage cards, Modem cards, Wireless/cellular cards, TV tuner cards, Video capture cards, Risercards.

Module :III

Display types, Refresh/frame rates, Resolution, Native resolution, Brightness/lumens, Analog vs. digital, Privacy/antiglare filters, Multiple displays, Aspect ratios. Display cable and connector types.

Module :IV

Drives, Magnetic hard disk drives, Hot swappable drives, Solid state/flash drives, RAID types, Tape drive, Media capacity.

Module :V

Socket types – Intel and AMD, Characteristics, Cooling – Heat sink, fans, thermal paste.
Connector type, characteristics and their voltages

Module :VI

Input and Output devices, network cable and connectors, crimping of network cable. Hardware and network troubleshooting. Assembling and disassembling of computer and laptop

Module :VII

Installation of DOS and Non-DOS operating system – Automatic and Manual Configurations

Cloud Computing Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cloud Computing Application	ENFC1403	Workshop	0-2-0	Nil

Objective

- Learn fundamentals of cloud computing
- Learn to build distributed applications and microservices with AWS Step Functions
- Learn step-by-step to setup up AWS platform

Course Outcome

- Setup AWS Account and AWS infrastructure
- Deploying serverless micro services
- Implementing scalability and implementing high availability

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course outline

Module: I (8 Hrs)

UNDERSTANDING CLOUD BASICS

Defining cloud computing, Introducing public, private, and hybrid clouds, Introducing cloud service models – IaaS, PaaS, and SaaS, Introducing multi-tenancy models, Compare cloud value proposition with conventional models. Understand Global Infrastructure – Region, Availability Zones, Edge Locations; Setting up AWS account, Getting Familiarity with AWS Management Console; Understanding cloud-based workloads

Module: II (10 Hrs)

DESIGNING CLOUD APPLICATIONS

Introducing cloud-based multitier architecture, Designing for multi-tenancy, Understanding cloud applications design principles, Understanding emerging cloud-based application architectures, Estimating your cloud computing costs, A typical e-commerce web application

Module: III (8 Hrs)

INTRODUCING AWS COMPONENTS

AWS components, managing costs on AWS cloud, Application development environments
Setting up the AWS infrastructure

Module: IV (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SCALABILITY

Defining scalability objectives, Designing scalable application architectures, Leveraging AWS infrastructure services for scalability, Evolving architecture against increasing loads, Event handling at scale, setting up Auto Scaling

Module: V (8 Hrs)

DESIGNING FOR AND IMPLEMENTING HIGH AVAILABILITY

Defining availability objectives, Nature of failures, Setting up high availability

Module: VI (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SECURITY

Defining security objectives, Understanding the security responsibilities, Best practices in implementing AWS security, Setting up security

Module: VII (10 Hrs)

DEPLOYING TO PRODUCTION AND GOING LIVE

Managing infrastructure, deployments, and support at scale, Creating and managing AWS environments using CloudFormation, Using CloudWatch for monitoring, Using AWS solutions for backup and archiving, Planning for production go-live activities, Setting up for production

Hydraulics & Hydraulic Machine

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Hydraulics & Hydraulic machines	CECC0103	Theory	2-0-0	Basic Fluid Mechanics

Objective

- To teach the common manifestations of boundary layer concepts and its effect upon any immersed and moving object and providing students the necessary background in real open channel flow

Course Outcome

- The students will gain knowledge of basic fluid properties in real flow engineering contexts of uniform and non-uniform flow in open channels of best economic section and channels flowing at uniform depth with transition and under the hydraulic jump and open channel Hydraulics with basics of Hydraulic machines such as pumps and turbines.
- Students shall develop skill on operation procedure of hydraulic machines and pumps.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written Examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class Attended
External Examination	External Theory	60	Written Examination
Total		100	

Course outline

Module I: BOUNDARY LAYER THEORY (6 Hrs.)

Basic Concepts of Boundary Layer; Development of Boundary Layers on a flat plate; Laminar & Turbulent Boundary Layers; Velocity Distribution with in Boundary Layer; Thickness of Boundary Layer; Viscous Drag; Displacement Thickness; Momentum thickness and Energy Thickness; Integral Momentum Equation; Drag Coefficients .

Module II: FLOW PAST IMMERSED BODIES , (4 hours)

; Drag and Lift on bodies ; Various types of Drag; Drag Coefficient; Variation of drag with Reynolds number for flow around cylinder; sphere; Flow around rotating cylinder; Magnus Effect; Stagnation Points; Lift and Drag on Rotating Cylinder.

Module III: PRINCIPLES OF OPEN CHANNEL FLOW (4hrs.)

Introduction & Classification of Open Channel Flow; difference between pipe and open channel flow; definition of terms; Wetted Perimeter; Hydraulic Mean Depth; Hydraulic Radius; Prismatic Channel; Velocity and Pressure Distribution in Open Channels; Basic Equations; Chezy's Equation; Manning's Equation; Uniform Flow; Normal Depth; Concept of Most Efficient Sections; Most Efficient Rectangular and Trapezoidal Sections.

Module IV: ENERGY PRINCIPLES (All discussions w.r.t. to Rectangular and Trapezoidal channels) (4 hrs)

Continuity and Energy equations in Open Channel Flows; Specific Energy; Specific Energy Diagram; Critical Flow; Froude Number; Critical Depth; Subcritical and Supercritical Flows Specific Energy.

Module V: RAPIDLY VARIED FLOW (All discussions w.r.t. to Rectangular channels) (4 hrs)

Momentum Principle in Open Channels; Specific Force; Conjugate Depths; Hydraulic Jump ; Gradually Varied Flow in Open Channels (All discussions w.r.t. to Rectangular channels); Introduction to Varied Flow; Gradually Varied Flow and rapidly Varied Flow; Governing Equation for GVF.

Module VI: HYDRAULIC MACHINES (PUMPS) (4Hrs)

Functions and general working principles of Turbines; Types of pumps; Centrifugal and Reciprocating pumps; relative Advantages; Selection of type of pump; centrifugal Pumps; component Parts of a Centrifugal Pump working principles; priming work done by impeller Classification of centrifugal pumps; Minimum starting speed of centrifugal Pumps Reciprocating Pumps; Component parts and working of reciprocating pumps; Slip and cavitation in pumps.

Module VII: HYDRAULIC MACHINES (TURBINES) (4Hrs)

(Numerical problems on velocity triangles; computations of work done and efficiencies of turbines not to be included in the university examination)

Basics of hydropower plants; Classification of Turbines; Impulse and Reaction Turbines; Selection of type of turbine; Working principle of Impulse turbines; Pelton wheel; component parts; Work done by Pelton wheel; Definitions of heads and efficiencies; Gross head & Net head; Mechanical; volumetric & overall efficiencies; Reaction turbines; Working principles of reaction

turbines; Francis and Kaplan turbine; Efficiency of turbines; mechanical; hydraulic and overall efficiency; (Numerical problems on Kaplan & Propeller turbines not to be part of external examination)

Session plan:

PEDAGOGY

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity</i>	<i>Assignment (Assignment /Project)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Module I				
MODULE I- Basic Concepts of Boundary Layer, Development of Boundary Layers on a flat plate - Laminar & Turbulent Boundary Layers, Velocity Distribution with in Boundary Layer - Thickness of Boundary Layer, Viscous Drag - Displacement Thickness, Momentum thickness and Energy Thickness. Integral Momentum Equation - Drag Coefficients for different velocity distributions in Laminar and Turbulent Boundary Layers. Boundary Layer Separation - Effect of Adverse Pressure Gradient - Control of Boundary Layer Separation(basics only).	6	Theory (PPT mode), class room practice	1	TB ₄ , Chapter 13 http://www.youtube.com/watch?v=cUTkqZeiMow
Module II: (Basic Concept only) Flow past immersed bodies - Pressure distribution around bodies - Circular Disc, Plate held normal to flow, Cylinder and Sphere. Drag and Lift on bodies - Various types of Drag - Drag Coefficient - Variation of drag with Reynolds number for flow around cylinder, sphere, disc and plate held normal to flow. Circulation - Circulation around an inclined Plate - Flow about a Rotating Cylinder - Magnus Effect- Stagnation Points - Lift and Drag on Rotating Cylinder.	4	Theory (PPT mode), class room practice	2	TB ₄ , Chapter 14

<p>MODULE- III: Introduction & Classification of Open Channel Flow, difference between pipe and open channel flow, definition of terms - Wetted Perimeter -Hydraulic Mean Depth - Hydraulic Radius - Prismatic Channel - Velocity and Pressure Distribution in Open Channels- Basic Equations- Chezy's Equation - Manning's Equation- Manning's Coefficient for different Bed Roughness. Uniform Flow -Normal Depth - Concept of Most Efficient Sections - Most Efficient Triangular, Rectangular and Trapezoidal Sections</p>	4	Theory (PPT mode), class room practice	3	TB2, Chapter-8
<p>Module IV:Continuity and Energy equations in Open Channel Flows - Specific Energy - Specific Energy Diagram - Critical Flow - Froude Number - Critical Depth - Subcritical and Supercritical Flows - Canal Transitions - change in Bed width and Bed level - Minimum Specific Energy - Relationship between Critical Depth and Minimum Specific Energy.</p>	4	Theory PPT mode, Class room Practice	4	
<p>MODULE- V: Momentum Principle in Open Channels - Specific Force - Conjugate Depths - Hydraulic Jump - Gradually Varied Flow in Open Channels (All discussions w.r.t. to Rectangular channels), Introduction to Varied Flow - Gradually Varied Flow and rapidly Varied Flow - Governing Equation for GVF-Classification of GVF Profiles - Critical, Mild and Steep Slopes - M1, M2, M3, S1, S2 and S3 only (basics only).</p>	4	Theory PPT mode, Class room Practice	5	TB4, Chapter 16 https://sites.google.com/a/vt.edu/moglen/home/animations-open-channel-flow
<p>MODULE- VI: Introduction to Turbo machinery, Functions and general working principles of Turbines, Types of pumps - Centrifugal and Reciprocating pumps - Relative Advantages, Selection of type of pump, Centrifugal Pumps, component Parts of a Centrifugal Pump working principles - Priming. Work done by impeller – Classification of centrifugal pumps - Minimum starting speed of centrifugal Pumps - Multi stage pumps, Specific Speed of Centrifugal Pumps - Reciprocating Pumps, Component parts and working of</p>	4	Theory PPT mode, Class room Practice	6	TB4, Chapter 19 and chapter 20

reciprocating pumps - Different types. Theoretical Discharge – Coefficient of Discharge and Slip				
MODULE- VII: (Basics only): Basics of HPP, Classification of Turbines - Impulse and Reaction Turbines - Selection of type of turbine, Working principle of Impulse turbines - Pelton wheel - component parts, Work done by Pelton wheel - Definitions of heads and efficiencies, Reaction turbines - Working principles- Francis turbine - Component parts - mechanical, hydraulic and overall efficiency, Types of Draft tubes, surge tank – water hammer, cavitation in draft tubes, working principles of Kaplan turbine.	4	Theory PPT mode, Class room Practice	7	TB4, Chapter 18
Total (hrs.)	30	THEOR Y		

Disaster Preparedness & Planning Management

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Disaster preparedness & Planning Management	CECC0102	Theory	2-0-0	Nil

Objective

- To teach the Challenges and Impacts posed by Disasters

Course Outcome

- Having successfully completed this course to make the students capable to know various natural hazards that can pose risk to property, lives, and livestock and understanding of the social responsibility towards preparedness for mitigating the damages.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written Examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based On Class Attended
External Examination	External Theory	60	Written Examination
Total		100	

Course Outline

Module-I: Introduction (3Hrs)

Concepts and definitions: disaster; hazard; vulnerability; risks severity; frequency and details, capacity; impact; prevention and mitigation

Module-II: Disaster(4Hrs)

Classification: Natural disasters floods; draught; cyclones; volcanoes; earthquakes; tsunami; landslides; coastal erosion; soil erosion; forest fires and manmade disasters

Module-III: Industrial Pollution

(4Hrs)

Artificial flooding in urban areas; nuclear radiation; chemical spills; transportation accidents; terrorist strikes; hazard and vulnerability profile of India; mountain ;coastal areas and ecological fragility

Module -IV: Disaster Impacts (5Hrs)

Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters

Module-V: Disaster risk Reduction (6Hrs)

(DRR) Disaster management cycle its phases; prevention, mitigation; preparedness, relief and recovery; structural and non-structural measures; risk analysis; vulnerability and capacity assessment; early warning systems; Post disaster environmental response water; sanitation; food safety; waste management; disease control; security and communications

Module-VI: Roles and Responsible of Government (3Hrs)

community; local institutions; NGOs and other stakeholders; Policies and legislation for disaster risk reduction; DRR programmes in India and the activities of National Disaster Management Authority

Module-VII: Environment and Development of Disaster (5Hrs)

Factors affecting vulnerability such as impact of developmental projects and environmental modifications including of dams; land use changes; urbanization etc. sustainable and environmental friendly recovery reconstruction and development methods

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.) Theory +Practice	Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)	Assignment (Project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Module I				
Concepts and definitions: disaster, hazard	1	Lecture	1.1	Text Book(TB) Chapter(CH)
Vulnerability, risks severity, frequency and details	1	Lecture	1.2	TB ₁ CH ₂
Capacity, impact, prevention, mitigation	1	Lecture	1.3	TB ₁ CH ₂
Sub-Total (hrs)	3			
Module II				
Classification; natural disasters floods	1	Lecture	2.1	TB ₂ CH ₃
Draught, cyclones, volcanoes, earthquakes,	1	Lecture	2.2	TB ₁ CH ₃
Tsunami, landslides, coastal erosion, soil erosion	1	Lecture	2.3	
forest fires etc. manmade disasters	1	Lecture+ Practice	2.4	
Sub-Total (hrs)	4			
Module III				
Artificial flooding in urban areas Nuclear radiation, chemical spills,	1		3.1	TB ₁ CH ₄ ,TB ₂ CH ₄
Transportation accidents, terrorist strikes	1		3.2	TB ₂ CH ₅
Hazard and vulnerability profile of India	1		3.3	TB ₂ CH ₅
Mountain and coastal areas, ecological fragility	1		3.4	TB ₂ CH ₅
Sub-Total (hrs)	4			
Module IV				
Disaster impacts (environmental, physical, social, ecological, economic, political, etc.)	1	Lecture	4.1	TB ₂ CH ₆
Health, psycho-social issues demographic aspects (gender, age, special needs)	2	Lecture	4.2	TB ₂ CH ₆
Hazard locations; global and national disaster trends	1	Lecture	4.3	TB ₂ CH ₆

climate change and urban disasters	1	Lecture	4.4	TB ₂ CH7
Sub-Total (hrs)	5			
Module V				
Disaster management cycle its phases; prevention, mitigation, preparedness, relief and recovery	1	Lecture	5.1	TB ₂ CH8
Structural and non-structural measures	1	Lecture	5.2	TB ₂ CH8
Risk analysis, vulnerability and capacity assessment	1	Lecture	5.3	TB ₂ CH8
Early warning systems, Post disaster environmental response	1	Lecture	5.3	TB ₂ CH9
Water, sanitation, food safety, waste management	1	Lecture	5.4	TB ₂ CH9
Disease control, security, communications	1	Lecture	5.5	TB ₂ CH10
Sub-Total (hrs)	6			
Module VI				
Community, local institutions, NGOs and other stakeholders;	1	Lecture	6.1	TB ₃ CH9
Policies and legislation for disaster risk reduction	1	Lecture	6.2	TB ₃ CH9
DRR programmes in India and the activities of National Disaster Management Authority	1	Lecture	6.3	TB ₃ CH11
Sub-Total (hrs)	3			
Module VII				
Factors affecting vulnerability	1	Lecture	7.1	TB ₄ CH8
Impact of developmental projects and environmental modifications	1	Lecture	7.2	TB ₂ CH8
Including of dams, landuse changes, urbanization	1	Lecture	7.3	TB ₂ CH9
Sustainable and environmental friendly recovery	1	Lecture	7.4	TB ₂ CH10

Reconstruction and development methods.	1	Lecture	7.5	TB ₂ CH10
Sub-Total (hrs)	5			
Total (hrs)	30	THEORY		

Estimation & Quantity Surveying

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Estimation & Quantity Surveying	CECC0201	Practice	0-2-0	Nil

Objective

- To make familiar with calculation of quantities for different item of works & provide knowledge about estimation of buildings through Estimator-2.0 software

Course Outcome

- Gain knowledge about how to schedule & estimate different construction works both manually and using software

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

COURSE OUTLINE

Module - I: BUILDING (16hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to buildings; preparation of Quantities and Units.

Practice Sessions:

- Study of construction drawings and preparation of WBS.
- Detailed estimates for a Shopping Complex using Estimator-2.0 software.
- Detailed estimates for a hostel Building using Estimator-2.0 software.
- Detailed estimates for a hospital using Estimator-2.0 software.

Module -II : CULVERT (10hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to irrigation structures; preparation of Quantities and Units.

5. Detailed estimates (Manual) for a Slab culvert with right angled/ Splayed wing wall.
6. Detailed estimates (Manual) for a box culvert.
7. Detailed estimates (Manual) for a Hume pipe Culvert.

Module –III:ROAD (6hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Roads structures; preparation of Quantities and Units.

8. Detailed estimates (Manual) for a road.

Module -IV :SLOPED ROOF (6hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Sloping roof/Roof truss structures; preparation of Quantities and Units.

9. Detailed estimate (Manual) for a timber roof truss.
10. Detailed estimate (Manual) for a roof cover of GI sheets.

Module –V:QUANTITY SURVEY (06hrs)

Estimations and Quantity Surveying; Preparation of Quantity of materials per unit rate of work; Estimating labour.

11. Quantity of materials required for different items of works in buildings (Manual).
12. Quantity of different types of labor required for different items of works (Manual).

Module-VI: RATE ANALYSIS OF BUILDING (10hrs)

Specifications; Rate Analysis as per State Govt. and CPWD Standards

13. Development of Excel Sheet for Rates, Specifications and Cost Estimates.
14. Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software.
15. Rate Analysis and Cost Estimates for a hostel Building and a hospital, using Estimator-2.0 software.

Module-VII:RATE ANALYSIS OF CULVERT & ROAD (6hrs)

Specifications; Rate Analysis as per State Govt. and CPWD Standards

16. Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software.
17. Rate Analysis and Cost Estimates for an arch culvert using Estimator-2.0 software.
18. Rate Analysis and Cost Estimates for a road using Estimator-2.0 software.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	(project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Estimations and Quantity Surveying; Reading of Plans, Sections and detailed Drawings Related to buildings, irrigation structures and Roads; preparation of Quantities and Units. Study of construction drawings and preparation of WBS.	2	lecture	1	RB ₁ ;chapter I & II
Detailed estimates for a Shopping Complex using Estimator-2.0 software.	6	Practice	2	http://estimator.in/tutorial/index.htm https://www.youtube.com/watch?v=d-EP7dm4X2s&list=PLuX_PtBw-QK1-c-B5D8SiJfOttjxmHf6 Seen on 11 th Jun, 2019
Detailed estimates for hostel Building using Estimator-2.0 software.	4	Practice		
Detailed estimates for a hospital using Estimator-2.0 software.	4	Practice		
Sub-total (hrs)	16			
Module II				
Detailed estimates (Manual) for a Slab culvert with right angled/Splayed wing wall.	6	Practice	3	TB ₁ ;chapter no-8 page-373 to 414
Detailed estimates (Manual) for a box	2	Practice		

culvert.				
Detailed estimates (Manual) for a Hume pipe Culvert.	2	Practice		
Sub-total (hrs)	Practice 10			
Module III				
Detailed estimates (Manual) for a road.	6	Practice	4	TB ₁ ; chapter no-7, page-328 to 372
Sub-total (hrs)	Practice 06			
Module IV				
Detailed estimate (Manual) for a timber roof truss	4	Practice	5	RB ₁ ; chapter VII, Page-275-299
Detailed estimate (Manual) for a roof cover of GI sheets	2	Practice		
Sub-total (hrs)	Practice 06			
Module V				
Quantity of materials required for different items of works in buildings (Manual).	04	Practice	6	RB ₁ ;chapter XIII, Page-473-528
Quantity of different types of labour required for different items of works (Manual).	02	Practice		
Sub-total (hrs)	Practice 06			

Module VI				
Specifications; Rate Analysis as per State Govt. and CPWD Standards. Development of Excel Sheet for Rates, Specifications and Cost	2	Practice	7	TB ₁ ;chapter no-13
Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software.	4	Practice		https://www.youtube.com/watch?v=NQIHnHWTRQc&list=PLuX_PtBw-QK1-c-B5D8SiJfOttjxmHf6&index=10
Rate Analysis and Cost Estimates for a hostel Building and a hospital, using Estimator-2.0 software.	4	Practice		Seen on 12 th Jun, 2019
Sub-total (hrs)	Practice 10			
Module VII				
Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software.	2	Practice	8	https://www.youtube.com/watch?v=NW8ODPKgtFw&list=PLuX_PtBw-QK1-c-B5D8SiJfOttjxmHf6&index=15
Rate Analysis and Cost Estimates for a arch culvert using Estimator-2.0 software.	2	Practice		Seen on 12 th Jun, 2019
Rate Analysis and Cost Estimates for a road using Estimator-2.0 software.	2	Practice		
Sub-total (hrs)	PRACTICE 06			
Total (hrs)	60	PRACTICE		

Pre-Fabricated Structures

Course Title	Course Code	Type of Course	T-P-PJ	Pre-Requisite
Pre-Fabricated Structures	CECC0202	Practice	0-2-0	Nil

Objective

- To teach the student with emerging technology of prefabrication in construction industry including various processes involved there upon

Course Outcome

- After completion of the courses the students will gain knowledge of the processes of planning, production, storage, transportation and site installation of various prefabricated units pertaining to a civil engineering construction project
- Students will develop innovative ideas about prefabricated structures

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

Module I: INTRODUCTION

(8hrs)

Practice

- Basic knowledge of PEB
- Generation of elevation and section for a utility using AutoCAD, Revit and CATIA .

Module II: TRUSS

(8hrs)

Practice

- Design of the truss through STAAD PRO
- Report on materials mix and Pre tensioning

Module III: PANEL AND BEAM

(8hrs)

- 5: Estimation of panel and beam lengths and number.
- 6: Estimation of the structure through ESTIMATOR 2.0.

Module IV: SLAB & INTRODUCTION OF MS-PROJECCT (10hrs)

- 7: Project scheduling through MS Project
- 8: Casting of slab panels as per the requirement of the proposed structure.

Module V: SITE CLEARANCE (12hrs)

- 9: Casting of beam panels as per the requirement of the proposed structure.
- 10: Site clearance and marking.
- 10: Fixing of slab panels

Module VI: FABRICATION (6hrs)

- 11: Fabrication &Finishing of roof panels
- 12: Erection of roof panels& beams

Module VII: CONSTRUCTION EQUIPMENT (8 hrs)

- 13: Fining of work
- 14: Equipment safety and operation & Report on Maintenance work

Concrete Technology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Concrete Technology	CECC0412	Theory+ Practice	1-1-0	Nil

Objective

- To teach the student about different property of concrete and its use in different work.

Course Outcome

- Students will able to apply core concepts of Concrete technology to solve engineering problems.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

COURSE OUTLINE

Module I :Properties of Cement (6Hrs)

Cement-Different types Chemical composition and Properties Tests on cement-IS Specifications; Portland cement chemical composition Hydration; Setting of cement Structure of hydrate cement Test on physical properties for Different grades of cement

Practice 1

- XRF analysis of cement
- Specific gravity of cement (comparison study)

Practice 2

- Compressive strength of cement(comparison study)
- Soundness test of cement (comparison study)
- Setting time(comparison study)

Module II: Aggregates(5Hrs)

Classification; Mechanical properties and tests as per BIS Grading requirements Classification of aggregate Particle shape & texture strength & other mechanical properties of aggregate Specific gravity; Bulk density; porosity; adsorption& moisture content of aggregate Bulking of sand

Practice 3

- Specific gravity of coarse aggregate

7. Specific gravity of fine aggregate
8. Zoning of aggregates
9. Water absorption of coarse aggregate

Module III :PROPERTIES OF CONCRETE (4Hrs)

Workability- Factors affecting workability; Measurement of workability by different tests Setting times of concrete; Effect of time and temperature on workability Segregation & bleeding Mixing and vibration of concrete

Practice 4 Workability test of Fresh Concrete by

10. Slump cone method
11. Compaction factor method
12. Flow table method
13. Preparation of cube mould for durability test

Module IV : CHEMICAL AND MINERAL ADMIXTURES(6 Hrs)

Accelerators; Retarders; Plasticizers- Super plasticizers; Water proofers ;Mineral Admixtures like Fly; Ash, Silica Fume; Ground Granulated Blast Furnace Slag and Metakaoline Their effects on concrete properties

Practice 14. Preparation of Design Mix of concrete

Practice 15.: Prepare the design mix using Retarder and Accelerator

Module V :SPECIAL CONCRETE(10Hrs)

Special Concretes: Introduction to light weight concrete ;Cellular concrete no-fines concrete high density concrete fiber reinforced concrete

Practice 16: Preparation of Fiber reinforced concrete

Practice 17:Preparation of Light weight concrete mix and reactive Powder concrete

Practice 18: Preparation of concrete with plastic aggregates

Practice 19: Design of concrete using construction demolition waste

Module VI :PROPERTIES OF HARDENED CONCRETE (11Hrs)

Properties of Hardened concrete Determination of Compressive and Flexural strength by Destructive tests and non-destructive tests.

Practice 20: Splitting tensile strength of cylinder and Flexural strength of beam

Practice 21: Compressive strength of cube and cylinder specimen

Practice 22: Stress-strain curve for concrete Determination of Young's Modulus.

Practice 23:

- (a) Non-destructive tests by Rebound hammer.
- (b) Destructive tests by core cutter.

Module VII :Durability of Concrete (3 Hrs)

Factors affecting durability; Tests for durability of concrete

Practice 24:

- (a) Carbonation test for concrete.
- (b) Resistance to chemical attack (Sulphate attack, chloride attack)

Text Books:

1. M.S Shety, S. CHAND Publication

Reference Books:

1. Indian standards for tests on concrete materials and mix design.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.) Theory +Practice	Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)	A (Project, A, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I [2hrs.Lecture+4hrs.Practice]				
Cement-Different types Chemical composition and Properties -Tests on cement-IS Specifications- Portland cement – chemical composition	1+0=1	Lecture	1.1	Text Book(TB) Chapter(CH)- 1&2
Hydration, Setting of cements Structure of hydrate cement. Test on physical properties for Different grades of cement	1+0=1	Lecture	1.2	TB CH-2
XRF analysis of cement Specific gravity of cement (comparison study)	0+2=2	Practice		TB CH-2
Compressive strength of cement(comparison study) Soundness test of cement (comparison study)	0+2=2	Practice		TB CH-2

Module II [3 hrs.Lecture+2 hrs. Practice]				
Aggregates-Classification-Mechanical properties and tests as per BIS Grading requirements-	1+0=1	Lecture	2.1	TB CH-3
Classification of aggregate Particle shape & texture strength & other mechanical properties of aggregate	1+0=1	Lecture	2.2	
Specific gravity, Bulk density, porosity, adsorption & moisture content of aggregate Bulking of sand	1+0=1	Lecture	2.3	
(a) Specific gravity of coarse aggregate (b) Specific gravity of fine aggregate (c) Zoning of aggregates (d) Water absorption of coarse aggregate	0+2=2	Practice		
Module III [2 hrs.Lecture+2 hrs. Practice]				
Workability Factors affecting workability Measurement of workability by different tests	1+0=1	Lecture	3.1	TB CH-5
Setting times of concrete Segregation & bleeding Mixing and vibration of concrete	1+0=1	Lecture	3.2	
(a) Slump cone method (b) Compaction factor method (c) Flow table method (d) Preparation of cube mould for durability test	0+2=2	Practice		

Module IV[2 hrs.Lecture+4hrs.Practice]				
Accelerators-Retarders Plasticisers Super plasticizers- Water proofers Mineral Admixtures like Fly, Ash, Silica Fume	1+0=1	Lecture	4.1	TB CH-7
Ground Granulated Blast Furnace Slag and Metakaoline Their effects on concrete properties	1+0=1	Lecture	4.2	
Preparation of Design Mix of concrete	0+2=2	Practice		
Prepare the design mix using Retarder and Accelerator	0+2=2	Practice		
Module V [2 hrs.Lecture+8 hrs. Practice]				
Special Concretes Introduction to light weight concrete Cellular concrete	1+0=1	Lecture	5.1	TB CH-12
No fines concrete high density concrete	1+0=1	Lecture	5.2	
Preparation of Fiber reinforced concrete	0+2=2	Practice		
Preparation of Light weight concrete mix and Powder concrete	0+2=2	Practice		
Preparation of concrete with plastic aggregates	0+2=2	Practice		
Design of concrete using construction demolition waste	0+2=2	Practice		
Module VI [3 hrs.Lecture+8 hrs.Practice]				
Properties of hardened concrete Determination of Compressive and Flexural strength as per BIS	1+0=1	Lecture	6.1	

Properties of Hardened concrete Determination of Compressive and Flexural strength	1+0=1	Lecture	6.2	TB CH-10
Destructive tests and non-destructive tests.	1+0=1	Lecture	6.3	
Splitting tensile strength of cylinder and Flexural strength of beam	2+0=2	Practice		
Compressive strength of cube and cylinder specimen	2+0=2	Practice		
Stress-strain curve for concrete Determination of Young's Modulus	2+0=2	Practice		
(a) Non-destructive tests by Rebound hammer. (b) Non-destructive tests by core cutter	2+0=2	Practice		
Module VII [1 hrs.Lecture+2 hrs.Practice]				
Factors affecting durability. Tests for durability of concrete	1+0=1	Lecture	7	TB CH-9
(a) Carbonation test for concrete. (b) Resistance to chemical attack (Suphate attack, chloride attack)	0+2=2	practice		TB CH-8
Total (hrs)	30+30=60	30hrs.Lecture+30 hrs.Practice		

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Soil Mechanics	CECC0401	Theory + Practice	2-1-0	Nil

Objective

- To teach the basic theoretical aspects of soil mechanics and implementation of geotechnical topics in the real-world situations

Course Outcome

- Students will gain knowledge on soil mechanics and the concepts involve in it
- Students will develop skill on laboratory experiments, empirical methods and software aids involve in soil mechanics

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Course Outline

Module I: Soil Properties and Relationships (09 Hours)

Theory

Soil formation; Soil structure and clay mineralogy; Adsorbed water; Mass- volume relationship and Relative density

Practice

1. To determine specific gravity of soil solids and free swell index test of soil
2. To determine the dry density of the soil by core cutter methods
3. To determine the dry density of the soil by sand replacement methods

Module II: CLASSIFICATION AND INDEX PROPERTIES OF SOILS (09 Hours)

Theory

Grain size analysis; Sieve and hydrometer methods; Consistency limits and indices and Activity of clays

Practice

4. Wet sieving and dry sieving test of soil
5. To determine the liquid limit of a soil specimen
6. To determine the plastic limit and shrinkage limit of a soil specimen

Module III: Compaction and Consolidation (09 Hours)

Theory

Compaction: Mechanism of compaction; Factors affecting compaction; Effects of compaction on soil properties; Field compaction equipment and Compaction control

Practice

7. To determine the compaction characteristics of a soil specimen by Standard Proctor's Test and Modified Proctor's Test

Theory

Consolidation: Stress history of clay; $e-p$ and $e-\log p$ curves; Magnitude and rate of 1-D consolidation and Terzaghi's theory

Practice

8. To determine the consolidation characteristics of a soil specimen

Module IV: Permeability and Seepage through Soils (10 Hours)

Theory

Permeability: Soil water; Capillary rise; Flow of water through soils; Darcy's law; Factors affecting permeability; Coefficient of permeability and Permeability of layered systems

Practice

9. To determine coefficient of permeability of a soil specimen by constant head permeability test
10. To determine coefficient of permeability of a soil specimen and falling head permeability test

Theory

Seepage through soils: Total, neutral and effective stresses; Quick sand condition; Seepage through soils; Flow nets: Characteristics and Uses

Module V: SHEAR STRENGTH OF SOILS (12 Hours)

Theory

Introduction; Mohr - Coulomb Failure theories; Types of laboratory strength tests; Strength tests based on drainage conditions and Shear strength of cohesive soils

(Mathematical derivations to be limited to classroom activity. They should not be a part of external evaluation)

Practice

11. To determine the shear strength of the soil by direct shear test
12. To determine the unconfined shear strength of a soil
13. To determine the shear strength of the soil by triaxial test
14. To determine the shear strength of the soil by vane shear test

Module VI: STRESS DISTRIBUTION IN SOIL (04 hours)

Theory

Normal and shear stresses on a plane; Boussinesq's solution for a point load, line load, strip load, uniformly loaded circular and rectangular areas; Isobar and pressure bulb concept; Stress distribution on horizontal and vertical planes and Contact pressure

(Mathematical derivations to be limited to classroom activity. They should not be a part of external evaluation)

Module VII: STABILITY OF SLOPES (07 hours)

Theory

Types of slopes; Failure types; Causes of slope failure; Factors contributing to instability of soil slope; Slope stability analysis: Analysis of finite and infinite slopes; Bishop's solution and Soil stabilization measures (Mathematical derivations to be limited to classroom activity. They should not be a part of External Evaluation)

Practice

15. Analysis of finite and infinite slopes (Using Geo5/ Geo studio / Simple slope software)

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I [3 Hours Lecture + 6 Hours Practice]				
SOIL PROPERTIES AND RELATIONSHIPS Introduction to geotechnical engineering; Origin and formation of soil	1	Lecture	1.1	Textbook (TB) Chapter (CH)-1
Preliminary definitions and relationships	2	Lecture	1.2 - 1.7	TB CH-2,3
Determination of specific gravity, swelling index of different types of soil	2	Practice		
Determination of dry density of soil by Core cutter method	2	Practice		
Determination of dry density of soil by Sand replacement method	2	Practice		
Module II [3 Hours Lecture + 6 Hours Practice]				
CLASSIFICATION AND INDEX PROPERTIES OF SOILS Grain size analysis; Consistency limits and indices	3	Lecture	2.1 -2.7	TB CH-3,4,5
Wet sieving test , Dry sieving test	2	Practice		
Liquid limit test	2	Practice		

Plastic limit and shrinkage limit test	2	Practice		
Module III [5 Hours Lecture + 4 Hours Practice]				
COMPACTION AND CONSOLIDATION Compaction: Factors affecting compaction and compaction control; Mechanism of compaction	2	Lecture		TB CH-17
Standard Proctor Test and Modified Proctor Test	2	Practice		
Consolidation theory	3+2	Lecture + Practice	3.1 – 3.7	TB CH-15,16
Module IV [6 Hours Lecture + 4 Hours Practice]				
PERMEABILITY AND SEEPAGE THROUGH SOILS Basic concepts of soil permeability & Darcy's law	3	Lecture	4.1 - 4.7	TB CH-7
Determination of coefficient of permeability (By Constant Head Permeability Method and Falling Head Permeability Method)	2+2	Practice		
Seepage through soils	3	Lecture	4.8- 4.9	TB Ch-6 ,9
Module V [4 Hours Lecture + 8 Hours Practice]				
SHEAR STRENGTH OF SOILS Shear strength of different types of soils & failure	4	Lecture	5.1 -5.7	TB CH-18

theories				
To determine the shear strength of the soil by direct shear test	2	Practice		
To determine the unconfined shear strength of a soil	2	Practice		
To determine the shear strength of the soil by triaxial test	2	Practice		
To determine the shear strength of the soil by vane shear test	2	Practice		
Module VI [4 Hours Lecture]				
STRESS DISTRIBUTION IN SOIL Normal and shear stresses on a plane; Boussinesq's solution for a point load, line load, strip load, uniformly loaded circular and rectangular areas; Isobar and pressure bulb concept; Stress distribution on horizontal and vertical planes and Contact pressure	4	Lecture	6.1 -6.7	TB CH-13,14
Module VII[5 Hours Lecture + 7 Hours Practice]				
STABILITY OF SLOPES Types of slopes; Failure types; Causes of slope failure; Factors contributing to instability of soil slope	3	Lecture		TB CH-23
Analysis of finite and infinite slopes	2 +2	Lecture + Practice	7.1 -7.7	
Total (Hours)	60	(30 Hours Theory + 30 Hours		

		Practice)	
--	--	-----------	--

Foundation Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Foundation Engineering	CECC0402	Theory + Practice	2-1-0	Soil Mechanics

Objective

- To teach the basic theoretical aspects and implementation of following topics in the real-world situations: Foundations and Retaining structures

Course Outcome

- Students will gain knowledge on retaining structures and various types of foundations on different structures and soil
- Students will develop skill to design various retaining structures and foundations in different conditions

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module I: Shallow Foundation (06 hours)

Theory

Introduction; Different types of shallow foundations; Calculation of bearing capacity of soil and Calculation of settlements of foundations

Practice

- Bearing capacity of soil can be checked using Geomechanica Software/ Bearing Capacity Software.

Module II: Mat Foundation Design (10 hours)

Practice

2. Generation of structural design documents including necessary plans and section of raft/mat foundation using STAAD. Foundation software
3. Calculation of geotechnical data of soil like ultimate soil bearing capacity, depth of footing, water table depth, unit weights, etc. using STAAD. Foundation software
4. Service load design of mat foundation using STAAD. Foundation software
5. Mesh generation, analysis properties and mat slab analysis/design options of raft/mat foundation using STAAD. Foundation software
6. Checks and reinforcement design of raft/mat foundation using STAAD. Foundation software

Module III: Deep Foundation (11 hours)

Theory

DEEP FOUNDATION: Introduction, Different types of deep foundations, Design methodology for piles, Calculation of pile capacity, Analysis of pile group, Settlement of pile group, Concept of negative skin friction, Piles subjected to lateral loads, Pile load test;

Practice

7. Checking of pile settlement using Group Pile Settlement Software

Module IV: Pile Foundation Design (08 hours)

Practice

8. Calculation of geotechnical data of soil like soil bearing capacity, depth of footing, water table depth, unit weights, etc. of pile foundation in STAAD. Foundation software
9. Service load design of pile foundation using STAAD. Foundation software
10. Structural analysis, checks and reinforcement design of pile foundation using STAAD. Foundation software
11. Design of pile cap using STAAD. Foundation software

Module V: Design of Well Foundation (05 hours)

Theory

DESIGN OF WELL FOUNDATION: Introduction and construction of well foundation;

Practice

12. Design of well foundation using STAAD. Foundation software

Module VI: DESIGN OF EARTH RETAINING STRUCTURES (08 hours)

Theory

DESIGN OF RETAINING STRUCTURES: Introduction, Different types of retaining structures, Stability analysis of rigid walls;

Practice

13. Design of cantilever sheet piles using STAAD.Foundation software
14. Design of anchor sheet piles using STAAD.Foundation software

Module VII: Earth Pressure and Foundation in Difficult Grounds (12 hours)

Theory

EARTH PRESSURE: Introduction , Types of Earth pressure, Rankine's active and passive earth pressure, Smooth vertical wall with horizontal backfill, Extension to Soil, Coulombs wedge theory; (Mathematical derivations to be limited to classroom activity, it should not be a part of external evaluation);

Practice

15. Calculation of Rankine's active and passive earth pressure(Using Earth Pressure Coefficient Software)

FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement, Foundations in swelling soil, Foundations in collapsible soil, Use of soil reinforcement;

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module-I:SHALLOW FOUNDATION (06 hours) SHALLOW FOUNDATION: Introduction, Different types of shallow foundations	1	Lecture		TB- 1 Ch-25
Calculation of bearing capacity of soil (Bearing capacity can be checked using Geomecanica Software/ Bearing Capacity Software)	2 +2	Lecture + Practice	1.1	TB- 1 Ch-25
Calculation of settlements of foundation	1	Lecture	1.2	TB- 1 Ch-25
Module II : MAT FOUNDATION DESIGN (10 hours) Generation of structural design documents including necessary plans and section of raft/mat foundation using STAAD.Foundation software	2	Practice		
Calculation of geotechnical data of soil like ultimate soil bearing capacity, depth of footing, water table depth, unit weights, etc. using STAAD.Foundation software	2	Practice		
Service load design of mat foundation using STAAD.Foundation software	2	Practice		
Mesh generation, analysis properties and mat slab analysis/design options of raft/mat foundation using STAAD.Foundation software	2	Practice		
Checks and reinforcement design of raft/mat foundation using STAAD.Foundation software	2	Practice		

Module III :DEEP FOUNDATION (11 hours) DEEP FOUNDATION: Introduction, Different types of deep foundations	1	Lecture		TB- 1 Ch-26
Design methodology for piles, Calculation of pile capacity	2	Lecture	3.1	TB- 1 Ch-26
Analysis of pile group, Settlement of pile group, (Checking of pile settlement using Group Pile Settlement Software)	3 +2	Lecture + Practice	3.2	TB- 1 Ch-26
Concept of negative skin friction, Piles subjected to lateral loads	2	Lecture	3.3	TB- 1 Ch-26
Pile load test	1	Lecture	Field Visit	TB- 1 Ch-26
Module IV :PILE FOUNDATION DESIGN(08 hours) Calculation of geotechnical data of soil like soil bearing capacity, depth of footing, water table depth, unit weights, etc. of pile foundation in STAAD.Foundation software	2	Practice		
Service load design of pile foundation using STAAD.Foundation software	2	Practice		
Structural analysis, checks and reinforcement design of pile foundation using STAAD.Foundation software	2	Practice		
Design of pile cap using STAAD.Foundation software	2	Practice		
Module V: DESIGN OF WELL FOUNDATION (05 hours) DESIGN OF WELL FOUNDATION: Introduction and construction of well foundation	3	Lecture		TB- 1 Ch-27
Design of well foundation using STAAD.Foundation software	2	Practice		
Module VI : DESIGN OF EARTH RETAINING STRUCTURES (08 hours) DESIGN OF RETAINING STRUCTURES:	1	Lecture		TB- 1 Ch-20,21

Introduction, Different types of retaining structures				
Stability analysis of rigid walls	3	Lecture	6.1	TB- 1 Ch-20,21
Design of cantilever sheet piles using STAAD.Foundation software	2	Practice		
Design of anchor sheet piles using STAAD.Foundation software	2	Practice		
Module VII : EARTH PRESSURE AND FOUNDATION IN DIFFICULT GROUNDS (12 hours) EARTH PRESSURE: Introduction, Types of Earth pressure	1	Lecture		TB- 1 Ch-24
Rankine's active and passive earth pressure	2	Lecture	7.1	TB- 1 Ch-24
Smooth vertical wall with horizontal backfill, Extension to Soil, Coulombs wedge theory	3	Lecture		TB- 1 Ch-24
Calculation of Rankine's active and passive earth pressure (Using Earth Pressure Coefficient Software)	2	Practice		
FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement	1	Lecture		
Foundations in swelling soil	1	Lecture		
Foundations in collapsible soil	1	Lecture		
Use of soil reinforcement	1	Lecture		
Total (Hours)	60	(Theory 30 Hours + Practice 30Hours)		

Transportation Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Transportation Engineering	CECC0403	Theory + Practice	2-2-0	Nil

Objective

- To introduce transportation engineering principles with emphasis on designing principal element of highways along with the safe and efficient operation of highways.

Course Outcome

- Students will gain knowledge on planning, material selection for construction, Economics and finance and designing of elements on highway.
- Acquire the skill of designing the geometric elements of highway using AUTOCAD CIVIL 3D software.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module I: Geometric Design (10 Hours)

Theory

Introduction, Horizontal Alignment, Vertical Alignment, Superelevation, Camber.

Practice Sessions:

- Design of Horizontal Alignment using CIVIL 3D software.
- Design of Vertical Alignment. using CIVIL 3D software.
- Design of Super elevation. using CIVIL 3D software.
- Create profile. using CIVIL 3D software.

Module II: Expressway (10 Hours)

Theory

Introduction, Components, I-Girder, Box culvert, VUP(Vehicle underpasses), PUP (Pedestrian underpasses), ROB(Rail over bridge); Road construction equipments; Machines used; Cement Concrete Roads: Joints in cement concrete pavements; Arrangement of joints;joint filler and sealer; wet mix macadam plant and its components; WBM roads; slipform pavers,; Elevated Roads;Flexible and Rigid pavements

Practice Sessions:

- Design of flexible pavements.
- Design of rigid pavements.

Module III : TRAFFIC ENGINEERING

(20Hrs)

Theory

Introduction to Traffic Engineering; Various Traffic Studies and their application (Field study); Traffic Signals; Traffic Signs and Road Marking; Traffic Operations-Accident Prevention and Safety Methods; Rotary intersection; ITS (Intelligent transportation system); ITS in various countries.

Practice Sessions:

7. Junction Design using civil 3d software.
8. Vehicle volume counts (field study)

Module IV: RAILWAY ENGINEERING

(12Hrs)

Theory

Permanent way components; Cross Section of Permanent Way; ETB (Electric trolley buses); LRT (Light Rail Transit); Maglev (Magnetic Levitation system); Multi-modal Transport systems; Cable cars; Monorails; RORO (Roll-on-Roll-off).

Module V: Airport Engineering

(12Hrs)

Theory

Airport layout; Various Components and their functions; Airport site selection; Geometric elements of run way and taxiway; Basic concepts in runway design; Holding aprons; Fighter jets.

Module VI: Highway Materials

(20Hrs)

Theory

Aggregate properties; Types of bitumen; Cutback bitumen; Bitumen emulsion; Tar; Types of tar; Bituminous mix design.

Practice Sessions:

9. Angeles abrasion test.
10. Aggregate Impact value test
11. Penetration Test of Bitumen
12. Ductility value test of Bitumen
13. Softening point test of Bitumen
14. Flash and Fire point test of Bitumen
15. Marshall Stability Test of Bitumen
16. Flakiness index and elongation index test of Aggregate.

Module VII: PAVEMENT FAILURE AND MAINTENANCE

(6Hrs)

Theory

Flexible pavement failure; Rigid pavement failure; Types of maintenance; Maintenance of bituminous surfaces; special repairs in flexible pavements; types of overlay.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I[2hrs. Lecture + 8hrs. Practice]				
Introduction	2	Lecture	1.1	Textbook(TB-1), Chapter(Ch-3,4)
Design of horizontal	2	practice	Software, civil	

alignment			3d	
Design of vertical alignment	2	practice	Software, civil 3d	
Design of Superelevation	2	practice	Software, civil 3d	
Create Profile	2	Practice	Software, civil 3d	
Sub-Total (Hrs)	10			
Module II[4 hrs. Lecture + 6hrs Practice]				
Expressways – Introduction,components	1	Lecture	2.1	Online source,Ref-1
Road construction equipments	1	Lecture	2.2	TB-1, Ch-8
Cement concrete roads- Introduction,joints	1	Lecture	2.3	TB-1, Ch-8
Overlays- Flexible and Rigid,WMM,WBM	1	Lecture	2.4	TB-1, Ch-7,8, Ref- 3,4
Flexible and rigid pavements design	6	practice		TB-1, Ch-7,8
Sub-total (Hrs)	10			
Module III[4 hrs. Lecture + 16hrs. Practice]				
Traffic engineering introduction	1	lecture	3.1	TB-1. Ch-5
Various traffic studies	10	practice	Field study	TB-1. Ch-5
Traffic signals	1	Lecture	3.2	TB-1. Ch-5
Traffic signs and road marking	1	Lecture	3.3	TB-1. Ch-5
Traffic accidents, safety methods	1	Lecture	3.4	TB-1. Ch-5
Design of intersection, rotary intersection	6	practice	3.5	TB-1. Ch- 5,Video-Ref-5
Module IV[12 hrs. Lecture + 0 hrs. Practice]				
Railway Engineering, introduction	2	lecture	4.1	TB-3, Ch-1
Permanent way components, cross-section of permanent way	2	lecture	4.2	Video,Ref-6
ETB	2	lecture	4.3	Video, Ref-7
LRT	1	lecture	4.4	Video, Ref-8
Maglev	2	lecture	4.5	Video, Ref-9
Multi-modal transport	3	lecture	4.6	Video, Ref-10,11

systems, cable cars, RORO				
Module V[12 hrs. Lecture + 0 hrs. Practice]				
Airport engineering, introduction	2	lecture	5.1	TB-4, Ch-1
Airport layout and various components and functions	3	lecture	5.2	Video, Ref-12
Airport site selection	1	lecture	5.3	TB-4, Ch-3,4
Geometric elements of runway and taxiway	4	lecture	5.4	TB-4, Ch-3,4
Fighter jets	2	lecture	5.1	Video, Ref-13
Module VI[2 hrs. Lecture + 18 hrs. Practice]				
Aggregate properties, types of bitumen, tar, cutback bitumen	1	lecture	6.1	TB-1, Ch-6
Bituminous mix design	1	lecture	6.2	TB-1, Ch-6
LOS Angeles abrasion test	2	practice	6.3	TB-1, Ch-6
Impact value test of aggregate	2	Practice	6.4	TB-1, Ch-6
Penetration test of bitumen	2	Practice	6.5	TB-1, Ch-6
Ductility value test of Bitumen	2	Practice	6.6	TB-1, Ch-6
Softening point test of bitumen	2	Practice	6.7	TB-1, Ch-6
Flash and fire point test of bitumen	2	Practice	6.8	TB-1, Ch-6
Marshall stability test of bitumen	6	Practice	6.9	TB-1, Ch-6
Module VII[4hrs. Lecture +0 hrs. Practice]				
Flexible pavement failure types	1	Lecture	7.1	TB-1,Ch-10
Rigid Pavement Failure types	1	Lecture	7.2	TB-1,Ch-10
Types of maintenance details	2	Lecture	7.3	TB-1,Ch-10
Maintenance of bituminous surfaces,specialrepairs,overlay	2	Lecture	7.4	TB-1,Ch-10
Total (Hrs)	90	(42hours theory and 48 hours practice)		

Water Supply and Waste Water Management

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Water Supply and waste water Engineering	CECC0415	Theory + Practice	2-1-0	Nil

Objective

- To enable the students understand about the drinking water quality through experiments.
- To make student understand the sources of drinking water.
- To train students to know the principles of water treatment and to design the treatment units.
- To train students to know the principles of waste water treatment and to design the treatment units.
- To make them understand the quality of sewage generated from different plants.

Course Outcome

- To understand the principles of water treatment units and the design of the treatment units.
- To understand the principles of waste water treatment and the design of treatment units.
- To understand the distribution network of the drinking water and the treated waste water.
- To understand to treat the waste water and reuse to make an eco-friendly environment

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module -I: Demand (08Hrs)

Planning and Execution of modern water supply schemes in Urban and Rural India; Sources; Surface Water and Underground water; Per capita demand; Domestic & Non-Domestic demand; Variation in demands; Design period for different components of a Water Supply System

Practice Sessions:

1. Design period for different components of a Water Supply System using excel

Module -II: Demand and supply of water (10Hrs)

Population Forecast; Collection; Pumping and Conveyance of water; Calculation of loss of head due to friction and minor losses; Pump and Motors.

Practice Sessions:

2. Calculation of loss of head due to friction and minor loss using excel.
3. Power calculations of pump and motor.

Module –III: Water Quality (12Hrs)

Quality of potable water; IS Standard, Miscellaneous Treatments; Removal of colour; Odour ;taste; Iron; Manganese; Fluoride; Dissolved Salts; Arsenic; Radioactivity and Domestic Water treatment.

Practice Sessions:

4. Determination of colour, Odour, pH in water.
5. Determination of Chloride, Fluoride in water.

Module -IV: Water distribution System (10Hrs)

Purification of water; Screening, aeration; Sedimentation; coagulation; flocculation; Filtration; Disinfection; Softening; Distribution System; Design of Size of Pipes in simple distribution system; Valves and Fittings. **(All the topics will be through field visit/ practicemode)**

Module –V: Practice Sessions (14 Hrs)

6. Design of sump and Pump well.
7. Design of approach channel.
8. Design of bar screen chamber.
9. Design of sedimentation tank (with flocculation chamber).
10. Design of rapid gravity filter.
11. Design of Size of Pipes in simple distribution system.
12. Design of pipe network

Module -VI: Waste Water Treatment and Design (11Hrs)

Systems of sanitation; Planning and Execution of Urban & Rural Sewage system; Collection; conveyance and system of Reuse; Quantity of sewage; Hydraulic design and construction of sewers; Appurtenances**(Sewer design will be through HEC software)**

Practice Sessions:

13. Computation of quantity of sewage.
14. Design of sewer using HEC Software
15. Design of primary settling tank

Module -VII: Water Treatment (10 Hrs)

Quality and Characteristics of sewage; Preliminary; Primary; Secondary (Biological);Advanced (Tertiary) Treatment; Disposal and utilization.**(All the topics will be through video presentation)**

E-content:

Text Books:

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I[4hrs.Lecture +4hrs.Practice]				
Planning and Execution of modern water supply schemes in Urban and Rural India, Sources-Surface Water and Underground water.	2	lecture	1.1	Text Book(TB ₁) Chapter(CH)-1
Per capita demand, Domestic & Non-Domestic demand, Variation in demands, Design period for different components of a Water Supply System.	2	lecture	1.2	TB ₁ ,CH-2
Design period for different components of a Water Supply System using excel.	4	practice	1.3	TB ₁ ,CH-2
Module II[6hrs.Lecture +4hrs.Practice]				
Population Forecast	3	lecture	2.1	TB ₁ ,CH-38
Collection, Pumping and Conveyance of water, Calculation of loss of head				

due to friction and minor losses, Pump and Motors.	3	lecture	2.2	TB ₁ ,CH-4
Practice sessions: 1. Calculation of loss of head due to friction and minor loss using excel. 2. Power calculations of pump and motor.	4	practice	2.3	Online source
Module III[7hrs.Lecture +5hrs.Practice]				
Quality of potable water. IS Standard ,Miscellaneous Treatments	3	lecture	3.1	TB ₁ ,CH-5
Removal of colour, Odour, taste, Iron, Manganese, Fluoride, Dissolved Salts, Arsenic, Radioactivity, Domestic Water treatment.	4+5	lecture + practice	3.2	TB ₁ ,CH-11
Module IV[4hrs.Lecture +6hrs.Practice]				
Purification of water, Screening, aeration, Sedimentation, coagulation, flocculation, Filtration, Disinfection, Softening.	2+3	lecture + field studies	4.1	TB ₁ ,CH-6,7,8,9&10
Distribution System, Design of Size of Pipes in simple distribution system, Valves and Fittings.	2+3	lecture + field studies	4.2	TB ₁ ,CH-12&14
Module V[0hrs.Lecture +14hrs.Practice]				
4. Design of sump and Pump well. 5. Design of approach channel. 6. Design of bar screen chamber. 7. Design of sedimentation tank (with flocculation chamber). 8. Design of rapid gravity filter. 9. Design of Size of	14	practice	5	TB ₁ ,CH-17

Pipes in simple distribution system. 10. Design of pipe network				
Module VI[5hrs.Lecture +6hrs.Practice]				
Systems of sanitation, Planning and Execution of Urban & Rural Sewage system,	1	lecture	6.1	TB ₁ ,CH-17
Collection, conveyance and system of Reuse, Quantity of sewage,	2	lecture	6.2	TB ₁ ,CH-18
Hydraulic design and construction of sewers, Appurtenances	2	lecture	6.3	TB ₁ ,CH-18
11. Computation of quantity of sewage. 12. Design of sewer using HEC Software 13. Design of primary settling tank.	6	practice	6.4	TB ₁ ,CH-21&22
Module VII[8hrs.Lecture +2hrs.Practice]				
Quality and Characteristics of sewage.	2	lecture	7.1	TB ₁ ,CH-26
Preliminary, Primary, Secondary (Biological), Advanced (Tertiary) Treatment, Disposal and utilization.	4	lecture	7.2	TB ₁ ,CH-27&28
Principle of Treatment of Industrial Waste Water.	2+2	lecture + field studies	7.3	TB ₁ ,CH-32
Total (hrs)	75	THEORY-42,PRACTICE-33		

Hydrology & Water Resources Engineering

Course Title	Code	Type of course	T-P-P	Prerequisite
Hydrology & Water resources Engineering	CECC0416	Theory+ practice	2-1-0	Nil

Objective

- To develop technical skills in students to make them familiar with hydrology, hydro-meteorology, surface and subsurface water, design water resources structures, surface and subsurface water management, integrated water resources planning, Irrigation processes, flood control, and basic of hydropower generation.

Course Outcome

- To have knowledge of irrigation implementation on hydrology, water power and water quality along with acquaintance of planning, design, construction and application of irrigation/hydraulic structures in management of surface and subsurface water.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module –I: Precipitation (5Hrs)

Introduction - hydrologic cycle; water-budget equation; world water balance; applications in engineering, sources of data; forms of precipitation; characteristics of precipitation in India; measurement of precipitation; rain gauge network; mean precipitation over an area; depth area-duration relationships; maximum intensity/depth-duration-frequency relationship

Module –II: Abstraction (5Hrs)

Abstractions from precipitation - evaporation process; evaporimeters; analytical methods of evaporation estimation; reservoir evaporation and methods for its reduction; evapotranspiration; potential evapotranspiration over India; actual evapotranspiration; interception; storage; infiltration; infiltration capacity; measurement of infiltration; infiltration indices

Module -III: Runoff (6Hrs)

Runoff volume; SCS-CN method of estimating runoff volume; flow duration curve; flow-mass curve; hydrograph; factors affecting runoff hydrograph; components of hydrograph; base flow separation; effective rainfall; unit hydrograph and its uses (assumptions and construction procedure only)

Module -IV: Ground Water and Well Hydrology (6Hrs)

Forms of subsurface water; aquifers; types and its properties; geologic formations of aquifers; well hydraulics: steady state flow in wells; equilibrium equations for confined and unconfined aquifers; aquifer tests

Module-V: Water Withdrawals and Uses (4hrs)

Water for energy production; water for agriculture; water for hydroelectric generation; flood control. Analysis of surface water supply; Water requirement of crops-Crops and crop seasons in India; cropping pattern; duty and delta; Quality of irrigation water; Soil-water relationships; consumptive use; irrigation requirement; frequency of irrigation; Methods of applying water to the fields: surface; sub-surface; sprinkler and trickle / drip irrigation

Module-VI: Distribution Systems (4Hrs)

Canal systems; alignment of canals; canal losses; estimation of design discharge. Design of channels- rigid boundary channels; alluvial channels; Kennedy's and Lacey's theory of regime channels. Basics of CD works; Water logging: causes; effects and remedial measures; lining of canals; types of lining. Drainage of irrigated lands: necessity, methods.

Module -VII: PART A IRRIGATION STRUCTURES(8Hrs)

(All the topics will be through field visit, practice mode only)

- I. Regulators - Functions of cross regulators; head regulators; canal falls; aqueducts; metering flumes and canal outlets.
- II. Diversion head works- Principles and design of weirs on permeable and impermeable foundation; Khosla's theory- expressions for uplift pressure at key points ; Various corrections and their calculations for simple cases
- III. Storage works: Types of dams, design, principles of rigid gravity, stability analysis.
- IV. Spillways: Spillway types, energy dissipation.
- V. River training: Objectives of river training, methods of river training.

Practice-PART B (22 Hrs)

- 1) Design of irrigation canal using Kennedy's theory.
- 2) Design of irrigation canal using Lacey's theory.
- 3) Design of lined canal.

- 4) Fixing of L-section of the canal.
- 5) Design of tank surplus weir.
- 6) Design of vertical drop weir.
- 7) Design of Notch fall.
- 8) Design of head regulators.
- 9) Design of cross regulators.
- 10) Stability analysis of gravity dam.

Practice 4hrs 1. Determination on infiltration capacity using double ring infiltrometer.	4hrs	Practice		
Runoff: Runoff volume, SCS-CN method of estimating runoff volume, flow duration curve, flow-mass curve, hydrograph, factors affecting runoff hydrograph, components of hydrograph, base flow separation, effective rainfall, unit hydrograph and its uses (assumptions and construction procedure only)	6hrs	CRT /Class room practice	1.3	TB ₁ CH-5&6, TB2C H-7
2. Hydrograph analysis using EXCEL. 3. Preparation of stage discharge curve.	2hrs			
Site visit for CD works (aqueduct, Syphons, Outlet and Level crossing, Branch canals and lining of canals)	4hrs			
Ground water and well hydrology: Forms of subsurface water, aquifers, types and its properties, geologic formations of aquifers, well hydraulics: steady state flow in wells, equilibrium equations for confined and unconfined aquifers, aquifer tests. Radial flow into a well under confined and unconfined conditions Yield of a well.	6	CRT /Class room practice	1.4	TB ₁ CH-9, TB2CH-16
5. Design of irrigation canal using Kennedy's theory. 6. Design of irrigation canal using Lacey's theory.	4hrs			

Water withdrawals and uses (4hrs) Water for energy production, water for agriculture, water for hydroelectric generation; flood control. Analysis of surface water supply, Water requirement of crops-Crops and crop seasons in India, cropping pattern, duty and delta, Quality of irrigation water; Soil-water relationships, consumptive use, irrigation requirement, frequency of irrigation; Methods of applying water to the fields: surface, sub-surface, sprinkler and trickle / drip irrigation.	4hrs	CRT /Class room practice	1.5	TB2CH-1&2
Practice 4hours: 7. Design of lined canal 8. Fixing of L-section of the canal	2hrs			
Distribution systems: Canal systems, alignment of canals, canal losses, estimation of design discharge. Design of channels- rigid boundary channels, alluvial channels, Kennedy's and Lacey's theory of regime channels. Basics of CD works, Water logging: causes, effects and remedial measures. lining of canals, types of lining. Drainage of irrigated lands: necessity, methods.	4Hrs	Lecture	1.6	TB2CH-4&5
9.Design of tank surplus weir. 10.Design of vertical drop weir.	4Hrs	Practice		
Diversion head works- Principles and design of weirs on permeable and impermeable foundation, Khosla's theory- expressions for uplift pressure at key points - Various corrections and their calculations for simple cases.	4Hrs	Practice+Field Visit		
Practice 11. Design of Notch fall. 12. Design of a spur	2Hrs			
Storage works: Types of dams, design, principles of rigid gravity, stability analysis. Spillways: Spillway types, energy dissipation. River training: Objectives of river training, methods of river training construction				TB2CH-9

Practice 13. Design of head regulators. 14. Design of cross regulators. 15. Stability analysis of gravity dam.	4 hrs	practice		
Total	60hrs	(THEORY-30+PRACTICE-30)

Quality Control and Risk Management in Construction

Course Title	Code	Type of course	Credits	Prerequisite
Quality Control and Risk Management in Construction	CECC0414	Theory+ Practice	2-1-0	Nil

Objective

- To make the student realize the necessity of quality control and quality assurance in construction industry.
- To impart the procedures involved in maintaining quality in construction industry and various standards and practices prescribed therefor.
- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check lists.
- To make the student to take up laboratory and field tests for quality assurance for civil engineering structures.

Course Outcome

- Generate quality control schedule for different projects in construction industry.
- Prepare quality control inspection check lists for selected civil engineering structures.
- Carryout the field and laboratory tests for quality assessment in construction industry.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module: I Principles of Quality Assessment & Quality Control (QA & QC) (Theory) (8 Hrs)

[Both Internal & External Assessment University Written Test and Sessional Tests.]

Introduction: Quality Control and Quality Assessment - Construction Quality - Purpose & Scope Definition & Evolution of Quality. Factors influencing Construction Quality QualityCircle.Establishing QC Requirements - Setting up a Quality Management System - Total Quality Management - Deming's PDSA Quality Cycle, Juran's Quality Triangle & Triple Role models.Concept of Quality ISO Standards.QualityAudit.Construction Quality Assurance System (CONQUAS).Principles of Quality Control and Quality Assessment. Quality Management System, Quality Control Inspection Process.

Quality Assurance & Control: Objective, Regularity Agent - Owner, Contract and Construction Oriented Objectives & Methods. Techniques and Needs of QA / QC.

Module: II Method Statement and Quality Inspection Schedule (Theory & Class Room Practice)

[Internal & External Assessment.] (8 Hrs)

Method Statement - Importance and Purpose - Contents of Method Statement.

Practice Session on preparation of Method Statement for given Structure (Buildings, Irrigation Structures and Highway Projects).

Quality Inspection Schedule and importance - General Phases of Inspection Schedule for different Construction Projects - Conventional Residential Building, Multi- storied Buildings, Highway Projects - Concrete Roads, Bituminous Pavements, Elevated and, Ground and Underground Water Tanks,

Practice Session on developing Quality Inspection Schedule for given Structure (Buildings, Irrigation Structures and Highway Projects).

Module:III Quality Assessment (QA) Inspection Check Lists (Theory & Class Room Practice) [Internal & External Assessment.] (8 Hrs)

Study of Quality Inspection Check Lists for various construction activities and their importance - Contents to be included - Some Standard Check Lists. Check list for Design Standards and design processes.

Module:IV (12Hrs)

Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.

Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.

Module: V Post Construction QA (Field Practice) [Internal & External Practice Assessment. No written university examination.](8 Hrs)

Study of field tests for Quality Assurance. Study of QC standards for various construction equipment including Concrete batch mixing / Bitumen batch mixing equipment.

Practice Session on Rebound Hammer Test, Ultrasonic Pulse Velocity Test and Core Sampling.

Module: VI Risk Involved in Construction Industry (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination.] (8 Hrs)

Introduction - Definition and Importance of Risk Management studies - Uncertainty Matrix - Importance of Risk Management - Risk Classification and Risk Management Process - Risk causation theories - Risk Identification Process - Preliminary Check List, Risk Events Consequences Scenario - Risk Mapping and Risk Classification - Risk Analysis.

Module: VII Safety Procedures in Construction Industry (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination.](8 Hrs)

Evaluation of Safety Project - Accident causation Theories, Foundations of a Major Injury - Unsafe Conditions and Unsafe Acts. Health and Safety Act and Regulations - Building & Other Construction Workers - Regulation of Employment and Condition of Services Act, 1996, Central Rules 1998.

Safety & Health Management System: Appraisal of construction safety management guidelines in Construction Sector - Safety Policy & Organization. Fire Prevention for different types of buildings Safety precautions in Construction activities, Construction equipment usage.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
<p>Introduction: Quality Control and Quality Assessment - Construction Quality - Purpose & Scope Definition & Evolution of Quality. Factors influencing Construction Quality Circle.</p>	2	lecture	1.1	Handouts
<p>Establishing QC Requirements - Setting up a Quality Management System - Total Quality Management - Deming's PDSA Quality Cycle, Juran's Quality Triangle & Triple Role models. Concept of Quality ISO Standards. Quality Audit.</p>	2	lecture	1.2	Handouts
<p>Quality Audit. Construction Quality Assurance System (CONQUAS). Principles of Quality Control and Quality Assessment.</p>	2	lecture	1.3	Handouts

Quality Management System, Quality Control Inspection Process.				
Quality Assurance & Control: Objective, Regularity Agent - Owner, Contract and Construction Oriented Objectives & Methods. Techniques and Needs of QA / QC.	2	lecture	1.4	Handouts
Sub-total (hrs)	08			
Module II				
Practice Session 1 on Quality Control Testing Procedure & Quality Control Schedule preparation	2	practice	2.1	Handouts
Practice Session 2 on Generation of sample Quality Control inspection Check list for Design Standards and design processes	2	practice	2.2	Handouts
Practice Session 3 on Generation of sample Quality Control Inspection schedule Check list for form work for a Building / Irrigation Structure.	2	practice	2.3	Handouts
Practice Session 4 on Generation of sample	2	practice	2.4	Handouts

Quality Control Inspection schedule Check list for concreting in a Residential building / Irrigation Structure/ Highway Projects.				
Sub-total (hrs)	08			
Module III				
Study of Quality Inspection Check Lists for various construction activities and their importance - Contents to be included - Some Standard Check Lists. Check list for Design Standards and design processes.	2	practice	3.1	Handouts
Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.	3	practice, field studies	field study	Handouts
Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.	3	practice, field studies	field study	Handouts
Sub-total (hrs)	08			
Module IV				
Importance of Quality Assessment for Materials used in construction Industry and their	1	lecture	4.1	Handouts

procurement.				
Study of laboratory tests for Quality Assurance. Quality Assessment Testing Procedure (Laboratory Tests) - IS Codes for Testing of Materials and Concrete.	4	practice	4.2	Handouts& IS Codes
Quality Assessment Schedule preparation for Laboratory Tests. Check Lists for Quality Control Testing Procedure & Practice.	2	practice	4.3	Handouts& IS Codes
Practice Session on Material Testing and Testing of Concrete for Quality Assessment.	5	practice	4.4	Handouts& IS Codes
Sub-total (hrs)	12			
Module V				
Study of field tests for Quality Assurance. Study of QC standards for various construction equipment including Concrete batch mixing / Bitumen batch mixing equipment Practice Sessions on laboratory tests, field tests and Field Visits	4	practice, field studies	field study	Handouts& IS Codes
Practice Session on Rebound Hammer Test, Ultrasonic Pulse Velocity Test and Core Sampling.	4	practice, field studies	field study	Handouts& IS Codes
Sub-total (hrs)	08			

Module VI				
Introduction - Definition and Importance of Risk Management studies - Uncertainty Matrix - Importance of Risk Management -	4	lecture	6.1	Handouts& IS Codes
Risk Classification and Risk Management Process - Risk causation theories - Risk Identification Process - Preliminary Check List, Risk Events Consequences Scenario - Risk Mapping and Risk Classification - Risk Analysis.	4	lecture	6.2	Handouts& IS Codes
Sub-total (hrs)	08			
Module VII				
Evaluation of Safety Project - Accident causation Theories, Foundations of a Major Injury - Unsafe Conditions and Unsafe Acts. Health and Safety Act and Regulations - Building & Other Construction Workers - Regulation of Employment and Condition of Services Act, 1996, Central Rules 1998.	2	lecture	7.1	Handouts& IS Codes
Safety & Health Management System: Appraisal of construction safety management guidelines in Construction Sector - Safety Policy & Organization. Fire Prevention for different types of buildings	2	practice, field studies	field study	Handouts& IS Codes

Safety precautions in Construction activities, Construction equipment usage. Safety Practices for material handling, Safety Practices for Equipment Operation - Material safety Data Sheets				
Study of Safety Provisions for selected organizations - National Power Corporation of India Limited, Atomic Energy Regulation Board, NTPC, Godrej & Boyce. Visit to a project site visit for observing and noting the safety provisions adopted.	2	practice, field studies	field study	Handouts& IS Codes
Sub-total (hrs)	08			
Total (hrs)	60			

Computer Aided Design of Steel Structures

Course Title	Course Code	Type of Course	T-P-PJ	Pre-Requisite
Computer aided design of Steel structures	CECC0407	Theory+ Practice	2-1-0	Nil

Objective

- To teach the basic fundamental behavior of different section of steel structure used in construction by using software

Course Outcome

- After completion of the courses the students will gain knowledge of Steel design calculation with relevant Indian Standards
- Students will develop skill of converting clients requirement to structural drawing by using STAAD.Pro

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total marks		100	

Course Outline

Module I: PLASTIC ANALYSIS (7Hours)

Theory

Plastic section modulus; load factor; shape factor; plastic moment of resistance; upper bound theorem and lower bound theorem

Practice

Tensile test of Mild steel specimen to know elastic and plastic failure region in UTM

Module II: FAILURE MECHANISM OF BEAMS AND PORTAL FRAMES (10Hrs)

Theory

Plastic analysis of fixed beam; continuous beam and simple rectangular portals

Practice

1. Failure mechanism of simply supported and cantilever beams with concentrated loads or uniformly distributed load
2. Failure mechanism of portal frames and simple truss with concentrated loads or uniformly distributed load

Module III: DESIGN OF BRACED AND UN-BRACED INDUSTRIAL BUILDING USING STAAD. Pro (13Hrs)

Theory

Different types of Industrial Floors; Different types of bolts and welds; their design strength calculation; design of tension members; design of beams and design of purlin

Practice

3. Design of bolts and welding
4. Design of beam- column and column–slab by welded and bolted joints
5. Design of tension members

Module IV: DESIGN OF COLUMN (8Hrs)

Theory

Design of Short and long Columns; design of laced and battened column

Practice

6. Design of short and long column
7. Design of lacing and battening column

Module V: DESIGN OF PLATE AND GANTRY GIRDERS (8Hrs)

Theory

Introduction; weight and economical depth; design of plate girders; splices; stiffeners; riveted / bolted and welded connections; HSF bolts ;design of gantry girder and application

Practice

8. Design of plate girder
9. Design of gantry girder

Module VI: DESIGN OF TRANSMISSION AND COMMUNICATION TOWER USING STAAD. Pro (10 HRS)

Theory

Classification of different types of towers; design for wind action; wind load calculation; design of transmission tower; design of a communication tower and design of purlin

Practice

10. Design of Transmission Tower
11. Design of Communication Tower
12. Design of roof truss Purlin

Module VII: DESIGN OF COLUMN BASE USING STAAD.Pro (8HRS)

Theory

Design of slab base and design of gusseted base;

Practice

13. Design of slab base
14. Design of gusseted base

Text Books

15. S K Duggal, " Designing of steel structures",2012.

Session Plan

Topics	No. of Sessions	Activity	Assignment	Suggested
--------	-----------------	----------	------------	-----------

	(in hrs)			Reading
Module I[5 Hours Lecture+2 Hours Practice]				
PLASTIC ANALYSIS Plastic section modulus, Load factor, shape factor	1	Lecture	1.1	Text Book(TB)- 2 Chapter(Ch)-8
plastic moment of resistance, upper bound theorem	2	Lecture + Practice	1.2	TB-2, Ch8
lower bound theorem	2	Lecture + Practice	1.3	TB-2, Ch8
Tensile test of Mild steel specimen to know elastic and plastic failure region in UTM	2	Practice		
Module II [6 Hours Lecture+4 Hours Practice]				
FAILURE MECHANISM OF BEAMS AND PORTAL FRAMES		Lecture	2.1-2.5	TB-1(Ch-17) TB -2(Ch-8)
Plastic analysis of fixed beam	2			
Plastic analysis of continuous beam	2	Lecture		TB-1(Ch-17) TB -2(Ch-8)
Plastic analysis of simple rectangular portal	2	Lecture		TB-1(Ch-17) TB -2(Ch-8)
Failure mechanism of simply supported and cantilever beams with concentrated loads or uniformly distributed load	2	Lecture+ Practice		TB-1(Ch-17) TB -2(Ch-8)
Failure mechanism of portal frames and simple truss with concentrated loads or uniformly distributed load	2	Lecture+ Practice		TB-1(Ch-17) TB -2(Ch-8)
Module III[7 Hour Lecture+6 Hour Practice]				
DESIGN OF BRACED AND UN-BRACED INDUSTRIAL BUILDING USING STAAD. Pro				
Different types of Industrial Floors	1	Lecture		

Different types of bolts and their strength calculation	2	Lecture+ Practice	3.1	TB-1(Ch-2) TB -2(Ch-4)
Different types of welds and their strength calculation	2	Lecture+ Practice	3.2	TB-1(Ch-3) TB -2(Ch-5)
Design of Tension Members	2	Lecture+ Practice	3.3-3.4	TB-1(Ch-6) TB -2(Ch-6) Reference 1
Design of Beams	4	Lecture+ Practice		TB-1(Ch-6) TB -2(Ch-6) Reference 1
Design of Purlin	2	Lecture+ Practice	3.5	TB-1(Ch-7) TB -2(Ch-9) Reference 1
ModuleIV[4 Hour Lecture+4 Hour Practice]				
DESIGN OF COLUMN Design of Short and long Columns				
Design of lacing and battening column	4	Lecture+ Practice		TB -2(Ch-7) TB -2(Ch-7)
Module V [4 Hour Lecture+4 Hour Practice]				
DESIGN OF COLUMN BASE PLATES AND GANTRY GIRDERS Analysis for Lateral Load and Load combination for design	1	Lecture		TB -2(Ch-11)
Lateral Load Resisting Systems for gantry girder	1	Lecture		TB -2(Ch-11)
Design Column base plates and anchor bolts	2	Lecture+ Practice	5.1-5.2	TB -2(Ch-11)
Design of gantry girder	4	Lecture+ Practice		TB -2(Ch-11)
Module VI [6 Hours Lecture+4 Hours Practice]				
DESIGN OF TRANSMISSION AND COMMUNICATION TOWER USING STAAD. Pro	1	Lecture		

Classification of different types of Towers				
Design for wind action and wind load calculation	1	Lecture	6.1	TB1(Ch-13)
Design of transmission tower	4	Lecture+ Practice	6.2-6.3	Online Sources
Design of communication tower	4	Lecture+ Practice		Online Sources
Module VII[2 Hours Lecture+2 Hours Practice]				
DESIGN OF SLAB BASE USING STAAD. Pro				TB-1(Ch-5) TB -2(Ch7) Reference 1
Design of slab base	2	Lecture+ Practice	7.1-7.2	
Design of gusseted base	2	Lecture+ Practice		TB-1(Ch-5) TB -2(Ch7) Reference 1
Total (Hours)	60	(32 Hours Theory+28 Hours Practice)		

Computer Aided Design of Concrete Structure

Course Title	Code	Type of course	T-P-P	Prerequisite
Computer Aided Design of Concrete Structures	CECC0408	Theory+ Practice	2-1-0	Nil

Objective

- To teach the basic theoretical aspects and contemporary issues in the design and fabrication of reinforced concrete members.

Course Outcome

- To gain the knowledge of RCC design calculation with relevant Indian Standards
- To acquire skill of converting clients requirement to structural drawing and BOM by using STAAD PRO.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination

	Internal Practice	30 (20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module-I: Design & Detailing of Multi-Storied Building Using STAAD PRO(14Hrs)

Practice Sessions:

1. Design detailing of rectangular beam, 'T' and 'L' beam, Design of lintel and sunshades
2. Design detailing of Slabs: Design and detailing of one way and two way slabs, circular slab

Module-II: Analysis and Design of long column (14Hrs)

Practice Sessions:

3. Design detailing of Columns: Short and long columns, axial and eccentrically loaded columns

Module-III: Analysis and Design of Short column (08Hrs)

4. Design detailing of short columns uniaxial-bending
5. Design for torsion, bond and Shear.

Module-IV: Matrix Methods for structural analysis of Trusses and Beam(10Hrs)

Basic concepts of Matrix methods of structural analysis: Flexibility and Stiffness method application to simple trusses and beams

Module-V: Matrix Methods for structural analysis of Trusses and Beam using STAAD Pro (6 Hrs)

6. Matrix method analysis of beams and trusses by STAAD.PRO

Module –VI: Influence Line Diagram of determinate beams (10Hrs)

ILD for simply supported, cantilever and overhanging beams; max BM and SF due to moving loads, Graphical representation of

Practice Sessions:

7. ILD for simply supported beams
8. ILD For cantilever beam

Module-VII: Influence Line Diagram of indeterminate beams(8Hrs)

9. ILD for continuous beam
10. ILD for three hinged arches

Text Books:

- a) Reinforced Design by DevdasMenon
- b) Structural Analysis by R.C Hibbeler
- c) Reinforced Concrete design-S. N. Sihna. Tata McGraw-Hill, New Delhi
- d) Structural analysis vol-1:S.S.Bhavikatti; Vikas Publication house

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I[6HoursTheory+4Hours Practice]				
DESIGN& DETAILING OF MULTI-STORIED BUILDING USING STAAD PRO Design detailing of rectangular beam	2+0=2	lecture	1.1	Text Book(TB) Chapter (CH)
Design detailing of T' and 'L' beam	2+0=2	lecture	1.2	TB1 CH1
Design of lintel and sunshades	1+1=2	lecture	1.3	TB1 CH1
Design detailing of rectangular beam, 'T' and 'L' beam	0+2=2	practice	1.3	Video
Design and detailing of one way and two way slabs	1+1=2	Lecture+ practice	1.4	TB1 CH2
Sub-Total (hrs)	6+4=10			
Module II[8Hours Theory+6Hours Practice]				
ANALYSIS AND DESIGN OF LONG COLUMN Design detailing of Short and long columns axial and eccentrically loaded columns	4+2=6	Lecture+ practice	2.1	TB2 CH3
Design detailing axial and eccentrically loaded columns	4+2=6	Lecture+ practice	2.2	TB2 CH3

Sub-Total (hrs)	8+4=12			
Module III[4Hours Theory+4Hours Practice]				
ANALYSIS AND DESIGN OF SHORT COLUMN Design detailing of short columns uniaxial-bending	2+2=4	Lecture+ practice	3.1	TB2 CH3
Design for torsion, bond and Shear	2+2=4	Lecture+ practice	3.2	TB2 CH3
Module IV[1HoursTheory+5Hours Practice]				
MATRIX METHODS FOR		Lecture	4.1	TB2 CH1
matrix methods for structural analysis of trusses and beam	2+2=4	Practice	4.2	TB2 CH1
matrix methods for structural analysis of trusses and beam	2+2=4	Practice	4.3	TB2 CH1
Module V[2HoursTheory+2Hours Practice]				
Matrix Methods for structural analysis of Trusses and Beam using STAAD Pro Max BM and SF due to moving loads	1+1=2	Lecture+ Practice	5.1	TB3 CH5
Suspension Bridges with Three- hinged arch; analysis for static loads; BM diagrams: influence line diagrams	1+1=2	Lecture+ Practice	5.2	TB3 CH5
Module VI[4HoursTheory+4Hours Practice]				
Influence Line Diagram of determinate beams		Lecture+ practice		TB3 CH5
ILD for simply supported beams	2+2=4	Lecture+ practice	6.1	TB3 CH5

ILD For cantilever beam	2+2=4	Lecture+ practice	6.2	TB3 CH5
Sub-Total (hrs)	4+4=8hrs			
Module VII[2HoursTheory+2Hours Practice]				
Influence Line Diagram of indeterminate beams				
ILD for continuous beam	3+2	Lecture+ practice	7.1	TB3 CH5
ILD for three hinged arches	3+2	Lecture+ practice	7.2	TB3 CH5
Total (hrs)	60Hrs	(30Theor y+30 Practice)		

GIS and Digital Cartography

Course Title	Code	Type of course	T-P-PJ	Prerequisite
GIS and Digital Cartography	CECC0413	Theory + Practice	2-2-0	Nil

Objective

<ul style="list-style-type: none"> • To study the basic concepts of GIS. • To study the data structure in GIS • To study data conversion in GIS and Meta data • To know the basics, importance, and methods of Cartography • To study the various maps projection and co-ordinate systems.

Course Outcome

<p>At the end of this course the students will be able to:</p> <ul style="list-style-type: none"> • To understand the structure of spatial data including file associations, attribute tables, Metadata, coordinate systems, and projections. • To develop software skills in programs used for map production in the modern cartographic workflow. • To learn the fundamental concepts of Cartography and its advancements as Digital Cartography. The engineers will be enabling to different aspects of Map Making, Generalization, Map Production and Map Reproduction

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module – I: BASICS OF GIS(7Hrs)

Introduction; concepts, Information system, components of GIS, History, Geospatial data architecture; Operations, Input data for GIS, display, types of output products. GIS categories; Level and scale of Measurement, importance of data quality.

Practice:

Introduction to GIS (Overview, Features, About the software, Main user interface, Main menu-Project menu; Layer menu; View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects)

Building a catalog of geographic data (Arc Catalog, folder connection, inside the catalog, folder location, create a working copy of the data, connect directly to your copy of the data, and remove folders that do not need)

Module – II: DATA ANALYSIS TOOLS(12Hrs)

The Spatial Analyst Extension and Model Builder; Metadata, Geo-referencing, Geocoding, Network Analyst; Interpolation and Surface Modeling, Interpolation Methods, The Geodatabase , Building a Geodatabase.

Practice:

Exploring data and adding it to a map (The Contents tab, Explore the contents of the Yellowstone folder, The Preview tab, Yellowstone data in Geography view, Explore the contents of a table, The Metadata tab, add a layer to a map, import metadata, Search for items, map compose)

Managing a dataset (Define a shape file's coordinate system, modify attributes in database tables, calculate attribute values in ArcMap, Update the table's metadata, create a layer using the related attributes, Add the vegetation type layer to the map)

ArcGIS Graphics language (generalization, symbology, and colour effect, change symbology and use transparency in creative ways)

Module - III: SPATIAL DATA ANALYSIS(16Hrs)

Spatial interpolation; measurement and analysis methods, reclassification techniques; Buffer analysis, overlay analysis, Vector overlay analysis, Topological overlay, raster over lay analysis, measurement of length, perimeter and area, queries; 2D to 3 D conversion, DTM and DEM, advantages and disadvantages, Network modeling.

Practice:

Projection (Understanding of projection and coordinate system, projecting a dataset, adding projected dataset into the map, define a projection to the layer)

Georeferencing (Basic of georeferencing, Georeferencing a Scanned Image, Assign Projection to the Referenced Image)

Topology (Concept of topology, topology in different GIS format, Coverage, shapefile, DXF-Drawing Exchange File, Geodatabase, Topology principle, Topological Error and Correction process, creating personal Geodatabase, creating a features dataset)

Module – IV: CARTOGRAPHY(13Hrs)

History and development of Cartography; Definition, scope and concepts of cartography., Characteristics of Map; Categories of maps, Methods of mapping, relief maps, thematic maps. Trends in Cartography.

Practice:

Feature Dataset and Domain (Creating Feature Classes within the Feature Dataset, Creating Domain for the Feature Datasets, Digitizing the Feature Classes, Creating Topology in Arc Catalog, Viewing and Editing the Topology).

Google Earth (Introduction to Google Earth, Convert Shape file to KML Format, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, Convert KML File to shape file, overlaying an image into google earth)

Module – V: EARTH MAP RELATION(11Hrs)

Geodesy; Map projection, classification principles of construction of common projections, cylindrical, conical, azimuthal and globular projections. Properties & uses of projection. The spheroid, Map scale, and co-ordinate system. Plane co-ordinates in UTM system, projection used in Survey of India topographic sheets.

Practice:

Buffering and Editing tools: (Buffering in ArcGIS, add the data layer, create the buffer, conflation, extend the line, Erase point, Flip line, Snap, trim line, Densify, create a polygon, Create point, Create polygon)

Data Conversion Tools (from Excel to Table and table to Excel, GPS-from GPX to Features, KML to layer, from PDF to TIFF, from Raster to ASCII/Float/Point/Polygon/Polyline/Video, metadata importer/exporter/translator, Export to CAD features class to coverage, table to the database, CAD to a geodatabase, DEM to raster, LAS dataset to raster, Point/line/polygon to raster, feature class to shape file)

Module – VI: GPS and DGPS(11Hrs)

GPS satellites; Introduction, components, Satellite Ranging, codes, GPS, DGPS, GPS Receiver and its Features, Receiver selection, enhancement of receiver, GPS processor Software; GPS Data, Processing of GPS data and types.

Practice:

Mapping of an area using GPS. Error of GPS, **Open Source Data;** Bhuvan (Introduction to Bhuvan web portal, types of data available with Bhuvan, create an account on Bhuvan, Download data)

Model – VII: Total Station (TS)(20Hrs)

Basic concept ; Contouring of an area using TS, Layout of different structures, Demarcation of an area according to the cadastral map, Locating different objects in the map.

Practice:

1. Contouring
2. Layout of building
3. Demarcation of plot
4. Locating different permanent objects

Text Books

1. Burrough P.A., Principles of Geographical Information System for Land Resources Assessment, Oxford Publications, 1980.
2. A.M. Chandra and S.K. Ghosh 2000. Remote Sensing and GIS. Narosa Publishing House, New Delhi.
3. Paul A. Longley, Micheal F. Goodchild, David J. Magaine David J. Magaine, David W Rhind. Geographical Information System. Vol. I & II, John wiley& Sons. Inc.,1999
4. Kang-tsung Chang, Introduction to Geographical Information System, Fourth Edition, Tata McGraw Hill, 2008.
5. Anji Reddy .M, “*Textbook of Remote Sensing and Geographical Information Systems*”, BS Publications, Hyderabad. 2011. ISBN: 81-7800-112-8.

Session Plan

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (lecture, tutorial, lab practice. etc)</i>	<i>A (project , A, seminar , etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Module-I				
Introduction, concepts , Information system , components of GIS, History, Geospatial data architecture, Operations, Geographic co-ordinate systems	1	<i>Lecture</i>	<i>1.1</i>	TB:4,CH:1
Map projections, concepts, In-put data for GIS, display, types of output products.	1	<i>Lecture</i>	<i>1.2</i>	TB:4,CH:2
Level and scale of Measurement, importance of data quality.	1	<i>Lecture</i>	<i>1.3</i>	TB:4,CH:1
Practice				
Introduction to GIS (Overview, Features, About the software, Main user interface, Main menu-Project menu; Layer menu View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects)	2	<i>Lab Practice</i>		https://www.youtube.com/watch?v=3BkaazSVIb https://www.youtube.com/watch?v=irs-1nEsDYQ
Building a catalog of geographic data (Arc Catalog, folder connection, inside the catalog, folder location, create a working copy of the data, connect directly to your copy of the data, and remove folders that do not need)	2	<i>Lab Practice</i>		https://www.youtube.com/watch?v=3BkaazSVIb TB:4,CH:1
Module-II				
GIS data types, data Representation, Data sources, typical GIS data sets, Data	2	<i>Lecture</i>	2.1	TB:4,CH:1 &

Acquisition, vector data model				3
topology, topology rules, Non topological vector data, object based vector data model, relationship between classes	1	<i>Lecture</i>	2.2	TB:4,CH:8
Data structure, data verification and editing spatial data models and errors – GIS database, attribute data input and management.	1	<i>Lecture</i>	2.3	TB:4,CH:9
Practice				
Exploring data and adding it to a map (The Contents tab, Explore the contents of the Yellowstone folder, The Preview tab, Yellowstone data in Geography view, Explore the contents of a table, The Metadata tab, add a layer to a map, import metadata, Search for items, map compose)	2	<i>Lab Practice</i>		https://www.youtube.com/watch?v=3BkaazSVIbI https://www.youtube.com/watch?v=RQ1Xs1D5oUU
Managing a dataset (Define a shape file's coordinate system, modify attributes in database tables, calculate attribute values in ArcMap, Update the table's metadata, create a layer using the related attributes, Add the vegetation type layer to the map)	2	<i>Lab Practice</i>		https://www.youtube.com/watch?v=PHtxbpboDro https://www.youtube.com/watch?v=cv6ltuMpnYM
ArcGIS Graphics language (generalization, symbology, and coloureffect, change symbology and use transparency in creative ways)	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=w7G3SF4doVg
Module-III				
Raster data – elements of data model, cell, value, data structure, cell by cell encoding	2	<i>Lecture</i>	3.1	TB:4,CH:5

Run length encoding, Quad tree, Header files, format	2	Lecture	3.2	TB:4,CH:1 https://www.youtube.com/watch?v=YI50cJScObI
Types of raster data, data compression, Linking and integration of vector data, Registration.	2	Lecture	3.3	TB:4,CH:1 https://www.gislounge.com/geodatabases-explored-vector-and-raster-data/
Practice				
Projection (Understanding of projection and coordinate system, projecting a dataset, adding projected dataset into the map, define a projection to the layer)	2	Lab Practice		https://www.youtube.com/watch?v=Ij6iOT11xpE https://www.youtube.com/watch?v=eFhsBHgGMIO
Georeferencing (Basic of georeferencing, Georeferencing a Scanned Image, Assign Projection to the Referenced Image)	4	Lab Practice		https://www.youtube.com/watch?v=cv6ltuMpnYM
Topology (Concept of topology, topology in different GIS format, Coverage, shapefile, DXF-Drawing Exchange File, Geodatabase, Topology principle, Topological Error and Correction process, creating personal Geodatabase, creating a features dataset)	4	Lab Practice		https://www.youtube.com/watch?v=hIDxUcG8op0 https://www.youtube.com/watch?v=DQLkdS7omcg
Module-IV				
Data format conversion, Medium	1	Lecture	4.1	TB:4,CH:9

conversion				
Spatial interpolation, measurement and analysis methods, Data accuracy and standards	2	Lecture	4.2	TB:4,CH:9
Attribute data input and Management, Relational mode-Data manipulation, classification techniques.	2	Lecture	4.3	TB:4,CH:9
Practice				
Feature Dataset and Domain (Creating Feature Classes within the Feature Dataset, Creating Domain for the Feature Datasets, Digitizing the Feature Classes, Creating Topology in Arc Catalog, Viewing and Editing the Topology).	4	Lab Practice		https://www.youtube.com/watch?v=OPv_7iZsDQQ
Google Earth (Introduction to Google Earth, Convert Shape file to KML Format, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, Convert KML File to shape file, overlaying an image into google earth)	4	Lab Practice		https://www.google.com/intl/en_in/earth/
Module-V				
Geodesy, Map projection, classification principles of construction of common projections, Cylindrical, conical, azimuthal and globular projections. Properties & uses of projection	1	Lecture	5.1	TB:4,CH:2
The spheroid, Map scale, and co-ordinate system. Plane co-ordinates in UTM system	1	Lecture	5.2	TB:4,CH:2
Projection used in Survey of India topographic sheets	1	Lecture	5.3	TB:4,CH:2
Practice				

Buffering and Editing tools: (Buffering in ArcGIS, add the data layer, create the buffer, conflation, extend the line, Erase point, Flip line, Snap, trim line, Densify, create a polygon, Create point, Create polygon)	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=7AK-jNK39Gs https://www.youtube.com/watch?v=ePScZlhE6A
Data Conversion Tools (from Excel to Table and table to Excel, GPS-from GPX to Features, KML to layer, from PDF to TIFF, from Raster to ASCII/Float/Point/Polygon/Polyline/Video, metadata importer/exporter/translator, Export to CAD features class to coverage, table to the database, CAD to a geodatabase, DEM to raster, LAS dataset to raster, Point/line/polygon to raster, feature class to shape file)	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=8tS_heOIM1U
Module - VI				
Introduction – GPS satellites – components	1	<i>Lecture</i>	6.1	https://www.maptoaster.com/maptoaster-topo-nz/articles/how-gps-works/how-gps-works.html
Satellite Ranging – codes - GPS – DGPS	1	<i>Lecture</i>	6.2	TB:4,CH:6
GPS Receiver and its Features – Receiver selection	1	<i>Lecture</i>	6.3	TB:4,CH:6
Enhancement of receiver - GPS processor Software – GPS Data	1	<i>Lecture</i>	6.4	TB:4,CH:6
Processing of GPS data and types	1	<i>Lecture</i>	6.4	TB:4,CH:6
Practice				

Mapping of area using GPS	2	<i>Lab Practice</i>		https://www.youtube.com/watch?v=i64d-pAYU0
Error of GPS, Open Source Data- Bhuvan (Introduction to Bhuvan web portal, types of data available with Bhuvan, create an account on Bhuvan, Download data)	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=Op6Rzx5RftA
Module - VII				
Contouring of an area using TS	1	<i>Lecture</i>	7.1	https://www.slideshare.net/iaeme/experience-on-using-total-station-surveying-for-mapping-and-contouring
Layout of different structures	1	<i>Lecture</i>	7.2	https://www.youtube.com/watch?v=LBUdvH9wvRI
Demarcation of an area according to the cadastral map	1	<i>Lecture</i>	7.3	https://www.youtube.com/watch?v=wf6rCktLqYU
Locating different objects in the map	1	<i>Lecture</i>	7.4	
Practice				
Contouring	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=d_DoEB4zWEQ
Layout of building	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=d_DoEB4z

				WEQ
Demarcation of plot	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=d_DoEB4zWEQ
Locating different permanent objects	4	<i>Lab Practice</i>		https://www.youtube.com/watch?v=d_DoEB4zWEQ
Total(hrs.)	90	(30 Theory+60 Practice)		

Strength of Materials

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Strength of Materials	CECC0411	Theory + Practice	1-2-0	Engineering Mechanics

Objective

- To teach the students on basic theories behind mechanics of solids
- To educate the students on using ANSYS for analysis of various mechanical structures and load transmitting elements

Course Outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data
- Students will be able to deploy ANSYS to develop mechanical design solutions

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Evaluation	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Course Outline

Module I: ANALYSIS OF BEAMS (07 Hrs)

Theory

Shear and Bending Moment in Beams: Types of Beams and Loads; Concept of Shear force; Bending moment and Sign Conventions; Relation Between Load; Shear force and Bending moment; Procedure for Drawing Shear force and Bending moment Diagrams; Point of Contra Flexure.

Practice

1. Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment
2. Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment

Module II: STRESSES IN BEAMS**(04 Hrs)**

Theory

Simple or Pure Bending; Flexure Formula; Section Modulus; Neutral Axis; Determination of Bending Stresses; Shear Stress Distribution for Different Sections

Practice

3. Simulation (Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam

<https://www.youtube.com/watch?v=ekKQvGna0ig>

Module III: DEFLECTION OF BEAMS**(05 Hrs)**

Theory

Equation of Elastic Curve; Direct Integration Method; Strain Energy Method; Castigliano's Theorem

Practice

4. Stress & Deflection Analysis of Mechanical Component (Using ANSYS)

5. Double Shear Test and Deflection Test Using UTM

Module IV: ANALYSIS OF COLUMN AND SHAFT**(06 Hrs)**

Theory

Failure of a Column; End Conditions; Euler's Critical Load for Long Columns; Rankine's Empirical Formula; Effective Length and Slenderness Ratio; Eccentric Loading and Secant Formula

Practice

6. Simulation (Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam

Module V: TORSION**(08 Hrs)**

Theory

Torsion Equation, Design of Shafts; Power Transmitted by Shafts; Composite Shafts; Combined Bending and Torsion; Closed-Coiled Helical Springs; Spring Connected in Series and Parallel

Practice

7. Simulation (Using ANSYS): Static and Dynamic Analysis of Shaft

8. Simulation (Using ANSYS): Spring Structural Analysis

9. Simulation (Using ANSYS): Stress Analysis of Suspension System

10. Stiffness Test of a Helical Spring

https://www.youtube.com/watch?v=xI-NqAKZ_60

<https://www.youtube.com/watch?v=rJ2e4DximL0>

Module VI: THEORIES OF FAILURE

(06 Hrs)

Theory

Failure Under Biaxial Loading, Rankine's Theory; Guest's or Tresca's Theory; Von Mises Theory; Graphical Representation of Failure; Safety Factors; Prevention of Failure in Design Stage; Diagnosis of Failure In Post-Manufacturing Stage

Practice

11. Simulation: Spur Gear Fatigue Analysis in Ansys

<https://www.youtube.com/watch?v=2SGqcLZISQ0>

12. Simulation: Chair Structural Analysis in ANSYS

<https://www.youtube.com/watch?v=DIII8bI-ea8>

13. Simulation(Using ANSYS): Bicycle Frame Structural Analysis

https://www.youtube.com/watch?v=p-CUK_pEfR4

Module VII: FATIGUE

(14 Hrs)

Theory

Failure under Cyclic Loading; Endurance Limit.S-N Curve; Stress Concentration; Goodman and Soderberg Criteria.

Pratice

14. Fatigue Failure Analysis(Using ANSYS)

<https://www.youtube.com/watch?v=ywDsB3umK2Y>

15. Fatigue Analysis of a Plate with Hole(Using ANSYS)

<https://www.youtube.com/watch?v=c3yM5fT5Ztc>

16. Fatigue Analysis(Using ANSYS) of Crankshaft of Two Wheeler

<https://www.youtube.com/watch?v=D0g3dpd-uYM>

Software requirement: ANSYS

Functional Planning & DPR

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Functional Planning & DPR	CECC0501	Theory + Project	1-0-2	Nil

Objective

<ul style="list-style-type: none"> To enlighten the students about various building components and their nominal sizes. To make the students learn how to plan a structure meeting the functional requirements and To train the students towards preparing a Detailed Project Report (DPR) for various structures.

Course Outcome

<ul style="list-style-type: none"> After successful completion of the course the students will be able to develop a functional plan and write a DPR of various structures through project work.
--

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination

	Internal Project	25	Project Work
External Examination	External Theory	30	Written examination
	External Project	25	Project Work + Report
Total		100	

Course outline

Module-I: Introduction to Functional Planning (3 hrs)

Appraisal of various components of buildings - classification of buildings – substructure: various types of foundations; choice of types of foundations – superstructure: types of walls, flooring, doors and windows - Nominal dimensions of building components.

Module-II: Introduction to DPR (2hrs)

Guidelines for project proposal for (NeGP project); DPR for Highway projects (NHAI); DPR for Irrigation projects; JNNURM DPR toolkit; DPR for APTS; Templates for preparation of detailed project report in r/o for KIIFB Assistance.

Module-III: Detailed Functional planning for buildings other than industrial as per IS code SP 41:1987.(2 hrs)

Climatology: Climate, thermal comfort, shading devices, energy requirement for cooling and heating.

Module-IV:Heat insulation,Ventilation&Lighting (3hrs)

Introduction, terminology, requirements, heat transmission through buildings, thermal performance of buildings, orientation of buildings, building characteristics for various climates, thermal design of buildings, influence of design parameters, mechanical controls.

Ventilation: Introduction, terminology, ventilation requirements, minimum standards for ventilation, ventilation design, energy conservation in ventilating systems.

Lighting: General, illumination requirement, daylighting, daylighting analysis, supplementary artificial lighting design, artificial lighting design, energy conservation.

Module-V:Detailed Functional planning for industrial building as per IS code SP 32:1986. (3hrs)

Lighting: Introduction, illumination levels, characteristics of good lighting, daylighting, principles of daylighting design, artificial lighting, maintenance.

Ventilation: Introduction, physiological considerations, standards of temperature, control of heat, amount of ventilation required, natural ventilation, mechanical ventilation, evaporative cooling,

air conditioning, measurement of ventilation, ventilations for contaminants control, installation and operation.

Module-VI: EIA (2hours)

Checklists, Salient features, Statutory clearances, land acquisition, feasibility report, Environmental Impact analysis, Basically Cost – Benefits analysis, Investment criteria, payback period, Discounted cash flow (DCF) Technique, Net Present Worth (NPW), Benefit Cost Ratio (B C Ratio), Internal rate of return (IRR)

Module-VII: Project (30 + 30 = 60 hrs)

Project

Students to select any two projects & prepare report on FP & DPR. Any other projects as per their choice approved by course instructor can also be taken up.

List of projects

- a) Hotel buildings
- b) Hospital buildings
- c) Academic campus buildings
- d) Administrative buildings
- e) Bridges & overpasses
- f) Irrigation projects
- g) Residential buildings
- h) Shopping complex
- i) Convention centre
- j) Micro or Mini-hydel power Plant

Reference

- a) IS code SP 41:1987.
- b) IS code SP 32:1986?

E-content:

- a) Handouts
- b) Various Templates for DPR
- c) Case Studies

Construction Equipment Management

Course Code	Course Title	Course Type	T-P-PJ	Prerequisites
DECP0101	Construction Equipment Management	Theory	3-0-0	Nil

Course Objective:

- To enlighten the student with various equipment used in construction industry including selection criterion and economics of the same.
- To appraise the student with the aspects related to functioning, operation and maintenance of various construction equipment

Course Outcomes:

- After successful completion of the course the students will be able to identify the particular equipment to be used in the construction project they will undertake.
- Prepare plans for economic management of the equipment in the projects they undertake.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Module I (Theory) 6Hrs.

Introduction: Planning & Selection of Equipment - Equipment classification - Selection criteria & Source of Information Economics of Equipment: - Down Time Cost & Obsolescence Cost - Equipment Value, Depreciation, Owning & Operation Cost.

Module II (Theory) 4Hrs.

Time Factors & Equipment Life: Equipment Time - Down Time & Cycle Time. Equipment Life - Economic Life, Useful Life, Operating Life and Working Life Equipment Management & Procurement:

Module III (Theory) 3Hrs.

Equipment Management Check List - Equipment Order and Invoice - Equipment Maintenance sheets and Log Book.

Module IV (Theory & Field Visit) 6Hrs.

Practice based study on the functions, operational process, specifications for different constructional equipment

Road Making Equipment, Material Handling Equipment and Grading Equipment
Batching Plant, Concreting Equipment & Slip form Equipment

Module V (Theory & Field Visit) 6Hrs.

Hauling, Tunneling and other Equipment
Excavation & Embankment Making Equipment and Grading Equipment

Module VI (Theory & Field Visit) 10Hrs.

Batching & Mixing Equipment, Concreting Equipment & Slip form Equipment and Asphaltic Equipment

Material Handling Equipment and Hauling & Hoisting Equipment
Pile Driving Equipment and De-watering Equipment

Module VII (Theory) 10Hrs.

Based study & discussion on Materials Management
Basics of Materials Management
Inventory Management
MRP

Text Books:

1. Construction Equipment-James E. Russel, Prentice Hall.
2. Construction Planning and project management-Neeraj K. Jha.
3. Construction Planning and project management-U.K. Shrivastava.
4. Construction Planning and project management-P.S. Gahlot & B.M. Dhir.

Site Supervision & Measurement Methods

Course Code	Course Title	Course Type	T-P-PJ	Prerequisite
DECP0401	Site Supervision & Measurement Methods	Theory + practices	2-2-0	Nil

Course Objectives:

- To provide knowledge about the buildings, bridges and culvert etc
- To make understand about the quality construction
- To make familiar with different technique of construction work
- To provide knowledge about the different component wise practical of construction works.
- To make student familiar with drawing (plans, elevations, sections, etc) for finding out the dimensions.

Course Outcome

- To know the basic knowledge of Civil Construction work, and Identify the Quantity and Quality of work.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module I (5hrs)

Introduction of Site Supervision, Basic knowledge of civil construction, Type of Buildings, Structural system of Building, Principal of site selection, Site plan, Planning Regulations and Bye-Laws, Principal of Planning, Basic functional Requirements of a Building, Important of Building Component, Site investigation, Ground Techniques

Module II (10hrs)

Different Types of Tools and its use Different Equipment's (Construction, pumping, drilling, Concreting, Road making) etc, Units Conversion, measurement of the building,(Plinth area, Builtup areas, Construction area, Floor area, etc, Different types of Safety materials and its use

Module III (15Hrs)

Lay out and marking of the Building,(center line, construction line),Earth work excavation for different foundation work, Foundation (Raft foundation, Shallow foundation,Streep foundation) with RRMasonry(Straight, L,T,+ Junction),

Module IV (15Hrs)

Brick Masonry (Straight, L,T,+ Junction), R.C.C.etc..Plinth Work, Super Superstructure work, Brick Work(Header Bond,Strecher Bond, English Bond, Flemish Bond, Rat Trap Bond, Gardening Bond etc..)Pre-cast Structure, Lintel with Chaja, Different Type of Arches (Segmental Arch, Semi circle, Pointed Arch etc..)

Module V (15Hrs)

Structural Work, Steel Cutting & Bending, Different type of Stirrups, Site visit to see the Bridge work (Well Foundation with, Box Foundation etc..),

Module VI (15Hrs)

Project work for calculation to get the Volume work and Quantity of material consumed with existing structure, cost calculation,etc..

Module VII (15Hrs)

Project work for calculation to get the Volume work and Quantity of material consumed with existing structure, cost calculation,etc..

Reference Books:

1. Building Construction by Rangwala,
2. Esimating and Costing by B.N.Dutta

Geotechnical Investigations

Course Code	Course Title	Course Type	T-P-PJ	Prerequisite
DECP0402	Geotechnical Investigation	Theory+ Practice	2-1-0	Nil

Course Objectives:

- To make the student realize the importance of geotechnical investigations in construction industry.
- To enlighten the student with the subsurface geotechnical exploration methods and the processes.
- To appraise various impart the procedures of geotechnical investigations for varying soils.
- To give hands on practice to the students in carrying laboratory and field tests during the geotechnical investigation process.
- To involve the student in the boring, drilling, trial pitting and preparation of geotechnical investigation reports.

Course Outcomes:

- Plan geotechnical investigations before constructing a structure.
- Conduct the laboratory and field tests as a part of geotechnical investigations.
- Analyze the geotechnical investigation test data and prepare a report for selected categories of structures

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module I (06 hours)

Introduction: Importance of Geotechnical Investigations –Soil Exploration, Methods of site exploration.

Practice:

Estimation of soil parameters for foundation design-Recommendations about the allowable bearing pressure, the type of foundation or structure. Writing a detail about scope of the investigations.

+ \

Module II (13 hours)

Planning for Subsurface Exploration: Fact finding and Geological survey, Reconnaissance, Preliminary Exploration, Detailed Exploration , Planning Trial Pitting, boring and drilling, Boring of Holes-Depth of exploration, Boring Methods.

Practice:

Information Extraction from site investigation topography, Description of the proposed structure, the location & geological condition of the site.

Field Visit for observing Boring, Drilling, Probing and Trial Pitting—Preparation of Borehole Log- Details of the field exploration programme, indicating the number of the borings, their locations & depths

Module III (09 hours)

Subsurface Exploration Necessity & Objectives and Types of Subsurface Explorations. Suitability of different investigation procedures for Shallow & Deep Investigations, Soft Marine Clays & Expansive Soils and Liquefiable soils & Lateritic deposits.

Practice:

Give details of the methods of exploration-Details about the soil formation, depth of change in soil formation from ground level from the geophysical exploration data.

Module IV (08 hours)

Sampling of soils and Sample Analysis: Disturbed samples , Undisturbed samples ,Study of Testing methods (In situ tests) - Different types of samplers, Sample Sizes, equipment / apparatus for different tests and Soil Disturbance during Sampling & its effect, **Requirement of good sampling process.**

Practice:

General description of the sub-soil conditions as obtained from in-situ test, such as standard penetration test, cone test. Discussions of the results.

Module V (09 hours)

Undisturbed Sampling Techniques: Study of Standards available, relevant codes and Sampling, laboratory testing and in situ testing requirements.

Practice:

Field Visit for Undisturbed Sampling and Analysis of field test data.

Module VI (07 hours)**Practice:**

Water table location, Depth of ground water table & the changes in water levels. Finding out solution for different types of problems.

Module VII (08 hours)**Practice:**

Preparation of Geotechnical Investigation Reports for Major Projects - Dams, Hydroelectric Projects, Railway Projects, Commercial Structures, Industrial Structures, Residential Structures.

Resources List:

1. IGS-TC04-GI-Manual 2016
2. IS SP7 (NBC- 2005)
3. Site Investigation (Clayton, Matthews and Simons)
4. Writing Geotechnical Investigation Report

Repairs, Renovation and Rehabilitation of Structures

Course Code	Course Title	Course Type	T-P-P	Prerequisite
DECP0403	Repairs, Renovation and Rehabilitation of structures	Theory+ Practice	2-1-0	Quality Control

Course Objectives

- To make the students conversant with the emerging technology involved in construction industry causes of deterioration, assessment, repair and renovation and maintenance of distressed/damaged structures and demolition procedures including various processes.
- Students shall gain knowledge about importance and methods of substrate preparation, modern repair materials, and various repair techniques repair renovation of damaged/dilapidated, corroded structures

Course Outcomes

- After successful completion of the course the students will have capability/knowledge of various important, monumental but distressed and damaged modern materials that longevities old concrete and masonry structures

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module I: Maintenance and Repair Strategies 4(Theory) +4 (Practice)

Introduction: concepts of durability and degradation of concrete structures - Defect identification, Types of damages of concrete/masonry structures (normal and marine environment), tests for damage evaluation.

Practice Session 1: Study session on Crack Diagnosis and its appraisal - Reasons for crack development / Crack prevention, Monitoring & Measuring Crack propagation and preparing a report on crack repairing techniques (field work)

Module II: Deterioration and distressed structures 4 (Theory) + 4 (Practice)

Deterioration of Structures, Distress in Structures, Causes and Prevention cracks, Mechanism of damage-Types of Damage, Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration.

Practice Session 2 (Practice cum Project): Case Study of old building developing cracks due to Natural hazards & Renovation - Natural Hazards

Practice session 3: Damage Control & Building Performance Levels and Structural & Non-structural Performance Levels

Module III: Retrofitting 4 (Theory) + 4 (Practice)

Earthquake damages of buildings, their retrofitting, restoration, effects of earthquakes, response of buildings to earthquake motion, factors related to building damages due to earthquake, methods of seismic retrofitting, restoration of earth quake damaged structures.

Practice session 4: Seismic up gradation of structures, Rehabilitation & Retrofitting and their necessity - Leakage arrest & Water proofing and Termite treatment

Practice Session 5: Study and report preparation on strengthening of different structural elements - Columns, Beams, Slabs and Foundation treatment. Conducting non-destructive tests and preparation of reports

Module IV: Damage diagnosis and assessment 6 (Theory) +6 (Practice)

Visual inspection, Non Destructive Testing using Rebound hammer, Ultra sonic pulse velocity, Semi destructive testing, Probe test, Pull out test, Chloride penetration test, Carbonation, Sulphate attack, Carbonation depth testing, Corrosion activity measurement, Freeze-thaw re

Practice Session 6: Study and report preparation on strengthening of different structural elements - Columns, Beams, Slabs and Foundation treatment.

Practice Session 7: (Practice cum Project): Visits to different buildings in Jatni/JITM campus (or outside) and identify the repairs needed and to prepare a report repair schedule.

Module V: Modern construction materials 4 (Theory) + 4 (Practice)

Advanced Construction materials for repair, renovation and retrofitting, processes and techniques used for repairs, rehabilitation and retrofitting Construction chemicals based on nanotechnology, various types of fibre wrappings, Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete (basic ideas only)

Practice Session 8: (site visit and submission of report): Special reflection in toilets, plumbing fittings, electrical renovations, choosing interiors, aesthetics, false ceiling, partitions etc.

Practice Session 9: Site visit to old dilapidated structures and reporting possible ameliorative measures or reporting demolition.

Module VI: Techniques for repair and renovation methods 4 (Theory) + 4 (Practice)

Grouting, guniting and shotcreting, Plate bonding, RCC Jacketing / Propping and supporting, Fiber wrap technique and Chemical and electro- chemical methods of repair, Rust eliminators, polymers coating for reinforced bars during repair, foamed concrete, Epoxy injection, Mortar repair for cracks, shoring, shuttering and underpinning.

Practice Session 9: Statutes and acts - Model Building Bye-laws, Ancient Monuments & Archeological Sites & Remains Act 2010, Permissions in Prohibited and Regulated Areas.

Module VII: Repair & Renovation of corrosion and marine structures: 4 (Theory) + 4 (Practice)

Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings and cathodic protection. Engineered demolition techniques for dilapidated structures – ideas and case studies

Practice session 10: Site visit to an ancient monument and reporting possible renovative measures.

Practice Session 11: Study & Report preparation on Renovation Methodology for different elements of a Building

Tendering Process, Bidding Contract Agreements Arbitration

Code	Course Title	Type of course	T-P-PJ	Prerequisite
DECP0601	Tendering Process, Bidding Contract Agreements and Arbitration.	Practice + Project	0-2-1	Quality Control and DPR

Objective

- To make students understand the basics of contract to enhance / develop the skills of professionals working in construction and allied sectors to upgrade their skills in procurement in Construction projects and help them to grow in their career

Course Outcome

- Upon successful completion of the course, students shall be fit in CPWD, state Government departments and infrastructural organizations, persons working in development projects in public or private sectors. Consultancy units, research organizations as well as self-employed practitioners engaged in the planning, design, Procurement, construction, operation and maintenance.
- Apply legal aspects of construction projects in construction contract, of issues related to contract administration, apply various disputes resolution techniques including arbitration.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module I (60 hours)

Module I: (Tender basics) :Laws governing structure & Working of Construction firms.

Project cost estimate, administrative approval and Technical sanction. AR, SR, OPWD code, and CPWD code.

Module II: Contract Outlines: Contracts, types of construction contracts, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract.

Module III: Tender: Tender as a basis of Contract, Tender Types, Notice inviting Tender, e-tendering, Preparation of tender documents, pre-qualification bid evaluation, Financial bid evaluation, Tendering procedures (submission of bids, analysis of submitted tenders), Basis for evaluation and acceptance, letter of intent, work order and agreement , award of contract, project financing and contract payments,

Module IV: Contracts

Contracts Outline, types of construction contracts, contract specifications, CPWD contract conditions, FIDIC form of contract, General conditions of contract, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract. Subcontracting: selection of subcontractors, work order with terms and conditions.

Module V: Contract Conditions: Clarification by parties to contract, obligations and responsibilities of the parties, Securities, protection and indemnification, bonds and insurance, subsurface conditions, inspection of work, change of work, rejected work and deficiencies.

Module VI (Arbitration): Causes and resolution of disputes, settlement for claims and extra items, arbitration., Agreements, Appointment of Arbitrators, Conditions of Arbitrations, Powers and duties of Arbitrator, Enforcement of Award-costs, Arbitration Act old & new.

Claims, Disputes and project closure: Claims its source and management, Disputes and its cause, dispute avoidance and its resolution, Causes leading to arbitration, Contract closure at construction site and at levels of project manager.

Text Books

- Bids Tenders &Praposals, Harold Lewis
- Civil engineering contracts & estimate, B. S. Patil
- Contract management in civil works, V. A. Prakash
- Construction Project Management, Kumar Neerajjha"

Session Plan(practice works appended below)

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment /Project	Suggested Reading (Book, Video, Online source, etc.)
Module I				

Module I: Tender basics:Laws governing structure & Working of Construction firms, Project cost estimate, administrative approval and Technical sanction. AR, SR, OPWD code and CPWD code.THE INDIAN CONTRACT ACT, 1872.	3+4	Practice +Project		
Module II : Contract Outlines: Contracts, types of construction contracts, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract.	3+4	Practice +Project		
Module III: Tender: Tender as a basis of Contract, Tender Types, Notice inviting Tender, e-tendering, Preparation of tender documents, pre-qualification bid evaluation, Financial bid evaluation, Tendering procedures (submission of bids, analysis of submitted tenders), Basis for evaluation and acceptance, letter of intent, work order and agreement award of contract, project financing and contract payments, Surety bonds and Guarantees	4+6	Practice +Project		
Module IV: Contracts: contract specifications, CPWD contract conditions, FIDIC form of contract, General conditions of contract, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract. Subcontracting: selection of subcontractors, work order with terms and conditions.	4+8	Practice +Project		
Module V: Contract Conditions (GCC and SCC and BOQ): Clarification by parties to contract, obligations and responsibilities of the parties, Securities, protection and indemnification, bonds and insurance, subsurface conditions, inspection of work, change of work, rejected work and deficiencies. Subcontracts, billing and payments	3+5	Practice +Project		

Module VI (Arbitration): Causes and resolution of disputes, settlement for claims and extra items, arbitration., Agreements, Appointment of Arbitrators, Conditions of Arbitrations, Powers and duties of Arbitrator, Enforcement of Award-costs, Arbitration Act old & new.	4+4	Practice +Project		
Module VII: Claims, Disputes and project closure: Claims its source and management, Disputes and its cause, dispute avoidance and its resolution, Causes leading to arbitration, Contract closure at construction site and at levels of project manager.Arbitration and Conciliation Act 1996; Arbitration case study.	3+5	Practice +Project		
		Theory : 24 classes	Practice projects : 36 classes	

Class room Practice Sessions:

1. **Practice I:** Writing item rate of contract for EW, Concrete, Bitumen roads, Concrete pavements with calculation of leads and lifts like inaccessible areas, Jails and hospitals.
2. **Practice II:** Preparation of Tender call notices for
 - i. Quotation call notices.
 - ii. Short tender call notices
 - iii. Tender call notices for a major work
 - iv. E- tender call notices
 - v. Corrigendum to TCN's
3. **Practice III:** Preparation of pre-bid evaluation documents for different works:
 - i. Multi Storied Building
 - ii. Road works
 - iii. Runways
 - iv. Hydraulic Structures
 - v. Preparation of design projects
4. **Practice session IV:** Preparation of draft financial bid evaluation documents (previous works).
5. **Practice session V:** Case studies of pre-bid evaluation of tenders and preparation comparative statement.

6. **Practice Session VI:** Preparation of Gnat or bar chart, CPM and PERT for construction projects
7. **Practice VII:** Practice of preparation lump Sum, K₂, F₂ and other agreements
8. **Practice Session VIII:** Practice for preparation of different type of bills for payment
9. **Practice session VIII:** Calculation for price escalation for materials, labour and POL
10. **Practice session IX:** Case studies for arbitration cases
11. **Practice session X:** Preparation of contract closure documents at site, managers level and final closure of contract.

Software Based Project Scheduling and Management

Code	Course Title	Course Type	T-P-PJ	Prerequisite
DECP0301	Software Based Project Scheduling and Management	Project	0-0-4	Nil

Course objective

- To enable the student understand the basic principles of Project Management.
- Make the student familiarize with the activities involved in a civil engineering construction project.
- To mold the student for taking up a major project through applying the higher version project software.

Course outcomes

- Identify various activities of a construction project and the critical path for executing the same.
- Carry out a major project and prepare a document that contains all aspects of a construction project.

Students shall take any one of the following projects for practice:

- a. Commercial Structures
- b. Residential Structures
- c. Industrial Structures
- d. Water Resources Structures
- e. Projects on Transportation

Note: The students can take up other activities also related to Construction Project during their Major Project.

Module I (18 Hours):

Lesson 1: Introduction to -MS Project as an execution tool, Project Information.

Lesson 2: Steps before Starting a Project- Activities and Events Identification.

Lesson 3: Creating and Defining Projects-Entering and Scheduling Tasks- Work Breakdown Structure.

Module II (18 Hours)

Lesson 4: Project Views.

Lesson 5: Calendars---Calendar Tasks & Milestones Structure.

Lesson 6: Organizing Tasks- Summary and Sub Tasks- Predecessor and Successor.

Module III (18 Hours)

Lesson 7: Working with Task Duration, Constraints, and Deadlines-Gant Chart.
 Lesson 8: Introducing Dependencies -Task Relationships - Network Development-Network Diagram –
 Task Types- Lag and Lead Time- Identify the Critical Path / Time Constraints

Module IV: (18 Hours)

Lesson 9: Working with Resources-Resource Identification- Equipment and Human Resources Assigning
 Resources to Tasks
 Lesson 10: Customizing and Formatting

Module V: (16 Hours)

Lesson 11: Resource Management
 Lesson 12: Communication and Progress Updates

Module VI: (20 Hours)

Lesson 13: Tracking Work in Project
 Lesson 14: Project Baselines & Running Reports

Module VII: (12 Hours)

Lesson 15: Printing Project Information, Consolidating Projects and Resources, Course Summary and Review.

Project

Course Title	Code	Course Type	T-P-PJ	Pre-requisites
Project	DEET0300	Project	0-0-6	Not before Semester 4

Students take up group projects and deal the following activities during the course of their project. The project Report should contain the reports of the activities and the explanation of the activity, how the same is taken up and the outcome of the activity.

- Functional Planning of the project,
- Preparation of documents and notices required for obtaining Environmental clearance,
- Preparing working drawings using Auto CAD, Revit & STAADPRO (for Reinforcement Drawing),
- Listing of Specifications, Rate Analysis and Estimating using Estimator Software,
- Resource Scheduling & Levelling,
- Preparing Quality Control checks and Quality Inspection sample reports specific to the project,
- Identifying the possible Risks involved (specific to the project) and listing the Safety Measures,
- Preparing sample M - book and Muster Role (Form 21),
- Tendering Process, and Development of Contract Agreement during their Major Project and x. Project Closure.

Internship

Course Title	Code	Course Type	T-P-PJ	Pre-requisites
Internship	DEET0800	Practice	0-4-0	Not before Semester 4

Students to select a construction firm and obtain training (for about 8 to 10 months) on the works that are being carried out there. They are required to prepare set of different reports on the activities in which they received training. The activities should invariably involve the aspects related to planning and design apart from the topics covered in various subjects of the domain. One report on each of the activities is to be submitted individually even if a group of students work in the same site. The reports should be certified by the authorized technical personnel of the organization.

Domain - Planning, Design & Drawing

Course Code	Course Title	Course Type	Credits	Prerequisite
DEPD0101	Green Building Design	Theory	3	Nil
DEPD0102	Earthquake Resistant Design	Theory	3	Nil
DEPD0103	Barrier Free Design	Theory	2	Nil
DEPD0104	Intelligent Building Design	Theory	2	Nil
DEPD0201	Architectural Design	Practice	6	Nil
DEPD0202	3D Modelling and VR experience of Building	Practice	4	Nil

Green Building Design

Course Title	Course Code	Type of course	T-P-PJ	Prerequisite
Green Building Design	DEPD0101	Theory	3-0-0	Nil

Objective

- To understand the concept of Green Building design
- To understand the various parameters of Green Building design.

Course Outcome

- To study the theory of sustainability.
- To study the changing climatology and contribution of built mass
- To learn reduction of carbon foot prints

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Theory of sustainable design (3 hours)

Various regions and their reciprocating design, concept of traditional design and logic, implication of the same logic in today's context, Basic Design Principles, ergonomic data and application

Ex: Dhajji-dwari construction of Kashmir/HP, Nilgiri Hills tribal houses

Module II Principles of Green Building Design (6 hours)

Design responding to climatological data, Eco-friendly use of material, technology used while construction and dependency of energy etc.

Module III Environment management (6 hours)

Design and its equation with environment, Building and its impact on surrounding – short term and in the long run, Measures to cut-down adverse impacts, Alternative methods to reduce the negative impact on environment.

Module IV Ecological Planning (6 hours)

Concepts of ecology, Co-relation with building design, Balance between ecosystem and intervention in terms of built environment, Study the direct proportion between improvements in ecological aspects with Green building design index.

Module V Green building material and technology (6 hours)

Existing building material over the green building material, impact of technology and how to erase the carbon foot prints, alternatives for building materials, cutting edge technology to modify and use/reuse the building materials.

Ex: use of Fly-ash bricks, Fly-ash modified in light weight building blocks

Module VI Green building rating tools (6 hours)

Green building rating tools- Leeds and IGBC codes. GRIHA– Material selection Embodied energy- Operating energy- Façade systems- Ventilation systems- Transportation- Water treatment systems- Water efficiency- Building economics

Module VII Green Building Design Case Study (6 hours)

Students to work through a controlled process of analysis and design to produce drawings and models of their own personal green building project. Topics include building form, orientation and site considerations; conservation measures; energy modeling; heating system; renewable energy systems; material choices. End with student Presentation.

Text Books

1. Colin Porteous, “The New Eco-Architecture”, Spon Press, 2002.
2. Energy Conservation Building Codes: www.bee-india.nic.in
3. Lever More G J, “Building Energy Management Systems”, E and FN Spon, London, 2000.
4. Ganesan T P, “Energy Conservation in Buildings”, ISTE Professional Center, Chennai, 1999.
5. John Littler and Randall Thomas, “Design with Energy: The Conservation and Use of Energy in Buildings”, Cambridge University Press, 1984.

Session Plan:

Weeks- 15

Contact Hours: 3 Hrs per week = 45 Hrs

Sr. NO	TOPICS	PEDAGOGY/ MODE OF PRESENTATION AND REMARKS	HOURS
1	Various regions and their reciprocating design, concept of traditional design and logic, implication of the same logic in today's context, Basic Design Principles, ergonomic data and application Ex: Dhajji-dwari construction of Kashmir/HP, Nilgiri Hills tribal houses	- PPT - Audio-video presentation for awakening	3
2	Design responding to climatological data, Eco-friendly use of material, technology used while construction and dependency of energy etc.	- Class notes - Power point presentation	6
3	Design and its equation with environment, Building and its impact on surrounding – short term and in the long run, Measures to cut-down adverse impacts, Alternative methods to reduce the negative impact on environment.	- Slides and Photographs - Class notes	6
4a	Intrim Exam	Allotted marks 10	1
5	Concepts of ecology, Co-relation with building design, Balance between ecosystem and intervention in terms of built environment, Study the direct proportion between improvements in ecological aspects with Green building design index.	- PPT - Videos	6-8
6	Existing building material over the green building material, impact of technology and how to erase the carbon foot prints, alternatives for building materials, cutting edge technology to modify and use/reuse the building materials. Ex: use of Fly-ash bricks, Fly-ash modified in light weight building	- Sketches on black board -Class notes	4-6

	blocks		
7	Green building rating tools- Leeds and IGBC codes. GRIHA- Material selection Embodied energy- Operating energy- Façade systems- Ventilation systems- Transportation- Water treatment systems- Water efficiency- Building economics	-Class notes and discussions	6
8	Students to work through a controlled process of analysis and design to produce drawings and models of their own personal green building project. Topics include building form, orientation and site considerations; conservation measures; energy modeling; heating system; renewable energy systems; material choices. End with student Presentation.	-Case Study - Solutions on PPT	6
9	Intrim Test - II		1

Earthquake Resistant Design

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Earthquake Resistant Design	DEPD0102	Theory	3-0-0	Nil

Objective

<ul style="list-style-type: none"> • To understand the difference between Earthquake Resistant Design and Structural Design • To expand the parameters of forces and loading impacts. • To understand the design guidelines in disaster resistant construction

Course Outcome

<ul style="list-style-type: none"> • To study co-relation with architectural design and performance of building during earthquake • To study advanced structural design parameters • To analyze the detailing of reinforcement design and its impact on performance
--

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Introduction to the Subject (3 hours)

Focus on the complexities involved in developing Earthquake resistant buildings, Performance of structural buildings in past earthquake. An overview and possible causes of failure during seismic loading

Module II Design Guidelines & Principles of Earthquake Resistant Design (6 hours)

Formulating the management plan and understanding the design guidelines in disaster resistant construction. Norms by IS codes and prevailing practices. Examples and various regions with iconic buildings as live samples.

Module III Indian Seismicity (6 hours)

Indian Seismicity Map, Past Earthquakes and building performances, Effects of EQ shaking, The philosophy, Indian codes impacting Building configuration and basics.

Module IV Traditional Practices (6 hours)

Vernacular architecture and their response to EQ. Their essence and logic, The advanced construction practices over the conventional practices.

Module V The detailing in Building construction (6 hours)

Masonry construction, frame structures and their performance, Beam-column design and detailing, junction design and detailing.

Module VI Earthquake resistant structural members (6 hours)

Shear wall provisions and detailing; Pounding and seismic joint detailing, Infill walls-cladding-glazing detailing

Module VII Special Construction Features and restoration (6 hours)

Cantilever, staircase design in seismic areas, Building byelaws and urban planning, historic building and possible provisions. Retrofitting techniques, Base isolation concepts.

Text Books

1. Seismic Design hand book for Buildings
2. Earth quake Architecture: New construction techniques for quake disaster Prevention

Session Plan:**Weeks- 15****Contact Hours: 3 Hrs per week = 45 Hrs**

Sr. NO	TOPICS	PEDAGOGY/ MODE OF PRESENTATION AND REMARKS	HOURS
1	Module-1 Introduction to over view of disaster, major natural disasters- flood, tropical cyclone, droughts, landslides, heat waves, earthquakes, fire hazards etc.	- PPT - Audio-video presentation for awakening	6
2	Factors for disasters. Basic understanding on fragile eco system, physiographic and geo chemical data mapping, soil and topography, Hydrological factors, inclement climatic conditions	- Class notes - Power point presentation	3
3a	Module-2	- Slides and Photographs	6

3b	Strategies for disaster prevention and mitigation. Disaster management plan. Revision, Overlap time and overview of the modules	- Class notes - BBC documentary on Loma Preta EQ (1 Hour)	
4a	Intrim Exam	Allotted marks 10	1
4b	National crisis management committee, state management group	- Slides &Notes - Class notes	5
5	Design guidelines in disaster proofing construction	- PPT - Videos on Advanced construction in Japan	6-8
6	Engineering, Agricultural, Architectural, landscaping and planning solution for different type of calamities.	- Sketches on black board -Class notes	3
7	Norms, standard, practice procedure for shelter and settlement. Organizational and management aspt	-Class notes and discussions	3-4
8	- Current Projects/Challenges - Research overview and scope	-Discussion - Examples on PPT	2
9	Intrim Test - II Actual implementation + Revision of Notes/key points	- TERI Projects in EQ-Flood zone - Showing actual projects for more ideas	1 2-3

Barrier Free Design

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Barrier Free Design	DEPD0103	Theory	2-0-0	Nil

Objective

- To understand the disability and its impact on built environment
- To open the built mass for everyone
- To make student able to construct an efficient built mass

Course Outcome

- To study the various provisions in the code
- To design or modification based on provision in the code
- To analyze the improved performance of the same building with different set of users

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Introduction to the Barrier Free Design (2 hours)

The need, reason and enforcement by government. Live examples and overview of public buildings.

Module II Types of disability and inferences (4 hours)

Types of disability, mobility devices and controls. Construction and maintenance standards, classification of buildings and access provisions. Examples and various types of building with different functions as live samples.

Module III Design Element within built mass (4 hours)

Design elements within buildings, site planning, parking, approach to plinth levels, corridors, entrance and exit, windows, stairways, lifts, toilets, signage, guiding and warning systems, floor materials.

Module IV Design Element outside the built mass (4 hours)

Design elements outside the building – curb at footpath, road crossing, public toilet, bus stop, toilet booth, and signage

Module V The provision in the codes (4 hours)

Provision in residential building, auditorium, parks, restaurants, railway station. Modern building bye-laws.

Module VI Hands on experience (4 hours)

A small live design problem which aims at design standards and construction techniques for barrier free environment

Module VII Case study based observations (4 hours)

Visit to nearby public buildings, parks: observations related to disability and effectiveness of design.

Text Books

1. Building without barriers for the disabled, Harkness, Sarh P/690.554 HAR/B
2. Disability and rehabilitation Handbook/ Goldenson, RM/362.2002 DIS/M

Session Plan:

Weeks- 15

Contact Hours: 2 Hrs per week = 30 Hrs

Sr. NO	TOPICS	PEDAGOGY/ MODE OF PRESENTATION AND REMARKS	HOURS

Intelligent Building Design

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Intelligent Building Design	DEPD0104	Theory	2-0-0	Nil

Objective

<ul style="list-style-type: none"> • To understand the concepts of automated buildings • To understand modern technology within built environment

Course Outcome

<ul style="list-style-type: none"> • To study integrates technology and process to create a facility that is safer, more comfortable and productive for its occupants • To design Smart buildings

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
----------------------	-----------	------------	----------------------

	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Introduction to the Intelligent buildings (2 hours)

Operationally efficient for its owners. Reasons and necessity, performance and cost saving parameters etc.

Module II Advance Parameters (4 hours)

Reuse of water/waste, structured cabling systems, wireless, communication protocol, interoperable smart building databases, smart disposal of waste.

Module III Efficiency improvement (4 hours)

Advanced technology—combined with improved processes for design, construction and operations—provide a superior indoor environment that improves occupant comfort and productivity while reducing energy consumption and operations staffing.

Module IV Control Systems (4 hours)

Lighting Control systems, electric power management systems, access control systems, video surveillance systems, video IPTV

Module V Digital provisions (4 hours)

digital signage systems, fire alarm and mass notification systems, voice network and distributed antenna systems, data networks, facility management systems.

Module VI Hands on experience (4 hours)

The economics of intelligent buildings, audio visual systems, network integration, energy and sustainability with a small scale live office room/small house design

Module VII Case study based observations (4 hours)

Visit to CUTM Labs, nearby offices and restaurants/supermarkets: observations related to smart building design.

Text Books

1. Smart Buildings systems for Architects, Owner, and Builders. By James Sinopoli, Elsevier
2. Intelligent buildings by James Sinopoli, Elsevier RM/362.2002 DIS/M

Architectural Design

Course Code	Course Title	Type of course	T-P-P	Prerequisite
DEPD0201	Architectural Design	Practice	0-6-0	Nil

Objective

<ul style="list-style-type: none"> To understand the Basic Principles of architectural design To understand the overlays of various aspects on architectural building design.

Course Outcome

<ul style="list-style-type: none"> To study the basic concepts of building Design. To study the climatology, soil condition, site analysis and other factors on design. To learn building bye laws application while designing any building
--

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

Module I Introduction to Architectural Design (12 hours)

Basic Design Principles, ergonomic data and application

Practice

1. Conceptualization of Design: Own House drafting

Module II Addition of layers (24 hours)

Geological data, climatological data and impact of hydrology: study the result in modified architectural plan

Practice

2. Modification of your own house design for a different region
3. Apply the knowledge to design a small scale house/flat/bungalow

Module III Site Analysis (36 Hours)

Land observation data, Site analysis and application potential information from the same on design

Double line plan, concept of section and elevation

Practice

1. Site Analysis Parameters and implications
2. Correction and re-orientation of Design
3. Preparation of architectural drawings for sanctioning of design (Double line plan, elevation, section)

Module IV Service layouts (24 Hours)

Parking, Road network, Water supply, Electrical and sanitation layouts.

Practice

1. Site plan with parking layout and road network
2. Water supply and electrical layout
3. Storm water and sewage disposal layout (may include roof plan)

Module – V – Planning of bigger scale buildings (36 Hours)

Hotel or Student Hostel, Hospital or Public School.

Practice

1. Architectural Plan
2. Building layout with key sections
3. Complete set of presentation drawings

Module – VI – Structural and service layout (24 Hours)

Adding layer of structural members and services on the designed project of Hotel or Student Hostel/ Hospital or Public School – Any one or live project.

Practice

1. Grid plan
2. Water supply and electrical layout
3. Centre-line and earthwork schedule

Module – VII – Building Bye laws (24 Hours)

Study the building bye laws and practice their implications on design. Modify and cross-check the building design in terms of fire safety, staircase, FAR, projections, ventilation etc
Hotel or Student Hostel/ Hospital or Public School – Any one or live project.

Practice

1. Norms and plan co-relationship
2. Parking and site layout – Pre-viva

3. Complete set of drawings for the building- Final viva

Text Books

1. James Snider Catmese, Introduction to Design.
2. V.S.Parmar, Design fundamentals in Architecture, Somaiya publications private limited, New Delhi
3. Francis D.K.Ching, Architecture-Form, space and order, Van, Nostrand Reinhold company, NewYork.

3D Modelling and VR Experience of Building

Course Code	Course Title	Type of course	T-P-P	Prerequisite
DEPD0202	3D Modelling and VR experience of Building	Practice	0-4-0	Nil

Objective

- To understand the Elements of planning building, fundamentals of Building Information Modelling (BIM).
- To understand the various drawing methods and modes.

Course Outcome

- To understand the Generation of 2D (plan, section and elevation) and 3D modelling.
- Able to carve out detailed specification and dimensioning of the following using AutoCAD, Revit Architecture and CATIA

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline and Session Plan

(Each Practice session is for 6 hours)

Practice Session 1: Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with same floor plans using Revit Architecture and CATIA.

Practice Session 2: Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD for (practice session 1).

Practice Session 3: Generation of section for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD, Revit Architecture and CATIA (practice session 1).

Practice Session 4: Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with varying floor plans using Revit Architecture and CATIA.

Practice Session 5: Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD (practice session 4).

Practice Session 6: Generation of section for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD, Revit Architecture and CATIA (practice session 4).

Practice Session 7: Generation of 3D modelling with detailed specification and dimensioning of a (G+5) shopping complex using Revit Architecture and CATIA.

Practice Session 8: Generation of elevation for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD (practice session 7).

Practice Session 9: Generation of section for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD, Revit Architecture and CATIA (practice session 7).

Practice Session 10: Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hospital building using Revit Architecture and CATIA.

Practice Session 11: Generation of elevation for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD (practice session 10).

Practice Session 12: Generation of section for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD, Revit Architecture and CATIA (practice session 10).

Practice Session 13: Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hostel building using Revit Architecture and CATIA.

Practice Session 14: Generation of elevation for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD (practice session 13).

Practice Session 15: Generation of section for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD, Revit Architecture and CATIA (practice session 13).

Domain - Smart City Planning

Remote Sensing and Digital Image Processing

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Remote Sensing and Digital Image Processing	DESP0401	Theory + Practice	3-2-0	Nil

Objective

- To teach Basic Principles of Remote Sensing and understand the current remote sensing system, Digital Image processing and Integration.

Course Outcome

- Students will gain knowledge of basic concepts of remote sensing, aerial photogrammetry.
- Students will gain knowledge of applications different satellites imagery, image classification techniques and image analysis and interpretation.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module – I Basic Concept

(7+6 Hrs)

Theory

Introduction of Remote Sensing: Principles of RS and its Type; Energy sources and Radiation principles, Pixel, DN value, Energy equation; EMR and Spectrum; EMR interaction with Atmosphere; scattering, Absorption, Atmospheric window, Black body radiation; EMR interaction with earth surface features, reflection, absorption, emission and transmission, Spectral signature; Interaction with vegetation, soil, water bodies; Advantage of RS over conventional method, Limitation, Ideal remote sensing.

Practice:

1. Installation of Image Processing software's
2. Layer stacking
3. LUT
4. Subset

Module – II Digital Image (6+6=12 hours)

Theory

Data acquisition: Procedure, Reflectance and Digital numbers; Intensity, Reference data, Ground truth, Analog to digital conversion, FCCs, TCC, Platforms and sensors; orbits ,types, Resolutions; Image Interpretation; visual- Interpretation keys.

Practice:

1. FCCs and TCC
2. Resolution
3. Image Interpretation

Module – III Satellite Information and Principles (6+6=12 hours)

Theory

Land observation satellites, characters and applications; PSLV, GSLV, Satellite, Platform Types; LANDSAT series; IRS series; IKONOS Series; QUICKBIRD series; Weather/Meteorological satellites; INSAT series, NOAA, Applications, Marine observation satellites; OCEANSAT

Practice:

1. Download satellite data from GLOVIS / Earth Explorer / Bhuvan etc.
2. Mosaicking

Module – IV IMAGE ACQUISITION AND FORMAT (6+2=8 hours)

Theory

Digital Image Processing; Export and import, Data formats; BSQ, BIL, BIP, Run length encoding, Image Compression Data products.

Practice:

1. Export and Import
2. Histogram
3. Subset using AOI

Module – V Image Processing (6+8=14 hours)

Theory

IMAGE RECTIFICATION; Preprocessing and Post processing Geometric distortion; sources and causes for distortion, rectification, GCP, Resampling, Image registration; Radiometric distortion; sources and causes, atmospheric correction

Practice:

1. Geometric correction
2. Radiometric correction

3. Atmospheric correction

Module – VI Classification (6+12=18 hours)

Theory

IMAGE CLASSIFICATION; Classification techniques, types, Supervised and Un-supervised; PCA; Image Enhancement; Accuracy assessment.

Practice

1. Supervised Classification
2. Un-supervised Classification
3. Image Enhancement
4. Accuracy Assessment

Model – VII Remote Sensing and Its application (8+12=20 hours)

Theory

Hyperspectral RS and its application; Microwave RS and its application; Thermal RS and its application; Optical RS and its application; Sensor and its types.

Practice:

1. Application of Hyperspectral remote sensing and case study
2. Application of microwave remote sensing and case study
3. Application of thermal remote sensing and case study
4. Application of optical remote sensing and case study

Text Books

1. Remote sensing & Image interpretation, THOMAS M. LILLESAND AND RALPH W. KIEFER, JOHN WILEY & SONS, INC. PUBLISHERS.
2. Remote sensing & GIS, B.Bhatta, OXFORD UNIVERSITY PRESS.
3. Remote Sensing principle & application, FLOYDIF SABINS, W.H FREEMAN & COMPANY, NEWYORK.
4. FUNDAMENTALS OF DIGITAL IMAGE PROCESSING, ANIL K JAIN, JAIN, Prentice Hall, New Delhi.
5. DIGITAL IMAGE PROCESSING, ABHISHEK YADAV, POONAM YADAV, OSCAR PUBLICATION, DELHI

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/f field-trip, Worksh op etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Introduction of Remote Sensing – Principles of RS-Types, Pixel, DN value, Energy sources and Radiation principles, Energy equation	2	Lecture & Video and Practice	1.1	TB:1, CH:1 TB:2, CH:2
EMR and Spectrum, EMR interaction with Atmosphere-scattering, Absorption, Atmospheric window, Black body radiation	2	Lecture and Practice	1.2	TB:1, CH:1 TB:2, CH:2
EMR interaction with earth surface features-reflection, absorption, emission and transmission	1	Lecture & Video	1.3	TB:1, CH:1 TB:2, CH:2
Spectral signature, Interaction with vegetation, soil, water bodies, Advantage of RS over conventional method, Limitation, Ideal remote sensing.	2	Lecture & Practice	1.4	TB:1, CH:1 TB:2, CH:2
PRACTICE				
Installation of Image Processing software's and Data Exploring	2			https://www.youtube.com/watch?v=XO1ZbqEemBM

Layer stacking and LUT	2			https://www.youtube.com/watch?v=Oaxc6UHx1tQ
Subset	2			https://www.youtube.com/watch?v=jIZeXzipmkg
Total	7+6=13			
Module-2				
Data acquisition - Procedure, Reflectance and Digital numbers- Intensity	1	Lecture & Video	2.1	TB:1, CH:1
Ground truth, Analog to digital conversion. FCCs, TCC	2+2	Lecture & Practice	2.2	
Platforms and sensors-orbits - types	1	Lecture & Practice	2.3	TB:2, CH:2
Resolution and its type, Image Interpretation	2+4	Lecture & Practice	2.4	TB:1, CH:1
Total	6+6=12			
Module 3				
Land observation satellites, characters and applications	1	Lecture & Video	3.1	TB:5, CH:1
PSLV and GSLV Concepts	1	Lecture & Video	3.2	TB:5, CH:1
LANDSAT series, IRS Series, IKONOS Series, QUICKBIRD series	2	Lecture & Video	3.3	TB:5, CH:1
Weather/Meteorological satellites, INSAT series, NOAA, Applications, Marine observation satellites, OCEANSAT Download satellite data from GLOVIS / Earth Explorer / Bhuvan etc. ,Mosaicking	2	Lecture & Video	3.4	TB:5, CH:1

PRACTICE				
Satellite Data downloading from Bhuvan, Earth Explorer, GLOVIS	6			https://glovis.usgs.gov/
Total	6+6=12			
Module IV				
Concepts of Digital Image Processing,	2	lecture	4.1	TB:1, CH:1
DIP, Data Formats-BSQ, BIL, BIP , Run length encoding, Export and Import, Image acquisition	2	Lecture	4.2	TB:1 CH:1
Export and Import, Histogram, Subset using AOI	2	Lab. Practice	4.3	TB:1, CH:1
PRACTICE				
Export and Import, Histogram, Subset using AOI	2			https://www.youtube.com/watch?v=jw_AytR6ID0
Total	6+2=8			
Module V				
Pre-processing and Post processing Geometric distortion, sources and causes for distortion	2	Lecture & Video	5.1	TB:3, CH:1
Geometric correction	2	Lab. Practice	5.2	TB:3, CH:1
Radiometric correction ,Atmospheric correction	2	Lab. Practice	5.3	TB:3, CH:1
PRACTICE				
Geometric correction	4			https://www.youtube.com/watch?v=xCDrHf8QxmI
Radiometric correction and Atmospheric correction	4			https://www.youtube.com/watch?v=RPMemRR1UPs
Total	6+8=14			

Module : VI				
Introduction to Classification	2	Lecture & Video	6.1	https://www.youtube.com/watch?v=25HTqFpcmps
Image Enhancement	2	Lecture & Video	6.2	https://www.youtube.com/watch?v=0qKOdmIOZIM
Supervised Classification	1	Lab. Practice	6.3	http://gsp.humboldt.edu/olm_2015/Courses/GSP_216_Online/lesson6-1/supervised.html
Un-supervised Classification, Image Enhancement	2	Lab. Practice	6.4	https://ieeexplore.ieee.org/abstract/document/964969
Accuracy Assessment	1	Lab. Practice	6.5	http://desktop.arcgis.com/en/arcmap/latest/manage-data/raster-and-images/accuracy-assessment-for-image-classification.htm
PRACTICE				
Image Enhancement	4			
Supervised Classification	2			https://www.youtube.com/watch?v=2SjzJHg4wIY
Un-supervised Classification and PCA	4			https://www.youtube.com/watch?v=g_V6BVRz82E
Accuracy Assessment	2			https://www.youtube.com/watch?v=GeyMurueZc
Total	6+12=18			
Module: VII				
Hyperspectral RS and its application, Microwave RS and its application	1	Lecture & Video	7.1	TB:4, CH:1
Thermal RS and its application, Optical RS and its application	1	Lecture & Video	7.2	B:4, CH:2

Application of Hyperspectral remote sensing and case study	1	Lab. Practice	7.3	B:4, CH:3
Application of microwave remote sensing and case study	1	Lab. Practice	7.4	B:4, CH:4
Application of thermal remote sensing and case study	1	Lab. Practice	7.5	B:4, CH:5
Application of optical remote sensing and case study	1	Lab. Practice	7.6	B:4, CH:2
PRACTICE				
Hyper spectral RS and its application, Microwave RS and its application	4			PRACTICAL
Thermal RS and its application, Optical RS and its application	4			PRACTICAL
Application of Hyperspectral remote sensing and case study	4			PRACTICAL
Application of thermal remote sensing and case study	4			PRACTICAL
Application of optical remote sensing and case study	4			PRACTICAL
Total	6+20=26

Geospatial Technology and its Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Geospatial Technology and its Application	DESP0901	Theory+ Practice+ Project	2-2-1	Nil

Objective

<ul style="list-style-type: none"> To teach the basic concepts of Geospatial Technology and data structure in Geospatial Technology
--

Course Outcome

<ul style="list-style-type: none"> Students will gain knowledge about the structure of spatial data including file associations, attribute tables, Metadata, coordinate systems, and projections. To develop software skills in programs used for map production in the modern cartographic workflow.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course outline

Module – I: GEOSPATIAL TECHNOLOGY FOR URBAN AND REGIONAL

PLANNING

(8+8+6)

Theory

Relevance of remotely sensed data for Urban & Regional Analysis and Planning; Identification of settlement features from aerospace images; Visual and digital analysis techniques; Scale and Resolution concepts; Scope and limitations.

Urban growth analysis; Slum development; House typology; Site selection for urban development, Density analysis, Population estimation, Transportation network analysis, Change Detection and mapping, classification, Urban fringe, CBD, Urban sprawl, Case studies, Land surface Temperature.

Practice:

1. Urban growth analysis
2. Site selection for urban development
3. Land surface Temperature

Module – II: GEOSPATIAL TECHNOLOGY FOR WATER RESOURCES ENGINEERING**(4+14+6)****Theory**

Watershed, types, divide catchment, command area, stream types, Drainage network, different pattern; morphometric analysis, Bifurcation ratio analysis; Assessment of **Groundwater potential zones** and Groundwater mapping; Site selection for recharge structures, Hydrogeological Mapping GIS applications to ground water studies.

Practice:

4. Mapping of catchment, command area
5. Drainage network analysis
6. Morphometric analysis
7. Mapping of Groundwater potential zones

Module – III: GEOSPATIAL TECHNOLOGY FOR ENVIRONMENTAL ENGINEERING**(4+12+2)****Theory**

Monitoring atmosphere constituents; air pollution, industrial activity, modeling using GIS, Resource development in remote areas, Impacts of anthropogenic activity, Solid Waste management; Water Pollution, Shortest path Identification, Network analysis.

Practice:

1. Air pollution mapping
2. Solid waste management
3. Network analysis
4. Water pollution

Module – IV: GEOSPATIAL TECHNOLOGY FOR AGRICULTURE AND FORESTRY**(4+6+8)****Theory**

Spectral behavior of leaf, Vegetation indices; NDVI, TVI, SVI, PCA; Vegetation classification and mapping; Estimation of Leaf area index, Biomass estimation, Deforestation / afforestation / Change detection in forests, case studies. Identification of crops, acreage estimation, production forecasting, pests and disease attacks through remote sensing, crop stress detection due to flood and drought.

Practice:

8. Biomass estimation
9. Calculation of different Indices
10. Forest (Deforestation, afforestation) mapping
11. Crop estimation

Model – V: GEOSPATIAL TECHNOLOGY FOR DISASTER MANAGEMENT (4+6+2)

Theory

Types of disaster Natural and manmade; Cyclone, flood, landslide, land subsidence, fire, Tsunami and earthquake. Issues and concern for various causes of disasters; Principles of Disaster Management; Natural Disasters, Hazards, Risks and Vulnerabilities. Issues in Environmental Health, Water & Sanitation

Practice:

12. Area of Flood, landslide, Tsunami and earthquake mapping using GIS
13. Health GIS

Model – VI: Web GIS (3+8+2)

Theory

FOSS and its use in web mapping; Designing web services and web maps, storing and processing spatial data with FOSS, Drawing and querying maps on the server with WMS, Putting layers together with a web mapping API, Drawing vector layers with the browser.

Practice:

14. Designing web services and web maps
15. Drawing and querying maps on the server with WMS
16. Putting layers together with a web mapping API
- 17 Drawing vector layers with the browser

Model – VII: GEOSPATIAL TECHNOLOGY FOR OCEAN ENGINEERING & COASTAL MANAGEMENT (3+6+4)

Theory:

Coastal erosion and protection; alt-water intrusion studies; Estuaries and their impact on coastal process wetland mapping, thematic data base generation in GIS and analysis, mangroves and coastal zone management Coastal Vulnerability.

Practice:

18. Shoreline change detection
19. Mangrove change detection
20. Saltwater intrusion
21. Coastal Vulnerability mapping

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I (6 hours lecture + 14 hours practice)				
Relevance of remotely sensed data for Urban & Regional Analysis and Planning - Identification of settlement features from aerospace images	2	Lecture	1.1	TB:4, CH:2
Visual and digital analysis techniques - Scale and Resolution concepts - Scope and limitations.	2	Lecture	1.2	TB:1, CH:1
Urban growth analysis - Slum development - House typology - Site selection for urban development - Density analysis - Population estimation	2	Lecture	1.3	TB:4, CH:3
Transportation network analysis - Change Detection and mapping- classification - Urban fringe - CBD - Urban sprawl-Case studies, Land surface Temperature	2	Lecture		TB:4, CH:4
PRACTICE				
Urban growth analysis	2+2	Practice	1.4	https://www.youtube.com/watch?v=oq7EBgNe4d0

Site selection for urban development	2+2	Practice	1.5	https://www.youtube.com/watch?v=ItZHK3WemWE
Land surface Temperature	4+2	Practice	1.6	https://www.youtube.com/watch?v=G09MOTHFikM
Module-II (4 hours Lecture + 14 hours practice + 6 hours project)				
Watershed, types, divide catchment, command area	1	Lecture	2.1	TB:5, CH:1
stream types, Drainage network, different pattern, morphometric analysis, Bifurcation ratio analysis	1	Lecture	2.2	TB:5, CH:2
Assessment of groundwater potential zones and groundwater mapping	1	Lecture		TB:5, CH:2
Hydrogeological Mapping GIS applications to ground water studies	1	Lecture		TB:5, CH:3
Practice + Project (14+6)				
Mapping of catchment, command area	2	Practice	2.3	
Drainage network analysis	2	Practice	2.4	
Morphometric analysis	4+2	Practice	2.5	
Mapping of Groundwater potential zones	6+4	Practice		
Module III (4 hours lecture + 12 hours Practice +2 hours project)				
Monitoring atmosphere constituents- air pollution - industrial activity, modeling using GIS	1	Lecture	3.1	
Resource development in remote areas-Impacts of anthropogenic activity	1	Lecture	3.2	
Solid Waste management, Water Pollution,	1	Lecture		
Shortest path Identification, Network analysis	1	Lecture		
Practice + Project (12+2)				
Air pollution mapping	4	Practice	3.3	

Solid waste management	4	Practice	3.4	
Network analysis	2+2	Practice	3.5	
Water pollution	2	Practice	3.6	
Module IV 4 hours lecture + 6 hours practice + 8 hours project)				
Spectral behavior of leaf – Vegetation indices – NDVI, TVI, SVI, PCA – Vegetation classification and mapping	1	Lecture	4.1	TB:1, CH:1
Estimation of Leaf area index, Biomass estimation, Deforestation / afforestation / Change detection in forests - case studies	1	Lecture	4.2	TB:1, CH:1
Identification of crops -acreage estimation -production forecasting - pests and disease attacks through remote sensing	1	Lecture	4.3	TB:1, CH:2
crop stress detection due to flood and drought	1	Lecture	4.4	TB:1, CH:2
Practice + Project (6+8)				
Biomass estimation	2+6	Practice and Project		https://www.youtube.com/watch?v=Odm8A1myBaI
Calculation of different Indices Forest (Deforestation, afforestation) mapping	2	Practice		https://www.youtube.com/watch?v=Odm8A1myBaI
Crop estimation	2+2	Practice and project		https://www.youtube.com/watch?v=Odm8A1myBaI
Module V (3 hours lecture + 6 hours practice + 2 hours project)				
Types of disaster Natural and manmade: Cyclone, flood, landslide, land subsidence, fire, Tsunami and earthquake.	2	Lecture	Assignment	INCOIS BULLETIN
Issues and concern for various causes of disasters. Principles of Disaster Management	1	Lecture		INCOIS BULLETIN
Natural Disasters, Hazards,	1	Lecture		INCOIS BULLETIN

Risks and Vulnerabilities, Issues in Environmental Health, Water & Sanitation				
Practice + Project (6+2)				
Area of Flood, landslide, Tsunami and earthquake mapping using GIS	4	Practice	5.1	https://www.youtube.com/watch?v=jppv9YSw8_8
Health GIS	2+2	.Practice and project	5.2	https://www.youtube.com/watch?v=jppv9YSw8_8
Module VI (3 hours lecture + 8 hours practice + 2 hours project)				
FOSS and its use in web mapping, Designing web services and web maps	1	lecture	6.1	https://enterprise.arcgis.com/en/server/latest/create-web-apps/windows/about-web-gis.htm
storing and processing spatial data with FOSS, Drawing and querying maps on the server with WMS	1	Lecture	6.2	https://enterprise.arcgis.com/en/server/latest/create-web-apps/windows/about-web-gis.htm
Putting layers together with a web mapping API, Drawing vector layers with the browser	1	Lab Practice	6.3	https://enterprise.arcgis.com/en/server/latest/create-web-apps/windows/about-web-gis.htm
Practice + Project (8+2)				
Designing web services and web maps	2	Practice		https://www.youtube.com/watch?v=8y2GiwdcKUU
Drawing and querying maps on the server with WMS	2	Practice		https://www.youtube.com/watch?v=8y2GiwdcKUU
Putting layers together with a web mapping API	2	Practice		
Drawing vector layers with the browser	2+2	Practice		
Module VII (3 hours lecture + 6 hours practice + 4 hours project)				
Coastal erosion and protection, salt-water intrusion studies	1	Lecture	7.1	TB: 6, CH:5
Estuaries and their impact on	1	Lecture	7.2	TB: 6, CH:5

coastal process wetland mapping				
Thematic data base generation in GIS and analysis, mangroves and coastal zone management Coastal Vulnerability.	1	Lecture		TB: 6, CH:5
Practice + Project (6+4)				
Shoreline change detection	2+2	Practice		https://www.youtube.com/watch?v=MUkpE_uWKcA
Mangrove change detection	2+2	Practice		https://www.youtube.com/watch?v=29Ku8hX3f5M
Saltwater intrusion and Coastal Vulnerability mapping	2	Practice		
Total (Hrs.)	120			

Photogrammetry and Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Photogrammetry and Application	DESP0402	Theory+ Practice	2-2-0	Nil

Objective

To teach digital photogrammetry techniques and applications

Course Outcome

- Students will gain knowledge about the survey by Photogrammetry method.
- Prepare DEM, TIN model and generate contour map.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module -I: INTRODUCTION (3+6 hours)

Theory:

Fundamentals of photogrammetry and aerial photography; History, aerial cameras, aerial films and processing. Types of aerial photos. Fundamentals and geometry of aerial photographs; Scale, Advantages and disadvantages of small scale and large-scale aerial photographs.

Practice:

1. Scale determination from aerial photo
2. Aerial photo Interpretation

Module - II: CONCEPT of PHOTOGRAMMETRY (7+8 hours)

Theory

Introduction, Terrestrial and Aerial photographs; vertical and oblique photographs, height determination, contouring, photographic interpretations, stereoscopy, parallax bar; Flight Planning, Photo Interpretation, Applications of aerial Photos, Photo theodolite.

Practice:

3. Use of Parallax bar and determination of Height from stereo pair
4. Satellite DEM and ortho Image generation

Module - III: DIGITAL PHOTOGRAMMETRY & ITS COMPONENTS (4+6 hours)

Theory:

Digital Cameras; CCD Camera, Full frame CCD, Frame transfer CCD, CCD cameras with piezo shift, Interline transfer CCD, Time delay integration CCD sensor, Spectral Sensitivity of CCD sensor, Geometric problems of CCD images; line jitter, blooming, warm up effect, tailing, Typical CCD systems.

Practice:

5. Primary and additive colour creation
6. Stereo test

Module – IV: RELIEF AND TILT DISPLACEMENTS (5+8 hours)

Theory:

Mosaics and types of mosaics, stereoscopic vision and stereoscopes; image displacement due to relief, concepts of stereo-photogrammetry, normal vision, depth perception and vertical exaggeration.

Practice:

7. Mosaic
8. Stereoscopic vision
9. Relief displacement

Module – V: DIGITAL CONVERSIONS (3+12 hours)

Theory:

Analog to digital conversion; Scanner, flat bed, drum type, Sensor characteristics; Scanner resolutions, Scanner calibration, Video Cameras, Frame Grabber ; Typical Scanner systems and Video cameras.

Practice:

10. Analog to digital conversion

11. Orientation of stereo model

12. Determination of Height

Module – VI: DRONE SURVEY

(5+12 hours)

Theory:

Aerial mapping and modelling using drone; types of mapping, types of mapping product, mapping for agriculture, mapping for Construction, Autonomous flight planning, Waypoints, collecting nadir imagery for 2D mapping, Collecting oblique imagery for 3d mapping, Volumetric measurements, map accuracy, ground truthing, ground control points.

Practice:

13. Aerial mapping using DRONE

14. Mosaicking of aerial Photo

15. Correction and rectification

Module – VII: DIGITAL PHOTOGRAMMETRIC APPLICATIONS (3+8 hours)

Theory:

DTM generation; Image correlation, Image matching, Digital Ortho-photo generation, Automated aero triangulation, Link between GIS and Digital Photogrammetry.

Practice:

16. DTM generation

17. Image correction

18. Link between GIS and Digital Photogrammetry

19. Ortho Image generation

LIDAR Remote Sensing and Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
LIDAR Remote Sensing and Application	DESP0201	Practice	0-3-0	Basic Survey

Objective

<ul style="list-style-type: none"> To teach LIDAR technique for linear and elevation measurement for multiple use geospatial management and planning plans, LIDAR technique to get 3D map and terrain information and 3D Experience Platform and Catia.
--

Course Outcome

<ul style="list-style-type: none"> Students will gain knowledge about LIDAR and its application. Students will be more skilled in CATIA Civil module
--

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

Model – I: LIDAR SYSTEM DESIGN

1. Download of LIDAR data
2. Layer stacking
3. Data Validation

Module – II: GEOREFERENCING AND CALIBRATION OF LIDAR DATA

4. Georeferencing Technology
5. Boresight Calibration - Lidar Data Preprocessing
6. Project Coverage Verification - Review Lidar Data against Field Control

7. Lidar data errors and rectifications, - processes calibration of Lidar data - artifacts and anomalies - Lidar Error Budget.

Module – III: AUTOMATED CLASSIFICATION

- 8. Noise Removal and other sensor-related artifacts - Layer Extraction - Automated Filtering 9. Manual Editing and Product Generation – Surface Editing - Hydrologic Enforcement
- 10. DEM, DSM -TIN,
- 11. Breaklines, Contours, and Accuracy Assessment.

Module – IV: LIDAR APPLICATIONS

- 12. Topographic Mapping, , flood inundation analysis, line-of-sight analysis
- 13. Forestry, various types of LIDAR sensors-, vegetation metric calculations - specific application software.
- 14. Corridor mapping system, data processing and quality control procedures.
- 15. Modelling

Resources List

- 1. Lidar: Range-Resolved Optical Remote Sensing of the Atmosphere, edited by Claus Weitkamp.
- 2. Manual of Airborne Topographic Lidar by Michael S. Renslow.
- 3. Lidar Techniques and Remote Sensing in the Atmosphere: Understanding the Use of Laser Light in the Atmosphere by Francis Emmanuel Mensah.

Session Plan

Sl. No.	Topic	Pedagogy	Hour	REFERENCES

Smart City Planning

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Smart City Planning	DESP0202	Practice	0-3-0	Nil

Objective

- To teach students learning with Autodesk Infracad and work with Open Street Map and Drafting of different types of buildings in the project area, the concept of terrain and slope for designing of drainage, road and railway and designing the city features including park, garden etc.

Course Outcome

- Students will gain knowledge about to design and plan a twin city model.
- Students will get more knowledge on designing of building, road, drainage etc. through Autodesk Infracad and 3D EXPERIENCE Platform

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module-I City Modelling

Digital Twin city, Open source data: - Open Street Map, City GML, Open Topography, SRTM, Google Satellite maps.

Module-II Terrain Preparation

3DModeling:- base maps, terrain preparation, contour preparations, 3DModeling of city furniture's such as Buildings, Bridges, road, canal, assembly, stadium.

Module-III 3D Modelling

3DModeling; Texturing and rendering, virtual reality using HTC vive or 360-degree point capture.

Module-IV Simulation

Virtual Simulations; Shadow analysis, Strome Water management

MODULE-V Risk Management

Virtual Simulations; Pedestrian behaviour, solar lights intensity, risk management.

Module-VI Virtual Simulations

Virtual Simulations; urban scope Generation, mobility and traffic Simulation, urban emergency management, water supply, flood simulations, city electric power management, health, education, governance.

Module-VII City planning

Virtual Simulations: - flood simulations, city electric power management, health, education, Good governance.

Project

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Project	DEET0300	Project	0-0-6	Nil

Course objectives:

To teach application of remote sensing and GIS and mold the student for taking up a major project through applying the GIS and Remote sensing image-processing software's.

Course Outcome:

Students take up group projects and deal the following activities during the course of their project. The project Report should contain the reports of the activities and the explanation of the activity, how the same is taken up and the outcome of the activity.

1. Functional Planning of the project

2. Identification of Objects

3. Literature Review

4. Preparation of Flow chart for Methodology

5. Layer creation and GIS analysis

6. Identifying the possible Risks involved (specific to the project)

7. Result and Discussion

8. Conclusion

9. Recommendation

10. References

Internship

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Internship	DEET0800	Practice	0-4-0	Nil

Students have to undergo twelve-week practical training in remote sensing and Geographical information System related organizations of their choice but with the approval of the department. At the end of the training student will submit a report as per the prescribed format to the department.

Assessment process

This course is mandatory and a student has to pass the course to become eligible for the award of degree. The student shall make a presentation before a committee constituted by the department, which will assess the student based on the report submitted, and the presentation made. Marks will be awarded out of 100 and appropriate grades assigned as per the regulations.

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Centurion University of Technology and Management Odisha

Environmental Science

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Environmental Science	FCBS0101	Theory	3	Nil

Course Objective:

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course Outcome:

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of

Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book: Anubhav Kaushik & C.P. Kaushik : Environmental Studies-New age International Publishers.

Reference Books:

Differential Equations

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Differential Equations	FCBS 0102	Theory	3	Nil

Course Objectives:

- To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Nonhomogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Book: 1) *Advanced Engineering Mathematics* by P.V.O' Neil

Publisher: Thomson

Linear Algebra & Vector Calculus

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Linear Algebra & Vector Calculus	FCBS 0103	Theory	3	Nil

Course Objectives:

- To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
- To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
- Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
- Determine the important quantities associated with scalar and vector fields.

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	30	Written examination

	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11) **Reference Books:**

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson
Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Integral Transform

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Integral Transform	FCBS 0104	Theory	3	Nil

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
- To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
- Solve differential & integral equations with initial conditions using Laplace transform.
- Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac’s Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig

Publisher: Johnwiley& Sons Inc-8th Edition

Chapters: 5 (5.1 to 5.6); 10 (10.1 to 10.4, 10.8, 10.9)

Reference Books:

2) *Higher Engineering Mathematics by B.V.Raman .Publisher: TMH*

Complex Analysis

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Complex Analysis	FCBS 0105	Theory	3	Nil

Course Objectives:

- *To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.*
- *To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.*

Course Outcomes: Upon successful completion of this course, the student will be able to:

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.
- Illustrate the applications of the calculus of residues in the evaluation of real integrals.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation, Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition Chapters: 12 (12.1 to 12.4, 12.9); 13, 14 (14.2, 14.4) & 15.

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson
- 2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

Discrete Mathematics

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Discrete Mathematics	FCBS 0106	Theory	3	Nil

Course Objectives:

- To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.
- To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Evaluate elementary mathematical arguments and identify fallacious reasoning.
- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus.
- Model and solve real-world problems using graphs, both quantitatively and qualitatively.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal & Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring, **Text Books:**

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition
Chapters: 1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to 8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4) **Reference Books:**
Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson
Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier
Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI

Calculus

Course Name	Code	Type of	T-P-PJ	Prerequisite
-------------	------	---------	--------	--------------

		course	(Credit)	
Calculus	FCBS0107	Theory	3	Nil

Objective

- To study how things change. It provides a framework for modeling systems in which there is change, and a way to deduce the predictions of such models.
- To construct a relatively simple quantitative models of change, and to deduce their consequences.
- The fundamental idea of calculus is to study change by studying “instantaneous” change, by which we mean change over tiny interval of time.

Course Outcome

- Upon successful completion of this course, students will be able to:
- Understand the importance of linear functions in mathematics.
 - Understand the major problems of differential and integral calculus.
 - Understand and recognize other important classes of functions (such as trigonometric and rational functions), and be able to use calculus with these functions.

Evaluation Systems

MODULE-I

(6 Hours)

Asymptotes

MODULE-II

(6 Hours)

Curve Tracing

MODULE-III

(6 Hours)

Curvature

MODULE-IV

(6 Hours)

Reduction Formulae

MODULE-V

(6 Hours)

Vector Integral Calculus: Line Integrals.

MODULE-VI

(6 Hours)

Surface Integrals, Green’s Theorem

MODULE-VII

(6 Hours)

Volume Integrals, Gauss’s Theorem, Stokes’ Theorem (without proof).

Text Books:

- 1) A Text book of Calculus Part-III : Shantinakaran
Chapters: 1 (Art 1 & 3), 3(Art 7, 8, 9)
- 2) A Text book of Calculus Part – II : Shantinakaran
Chapter: 8 (Art. 24, 25, 26),
- 3) A Text book of Calculus Part – II : Shantinakaran
Chapter: 10 (Art.33, 34, 35, 36, 37)

- 4) A Textbook of Vector Calculus by Shanti Narayan & P. K. Mittal, S. Chand & Co. , 2003
Chapters: 7 (7.1 to 7.6, 7.8 & 7.11)

Probability & Statistics

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Probability & Statistics	FCBS0108	Theory	3	Nil

Objective

- To translate real-world problems into probability models.
- To motivate in students an intrinsic interest in statistical thinking.
- To recognize the role of and application of probability theory, descriptive and inferential statistics in many different fields of engineering.

Course Outcome

- Upon successful completion of this course, students will be able to:
- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
 - Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
 - Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
 - Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Evaluation Systems

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
<i>External Examination</i>		60	Written examination
<i>Total</i>		100	

MODULE-I

(6 Hours)

Probability: Sample space and Events, Principles of Counting, Classical definition of probability.

MODULE-II

(6 Hours)

Axioms of probability, Elementary theorems, Addition and Multiplication rules, Conditional probability.

MODULE-III

(6 Hours)

Probability Distributions: Discrete and Continuous Random Variables.

MODULE-IV

(6 Hours)

Probability Density and Distribution functions, Mean and Variance of Distributions. Binomial Distribution.

MODULE-V

(6 Hours)

Poisson Distribution, Normal Distributions, Poisson and Normal Distributions as Limiting forms of Binomial Distribution.

MODULE-VI**(6 Hours)**

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances.

MODULE-VII**(6 Hours)**

Point and Interval Estimations, Confidence Intervals, Fitting Straight Lines, Correlation and Regression.

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig

Publisher: John Willey & Sons Inc-8th Edition

Chapters: 22(22.1 to 22.8), 23(23.1 to 23.3, 23.9, 23.10)

Reference Books:

1) Statistical Methods By S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2) Mathematical Statistics By S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Numerical Methods

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Numerical Methods	FCBS0109	Theory	3	FCBS0102 Differential Equations

Objective

- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.
- Ability to decide and to derive appropriate numerical methods for approximating the solutions of various types of problems in engineering and science and analyze the error incumbent in any such numerical approximation.
- Ability to report analysis, solution and results in a standard engineering format.

Course Outcome

- Upon successful completion of this course, students will be able to:
- Perform error analysis to select an appropriate numerical model and to estimate errors in numerical solution of a given problem.
 - Derive a variety of numerical algorithms/methods & compare the viability of different approaches to the numerical solutions of various mathematical problems arising in roots of linear and non-linear equations, interpolation and approximation, numerical differentiation and integration, system of linear algebraic equations and differential equations.
 - Analyze and evaluate the accuracy of common numerical methods.

Evaluation Systems

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
<i>External Examination</i>		60	Written examination
<i>Total</i>		100	

MODULE-I

(6 Hours)

Approximation and round of errors, Truncation error and Taylor's series, Roots of equation using Bisection Method.

MODULE-II

(6 Hours)

Roots of equation using the false-position method, fixed point iteration, Newton-Raphson method, Secant method.

MODULE-III

(6 Hours)

Solution of System of Linear algebraic equations: Gauss-Seidel method, Lagrange Interpolation.

MODULE-IV

(6 Hours)

Newton divided difference interpolation, Inverse Interpolation, Lagrange Interpolation, Newton's forward and backward interpolation.

MODULE-V**(6 Hours)**

Numerical Differentiation, Numerical integration by the trapezoidal rule.

MODULE-VI**(6 Hours)**

Numerical integration by the Simpson's rules, Gauss quadrature rule.

MODULE-VII**(6 Hours)**

Solution of Ordinary Differential Equations: Euler's method, Improvement of Euler's method, Runge-Kutta methods.

Text Book:

- 1) Advanced Engineering Mathematics by E. Kreyszig
Publisher: John Willey & Sons Inc-8th Edition
Chapters: 17 (17.1 to 17.3, 17.5), 18 (18.3), 19 (19.1)

Reference Books:

- 1) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 2) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Applied Analytical Chemistry

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Applied Analytical Chemistry	FCBS0401	Theory + Practice	3	Nil

Course Objective

- The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.
- The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Course outcome

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix
- Point out suitable techniques for sampling and handling of environmental samples
- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Describe simple approaches for troubleshooting

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

1. Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
2. Determination of Turbidity by nepheloturbidity meter, pH, Conductivity.
3. Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell **Practice:**

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Industrial Chemistry

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Industrial Chemistry	FCBS0402	Theory + Practice	3	Nil

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cemenas well as dyes, oils, soaps

- *Introduce the students to industrial processing principles as applicable to chemical and allied industries.*
- *Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.*
- *Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.*

Course outcome

- *Appreciate better their future roles as chemists in Industrial establishments*
- *Be able to explain the origin of raw materials used in the chemical and allied industries*
- *Have a good understanding of how chemical raw materials are processed into finished products.*
- *Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.*

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

- Preparation of soap by saponification
- Determination of the properties different type of soap
 1. pH test
 2. Foam test

- Hard water test
- Determination of iodine number of oil
- Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline
- Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores.

Practice:

- Estimation of Cu in copper ore
- Determination of Fe as ferrous iron in an ore sample
- Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

- Estimation of calcium in Portland cement
- Cement hydration and pH evaluation during caving
- To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Applied Engineering Materials

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Applied Engineering Materials	FCBS0403	Theory + Practice	3	Nil

Course Objective

- To understand the importance of the chemical approach to nanomaterials
- To study the preparation, analysis and applications of metal nanoparticles
- To develop an understanding of conjugated polymers and their applications
- To understand how polymer composition and architecture imparts unique properties and behavior
- To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials □ Know the application of Nanotechnology and nanomaterials

Evaluation System

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

- Synthesis of Ag, Au nano particles by wet chemical methods. □ Synthesis of ZnO Nanoparticles by Precipitation Method □ Synthesis of Cu nano particles Sonochemical method.
- Synthesis of Fe nano particles Co-precipitation method.
- Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

- Synthesis of Thiokol Rubber
- Synthesis of a Rubber Ball from Rubber Latex
- Synthesis of Polystyrene (PS)
- Synthesis of Polymethyl Methacrylate (PMMA) □ Synthesis of Nylon-6:6.
- Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites“ refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

- Synthesis of bio composite materials by using jute fibres and wood fibres

Electricity and Magnetism

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Electricity and Magnetism	FCBS0404	Theory + Practice	4	Nil

Course Objective

- To understand electric circuit components and their use.
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices.
- Understanding magnetic properties of matter and performing experiments to realize magnetism.

Course outcome

- Realizing the importance and use of electrical components in a circuit.
- Learning how to do different connections and their purpose.
- Understanding magnetism of matter and its applications

Evaluation Criteria

Internal Examination	Component	% of Marks	Method of Assessment
	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination			
	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Practice I Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection, Kirchoff’s laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.
2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Foster’s Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.
3. To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
4. To study the response curve of a parallel LCR circuit and determine its (a) Anti- resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis. Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

2. To study the induced e.m.f. as a function of the velocity of the magnet.
3. Measurement of field strength B and its variation in a solenoid.
4. Determination of μ_r ratio.

Text Book:

1. *Electricity and Magnetism* By K. K. Tiwari, S. Chand Publishing References:
2. *Electricity and Magnetism*, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan
3. *Introduction to Electrodynamics*, by David J. Griffiths Prentice-Hall; 3 edition (2011)
4. *Electricity and Magnetism* by - D. C. Tayal, Himalaya Publishing, 2009.

Basic Mechanics and Properties of Matter

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Basic Mechanics and Properties of Matter	FCBS0405	Theory + Practice	4	Nil

Course Objective

- To give the students overall idea about material properties and also hands on experience to measure them.
- To make them realize the applications of material properties.
- To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.
- Encouraging them to build simple models to explain the mechanical properties. **Theory:**

Course outcome

- To understand material properties and perform experiments on them.
- To understand the applications of material properties in real life.
- To be able to make small models for explain few mechanical properties.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder, bending of beams, Vibration of loaded cantilever.

Lab:

1. Young's modulus by single/double cantilever
2. Young's modulus by Searle's method
3. Rigidity modulus using Barton's apparatus
4. Poisson's ratio

Practice II Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseuille's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface. **Lab:**

1. Viscosity by Stokes method
2. Viscosity by Poiseuille's method
3. Metacentric height of floating body

4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Text Book:

1. Elements of Properties of Matter, Dec 2010 by D.S. Mathur, S.Chand (G/L) & Company Ltd

Optics and Optics Fibre

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Optics and Optics Fibre	FCBS0406	Theory + Practice	4	Nil

Course Objective

To understand optical phenomena.

- *To understand different light sources and their use*
- *Understand designing of microscope and artificial light sources*
- *Understanding optical fiber and its applications*

Course outcome

- *Students should understand optical phenomena.*
- *Students should learn about different light sources and their use*
- *Students should be able to understand optical fiber principle, operations and its applications.*

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Practice II

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

Practice-III

Theory: Optical properties—scattering, refraction, reflection, transmission & absorption. Introduction, principle of Laser, stimulated and spontaneous emission, Coherence (temporal and spatial) Ruby Laser, Application of Lasers.

Optical Fibres: Introduction, numerical aperture, step index and graded index fibres, attenuation & dispersion mechanism in optical fibers (Qualitative only), application of optical fibres, optical communication (block diagram only)

Lab:

1. Measurement of attenuation and bending losses of an optical fibre.
2. Measurement of numerical aperture of a optical fibre
3. Study of spatial and temporal coherence of LASER
4. Making of a light guide

Text Book:

1. *A Text Book of Optics by M.N. Avadhanulu, Brij Lal, N. Subrahmanyam, S Chand; 23rd Rev. Edn.*

SYLLABUS
FCHU1201FOUNDATIONS OF ENGLISH COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVES

- To develop vocabulary and grammar knowledge
- To develop reading comprehension skills

COURSE OUTCOMES

- Development of academic and sub-technical vocabulary
- Enhancement of basic language skills, i.e., listening, speaking, reading and writing
- Development of grammatical competence
- Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of learning communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

- Animal Farm
- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

- To expose the students to a variety of self- instructional, learner- friendly modes of language learning.
- To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.
- To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

- Ability to communicate fluently in different business situation
- Effective oral and written communication
- Appropriate word usage with correct pronunciation
- Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

- Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade
- Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.
- Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

- Elimination of common errors
- Editing passages
- Word power A-Z: Easy and quick techniques
- Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

- Pronunciation Guidelines: Consonants and Vowels
- Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences
- Speaking Techniques: Using correct stress patterns, developing voice quality
- Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHU1203 BUSINESS COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVES

- The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.
- This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

- Understand the differences between general communication and business communication
- Development of basic language skills, i.e., listening, speaking, reading and writing
- Effective participation in group discussion and job interviews

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

- General Communication and Business Communication
- Communication in Organizational Settings: Patterns of Communication in the Business World – Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal
- Introduction to Cross Cultural Communication
- Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading

books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

- Importance of Developing Reading Skills
- Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making
- Importance of Writing Skills and Principles of Effective Writing
- Writing Process: Pre-writing, Drafting and Re-Writing
- Paragraph Writing
- Summaries and Abstracts
- Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
- Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

- Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies
- Common forms of Oral Communication in the Business World:
- Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes
- Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality
- Making an Oral Presentation: Planning, Preparing and Delivery
- Facing an Interview: Preparation, Types of Interview, Do's and Don'ts
- Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204COMMUNICATIVE PRACTICE LABORATORY –II

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

- To master Study Skills

- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

- Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.
- Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

- Situational Dialogues / Role Play: Organization Communication
- Oral Presentations- Prepared and Extempore
- 'Just a minute' Sessions (JAM)
- Debates
- Mock Meetings
- Cracking Job Interviews: Mock Sessions
- Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

- Review Presentation (Movie/ Article/ Book)

- Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

- Short Paragraphs on current general and technical topics
- Creative Writing: Idea Generation
- Business Letters, Email Messages, Project Writing
- Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205CORPORATE READINESS LABORATORY

Pre - requisites	Course Type	Credits
Nil	Workshop	2

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

- Understand the process of communication
- View communication from the perspective of each stakeholder
- Plan and manage communication difficulties
- Learn exactly how, when and what of communication

COURSE OUTCOMES

- Understanding the convention of project report
- Understanding the process of data collection and documentation
- Preparation and presentation of project report
- Preparation for various academic and professional needs

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes

(E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206IT ENABLED COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- Speak confidently and fluently, in both formal and informal contexts.
- Write clearly, correctly and cogently
- Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence
- Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

- Pre-Course Assessment
- Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...
- Do you know?
- Introduction to IT Enabled Communication
- Communication in the New Age Context and Demand for Communication Interventions

(This module includes pre-course assessments and presentations)

MODULE II: BLOG DESIGNING & POSTING

- Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing
- Photoshop for Image, Editing and graphic design

(This module will be driven through methods like self-learning, learning by doing, and workshop)

MODULE III: TECHNOLOGY AND COMMUNICATION

- Tools for Business Correspondence and web-based exercises
- Creating and delivering high impact presentations with Slides and other Visuals
- Video Documentaries
- Video Conferencing Sites, Skype, Team Viewer

(This module will be facilitated through presentations, use of tools and technology)

TEXT BOOKS

6	Team Building and Teamwork	Activity Based Learning	Coin Logo Time Required: 5-10 minutes Begin by asking all participants to empty their pockets, purses, and wallets of any coins they may have and place them on the table in front of them. If someone doesn't have any coins or only has very few, others in the room can share their coins with them. Instruct each person to create their own personal logo using the coins in front of them in just one minute. Other materials they may have on them, such as pens, notebooks, wallets, etc. can also be used in creation of the logo. If there is a particularly large group, people can be broken up into teams of 3-6 people and instructed to create a logo that represents them as a team or the whole room can gather to use the coins to create a logo for the organization/group/department/etc. Each solitary participant can explain their logo to the group or if the room was split into groups, the leader can have each group discuss what led to the team logo and what it says about them. Not only does this activity promote self	0	1	1	0

			and mutual awareness, but it also enables participants to get to know each other on a more personal level. http://www.livestrong.com/article/219775-team-building-exercises-for-small-groups/

11	Personality and Career Choice	Classroom exercise	rs_self-assessment.pdf	0	1	0	0
12	Time Management	Group Activity	<p>How long is a minute?</p> <p>At the beginning of session ask people to close their eyes for 30 seconds and after that to open it. Nobody can watch the clock and don't measure the time. Ask of participants to open their eyes after what they believe has been 30 seconds. Of course, they all open them at different times. Afterwards, we talk about our understanding of time. Even though everyone has an equal (24 hours a day or 30 seconds for exercise), in fact, we experience it and use it in different ways. Some of us experienced it as a short period, other as a long. This always works as a good opener.</p> <p>2) Cover all the clocks in the room, then ask participants to remove their wrist watches and stand up. Instruct them to sit down when they think 1 minute has elapsed after you shout "Start" to begin the countdown. You will be surprised with the results. Just enjoy the fun that follows this activity</p>	0	1	0	0

FCHU1209 SEMINAR AND TECHNICAL WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

Seminar allows students the opportunity to put all of information together. The students are required to prepare technical reports including oral presentations supported by written technical papers. Seminar is designed to assist students in preparing for their career.

COURSE OBJECTIVES

- Understand the requirements and ethics of technical writing in the 21st Century workplace.
- Work professionally, individually and in a team to produce effective technical documents incorporating verbal, visual, and multimedia materials as necessary.
- Communicate effectively by analyzing audience, organizing documents, writing clearly and precisely with no grammar errors and presenting the document with skillful design.
- Locate, evaluate, and incorporate pertinent information.
- Write clear, intelligent technical reports
- Make seminar presentations

COURSE OUTCOMES

- Understand how technical communication is used in the workplace.
- Understand and use the principles of design in business and technical communication.
- Apply useful descriptive language to your technical documents.
- Students will gain experience in preparing a technical report including an oral presentation supported by a written technical paper.

MODULE-I: TECHNICAL COMMUNICATION ESSENTIALS

COURSE OUTCOMES

- Describe the writing process most useful in today's technical writing environment.
- Analyze an audience and consider appropriate writing situations to meet the audience's needs.
- Understand the ethics of the workplace and apply those ethics to their technical and business writing.

OUTLINE: Communicating in the Workplace, Technical Writing Process Today, Readers and Contexts of Use, Ethics in the Technical Workplace

MODULE- II: DOCUMENT DESIGN

COURSE OUTCOMES

- Create and use graphics that complement your business and technical communication.

OUTLINE: Designing Documents and Interfaces, Creating and Using Graphics

MODULE-III: TECHNICAL COMMUNICATION STRATEGIES AND RESEARCHED REPORT WRITING

COURSE OUTCOMES

- Define terms clearly in technical documents.
- Explain instructions and processes clearly.
- Write clear proposals for business and technical situations.
- Research and manage information.
- Write an analytical report.

OUTLINE: Researching and Managing Information, Organizing and Drafting, Technical Definitions, Technical Descriptions, Instructions and Documentation, Proposals, Analytical Reports

MODULE-IV: SEMINAR PRESENTATION

COURSE OUTCOME

- Students will not only learn from the experience gained in preparing and presenting their seminar, but will have the opportunity to observe and participate in the seminar given by their classmates.

OUTLINE: Technical Report, Seminar Presentation

(Planning, Preparing, Organizing and Seminar Presentation are the 4 stages of this module)

FCHU1211 CREATIVE WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The aim of the course is to prepare students for careers in a workplace that is information-rich and that increasingly values communication skills and the ability to think creatively and critically. The class time will be devoted to writing workshop, innovation exercises, and the critical appreciation of write-ups. The Creative Writing course will focus on

- Reading
- Writing Creatively
- Presentations

Thus the main objective is to breed a culture of learning where students learn a variety of approaches to

creative writing in a cooperative learning environment.

COURSE OBJECTIVES

- Develop thinking skills
- Acquire basic skills and techniques to develop a suitable practice of creative writing in context
- Use a constructive approach to critique his/her own work, as well as work by his/her peers
- Organize, prepare and present spoken presentations clearly and expressively

COURSE OUTCOMES

Upon the Completion of the course, a student will

- Create Blog/ Online Presence
- Submit works for publication
- Compose a variety of written responses for different purposes and audiences
- Collaborate by sharing ideas, examples and insights, productively and respectfully in informal conversations and discussions.
- Students will put into practice the learning into the personal, professional and technical sphere.

MODULE -I: WRITING CREATIVELY (12hrs)

Foundational activities

- Introduction to Class Standards
(Workshops, peer conferencing, blogging, reading outside the classroom)
- Collaborative Creation of Classroom Philosophy
- Basics of Creative Writing

Different forms of expression

- Memoirs/Writing the Personal Narratives
- Situational Writing/ Writing for the Target Audience
- Dialogues, Essay, Poetry Slam
- Script Writing
- Writing for Blogs
- Cooking Up Interview Stories

Writing from visuals

- Pictures, Graphs, Images, Diagrams and Designs, Cartoons
- Brochures and Newsletters

(This module will be facilitated through creative writing and speaking activities)

MODULE-II: READING AND CRITICAL APPRECIATION (8hrs)

- Book
(Independent Study: Two Master Piece)

- Article
- Movie

(Student Work: Free Choice, Discussion and Oral/ Written Critiquing, Editing/ Revision

- Publication/ Sharing, Short Report on Two Authors

(This module will be facilitated through reading activities and critical appreciation)

MODULE-III: POWER OF LATERAL THINKING TO CREATE NEW IDEAS (7hrs)

- General Concepts: Creativity and Lateral Thinking
- Using the Technique of Lateral Thinking in Writing
- Idea Generation Games and Activities
- Six Thinking Hats

(This module will be facilitated through idea generation activities and presentation)

FCHU1212ENGLISH FOR COMPETITION (GRE/GMAT/TOEFL/IELTS)

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVE

- Familiarize the learners with the pattern of the TOEFL/GMAT/IELTS/GRE examination and improve overall English skills to face the competitive exams confidently.

COURSE OUTCOME

- Learners understand the pattern of the TOEFL, IELTS and GRE examination and apply test-taking strategies in exams.

A student is required to take up five laboratory tests of 100 marks.

LIST OF EXPERIMENTS

1: TOEFL Listening

Developing Listening Comprehension by taking notes after the short recorded conversations.

2: TOEFL Speaking

Developing test taking strategies to face speaking test of TOEFL exam through role play and Mock Interview.

3: TOEFL Reading

Practicing and improving student's confidence in completing the various sections of reading test in TOEFL examination.

4: TOEFL Writing

Learning and enhancing writing skills required for TOEFL writing test.

5: IELTS Listening

Practicing the listening comprehension of the students and handling questions while listening the recorded conversations.

6: IELTS Speaking

Developing test taking strategies to face speaking test of IELTS examination through role plays and mock interviews.

7: IELTS Writing

Summarizing or explaining information presented in a graph, chart, table or diagram.

8: IELTS Reading

Understanding and interpreting the text in its particular use of language, ideas and style.

9: GRE Reading Comprehension

Taking GRE Reading Comprehension examination with confidence utilizing the methods and strategies.

10: GRE SENTENCE COMPLETION

Developing sentence completion strategies through logical thinking.

11: GRE SENTENCE EQUIVALENCE

Learning and developing strategies to deal with sentence equivalence questions.

12: GRE VOCABULARY

Understanding and using appropriate choice of vocabulary in GRE vocabulary section.

13. GRE Vocabulary & Verbal-Sentence Corrections

14. GMAT Verbal-Critical Reasoning

15. GMAT Verbal- Reading Comprehension

(The entire lab will be facilitated through online quizzes, and practice sets available in language lab))

FCHU1213BE A CONTRIBUTOR

Pre - requisites	Course Type	Credits
Nil	Workshop	2

PROGRAM OBJECTIVES:

1. Build consciousness of ‘contributor thinking’ in students systematically by exposing them to the essential building blocks of contributor thinking. [The 4 sets of the program represent the 4 fundamental building block of the program]
2. Through projects expose students to the ‘realness’ of contributor way of thinking in the world around them.

SESSION PLAN:

Semester 1 of program delivery	SET 1: CONTRIBUTOR BASICS	
	UNIT 1: Who is a Contributor?	~5hrs
	UNIT 2: Scope of Contribution (Self, Organization, Society)	~5hrs
	UNIT 3: Depth of Contribution (From ‘opportunities to contribute’ to a ‘life of Purpose’)	~5hrs
	SET 2: BASIC AXIOMS OF LIFE	
	UNIT 4: The Contributor’s Response (From ‘victim’ to ‘creator of my destiny’)	~5hrs
	UNIT 5: The Contributor’s Identity (From ‘static identities’ to ‘dynamic identities’)	~5hrs
Semester 2 of program delivery	UNIT 6: The Contributor’s Vision of Success & Career (From an ‘acquisitive vision’ to a ‘contributive vision’)	
	SET 3: CONTRIBUTOR EFFECTIVENESS	
	UNIT 7: Engage Deeply	~5hrs
	UNIT 8: Design Solutions	~5hrs
	UNIT 9: Create Value	~5hrs
	SET 4: CONTRIBUTOR CONDUCT	
	UNIT 10: Thinking Win-win (Enlightened Self-Interest)	~5hrs
UNIT 11: Thinking Human-impact (Imaginative Sympathy)	~5hrs	
UNIT 12: Building Trust-surplus (Trust Behaviors)	~5hrs	

Full program duration	~60hrs
------------------------------	---------------

1.0 | Faculty can utilise the 5 hours of classroom as follows –

<p>i. The Class Engagement Books (for each unit)</p>  <p>Students fill in the book, in the class, while going through a class engagement</p>	
<p>ii. The Program App (Channel Illumine App)</p>  <p>The app is used along with the book to create a rich learning experience</p>  <p>Participants scan the QR-code given in the book to open the relevant app unit.</p>	<p>~ 4hrs for Book and App engagement.</p>
<p>iii. Projects (for each unit)</p> <p>Students can do 1-2 projects in each semester. The project is done out of class. In-class time is only for student presentation.</p>	<p>~1hr for project presentations</p>

Source: This document is an abridged version of ‘Overview of Become a Contributor Program’ given in your Facilitator Guide. It is strongly recommended that faculty refer the detailed Facilitator Guide for more details.

EVALUATION PARAMETERS (Total-100 Marks)

A] ENGAGEMENT IN CLASS		40 marks
1	Regular attendance across classes	10 marks
2	Quality of class participation (involvement in discussions, asking thoughtful questions, sharing examples, etc.)	15 marks
3	In-class assignments <ul style="list-style-type: none">• Students can be asked to submit their filled books for specific in-class assignments (Illumine can provide a list of which class engagements in each book, can be checked for this)• Any 4 books (one from each set), can be considered for marking.	15 marks
B] PROJECT WORK <ul style="list-style-type: none">• Project assignments are provided by Illumine for the course.• Mark students on their best 3, from these project assignments.		30 marks
1	Completion & submission of assigned projects, with basic quality	10 marks
2	Design and execution of the project (Methodology of project work) (students present how they went about the project – their approach, method, documentation of research work)	10 marks
3	Project presentation & project output uploads (assessed against the project goal)	10 marks
C] PRE & POST TEST		20 marks
1	Completion of pre-test	5 marks
2	Completion of post-test	5 marks
3	Improvement (sent by Illumine, based on test results)	10 marks
D] APP USAGE (sent by Illumine, based on app usage pattern)		10 marks

FCHU0213 LIFE SKILLS DEVELOPMENT-I [Aptitude & Reasoning]

Pre - requisites	Course Type	Credits
Nil	Practice	2

OBJECTIVES

- To provide ample opportunities for practice.
- To make the students solve each & every question within 30-40 seconds.
- To make the students visit all the questions in any exam.
- To make them learn the art of skipping questions which require more time.
- To make the students eligible to score 70% or more in each written tests.

OUTCOMES

- Quantitative Ability skills will be increased.
- Calculation & Logical thinking skills will be increased.
- Time spent per questions will be minimized.
- Students will be able to score minimum of 70%.
- Improved skills to qualify all competitive exams like Campus Written tests, Banking Exams, SSC Exams, Railway Exams, GATE Exams.

Nil	Theory	2

Course Objective:

In today's dynamic economic environment, effective managerial decision making requires timely and efficient use of information. The basic purpose of this course is to provide students with a basic understanding of the economic principles, methodologies and analytical tools that can be used in business decision making problems. It provides an understanding of the economic environment and its impact on strategy formulation. The course also focuses on the impact of economic policies on managerial decision-making by providing an understanding of fiscal policy, and national and global economic issues affecting business.

The language of science (and all analytical thinking) is mathematics. Since economics is a social science, use of some mathematical tools, basically the constrained and un-constrained optimization techniques will help in measuring and solving the basic economic problems and thus improves decision-making. It becomes difficult and totally un-practicable to solve business (economic) problems logically and systematically without use of mathematics. The basic objective is to solve problems mathematically and interpret the results economically.

Module-1: Micro Economics

Introduction to economics: Scarcity, Choice and Efficiency, Fundamental issues of what, how and for whom to produce to make the best use of economics. Demand for a commodity: Law of demand, Demand schedule and demand curve, Individual and market demand, Change in demand, Consumer behavior: Analysing law of demand through Marshallian utility analysis, Indifference curve technique and Consumer Surplus.

Elasticity of demand: Price Elasticity of demand: Estimation, Types, Elasticity and revenue, Factors affecting price elasticity of demand. Income elasticity, Cross elasticity, Uses of different concepts of elasticity in business decisions.

Analysis of Supply: Law of Supply, Supply schedule and supply curve, Change in supply, Price elasticity of supply, Equilibrium of demand and supply: Equilibrium with demand and supply curves, Effect of a shift of demand and supply curves.

Production Function: Production function with one variable input, Production function with two variable inputs, optimal combination of inputs, Returns to scale

Cost Theory: Types of costs, Production and cost, Short-run cost functions, Long-run cost functions, Economies of scale and scope, Cost-Volume-profit Analysis

Market: Meaning, types and characteristics of different market structure (Perfect competition, Monopoly, Monopolistic competition and Oligopoly)

Module: 2: Macro Economics

National Income Accounting: Circular flow of Income, National Income Concept, Eight variants of national product aggregates, Measurement (Income, Value Added and Expenditure), Real and Nominal GNP, Difficulties in measuring the national income, Uses of National income statistics, Money and Inflation: Demand for and supply of money. Causes and consequences of Inflation. Commercial and central banking: Role and functions of commercial banks and R.B.I., Monetary Policy and Fiscal policy: Objectives and Instruments, Balance of Payment (BoP): Meaning, BoP Account, Disequilibrium in BoP, Measures to correct disequilibrium in BoP, Foreign Exchange: Floating Exchange Rate and Fixed Exchange Rates

FCMG0102 ACCOUNTING AND FINANCE

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- To familiarize the students with basic terms of accounting, accounting principles, concepts and convention.
- To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis: Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity
Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. Accounting for Management—Ashok Sehgal, Taxxman
2. Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI
3. Khan & Jain – Management Accounting, TMH.
4. Horngren ,Datar, Foster- Cost Accounting, Pearson.
5. Financial Accounting, Jain/Narang/Agrawal, Kalyani.
6. Basic Financial Accounting for Management, Shah, Oxford.
7. Financial Management by I. M. Pandey
8. Financial Management – Theory and Practice by Chandra
9. Financial Management – Text and Problems by Khan & Jain

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content

Unit: I

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

Unit: II

Individual System: Learning, Perception, Personality and Motivation,

Unit: III

Social System: Group Dynamics and Leadership.

Books Recommended:

1. Robins & Sanghii; Organizational Behavior, Pearson
2. Luthans ,F; Organizational Behavior-TMH
3. Udai Pareek ; Understanding Organizational Behavior, Oxford
4. Prasad,L.M; Organization behavior, S.Chand.
5. K. Aswathappa; Organization behaviour

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- They can use specialized knowledge in Operations Management to solve business processes.
- They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - “Operations Management”, TMH
- 2) Krajewski, Ritzman, Kansal, - “Operations Management”, Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - “Production and Operations Management”, PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - “Operations Management”, Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - “Production and Operations Management”, HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- The students will understand the various marketing approach in today’s competitive scenario.
- The students will learn the application of various marketing tools for solving business problems
- The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL), Porter’s five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP); What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning, Effective positioning strategies, Positioning of brands and repositioning, introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of

promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication
2. Marketing Mangement: Fourth edition- RajanSaxena
3. Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA

FCMG0108 INTRODUCTION TO RESEARCH

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

- To introduce the students about research, methods and techniques.
- To understand the process and apply in other areas.

Course outcome:

- Students will be able to understand the process of doing a research.
- Students will be able to write a research report.

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, Sampling: Census and sample survey, different types of sample design, Measurement: Measurement and scaling techniques, Methods of Data Collections: Experimentation, observation,

interview, Survey, case study; Data Analysis and Interpretation: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

1. Ranjit Kumar, 2011, Research Methodology: A Step by Step Guide, Sage South Asia Publication.

FCMG0113 INDIAN SOCIETY AND CULTURE

Pre – requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswatiand Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. Indian Society and Culture: Continuity and Change – by N. Hasnain
2. Social and Cultural History of India – O.M. Prakash
3. Makers of Modern India – RamachandraGuha

Introduction to Human Rights

Course	Code	Type of course	Credit
Introduction to Human Rights	FCMG1203	Workshop	2

Objective

- The course is an introduction to human rights. Human beings are rational beings. They by virtue of their being human possess certain basic and inalienable rights which are commonly known as human rights. Human Rights are defined as all those rights which are essential for the protection and maintenance of dignity of individuals and create conditions in which every human being can develop his or her personality to the fullest extent. The purpose of this course is for students to gain a holistic view of human rights and their implications.

Course outcome

- Develop an understanding of human rights, its history, characteristics and types,
- Gain a nuanced understanding of protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law
- Conflicts of Rights: Challenges of the past and Challenges for the future

Course outline

Module I	Introduction to Human Rights
Topic	Meaning and Definition, History, Principles, Characteristics, Types
Pedagogy	Example: lecture (ppt), videos, etc
Lab/Activity	
Assignment/practice	
No. of hours	6
Reference materials: Book/e-content/online source	

Module 2	Human Rights Law
Topic	Protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law
Pedagogy	Example: lecture, videos, Case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	8
Reference materials: Book/e-content/online source	

Module 3	Conflicts of Rights: Challenges of the past and challenges for the future
Topic	Persistence of discrimination, poverty, and inequality in the region, efforts in the search for justice for past violations, continued struggle for human rights and accountability

Pedagogy	Example: lecture, videos, case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	16
Reference materials: Book/e-content/online source

Project work and presentations	8 hours			

Introduction to Ethics

Course	Code	Type of course	Credit
Introduction to Ethics	FCMG1204	Workshop	2

Course Objective

<ul style="list-style-type: none"> The course is an introduction to Ethics. This course will introduce to the meaning of ethics and the historical development – utilitarianism, ethical relativism and virtue ethics. Will also examine some current ethical issues. Questions which will be considered are: what is the good life? Do we have a moral duty to act in certain ways? Are there such things as natural human rights? Are some values more compelling than or better than others?
--

Course outcome

<ul style="list-style-type: none"> Demonstrate knowledge of important ethical systems Demonstrate their respect of different ethical perspectives Critique some aspects of an ethical position Clearly formulate their ethical position on an issue and develop arguments based on sound inferences and clear premises (through project)
--

Course outline

Module I	Introduction to Ethics
Topic	What is the study of ethics, Introduction to Indian and Western Ethics
Pedagogy	lecture (ppt),
Lab/Activity	
Assignment/practice	
No. of hours	6
Reference materials: Book/e-content/online source	

Module 2	Different Ethical systems and Perspectives
Topic	Ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics
Pedagogy	lecture, Case studies, small group work
Lab/Activity	
Assignment/practice	
No. of hours	8
Reference materials: Book/e-content/online source	

Module 3	Critique of various aspects of ethical positions
Topic	Critique an ethical issue/ problem and formulate own ethical position on the issue/ problem
Pedagogy	lecture, small group work
Lab/Activity	
Assignment/practice	
No. of hours	16
Reference materials: Book/e-content/online source

FCMG1201 DISASTER MANAGEMENT

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective		
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> • To provide students an exposure to disasters, their significance, types & Comprehensive understanding on the concurrence of Disasters and its management. • To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention, risk reduction and the basic understanding of the research methodology for risk reduction measures. • Equipped with knowledge, concepts, and principles, skills pertaining to Planning, Organizing, Decision-making and Problem solving methods for Disaster Management. • The course also facilitates students to globally share their views, ideas and information pertaining to Disaster Management on a common platform. • To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity. 		

GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT

A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments, presentations and written test.

COURSE CONTENT			
Module - 1			
UNIT I – Introduction to Disaster Management (2hrs)			
Session	Topic	Coverage	Reading/Reference
4hrs	Disaster & Emergencies : Concept & Fundamentals of Disaster Management	<ul style="list-style-type: none"> • Introduction/ Brain storming/ Group formation • History of Disasters • Concepts and Definitions • Hazard, Risk, Vulnerability, Capacity, Disaster & Equations of Disaster Management 	
		<ul style="list-style-type: none"> • Types & Classification of Disasters • Factors responsible for disasters like flood, 	

		cyclone and Earthquake.	
UNIT II – Effect and Impact of Disaster (4 Hrs)			
1hr	Effect and Impacts of Disasters (Group work)	<ul style="list-style-type: none"> Disasters Impact – Social, Economic, Political, Environmental, Health, Psychosocial, etc. Differential impacts- in terms of Caste, Class, Gender, Age, Location, Disability. 	Disaster Mgmt. and India: Responding Internally and Simultaneously in Neighboring Countries Kailash Gupta, BE (Elec.), MBA(IIMA)
1 hr	Disaster vs Development	<ul style="list-style-type: none"> Disaster is the causes of destruction Disaster leads to development 	
2 hrs	Global warming and climate change	<ul style="list-style-type: none"> Concept and understanding of global warming and climate change Causes and factors Remedial measures 	
Module – II		•	
UNIT III – Disaster Risk Management - (6 hours)			
2 hrs	Community Managed Disaster Risk Reduction And Village Contingency Plan (Group work) Role of Task force/ ODRAF/ NDRF for DRR at community level.	<ul style="list-style-type: none"> Hazard analysis and assessment Vulnerability analysis Resource capability assessment Mapping & Seasonality Calendar Structural and Non Structural assessment. Task forces with various roles for DRR. 	CBDRM for Local Authorities: PARTICIPANT’S WORKBOOK – adpc www.adpc.net
2 hours	Rapid Need Assessment Pre and Post Disaster (Group work and Practical demo)	<ul style="list-style-type: none"> Meaning and Importance Rapid Need Assessment in emergency and its significance Process and Methods 	
2 hrs	Stress Management	<ul style="list-style-type: none"> Causes and consequences of Stress What are the best ways to handle pressure Psychosocial Support 	

UNIT IV – Disaster Management (8 hrs)			
2 hrs	Disaster Management Cycle	<ul style="list-style-type: none"> • Disaster Management Cycle • Phases of Disasters • Prevention, Mitigation Preparedness, Warning, Response, Rehabilitation, Reconstruction 	
2 hrs	Fire safety (Practical)	<ul style="list-style-type: none"> • Practical 	
2 hours	First Aid & Driving Learning (Theory and Practical)	<ul style="list-style-type: none"> • ABCD of First Aid • Dressing and Bandages Practical session • Emerging need and importance of learning driving 	
2hrs	Building Rescue operation or Demonstration of ODRAF/NDRAF rescue materials	<ul style="list-style-type: none"> • Practical 	
Module – III		<ul style="list-style-type: none"> • 	
UNIT V – Humanitarian Charter and Minimum Standards in Humanitarian Response (4 hrs)			
2hrs	Sphere Standards (Group Work)	<ul style="list-style-type: none"> • The Humanitarian Charter • Protection Principles • Core Standards 	
2hrs	Restoring Life Line Services (WASH) (Group work)	<ul style="list-style-type: none"> • Water , Sanitation & Hygiene Promotion • Food Security & Nutrition • Health Services • Health Services • Shelter and Settlement 	The Sphere Project , Humanitarian Charter and Minimum Standards In Humanitarian Response
UNIT VI – Disaster Management Projects –(6 hours)			
6hrs	Seminars / Workshop	<ul style="list-style-type: none"> • Adapting Climate Change • Disaster Resilience Structures and Buildings • IT in Disaster Management • Inter-relationship between Disasters and Development • Urban Disaster 	

		<ul style="list-style-type: none"> • Rain Water Harvesting • Inclusions – Disability, Aged, Social etc 	
		<ul style="list-style-type: none"> • 	
		<ul style="list-style-type: none"> • 	

- Team of 10 – 15 members would be formed
- Each Team would take up a project work in one of the topics above or related topics with prior approval : 2 Weeks
- Each Team would organize one Seminar / Workshop during the session

FCMG1202MS Excel

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective		
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> • Indicate the names and functions of the Excel interface components. • Enter and edit data. • Format data and cells. • Construct formulas, including the use of built-in functions, and relative and absolute references. • Create and modify charts. • Preview and print worksheets. • Use the Excel online Help feature. 		
<p>Course Outcome</p> <ul style="list-style-type: none"> • Navigate your way around Microsoft Excel • Work with data analysis and presentation • Create and work with formulas and functions, understand and use formula cell • Use Excel for Business application 		
GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT		
<p>A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments and presentations.</p>		

Course Contents:

Unit 1: Excel Introduction, direct right, The Excel Interface, direct right, Basic Navigation and Editing,

Unit 2: Getting Going, Orientation & efficiency, Editing, Viewing, Spreadsheet Structure, Cell References, Named Ranges, Basic Macros, Design

Unit 3: Administration, Customising Excel, Housekeeping, Connecting Workbooks Documentation, Protecting and Sharing, Google Docs, Excel Troubleshooting, Data Handling, Sorting and Filtering, Controlling User Input, - Working with Dates & Times

Unit 4: U- Working with Text, Lookup and Reference, Logical Functions, Data Analysis, Working with Numbers, Summarising Data, PivotTables 1 - Simple Summaries, PivotTables 2 - Manipulating Data,

Unit 5: PowerPivot: Handling Big Data, Formula Auditing, Advanced Macros and VBA, Modelling, Presentation, Cell Formatting, Number Formatting, Conditional Formatting, Graphs and Charts, Page and print setup

Introduction to Gender

Subject Name	Code	Type of course	Credit
Introduction to Gender	FCMG1205	Workshop	2

Objective

- In the traditional social order women have been assigned a subordinate status in society for centuries. They have been deprived of many social privileges and suffered from discriminations that prevented them from contributing to the development process. They have remained marginalized in society. To remedy the prevailing situation, gender concerns have become increasingly important in the development agenda in the last few decades. In spite of special policies and programmes being implemented, gender based injustice continues to exist and hinder development

Course outcome

- Develop an understanding of perspectives on gender and development
- Discuss in detail the gender question in selected development sectors and globalisation
- Familiarise with the different tools and techniques for gender planning, analysis and evaluation in the development sector

The course has three modules covering these three aspects of gender and development.

Course outline

Module I

UNDERSTANDING AND CONCEPTUALISING GENDER RELATIONS

Module II

GENDER ISSUES IN DEVELOPMENT SECTORS

Module III

GENDER ANALYSIS, TOOLS, TECHNIQUES AND FRAMEWORKS

1. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module 1				
Difference between Sex and Gender	1	Lecture		Lecture Notes and Book chapters
Why gender is a development issue?	1	Lecture		Lecture Notes and Book chapters
Gender system and inequality	1	Lecture		Lecture Notes and Book chapters
Understanding gender relations	1	Lecture		Lecture Notes and Book chapters
Gender planning – practical and strategic gender needs	1	Lecture		Lecture Notes and Book
Approaches to address gender inequality – WID, GAD and GID	1	Lecture		Lecture Notes and Monograph
Module 2				
Gender issues in the economic sector	1	Quiz 1 and Lecture		Lecture Notes and Articles
Gender issues in the education sector	1	Lecture		Lecture Notes and Articles
Gender issues in the health sector	1	Lecture		Lecture Notes and Articles
Gender issues in the governance sector	1	Lecture		Lecture Notes and Articles
Gender issues in globalisation	1	Lecture		Lecture Notes and Articles
Module 3				

Harvard Analytical Framework	1	Lecture		Handouts and Book chapter
Gender Assessment Study and Gender Analysis Matrix	1	Lecture		Handouts and Book Chapters
Gender Empowerment Framework	1	Quiz 2 and Lecture		Handouts and Book Chapters
Gender and Organisations	1	Lecture		Handouts and Book Chapters
Student Presentations based on group projects	Extra classes			
Total (hrs)	15 hours +3 hours			

Centurion University of Technology and Management Odisha

Choice Based Credit System

Syllabus

Engineering Mechanics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Engineering Mechanics	ENFC0101	Theory	3-0-0	Nil

Objective

- To provide the students with a clear and thorough understanding on theory and application of principles of mechanics as applied in engineering problems.

Course Outcome

- Students will acquire knowledge and skill to analyze the effect of force and motion on rigid bodies to solve engineering problems through application of basic laws of mechanics.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (9 Hrs)

Coplanar Forces : Principles of Statics, Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Free Body Diagram, Equilibrium of Concurrent Coplanar Forces, Lami's Theorem (Case Studies : - Analysis of a Boom, Analysis of a Tripod Stand, Equilibrium Analysis of a Wall Bracket)

To Understand the Equilibrium of a Particle under the Action of Forces in a Plane using Gravesand's Apparatus or Coplanar Force Setup. (The theory can be taught in practice mode)

Module: II (6 Hrs)

Moment and Couple, Varignon's Principle of Moment, General Conditions of Equilibrium, Types of Supports and Support Reactions,

Friction :Equilibrium of Bodies on Rough Inclined Planes, Ladder Friction, Applications of Friction (Friction in Square Threaded Screw, Disc and Bearing Friction, Belt Friction)

To Determine the Coefficient of Static Friction between two given Material with the Help of an Inclined Plane. (The theory can be taught in practice mode)

Module : III (10 Hrs)

Center of Gravity : General Case of Parallel Forces in a Plane, Centre of Parallel Forces in a Plane, Centroid and Centre of Gravity, Axis of Symmetry, Centroid of Composite Plane Figures and Curves.

Moment of Inertia : Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Plane Composite Figures and Material Bodies.Determination of Moment of Inertia of a Flywheel. (The theory can be taught in practice mode)

Module : IV (6 Hrs)

Linear Motion : Motion under Gravity and Variable Acceleration, Principles of Dynamics such as Newton's Second Law, D'Alembert's Principle, Work-Energy Relation, Impulse-Momentum Relation, Law of Conservation of Momentum and Energy, Impact and its Types, Impact of a Body on a Fixed Plane.

Module : V (5 Hrs)

Concept of Stress and Strain :Types of Stresses and Strains, Hooke's Law, Stress-Strain Diagrams for Ductile and Brittle Materials, Analysis of Axially Loaded Bars. Stress Strain Curve of a Ductile Material (Mild Steel) using UTM.

Module: VI (5Hrs)

Bars of Varying Cross-section, Composite Bars, and Poisson are Ratio, Complimentary Shear Stress, Volumetric Strain, Elastic Constants and their Relationship. Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Module : VII (4 Hrs)

Principal Stresses and Strains : Transformation of Stress and Strain, Principal Stresses, Principal Strains, Mohr's Circle for Stress and Strain.

Text Books :

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons Strength of Materials by S.S. Rattan, Tata Mc-Graw Hill Publication. Reference Books : Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill. Online Source : NPTEL, You tube

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Principles of statics, law of transmissibility of a force, composition and resolution of forces	3	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Resultant and equilibrant, free body diagram	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Equilibrium of concurrent coplanar forces,	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Lami's theorem, (case studies : - analysis of a boom, analysis of a tripod stand, equilibrium analysis of a wall bracket)	1+2	Lecture + practice	Assignment	Engineering Mechanics by D.S. Kumar
Module II				
Moment and couple, Varignon's principle of moment, general conditions of equilibrium	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Types of supports and support reactions.	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Equilibrium of bodies on rough inclined planes, ladder friction	2	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Wedge friction, applications of friction (friction in square threaded screw, disc and bearing friction, belt	1	Lecture	Assignment	Engineering Mechanics by D.S. Kumar

friction				
Module III				
Center of Gravity : General case of parallel forces in a plane, centre of parallel forces in a plane, centroid and centre of gravity, axis of symmetry, centroid of composite plane figures and curves.	5	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Moment of Inertia : Rectangular and polar moment of inertia, radius of gyration, parallel axis theorem and perpendicular axis theorem, moment of inertia of plane composite figures and material bodies. Determination of moment of inertia of a flywheel.	5	Lecture	Assignment	Engineering Mechanics by D.S. Kumar
Module IV				
Linear Motion : Motion under gravity and variable acceleration, principles of dynamics such as Newton's second law, D'Alembert's principle, work-energy relation, impulse-momentum relation, law of conservation of momentum and energy, impact and its types, impact of a body on a fixed plane.	6	Lecture	Assignment	Engineering Mechanics by D.S. Kumar http : //vlab.amrita.edu/?sub=1 &brch=74&sim=189&cnt =4)
Module V				
Concept of stress and strain : Types of stresses and strains, Hooke's law,	3	Lecture	Assignment	Strength of materials by S.S. Rattan

stress–strain diagrams for ductile and brittle materials, analysis of axially loaded bars.				
Stress-strain curve of a ductile material (mild steel) using UTM	2	Practice		Strength of materials by S.S. Rattan
Module VI				
Mechanical properties of materials Rockwell and Brinell hardness tests	2	Practice		Strength of materials by S.S. Rattan
Bars of varying cross-section, composite bars, Poisson's ratio, complimentary shear stress, volumetric strain, Elastic constants and their relationship.	2	Lecture	Assignment	Strength of materials by S.S. Rattan
Longitudinal and hoop stress in thin-walled pressure vessels subjected to internal pressure.	1	Lecture	Assignment	Strength of materials by S.S. Rattan
Module VII				
Principal stresses and strains : Transformation of stress and strain, principal stresses, principal strains, Mohr's circle for stress and strain.	2+2	Lecture + Practice	Assignment	Strength of materials by S.S. Rattan
Total				45

Material Sciences

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Material Sciences	ENFC0102	Theory	3-0-0	Nil

Objective

- To study classification and properties of materials used in day to day life
- To understand the material application and it's needed.

Course Outcome

- Students will able to identify materials for engineering use.
- Students will able to select best materials for a specific design and production.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (8 Hrs)

Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminum & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys , Magnesium Alloys, Titanium Alloys, Super Alloys.

Module: II (7 Hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geosynthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, C64, Bucky Ball Structures, Graphene.

Module: III (5 Hrs)

Prefabricated Materials: Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module: IV (8 Hrs)

Electrical & Magnetic Materials: Classifications, Properties, Advantages & Applications, Photo Voltaic Material, Dielectric Materials.

Module: V (6 Hrs)

Solar Cell and Super Conductivity, Ferro Electricity, Electro-active Polymers, Piezoelectric Material, Magneto Electric Materials, Electrorheological Fluids.

Module: VI (6 Hrs)

Fiber Optic Sensors, Photoconductivity; Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses.

Module: VII (8Hrs)

Smart Material, Shape Memory Alloys, Piezoelectric Ceramics, Biomaterials, Bioactive Glass & Ceramic, Polymer & Composite, UHTC, Soft Materials, Energy Materials.

Text Books:

1. Materials Science and Engineering, W D Callister, 2014, 2nd Edition, Wiley India Private Limited, India.

Reference Books:

1. Material Science and Engineering, V Raghavan, 2013, 5th Edition, PHI publication, India.
2. Material Science and Engineering, S Chawla, 2011, 1st Edition, Dhanpat Rai & co Private Ltd., India.

Session Plan

Thermodynamics

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Thermodynamics	ENFC0103	Theory	3-0-0	Nil

Objective

- To know the Laws of Thermodynamics and Conditions for Energy Transformation.
- To get Familiar with Different Thermodynamic Properties of Pure Substances.

Course Outcome

- Students will be able to prepare Energy Balance Sheet.
- Students will be able to determine Efficiency of Various Thermal Devices.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I (6 Hours)

Introduction : Difference between Statistical Thermodynamics and Classical Thermodynamics, Concept of Continuum, Traceability of Thermodynamic Change, Concept of Reversibility, Concept of Equilibrium, Design of Thermometers with Three Different Liquids Having Different Coefficient of Thermal Expansion, To Explain Zeroth Law of Thermodynamics. Ideal Gas Temperature Scale and Calibration of Thermometers.

Module: II (9 Hours)

Work Transfer Calculations: Various Modes of Displacement Work. Calculation of Work for Various Processes & Cycles.

Application of First Law of Thermodynamics : Closed Systems & Open Systems. Concept of Internal Energy, Enthalpy & Its Calculation Using Specific Heats.

Module: III (3 Hours)

Energy Balance analysis: Sheet for Opens Systems and Closed Systems : Nozzle, Diffuser, Compressor, Turbine, Heat Exchanger, Throttling Devices, Boilers and Condensers.

Module: IV (10 Hours)

Second Law of Thermodynamics: Working of Refrigerator and Heat Pump. Kelvin Planck and Clausius Statement of Second Law, Corollaries, Clausius Inequality.

Entropy : Definition, Principle of Increase of Entropy. Change of Entropy of Perfect Gas in Various Processes.

Module: V (5 Hours)

Properties of Pure Substance :P-V, P-T, T-S, H-S Diagram for Steam, Triple Point of Water. Different Types of Steam.

Introduction to Steam Tables : Specific Volume, Pressure, Temperature, Enthalpy and Entropy.

Module: VI (6 Hours)

IC Engines :Working Of IC Engines. Classification of IC Engines : 2 Strokes & 4 Strokes Engine, Petrol & Diesel Engines. Engine Nomenclature.

Module: VII (6 Hours)

Gas Power Cycles : Carnot Cycle, Air Standard Cycles-Otto, Diesel, Dual Combustion.

Introduction to Gas Turbine Cycles : Open & Closed Cycle.

Text Books:

1. A Text Book of Engineering Thermodynamics: R K Rajput,4th Edition. Laxmi Publications
2. Thermodynamics an Engineering Approach, Y.A Cengel, M. A Boles, Tata Mcgraw Hill Companies

Reference Books:

1. Fundamentals of Thermodynamics, C. Borgnakke, R. E. Sonntag, Wiley Publication.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I (6 Hrs)				

Difference between statistical thermodynamics and classical thermodynamics.	1	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Concept of continuum. Traceability of thermodynamic change : Concept of reversibility. Concept of equilibrium.	2	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies
Design of thermometers with 3 different liquids having different coefficient of thermal expansion to explain zeroth law of thermodynamics.	2	CRT & Video presentation	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies <u>https : //www.youtube.com/watch?v=1nECy2s_qEo</u>
Ideal gas temperature scale and calibration of thermometers.	1	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module II (9 Hrs)				
Work Transfer Calculations : Various modes of displacement work.	5	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput,4 th edition. Laxmi publications.

Calculation of work for various processes & cycles.				Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Application of first law of thermodynamics to closed systems & open systems. Concept of internal energy, enthalpy & its calculation using specific heats	4	CRT	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module III (3 Hrs)				
Energy balance sheet for opens systems and closed systems : Nozzle, Diffuser, compressor, turbine, heat exchanger, throttling devices, boilers and condensers.	3	CRT & Video presentation	Assignment-I	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch? v=Nv2G8Dpruxc</u> <u>https : //www.youtube.com/watch? v=-CRjNmIOdZo</u>
Module IV (10 Hrs)				
Working of refrigerator and heat pump.	3	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Kelvin Planck and Clausius statement	2	CRT	Assignment-	A text book of Engineering Thermodynamics : R K

of second law, corollaries.			II	Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Clausius inequality.	1	CRT & Video Presentation	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch?v=wd0Rghxmf3M</u> <u>https : //www.youtube.com/watch?v=MbyfTw5YFZs</u>
Entropy : Definition, principle of increase of entropy.	2	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Change of entropy of perfect gas in various processes	2	CRT	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi publications. Thermodynamics An Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.
Module V (5 Hrs)				
Properties of pure substance : p-v, p-T, T-S, h-S	3	CRT & Video presentation	Assignment-II	A text book of Engineering Thermodynamics : R K Rajput, 4 th edition. Laxmi

<p>diagram for steam, Triple point of water. Different types of steam.</p>				<p>publications. Thermodynamics Engineering. Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies. <u>https : //www.youtube.com/watch?v=pP2HuLPkrkY</u> <u>https : //www.youtube.com/watch?v=pJM9Fh9Fp-I</u></p>
<p>Introduction to steam table with respect to specific volume, pressure, temperature, enthalpy and entropy</p>	2	CRT	Assignment-II	<p>A text book of Engineering Thermodynamics : R K Rajput, 4th edition. Introduction to Communication Engineering

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Introduction to Communication Engineering	ENFC0104	Theory	3-0-0	Nil

Objective

- The objective of this subject is to impart the fundamentals of modern digital & analog communication systems.

Course Outcome

- Upon successful completion of this subject students should be able to : understand important concepts in communication engineering and an insight into modern communication standards.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (06 Hours)

Land Line Communication :

Evolution of telecommunications, simple telephone communication, basics of switching system, switching system parameters, signaling tones, electronic space division switching centralized and distributed SPC

Module : II (06 Hours)

Optical Communication:

Fiber-Optic Cable, Optical Principles, Optical Communication System, Fiber Optical Cables.

Module: III (07 Hours)

Elements of a Television System : Picture Transmission, Sound Transmission, Picture Reception, Sound Reception, Synchronization, Receiver Controls, Color Television.

Signal Transmission and Channel Bandwidth : Amplitude Modulation, Channel Bandwidth, Vestigial Sideband, Transmission, Transmission Efficiency Complete Channel Bandwidth, Reception of Vestigial Sideband Signals, Frequency Modulation, FM Channel Bandwidth, Channel Bandwidth for Colour Transmission, Allocation of Frequency Bands for Television Signal Transmission, Television Standards.

Module: IV (06 Hours)

Mobile Communication: Overview of Cellular Systems and Evolution of 2G/3G/4G/5G, Cellular Concepts – Cellular Systems, Hexagonal Cell Geometry, Frequency reuse, Co-channel and Adjacent channel Interference, Cell Splitting, Handoff, Blocking, GSM& CDMA Standards. WLAN, Bluetooth, Infrared Wireless, Wi-fi, Wi-Max.

Module: V (06 Hours)

Radar Communication : RADAR, Applications, Types, Frequency Bands, Basic Radar, RADAR range equation, Pulsed RADAR, CW RADAR, MTI RADAR, Tracking RADAR, Global Positioning System.

Module: VI (06 Hours)

Satellite Communication: Basic Satellite Systems, Indian Scenario, Satellite Orbits, Satellite Communication Systems, satellite link design,

Module: VII (08 Hours)

Internet Communication:

Data Communication Architecture, Link To Link Layers, End-To-End Layers, Switching Techniques for Data Transmission, LAN, MAN, ISDN, BISDN.

Text Books:

1. Telecommunication Switching Systems and Networks, Thiagarajan Vishwanathan PHI Publisher .
2. Fiber-Optic Communication Systems, 3ed Paperback – 2007 by Govind P. Agrawal.
3. Monochrome and colour television by R.R.Gulati
4. Satellite Communication by T. Pratt, C. Bostian and J. Allnutt. 2nd Edition, Joihn Wiley Co.
5. Radar engineering by G. S. N. Raju

Session Plan

Topic Coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I [06 hrs. Lecture]				
Evolution of telecommunications, simple telephone communication,	1	Lecture		Text Book-1
Basics of switching system,	1	Lecture		Text Book-1
switching system parameters,	1	Lecture		Text Book-1
signaling tones,	1	Lecture		Text Book-1
electronic space division switching	1	Lecture		Text Book-1
centralized and distributed SPC	1	Lecture		Text Book-1
Module-II [06 hrs. Lecture]				
Fiber-Optic Cable	1	Lecture		Text Book-2
Optical Principles	1	Lecture		Text Book-2
Optical Communication System	2	Lecture		Text Book-2
Fiber Optical Cables.	2	Lecture		Text Book-2
Module-III [07 hrs. Lecture]				
Elements of a Television System : Picture Transmission, Sound Transmission, Picture Reception	1	Lecture		Text Book-3
Sound Reception, Synchronization, Receiver Controls , Colour Television.	1	Lecture		Text Book-3

Signal Transmission and Channel Bandwidth : Amplitude Modulation , Channel Bandwidth	1	Lecture		Text Book-3
Vestigial Sideband ,Transmission , Transmission Efficiency	1	Lecture		Text Book-3
Complete Channel Bandwidth , Reception of Vestigial Sideband Signals , Frequency Modulation	1	Lecture		Text Book-3
FM Channel Bandwidth, Channel Bandwidth for Colour Transmission	1	Lecture		Text Book-3
Allocation of Frequency Bands for Television Signal Transmission, Television Standards.	1	Lecture		Text Book-3
Module-IV [06 hrs. Lecture]				
Overview of Cellular Systems and Evolution of 2G/3G/4G/5G	1	Lecture		Text Book-4
Cellular Concepts – Cellular Systems, Hexagonal Cell Geometry	1	Lecture		Text Book-4
Frequency reuse, Co-channel and Adjacent channel Interference	1	Lecture		Text Book-4
Cell Splitting, Handoff, Blocking, GSM & CDMA	1	Lecture		Text Book-4
Standards. WLAN, Bluetooth	1	Lecture		Text Book-4
Infrared Wireless, Wi-fi, Wi-Max	1	Lecture		Text Book-4
Module-V [06 hrs. Lecture]				
RADAR, Applications, Types, Frequency Bands	1	Lecture		Text Book-5
Basic Radar , RADAR range equation,	1	Lecture		Text Book-5
Pulsed RADAR,	1	Lecture		Text Book-5
CW RADAR,	1	Lecture		Text Book-5
MTI RADAR, Tracking RADAR	1	Lecture		Text Book-5
Global Positioning System.	1	Lecture		Text Book-5
Module-VI [06 hrs. Lecture]				

Basic Satellite Systems	1	Lecture		Text Book-4
Indian Scenario	1	Lecture		Text Book-4
Satellite Orbits	1	Lecture		Text Book-4
Satellite Communication Systems	2	Lecture		Text Book-4
Satellite link design	1	Lecture		Text Book-4
Module-VII [08hrs. Lecture]				
Data Communication Architecture	1	Lecture		Text Book-1
Link To Link Layers	1	Lecture		Text Book-1
End-To-End Layers	1	Lecture		Text Book-1
Switching Techniques for Data Transmission	2	Lecture		Text Book-1
LAN, MAN	1	Lecture		Text Book-1
ISDN	1	Lecture		Text Book-1
BISDN.	1	Lecture		Text Book-1
Total (hrs.)				45 hr.

Introduction to Aerospace Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Aerospace Engineering	ENFC0105	Theory	3-0-0	Nil

Objective

- To familiarize with the Basic Concepts of Flying, Aircraft Structures, Systems, Instruments and Power Plants used in Airplanes.

Course Outcome

- To Identify the Component of Flight and Suitable Materials for Aircraft Structure.
- To Perform Basic Calculation on Mechanics using Newton Law for Lift, Drag and Moment.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module: I (08 Hrs)

History of Flight:

Early flying vehicles by Wright brothers, hot air balloons, Classification of flight vehicles, biplanes and monoplanes, developments in aerodynamics airplanes and Helicopters, Components of an airplane and their functions.

Module: II (06 Hrs)

Basics of Aeronautics: Physical properties and structure of the atmosphere, temperature, pressure and altitude relationships.

Module: III (08 Hrs)

Newton's law of motions applied to aeronautics - evolution of lift, drag and moment. aerofoils, mach number, subsonic, transonic, supersonic, hypersonic flows.

Module: IV (06 Hrs)

Airplane Structures and Materials :General types of construction, monocoque and semi-monocoque constructions, typical wing and fuselage structure.

Module: V (06 Hrs)

Airplane Structures and Materials:Materials used in aircraft metallic and non-metallic materials, use of aluminium alloy, titanium, stainless steel and composite materials.

Module: VI (06 Hrs)

Systems and Instruments:Conventional control, Powered controls, Basic instruments for flying, typical systems for control actuation.

Module: VII (08 Hrs)

Power Plants : Basic ideas about piston, turboprop and jet engines - use of propeller and jets for thrust production - comparative merits, principles of operation of rocket, types of rockets and typical applications, exploration into space.

Introduction to Computer Networks

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Computer Networks	FCEN0120	Theory	3-0-0	Nil

Objective

- This course introduces the architecture, functions, and components of the Internet and computer networks, the principles and structure of IP addressing and sub netting, the fundamentals of Ethernet, the architecture, components and operations of routers, routing protocols and switches in a network.
- Topics include TCP/IP, Ethernet, IPv4, routers, switches.

Course Outcome

- Upon successful completion of this course students will be able to define layers of the OSI model and identify the protocols, and services associated with each layer, identify the purpose, features, and functions of current common network hardware and the OSI layer with which each is associated
- Explain the operation principles of current common network hardware devices, describe current common protocols in terms of their function, routing, addressing schemes, interoperability, and naming conventions, justify information security issues in computer net works.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I Computer Networking Fundamentals

(8Hrs.)

Networking fundamentals, Internet, Access Networks, Physical Media, Switching techniques, Layered Architecture, Introduction to the Seven layers of the OSI model, concept of the OSI model, TCP/IP model and comparison with OSI model, the Application Layer, the Presentation Layer, the Session Layer, the Transport Layer, the Network Layer, the Data Link Layer & the Physical layer.

Module II (Part-1) Security Protocols - Application Layer (5 Hrs.)

Introduction to Protocol concepts, Important Protocols, File Transfer Protocol, Socket Secure OCKS), Secure Shell (SSH), Remote Terminal Control Protocol (Telnet), HTTP.

Module III (Part -2) Security Protocols - Application Layer (2) (4 Hrs.)

Transport Layer Security/Secure Sockets Layer (TLS/SSL), Extensible Messaging & Presence Protocol (XMPP), Wireless Application Protocol (WAP) & Internet Relay Chat (IRC), SMTP.

Module IV (Part-1)Transport Layer (4 Hrs.)

Introduction to Transport Layer, TCP/IP, User Datagram Protocol (UDP), Real-time Transport Protocol (RTP)

Module V (Part-2) Transport Layer (4 Hrs)

Datagram Congestion Control Protocol (DCCP), Stream Control Transmission Protocol (SCTP), Resource reservation Protocol (RSVP)&Explicit Congestion Notification (ECN)

Module VI Network Layer (8Hrs.)

Introduction to Network Layer, Internet Protocol Version 4 (IPv4), Internet Protocol Version 6 (IPv6), internet Protocol Security (IPSEC), Internet Control Message Protocol (ICMP) & Internet Group Management Protocol (IGMP)

Module VII: Data Link Layer (8Hrs.)

Introduction to Data Link Layer, Error correction and detection, CRC, the Address Resolution Protocol (ARP), Tunneling Protocol (Tunnels) &the Point to Point Protocol (PPP), HDLC.

Computer Fundamental and Organization

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Computer Fundamental and Organization	FCEN 0118	Theory	3-0-0	Nil

Objective

- To explore the organization of computer system and its working.
- To understand the basics of computer networks.
- To use office packages like MS Office.

Course Outcome

- After completing the course students will able to
- Explain different components of computer system and their functions.
- Know the basics about computer networks.
- Use word processing, spreadsheet, and power point applications.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I (7 hrs)

General Features of a Computer: General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super computers. Computer applications – data processing, information processing, commercial, office automation, industry and engineering, healthcare, education, graphics and multimedia.

Module: II (6 hrs)

Computer Organization: Computer organization, central processing unit, computer memory – primary memory and secondary memory. Secondary storage devices – Magnetic and optical media. Input and output units. OMR, OCR, MICR, scanner, mouse, modem.

Module: III (5 hrs)

Computer Hardware and Software Computer hardware and software. Machine language and high level language. Application software, computer program, operating system. Computer virus, antivirus and computer security. Elements of MS DOS and Windows OS.

Module IV: (5 hrs)

Computer Arithmetic and Number System :Computer arithmetic, Binary, octal and hexadecimal number systems.

Module V: (6 hrs)

Logic Gates:Algorithm and flowcharts, illustrations, elements of a database and its applications
Basic Gates (**De Morgan's** theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions.

Module: VI: (5 hrs)

MS Office: Word processing and electronic spread sheet. An overview of MSWORD, MSEXCEL and MSPOWER POINT.

Module VII : (5 hrs)

Introduction to Networking: Network of computers. Types of networks, LAN, Intranet and Internet. Internet applications. World Wide Web, E-mail, browsing and searching, search engines, multimedia applications.

Operating System Building Blocks

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Operating System Building Blocks	FCEN 0119	Theory	3-0-0	Nil

Objective

- The operating system is the most important program that runs on a computer. Every general-purpose computer must have an operating system to run other programs.
- Operating systems perform basic tasks, such as recognizing input from the keyboard, sending output to the display screen, keeping track of files and directories on the disk, and controlling peripheral devices such as disk drives and printers.
- This course covers the concept of operating system and its applications.

Course Outcome

- After learning the fundamental concepts in Operating system including how OS has evolved over the years and different components of OS, students will continue to more significant functions of OS like Process management, storage and memory management etc.
- This will provide the necessary information for students to extract maximum benefits out of the OS while developing programs, working with applications etc.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I: (5 Hrs.)

Introduction to Operating System: Objectives and Functions of OS, Evolution of OS, OS Structures, OS Components, OS Services, System calls, System programs, Virtual Machines.

Module II: (8 Hrs.)**Process Management – Processes and Threads**

Processes: Process concept, Process scheduling, Co-operating processes, Operations on processes, Inter process communication, Communication in client-server systems. Threads : Introduction to Threads, Single and Multi-threaded processes and its benefits, User and Kernel threads, Multithreading models, threading issues. CPU Scheduling : Basic concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm Evaluation, Process Scheduling Models.

Module III: (6 Hrs.)

Process Management – Synchronization : Process Synchronization : Mutual Exclusion, Critical – section problem, Synchronization hardware, Semaphores, Classic problems of synchronization, Critical Regions, Monitors, OSS Synchronization, Atomic Transactions.

Module IV: (4 Hrs)

Deadlock Handling Deadlocks: System Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock, Detection, Recovery from Deadlock.

Module V: (8 Hrs.)

Memory Management: Memory Management: Logical and physical Address Space, Swapping, Contiguous Memory Allocation, Paging, Segmentation with Paging. Virtual Management : Demand paging, Process creation, Page Replacement Algorithms, Allocation of Frames, Thrashing, Operating System Examples, Page size and other considerations, Demand segmentation.

Module VI: (4 Hrs.)

Device and File Management File-System Interface : File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics. File-System Implementation: File-System structure, File-System Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery. Disk Management Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation.

Module VII : (4 Hrs.)

Protection and Security Protection : Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability- Based Systems, Language – Based Protection. Security : Security Problem, User Authentication, One – Time Password, Program Threats, System Threats, Cryptography, Computer – Security Classifications.

E-content: LMS Content

Text Books:

1. Operating System by Silberschatz / Galvin / Gagne, 6th Edition, WSE (WILEY Publication)
2. Operating System by Abraham Silberschatz and peter Baer Galvin, 8th Edition, Pearson Education 1989 (Chapter 1,3.1,3.2,3.3,3.4,3.6,4,5,6 (Except 6.8,6.9), 7, 8,9,10,11,13, (Except 13.6) 19 (Except 19.6),20(Except 20.8, 20.9), 22,23).

Reference Books:

1. Operating System Concepts and design by Milan Milonkovic, II Edition, McGraw Hill 1992.
2. Operation System Concepts by Tanenbaum, 2nd Edition, Pearson Education.
3. Operating System by William Stallings, 4th Edition, Pearson Education.
4. Operating System by H.M. Deitel , 2nd Edition Pearson Education.
5. Operating Systems by Nutt, 3/e Pearson Education 2004.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module - I (5 Hrs.)				
Introduction to Operating System : Objectives and Functions of OS, Evolution of OS	3	Lecture	Assignment	Book, Online Source

OS Structures, OS Components, OS Services	1	Lecture	Assignment	Book, Online Source
System Calls	1	Lecture	Assignment	Book, Online Source
Module - II (8 Hrs.)				
Process Management – Processes and Threads : Processes : Process concept, Process scheduling, Co-operating processes, Operations on processes	2	Lecture	Assignment	Book, Online Source
Inter process communication, Communication in client-server systems.	2	Lecture	Assignment	Book, Online Source
Threads : Introduction to Threads, Single and Multi-threaded processes and its benefits, User and Kernel threads, Multithreading models, Threading issues.	1	Lecture	Assignment	Book, Online Source
CPU Scheduling : Basic concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm Evaluation, Process Scheduling Models.	3	Lecture	Assignment	Book, Online Source
Module - III (6 Hrs.)				
Process Management – Synchronization Mutual Exclusion,	3	Lecture	Assignment	Book, Online Source

Critical – section problem, Synchronization hardware, Semaphores				
Classic problems of synchronization, Critical Regions.	3	Lecture	Assignment	Book, Online Source
Module - IV (4 Hrs.)				
Deadlock Handling : System Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance.	2	Lecture	Assignment	Book, Online Source
Deadlock Detection, Recovery from Deadlock.	2	Lecture	Assignment	Book, Online Source
Module - V (8 Hrs.)				
Memory Management : Logical and physical Address Space, Swapping.	3	Lecture	Assignment	Book, Online Source
Contiguous Memory Allocation	2	Lecture	Assignment	Book, Online Source
Paging, Segmentation with Paging.	3	Lecture	Assignment	Book, Online Source
Module - VI (4 Hrs.)				
Device and File Management : File-System Interface: File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics.	1	Lecture	Assignment	Book, Online Source
File-System Implementation: File-System structure, File-System	1	Lecture	Assignment	Book, Online Source

Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery.				
Disk Management: Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation.	2	Lecture	Assignment	Book, Online Source
Module-VII (4 Hrs.)				
Protection and Security: Protection: Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability-Based Systems, Language – Based Protection.	2	Lecture	Assignment	Book, Online Source
Security : Security Problem, User Authentication, One – Time Password, Program Threats, System Threats, Cryptography, Computer – Security Classifications	2	Lecture	Assignment	Book, Online Source
Total (hrs)	39 Hrs.			

Introduction to Biotechnology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction To Biotechnology	FCEN0115	Theory	3-0-0	Nil

Objective

- To introduce students basic knowledge about biotechnology

Course Outcome

- To impart a sound knowledge on the principles of Biotechnology involving the different application oriented topics required for all engineering branches.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Biochemistry: Component of the cell, structure and biochemical functions,

Module: II

Biomolecules-Carbohydrates, lipids, proteins, Nucleic acids, Structure and classification of enzymes

Module: III

Cell Biology Eukaryotic, Prokaryotic cells, Cell cycle – Mitosis and Meiosis,

Module: IV

Cell fractionation and flow cytometry.

Module: V

Introduction to nucleic acids: Nucleic acids as genetic material, Structure and physicochemical properties of elements in DNA and RNA, Biological significance of differences in DNA and RNA.

Module: VI

Immunology: Cells of immune system, Development, maturation, activation and differentiation of Tcells and Bcells, Phagocytosis process

Module VII

Biotechnology Applications: Industrial production, Drug discovery and development

Text Books:

1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. CBS publishers and distributors.
2. Murray R.K., Granner D.K., Mayes P.A. and Rodwell V.W. Harpers Biochemistry. Appleton and Lange ,Stanford ,Conneticut.

Reference Books:

1. Lodish, Harvey etal., “ Molecular Cell Biology,” 6th Edition. W.H.Freeman, 2008
2. Alberts, Bruce, “Molecular Biology of Cell”, 5th Edition, Garland Science, 2008.
3. Satyanarayana, U. “Biotechnology” Books & Allied (P) Ltd., 2005.
4. Friefelder, David. “Molecular Biology.” Narosa Publications, 199

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial	assignment	Book, Video, Notes
Component of the cell	1			
Cell structure	1			
biochemical functions	1			
Module II				
Carbohydrates	3			
lipids	3			
Proteins	3			

Nucleic Acids	3			
Structure of Enzymes	3			
Module III				
Eukaryotic, Prokaryotic cells	5	lecture, tutorial	assignment	Book, Video, Notes
Cell Cycle	5			
Nucleic acids as genetic material				
Module IV				
Cells of immune system	3	lecture, tutorial	assignment	Book, Video, Notes
activation and differentiation of Tcells and Bcells	3			
Drug discovery and development	2			
Module IV				
Cell fractionation and flow cytometry.	2	lecture, tutorial	assignment	Book, Video, Notes
Module V				
Nucleic acids as genetic material	1	lecture, tutorial	assignment	Book, Video, Notes
Structure and physicochemical properties of elements in DNA and RNA	2			
Biological significance of differences in DNA and RNA.	1			
Module VI				
Cells of immune system, Development, ,	1	lecture, tutorial	assignment	Book, Video, Notes
maturation, activation and differentiation of Tcells and Bcells	2			

Phagocytosis process	1			
Module VII		lecture, tutorial	assignment	Book, Video, Notes
Industrial production	1			
Drug discovery and development	2			
Total (hrs)	45			

Introduction to Biophysics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction To Biophysics	FCEN0116	Theory	3-0-0	Nil

Objective

- Learn the structures of biological molecules
- To understand the concept of structural analysis
- Learn the techniques for analysis and determination of structure of biomolecules.

Course Outcome

- To introduce the theories and concepts of biophysics of biomolecules which are considered important in biotechnology applications

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Structures of Biological macromolecules: Levels of structures in proteins, nucleic acids and polysaccharides - primary, secondary, tertiary and quaternary structures

Module: II

Conformational analysis of proteins: Polypeptide chain geometries, internal rotation angles, Ramachandran plot, potential energy calculations, forces that determine protein structure – hydrogen bonding

Module: III

Hydrophobic interactions, ionic interactions, disulphide bonds – prediction of protein structure.

Module: IV

Conformational analysis of Nucleic acid: General characteristics of nucleic acid structure – geometric Glycosidic bond – rotational isomers, ribose puckering–backbone rotation angles and steric hindrances – forces stabilizing ordered forms – base pairing and base stacking.

Module V

Techniques for the study of Biological structures, Electron Microscopy, Ultracentrifuge, Viscometry

Module VI

Molecular –sieve chromatography, electrophoresis, NMR and EPR. X-Ray crystallography

Module VII

X-ray fiber diffraction, light scattering, Neutron scattering

Text Books:

Biophysical Chemistry, Cantor and Schimmel, part I and II, W.H. Freeman and co 1997.

Reference Books:

1. Physical Biochemistry : David Friefelder, 5th Ed, PHI
2. Physical Biochemistry : Kensal E van Holde. PHI

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Levels of structures in proteins	2	lecture, tutorial	assignment	Book, Video, Notes
nucleic acids and polysaccharides	2			
primary, secondary, tertiary and quaternary structures	2			
Module II				
Polypeptide chain geometries,	2	lecture, tutorial	assignment	Book, Video, Notes
internal rotation angles, Ramachandran plot,	2			
potential energy calculations	2			

forces that determine protein structure – hydrogen bonding	2			
Module III		lecture, tutorial	assignment	Book, Video, Notes
Hydrophobic interactions,	2			
ionic interactions, disulphide bonds	2			
prediction of protein structure.	2			
Module IV		lecture, tutorial	assignment	Book, Video, Notes
General characteristics of nucleic acid structure – geometric	2			
Glycosidic bond – rotational isomers	2			
ribose puckering– backbone rotation angles and steric hindrances	2			
forces stabilizing ordered forms – base pairing and base stacking.	2			
Module V		lecture, tutorial	assignment	Book, Video, Notes
Techniques for the study of Biological structures	2			
Electron Microscopy, Ultracentrifuge	2			
Viscometry	1			
Module VI		lecture, tutorial	assignment	Book, Video, Notes
Molecular–sieve chromatography	2			
Electrophoresis	2			
NMR and EPR.	2			
X-Ray crystallography	1			
Module VII		lecture, tutorial	assignment	Book, Video,

X-ray fiber diffraction	2			Notes
light scattering	2			
Neutron scattering	1			
Total (hrs)	45			

Biosafety, Bioethics, IPR & Patents

Subject Name	Code	Type of course	T-P-PJ	Prerequisite
Biosafety, Bioethics, IPR & Patents	FCEN0117	Theory	2-0-0	Nil

Objective

- To introduce the biosafety regulations and ethical concepts in biotechnology
- To emphasize on IPR issues and need for knowledge in patents in biotechnology

Course Outcome

- This course creates awareness on the Biosafety, bioethics, Intellectual property rights and patenting of biotechnological processes.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Bioethics: Bioethics – Necessity of Bioethics, different paradigms of Bioethics – National & International. Ethical issues against the molecular technologies.

Module: II

Biosafety: Biosafety– Introduction to biosafety and health hazards concerning biotechnology.

Module: III

Good Laboratory Practices :Introduction to the concept of containment level and Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).

Module IV

Introduction to Patent: Objectives of the patent system - Basic principles and general requirements of patent law biotechnological inventions.

Module V

Patent Laws:Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions.

Module VI

Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

Module VII

Intellectual Property Rights:Intellectual property rights-TRIP- GATT-International conventions patents and methods of application of patents Legal implications-Biodiversity and farmer rights.

Text Books:

1. Singh K, Intellectual Property rights on Biotechnology, BCIL, New Delhi
2. Regulatory Framework for GMOs in India (2006) Ministry of Environment and Forest, Government of India, New Delhi

Reference Books:

1. Beier, F.K., Crespi, R.S. and Straus, T. Biotechnology and Patent protection-Oxford and IBH Publishing Co. New Delhi.
2. Sasson A, Biotechnologies and Development, UNESCO Publications.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Earth System Science

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Earth System Science	FCEN0111	Theory	3- 0 - 0	Nil

Objective:

<ul style="list-style-type: none"> ● To make the students have a clear knowledge on : ● Space Science ● Earth Dynamics ● Geological Oceanography ● Geological bodies and structure ● Hydrogeology ● Glaciology ● Earth's Atmosphere ● Biosphere ● Natural Resources

Course Outcome:

<ul style="list-style-type: none"> ● Students will be able to understand the earth's interior, its composition, various dynamic processes, oceanography, hydrogeology, glaciology, structural geology earth's atmosphere, biosphere and the natural resources. ● A clear understanding of the basics of geology as a prerequisite for mining engineering.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline:

Module: I

Space Science: Solar System, Age of the Earth, Origin of Solar system. Meteors and Meteorites.

Earth Dynamics: Interior of the Earth, Composition of the Earth, Seismic waves, Seismograph, Plate Tectonics, Basics of Earthquake Engineering, Landslides, Volcanoes.

Module: II

Geological Oceanography: Sea waves, Tides, Ocean currents, Geological work of seas and oceans, Tsunami and its causes, Warning system and mitigation

Hydrogeology: Water table, Aquifer, Groundwater fluctuations and groundwater composition, Hydrologic cycle.

Module: III

Glaciology: Glacier types, Different type of glaciers, Landforms formed by glacier.

Geological bodies and their structures: Rock, mineral, batholiths, dyke, sill, fold, fault, joint, unconformity.

Module: IV

Earth's Atmosphere: Structure and composition of atmosphere, Atmospheric circulation, Geological work of wind, Greenhouse effect and global warming, Carbon dioxide sequestration.

Module: V

Steps to maintain clean and pollution free atmosphere with governing laws, precautionary measures against disasters.

Module: VI

Biosphere: Origin of life, Evolution of life through ages, Geological time scale, biodiversity and its conservation.

Module VII

Natural Resources: Renewable and non-renewable resources, Mineral and fossil fuel resources and their Geological setting, mining of minerals and conservation, effect of mining on surface environment.

Reference Book

1. W Kenneth Hamblin; Eric H Christiansen "Earth's dynamic systems" Publisher: Upper Saddle River, N.J. : Prentice Hall, Pearson Education

Introduction to Mining

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Mining	FCEN0112	Theory	3-0-0	Nil

Objective:

- Mines
- Types of mining methods
- Mineral deposits
- Types of mineral deposits
- Mine life cycle
- Overview of surface mining
- Overview of underground mining
- Transport system in mines
- Ventilation in mines
- Illumination in mines
- Support system in mines

Course Outcome

- Students will be able to understand about mines, different types of mining methods and mineral deposits.
- A clear understanding of the basics of mining engineering.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Mining: Definition and economic importance; Mine – definition, different types and classification;
 Mine life cycle,

Module: II

Mineral deposit-different types and their classification, Modes of entry to a mine- shaft, incline, decline, adit and box-cut.

Module: III

Overview of surface mining: Types of surface mines, unit operations, basic bench geometry,

Module: IV

Applicability&limitations, advantages and disadvantage

Module: V

Overview of underground mining: Different coal mining methods and their applicability & limitations

Module VI

Different metal mining methods and their applicability & limitations;

Module VII

Basic concepts of transportation, ventilation, illumination and support in underground mines.

Text Book:

1. D J Deshmukh “Elements of mining technology” Publisher: Ramdaspath, Nagpur : Vidyasewa Prakashan,

Reference Book.

1. Howard L Hartman; Jan M Mutmansky “Introductory mining engineering” Publisher: New York : John Wiley & Sons, 2002

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Definition and economic importance of mining	1	lecture	assignment	book
Mine – definition, different types and classification	2	lecture	Assignment, field study	book

Mine life cycle	1	lecture	assignment	book
Mineral deposit – different types and their classification	2	lecture	Assignment, field study	book
Mineral resources of India	2	lecture	assignment	book
Modes of entry to a mine – shaft	1	lecture	Assignment, field study	book
	1	lecture	assignment	book
incline, decline, adit and box-cut.	1	lecture	assignment	book
Overview of surface mining : definition	1	lecture	assignment	book
Types of surface mines,	1	lecture	assignment	book
Unit operation	1	lecture	assignment	book
basic bench geometry	2	lecture	Assignment, field study	book
applicability & limitations	1	lecture	assignment	book
advantages & disadvantage	1	lecture	assignment	book
Overview of underground mining : definition	1	lecture	assignment	book
Different coal mining methods and their applicability & limitations	2	lecture	Assignment, field study	book
Different metal mining methods and their applicability & limitations	2	lecture	assignment	book
Basic concepts of transportation	1	lecture	Assignment, field study	book
ventilation	1	lecture	assignment	book
illumination and support in underground mines	2	lecture	assignment	book
Total	27Hrs.			

Mine Development

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Development	FCEN0113	Theory	3 0 0	Nil

Objective:

<ul style="list-style-type: none"> ● To make the students have knowledge on : ● Opening-up of Deposits ● Vertical and Inclined Shafts ● Shaft Sinking Operations ● Insets ● Mechanized Sinking ● Shaft Boring ● Special Attributes ● Main Haulage Drifts and Tunnels ● High Speed Drifting/Tunneling ● Recent Developments ● Layouts
--

Course Outcome:

<ul style="list-style-type: none"> ● Students will be able to understand the choice of mode of entry their applicability, Number and disposition. ● Students will be able to understand vertical and Inclined Shafts ● Students will be able to understand methods and equipment of shaft boring. ● Students will be able to understand main Haulage Drifts and Tunnels. ● Students will be able to understand layouts of pit-top and pit-bottom, coal Handling Plant, Bunkers and Railway Sidings

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Opening-up of Deposits: Choice of mode of entry- adit, shaft, decline and combined mode, their applicability, number and disposition.

Vertical and Inclined Shafts: Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.

Module: II

Shaft Sinking Operations: Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.

Module III

Insets: Design, excavation and lining.

Mechanized Sinking: Simultaneous sinking and lining; slip - form method of lining; high speed sinking.

Module IV

Shaft Boring: Methods and equipment.

Special Attributes: Widening and deepening of inclined and vertical shafts; staple shafts, raised shafts.

Module V

Main Haulage Drifts and Tunnels : Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting.

Module VI

High Speed Drifting/Tunneling : Application of mechanized methods; road headers and tunnel boring machines.

Module VII

Recent Developments in shaft sinking and drifting/tunnelling. Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings

Text Book

1. D J Deshmukh "Elements of mining technology" Publisher: Ramdaspath, Nagpur : Vidyasewa Prakashan,

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Choice of mode of entry-adit, shaft, decline and combined mode, their applicability, number and disposition.	3	lecture	Assignment, field study	book
Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.	4	lecture	assignment	book
Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.	4	lecture	assignment	book
Insets : Design, excavation and lining.	2	lecture	assignment	book
Simultaneous sinking and lining; slip - form method of lining; high speed sinking. Shaft Boring : Methods and equipment.	4	lecture	assignment	book
Main Haulage Drifts and Tunnels : Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting	4	lecture	assignment	book
Application of mechanized methods; road headers and tunnel boring machines.	3	lecture	Assignment, field studies	book

Recent Developments in shaft sinking and drifting/tunneling. Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings	4	lecture	assignment	book
Total Hrs	28			

Mine Surveying - I

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Surveying - I	FCEN0114	Theory	3- 0- 0	Nil

Objective

- To make the students have knowledge on :
- Surveying
- Angular Measurement
- Leveling
- Total Station
- Plane Table Surveying
- Contours

Course Outcome

- Students will be able to understand the classification and principles of surveying
- Students will be able to understand linear measurement.
- Students will be able to understand angular measurement
- Students will be able to understand leveling instruments types, Leveling staves, Underground leveling

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module: I

Surveying: Definition, objective, classification and principles of surveying.

Module: II

Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.

Module: III

Angular Measurement: Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic

Theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments;

Module: IV

Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.

Module: V

Leveling : Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, crosssectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.

Module: VI

Total Station: Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.

Module VII

Plane Table Surveying: Methods Contours: Concepts; Characteristics of contour; Contour Interval; Methods of contouring and uses of contours.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Surveying : Definition, objective, classification and principles of surveying.	3	Lecture	Assignment, field studies	book
Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.	4	Lecture	Assignment, field studies	book

Angular Measurement : Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments; Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.	5	Lecture	Assignment, field studies	book
Leveling : Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, crosssectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.	6	Lecture	Assignment, field studies	book
Total Station : Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.	5	Lecture	Assignment, field studies	book
Plane Table Surveying : Methods Contours : Concepts; Characteristics of contour; Contour Interval; Methods of Contouring and uses of contours.	4	Lecture	Assignment, field studies	book
Total Hrs	27			

Workshop Practice

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Workshop Practice	ENFC0201	Practice	0-2-0	Nil

Objective

- To provide the students hands-on-experience on manufacturing processes like fitting, carpentry, plumbing, casting, turning, joining and machining.

Course Outcome

- Students will be able to choose manufacturing technique for a given product and can perform simple operations.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

Experiment 1 : Workshop Safety Practice, Use of Personal Protective Equipment.

Fitting:

Experiment 2: Marking & Sizing of a 5mm thick Rectangular Plate with given dimensions using Scriber, Caliper, Steel Rule, Hack Saw & Holding Vice.

Experiment 3 : Preparing an Open V Fitting Joint.

Plumbing:

Experiment 4 : Use of Pipe Vice, Wrench, Tap and Die to make External Threads in ½”PVC Pipe for Basic Pipe Fittings and to do a Leak Test.

Experiment 5 : Fabrication of a Rectangular Loop using basic Pipe Fittings.

Experiment 6 : Fitting of Flow Measurement Water Meter.

Casting:

Experiment 7 : Sand Mold Preparation with Pattern for Casting Aluminum .

Experiment 8 : Casting of Aluminum Spur Gear.

Welding:

Experiment 9: Safety to Connect a Welding Transformer, Tools and SMAW Arcing.

Experiment 10: Oxy Acetylene 3 Types of Flames & Torch Brazing.

Experiment 11: Preparation of a Study Stool of Square Section. (4 student in a group)

Turning:

Experiment 12: Aligning a 20mm Cylindrical Job in Conventional Lathe, Use of Dial Gauge.

Experiment 13: Facing and Plain Turning of 20mm M.S Stock.

Electrical & Electronic:

Experiment 14: Domestic & Staircase Wiring Circuit Practice.

Experiment 15: PCB: Designing and Making of Simple Circuits.

Experiment 16: Measurement Power Consumption by Incandescent, CFL and LED Lamps.

Experiment 17: Use of Transducer and Sensors, Strain Gauge, Photovoltaic Cell.

.Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Demonstration of Various Safety Practice, Measuring Tools and Equipments used in Workshop.	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology

Preparing an Open V Fitting Joint	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, Chapman, W A J, Arnold, E, Workshop Technology S K, HazraChaudhary
Use of Pipe Vice, Wrench, Tap and Die to make external threads in ½”PVC pipe for basic pipe fittings and to do a leak test	3	Job Working in groups	Group Assignment and Evaluation	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology
Fabrication of a Rectangular Loop using Basic Pipe Fittings	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Fitting of Flow Measurement Water Meter	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Sand Mold Preparation with Pattern for Casting Aluminum	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Casting of Aluminum Spur Gear	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Safety to Connect a Welding Transfer, Tools and SMAW Arcing	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Oxy Acetylene 3 Types of Flames & Torch Brazing	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Preparation of a Study Stool of Square Section	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary

Aligning a 20mm Cylindrical Job in Conventional Lathe, use of Dial Gauge	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Facing and Plain Turning of 20mm M.S Stock.	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Domestic & Staircase Wiring Circuit Practice	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
PCB : Designing and Making of Simple Circuits	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Measurement Power Consumption by Incandescent, CFL and LED lamps	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary and Chapman, W A J, Arnold, E, Workshop Technology
Use of Transducer and Sensors, Strain Gauge, Photovoltaic Cell	3	Job Working in groups	Group Assignment and Evaluation.	HazraChaudhary, S K, HazraChaudhary
Total (hrs)	48			

Geometric Modeling Lab

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Geometric Modeling Lab	ENFC0202	Practice	0-2-0	Nil

Objective

- To impart knowledge to students on conceptual design, 3D modeling, surface modeling and drafting through hands-on-practice mode using CATIA.
- To impart requisite knowledge and skills to the students on developing 3D assembly drawings and exploded views using CATIA.

Course Outcome

- Students will be able to study, understand and interpret engineering drawings used in industry
- Students will be able to use CATIA for creation of 3D models, assembly drawings and exploded view

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module: I (20 Hrs)

Part Modeling: Creation of Simple Solids, Parametric Modeling, Booleans and Functional Modeling, Rendering

Module: II (20 Hrs)

Assembly Modeling: Simple Assembly, Constraints, Digital Mockup

Module: III (20 Hrs) :

Drafting & Surface Modeling: Creation of Layout, Conversion of Part drawing to projection views, detailed drawing. Creation of Surfaces, Simple Surface Models, Converting Surface Models to Part Drawing.

(**Note:** All of the topics will be through learn by doing and laboratory mode.
Platform is CATIA)

MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED
TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Text Books:

Geometrical Modelling, M.E. Morteson

Session Plan

(Total 12 experiments out of 17 to be conducted)

Sl. No.	Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
1	Assembly of Quick Acting Hold Down Clamp	3	Lab practice		
2	Modeling parts of Quick Acting Hold Down Clamp Assembly	6	Lab practice		
3	Assembly of Pneumatic FRL	3	Lab practice		
4	Modeling parts of Pneumatic FRL Assembly	6	Lab practice		
5	Assembly of Roller Guide	3	Lab practice		
6	Modeling Parts of Roller Guide Assembly	6	Lab practice		
7	Assembly of Electrical Tower	3	Lab practice		
8	Modeling parts of Electrical Tower Assembly	6	Lab practice		
9	Assembly of Hitch Mount	3	Lab practice		
10	Modeling parts of Hitch mount Assembly	6	Lab practice		
11	Assembly of Trombon	3	Lab practice		

12	Modeling parts of Trombon Assembly	6	Lab practice		
13	Drafting all the parts of two Assemblies	6	Lab practice		
14	Production of Detailed Drawing of two Assemblies	6	Lab practice		
15	Surface Modeling of Automobile Tail Lamp	6	Lab practice		
16	Surface Modeling of Automobile Bonnet	6	Lab practice		
17	Conversion of Surface Model of Tail Lamp to Part Model	3	Lab practice		
Total (hrs)		60			

Introduction to Robotics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Robotics	ENFC0203	Practice	0-2-0	Geometric Drawing

Objectives

- To Provide An Overview To Students On Various Types of Industrial Robots and Their Configurations.
- To Educate The Students on Use Of DELMIA To Carryout Simulation Exercises of Various Types of Robotic Arms Suiting to Specific Applications.

Course Outcome

- Students Will Have Knowledge and Skill To Program Industrial Robots For Performing Various Tasks.
- Students Will Be Able To Undertake Simulation Exercises Of Various Types Of Robotic Arms As A Pre-Requisite Leading To A Safe, Cost Effective, Reliable And Optimum Design.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

List of Experiments (45 Hours)

DELMIA: Simulated Models of Various Types Industrial Robots & Its Architecture.

DELMIA: Simulation of Activities Like: Pick and Place, Coordinated Movement, Spot Welding and Arc Welding.

DELMIA: Designing Own Robotic Arm with Insight to Robot Kinematics.

- i) A Prismatic Robotic Arm.
- ii) A Revolute Joint Robotic Arm.
- iii) Articulated Robotic Arm
- iv) Spherical Robotic Arm

Robot Programming: Use of Brabofor Pick and Place Actions.

An Understanding of Different Sensors, Their Operation and Application. Demonstration of Use of Sensors for At Least 3 Applications of Robot.

Commanding A Robot To Achieve Tasks On The Basis Of Sensor Information, A Description Of Motors, And How Their Velocity Is Set, And Other Robotic Actuators.

Reference

Text Books :

M.P. Groover, Industrial Robotics, Second Edition, TMH Publishers.

S.R. Deb and S. Deb, Robotics Technology and Flexible Automation, Second Edition, TMH Publishers.

Reference Books :

Y Koren, Robotics for Engineers, TMH Publishers.

Session Plan

Sl. No	Topic coverage and Internal Test	No. of Sessions (in hr)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
1	Demonstration of various robotic arms available in DELMIA	3	Lab Demonstration	Collection of tutorials related various Robotic Arms	DELMIA help file
2	Robotic architecture. Demonstration of prismatic, revolute and SCARA	6	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of Application.	DELMIA help file
3	Robotic architecture. Demonstration of articulated robotic arm and Spherical robotic arm	3	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of Application.	DELMIA help file

4	Demonstration of application in spot welding and arc welding	3	Lab Demonstration	Development of Robotic Arm in DELMIA & Demonstration of application.	DELMIA help file
5	Demonstration of application in assembly line operation.	3	Lab Demonstration	Development of robotic arm in DELMIA & Demonstration of application.	DELMIA help file
6	Robotic Programming practice to do pick and place action.	3	Lab practice	Development of programs to do other actions like writing on the white board, Erasing the same with wiper. At least 3 such Activities	Brabo Manual
7	Demonstration of assignment Exercises	3	Lab practice	Recording of all assignments	BraboManual
8	Demonstration of application of sensors, At least 3 sensor based applications	3	Lab practice	Identifying different types of sensors that can be used in robot arm application	
9	Demonstration of use of sensors	3	Lab practice		
10	Demonstration of sensors to actuate motors and its speed control	3	Lab Practice		
11	Demonstration of sensors to actuate motors and its speed control	6	Lab Practice	A Mini project of designing to making a movement to robotic arm	

12	A mini Project Demonstration	6			
	Total (hours)	45			

3D Modelling

Course Title	Code	Type of course	T-P-PJ	Prerequisite
3D Modelling	ENFC0204	Practice	0-2-0	Nil

Objective

- The course covers modeling conceptual design, 3D modeling, Views and documentation of building drawing

Course Outcome

- 3D Solid Model and drawing
- 3D Building Model

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module I (12 Hrs)

Elements of planning building, fundamentals of Building Information Modelling (BIM). Generation of 2D (plan, section and elevation) and 3D modelling with detailed specification and dimensioning of the following using AutoCAD, Revit Architecture and CATIA :

Practice Session 1 : Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with same floor plans using Revit Architecture and CATIA.

Practice Session 2 : Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD for (practice session 1).

Practice Session 3 : Generation of section for with detailed specification and dimensioning of a multi-storeyed building with same floor plans using AutoCAD, Revit Architecture and CATIA (practice session 1).

Module II (36 Hrs)

Practice Session 4 : Generation of 3D modelling with detailed specification and dimensioning of a (G+20) multi-storeyed building with varying floor plans using Revit Architecture and CATIA.

Practice Session 5 : Generation of elevation for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD (practice session 4).

Practice Session 6 : Generation of section for with detailed specification and dimensioning of a multi-storeyed building with varying floor plans using AutoCAD, Revit Architecture and CATIA (practice session 4).

Practice Session 7 : Generation of 3D modelling with detailed specification and dimensioning of a (G+5) shopping complex using Revit Architecture and CATIA.

Practice Session 8 : Generation of elevation for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD (practice session 7).

Practice Session 9 : Generation of section for with detailed specification and dimensioning of a (G+5) shopping complex using AutoCAD, Revit Architecture and CATIA (practice session 7).

Practice Session 10 : Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hospital building using Revit Architecture and CATIA.

Practice Session 11 : Generation of elevation for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD (practice session 10).

Practice Session 12 : Generation of section for with detailed specification and dimensioning of a (G+4) hospital building using AutoCAD, Revit Architecture and CATIA (practice session 10).

Module III (12Hrs)

Practice Session 13 : Generation of 3D modelling with detailed specification and dimensioning of a (G+4) hostel building using Revit Architecture and CATIA.

Practice Session 14 : Generation of elevation for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD (practice session 13).

Practice Session 15 : Generation of section for with detailed specification and dimensioning of a (G+4) hostel building using AutoCAD, Revit Architecture and CATIA (practice session 13).

Electrical Workshop Practice

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electrical Workshop Practice	ENFC0205	Practice	0-2-0	Nil

Objective

- To develop skills for troubleshooting of electrical wiring and appliances at household level

Course Outcome

- Enhances the skill of operating electrical instruments, hand tools and power tools.
- Comprehend the safety measures required to be taken while using the tools.
- Solving Electrical Problems at domestic level.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Lists of Experiments

1. To study safety precautions for electrical engineering, draw the electrical symbol and general electrical house wiring.
2. To study the various types of accessories and tools. Working of fuse and circuit breaker.
3. To setup a series, parallel and staircase wiring using the given lamps.
4. To study Earth-wire connection and Earth-wire measurement in electrical wiring.
5. To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.
6. Study of Multimeter, voltmeter, ammeter, wattmeter (both AC&DC)
7. Connection & fault analysis in Domestic appliances (Fan, electric iron)
8. Connection & fault analysis in Domestic appliances (Air Condition)
9. Connection & fault analysis in Domestic appliances (fluorescent tube)
10. Study of Industrial wiring in the workshop and study of bimetallic relay.
11. Study of a 11/4 KV transformer substation
12. Concept of efficiency (Star rating) of electrical appliances

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
To study safety precautions for electrical engineering, draw the electrical symbol and general electrical house wiring.	4	Lab Practice	Experiment Result & Viva	
To study the various types of accessories and tools. Working of fuse and circuit breaker.	4	Lab Practice	Experiment Result & Viva	
To setup a series, parallel and staircase wiring using the given lamps.	4	Lab Practice	Experiment Result & Viva	
To study Earth-wire connection and Earth-wire measurement in electrical wiring.	4	Lab Practice	Experiment Result & Viva	
To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.	8	Lab Practice	Experiment Result & Viva	
Study of Multimeter, voltmeter, ammeter, wattmeter (both AC&DC)	4	Lab Practice	Experiment Result & Viva	
Connection & fault analysis in Domestic appliances (Fan, electric iron)	4	Lab Practice	Experiment Result & Viva

Mine Surveying –I Lab

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Mine Surveying - Lab	FCEN0214	Practice	0-2-0	Nil

Objective:

- To make the students have practical knowledge on :
- Linear measuring instruments & carrying out Chain Surveying
- Carrying out Compass Traversing
- Vernier theodolite
- Tilting level & carrying out Fly Leveling
- Auto level & carrying out Profile Leveling

Course Outcome:

- Enhances the skill of operating electrical instruments, hand tools and power tools.
- Comprehend the safety measures required to be taken while using the tools.
- Solving Electrical Problems at domestic level.

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course outline

Module I

Study and sketch the linear measuring instruments & carrying out Chain Surveying Prismatic Compass and carrying out Compass Traversing; Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite; Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling; Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring; Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Study and sketch the linear measuring instruments & carrying out Chain Surveying	3	lab practice	assignment, field study	book
Prismatic Compass and carrying out Compass Traversing	3	lab practice	assignment, field study	book
Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite;	6	lab practice	assignment, field study	book
Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling;	6	lab practice	assignment, field study	book
Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring	6	lab practice	assignment, field study	book
Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.	6	lab practice	assignment, field study	book
Total Hrs	30			

Aerodynamics Laboratory

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Aerodynamics Laboratory	ENFC0208	Practice	0-2-0	Nil

Objective

<ul style="list-style-type: none"> To Predict Different Aerodynamic Propulsion in Aero Applications
--

Course Outcome

<ul style="list-style-type: none"> Ability to Use the Fundamental Dynamics Principles in Aircraft Applications.

1. List of Experiments

1. Application of Bernoulli's Equation – venturimeter and orifice meter.
2. Frictional loss in laminar flow through pipes.
3. Frictional loss in turbulent flow through pipes.
4. Calibration of a subsonic Wind tunnel.
5. Determination of lift for the given airfoil section.
6. Pressure distribution over a smooth circular cylinder.
7. Pressure distribution over a rough circular cylinder.
8. Pressure distribution over a symmetric aerofoil.
9. Pressure distribution over a cambered aerofoil.
10. Flow visualization studies in subsonic flows.
11. Calculation of drag over smooth cylinder
12. Calculation of drag over rough cylinder

List of Equipment for a Batch of 30 Students

S.N	Name of Equipment	Quantit	Experiment No.
1	Venturimeter	1	1
2	Orificemeter	1	1
3	Pipe friction apparatus	1	2, 3
4	Subsonic Wind tunnel	1	4, 5, 6, 7, 8, 9, 10, 11, 12
5	Models (aerofoil, rough and smooth cylinder, flat plate)	1	5, 6, 7, 8, 9

Engineering Metrology and Measurements

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Engineering Metrology and Measurements	ENFC0401	Theory + Practice	1-2-0	Nil

Course Objective

- To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- Analyze Measurement Requirement.
- Can Choose Transducer & Sensors for Products.

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment

Course Outline

Module: I (6 Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice : (Laboratory Mode- Learn by Doing)

Calibration of Measuring Instruments Using Slip Gauge Blocks.

Module: II (9 Hours)

Limit System; Limits Fits & Tolerances; Allowances; Hole Basis & Shaft Basis Systems; Interchangeability; Gauge Design. (Class room Teaching and videos)

Practice : (Laboratory Mode- Learn by Doing)

1. Introduction to Metrology Laboratory (Steel Rule, Tape, Right Angle, Protractor, Surface Plate).
2. Gauges- Filler, Radius, Thread, Wire, Snap & GO-NOGO.

Module: III (9 Hours)

Standards of Measurement; Dial Indicators; Vernier Apparatus; Micrometers; Comparators (Mechanical, Electrical, Pneumatic).

Practice : (Laboratory Mode- learn by Doing)

3. Vernier Caliper- Inside, Outside, Depth Measurement & Height Gauge.
4. Micrometers, Outside, Inside Micrometer & Depth Micrometer.
5. Three Points Bore Micrometer

Module: IV (10 Hours)

Measurement of Angles & Tapers using Bevel Protractor; Angle Gauges; Sine Bars; Flatness Spirit Level & Surface Plate.

Practice: (Laboratory Mode- learn by Doing)

6. Sine Bar/Bevel Protractor-Measurement of Angles.
7. Flatness Test Using Sprit Level.
8. Use of Dial Indicators-in-lathe.

Module: V (9 Hours)

Gear Tooth Metrology; Inspection & Alignment Tests. Transducers; Variable Resistance Transducer; LVDT; Comparative Transducer; Piezoelectric Transducer; Photo Voltaic Cells; Devices for Pressure Measurement- Dead Weight Tester; Bourdon Tube Pressure Gauge; Diaphragm and Bellow Gauges.(Topics will be covered by explaining and fallowed by practice mode)

Practice: (Laboratory Mode- Learn by Doing)

9. Gear Tooth Metrology, Inspection & Alignment Tests.

Module: VI (10 Hours)

Low Pressure Measurements; Force Measuring Using Proving Rings; Torque Measuring Using Dynamometers; Strain Measurements; Profile Projector; Tool Maker's Microscope; Optical Flats; Laser Interferometers; Autocollimators.

Practice: (Laboratory Mode- Learn by Doing)

10. Optical Flat Use & Surface Plate Test Using Spirit Level & Dial Gauge.
11. Measurement of Template Using Profile Projector.

Module: VII (12 Hours)

Assessment of Surface Roughness; Machining Symbols for Surface Finish; Measuring Instruments; Tally-Surf; Screw Thread Measurement- Terminology; Precision Instruments Based on Laser Principles- Laser Interferometer Application; Coordinate Measuring Machine (CMM).

Practice: (Laboratory Mode- Learn by Doing)

12. Surface Finish by Taylor's Apparatus –LVDT.
13. Measurement of Tool angle in Tool Maker's Microscope.
14. Repeat Laboratory-1 or Test.
(50% of the topics will be covered by “Learn by Doing” principle and few video presentations)

Allowances, Hole Basis & Shaft Basis Systems, Interchangeability	1	lecture	Assignment	https : //www.youtube.com/watch?v=AP_T7hf5Wv0&list=PL0uwpDY0Y8Q2aoPhDuEZLI1PVuKKUGb90&index=4 Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051

Design of Gauges- GO, NOGO	2	lecture	Assignment	https : //www.youtube.com/watch?v=uNOZ TmhsH1w https : //www.youtube.com/watch?v=mZH Hdim3hOY Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Practice				
2.Introduction to Metrology Laboratory(1hr) + Steel Rule, Tape, Right Angle Protractor, Surface Plate	2	Practice	field study	
3.Gauges- Filler ,Radius, Thread, Wire, Snap, GO- NOGO	2	Practice	field study	
Module III				
Standards of Measurement	1	lecture	Assignment	Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051
Dial Indicators, Vernier caliper &Micrometer	1	lecture	Assignment	https : //www.youtube.com/watch?v=FqSJh Y_lctc https : //www.youtube.com/watch?v=vkPlz malvN4 https : //www.youtube.com/watch?v=StBc5 6ZifMs Mahajan, M, A Text Book of Metrology. 2010. DhanpatRai& Co (P) Ltd,ISBN 13 : 978-817700051

Comparators Mechanical, Electrical, Pneumatic	1	lecture	Assignment	Mahajan, M, A Text Book of Metrology. 2010. Dhanpat Rai & Co (P) Ltd, ISBN 13 : 978-817700051
Practice				
Slip Caliper- inside, outside, depth measurement, Height Gauge	2	Practice	Field Study	
5. Micrometers, Outside & Inside Micrometer, Depth Micrometer	2	Practice	Field Study	
6. Three point Bore Micrometer	2	Practice	Field Study	
Module IV				
Angular Measurements Measurement of Angles & Tapers using Bevel Protractor, Angle Gauges, Sine Bars	3	lecture	Assignment	https : //www.youtube.com/watch?v=oJFUI _FHlio https : //www.youtube.com/watch?v=F7uC EeipdCw https : //www.youtube.com/watch?v=u- PLC3uKICM
Spirit Level, Surface Plate	1	lecture	Assignment	https : //www.youtube.com/watch?v=H- F2C5F78aw
Practice				
7. Sine Bar/Bevel Protractor- Measurement of Angles	2	Practice		

8.Flatness test using Sprit Level	2	Practice		
9.Use of Dial Indicators-in –Lathe.	2	Practice		
Module V				
Gear Tooth Metrology	2	lecture	Assignment	https : //www.youtube.com/watch?v=fb278 VIHICU
Inspection &Alignment Tests	1	lecture	Assignment	https : //www.youtube.com/watch?v=utZVv 7QvRt8
Transducers, Variable Resistance Transducer, LVDT, comparative transducer, piezoelectric transducer, photo voltaic cells.	2	lecture	Assignment	https : //youtu.be/vuVFbKxsds
Devices for pressure measurement- dead weight tester, bourdon tube pressure gauge, diaphragm and bellow gauges.	1	lecture	Assignment	
Practice				
ar Tooth Metrology, Inspection & Alignment tests	3	Practice		
Module VI				
Low Pressure Measurements	1	lecture	Assignment	
Force Measuring Using Proving	2	lecture	Assignment	

Rings. Torque Measuring Using Dynamometers, Strain Measurements				
Profile Projector, Tool Maker's Microscope, Optical Flats, application.	1	lecture	Assignment	https : //www.youtube.com/watch?v=HGO9GXaeZFc https : //www.youtube.com/watch?v=hqsVXA5S2xM https : //www.youtube.com/watch?v=5JE7BV-XkSk
Laser Interferometers	1	lecture	Assignment	https : //www.youtube.com/watch?v=UA1qG7Fjc2A
Autocollimators	1	lecture	Assignment	https : //www.youtube.com/watch?v=XHEywuzl9sA
Practice				
tical Flat Use & Surface Plate test using Spirit Level & Dial Gauge	2	Pratice	Field study	
12.Measurement of template using Profile Projector	2	Practice	Field Study	
Module VII				
Assessment of Surface Roughness, Machining Symbols for	1	lecture	Assignment	https : //www.youtube.com/watch?v=omhoWIs2d-M

Surface Finish, Measuring Instruments, Tally-Surf,				https : //www.youtube.com/watch?v=VyeP ASErr5Q
Screw Thread Measurement- Terminology, Determination of Effective Diameter Using Two, three Wire Method	2	lecture	Assignment	https : //www.youtube.com/watch?v=N4pjg JMmk3A https : //www.youtube.com/watch?v=LjQf6 ISFISg
Coordinate measuring machine (CMM)	1	lecture	Assignment	https : //www.youtube.com/watch?v=844Ui RBVx1Y
Practice				
11.Surface Finish by Taylor's Apparatus	2	Practice	field study	
13.Measurement of Tool angle in Tool Maker's Microscope	2	Practice	Field Study	
14.Repeat Laboratory-1	2	Practice	field study	
15. Repeat Laboratory-2	2	Practice	field study	
Total Hours	65			

Basic Fluid Mechanics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Basic Fluid Mechanics	ENFC0402	Theory + Practice	2-1-0	Nil

Objective

- To make students understand flow characteristics and different types of flow and application of dimensional analysis, different flow and velocity measuring device.

Course Outcome

- Understand flow characteristics and different types of flow
- Understand kinematics and dynamics of flow
- Understand about application of dimensional analysis

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module I Fluid kinematics (9 Hours)

Types of flow, Continuity equation (in one, two & three dimension), velocity and acceleration, streamline, streakline, path line, velocity potential function and stream function, types of motion (Linear Translation and all deformations, rotation and vorticity, vortex flow.

Experiments:

1. Demonstration of different types of flow
2. Pressure Measurement

Module II Fluid Dynamics (7 Hours)

Rate of Flow Or Discharge, Euler's equation of motion along a stream line for ideal flow - Principle of conservation of energy Integration of Euler's equation along a stream line - Bernoulli's equation (**Derivation not to be included for external Examination**) - Practical applications of Bernoulli's Principle - Kinematics of free jets.

Experiments:

3. Bernoulli's experiment
4. Characteristics of free jet

Module III Principle of conservation of momentum (5 Hours)

Impulse momentum equation. Application of momentum principle for force on pipe bends and reducers. Angular momentum principle and its applications (Numerical problems on angular momentum principle not included. Only fundamental concepts.)

Experiments :

5. Impact of jet

Module IV Laminar Flow and Turbulent Flow : (6 Hours)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, HagenPoiseulle Equation for laminar flow through pipe (**Derivation not to be included for external Examination**), Darcy-Weisbach Equation for Turbulent flow through pipe (**Derivation not to be included for external Examination**)

Experiments :

6. Pipe friction
7. Reynolds's no calculation and identification of laminar and turbulent flow

Module V Flow through Pipes (8 Hours)

Loss of Energy-Friction loss & Minor losses, HGL&TEL, Pipes in series and Parallel, Equivalent Length of pipe, Power transmission through pipes and nozzle, Hydro dynamically smooth & rough boundaries, Moody's Diagram.

Experiments :

8. HGL& TEL through simulation
9. Hardy Cross Method

Module VI Dimensional Analysis and Similitude : (5 Hours)

Fundamental and derived units, Dimensional formulae for various geometric, kinematic and dynamic parameters. Rayleigh and Buckingham' methods for arriving group of dimensionless parameters. Similarity laws - Reynolds, Froude, Mach Laws. Geometric, Kinematic and Dynamic similarities. Distorted Models.

Module VI Flow Measurement(18 Hours)

Flow through small orifice, Mouthpiece, Time of Emptying tanks. Velocity Measurement using Pitot tube, Prandtl tube, Flow measurement in pipes-Flow Meters-orifice Plate-Flow Nozzle Meter, Venturi Meter, Flow rate Measurement in channel- Weir and Notches.

Experiments :

10. Flow Measurement through V-Notch
11. Flow Measurement through Venturi Meter
12. Flow Measurement through Small Orifice
13. Flow Measurement through Orifice Meter
14. Flow Measurement through Rota meter
15. Flow Measurement through Pitot Tube

LIST OF THE EXPERIMENT THROUGH SIMULATION : -

1. Bernoulli's Equation
2. Venturi Meter
3. Orifice Meter
4. Reynolds's Experiment
5. Impact Of Jet
6. Discharge through Weir.
7. Mouth Piece

All this Experiment can be done using the link given below

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE-1 FLUID KINEMATICS				
Types of flow, Continuity equation (in one, two & three dimension) video on types of flow	2	Lecture		
velocity and acceleration, streamline, streakline, path line	1	Lecture		
Velocity potential function and stream function, types of motion (Linear Translation and all deformations) rotation and vorticity, vortex flow.	2	Lecture		Video
Demonstration of different types of flow	2	Practice		
Pressure Measurement	2	Practice		
MODULE-2 FLUID DYNAMICS				
Rate of Flow Or Discharge, Euler's equation of motion along a stream line for ideal flow - Principle of conservation of energy Integration of Euler's equation along a stream line - Bernoulli's equation	1+2	Lecture+ Practice		
Practical applications of Bernoulli's Principle - Kinematics of free jets. Bernoulli's Principle	2+2	Lecture+ Practice		Video

MODULE-3 PRINCIPLE OF CONSERVATION OF MOMENTUM				
Impulse momentum equation. Application of momentum principle for force on pipe bends and reducers	2+2	Lecture+ Practice		
Angular momentum principle and its applications (Numerical problems on angular momentum principle not included. Only fundamental concepts.)	1	Lecture		
MODULE-4 LAMINAR FLOW & TURBULENT FLOW				
Reynolds's Experiment, Laws of Laminar and Turbulent Friction	1+2	Practice		Video
Hagen Poiseulle Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe	1+2	Lecture+ Practice		
MODULE-5 FLOW THROUGH PIPES				
Loss of Energy-Friction loss & Minor losses, HGL&TEL	1+2	Lecture+ Practice		
Pipes in series and Parallel, Equivalent Length of pipe	1+2	Lecture+ Practice		
Power transmission through pipes and nozzle	1	Lecture		
Hydrodynamically smooth & rough boundaries, Moody's Diagram.	1	Lecture		

MODULE-6 DIMENSIONAL ANALYSIS				
Fundamental and derived units, Dimensional formulae for various geometric, kinematic and dynamic parameters.	1	Lecture		
Rayleigh and Buckingham' methods for arriving group of dimensionless parameters.	2	Lecture		
Similarity laws - Reynolds, Froude, Mach Laws.Geometric, Kinematic and Dynamic similarities.Distorted Models.	2	Lecture		
MODULE-7 FLOW MEASUREMENT IN PIPES AND CHANNELS				
Flow through small orifice,MouthPiece,Time of Emptying tanks.	2+4	Lecture+ Practice		
Velocity Measurement using pitottube ,Prandtl tube	2+2	Lecture+ Practice		
Flow measurement in pipes-Flow Meters-orifice Plate-Flow Nozzle Meter,Venturimeter	2+4	Lecture+ Practice		
Flow rate Measurement in channel- Weir and Notches.	2+2	Lecture+ Practice		
Total (hrs.)	60			

Basic Surveying

Subject Name	Code	Type of course	T-P-PJ	Prerequisite
Basic Surveying	ENFC0403	Theory & Practice	2-1-0	Nil

Objective

- To make students able to understand the measurement techniques, equipment used in land surveying using Dumpy level, Theodolite and Total station.

Course Outcome

- Apply math, science, and technology in surveying activities.
- Measure horizontal distances across clear landscape and across obstacles.
- Prepare contour maps using Theodolite and Total station for projects(Road, Railway and water shade)

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module-I (2HRS)

Historical survey practice : Introduction to surveying : Classification, Basic Principle, List of Instruments used in surveying.

Module-II (8HRS)

Leveling: Use of dumpy level and leveling staff. Temporary and Permanent adjustment of dumpy level, Curvature and refraction error, types of leveling, reciprocal leveling, leveling difficulties and common errors.

Experiments:

1. Calculation of RL using HI and Rise and fall method.
2. Longitudinal and cross sectional Leveling
3. Check Leveling

Module--III (11HRS)

Theodolite: Use of theodolite, description, uses and adjustments – temporary and permanent, measurement of horizontal and vertical angles.

Experiments :

4. Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse.
5. Measurement of Inaccessible points.

Module--IV (13Hrs)

Total station: Introduction to Total station, Functions, working principles of total station applications, Use of all parts and all options inside the machines.

Experiments:

6. Basic operation, setting up the instrument
7. Measurement of angle and Measurement of Distance
8. Setting up instrument station, Co-ordinate system
9. Traverse adjustment (With help of software)
10. Area calculation using Total station

Module--V (6Hrs)

Contouring: Characteristics, methods and types of contouring.

Experiments:

11. Preparation of contour map using total station and surfer software.

Module--VI (10HRS)

Curves: Types of curves, Properties– simple, compound, reverse and transition curve.

Experiments:

12. Setting out of different curves (simple, compound, reverse and transition) using Total Station.

Module -VI (10HRS)

Setting out of work using Total station.

Experiments:

13. Setting out of Building
14. Setting out of culvert.

Text Books:

1. Surveying Vol I & II, III B C Purnima, Laxmi Publication.
2. Surveying, volume 1&2 BY S.K.Duggal, TMH publisher.

Reference Books:

1. Surveying & Levelling by T.P Kanitkar & V S Kulkarni

Lesson Plan

Module I

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Historical survey practice : Introduction to surveying : Classification, Basic Principle, List of Instruments used in surveying.	2	Lecture	Assignment	https://www.youtube.com/watch?v=-JgCfsooiu0)
Total (hrs.)	2			

Module-II

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Levelling : Use of dumpy level and levelling staff. Temporary and Permanent adjustment of dumpy level, Calculation of RL by HI and rise and fall method. Curvature and refraction error, types of levelling, reciprocal levelling, levelling difficulties and common errors.	2	lecture	Assignment	https : //www.youtube.com/watch?v=grvdEYmjSPc
Experiments : Calculation of RL using HI and Rise and fall method.	2	practice, field studies	field study	https : //www.youtube.com/watch?v=grvdEYmjSPc
Longitudinal and cross sectional levelling Check Levelling	4	practice, field studies	field study	https : //www.youtube.com/watch?v=grvdEYmjSPc
Total (hrs.)	8			

Module III

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Theodolite : Use of theodolite, description, uses and adjustments – temporary and permanent, measurement of horizontal and vertical angles.	2	(lecture, lab practice, field studies)	Assignment	https : //www.youtube.com/watch?v=A-kf1oX_xJ0&t=796s . https : //www.youtube.com/watch?v=XsxJD79MR0s)

<p>Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse. Experiments : Theodolite traversing, checks and closing errors, balancing a traverse, adjustment of bearings, computation of area of closed traverse.</p>	3+2	Lecture ,lab practice, field studies)	Field study	<a href="https://www.youtube.com/watch?v=A-
kf1oX_xJ0&t=796s">https : //www.youtube.com/watch?v=A- kf1oX_xJ0&t=796s , https : //www.youtube.com/watch?v=XsxJD79MR0s)
<p>Measurement of Inaccessible points using theodolite. Experiments : Measurement of Inaccessible points.</p>	2+2	(lab practice, field studies)	Field study	https : //www.youtube.com/watch?v=eRiSShpgm3U)
Total (hrs.)	11			

Module IV

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Total station : Introduction to Total station, Functions, working principles of total station applications, Use of all parts and all options inside the machines. Electronic data recording & total station operation	3	Lecture	Assignment	<u>(https : //www.youtube.com/watch? v=hISmKTEfgXc)</u>
Experiments : 6. Basic operation, setting up the instrument 7. Measurement of angle and Measurement of Distance 8. Setting up instrument station, Co-ordinate system 9. Traverse adjustment (With help of software) 10. Area calculation using Total station	10	practice, field studies	field study	<u>https : //www.youtube.com/watch? v=hISmKTEfgXc</u> <u>https : //www.youtube.com/watch? v=zZL9MNsmSWo</u> <u>https : //www.youtube.com/watch? v=zZL9MNsmSWo</u>
Total (hrs.)	13			

Module V

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Contouring : Characteristics, methods and types of contouring	1	lecture	assignment	<u>https : //www.youtube.com/watch?v=50jrYYKKUCA</u>
Preparation of contour map using total station and surfer software Experiments : 11. Preparation of contour map using total station and surfer software.	5	lecture, lab practice, field studies	assignment, field study	<u>https : //www.youtube.com/watch?v=50jrYYKKUCA</u>
Total (hrs.)	6			

Module V

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Curves : Types of curves, Properties–simple, compound, reverse and transition curve. Experiments : 12. Setting out of different curves (simple, compound, reverse and transition) using Total Station.	10	lecture, tutorial, field studies	assignment, field study	https : //www.youtube.com/watch?v=aqN8uDJoXFA&t=2s https : //www.youtube.com/watch?v=hISmKTEfgXc
Total (hrs.)	10			

Module VI

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Setting out of work using Total station. Experiments : 13. Setting out of Building 14. Setting out of culvert.	10	lecture, tutorial, field studies	assignment, field study	https : //www.youtube.com/watch?v=XPbWIp56zxY
Total (hrs.)	10			

Basic Electrical Engineering

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Basic Electrical Engineering	ENFC0404	Theory & Practice	2-1-0	Nil

Objective

- Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency in the analysis of basic D.C. and A.C.
- Develop selection skill to identify the type of generators or motors required for particular application and highlight the importance of transformers in transmission and distribution of electric power.

Course Outcome

- Understand concept of electrical circuit and magnetic circuit configurations
- Understand fundamentals of single and three phase A.C circuits,
- Understand wiring schedule for residential, office and industrial loads, concept of earthing and will be acquainted with Distribution Transformer and LT lines to understand the fundamentals of distribution system.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Module I

Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference, E.M.F, electric power, ohm's law, basic circuit components, Ideal and Practical Sources, Source Conversion, Induced EMF, Energy Stored in Inductor & Capacitor.

Practice:

1. Understanding working principle of DC potential (Lead-Acid battery). Specific gravity of electrolyte. Charging process of battery. Modern DC cells.
2. Plotting the V-I Characteristics of Incandescent lamp.

Module II

DC Networks : Laws and Theorems applicable to DC networks (KCL & KVL, Node voltage & Mesh current analysis, Delta-Star & Star-Delta conversion, Superposition principle, Thevenin's & Norton theorem), Transients in R-L and R-C circuits with DC excitation, Simple problems.

Practice:

3. Verification of Thevenin's theorem, Superposition and Nodal analysis (by experimental setup)
4. Verification of KCL and KVL in series and parallel circuits.
Observing current rise/fall due to transience in DC circuits in Oscilloscope.

Module III

Introduction to Electromagnetism : Magnetic Circuits, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. Methods of preventing such losses. Solenoids and field coils. Application of solenoids in different circuits in Automobiles in electrical protection Working principle of MCBs. Use of field coils in machines and instruments. Galvanometer.

Module IV**Practice:**

5. Study of operation of solenoids.
6. Study of operation of MCBs
7. Study of operation of field coils in machines.
8. Observation of generation of magnetic flux for different input current in a coil and plotting BH Curve.

Practice: Applications of electromagnetism.

9. Observing working of a coil, a Galvanometer.
10. Measurement of iron loss in a core from BH curve by using CRO
11. Observing Induction of Electro Motive Force in a DC generator with D.C Shunt Generator.

Module V

Single-Phase AC Circuits : Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor.

Practice:

12. Connection & Measurement of power consumption of a fluorescent lamp/LED.
13. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply.

Module VI

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.

Practice:

15. Measurement of power and power factor in a 3- \emptyset AC circuit by two wattmeter
16. Single-Phase Transformers : Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers
Calculation of No-Load losses of a 1- \emptyset Transformer.

Module VII

Only Practice

17. Domestic Wiring; Switch Boards, Distribution boxes

18. Workshop wiring : Study of the wiring of electrical machine lab.

19. Concept of Earthing.

Reference

Text Books:

1. D C Kulshrestha, “Basic Electrical Engineering”, Tata Mc-Graw Hill Education
2. P K Sathpathy “Basic Electrical Engineering” Oxford

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference.	1	Lecture	Assignment	Book
Emf, electric power, ohm’s law	1	Lecture	Assignment	Video
basic circuit components, Ideal and Practical Sources	1	Lecture	Assignment	Book
Source Conversion	1	Lecture	Assignment	Book
Induced EMF	1	Lecture	Assignment	Book
Energy Stored in Inductor & Capacitor	1	Lecture	Assignment	Book
DC Networks : Laws and Theorems applicable to DC networks (KCL & KVL)	4	Practice	Experiments	Book
Node voltage	1	Lecture	Assignment	Book
Mesh current analysis	1	Lecture	Assignment	Book
Delta-Star & Star-Delta conversion	1	Lecture	Assignment	Book
Superposition principle	2	Practice	Experiments	Book

Thevenin's & Norton theorem	4	Practice	Experiments	Book
Transients in R-L and R-C circuits with DC excitation	2	Lecture	Assignment	Book
Simple problems	1	Tutorial	Assignment	Book
Magnetic Circuits : Introduction to Electromagnetism, B-H curve	1	Lecture	Assignment	Book
Permeability, Reluctance, Solution of simple magnetic circuits	1	Lecture	Assignment	Book
Hysteresis and Eddy current loss	1	Lecture	Assignment	Book
D.C. Machines : Construction	2	Practice	Experiments	Book
Classification and Principle of operation of DC machines, EMF equation of DC generator	1	Lecture	Assignment	Video
Speed Equation of DC Motor	4	Practice	Experiments	Book
Single-Phase AC Circuits : Single-phase EMF Generation, Waveform and Phasor Representation	2+1	Lecture (using videos) and Practice	Experiments	Video
Average and Effective value of sinusoids, Peak factor & Form factor	2	Lecture	Assignment	Video
Complex Impedance and Power using j-operator, Power factor.	2	Lecture	Assignment	Video
Three-Phase AC Circuits : Comparison between single phase and three-phase systems, Three-phase EMF Generation	2	Lecture	Assignment	Video
Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.	1	Lecture	Assignment	Book
Single-Phase Transformers : Construction and principle of operation.	1+2	Lecture and Practice	Experiments	Book
EMF Equation, Transformation ratio	2	Lecture	Assignment	Book
Practical and Ideal transformers	1+2	Practice	Experiments	Book
Induction Motors :	2+2	Lecture and	Experiments	Book

Introduction to Three-phase and Single-phase Induction Motors, Concept of Slip		Practice		
Concept of Slip, Slip-Torque characteristics	1	Lecture	Assignment	Book
Measuring Instruments : Introduction, PMMC Ammeters and Voltmeters with extension of range	2	Lecture	Assignment	Book
Moving-Iron Ammeters and Voltmeters	1	Lecture	Assignment	Book
Dynamometer type Wattmeter, Energy meter	4	Practice	Experiments	Book
Domestic Wiring; Switch Boards, Distribution boxes	2	Practice	Experiments	
Workshop wiring : Study of the wiring of electrical machine lab.	2	Practice	Experiments	
Concept of Earthing.	2	Practice	Experiments	
Total- 68 Hours (Theory- 35 hours, Practice- 33hours)				

Electrical Machines

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electrical Machines	ENFC0405	Theory & Practice	2-1-0	Nil

Objective

- To introduce the students about principles of electromagnetism applied to AC & DC Machines and its importance.

Course Outcome

- Able to distinguish the constructional similarity and dissimilarity between various machines.
- Able to test and certify the machines as per BIS
- Able to select appropriate transformer and electrical machines
- Able to develop selection skill to identify the type of generators or motors required for particular application.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module: I

D.C. Machines: Construction, Classification and Principle of operation of DC machines, EMF equation of DC generator, Dc Motor Characteristics, Speed Equation of DC Motor. Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors and their Application. (Lecture & practice)

Practice:

- Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
- Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.

Module: II

Single-Phase Transformers: Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers, Transformer losses, Brief idea on Transformer Phasor diagram and transformer rating

Practice:

- Calculation of No-Load losses of a 1-Ø Transformer.

Module: III

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply. Delta-delta, Star-delta, Delta-star, Zig-zag connections. Scott connection, Open delta connection. Auto Transformers

Module IV

Three Phase Induction Machines

Constructional Features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors, Principle of Operation, and Slip Speed.

Practice:

4. Determination of Efficiency, Plotting of Torque-Slip Characteristics of Three Phase Induction motor by Brake Test.

Module: V

Three Phase Synchronous Generators: Synchronous Generator Construction (both Cylindrical Rotor and Salient Pole type), The Speed of Rotation of a Synchronous Generator, Induced voltage in A.C. Machines

Module: VI

Three Phase Synchronous Motors : Basic Principles of Motor operation, Construction, Starting Synchronous Motors, induction motor and Synchronous Motors, Synchronous Motor Ratings, Applications of synchronous motors(Class room teaching)

Module: VII

Single Phase Induction Motors: Starting of Single Phase Induction Motors, Speed Control of Single Phase Induction Motors, Circuit Model. Other types of Motors : Reluctance Motors.(Class room teaching)

Practice:

5. Determination of parameter of a single phase induction motor and study of

(a) Capacitor start induction motor

(b) Capacitor start and capacitor run induction motor

Text Books:

1. Electrical Machines – D P Kothari and I J Nagrath – Tata McGraw Hill.

Reference Books:

1. Electrical Machinery – P S Bimbhra – Khanna Publishers.

2. Electrical Machines - P. K. Mukherjee, S. Chakravarti, Dhanpat Rai & Sons

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
D.C. Machines : Construction	2	Lecture	Assignment	Book
Classification and Principle of operation of DC machines, EMF equation of DC generator	3	Lecture	Assignment	Video
Speed Equation of DC Motor	2	Practice	Experiments	Book
Characteristic for Speed Armature Current, Torque Armature Current	2	Lecture	Assignment	Book
Comparison between Different types of DC Motors and their Application.	1	Lecture	Assignment	Book
Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor	2	Lecture	Assignment	Book
Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.	2	Practice	Experiments	Book
Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.	2	Practice	Experiments	Book
Single-Phase Transformers : Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers, Transformer losses, Brief idea on Transformer Phasor diagram and transformer rating	2	Lecture	Assignment	Book
Calculation of No-Load losses of a 1- \emptyset Transformer.	3	Practice	Experiments	Book
Three Phase Transformers : Three-phase transformer connections- Star-star	1+2	Lecture (using videos) and Practice	Experiments	Video

Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating,	2	Lecture	Assignment	Video	
T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply.	2	Lecture	Assignment	Video	
Delta-delta, Star-delta, Delta-star, Zig-zag connections.	2	Lecture	Assignment	Video	
Scott connection, Open delta connection.	5	Practice	Experiments	Book	
Auto Transformers.	1	Lecture	Experiments	Book	
THREE PHASE INDUCTION MACHINES : Constructional Features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors,	2	Lecture	Assignment	Book	
Principle of Operation, Slip Speed	1	Lecture	Assignment	Video	
THREE PHASE SYNCHRONOUS GENERATORS : Synchronous Generator Construction (both Cylindrical Rotor and Salient Pole type),	2+2	Lecture Practice	+	Experiments	Book
The Speed of Rotation of a Synchronous Generator, Induced voltage in A.C. Machines	3	Lecture	Assignment	Book	
THREE PHASE SYNCHRONOUS MOTORS Basic Principles of Motor operation, Construction	2+1	Lecture Practice	&	Assignment	Book
Starting Synchronous Motors, induction motor and Synchronous Motors, Synchronous Motor Ratings, Applications of synchronous motors(Class room teaching)	2	Lecture	Assignment	Book	
SINGLE PHASE INDUCTION MOTORS : Starting of Single Phase Induction Motors, Speed Control of Single Phase Induction Motors, Circuit Model. Other types of Motors : Reluctance Motors.	3+6	Lecture Practice	and	Experiments	Book

Determination of parameter of a single phase induction motor and study of (a)Capacitor start induction motor (b) Capacitor start and capacitor run induction motor				
Total : 57 Hours (Theory- 35 hours, Practice- 25 hours)				

Introduction to Automation

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Automation	ENFC0406	Theory & Practice	2-1-0	Nil

Objective

- | |
|--|
| <ul style="list-style-type: none"> To provide knowledge levels needed for PLC programming and operating. To train the students to develop a relay based control circuit. |
|--|

Course Outcome

- | |
|--|
| <ul style="list-style-type: none"> Gain knowledge on Programmable Logic Controllers Understand different types of Devices to which PLC input and output modules are connected Provide the knowledge about understand various types of PLC registers |
|--|

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module -: I (5 Hours)

Introduction to Automation

What is Automation, Brief history of Automation, Automation Uses, Automation - PLC Basics, Mechanical relays versus PLC, PLC Architecture, Functions of various blocks, and working principle of PLC?

Module: II (8 Hours)

PLC Hardware & Terminology

Various Types of Addressing Used within a PLC, PLC Programming input instructions

Practice:

Study of hardware of PLC.

Module: III (9Hours)

Programming PLC's

Differences between Types of Programming, construction of PLC ladder diagrams, Controlling Program Flow in a Ladder Logic Program.

Practice:

Basic programming using ladder logic program

Module: IV (11 Hours)

Timers and Counters

What is timers & Counters, Use of timers and counters within a ladder logic program, Basic concepts of function blocks.

Practice:

Study of latching and unlatching of motor.

Module: V (7 Hours)

PLC Communication

What are the common types of data communications and their characteristics and use of Ethernet TCP/IP protocol.

Practice:

Sequential operation.

Module: VI (5 Hours)

Introduction to SCADA

Introduction and SCADA Basics. Importance of SCADA in Industrial Automation.

Module: VII (15 Hours)

Basic operation of SCADA

Basic operations related to SCADA. How to work on windows property.

Practice:

Basic window property concepts of SCADA.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE I (Introduction To Automation) (Theory- 5 hours)				
What is Automation, Brief history of Automation	1	Lecture	Assignment	Text Book 1
Automation Uses, Automation - PLC Basics	1	Lecture	Assignment	Text Book 1
Mechanical relays versus PLC, PLC Architecture	1	Lecture	Assignment	Text Book 1
Functions of various blocks, working principle of PLC.	2	Lecture	Assignment	Text Book 1
MODULE II (PLC Hardware & Terminology) (Theory- 04 hours, Practice - 04 hours)				
Various Types of Addressing Used within a PLC	2	Lecture	Assignment	Text Book 1
PLC Programming input instructions	2	Lecture	Assignment	Text Book 1
Study of hardware of PLC.	4	Practice	Result of Experiments and Viva	Text Book 1
MODULE III (Programming PLC's) (Theory- 4 hours, Practice –05 hours)				
Differences between Types of Programming	2	Lecture	Assignment	Text Book 1
Construction of PLC ladder diagrams. Controlling Program Flow in a Ladder Logic Program.	2	Lecture	Assignment	Text Book 1
Basic programming using ladder logic program	5	Practice	Result of Experiments and Viva	Text Book 1

MODULE IV(Timers and Counters) (Theory- 06 hours, Practice –05 hours)				
What is timers & Counters,	4	Lecture	Assignment	Text Book 1
Use of timers and counters within a ladder logic program, Basic concepts of function blocks.	2	Lecture	Assignment	Text Book 1
Study of latching and unlatching of motor.	5	Practice	Result of Experiments and Viva	Text Book 1
MODULEV(PLC Communication) (Theory- 02 hours, Practice –05 hours)				
What are the common types of data communications and their characteristic sand use of Ethernet TCP/IP protocol.	2	Lecture	Assignment	Text Book 1
Sequential operation	5	Practice	Result of Experiments and Viva	Text Book 1
MODULE VI(Introduction To SCADA) (Theory- 5 hours)				
Introduction and SCADA Basics	3	Lecture	Assignment	Text Book 1
How to work on windows property	2	Lecture		Text Book 1
MODULE VII(Basic operation of SCADA) Theory- 04 hours, Practice –11 hours)				
Basic operations related to SCADA	2	Lecture	Assignment	Text Book 1
How to work on windows property	2	Lecture	Assignment	Text Book 1
Basic window property concepts of SCADA.	11	Practice	Result of Experiments and Viva	Text Book 1
Total- 60 Hours (Theory- 30 hours Practice-30 hours)				

Introduction to Web Technology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Introduction to Web Technology	ENFC0407	Theory & Practice	2-1-0	Nil

Objective

- This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web and general grounding introduction to more advanced topics such as programming scripting. This will also explore expose students to the basic tools and applications used in Web publishing.

Course Outcome

- Students may also create web pages using XHTML and Cascading Style Sheets. Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas. Build interactive web applications using AJAX.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Module : I (5 hrs)

What is Web? What is WWW, Web site - Static and Dynamic web site, Web application - Client-server, Web development Technologies- Html, CSS, Js, XML, Servlet & JSP, PHP and Ajax.

Module : II (7 hrs)

Introduction to Html, Html structure, Html Editors, Html element/tag & attributes, Designing simple page - Html tag, Head tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag, Frame tag, Div. tag, Html forms - Input type, Text area, Select, Button.

Module : III (5 hrs)

Introduction to CSS, Syntax, Selectors, Embedding CSS to Html, Formatting fonts, Text & background color, Borders & boxing

Module : IV (6 hrs)

Introduction to JS, Embedding JS into Html, Variables, Data types, Operators, Conditional statements, Looping statements, Strings, Arrays, Math Object, Date Object, Functions, Objects, Event Handling.

Module : V (3 hrs)

Introduction to XML, Difference b/w Html & XML, XML editors

Module : VI (3 hrs)

XML Elements & Attributes XML DTD, XML Schema

Module : VII (4 hrs)

XML Schema, XML DOM

E-content : LMS Content

Reference Books :

1. HTML, XHTML & CSS Bible, Brian Pfaffenberger, Steven M.Schafer, Charles White, Bill Karow- Wiley Publishing Inc, 2010 .
2. HTML Black Book by Steven Holzner 2011
3. Web Design with HTML, CSS, JavaScript and jQuery Set by Jon Duckett.
4. Beginning Java Script with DOM scripting and Ajax By Christian Heilmann- Apress Publisher, 2010.
5. Learning PHP & My SQL, Michele Davis, Jon Philips- O'Reilly Publisher, 2009.
6. PHP Cook book By : David Sklar, Adam Trachtenberg- O'Reilly Publisher, 2008

Introduction to Web Technology Lab List of Programs :

1. Create a simple web page using HTML
2. Create and HTML page with a table and a set of ordered and unordered list.
3. Use CSS in the above web page
4. Design a web page for a company XYZ
5. Develop a static web page that shows basic animation
6. Develop a web page for an audio company
7. Develop a dynamic web page
8. Develop a dynamic web page using DHTML and CSS
9. Consider a company ABC which is into selling movie CDs. Develop a web page for the company.
10. Create a web site in which you can navigate from one page to another
11. Create a dynamic web page for a college
12. Organize a set of data using XML

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

		etc.)		
Module-I (Total Theory = 5 Hours)				
What is Web?, What is WWW, Web site - Static and Dynamic web site,	2	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Web application - Client-server, Web development Technologies- Html, CSS, Js, XML, Servlet & JSP, PHP and Ajax.	3	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Module II (Total Theory = 7 Hour /Practical= 8 Hour)				
Introduction to Html, Html structure, Html, Editors, Html element/tag & attributes, Designing simple page - Html tag, Head tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Frame tag, Div tag ; Html forms - Input type, Text area, Select , Button.	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module III (Total Theory = 5 Hours / Practical= 7 Hours)				
Introduction to CSS, Syntax, Selectors	2+3	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Embedding CSS to Html, Formatting fonts, Text & background colour, Borders & boxing.	3+4	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module-IV (Total Theory= 6 hour / Practical = 7 Hour)				
Introduction to JS, Embedding JS into Html, Variables, Data types	2	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM

Operators, Conditional statements, Looping statements, Strings, Arrays, Math Object, Date Object, Functions, Objects	2+5	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Event Handling	2+2	Class Room Teaching+ PPT	Assignment	Book,Online Sources,SLM
Module-V (Total Theory= 3 Hour/ Practical = 1 Hour)				
Introduction to XML, Difference b/w Html & XML	3+1	Lecture	Assignment	Book,Online Sources,SLM
Module-VI (Total Theory= 3 Hour/ Practical = 1 Hour)				
XML editors, XML Elements. XML Schema	3+1	Class Room Teaching+ PPT+Practical	Assignment	Book,Online Sources,SLM
Module-VII (Total Theory = 4 Hour/ Practical = 0 Hour)				
XML Schema, XML DOM	4	Class Room Teaching + PPT + Practical	Assignment	Book, Online Sources, SLM
Total (hrs)	Total = 57 Hours (Theory 33 Hours + Practical 24 Hours)			

Information Security-I

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Information Security-I	FCEN 0408	Theory & Lab	2-1-0	Nil

Objective

- Get a clear understanding of Types of Threats, Vulnerabilities, Risks and various terminologies in Information Security.
- Understand C I A of Security and Ease of Use Triangle in Information Security
- Understand Access Controls and Physical security measures to safeguard the Assets
- Understand System And Server Security And Internet Security
- Understand Cyber Law and its need

Course Outcome

- Students will understand the importance of CIA Traid (Confidentiality, Integrity and Availability) and advantage of Security
- The student will be able to safeguard their Assets

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module: I INTRODUCTION (7 Hours)

Security Definition, Why Security, Security and its need, Current Trends and Statistics, Basic Terminology, The C I A of Security the Relation : Security functionality and Ease of Use Triangle

Module : II USER IDENTITY AND ACCESS MANAGEMENT (4 Hours)

User identity and Access Management : Authentication, Account Authorization, Validation, Access Control and Privilege management.

Module : III HASHING AND CRYPTOGRAPHY (6 Hours)

Hashing and Cryptography- Encryption and Decryption

Module : IV SYSTEM AND SERVER SECURITY (9 Hours)

System Security, Desktop & Server Security, Firewalls, Password cracking Techniques, Key-logger, viruses and worms, Malwares & Spy wares, Windows Registry

Module : V INTERNET SECURITY (5 Hours)

Internet Security : LAN Security, Email Security, Hacking attacks, preventive measures

Module : VI RISK ASSESSMENT (6 Hours)

Vulnerability Assessment, Penetration Testing, Risk Assessment, Threat, Vulnerability

Module : VII CYBER LAWS (3 Hours)

Cyber Laws – India Context

E-content : LMS Content

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE 1 : Introduction (Theory- 7 hours, Practice- 8 hours)				
Security Definition, Why Security, Security and its need	2	Lecture	Assignment	Book, Online source, SLM
Current Trends and Statistics, Basic Terminology	2	Lecture	Assignment	Book, Online source, SLM
The C I A of Security the Relation : Security functionality and Ease of Use Triangle	3	Lecture	Assignment	Book, Online source, SLM
System Security Configuration in Windows 7 I & II	2	Practice	Experiments	Online source, Video
DOS attacks and its prevention	2	Practice	Experiments	Online source, Video
Password Based Authentication Process	2	Practice	Experiments	Online source, Video
Service Management of Windows 7 for prevention of attacks.	2	Practice	Experiments	Online source, Video
MODULE II USER IDENTITY AND ACCESS MANAGEMENT (Theory- 4 hours)				
User identity and Access Management : Authentication, Account Authorization	2	Lecture	Assignment	Book, Online source

Validation, Access Control and Privilege management.	2	Lecture	Assignment	Book, Online source
MODULE III HASHING AND CRYPTOGRAPHY(Theory- 6 hours, Practice- 3 hours)				
Hashing	2 + 1	Lecture + Practice	Experiment	Book, Online source
Cryptography- Encryption and Decryption	4	Lecture	Assignment	Book, Online source
Event logger analysis	2	Practice	Experiment	Book, Online source
Module IV SYSTEM AND SERVER SECURITY (Theory- 9 hours, Practice- 7 hours)				
System Security, Desktop & Server Security	2	Lecture	Assignment	Book,Online ,SLM
Firewalls	2+2	Lecture + Practice	Experiment	Book,Online ,SLM
Password cracking Techniques	2+2	Lecture + Practice	Experiment	Book,Online ,SLM
Key-logger	1+2	Lecture + Practice	Experiment	Book,Online ,SLM
viruses and worms, Malwares & Spy wares	1	Lecture	Assignment	Book,Online ,SLM
Windows Registry	1+1	Lecture + Practice	Experiment	Book,Online ,SLM
Module V INTERNET SECURITY (Theory- 5 hours, Practice- 0 hours)				
LAN Security	2	Lecture	Assignment	Book,Online,SLM
Hacking attacks, preventive measures	2	Lecture	Assignment	Book,Online,SLM
Security on E-mail	1	Lecture	Assignment	Book,Online,SLM
Module VI INTERNET SECURITY (Theory- 6 hours, Practice-2 hours)				
Vulnerability Assessment	2 +2	Lecture + Practice	Experiment	Book,Online ,SLM
Penetration Testing	2	Lecture	Assignment	Book,Online,SLM

Risk Assessment	1	Lecture	Assignment	Book,Online,SLM
Threat, Vulnerability	1	Lecture	Assignment	Book,Online,SLM
Module VII Cyber Law (Theory- 3 hours)				
Cyber Laws – Indian Context.	2	Lecture	Assignment	Book,Online,SLM
Importance of Cyber Law	1	Lecture	Assignment	Book,Online,SLM
Total (hrs) : 60 Hours (Theory- 40 hours, Practice- 20 hours)				

Programming in C

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Programming in C	ENFC0409	Theory & Practice	2-1-0	Nil

Objective

- To provide basic knowledge of programming tools and techniques.
- To familiarize the programming environment and syntax of C programming.
- To understand the working of basic programming constructs.

Course Outcome

- The students will able to apply programming skills to problem solving.
- The student will able to write 150 to 200 line programs without any error.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course outline

Module I :Problem Solving Techniques (10Hours)

Problem solving techniques : Algorithm, flow chart; Structure of C program, Character set, Identifiers, Keywords, Data Types, Constants and Variables, Input-output statements, relational and logical operators, increment and decrement operators, conditional operator, bit-wise operators, assignment operators, expressions, type conversions, conditional expressions, precedence and order of evaluation.

Module II : Control Structures (7Hours)

Statements and blocks, if and switch statements, loops : -while, do-while and for statements, break, continue, goto.

Module III : Array(7Hours)

Arrays-concepts, declaration, definition, accessing elements, two-dimensional and multi-dimensional arrays, applications of arrays.

Module IV : Functions(15 Hours)

Designing structured programs Functions, parameter passing, user defined functions, recursive functions, storage classes- extern, auto, register, static, scope rules.

Module V : Pointern (15 Hours)

Pointers- concepts, initialization of pointer variables, pointers and function arguments, address arithmetic, Character pointers and functions, pointers to pointers, pointers and multidimensional arrays, dynamic memory management functions, command line arguments.

Module VI : Structures(11Hours)

Derived types-structures-declaration, definition and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self referential structures, unions,

Module VII : Files (10Hours)

Typedef, bit fields, C program examples. Input and output–concept of a file, text files and binary files, streams, standard I/O, Formatted I/O, file I/O operations.

Text Books :

1. E. Balaguruswamy “Programming in C”, Tata McGraw Hill 3rd Edition
2. Y. Kanetkar, “Let us C”, BPB Publications-9th edition.

Reference Books :

1. H. Scheldt, “C The Complete Reference”, Tata McGraw Hill
2. B.W. Kernighan & D.M. Ritchie, "C Programming Language", PHI.
3. Gotterfried, Schaum Series-“C Programming”.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I 5 hrs lectures + 3 hrs practice				
Problem solving techniques : Algorithm Problem solving techniques : flow chart	1	lecture	assignment	Book
Structure of C program Character set, Identifiers Keywords, Data Types, Constants and Variables, Input-output statements	1+1	lecture, quiz	assignment	Book

Relational and logical operators, increment and decrement operators	1	lecture	assignment	Book
Conditional operator, bit-wise operators, assignment operators	1+2	lecture, practice	assignment	Book
Expressions, type conversions Conditional expressions, precedence and order of evaluation	1	lecture		Book
Module II 4 hrs lectures + 5 hrs practice				
Statements and blocks, if and switch statements	2+1	lecture, practice	assignment	Book
loops : -while, do-while	1+2	lecture, practice	assignment	Book
for statements, break, continue, goto	1+2	lecture, practice	assignment	Book
Module III 5 hrs lectures + 5 hrs practice				
Arrays-concepts Declaration, definition, accessing elements, programs	1+2	lecture, practice, quiz	assignment	Book
two-dimensional arrays multi-dimensional arrays	2+2	lecture, practice	assignment	Book
applications of arrays	2+1	lecture, practice	assignment	Book
Module IV 5 hrs lectures + 4 hrs practice				
Designing structured programs : -Functions	1	lecture, practice	assignment	Book
parameter passing, user defined functions	2+2	lecture, practice	assignment	Book
recursive functions	1+1	lecture,	assignment	Book

		practice		
storage classes-extern, auto, register, static, scope rules	1+1	lecture, practice	assignment	Book
Module V 5 hrs lectures + 4 hrs practice				
pointers-concepts, initialization of pointer variables	1	lecture	assignment	Book
pointers and function arguments, address arithmetic, Character pointers and functions	2+2	lecture, practice	assignment	Book
pointers to pointers, pointers and multidimensional arrays	1+1	lecture, practice	assignment	Book
dynamic memory management functions, command line arguments	1+1	lecture, practice	assignment	Book
Module VI 6 hrs lectures + 5 hrs practice				
Derived types-structures-declaration, definition and initialization of structures, accessing structures	2+2	lecture, practice	assignment	Book
nested structures, arrays of structures	2+1	lecture, practice	assignment	Book
pointers to structures, self referential structures	1+1	lecture, practice	assignment	Book
unions	1+1	lecture, practice	assignment	Book
Module VII 4 hrs lectures + 6 hrs practice				
Typedef, bit fields Input and output–concept of a	2+2	lecture, practice	assignment	Book

file, text files and binary files, streams				
standard I/O, Formatted I/O	1+2	lecture, practice	assignment	Book
file I/O operations	1+2	lecture, practice	assignment	Book
Total (hrs)	34+32			

Desktop Operating System (Windows 10)

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Desktop Operating System (Windows 10)	ENFC0410	Theory & Practice	2-1-0	FCEN0119 Operating System Building Blocks

Objective

- To install and configure Windows 10 enterprise.
- Configure networks, security settings in Windows 10 enterprise.

Course Outcome

- Student will able to install windows 10 enterprise.
- Student will able to configure devices, security settings, firewall in Windows 10 enterprise.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module : I Installing, upgrading and managing Windows (4 Hrs.)

Gathering hardware devices, preparing to install windows, upgrading and migrating, Clean and Image based installation, Configuring Application Compatibility

Module : II Windows Features ,device drivers and disk managemnt (4 Hrs.)

Administrating windows features, Disk management, and installing and configuring device drivers.

Module : III File Access, Printers with Windows (4 Hrs.)

Introduction to Authentication and Authorization, Managing file access, Shared Folders, File compression, file archiving, managing printers

Module : IV Network connectivity with Windows (4 Hrs.)

Connecting windows client with server, configuring ipv4 & ipv6 connectivity, Implementing APIPA, Introduction to Name resolution, troubleshooting network issues, Overview of wireless network, configuring wireless network.

Module : V Securing, Optimizing and maintaining windows Client (5 Hrs.)

Overview of local security management, local security policy settings, EFS and Bitlocker, Application restrictions, UAC, Windows Firewall, Windows Defender.

Module : VI Configuring Browser and Mobile Computing in Windows (3 Hrs)

Administrating IE8, Configure Mobile computer and device settings

Module : VII Configuring Remote Access in windows (4 Hrs.)

Remote desktop, remote assistance, direct access, branch cache.

LAB EXERCISES : ANY TEN LABS

Navigating and Customizing the User Interface

Navigating the Windows 10 User Interface

Configuring Start

Configuring the Desktop

Installing Windows 10

Upgrading Windows 7 to Windows 10

Migrating User Settings

3 .Configuring Windows 10

Using the Settings App

Using Control Panel

Using Windows Power Shell

Using GPOs

Synchronizing Settings with One Drive

Connecting a Microsoft Account

Synchronizing Settings between Devices

Configuring Network Connectivity

Verifying and Testing IPv4 Settings

Configuring Automatic IPv4 Settings

Configuring and Testing Name Resolution

Managing Storage

Adding a Disk

Creating a Simple Volume

Compressing a Folder

Enabling Disk Quotas

Creating a Storage Space

Configuring and Managing Permissions and Shares

Creating, Managing, and Sharing a Folder

Using Conditions to Control Access and Effective Permissions

Installing and Managing a Printer

Managing and Using a Printer

Configuring Windows 10 Web Browsers

Configuring and Using Microsoft Edge

Configuring and Using Internet Explorer

Data Security

Using EFS

Using Bit Locker

Device Security

Creating Security Policies

Testing Security Policies

Configuring UAC Prompts

Configuring and Testing AppLocker

Network Security
 Creating and Testing Inbound Rules
 Creating and Testing Outbound Rules
 Creating and Testing Connection Security Rules
 Configuring Windows Defender
 Troubleshooting and Recovery
 Managing Device Drivers
 Using File History to Recover Files
 Using Previous Versions to Recover Files
 Recovering a Device with a Restore Point
 Using the Advanced Start-up Options to Recover a Device

Principles of Biochemistry

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Principles Of Biochemistry	FCEN0408	Theory & Practice	3-2-0	Nil

Objective

- To study the structure and properties of carbohydrates.
- Discuss the structure, properties and reactions of proteins and amino acids
- Discuss the structure, properties of fats and lipids
- To study the composition, structure and functions of nucleic acids

Course Outcome

- Aims at providing an elementary knowledge of bio molecules and its application

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module : I

Biochemical Organization

Scope of clinical biochemistry, component of the cell, structure and biochemical functions, membrane structure and functions, transport through biological cell membrane

Module : II

Bioenergetics

Concept of free energy, determination of change in free energy from equilibrium constant and reduction potential, bioenergetics and biological oxidation – general concept of oxidation and reduction

Module : III

Electron transport chain, oxidative phosphorylation, uncouplers and theories of biological oxidation and oxidative phosphorylation.

Module : IV

Carbohydrates :

Classification, properties. Starch, glycogen, dextrin, inulin, cellulose, metabolism of carbohydrates, gluconeogenesis, glycogenolysis, glycolysis. Citric acid cycle and its biological significance, role of sugar in nucleotide biosynthesis and pentose phosphate pathway.

Module : V

Lipids :

Classification, properties. sterols, essential fatty acids, eicosanoids, phospholipids, sphingolipids, metabolism of lipids, oxidation of fatty acids, α, β - oxidation and biosynthesis of ketone bodies, cholesterol, porphyrin biosynthesis, metabolism of bile pigments.

Module : VI

Amino acids and nucleic acids :

Classification, properties, biosynthesis of amino acids and proteins, essential amino acids, metabolism of amino acids and proteins, Nitrogen balance, genetic code, nucleic acids, and structure of DNA and RNA, purine biosynthesis and pyrimidine biosynthesis.

Module : VII

Macromolecules, Vitamins, Hormones, Enzymes

Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein, classification and their properties, occurrence, functions, requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties, hormones, Nomenclature, enzyme kinetics, Michelles-Menten equation, classification and their properties, mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical importance.

LIST OF EXPERIMENTS (Any 8)

1. pH measurements and preparation of buffers.
2. Qualitative tests for Carbohydrates.
3. Estimation of sugars.
4. Estimation of proteins by Lowry's method / Biuret method.
5. Estimation of cholesterol by Zak's method.
6. Determination of saponification number of lipids.
7. Estimation of Amino acids.
8. Separation of amino acids - Thin layer chromatography.
9. Separation of sugars - Paper chromatography
10. Biochemical estimation of DNA /RNA using Spectrophotometer

Text Books :

1. Biochemistry by Jeremy M.Berg, John L.Tymozko, Lubert Stryer, Fifth edition, W.H.Freeman and Company, 1514 pages.
2. Thomas M. Devlin. Textbook of Biochemistry with clinical correlations. Wiley Liss Publishers

Reference Books :

1. Burtis & Ashwood W.B. Tietz Textbook of Clinical chemistry. Saunders Company
2. Lubert Stryer W.H. Biochemistry. Freeman and company, New york.
3. Donald Voet & Judith G. Voet. Biochemistry. John Wiley and Sons, Inc.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Scope of clinical biochemistry	2			
component of the cell,	1			
membrane structure and functions, transport through biological cell membrane	2			
structure and biochemical functions	1			
Module II		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Concept of free energy,	1			
determination of change in free energy from equilibrium constant and reduction potential,	2			
bioenergetics and biological oxidation	2			
general concept of oxidation and reduction	2			
Module III		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Electron transport chain,	1			
oxidative phosphorylation, uncouplers	1			
theories of biological oxidation	1			
oxidative phosphorylation.	2			
Module IV		lecture,	assignment	Book, Video,

classification, properties. starch, glycogen, dextrin, inulin, cellulose	2	tutorial, lab practice		Online source
metabolism of carbohydrates, gluconeogenesis, glycogenolysis,	1			
glycolysis. citric acid cycle and its biological significance	1			
role of sugar in nucleotide biosynthesis and pentose phosphate pathway	2			
Module V		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Classification, properties. sterols, essential fatty acids, eicosanoids	1			
phospholipids, sphingolipids	1			
metabolism of lipids, oxidation of fatty acids	2			
α, β - oxidation and biosynthesis of ketone bodies	1			
cholesterol, porphyrin biosynthesis	1			
metabolism of bile pigments.	1			
Module VI		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Classification, properties, biosynthesis of amino acids and proteins,	2			
essential amino acids, metabolism of amino acids and proteins,	2			
Nitrogen balance, genetic code, nucleic acids, and structure of DNA and RNA,	1			
purine biosynthesis and pyrimidine biosynthesis.	2			

Module VII		lecture, tutorial, lab practice	assignment	Book, Video, Online source
Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein	2			
classification and their properties, occurrence, functions, importance	2			
requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties,	1			
hormones, Nomenclature, enzyme kinetics,	1			
Michelles-Menten equation, classification and their properties,	2			
mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical	1			
Total (hrs)	45+20			

Cell Biology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cell Biology	FCEN0409	Theory & Practice	3-2-0	Nil

Objective

- To study cell structure and functions of organelle functions
- Exposure on transportations through cell membrane
- To focus on different receptors and model of signaling
- To introduce the concept of cell signaling

Course Outcome

- The course is aimed to make the student understand the basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module : I

Cell Structure and function

Origin and evolution of cells, molecular composition of cells, central role of enzymes, metabolic energy, biosynthesis of cell constituents, cell membrane

Module : II

Nucleus, Endoplasmic reticulum, Golgi apparatus and Lysosomes, Bioenergetics and Metabolism – Mitochondria, chloroplasts, Peroxisomes.

Module : III

Cell Division

Cell cycle – Mitosis, Meiosis, Molecules controlling cell cycle

Module : IV

Extra cellular matrix, role of matrix in cell enthore : Gap junctions, Tight junctions, Plasmodesmata.

Module : V**Transport across cell membrane**

Passive and Active Transport, Permeases, Ion channels, ATP pumps. Na^+ / K^+ / Ca^{2+} pumps uniport, symport antiporter system. Ligand gated / voltage gated channels, Agonists and Antagonists.

Module : VI**Signal Transductions**

Receptors – extracellular signaling, Cell surface / cytosolic receptors and examples, Different classes of receptors autocrine / paracrine / endocrine models, Secondary messengers molecules.

Module : VII

The Development and causes of cancer, tumour viruses, oncogenes, prevention and treatment

LIST OF EXPERIMENTS (Any 8)

1. Microscopic study of cell and cell organelles
2. Cell fractionation
3. Fixation, Dehydration, embedding and sectioning of tissues
4. Histology of extracellular matrix
5. Quantitative analysis of lipid classes by TLC
6. Isolation of microtubules
7. Isolation of actin and Myosin filaments
8. Isolation of Mitochondria
9. Nuclear staining
10. Stages of cell cycle.

Text Books :

1. The Cell : A molecular approach by Geoffrey M. Cooper. ASM Press, Pages : 673

Reference Books :

1. Molecular Biology of the Cell Edition 4, Roberts, Keith Alberts, Bruce Johnson, Alexander Raff, Martin Walter, Peter Lewis, Julian, Garland
2. Molecular Cell Biology, Lodish, Harvey Krieger, Monty Kaiser, Chris A. Berk, Arnold, W H Freeman & Co

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Origin and evolution of cells	2			
molecular composition of cells, cell membrane	1			
central role of enzymes, metabolic energy, biosynthesis of cell constituents	2			
Module II		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Nucleus, Endoplasmic reticulum	2			
Golgi apparatus and Lysosomes	2			
Bioenergetics and Metabolism	2			
Mitochondria chloroplasts	1			
Peroxisomes	1			
Module III		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Cell cycle – Mitosis	2			
Meiosis	2			
Molecules controlling cell cycle	1			
Module IV		lecture, tutorial, lab	assignment	Book, Video, Notes
Extra cellular matrix, role of matrix in cell enthore	2			

Gap junctions	1	practice,		
Tightjunctions, Plasmodesmata.	1			
Module V		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Passive and Active Transport,.	2			
Permeases, Ion channels,	2			
ATP pumps. Na ⁺ / K ⁺ / Ca ²⁺ T pumps uniport,	2			
Symport antiporter system	1			
Ligand gated / voltage gated channels	1			
Agonists and Antagonists	1			
Module VI		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
Receptors – extracellular signaling	2			
Cell surface / cytosolic receptors and examples,	2			
Different classes of receptors antocrine / paracrine / endocrine models	1			
Secondary messengers molecules	2			
Module VII		lecture, tutorial, lab practice,	assignment	Book, Video, Notes
The Development and causes of cancer	2			
tumour viruses, oncogenes,	1			
prevention and treatment	2			
Total (hrs)	45+20			

Programming for Problem Solving- Java

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Programming for Problem solving- Java	ENFC0412	Theory + Practice	1-2-0	Nil

Objective

- Learn problem solving using object-oriented concepts
- Implement object oriented programming using Java
- Analyze several alternative solutions to determine the best approach
- Create job opportunities in java application development area

Course Outcome

- Able to use object oriented concept to solve problems
- Write an error free program of minimum 200 lines of code.
- Acquire java coding skill which helps students in getting jobs in different IT firms

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Projects :

1. Simple Currency Converter
2. Designing a Calculator
3. Generating the mark sheet of a student
4. Create a phone directory and search a number
5. Create a tic tac toe game
6. Developing a library maintenance system
7. Desktop applications
8. Exam System (Without Database)
9. Create Country MAP and Different banners

Course outline

Module: I (10Hrs) :

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study.

Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program.

Object-Oriented Programming : Object Oriented Concepts, Java Programming Environment, Feature of Java, Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module : II(15 Hrs)

Classes : Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword.

Inheritance and Polymorphism: Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module :III (10 Hrs) :

Packages : Packages, Access Protection, Importing Package

Interfaces : Interface, Implementing Interfaces.

Module :IV (10 Hrs) :

String Handling : String, String Buffer, String Builder.

Exception Handling : Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, Multiple Catches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception.

Module :V (10 Hrs) :

Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util).

Module-VI (10 Hrs) :

Java.IO : I/O Streams, Serialization

AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module :VII (10 Hrs) :

Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components.

Text Books:

1. Mark Lassoﬀ, Java Programming for Beginners, Packt Publishing Limited, October 2017
2. Walter Savitch, “Java-An Introduction to Problem Solving & Programming”, 8th edition, Pearson, 2017
3. Herbert Schildt, “Java Complete Reference”, 10th edition, in McGraw-Hill Education, 2017

Reference Books:

1. Dr. Edward Lavieri, Peter Verhas, Mastering Java 9, Packt Publishing Limited, October 2017
2. Nell Dale, Chip Weems, “Programming and problem solving with Java”, in Jones and Bartlett, 2008
3. Bhave&. Patekar, “Programming with Java” in Pearson Education, 2008

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Problem Solving Techniques : Ask Questions, Look for things that are familiar,	4	Lecture		Book

solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study				
Installation of JDK,Configure runtime environment and Visualizing Java programming Environment (architecture)	1+1	Practice		
What is Programming, Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program	1	Lecture	Assignment	Book
Constructing skeleton of Java Program, Object Oriented Concepts, Java Programming Environment, Feature of Java	2+2	Lecture, Practice	Assignment	Book
Share and execute India Map & CUTM Banner Sharing and Execute Calculator program	2	Practice	Assignment	

Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, more example	2	Practice	Assignment	Book
Conditional statement, looping statement,	2	Practice	Assignment	Book
Sharing and Execute calculate grade of students	2	Practice		
Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor With Examples	2+2	Lecture, Practice	Assignment	Book
Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword	2	Practice	Assignment	Book
Sharing and Execute area of shapes	1	Practice		
Inheritance and Polymorphism : Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch	1+2	Lecture, Practice	Assignment	Book
Abstract Classes, Inner Classes	1+2	Lecture, Practice	Assignment	Book

ToDo list where you can calculate the completed task vs. pending tasks.	1	Practice		
Packages, Access Protection, Importing Package, Interface, Implementing Interfaces	1+4	Lecture, Practice	Assignment	Book
StringHandling : String, StringBuffer, StringBuilder	1+2	Lecture, Practice	Assignment	Book
Create a phone directory and search for a number.	1	Practice		
Excepting Handling : Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, Multiple Catches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception	1+4	Lecture, Practice	Assignment	Book
Create a tic tac toe game	1	Practice		

java.io : I/O streams, Serialization	1+4	Lecture, Practice	Assignment	Book
Producer/Consumer Problem	1	Practice		
Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, using Different Thread Methods	1+2	Lecture, Practice	Assignment	Book
Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util)	1+2	Lecture, Practice	Assignment	Book
Developing a library maintenance system.	1	Practice		
Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components	1+2	Lecture, Practice	Assignment	Book
AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers	2+6	Lecture, Practice	Assignment	Book

Database Management System

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Database Management System	ENFC0414	Theory + Practice	1-2-0	Nil

Objective

- Introduce the fundamental concepts of database systems & their importance in practical life and the basic concepts necessary for designing, using and implementing database systems & applications
- Make the students understand the principles behind relational database management systems, including the database environment, the relational model, relational languages, develop simple SQL queries
- Create job opportunities in database design, development and administration.

Course Outcome

- Demonstrate the underlying concepts of database technology, identify the appropriate data model for the given problem
- Write SQL queries for performing database operations
- Design, implement and normalize a relational model for a given problem domain
- Obtain skills in designing, developing and administrating the relational database.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module: I

General introduction to database systems; Database - DBMS distinction, approaches to building a database, data models, database management system, three-schema architecture of a database, challenges in building a DBMS, various components of a DBMS.

File Based Systems and Database Systems : File Based Approach, Database Systems, File-oriented Systems vs. Database Systems Database Approach : Database, Database Management System (DBMS), Components of DBMS Environment, Advantages and Disadvantages of DBMS Roles in Database Environment : Database Users, Database Administrators(DBA)

Module: II

Database System Architecture: Three Level Architecture, External Level, Conceptual Level, Internal Level, Schemas, Mappings, Instances, Data Independence, Data Abstraction
E/R Model - Conceptual data modeling - motivation, entities, entity types, various types of attributes, relationships, relationship types, E/R diagram notation, examples.

Module: III

Relational Data Model: Concept of relations, schema-instance distinction, keys, referential integrity and foreign keys, relational algebra operators : selection, projection, cross product, various types of joins, division, example queries, tuple relation calculus, domain relational calculus, converting the database specification in E/R notation to the relational schema.

Module: IV

Database installation procedure: Database table creation & insertion of values Database Languages : SQL - DDL, DML, TCL, DCL

SQL - Introduction, data definition in SQL, table, key and foreign key definitions, update behaviors. Querying in SQL - basic select-from-where block and its semantics, nested queries - correlated and uncorrelated, notion of aggregation, aggregation functions group by and having clauses, embedded SQL.

Data Definition Language : Creating a Database, Table Operations (Create, Alter, Drop, Truncate, Comment and Rename), Creating and Removing an Index

Data Manipulation Language : Using different DML commands (Insert, Delete, Update, and Select), Sorting Results (Order By), Aggregate Functions, Join, Grouping Results (Group By)

Data Control Language & Transaction Control Language : Using different DCL commands (Grant, Revoke) & using different TCL commands (Commit, Rollback and Savepoint).

Module: V

Dependencies and Normal forms - Importance of a good schema design, problems encountered with bad schema designs, motivation for normal forms, dependency theory - functional dependencies, Armstrong's axioms for FD's, closure of a set of FD's, minimal covers, definitions of 1NF, 2NF, 3NF and BCNF, decompositions and desirable properties of them, algorithms for 3NF and BCNF normalization, multi-valued dependencies and 4NF, join dependencies and definition of 5NF.

Module :VI

Data Storage and Indexes - file organizations, primary, secondary index structures, various index structures - hash-based, dynamic hashing techniques, multi-level indexes, B+ trees.

Terminologies of Relational Model : Relational Data Structure, Relational Keys, Representing Relational Database Schema Integrity Constrains and Views : Nulls, Entity Integrity, Referential Integrity, General Constraints, Views, Purpose of Views

Module: VII

Transaction processing and Error recovery - concepts of transaction processing, ACID properties, concurrency control, locking based protocols for CC, error recovery and logging, undo, redo, undo-redo logging and recovery methods.

PL/SQL : SQL vs PL/SQL, Practice different basic PL/SQL programs

Text Book:

1. Raghuram Ramakrishnan, Johames Gerkhe “ Data Base Management Systems, Mc Graw Hill
2. Gaurav Gupta, Sarika Gupta “ Data Base Management Systems” Khanna Book Publisher

Electronics and its Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electronics and Its Application	ENFC0415	Theory & Practice	2-1-0	Nil

Objective

- The objective of this course is to provide a good understanding on the components used in today's electronics circuits and systems.

Course Outcome

- Describe active and passive components and their application.
- Explain the Working principle of different types of sensor and their application.
- Design and simulate deferent electronic circuits using software tools(ORCAD/MULTISIM/MATLAB)

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: RECENT TRENDS IN ELECTRONIC APPLICATION

(9 Hours)

Theory

a. Smart Electronics : Few Case Studies

- Wearable Electronic Devices / Wearable Technology
- Home Automation
- Driverless Car / Self-driving Car
- Inside a Smart Phone

b. Electronics in Transdisciplinary Applications

- Automotive
- Space
- Underwater
- Medical
- Mining
- Manufacturing

- Industrial Automation
- Robotics
- Agriculture
- Entertainment

c. New Trends

- Green Electronics
- Organic Electronics
- Bio-Electronics
- Nano Electronics
- Polymer Electronics
- Molecular Electronics

Practice

1. Familiarization with different components inside a smart phone

Module II: ELECTRONIC MANUFACTURING

(11 Hours)

Theory

Electronic Manufacturing:

- a. Semiconductor devices
- b. Integrated Circuits (IC)
- c. System-on-Chip (SoC)
- d. System-in-Package (SiP)
- e. Network on Chip (NoC)
- f. Printed Circuit Board (PCB)
- g. Single layer PCB, Double layer PCB, Multi-Layer PCB
- h. Aluminum Backed PCB
- i. 3D Printed PCB

Practice

2. Familiarization with different ICs.
3. Familiarization with PCB design software.
4. Familiarization with 3-D printer.

Module III: COMPONENTS FOR ELECTRONIC CIRCUITS

(12 Hours)

Theory

a. Passive Components :

Resistor, potentiometer, capacitor, inductor, connectors, switches and relays.

b.Active Components :

PN junction diode, Zener diode, Photo diode, Light Emitting Diode (LED), Bipolar Junction Transistor (BJT) and Field Effect Transistor (FET)

Practice:

5. Familiarization with different Components - Resistor, Potentiometer, Capacitor, Inductor, Connectors, switches & Relays. Measurement of Resistance and Capacitance.
6. Application of PN junction diode, Zener Diode
7. Application of LED and photodiode
8. Application of BJT and FET

Module IV: SENSOR & ACTUATOR**(4 Hours)****Theory****a. Sensors : Types and Applications**

- Analog Sensors
- Digital Sensors
- Special Sensors

b. Actuators

- Types of Actuators
- Applications

Practice

9. Familiarization with all types of available sensors.

Module V:SENSOR APPLICATION**(8 Hours)****Theory**

- a. Sensors and Smart Sensors
- b. Reading Sensor Input
- c. Sensor Wiring
- d. Understanding sensors and its application
 - **Infrared Reflectance Sensor.**
 - **Resistance Temperature Detectors**
 - **Temperature Sensor (LM35, Thermistor)**
 - **Motion Sensor**
 - **Limit Switch/Sensor**
 - **Touch Sensor Circuit**

Practice:

10. Sensor Wiring
11. Application of any of the above sensors.

Module VI:VOLTAGE REGULATOR & AMPLIFIER**(8 Hours)****Theory**

Assembling and Testing (Hardware/Multisim) for Different Circuits (Any one from each category by different groups)

a.Voltage Regulator

- Linear Regulators (LM723,78XX,79XX)
- Switching Regulators (LM2676)
- SMPS
- Hybrid Regulators

b.Amplifier

- Voltage Amplifier
- Current Amplifier
- Power Amplifier

Practice

12. Design of a voltage divider circuit
13. Design of an amplifier

Module VII: SWITCH & OSCILLATOR

(8 Hours)

Theory

Assembling and Testing (Hardware/Multisim) for Different Circuits (Any one from each category by different groups)

Switch

- Relay
- Diode as a Switch
- Transistor as a Switch

Oscillator

- Harmonic Oscillator
- Voltage Controlled Oscillator

Practice

12. Design of a switch
13. Design of an oscillator circuit

Practice will be through hardware implementation and software simulation using Multisim / OrCad PSpice/ Matlab.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module-I [7 hrs. Lecture + 2 hrs. Practice]				
Smart Electronics : Few Case Studies Wearable Electronic Devices Wearable Tech Home Automation Driverless Car / Self-driving Car	2	Lecture		Online source
Inside a Smart Phone [Familiarization with different components inside a smart phone]	2	Practice		Online source
Electronics in Transdisciplinary Applications : Automotive Space Underwater	1	Lecture		Online source
Medical Mining Manufacturing	1	Lecture		Online source
Industrial Automation Robotics Agriculture	1	Lecture		Online source
Green Electronics Organic Electronics Bio-Electronics	1	Lecture		Reference Book-1 + Online reference
Nano Electronics Polymer Electronics Molecular Electronics	1	Lecture		Reference Book-1 + Online reference
Module-II [5 hrs. Lecture+6 hrs. Practice]				
Electronic Manufacturing				
Semiconductor devices [Overview only]	1	Lecture		Text Book-3
Integrated Circuits (IC) [Familiarization with all	2	Practice		Text Book-3

available ICs in Lab]				
System on Chip (SoC), System on Package, Network on Chip [Overview and advantage]	1	Lecture		Text Book-3
Single layer PCB, Double layer PCB, Multi-Layer PCB, Aluminum Backed PCB [Overview of design software and application]	4	2hr. Lecture+ 2 hrs. Practice		Text Book-2 Chapter 15
3D Printed PCB	3	1hr. Lecture +2hrs. Practice		Text Book-2 Chapter 15
Module-III [4hrs. Lecture+8 hrs. Practice]				
Passive Components : Resistor, Potentiometer, capacitor, Inductor, Connectors, switches & Relays. [Definition, Function and Application]	4	2hrs. Lecture+ 2hrs. Practice		Text Book-2 Chapter 8 & 9, Text Book-1 Chapter 5
Active Components : PN junction diode, Zener diode, Photo diode, LED, BJT & FET [Function and application]	8	2hrs. Lecture+ 6 hrs. Practice		Text Book-2 Chapter 8 &9 , Text Book-1 Chapter 5
Module-IV [2hrs. Lecture+2 hrs. Practice]				
Sensors : - Types and Applications Analog Sensors Digital Sensors Special Sensors [Overview, Types and Applications]	3	1 hr. Lecture+ 2 hrs. Practice		Text Book-1 Chapter 8
Actuators : - Types of Actuators Applications	1	Lecture		Text Book-1 + online reference
Module-V [4hrs. Lecture+4 hrs. Practice]				
Sensors and Smart Sensors [overview]	1	Lecture		Text Book-1 + online reference
Reading Sensor Input, Sensor Wiring	3	1hr. Lecture + 2 hrs. Practice		Text Book-1 + online reference
• Infrared Reflectance Sensor	4	2hrs. Lecture +		Text Book-1 +

<ul style="list-style-type: none"> • Resistance Temperature Detectors • Temperature Sensor (LM35, Thermistor) • Motion Sensor • Limit Switch/Sensor • Touch Sensor Circuit <p>[Each group will practice any one of the above]</p>		2 hrs. Practice		online reference
Module-VI [4hrs. Lecture+4 hrs. Practice]				
Voltage Regulator Linear Regulators (LM723, 78XX, 79XX) Switching Regulators (LM2676) SMPS, Hybrid Regulators	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Amplifier : Voltage Amplifier, Current Amplifier, Power Amplifier	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Module-VII [4hrs. Lecture+4 hrs. Practice]				
Switch Relay, Diode as a Switch, Transistor as a Switch	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Oscillator Harmonic Oscillator Voltage Controlled Oscillator	4	2hrs. Lecture + 2hrs. Practice		Reference Book-1 + Online reference
Total (hrs.)	60	29 hr. Lecture + 31 hrs. Practice		

Electronic Devices

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electronic Devices	ENFC0416	Theory + Practice	2-1-0	Nil

Objective

- The objective of this subject is to provide in-depth understanding on construction and characteristics of three major components of electronics-diode, BJT, FET.

Course Outcome

- Learn the construction and characteristics of different semiconductor devices.
- Design different rectifier, voltage regulator circuit and Filters.
- Design and analysis of different amplifier circuits.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I: INTRODUCTION

(4 Hours)

Theory

Various properties of conductor, semiconductor and insulator, n-type and p-type semiconductors. Formation of PN junction, depletion region, drift and diffusion.

Module II: SEMICONDUCTOR DIODE

(8 Hours)

Theory

Open-circuited, forward bias and reverse bias of p-n junction diode, Diode equation, Volt-ampere characteristics of p-n junction diode (forward and reverse bias), Temperature dependence of VI characteristic, Transition and Diffusion capacitances.

Practice

- Volt-Ampere characteristics of a Forward bias PN Diode.
- Volt-Ampere characteristics of a Reverse bias PN Diode.

Module III: SEMICONDUCTOR DIODE**(5 Hours)****Theory**

Breakdown mechanisms in semiconductor (Avalanche and Zener breakdown), Zener diode characteristics, LED and photo diode.

Practice

3. Volt-Ampere characteristics of a Zener Diode

Module IV: RECTIFIERS, FILTERS AND REGULATORS**(11 Hours)****Theory**

Half wave rectifier, full wave rectifier and ripple factor. Application of p-n diode as clipper and clamper. Simple circuit of a regulator using Zener diode, series and shunt voltage regulators.

Practice

4. Implementation of half wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values
5. Implementation of full wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values
6. Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.

Module V: TYPES OF FILTER**(10 Hours)****Theory**

Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter.

Practice

7. Implementation of clamper circuits using PN-junction diode. Tracing of waveforms at the clamper circuits output.
8. Design and implementation of a capacitor Filter.
9. Design and implementation of Voltage Regulator using Zener diode

Module VI: BJT CONSTRUCTION AND CHARACTERISTICS**(12 Hours)****Theory**

Bipolar Junction Transistor (BJT), Types, Construction and it's working principle., Transistor as an amplifier, Detailed study of currents in a Transistor, VI characteristics of transistor in Common Base (CB), Common Emitter (CE) and Common collector (CC) configurations; Comparison of CE, CB and CC transistor configuration. Relation between Alpha, Beta & Gamma.

Practice

10. Plot and verify VI Characteristics of BJT in CB configuration.
11. Plot and verify VI Characteristics of BJT in CC configuration.
12. Plot and verify VI Characteristics of BJT in CE configuration.

Module VII: MOSFET CONSTRUCTION & CHARACTERISTICS (10 Hours)**Theory**

MOSFET –Types, Construction, working Principle, characteristics (Enhancement and depletion mode), Symbols of MOSFET, VI characteristics of CS, CD and CG configuration; Introduction to SCR and UJT; Thermal run away and thermal stability

Practice

13. Plot and verify VI Characteristics of FET in CS configuration.
14. Plot and verify VI Characteristics of FET in CD configuration.
15. Plot and verify VI Characteristics of FET in CG configuration.

Practice will be done through hardware implementation and software simulation using OrCAD PSpice/ Multisim/ LTspice.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I [4 hrs. Lecture]				
Various properties of Conductor, Semiconductor & Insulator, n and p – type semiconductors, Formation of PN junction	2	Lecture	Assignment-1.1	Text Book-1
Depletion region, Drift and diffusion	1	Lecture	Assignment-1.2	Text Book-1
Diode equation	1	Lecture	Assignment-1.3	Text Book-1

Module II [4 hrs. Lecture + 4 hrs. Practice]				
Volt-ampere characteristics of p-n diode (Forward and Reverse bias)	4	Practice		Text Book-1 and Lab Manual
Temperature dependence of VI characteristic, Transition and Diffusion capacitances,	2	Lecture	Assignment-2.1	Text Book-1
Breakdown Mechanisms in Semiconductor (Avalanche and Zener breakdown)	2	Lecture	Assignment-2.2	Text Book-1
Module III [3 hrs. Lecture + 2 hrs. Practice]				
Zener diode characteristics	2	Practice		Text Book-1 and Lab Manual
LED and photo diode	3	Lecture	Assignment-3.1	Text Book-1
Module IV [5 hrs. Lecture + 6 hrs. Practice]				
Half wave rectifier	1	Lecture	Assignment-4.1	Text Book-1
Implementation of half wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values	2	Practice		Lab Manual
Full wave rectifier	1	Lecture	Assignment-4.2	Text Book-1
Ripple factor	1	Lecture	Assignment-4.3	Text Book-1
Implementation of full wave rectifier. Tracing of waveforms, measurement of DC load voltage, AC load voltage and ripple factor values	2	Practice		Lab Manual
Application of p-n diode as clipper	2	Lecture	Assignment-4.4	Text Book-1
Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.	2	Practice		Lab Manual
Module V [4 hrs. Lecture + 6 hrs. Practice]				
Clamper	1	Lecture	Assignment-5.1	Text Book-1

Implementation of clamper circuits using PN-junction diode. Tracing of waveforms at the clamper circuits output.	2	Practice		Lab Manual
Types of filter, Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter.	1	Lecture	Assignment-5.2	Text Book-1
Design and implementation of a capacitor Filter.	2	Practice		Lab Manual
Simple circuit of a regulator using Zener diode	1	Lecture	Assignment-5.3	Text Book-1
Design and implementation of Voltage Regulator using Zener diode	2	Practice		Lab Manual
Series and shunt voltage regulators	1	Lecture	Assignment-5.4	Text Book-1
Module-VI [6 hrs. Lecture + 6 hrs. Practice]				
Bipolar Junction Transistor, Types, Construction & it's working principle	2	Lecture	Assignment-6.1	Text Book-1
Transistor as an amplifier, Detailed study of currents in a Transistor	2	Lecture	Assignment-6.2	Text Book-1
VI Characteristics of transistor in Common Base (CB) configurations	2	Practice		Text Book-1
VI Characteristics of transistor Common collector (CC) configurations	2	Practice		Text Book-1
VI Characteristics of transistor Common Emitter (CE) configurations	2	Practice		Text Book-1
Comparison of CE, CB and CC transistor configuration. Relation between Alpha, Beta & Gamma	2	Lecture	Assignment-6.3	Text Book-1
Module VII [4 hrs. Lecture + 6 hrs. Practice]				
MOSFET –Types, construction, working principle	2	Lecture	Assignment-7.1	Text Book-1
Characteristics of MOSFET (enhancement and depletion mode). Symbols of MOSEET	1	Lecture	Assignment-7.2	Text Book-1

VI Characteristics of CS, configuration	2	Practice		Text Book-1
VI Characteristics of CD configuration	2	Practice		Text Book-1
VI Characteristics of CG configuration	2	Practice		Text Book-1
Introduction to SCR and UJT. Thermal run away and thermal stability	1	Lecture	Assignment-7.3	Text Book-1
Total (hrs.)	60	30hrs. Lecture + 30hrs. Practice		

Sensors and IOT

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Sensors and IOT	ENFC0417	Theory & Practice	2-1-0	NIL

Objective

- To teach how 'Internet of Things' works, how the Protocols Function, familiarization with different Sensors and their Working, how a Hardware Communicates with Internet and the way it Exchange Necessary Data Through Internet.

Course Outcome

- Students will gain knowledge on how 'Internet of Things' can be utilized and how different Sensors can help in making the System to Operate Effectively and Smartly.
- Students will develop skill in Designing Portable, Ease of Access, Smart, Effective and Efficient Systems to meet the need of Modern Society by using IOT and various Sensors.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I : SENSORS & IOT

(15 Hours)

Theory

What is Sensor? Types of Sensors, URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR, PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11), Stress Sensors, LoadSensors, Force Sensors, Wi-Fi modules

What is IOT, What Device makes it to IOT, IOT Platforms, What IOT means for the Developer, Challenges of IOT

Practice

- Interfacing and Testing the Ultrasonic Module, Relay and Infra-Red Module
- Interfacing and Testing PIR, Laser LED, and Accelerometer
- Interface the LPG Sensor, Monoxide Sensor, Temperature and Humidity Sensor
- Interfacing and Testing Stress Sensor, Load Sensor, Force Sensor, Wi-Fi Modules

Module II: ARDUINO ENVIRONMENT, WEB CONNECTIVITY (12 Hours)

Theory

Introduction to Arduino, setting up the Arduino Development Environment, Options for Internet Connectivity with Arduino, Interacting with Basic Sensors, Interacting with Basic Actuators, Configuring your Arduino Board for the IOT

Practice

5. Installing the Arduino IDE
6. Learning the steps to Interface the Controller Board to the System through the Interface
7. Connecting the Arduino to the Internet
8. Interacting of various Sensors to the Internet through the Controller Board
9. Interfacing Actuators to the Controller Board and Control through the Internet

Module III: DATA EXTRACTION (5 Hours)

Theory

Grabbing the Content from a Web Page, Sending Data to the Web, Troubleshooting Basic Arduino Issues

Practice

10. Extracting Data from a Web Page
11. Sending Data to a Web Page

Module IV: INTERNET DATA MONITORING (10 Hours)

Theory

Introduction, Internet of Things Platforms for Arduino, Posting the Sensor Data Online, Retrieving your Online Data, Securing your Online Data, Monitoring Sensor Data from a Web based Dashboard, Monitoring several Arduino Boards at once, Troubleshooting Issues with Web Data Monitoring

Practice

12. Posting the data to the Internet through Internet on-line
13. Monitor the Sensor output from a remote computer through Internet
14. Parallel Monitoring multiple Controller Boards connected to the Internet

Module V:WEB SERVICES

(7 Hours)

Theory

Introduction, Discovering the Temboo Platform, Tweeting from an Arduino Board, Posting updates on Facebook, Automation with IFTTT, Sending Push Notifications

Practice

15. Posting an update to Facebook
16. Sending a Push notification through the Controller by Internet

Module VI: INTERACTING WITH WEB SERVICES

(15 Hours)

Theory

Sending Text Message Notifications, Storing data on Google Drive, Troubleshooting issues with Web Services

Practice

17. Sending a Text Notification through Internet
18. Control Light and Fan via Internet. (prototyped as LEDs)
19. Operate a DC Motor and Servo Motor to Simulate the opening and closing of door

Module VII:MACHINE-TO-MACHINE INTERACTIONS

(11 Hours)

Theory

Introduction, Types of IoT Interaction, Basic local M2M Interactions, Cloud M2M with IFTTT, M2M Alarm System, Automated Light Controller, Automated Sprinkler Controller, Troubleshooting basic M2M Issues

Practice

20. Operate the Smoke Detector from Internet
21. Extract the reading of Temperature, Humidity and Monitoring through Internet
22. Automating the Control of Light, Sprinkler
23. Operate the Robot through Internet which has facility of Communication to and fro through Web and the Sensor Data

Session Plan :

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I [3 hrs. Lecture + 12 hrs. Practice]				
What is Sensor? Types of Sensors	1	Lecture	Assignment 1.1	Text Book(TB)-1, Reference Book(RB)-1
URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR	1	Lecture	Assignment 1.2	TB-1, RB-1
Interfacing and Testing the URM 37, Relay, IR Module	4	Practice		TB-1
PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11)	1	Lecture	Assignment 1.3	TB-1, RB-1
Interfacing and Testing PIR, Laser, Accelerometer, MQ2, MQ3, DHT-11	4	Practice		RB-1
Stress Sensors, LoadSensors, Force Sensors, Wi-Fi Modules	1	Lecture	Assignment 1.4	TB-1, RB-1
Interfacing and Testing stress Sensor, Load Sensor, force Sensor, Wi-Fi modules	4	Practice		TB-1
Background, What is IOT, What device makes it to IOT, IOT platforms, What IOT means for the Developer.	1	Lecture	Assignment 1.5	TB-1,
Module II [2 hrs. Lecture + 10 hrs. Practice]				
Introduction, Setting up the Arduino Development Environment.	2	Practice		TB-1

Interacting of various Sensors to the Internet through the Controller Board.	4	Practice		TB-1
Interacting with basic actuators, Configuring your Arduino Board for the IoT.	4	Practice		
Module III [1 hrs. Lecture + 4 hrs. Practice]				
Grabbing the content from a Web page, sending data to the Web, Troubleshooting basic Arduino issues.	1	Lecture	Assignment 3.1	TB-2 RB-1,2
Extracting data from a Web page.	2	Practice		TB-2
Sending data to a Web page.	2	Practice		
Module IV [2 hrs. Lecture + 8 hrs. Practice]				
Introduction, Internet of Things platforms for Arduino	1	Lecture	Assignment 4.1	TB-2 RB-1,2
Posting the Sensor data online, retrieving your online data, and Securing your online data, Monitoring Sensor data from a Web-based dashboard.	4	Practice		TB-2 RB-1,2
Monitoring several Arduino Boards at once, Troubleshooting issues with Web data Monitoring.	1	Lecture	Assignment 4.2	TB-2 RB-1,2
Parallel Monitoring multiple Controller Boards connected to the Internet.	4	Practice		TB-2 RB-1,2
Module V [3 hrs. Lecture + 4 hrs. Practice]				
Introduction, Discovering the Temboo platform, Tweeting from an Arduino Board. Tweeting from an Arduino Board	2	Lecture	Assignment 5.1	TB-2
Posting updates on Facebook, Automation with IFTTT, Sending push notifications.	1	Lecture	Assignment 5.2	TB-2
Posting updates on Facebook, Sending push notifications	4	Practice		TB-2
Module VI [1 hrs. Lecture +14 hrs. Practice]				
Sending text message notifications, Storing data on Google Drive.	2	Practice		

Troubleshooting issues with Web services.	1	Lecture	Assignment 6.1	Text Book-1, Reference Book-1,2
Control Light & Fan from the Internet.	4	Practice		
Remote Controlled door (opening & closing) using servo Motor.	4	Practice		
Smoke detector and Remote Control room temperature from Internet.	2	Practice		
Extract the reading of Temperature, Humidity and Monitoring through Internet.	2	Practice		
Module VII [3 hrs. Lecture + 8 hrs. Practice]				
Introduction, Types of IoT interaction, Basic local M2M interactions.	1	Lecture	Assignment 7.1	Text Book-1, Reference Book-1,2
Cloud M2M with IFTTT, M2M alarm system, Troubleshooting basic M2M issues.	1	Lecture	Assignment 7.2	Text Book-1, Reference Book-1,2
Automated light Controller, Automated sprinkler Controller,	4	Practice		
Introduction, choosing a robotic platform, Building a mobile robot, Configuring your mobile robot, Basic robot Control, Using distance Sensors, Controlling your robot from anywhere, Troubleshooting basic robotic issues.	1	Lecture	Assignment 7.3	Text Book-1, Reference Book-1,2
Operate the robot through Internet which has facility of communication to and fro through Web and the Sensor data.	4	Practice		
Total (hrs.)	75	15 hrs. Lecture + 60 hrs. Practice		

Problem Solving and Programming

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Problem Solving and Programming	ENFC0418	Theory +Practice	1-2-0	Nil

Objective:

- To introduce programming through Visual programming tool - SCRATCH
- To teach problem solving through Flow charting tool - RAPTOR
- To elucidate problem solving through python programming language
- To introduce function-oriented programming paradigm through PYTHON
- To train in development of solutions using modular concepts
- To teach practical Python solution patterns
- To enhance the problem analysis capability and problem solving techniques

Course Outcome:

- Develop a program controlled by a loop.
- Experiment with “costumes” to change the appearance of sprites
- Perform Input, Output Operations using scratch
- Perform computation using common mathematical formulas.
- Develop programs by passing messages between sprites.
- Build Mobile apps using App Inventor
- Select flowchart symbols for solving problems.
- Develop basic flowcharts for performing Input, Output and Computations
- Solve numerical problems using Raptor
- Analyze the different computational problems and give programmatic solutions.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I : SCRATCH (10 Hours)

Introduction to programming concepts with scratch, Scratch environment, sprites looks and motion, Angles and directions, repetition and variation, changing costumes, adding background, Input/Output, variables and operators. Working with sounds and sprite communication and

creating stories, App Generation.

Module II : RAPTOR (10 Hours)

RAPTOR: Flow chart symbols, Input/Output, Assignment, operators, conditional if, repetition, function and sub charts.

Module III : Programming Languages (9 Hours)

Various types of Programming Languages(PL), Types of PL, Characteristics of PL, Syntax, Semantics, Pragmatics Analysis Procedure based languages : General features, Data types, Abstract Data Types (ADT), Structuring, Syntax, Semantics, RAM model of computation, Example : C language

Module IV : Object Oriented Concepts (10 Hours)

Object based languages: Concepts of objects, Class vs ADT, control structures, methods, General features-inheritance, polymorphism, derived classes & information hiding, Example : C++ and Java, Difference with C.

Module V : Programming Concepts (12 Hours)

Logic programming: Predicate calculus- Logical operators, Propositional forms, Rules of inference, Logical equivalence, Quantification, Wellformed formula, Disproofs; Prolog- Syntax, Lists, Operators and arithmetic, Control, i/o, data structures. Functional programming : Lisp- Control constructs, List processing, Files and i/o, Generic functions, Objects,Exceptions.

Module VI : PYTHON Basic concepts (12 Hours)

Python – Numbers, Strings, Variables, operators, expressions, statements, String operations, Math function calls, Input/Output statements, Conditional If, while and for loops, User defined Functions, parameters to functions, recursive functions, Turtle Graphics.

ModuleVII : PYTHON Data Structures (12 Hours)

Lists, Tuples, Dictionaries, Strings, Files and their libraries.Beautiful Idiomatic approach to solve Turtle Bar Chart, Event Driven programming. Key press events, Mouse events, timer events.

Data Structures

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Data Structures	ENFC0419	Theory +Practice	2-1-0	Nil

Objective

- Understand and implement linear, nonlinear datastructures
- Implement various searching and sorting techniques.

Learning outcome

- Acquire the knowledge about linear, non-linear datastructures.
- Able to implement various searching and sorting techniques.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module I (10 Hrs)

Definition, Classification of data structures: primitive and non-primitive, Elementary data organization, Time and space complexity of an algorithm (Examples)

Module II

(10 hrs)

Stack Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations, Conversion of an arithmetic expression from Infix to postfix, Applications of stacks.

Module III

(10 hrs)

Queue: Definition, Array representation of queue, Types of queue: Simple queue, Circular queue, Double ended queue (De-queue), Priority queue, Operations on all types of Queues

Module IV**(15 Hrs)**

Definition, Components of linked list, Representation of linked list, Advantages and disadvantages of linked list. Types of linked list: Singly linked list, doubly linked list, Circular linked list, Operations on singly linked list: creation, insertion, deletion, search and display.

Module V**(15 Hrs)**

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Tree terminology: Root, Node, Degree of a node and tree, Terminal nodes, Non-terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree: Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, In-order and post-order, Binary search tree, AVL tree.

Module VI (14 Hrs)

Basic Sorting and Searching Techniques: Sequential search: Iterative and Recursive methods, Binary search: Iterative and Recursive methods, Comparison between sequential and binary search. Sort: General background and definition, Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort, Radix sort, heap sort.

Module VII(10 Hrs)

Graphs, Graph terminology, Application of Graphs, Depth First search, Breadth First search, Topological sort.

Switching Theory & Logic Design

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Switching Theory & Logic Design	ENFC0420	Theory + Practice	2-1-0	Nil

Objective:

- The Objective of this Subject is to Provide Good Understanding on Digital Logic and Different Combinational and Sequential Circuits Design and their Implementations.

Course Outcome:

- Understand different number representation and conversion between different representations.
- Design various logic gate and simplify different Boolean equations.
- Design and analyze various combinational circuits.
- Understand the design of sequential circuits in terms of Algorithmic State Machines

Evaluation Systems:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: NUMBER SYSTEMS AND CODES (3 Hours)

Number Systems, Base Conversion Methods, Complements of Numbers, Codes- Binary Codes, Binary Coded Decimal Code and its Properties, Module Distance Codes, Alphanumeric Codes, Error Detecting and Correcting Codes.

Module II: BOOLEAN ALGEBRA AND LOGIC MINIMIZATION (9 Hours)

Basic Theorems and Properties, Switching Functions, Canonical and Standard Form, Algebraic Simplification of Digital Logic Gates, Properties of XOR Gates, Universal Gates, Multilevel NAND/NOR realizations

Module III: LOGIC MINIMIZATION AND COMBINATIONAL CIRCUIT DESIGN (13 Hours)

Introduction, The Minimization with theorem, The Karnaugh Map Method, Five and Six Variable Maps, Prime and Essential Implications, Don't Care Map Entries, Using the Maps for Simplifying, Tabular Method Partially Specified Expressions, Multi-output Minimization, Minimization and Combinational Design, Arithmetic Circuits, Comparator, Multiplexers, Code

Converters, Wired Logic, Tristate Bus System, Practical Aspects related to Combinational Logic Design, Hazards and Hazard Free Relations.

Module IV: SEQUENTIAL CIRCUIT DESIGN (9 Hours)

Introduction, Basic Architectural Distinctions Between Combinational and Sequential Circuits, The Binary Cell, Fundamentals of Sequential Machine Operation, The Flip-Flop, The D-Latch & Flip-Flop, The “Clocked T” Flip-Flop, The “ Clocked J-K” Flip-Flop, Design of a Clocked Flip-Flop, Conversion From One Type of Flip-Flop to Another, Timing and Triggering Consideration, Clock Skew

Module V: REGISTER AND COUNTER (10 Hours)

Introduction, State Diagram, Analysis of Synchronous Sequential Circuits, Approaches to the Design of Synchronous Sequential Finite State Machines, Design Aspects, State Reduction, Design Steps, Realization Using Flip-Flops Counters – Design of Single Mode Counter, Ripple Counter, Ring Counter, Shift Register, Shift Register Sequences, Ring Counter Using Shift Register.

Module VI: FINITE STATE MACHINE (8 Hours)

Finite State Machine-Capabilities and Limitations, Mealy and Moore Models-Minimization of Completely Specified and Incompletely Specified Sequential Machines, Partition Techniques, and Merger Chart Methods-Concept of Minimal Cover Table.

Module VII: ALGORITHMIC STATE MACHINES (8 Hours)

Salient Features of the ASM Chart-Simple Examples-System Design Using Data Path and Control Subsystems-Control Implementations-Examples of Weighing Machine and Binary Multiplier.

Operating Systems

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Operating Systems	ENFC0422	Theory + Practice	1-2-0	Nil

Course Objective

- Provide knowledge about the services rendered by operating systems
- Present details discussion on processes, threads and scheduling algorithms
- Discuss various file-system design and implementation issues
- Provide good insight on various memory management techniques
- Expose the students with different techniques of handling deadlocks
- Familiarize students with the basics of linux operating system and perform administrative tasks on Linux servers
- Provide skills in operating system abstraction, mechanism and implementation of operating system concepts

Course Outcome:

- Understand operating system structure and functions, services and system calls
- Differentiate between preemptive, non-preemptive and real time CPU scheduling
- Understand how to achieve mutual exclusion in uniprocessor systems
- IPC outcome
- Demonstrate the ability to implement various memory management techniques
- Illustrate various demand paging techniques.
- Understand file systems in various operating systems
- Analyse different disk scheduling algorithms
- Understand various schemes available for achieving system protection and system security
- Acquire skill in administrating Linux system

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module :I

Introduction:(8hrs)

Architecture, Goals & Structures of O.S, Basic functions, Interaction of O. S. & hardware architecture, System calls, Batch, multiprogramming. Multitasking, time sharing, parallel, distributed & real -time O.S.

Module: II

Process Management: (13hrs)

Process Concept, Process states, Process control, Threads, Uni- processor Scheduling: Types of scheduling : Preemptive, Non preemptive, Scheduling algorithms : FCFS, SJF, RR, Priority, Thread Scheduling, Real Time Scheduling. System calls like ps, fork, join, exec family, wait.

Module :III(12hrs)

Concurrency control :

Concurrency : Principles of Concurrency, Mutual Exclusion : S/W approaches, H/W Support, Semaphores, pipes, Message Passing, signals, Monitors, Classical Problems of Synchronization : Readers-Writers, Producer Consumer, and Dining Philosopher problem. Deadlock :Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, System calls like signal,kill.

Module :IV

Memory Management : (12hrs)

Memory Management requirements, Memory partitioning : Fixed and Variable Partitioning, Memory Allocation : Allocation Strategies (First Fit, Best Fit, and Worst Fit), Fragmentation, Swapping, and Paging. Segmentation, Demand paging

Module V

Virtual Memory :(8hrs)

Concepts, management of VM, Page Replacement Policies (FIFO, LRU, Optimal, Other Strategies), Thrashing.

Module :VI

I/O management & Disk scheduling : (8hrs)

I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering, Disk Scheduling (FCFS, SCAN, C-SCAN, SSTF), RAID, Disk Cache.

Module :VII

Inter Process Communication :(10hrs)

Basic Concepts of Concurrency, Cooperating process, Advantage of Cooperating process, Bounded- Buffer - Shared-Memory Solution, Inter- process Communication (IPC), Basic Concepts of Inter-process Communication and Synchronization.

Text Book:

Operating System Concepts by Abraham Silberschatz , Peter B. Galvin , Wiley Publication

Big Data Analytics

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Big Data Analytics	ENFC0423	Theory +Practice	1-2-0	Nil

Course Objective

- Learn understand and practice big data analytics approaches with the study of modern computing big data technologies and focus on industry application
- Conceptualize and summarize big data computing technologies machine learning, trivial data vs big data and scale of the approaches.
- Gain essential skills in data storage, process and data analysis

Course Outcome:

- Identify the characteristics of data set and compare trivial data and big data for various applications
- Recognize and implement different ways of selecting parameters and integrate with the mathematical and statistical tools
- Acquires skills in big data applications.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module: I Introduction to Big Data(10 hrs)

Big Data-definition, Characteristics of Big Data (Volume, Variety, Velocity, Veracity, Validity), Importance of Big Data, Patterns for Big Data Development, Data in the Warehouse and Data in Hadoop.

Module: II Introduction to Hadoop (10 hrs)

Hadoop- definition, Understanding distributed systems and Hadoop, Comparing SQL databases and Hadoop, Understanding MapReduce, Counting words with Hadoop—running your first program, History of Hadoop, Starting Hadoop - The building blocks of Hadoop, NameNode, DataNode, Secondary NameNode, JobTracker and Task Tracker.

Module: IIIMapReduce(10 hrs)

A Weather Dataset, Analyzing the Data with Unix Tools, Analyzing the Data with Hadoop, Scaling Out, Hadoop Streaming, Hadoop Pipes, Developing a MapReduce Application - The Configuration API, Configuring the Development Environment, Running Locally on Test Data, Running on a Cluster, Tuning a Job, MapReduce Workflows.

Module: IVHDFS(13 hrs)

Components of Hadoop -Working with files in HDFS, Anatomy of a MapReduce program, Reading and writing the Hadoop Distributed File system -The Design of HDFS, HDFS Concepts, The Command-Line Interface, Hadoop Filesystem, The Java Interface, Data Flow, Parallel Copying with distcp, Hadoop Archives

Module: VMapReduce Programming(12 hrs)

Writing basic Map Reduce programs - Getting the patent data set, constructing the basic template of a Map Reduce program, Counting things, Adapting for Hadoop's API changes, Streaming in Hadoop, Improving performance with combiners.

Module : VI MapReduce Advanced Programming (10 hrs)

Advanced MapReduce - Chaining MapReduce jobs, joining data from different sources, creating a Bloom filter, Passing job-specific parameters to your tasks, probing for task-specific information, Partitioning into multiple output files, Inputting from and outputting to a database, keeping all output in sorted order.

Module: VIIGraph Representation in MapReduce(10 hrs)

Modeling data and solving problems with graphs, Shortest Path Algorithm, Friends-of-Friends Algorithm, PageRank Algorithm, Bloom Filter, Parallelized Bloom filter creation in MapReduce, Map-Reduce semi-join with Bloom filters.

Text Books:

1. Anil Maheswari, “ Big Data” TMH Publication
2. Thomas Erl, Wajid Khattak, Paul Buchler “ Big Data Fundamentals: Concepts, Drivers & Techniques Prentice Hall

Block Chain & Smart Contracts

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Block Chain & Smart Contracts	EN FC0424	Theory +Practice	1-1-0	Nil

Course Objective

- This course aims to provide conceptual understanding of the function of Block chains as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable
- It covers the technological underpinnings of block chain operations as distributed data structures and decision making systems, their functionality and different architecture types.
- Able to build the career in block chain application development

Course Outcome :

- Understand the structure of a blockchain and why/when it is better than a simple distributed database
- Analyze the incentive structure in a blockchain based system and critically assess its functions, benefits and vulnerabilities
- Evaluate the setting where a blockchain based structure may be applied, its potential and its limitations
- Analyze to what extent smart and self-executing contracts can benefit automation, governance, transparency and the Internet of Things (IOT)
- Attain awareness of the new challenges that exist in monetizing businesses around blockchains and smart contracts.
- Acquires skills in design and program smart contracts and decentralized applications

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I

Introduction to Distributed system, Challenges in Centralized networks. Fundamentals of cryptography, Introduction to Hashing Algorithms, Family of SHA Algorithms and its applications. Course overview and logistics Bitcoin The big picture of the industry – size,

growth, structure, players. The key terms that are used. Bitcoin versus Cryptocurrencies versus Blockchain, Distributed Ledger Technology (DLT). Strategic analysis of the space – who are the major players (Block chain platforms, regulators, application providers, etc.) Bitcoin, HyperLedger, Ethereum, Litecoin, Zcash. Etc. The major application : currency, identity, chain of custody.

Module: II

Introduction to blockchain, Blockchain eco system, Introduction to consensus algorithms and its importance, Proof of work, Proof of stake. Mining, Rewards, Forking – hard and soft .Types of blockchain – Public, private, permissioned, permissionless.

Module: III

Smart contract – Writing a simple smart contract – deploying a contract. Applications of smart contracts – real time use cases in Banking & Insurance, Supplychain management.

Module: IV

Cryptocurrency, Introduction to tokens – Security Token, Utility token and payment tokens, ERC 20 and ERC 721. Case study on token usage in gaming and e-commerce industry. Creating our own virtual currency using smart contracts. Scaling Blockchain – reading and writing data. Differentiate nodes, sparse data and Merkle trees. Fixing on the fly – fixes to current implementations : Layer 2 solutions (Lightning and Ethereum state channels.) Bitcoin scaling debate (Segwit2x etc.). The realities of hard forks for scaling, and bugs.

Module: V

Case study on Blockchains – Ethereum, Hyperledger and EOS. Blockchain Dynamics, Public and private blockchains, Hard and soft forks, Sharding Side chains, Distributed Virtual Machines, Smart Contracts, Oracles

Module: VI

Basics of contract law. Smartcontracts and their potential Trust in Algorithms, the impact on society. How existing legal systems could be integrated? OpenZeplin, OpenLaw.

Module: VII

Assets (fiat currencies, property, equity, securities). Supply and demand. Inflation and deflation Valuations and bubbles. Cyrptoconomics – moving beyond its use in verifying the blockchain– motivating participants, creating investment funds, storing value Creating and using tokens and coins.

Text Book:

1. Melanie Swan “ Block Chain Blue Print for new economy” Keilly Publication
2. Tiana Laurence “ Block Chain for Dummies” Wiley Publication
3. Debajani Mohanty “ Block Chain” BPB Publication

Product Development

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Product Development	ENFC0601	Practice + Project	0-2-1	Nil

Objectives

- To educate the students on various stages of development of design of a product beginning from intent-to-actual design.
- Educate the students on usage of design software like ENOVIA, SIMULIA.

Course Outcome

- Students will have knowledge and skills to undertake design projects through making design decisions and evolve design of a product using the theoretical knowledge and hands-on-experience provided on design software.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module : I (08 Hours)

Intent, Impact, Import & Use of Core Mechanical Principles for Concept Design, Engineering Design, Problems Engineering can Solve, How to Identify Opportunities for Design, Needs Assessment & Problem Definition.

Module : II (10 Hours)

Defining Requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing Possible Design Solutions, Making Design Decisions.

Module : III (08 Hours)

Introduction to CAD Process through 3D Experience Free Modeling, Modeling & Managing Subassemblies in the Robot

Module : IV PLM through ENOVIA(09 Hours)

Modeling a Lathe Machine.Introduction to PLM through ENOVIA, Steps Involved in Controlling the Product Updates in ENOVIA.

Module : V (20 Hours)

Introduction to FEA in Industry, Pre-Processing Using SIMULIA.

Module : VI (15 Hours)

Understanding the Mathematical Modeling for Product in Physical Behavior

Module :VII (15 Hours)

Introduction to Design of Experiments, How to Use SIMULIA to Make an Incremental Design Decision.Type of Engineering Analysis.

E-content: Peer Learning Experience by Dassault Systemes.

Text Books:

1. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India.
2. Ulrich, K T, Eppinger, S D, Product Design & Development, 2016, 5th edition, Tata McGraw-Hill Companies, Inc.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I				
Intent, Impact, Import, Use of core Mechanical Principles for concept Design, What is Engineering Design, Problems Engineering can solve, How to	08	Tutorial	Project	

identify opportunities for design, Needs Assessment & Problem Definition,				
Module-II				
Defining requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing a possible design Solutions, Making Design Decisions.	10	Tutorial	Project	
Module-III				
Introduction to CAD Process through 3D Experience free modeling, Modeling & managing subassemblies in the Robot,	08	Tutorial , Practice	Project	
Module-IV				
Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps involved in controlling the product updates in ENOVIA.	09	Tutorial , Practice	Project	
Module-V				
Introduction to FEA in Industry, Pre-processing using SIMULIA, Understanding the Mathematical modeling for Product in physical behavior, Introduction to design of experiments, How to use SIMULIA to make a incremental design decision. Type of Engineering analysis. Projects such as Disc Brake analysis by DOE, Door trim Substrate by DOE, MBD of Suspension by DOE.	20	Practice, tutorial	Project	
Module-VI				
Consumer Sentimental Analysis, Behavior Loyalty Metric, Emotional Loyalty Metric, Understanding decision making dashboards in NetVibes,	15	Lecture, Practice	Project	
Interpreting the Real time social data, Creation of different metric for business condition in Net Vibes, Automate Business logic to respond.	15	Lecture, Practice	Project	
Total (hours)	85			

Artificial Intelligence Tools, Techniques and Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Artificial intelligence Tools, Techniques and Application	ENFC0603	Practice + Project	0-2-1	Nil

Objective

- Introduce fundamental concepts in AI
- Demonstrate the capability to create simple AI applications using Natural Language Processing, Audio engineering & Speech, Computer Vision, pattern recognition and machine learning.
- Present various modeling and formulation techniques to solve problems using AI techniques.
- Introduce state-of-art AI tools and techniques to solve various problems faced by Engineers in design and analysis.

Course Outcome:

- Understand the importance of AI.
- Explain the concepts of Natural Language Processing.
- Understand concepts of Machine Learning algorithms and their limitations.
- Compare different Machine Learning Algorithms
- Summarize applications of Speech Recognition and Synthesis.
- Develop the applications of, Computer Vision and Image Processing.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module :I Introduction to Artificial Intelligence(10 hrs)

Basics of AI.Applications of AI. Advanced search, Constraint satisfaction problems, Knowledge representation & reasoning, Non-standard logics, Uncertain and probabilistic reasoning

Conceptual introduction to **Machine Learning: Introduction** to Neural Networks, Supervised, Unsupervised, and Semi-Supervised Learning, Deep Learning, Reinforcement Learning, LinearRegression.

Module :II Conceptual introduction to Natural Language Processing : (10 hrs)

Natural language Understanding, Sentiment Analysis, Segmentation and recognition.Conceptual introduction to **Speech Recognition &Synthesis: Speech Fundamentals**, Speech Analysis,Speech Modeling, Speech Recognition, Speech Synthesis, Text-to-Speech

Module : III Conceptual introduction to Image Processing & Computer Vision : (10 hrs)

Introduction to Image processing, Image Noise, Removal of Noise from Images, Color Enhancement, Segmentation, Edge Detection, Optical Character Recognition, Feature Detection & Recognition

Module :IV BOT Technologies and Virtual Assistants : (10 hrs)

Chatbots: Introduction to a Chatbot, Architecture of a Chatbot. NLP in the cloud, NL Interface, How to Build a Chatbot, Transformative user experience of chatbots, Designing elements of a chatbot, Best practices for chatbot development. NLP components.NLP wrapper to chatbots.Audiobots and Musicbots.

Virtual Assistants :Architecture of a Virtual Assistant.

Module :V Image Processing & Computer Vision : (10 hrs)

Image - Definition and Tagging.Classification of images.Tagging.Image formation, Deep Learning algorithms for Object detection & Recognition. Face recognition, Instance recognition, Feature detection and matching, Segmentation, Recognition Databases and test sets Applications -- Feature extraction, Shape identification. Fane detection,.

Applications :Automation, Agriculture[Crop and Soil Monitoring, Grading farm produce, Predictive Analytics], Retail and Retail Security[Amazon Go], Autonomous vehicles,

Module: VI Reinforcement Learning(10 hrs)

Introduction to Reinforcement Learning, Game Playing [Deep Blue in Chess, IBM Watson in Jeopardy, Google's DeepMind in AlphaGo], Agents and Environment, Action-Value Function, Deep ReinforcedLearning

Module :VII Smart Applications (10 hrs)

Smart Manufacturing, Smart Agriculture, Smart Healthcare, Smart Education, Smart Grids,

Smart Transportation and Autonomous Vehicles, Smart Homes, Smart Cities

Text Books:

2. Prateek Joshi, Artificial Intelligence with Python, 1st Edition, Packt Publishing Limited, January 2017.
3. Stuart J.Russell, Peter Norving, Artificial Intelligence, Pearson Publishing, 2015

Note: 14 hrs will be assigned for Project.

Cloud Computing and its Applications Using Linux OS

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cloud Computing and its Applications using Linux	ENFC0602	Practice + Project	0-2-1	Nil

Course Objective

- To learn how to use Cloud Services.
- To implement Virtualization
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- Broadly educate to know the impact of engineering on legal and societal issues involved.

Course Outcome

- Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
- Acquires the skills in accessing cloud Storage systems and Cloud security and develop cloud application

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module: I Introduction to User Permissions (10 Hours)

Users, Groups and Permissions, Using the bash Shell, Std. I/O and Pipes, Text Editor, Basic System Configuration Tools, Investigating and Managing Processes, Configuring the Bash Shell, Finding and Processing Files, Network Clients.

Module: II Basics Commands of OS (15 Hours)

Basic Commands & OS Basics, browsing root and various directories, ext3 and ext4 file system, chmod, chgrp, bash, set, shell basics, less, more, tail, head, sort, cut, grep, awk, sed, tr, etc., vi, ps, kill, top, jobs, shell scripting – branching, looping, find, locate and advanced find, network related scripts, cron, tar, and additional tools

Module: III File System Management (10 Hours)

Package Management, Kernel Services, and System Services, File system Management, User Administration, Network Configuration, Installation, and Troubleshooting, Minor Project for develop a file system, System Performance and Security, Web Service and website configuration,

Module: IV Commands of Linux (10 Hours)

Rpm , yum, apt-get, lspci, lsmod, systemctl services, chkconfig, creating partition, format and mount, LVM useradd, userdel, groupadd, groupdel, passwd, chage, acl, raid, iscsi etc, Basic Installation and Configuration Breaking SU passwd, services check Electronic Mail Services, Account Management, Design and develop a network using packet tracer. Cloud Computing

Module: V Introduction to Cloud (10 Hours)

Introduction to Cloud, Amazon EC2 and EBS, Amazon S3, RRS, Auto Scaling and load distribution in AWS, Route53, AWS VPC, IAM. Services and resources life cycle, AWS Architecture and Design, Cloud Migration and Implementation

Module: VI Introduction to Kali Linux(15 Hours)

Using Kali Linux - Footprinting and Reconnaissance - FP Terminology, What is FP, Why FP, Objectives of FP, Types of Threats, FP through Search Engines, Competitive Intelligence Gathering, Footprinting using google hacking WHOIS Lookup, DNS Information, Network FP, Traceroute, FP through Social Engineering, Pen Testing, FP Countermeasures. DN Analyzer Pro, Web Data Extractor.

Social Engineering : What is SE, Types of SE, Human-based, Computer-based and Mobile based SE, SE Countermeasures.

Module: VII Networking Concepts**(15 Hours)**

Scanning Networks : Identifying hosts, ports and services, Scanning Methodology, Checking Live Systems, Ping Sweep, Check for Open Ports, Scanning Techniques, scanning beyond IDS, Banner Grabbing, Scan for Vulnerability, Draw Network Diagrams, Prepare Proxies, Pen Testing. Sniffing: Wiretapping, Packet Sniffing, CAM Table, MAC Flooding Tool : macof -i eth0, Yersinia, DHCP Packet Format, Starvation Attack Tool. Rogue DHCP Server Attack ARP, ARP Spoofing Techniques, ARP Spoofing Attack, and Wireshark.

Problem Solving Using Python

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Problem Solving Using Python	ENFC0901	Theory +Practice	1-2-0	Nil

Objective:

- Learn core Python scripting elements such as variables and flow control structures.
- Understand the concepts of file I/O.
- Plot data using appropriate Python visualization libraries such as Numpy, Matplotlib and SciPy etc.
- To enhance the problem analysis capability and problem solving techniques using python

Course Outcome:

- Able to use object oriented concept to solve problems.
- To quickly and easily draw plot or visualize the information through visualization technique.
- Write an error free program of minimum 200 lines of code.
- Acquire python coding skill which helps students in getting jobs in different IT firms

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I : Familiarization of Python (12 Hours)

Features and Installation, Setting up Path, Working with Python Basic Syntax, Variable and Data types, Basic operators, Numbers, Array, Tuples, Dictionary, Date and Time. **String Manipulation** :Accessing Strings, Basic Operations, String slices.

List :Accessing lists, Operations, Working with lists List (Functions).

Decision Making Statement :Boolean Expressions, if-else Statement, Nested if Else Statement, elif Statement, Switch Statement. **Iteration Statement** :The while Statement, for Statement, Nested Loops, Break and Continue statement.

Module II : Functions Operation (10 Hours)

Types of Function, Function Arguments, Passby reference vs value, Recursion Function. Files Operation : Create Text & Binary Files, Different modes of opening a file, Reading and Writing into Files, FilePositions.

Module III : NumPy (10 Hours)

Arrays, Array indexing, Data types, Array math operation, Sequences, Repetitions and Random number, Broadcasting, Polynomial, unique items and the counts.

Module IV : Functional Programming (12 Hours)

Lists, Tuples, Dictionaries, Strings, stacks, queues, lambda function, Standard library functions, multithreading.

Module V : SciPy (12 Hours)

Numpy VS SciPy, File input/output, Special Function, Linear Algebra, Operation, Interpolation, Optimization and fit, Statistics and random numbers, Numerical Integration, Fast Fourier transforms, Image manipulation.

Module VI : GUI Programming (08 Hours)

Example GUI Program, Environment Variables, Label, Message Widget, Text Area, Button, Radio Button, CheckBox, Listbox/ DropDown Box, Frames, Menu Widget, Menu Button Widget, Scrollbar, Forms, Sliders, Database access, Sending email.

Module VII: Data Visualization (11 Hours)

Visualization Libraries, Data frame : Data types, Attributes, methods (mean(), median(), std(), var(), cor(), min()/ max(), describe()), groupby method, Selecting Column, Filtering, Selecting row and column, Missing values, Data read from excel, CSV and txt file. **Plotting using Matplotlib** :Basic plot(), Histogram, Bar Plot, Box Plots, Area Plot, Scatter Plot, PieChart.

Object Oriented Programming Using Java

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Object Oriented Programming using Java	ENFC0902	Theory + Practice + Project	1-1-1	Nil

Objective:

- To learn why Java is useful for the design of desktop and web applications.
- To learn how to implement object-oriented designs with Java.
- To identify Java language components and how they work together in applications.
- To design and program stand-alone Java applications.
- To learn how to design a graphical user interface (GUI) with Java Swing.
- To understand how to use Java APIs for program development.

Course Outcome:

- Able to understand the use of OOPs concepts.
 - Able to solve real world problems using OOP techniques.
 - Able to understand the use of abstraction.
 - Able to understand the use of Packages and Interface in java.
 - Able to develop and understand exception handling, multithreaded applications with synchronization.
- Able to **design** GUI based applications and **develop** applets for web applications.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outline

Module:I Problem Solving Techniques & OOP(10 hrs)

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, MeansEnds Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block : The Fear of Starting, Object Oriented Problem Solving, and Case Study. Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution ofProgram.

Object-Oriented Programming: Object Oriented Concepts, Java Programming Environment,

Feature of Java, Elements of Java Program : Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module : II Class & Characteristics of OOPs (12 hrs)

Classes : Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword. Inheritance and Polymorphism : Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module :III Package and Interface (12 hrs)

Packages : Packages, Access Protection, Importing Package Interfaces : Interface, Implementing Interfaces.

Module :IV String Handling and Exception Handling (10 hrs)

StringHandling : String, String Buffer, String Builder. Excepting Handling :Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, MultipleCatches, Throw, Throws, Finally, Java’s Built-In Exceptions, User-Defined Exception.

Module-V :Multi-Threading (10 hrs)

Multi-Threading : Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors(java.util).

Module-VI:Java.IO and AWT (10 hrs)

Java.IO : I/O Streams, Serialization AWT : AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module: VIIEvent Handling(10 hrs)

Event Handling : Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components

Text Books:

1. Walter Savitch, “Java-An Introduction to Problem Solving& Programming”, 8th edition, in Pearson, 2017.

Web Technologies

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Web Technologies	ENFC0903	Theory + Practice + Project	1-1-1	Nil

Objective:

- Understand client server architecture and able to use the skills for web project development
- Create job opportunities as a web developer.

Course Outcome:

- Develop a static, interactive and well-formed webpage using JavaScript, CSS3 and HTML5
- Use PHP7 to improve accessibility of a web document.
- Gain necessary skills for designing and developing web applications

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outcome

Module: I HTML5:(10 hrs)

Editors, Attributes, Head, Meta, Body, Style, Paragraphs, Headings, Bold, Line Breaks, Horizontal Rule, Upload, Textarea, Charset, URL Encoding, XHTML, Semantics, Migration, Syntax, Canvas, SVG, Audio, Video, API's, Geolocation, Drag/Drop, Local Storage, Web Workers, App Cache

Module:II CSS3 (10 hrs)

Introducing CSS3,What is CSS3?,The History of CSS, Browser Support, Selectors and Pseudo Classes, Attribute Selectors, The Target Pseudo-Class, UI Element States Pseudo- Classes, Negation Pseudo-Class, Structural Pseudo-Classes, Fonts and Text Effects, Fonts on the Web, Font Services, Gradients, Rounded Corners, Box Shadow, Transitions, Transforms, and Animations, Transitions and Transforms, Transitions.

Module:III Java Script, XML (12 hrs)

Basics, Functional programming, Object oriented programming, Client-side applications, Server-side applications, Design patterns and Idioms, Popularframeworks.
XML Basics, SAX, DOM, Xpath, Digester, XUL, SOAP, WSDL

Module:IV PHP (12 hrs)

Introduction to PHP,Installation of PHP and mySql,PHP configuration in IIS & Apache Web Server and features of PHP,Writing PHP,How PHP code is parsed,Embedding PHP and HTML,Executing PHP and viewing in Browser,Data types,Operators,PHP variables : static and global variables,Comments in PHP,Control Structures,Condition statements,If...Else Switch,? Operator,Loops,While,Break Statement,Continue,Do... While,For,For each,Exit, Die, Return,Arrays in PHP

Module: V Advanced PHP(10 hrs)

Working With Data Form Element, Input Elements, Validating The User Input, Passing Variables Between Pages, Passing Variables Through A Get,Passing Variables Through A Post, Passing Variables Through A Request,Functions,Handling Sessions And Cookies, Concept Of Session, Starting Session,Modifying Session Variables, Unregistering And Deleting Session Variable,Concept Of Cookies,Handling Of Cookies, Introduction Of MySQL, Types Of Tables In Mysql,Query In Mysql : Select, Insert, Update, Delete,Truncate,Alias,Order By,Database Connectivity Of Php With Mysql

Module: VI Mysqli(10 hrs)

Data Definition Statements, Data Manipulation Statements, Transactional and Locking Statements, Replication Statements, Prepared SQL Statement Syntax, Compound-Statement Syntax, Database Administration Statements, Utility Statements, Connection with PHP and Mysql using PDOs

Module: VII CMS (10 hrs)

BootStrap, Joomla, Wordpress, Drupal with project implementation

Text Books

1. HTML 5 Black Book (Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP, jQuery) 2Ed By DT Editorial Services.
2. [Web Technologies: HTML, JAVASCRIPT, PHP, JAVA, JSP, ASP.NET, XML and Ajax, Black Book: HTML...](#) by Kogent Learning Solutions Inc.
3. MySQL(TM): The Complete Reference,Vikram Vaswani
4. PHP: The Complete Reference,Steven Holzner
5. Beginning HTML5 and CSS 3, Copyright © 2012 by Richard Clark, Oli Studholme, Christopher Murphy and Divya Manian.

Software Engineering using Agile

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Software Engineering using Agile	ENFC0904	Theory + Practice + Project	1-1-1	Nil

Objective

- Explain the phases of Software Development.
- Teach the customer requirement gathering techniques.
- Familiarize with Agile software development methods.
- Demonstrate the testing techniques.
- Teach Software Design techniques
- Learn the skill principles and practices associated with agile development methods

Course Outcome:

- List the steps involved in software development.
 - Interpret the myths of software.
 - Analyze various software process models
 - Explain agile software development model
 - Identify the functional and non-functional requirements for software development
 - Analyse user requirements for a software
- Apply agile software development model (L3)
 Identify different requirement modeling strategies (L2)
 Design UML Diagrams for the given problem (L6)

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	40 (30+5+5)	Written examination + Assignment + Attendance
	Internal Practice	50 (40+10)	Lab Work
	Internal Project	50	Project Work
External Examination	External Theory	60	Written examination
	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		300	

Course Outline

Module: I Software Engineering Process: (10 hrs)

The Nature of Software, The Unique Nature of WebApps, Software Engineering, The Software Process, Software Engineering Practice, Software Myths, How It All Starts. A Generic Process Model, Process Assessment and Improvement, Prescriptive Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models, Process Technology.

Module: II Agility(10 hrs)

What Is Agility?, Agility and the Cost of Change, What Is an Agile Process?, Extreme Programming (XP), Other Agile Process Models, A Tool Set for the Agile Process, Software Engineering Knowledge , Core Principles, Principles That Guide Each Framework Activity, Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Requirements Model, Negotiating Requirements, Validating Requirements.

Module: III UML Models (12 hrs)

Requirements Analysis, Scenario-Based Modeling, UML Models That Supplement the Use Case, Data Modeling Concepts, Class-Based Modeling, Requirements Modeling Strategies, Flow-Oriented Modeling, Creating a Behavioral Model, Patterns for Requirements Modeling, Requirements Modeling for WebApps.

Module: IV Software Design (12 hrs)

Design within the Context of Software Engineering, The Design Process, Design Concepts, The Design Model, Software Architecture, Architectural Genres, Architectural Styles, Assessing Alternative Architectural Designs, Architectural Mapping Using Data Flow.

Module: VSoftware Design

What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Component-Level Design for WebApps, Designing Traditional Components, Component-Based Development.

Module: VI Software Interface (10 hrs)

The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, WebApp Interface Design, Design Evaluation, A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Test Strategies for Object-Oriented Software, Test Strategies for WebApps, Validation Testing, System Testing.

Module: VII Software Testing (10 hrs)

The Art of Debugging, Software Testing Fundamentals, Internal and External Views of Testing, White-Box Testing, Basis Path Testing

Internet of Things

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Internet of Things	ENFC1407	Workshop	0-2-0	Nil

Objective

- Introduce the fundamental concepts of IoT and physical computing
- Expose the student to a variety of embedded boards and IoT Platforms
- Create a basic understanding of the communication protocols in IoT communications.

Course Outcome:

- Explain IOT architecture.
- Interpret the design principles that govern connected devices
- Summarize the roles of various organizations for IOT
- Explain the basics of microcontrollers
- Outline the architecture of Arduino
- Acquire skills to develop applications using Arduino

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course Outline

Module: I

The Internet of Things : An Overview; The Flavour of the Internet of Things; The “Internet” of “Things”; The Technology of the Internet of Things; Enchanted Objects; Who is Making the Internet of Things?; Design Principles for Connected Devices; Calm and Ambient Technology; Privacy; Keeping Secrets; Whose Data Is It Anyway?; Web Thinking for Connected Devices; Small Pieces, Loosely Joined; First-Class Citizens On The Internet; Graceful Degradation ; Affordances

Module: II

Embedded Computing Basics; Microcontrollers; System-on-Chips; Choosing Your Platform; Arduino; Developing on the Arduino; Some Notes on the Hardware; Openness;

Module: III

Raspberry Pi ; Cases and Extension Boards; Developing on the Raspberry Pi; Some Notes on the Hardware; Openness; Other notable platforms; Mobile phones and tablets; Plug Computing ; Always-on Internet of Things

Module: IV

Internet Principles; Internet Communications : An Overview IP; TCP; The IP Protocol Suite (TCP/IP); UDP ; IP Addresses; DNS ; Static IP Address Assignment ; Dynamic IP

Module: V

Address Assignment; IPv6 ; MAC Addresses ; TCP and UDP Ports An Example : HTTP Ports ; Other Common Ports; Application Layer Protocols- HTTP; HTTPS : Encrypted HTTP ; Other Application Layer Protocols

Module: VI

Getting Started with an API; Mashing Up APIs; Scraping; Legalities; Writing a New API; Clockodillo; Security; Implementing the API; Using Curl to Test; Going Further;

Module: VII

Real-Time Reactions; Polling; Comet; Other Protocols ; MQ Telemetry Transport; Extensible Messaging and Presence Protocol; Constrained Application Protocol

Build Your Own Computer

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Build your Own Computer	ENFC1402	Workshop	0-2-0	Nil

Objective:

- Develop ability to understand the internals of Computer and peripherals
- To have an overall idea about networking concepts and devices
- To have an overall idea about secure computing

Course Outcome:

- Build your computing device
- Troubleshoot various faults in a computer system and network
- Construct small LAN for resource sharing

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course Outline

Module: I

Firmware upgrades/flash BIOS, BIOS component information, BIOS configurations, Built-in diagnostics, Monitoring. Sizes of cabinet, Expansion slots, RAM slots, CPU sockets, Chipsets, CMOS battery, Power connections and types, Fan connectors, Front/top panel connectors, Bus speeds, Resetbutton.

Module :II

Types of RAM, Single channel vs. dual channel vs. triple channel, RAM compatibility. Sound cards, Video cards, Network cards, USB cards, Firewire cards, Thunderbolt cards, Storage cards, Modem cards, Wireless/cellular cards, TV tuner cards, Video capture cards, Risercards.

Module :III

Display types, Refresh/frame rates, Resolution, Native resolution, Brightness/lumens, Analog vs. digital, Privacy/antiglare filters, Multiple displays, Aspect ratios. Display cable and connector types.

Module :IV

Drives, Magnetic hard disk drives, Hot swappable drives, Solid state/flash drives, RAID types, Tape drive, Media capacity.

Module :V

Socket types – Intel and AMD, Characteristics, Cooling – Heat sink, fans, thermal paste.
Connector type, characteristics and their voltages

Module :VI

Input and Output devices, network cable and connectors, crimping of network cable. Hardware and network troubleshooting. Assembling and disassembling of computer and laptop

Module :VII

Installation of DOS and Non-DOS operating system – Automatic and Manual Configurations

Cloud Computing Application

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Cloud Computing Application	ENFC1403	Workshop	0-2-0	Nil

Objective

- Learn fundamentals of cloud computing
- Learn to build distributed applications and microservices with AWS Step Functions
- Learn step-by-step to setup up AWS platform

Course Outcome

- Setup AWS Account and AWS infrastructure
- Deploying serverless micro services
- Implementing scalability and implementing high availability

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Practice	100	Workshop
	Total	100	

Course outline

Module: I (8 Hrs)

UNDERSTANDING CLOUD BASICS

Defining cloud computing, Introducing public, private, and hybrid clouds, Introducing cloud service models – IaaS, PaaS, and SaaS, Introducing multi-tenancy models, Compare cloud value proposition with conventional models. Understand Global Infrastructure – Region, Availability Zones, Edge Locations; Setting up AWS account, Getting Familiarity with AWS Management Console; Understanding cloud-based workloads

Module: II (10 Hrs)

DESIGNING CLOUD APPLICATIONS

Introducing cloud-based multitier architecture, Designing for multi-tenancy, Understanding cloud applications design principles, Understanding emerging cloud-based application architectures, Estimating your cloud computing costs, A typical e-commerce web application

Module: III (8 Hrs)

INTRODUCING AWS COMPONENTS

AWS components, managing costs on AWS cloud, Application development environments
Setting up the AWS infrastructure

Module: IV (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SCALABILITY

Defining scalability objectives, Designing scalable application architectures, Leveraging AWS infrastructure services for scalability, Evolving architecture against increasing loads, Event handling at scale, setting up Auto Scaling

Module: V (8 Hrs)

DESIGNING FOR AND IMPLEMENTING HIGH AVAILABILITY

Defining availability objectives, Nature of failures, Setting up high availability

Module: VI (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SECURITY

Defining security objectives, Understanding the security responsibilities, Best practices in implementing AWS security, Setting up security

Module: VII (10 Hrs)

DEPLOYING TO PRODUCTION AND GOING LIVE

Managing infrastructure, deployments, and support at scale, Creating and managing AWS environments using CloudFormation, Using CloudWatch for monitoring, Using AWS solutions for backup and archiving, Planning for production go-live activities, Setting up for production

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)

Defining cloud computing, Introducing public, private, and hybrid clouds	2	Lecture	Assignment	Text Book -1
Introducing cloud Service models – IaaS, PaaS, and SaaS, Introducing multi-tenancy models	2	Lecture	Assignment	T.B-1
Understanding cloud-based workloads, Setting up AWS account	2	Lab Practice	Experiment	T.B-1
Introducing cloud-based multitier architecture, Designing for multi-tenancy	2	Lab Practice	Experiment	T.B-1
Understanding cloud applications design principles, Understanding emerging cloud-based application architectures	2	Lab Practice	Experiment	T.B-1
Estimating your cloud computing costs, A typical e-commerce web application	2	Lab Practice	Experiment	T.B-1
AWS components, Managing costs on AWS cloud	2	Lab Practice	Experiment	T.B-1
Application development environments	2	Lab Practice	Experiment	T.B-1
Setting up the AWS infrastructure	2	Lab Practice	Experiment	T.B-1
Defining scalability objectives, Designing scalable application architectures	4	Lab Practice	Experiment	T.B-1
Leveraging AWS infrastructure services for scalability	4	Lab Practice	Experiment	T.B-1
Evolving architecture against increasing loads	2	Lab Practice	Experiment	T.B-1
Event handling at scale , Setting up Auto Scaling	4	Lab Practice	Experiment	T.B-1
Defining availability objectives, Nature of failures, Setting up high availability	6	Presentation, Lab Practice	Assignment, Experiment	T.B-1

Defining security objectives, Understanding the security responsibilities	3	Lab Practice	Experiment	T.B-1
Best practices in implementing AWS security, Setting up security	4	Lab Practice	Experiment	T.B-1
Managing infrastructure, deployments, and support at scale	3	Lab Practice	Experiment	T.B-1
Creating and managing AWS environments using CloudFormation	3	Lab Practice	Experiment	T.B-1
Using CloudWatch for monitoring	2	Lab Practice	Experiment	T.B-1
Using AWS solutions for backup and archiving	2	Lab Practice	Experiment	T.B-1
Planning for production go-live activities, Setting up for production	3	Lab Practice	Experiment	T.B-1
Total (hrs)	60			

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Transmission & Distribution

Course Title	Code	Type of course	T-P-P	Prerequisite
Transmission & Distribution	ELCC0101	Theory	3-0-0	Nil

Objective

- To make the students conversant with all the important aspects of overhead transmission and distribution system.

Course Outcome

- Understand the structure, components, calculations and design of transmission and distribution line parameters.
- Design power system components for a specified system and application

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I: Transmission Line Parameters-Resistance and Inductance (10 hours)

Theory

Resistance: Series impedance of transmission line, Types of conductors, Resistance, Tabulated Resistance value, Skin and Proximity effects, **Inductance:** Inductance of a conductor due to Internal Flux, Flux linkages between two points External to an Isolated Conductor, Inductance of a Single-phase Two-wire Line, Flux Linkages of One Conductor in a group, Inductance of composite conductor lines, The use of tables, Inductance of Three-phase Lines with Equilateral Spacing, Inductance of Three-phase Lines with Unsymmetrical Spacing, Inductance calculations for Bundled Conductor

Module II: Capacitance of Transmission Lines (6 hours)

Theory

Electric field of a long, straight conductor, The potential Difference between Two Points Due to a Charge, Capacitance of a Two wire Line, , Capacitance of Three-phase Lines with Equilateral

Spacing, Capacitance of Three-phase Lines with Unsymmetrical Spacing, Effect of Earth on the Capacitance of Three-phase Transmission line, capacitance calculation for bundled conductors, Parallel-circuit Three-phase Lines.

Module III: Performance Of Transmission Lines (14 hours)

Theory

Current and Voltage Relations on a Transmission Line, Representation of Lines, Short Transmission Line, Medium Length Line, Long Transmission Line, Equivalent Circuit of a long Transmission Line, Ferranti effect , Power flow through a Transmission Line, Reactive compensation of Transmission Line, Transmission Line Transients, Travelling waves, Reflections, Direct current Transmission

Module IV: Overhead Line Insulators (3 hours)

Theory

Types of Insulators, String efficiency and Methods for improvement of string efficiency.

Module V: Mechanical Design Of Overhead Transmission Lines (3 hours)

Theory

Sag and Tension Calculations- with equal and unequal heights of towers, Effect of Wind and Ice on weight of Conductor.

Module VI: Corona (3 hours)

Theory

Description of the phenomenon, factors affecting corona, critical voltages and power loss, Radio Interference

Module VII: Distribution (6 hours)

Theory

Comparison of various Distribution Systems, AC three-phase four-wire Distribution System, Types of Primary Distribution Systems, Types of Secondary Distribution Systems, Voltage Drop in DC & AC Distributors, Kelvin’s Law & Limitations.

Text Books:

1. John J. Grainger and W. D. Stevenson, “Power System Analysis,” Tata McGraw-Hill, 2003.
2. M..L. Soni, , P.V.Gupta, , U.S.Bhatnagar, and A .Chakrabarthy, “A Text Book on Power System Engineering” DhanpatRai& Co Pvt. Ltd.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading

Module – I :Transmission Line Parameters-Resistance and Inductance (10 hours)				
Series impedance of transmission line: Types of conductors, Resistance, Tabulated Resistance value,	1	Lecture	-	TB 1 4.1,4.2,4.3
Skin Effect and Proximity effect	1	Lecture	Assignment 1.2	
Inductance of a conductor due to Internal Flux,	1	Lecture	Assignment 1.3	TB 1 4.4
Flux linkages between two points - External to an Isolated Conductor,	1	Lecture	Assignment 1.4	TB 1 4.5
Inductance of a Single-phase Two wire Line	1	Lecture	Assignment 1.5	TB 1 4.6
Flux Linkages of One Conductor in a group,	1	Lecture	Assignment 1.6	TB 1 4.7
Inductance of composite conductor lines, The use of tables,	1	Lecture	Assignment 1.7	TB 1 4.8,4.9
Inductance of Three-phase Lines with Equilateral Spacing,	1	Lecture	Assignment 1.8	TB 1 4.10
Inductance of Three phase Lines with Unsymmetrical Spacing	1	Lecture	Assignment 1.9	TB 1 4.11
Inductance calculations for Bundled Conductor.	1	Lecture	Assignment 1.10	TB 1 4.12
Module – II Capacitance of Transmission Lines (6 hours)				
Capacitance of Transmission Lines: Electric field of a long straight conductor	1	Lecture	Assignment 2.1	TB 1 5.1
The potential Difference between Two Points Due to a Charge,	1	Lecture	Assignment 2.2-2.4	TB 1 5.2
Capacitance of a Two wire Line,	1	Lecture	Assignment 2.5-26	TB 1 5.3
Capacitance of Three-phase Lines with Equilateral Spacing,	1	Lecture	Assignment 2.7-2.9	TB 1 5.4
Capacitance of Three-phase Lines with Unsymmetrical Spacing,	1	Lecture	Assignment 2.10-2.12	TB 1 5.5
Effect of Earth on the Capacitance of Three-phase Transmission line	1	Lecture	Assignment 2.13-2.15	TB 1 5.6
Module – III Performance Of Transmission Lines (14 hours)				
Performance of transmission lines: Representation of Lines,	1	Lecture	Assignment 3.1	TB 1 6.1
Short Transmission Line,	1	Lecture	Assignment 3.2-3.5	TB 1 6.2
Medium Length Line: End condenser method	1	Lecture	Assignment 3.6	TB 1 6.3.1
Nominal T method	1	Lecture	Assignment	TB 1

			3.7-3.10	6.3.2
Nominal Pie Method	1	Lecture	Assignment 3.11-3.15	TB 1 6.3.3
Long Transmission Line: Rigorous method of solving long transmission line	2	Lecture	Assignment 3.16-3.18	TB 1 6.4
Equivalent Circuit of a long Transmission Line, Equivalent T circuit	2	Lecture	Assignment 3.19	TB 1 6.5
Equivalent Circuit of a long Transmission Line, Equivalent pie circuit	2	Lecture		TB 1 6.6
Ferranti effect, Power flow through a Transmission Line,	1	Lecture	Assignment 3.20	TB 1 6.7,6.8
Reactive compensation of Transmission Line, Transmission Line Transients, Travelling waves	2	Lecture		TB 1 6.9
Module – IV Overhead Line Insulators (3 hours)				
Insulators: Types of Insulators,	1	Lecture	Assignment 4.1-4.3	TB 2 11.1,11.2
String efficiency calculation	1	Lecture	Assignment 4.4-4.8	TB 2 11.3,11.5
Methods for improvement of string efficiency	1	Lecture	Assignment 4.9-4.12	TB 2 11.6
Module – V Mechanical Design Of Overhead Transmission Lines (3 hours)				
Mechanical Design of Overhead Transmission Lines: Sag Calculations with equal heights of towers	1	Lecture	Assignment 5.1-5.6	TB 2 12.1,12.3
Sag Calculations with unequal heights of towers	1	Lecture	Assignment 5.7-5.10	TB 2 12.4
Effect of Wind & Ice on weight of Conductor,	1	Lecture	Assignment 5.11-5.15	TB 2 12.6,12.7
Module – VI Corona (3 hours)				
Corona: Description of the phenomenon	1	Lecture	Assignment 6.1	TB 2 15.1,15.2
Factors affecting corona	1	Lecture	Assignment 6.2	TB 2 15.3
critical voltages and power loss, Radio Interference	1	Lecture	Assignment 6.3-6.6	TB 2 15.4,15.5
Module – VII Distribution (6 hours)				
Distribution: Comparison of various distribution systems AC three-phase four-wire Distribution System,	1	Lecture	Assignment 7.1-7.4	TB 2 18.1,18.2
Types of Primary Distribution	1	Lecture	Assignment	TB 2

Systems, Types of Secondary Distribution Systems			7.5-7.6	18.3,18.4
Voltage Drop in DC Distributors,	2	Lecture	Assignment 7.7-7.15	TB 2 18.5,18.6
Voltage Drop in AC Distributors,	1	Lecture	Assignment 7.16-7.20	TB 2 19.1-4
Kelvin's Law & Limitations	1	Lecture	Assignment 7.21-7.25	TB 2 7.5
Total (hrs)= 45Hours (Theory- 45 hours + Practice-0 hours)				

Power System Operation and Control

Course Title	Code	Type of course	T-P-P	Prerequisite
Power System Operation and Control	ELCC0102	Theory	3-0-0	Nil

Objective

- To learn the basic control technique involved in power system operation
- To provide a solid foundation in mathematical and engineering fundamentals required to control the governing system in turbine models

Course Outcome

- Make Economic operation of power system and importance of LFC
- Analyze thermal and hydro power plant operation in meeting the load demand optimally
- Analyze single area load frequency control and two area load frequency control

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I :Load Flow Studies (3 hours)

Theory

Network model formulation, Y bus formation (MATLAB) and singular matrix transformation

Module II : Load Flow Solution

(9 hours)

Theory

Load flow problem , Gauss Seidel (GS) method, Newton-Raphson method (NR) (Polar, Rectangular form), Decoupled, Fast Decoupled load flow and comparison, Concept of DC loads flow.(Topics on Gauss Seidel (GS) method, Newton-Raphson method (NR) and Y bus formation

Module III : Economic System Operation

(8 hours)

Theory

Generator operating cost, input-output, Heat rate and IFC curve, Constraints in operation, Coordinate equation, Exact coordinate equation, B_{mn} coefficients, transmission loss formula, Economic operation with limited fuel supply and shared generators, Economic exchange of power between the areas. Optimal unit commitment (MATLAB/SciLab) and reliability considerations

Module IV : Automatic Generation and control (6 hours)

Theory

Load frequency control problem, Thermal Governing system and transfer function, Steam Turbine and Power system transfer function, isolated power system static and dynamic response.

Module V : Load Frequency Control (6 hours)

Theory

Two area load frequency control, static and dynamic response, Frequency biased Tie line Bias control- implementation and effect, Implementation of AGC, AGC in restructured power system(media presentation), under frequency load shedding, GRC, Dead band and its effect.

Module VI : Power System Stability (6 hours)

Theory

Types of Stability Study, Dynamics of synchronous machine, Power angle equation, Node elimination technique, Simple Systems, Steady state stability, Transient stability

Module VII : Equal Area Criteria (7 hours)

Theory

Equal area criteria and its applications, Numerical solution of swing equation, Modified Euler's method.(MATLAB/SciLab)

Text Books

1. W.D. Stevenson., G. J. Grainger. "Elements of Power System."Mc-Graw-Hill Publication
2. Kothari. D. P, Nagrath. I. J., "Modern Power System Analysis," TMH Publication, Third Edition, 2008
3. Olle.I.Elgerd, "Electric energy systems theory-An introduction", Tata McGrawHill publishing Ltd, New Delhi,2008

Reference Books

1. P.Venkatesh, B.V. Manikandan,"Electrical Power Systems," PHI Publication
2. Kimbark E W, "Power System Stability," Volume I, and III, Wiley Publication.
3. HadiSaadat, "Power System Analysis," TMH Publication ,Second Edition, 2002

Session Plan

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity</i>	<i>Assignment</i>	<i>Suggested Reading</i>

Module I : Load Flow Studies (Theory-3 hours, Practice-0)				
Load Flow Studies: Network model formulation,	01	Lecture	Assignment 1.1	TB- 1 Ch-7.1
Y bus formation and singular matrix transformation	02	Lecture	Assignment 1.1	TB- 1 Ch-7.3
Module II: Load Flow Solution (Theory-9 hours, Practice-0)				
Load flow problem, Gauss Seidel (GS) method	03	Lecture	Assignment 1.2	TB- 1 Ch-9.2
Newton-Raphson method (NR) (Polar, Rectangular form)	04	Lecture	Assignment 1.2	TB- 1 Ch-9.3
Decoupled, Fast Decoupled load flow and comparison. Concept of DC loads flow.	02	Lecture	Assignment 1.2	TB- 1 Ch-9.7
Module III : Economic System Operation (Theory-8 hours, Practice-0)				
Generator operating cost: input-output, Heat rate and IFC curve	02	Lecture	Assignment 2.1	TB- 1 Ch-13
Constraints in operation, Coordinate equation, Exact coordinate equation	01	Lecture	Assignment 2.1	TB- 1 Ch-13
Bmn coefficients, transmission loss formula	01	Lecture	Assignment 2.1	TB- 1 Ch-13
Economic operation with limited fuel supply and shared generators, Economic exchange of power between the areas.	02	Lecture	Assignment 2.1	TB- 1 Ch-13
Optimal unit commitment and reliability considerations	02	Lecture	Assignment 2.1	TB- 1 Ch-13
Module IV: Automatic Generation and control (Theory-6 hours, Practice-0)				
Automatic Generation and control:	01	Lecture	Assignment 2.2	TB- 3 Ch-4
Load frequency control problem	01	Lecture	Assignment 2.2	TB- 3 Ch-4
Thermal Governing system and transfer function	01	Lecture	Assignment 2.2	TB- 3 Ch-4
Steam Turbine and Power system transfer function, Isolated power system:-static and dynamic response , PI control and implementation.	03	Lecture	Assignment 2.2	TB- 3 Ch-4
Module V : Load Frequency Control (Theory-6 hours, Practice-0)				
Two area load frequency control, static and dynamic response,	02	Lecture	Assignment 2.3	TB- 3 Ch-5
Frequency biased Tie line Bias control-implementation and effect, Implementation of AGC	02	Lecture	Assignment 2.3	TB- 3 Ch-5
AGC in restructured power system, under	01	Lecture	Assignment	TB- 3

frequency load shedding			2.3	Ch-5
GRC, Dead band and its effect	01	Lecture	Assignment 2.3	TB- 3 Ch-5
Module VI : Power System Stability (Theory-6 hours, Practice-0)				
Types of Stability Study, Dynamics of synchronous machine	02	Lecture	Assignment 3.1	TB- 1 Ch-16
Power angle equation	01	Lecture	Assignment 3.1	TB- 1 Ch-16
Node elimination technique	01	Lecture	Assignment 3.1	TB- 1 Ch-16
Simple Systems, Steady state stability, Transient stability,	02	Lecture	Assignment 3.1	TB- 1 Ch-16
Module VII : Equal Area Criteria (Theory-7 hours, Practice-0)				
Equal area criteria and its applications	03	Lecture	Assignment 3.2	TB- 1 Ch-16
Numerical solution of swing equation	02	Lecture	Assignment 3.2	TB- 1 Ch-16
Modified Euler's method	02	Lecture	Assignment 3.2	TB- 1 Ch-16
Total (hrs)= 45Hours (Theory- 45 hours + Practice-0 hours)				

Distributed Generation & Micro Grid

Course Title	Course Code	Course Type	T-P-Pr	Prerequisite
Distributed Generation & Micro Grid	ELCC0103	Theory	2-0-0	Nil

Objective

- To make students understand the integration between renewable sources with Micro-Grid

Course Outcome

- Understand the concepts behind distributed generation
- Understand the integration technique in micro grid

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I: Introduction

(5 hrs)

Theory

Conventional power generation: advantages and disadvantages, Non-conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

Module II: Distributed Generation

(4 hrs)

Theory

Concept of distributed generations, Why integration of distributed generation? Active distribution network. Distributed generation, technology, value of distributed generation, application & issues, distributed resources, distributed capacity, factors of DG growth, general structure

Module III: Supply demand in Electric power grid

(4 hrs)

Theory

Understanding the grid, reliability concept, electric power dynamic demand, need of spinning reserve, local load control

Module IV: Basics of a Micro-Grid**(5 hrs)****Theory**

Concept and definition of micro grid, classification ,need & application of micro-grid, formation of micro grid, typical structure and configuration of a micro grid, AC and DC micro grids, Power Electronics interfaces in DC and AC micro grids.

Module V:DC Micro Grids**(4 hrs)****Theory**

PV sources control, storage control, grid connection control, DC load control, Power balancing principle

Module VI :Control & Operation of Micro Grid**(4 hrs)****Theory**

Modes of operation and control of micro grid: grid connected and islanded mode, Active and reactive power control, protection issues

Module VII: Storage Technologies**(4 hrs)****Theory**

Classification of electrical energy storage, mechanical storage system, batteries, flywheels, super conducting magnetic energy storage, super capacitors.

Text Books

1. Magdi S. Mahmoud, Fouad M. AL-Sunni, “Control and Optimization of Distributed Generation Systems,”
2. Gevork B. Gharehpetian, S. Mohammad Mousavi Aga, “Distributed Generation Systems: Design, Operation and Grid Integration,”

Session Plan

Topics	No. of Sessions (in hrs)	Activity	Assignment	Suggested Reading
Module – I: Introduction [Theory=5 Hrs Practice = 0Hrs]				
Conventional power generation: advantages and disadvantages, Non-conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.	5	Lecture	Assignment 1	TB- 2 Ch-1,4,5
Module – II: Distributed Generation[Theory=4 Hrs Practice = 0Hrs]				
Concept of distributed generations, Why integration of distributed generation? Active distribution network. Distributed generation, technology, value of	4	Lecture	Assignment 2	TB- 1 Ch-1.1

distributed generation, application & issues, distributed resources, distributed capacity, factors of DG growth, general structure				
Module – III: Supply demand in Electric power grid [Theory=4 Hrs Practice = 0Hrs]				
Understanding the grid, reliability concept, electric power dynamic demand, need of spinning reserve, local load control	4	Lecture	Assignment 3	TB-1 Ch-1.2
Module – IV: Basics of A Micro-Grid [Theory=5 Hrs Practice = 0Hrs]				
Concept and definition of micro grid, classification ,need & application of micro-grid, formation of micro grid, typical structure and configuration of a micro grid, AC and DC micro grids, Power Electronics interfaces in DC and AC micro grids.	5	Lecture	Assignment 4	TB- 1 Ch-1.3 Ch-3
Module – V:DC Micro Grids [Theory=4 Hrs Practice = 0Hrs]				
PV sources control, storage control, grid connection control, DC load control, Power balancing principle	4	Lecture	Assignment 5	TB- 1 Ch-5
Module – VI :Control & Operation of Micro Grid[Theory=4 Hrs Practice = 0Hrs]				
Modes of operation and control of micro grid: grid connected and islanded mode, Active and reactive power control, protection issues.	4	Lecture	Assignment 6	TB- 1 Ch-6
Module – VII : Storage Technologies[Theory=4 Hrs Practice = 0Hrs]				
classification of electrical energy storage, mechanical storage system, batteries, flywheels, super conducting magnetic energy storage, super capacitors	4	Lecture	Assignment 7	TB- 2 Ch-7
Total (hrs)= 30Hours (Theory- 30 hours + Practice-0 hours)				

Soft Computing Techniques - I

Course Title	Code	Type of course	T-P-Pr	Prerequisite
Soft Computing-I	EECC0101	Theory	2-0-0	Nil

Objective

- To teach the Fuzzy Logic & Systems and Artificial Neural Networks

Course Outcome

- Students will gain knowledge of Artificial Neural Networks and soft computing techniques in classification
- Students will develop skill of optimization technique for particular application

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written Examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on Class Attended
External Examination	External Theory	60	Written Examination
Total		100	

Course Outline

Module I: Basic Tools of Soft Computing

(04 Hours)

Theory

Basic tools of soft Computing: Introduction, Fuzzy logic, Neural Networks and Evolutionary Computing, Approximations of Multivariate functions, Non – linear Error surface and optimization.

Module II: Fuzzy Logic

(05 Hours)

Theory

Fuzzy logic: Introduction, crisp sets, fuzzy sets, crisp relations; fuzzy relations: Cartesian product of relation – classical relation, fuzzy relations, tolerance and equivalence relations, non-iterative fuzzy sets.

Module III: Membership Functions

(05 Hours)

Theory

Membership functions: features, fuzzification, methods of membership value assignments, Defuzzification: lambda cuts methods, fuzzy arithmetic; fuzzy measures: fuzzy arithmetic, extension

principle, fuzzy measures, measures of fuzziness and fuzzy integrals.

Module IV: Fuzzy Rule Base and Approximate Reasoning (04 Hours)

Theory

Fuzzy rule base and approximate reasoning: truth values and tables, fuzzy propositions, formation of rules-decomposition of rules, aggregation of fuzzy rules and fuzzy reasoning-fuzzy inference systems-overview of fuzzy expert system-fuzzy decision making.

Module V: Neural Networks (04 Hours)

Theory

Neural networks: Single layer networks, supervised learning network, Perceptron, Activation functions, Adalinc- its training and capabilities, weights learning.

Module VI: Multilayer Perceptron (04 Hours)

Theory

Multilayer Perceptron: Error back propagation, generalized delta rule; Radial basis function networks and least square training algorithm.

Module VII: Unsupervised Learning Networks (04 Hours)

Theory

Unsupervised learning networks: Kohonen self – organizing map and learning vector quantization networks; Recurrent neural networks, Simulated annealing neural networks; Adaptive neuro-fuzzy information; systems (ANFIS).

Text Books

1. J. S. R. Jang, C. T.Sun& E. Mizutani, “Neuro-Fuzzy and Soft Computing”, PHI-2013.
2. Satish Kumar, “Neural Networks: A Classroom Approach”, TMH Education-2014.

Reference Books

1. S. Rajasekaran & G.A. VijayaLaxmiPai, “Neural Networks Fuzzy Logic & Genetic Algorithms, Synthesis & Applications”, Prentice Hall-2006.
2. S.N. Sivanandan& S.N. Deepa, “Principle of Soft Computing”, Wiley India Edition-2010.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Basic Tools of Soft Computing (04 Hours)				
Basic tools of soft Computing: Introduction, Fuzzy logic, Neural Networks	1	Lecture	Assignment No.1.1	Text Book (TB)-1 Chapter (CH)-1
Evolutionary Computing	1	Lecture	Assignment No. 1.2	TB-1 CH- 1
Approximations of Multivariate functions	1	Lecture	Assignment	TB-1 CH- 1

			No. 1.3	
Non – linear Error surface optimization.	1	Lecture	Assignment No. 1.4	TB-1 CH- 1
Module II: Fuzzy Logic(05 Hours)				
Fuzzy logic: Introduction, crisp sets, fuzzy sets, crisp relations and fuzzy relations	2	Lecture	Assignment No. 2.1-2.3	RB-1 CH- 6
Cartesian product of relation – classical relation, fuzzy relations, tolerance and equivalence relations	2	Lecture	Assignment No. 2.4-2.5	RB-1 CH- 6
Non-iterative fuzzy sets.	1	Lecture	Assignment No. 2.6	RB-1 CH- 6
Module III: Membership Functions (05 Hours)				
Membership functions: features, fuzzification, methods of membership value assignments	1	Lecture	Assignment No. 3.1-3.2	RB-1 CH- 7
Defuzzification: lambda cuts methods, fuzzy arithmetic and fuzzy measures	2	Lecture	Assignment No. 3.3-3.4	RB-1 CH- 7
Fuzzy arithmetic, extension principle, fuzzy measures, measures of fuzziness, fuzzy integrals	2	Lecture	Assignment No. 3.5-3.7	RB-1 CH- 7
Module IV: Fuzzy Rule Base and Approximate Reasoning (04 Hours)				
Fuzzy rule base and approximate reasoning: truth values and tables, fuzzy propositions, formation of rules-decomposition of rules, aggregation of fuzzy rules	2	Lecture	Assignment No. 4.1-4.2	RB-1 CH- 7
Fuzzy reasoning-fuzzy inference systems-overview of fuzzy expert system-fuzzy decision making.	2	Lecture	Assignment No. 4.3	RB-1 CH- 7
Module V: Neural Networks (04 Hours)				
Neural networks: Single layer networks, supervised learning network	2	Lecture	Assignment No. 5.1	RB-1 CH- 1
Perceptron; Activation functions; Adalinc- its training and capabilities, weights learning	2	Lecture	Assignment No. 5.2-5.3	RB-1 CH- 1
Module VI: Multilayer Perceptron (04 Hours)				
Multilayer perceptrons: Errorbackpropagation,	2	Lecture	Assignment No. 6.1-6.2	RB-1 CH-

generalized delta rule				3.1-3.2
Radial basis function networks and least square training algorithm.	2	Lecture	Assignment No. 6.3	RB-1 CH-3.1-3.2
Module VII: Unsupervised Learning Networks (04 Hours)				
Unsupervised learning networks: Kohonen self – organizing map and learning vector quantization networks	1	Lecture	Assignment No. 7.1	TB-1 CH-11.3
Recurrent neural networks, Simulated annealing neural networks	1	Lecture	Assignment No. 7.2-7.3	TB-1 CH-11.7
Adaptive neuro-fuzzy information; systems (ANFIS).	2	Lecture	Assignment No. 7.4	TB-1 CH-12.1-12.2
Total (hrs)= 30Hours (Theory- 30 hours + Practice-0 hours)				

Electrical Circuit Drawing (AutoCAD)

Course Name	Code	Type of course	T-P-Pr	Prerequisite
Electrical Circuit Drawing (AutoCAD)	ELCC0202	Practice	0-2-0	Nil

Objective

<ul style="list-style-type: none"> To teach the 2D Design of Electrical-System-Layout drawing using AutoCAD
--

Course Outcome

<ul style="list-style-type: none"> Students will know the use of AutoCAD Software. Students will develop skill of designing generalized electrical Machine blueprints

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab Work + Learning Record
External Examination	External Practice	50	Lab Work
Total		100	

Lists of Experiments (60 Hours)

1. Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires
2. Symbol creation
3. General lay out of a power system network
4. Simple house wiring (1-phase): light and fan
5. Simple house wiring (3-phase): light, fan, AC, geezer and 3-phase motor
6. Agricultural pump-set wiring (star-delta) with panel wiring
7. Workshop panel wiring for machine lab
8. Four wheeler electrical wiring
9. Forklift wiring harness
10. Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)
11. CIT new substation layout (Schneider) or JITM Substation
12. Differential protection of transformer
13. Layout drawing of a power plant
14. Layout drawing of a Electrical Automation system

Reference Books

Randy H. Shih, "AutoCAD 2013 Tutorial- First Level: 2D Fundamentals", SDC Publication, 2013.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires.	8	Practice	Designing	Reference Book (RB)
Symbol creation.	4	Practice	Designing	RB
General lay out of a power system network.	4	Practice	Designing	RB
Simple house wiring (1-phase): light and fan.	4	Practice	Designing	RB
Simple house wiring (3-phase): light, fan, AC, geezer and 3-phase motor.	4	Practice	Designing	RB
Agricultural pump-set wiring (star-delta) with panel wiring.	4	Practice	Designing	RB
Workshop panel wiring for machine lab.	4	Practice	Designing	RB
Four wheeler electrical wiring.	4	Practice	Designing	RB
Forklift wiring harness.	4	Practice	Designing	RB
Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)	4	Practice	Designing	RB
CIT new substation layout (Schneider) or JITM Substation.	4	Practice	Designing	RB
Differential protection of transformer.	4	Practice	Designing	RB
Layout drawing of a power plant.	4	Practice	Designing	RB
Layout drawing of a Electrical Automation system.	4	Practice	Designing	RB
Total- 60 Hours				

Network Theory

Course Title	Code	Type of course	T-P-Pr	Prerequisite
Network Theory	ELCC0401	Theory & Practice	2-1-0	Nil

Objective

- To deliver problem solving skills on circuits through the application of techniques and principles to common circuit problems.

Course Outcome

- Gain knowledge about the various components, theorems, parameters related to a circuit
- Get the skill of circuit solving and can analyze different types of circuits.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I: Network Topology

(7 hours)

Theory

Graph of a network, Concept of tree, Incidence matrix, Tie-set matrix, Cut-set matrix, Formulation and solution of network equilibrium equations on loop and node basis

Module II: Network Theorems

(9 hours)

Theory

Substitution theorem, Reciprocity theorem, Maximum power transfer theorem, Tellegen's theorem, Millman's theorem, Compensation theorem

Practice

- Verification of Reciprocity theorem
- Verification of Tellegen's theorem
- Verification of Millman's theorem
- Verification of Maximum power transfer theorem
- Verification of Compensation theorem

Module III: Coupled Circuits

(8 hours)

Theory

Coupled Circuits, Dot Convention for representing coupled circuits, Coefficient of coupling, Series and parallel resonant circuits: Band Width and Q-factor

Practice

6. Self-inductance, mutual inductance and coefficient of coupling to be determined for a 1- \emptyset transformer representing coupled circuit.
7. Frequency response of a series and parallel resonant circuit by laboratory set up.

Module IV: Network Laplace Transform

(8 hours)

Theory

Application of Laplace transform: Circuit Analysis (Steady State and Transient)

Practice

8. AC and DC transient response analysis for RL,RC and RLC circuits

Module V: Two Port Network

(10 hours)

Theory

Z, Y, ABCD and h-parameters, Reciprocity and Symmetry, Interrelation of two-port parameters, Interconnection of two-port networks.

Practice

9. Determination of Z parameters
10. Determination of Y parameters
11. Determination of h parameters
12. Determination of ABCD parameters

Module VI: Fourier Series

(8 hours)

Theory

Fourier series, Fourier analysis and evaluation of coefficients, Steady state response of network to periodic signals, Fourier transform and convergence, Fourier transform of some functions

Module VII: Filters

(10 hours)

Theory

Brief idea about network filters (Low pass, High pass, Band pass and Band elimination) and their frequency response

Practice

13. Design and frequency response analysis of Low Pass filter
14. Design and frequency response analysis of High Pass filter
15. Design and frequency response analysis of Band Pass filter
16. Design and frequency response analysis of Band elimination filter

Text Books:

1. A K Chakraborty, "Network Theory," DhanpatRai Publication.
2. M.H.Hayt and JR.J.E.Kemmerly, "Engineering Circuit Analysis," Tata McGraw Hill
3. Alexander &Sadiku "Fundamentals of Electric Circuits," Tata McGraw Hill.

Session Plan

Topics	No. of Sessions	Activity	Assignment	Suggested Reading
Module – I: Network Topology (Theory- 7 hours, Practice- 0 hours)				
Graph of a network, Concept of tree, Incidence matrix	2	Lecture	Assignment-1 (Question No 1 to 5)	Text Book(TB) 1- Chapter(C H)-16.1 to16.5
Tie-set matrix, Cut-set matrix	3	Lecture	Assignment-1 (Question No 6 to 8)	TB1-CH-16.6 to16.10
Formulation and solution of network equilibrium equations	2	Lecture	Assignment-1 (Question No 9 to 10)	TB1-CH-16.16
Module – II: Network Theorems (Theory- 4 hours, Practice- 5 hours)				
Substitution theorem	1	Lecture	Assignment-2 (Question No 1 to 3)	TB1-CH-6.8
Reciprocity theorem	2	1hr Lecture +1hr Practice	Assignment-2 (Question No 4,5)	TB1-CH-6.7
Maximum power transfer theorem	2	1hr Lecture +1hr Practice	Assignment-2 (Question No 6 to 9)	TB1-CH-6.5
Tellegen's theorem,	1	Practice	Result of Experiments and Viva	TB1-CH-6.10
Millman's theorem	1	Practice	Result of Experiments and Viva	TB1-CH-6.6
Compensation theorem	2	1hr Lecture +1hr Practice	Assignment-2 (Question No 10 to12)	TB1-CH-6.9
Module – III: Coupled Circuits (Theory- 1 hours, Practice- 7 hours)				
Dot Convention for representing coupled circuits	1	Lecture	Assignment-3 (Question No 1 to 3)	TB1-CH-11.7
Coefficient of coupling	2	Practice	Result of Experiments and Viva	TB1-CH-11.4
Series resonant circuits	2	Practice	Assignment-3 (Question No 4 to 8)	TB1-CH-11.8
Parallel resonant circuits	2	Practice	Assignment-3	TB1-CH-

			(Question No 9 to 12)	11.9
Band Width and Q-factor	1	Practice	Assignment-3 (Question No 13,14)	TB1-CH-11.9
Module – IV: Network Laplace Transform (Theory- 6 hours, Practice- 2 hours)				
Introduction to Laplace Transform	1	Lecture	Assignment-4 (Question No 1 to 4)	TB1-CH-9.1 to 9.3
Laplace transform of some basic functions	1	Lecture	Assignment-4 (Question No 5 to 8)	TB1-CH-9.4 to 9.5
Laplace transform of periodic functions	1	Lecture	Assignment-4 (Question No 9 to 11)	TB1-CH-9.6
Inverse Laplace transform	1	Lecture	Assignment-4 (Question No 12 to 16)	TB1-CH-9.9
Application of Laplace transform	1	Lecture		TB1-CH-9.8
Circuit Analysis (Steady State and Transient)	3	1hr Lecture + 2 hrs Practice	Result of Experiments and Viva	TB1-CH-9.10-9.11
Module – V: Two Port Network(Theory- 2 hours, Practice- 8 hours)				
Z -Parameter	2	Practice	Assignment-5 (Question No 1 to 6)	TB1-CH-12.6
Y- parameter	2	Practice	Assignment-5 (Question No 7 to 11)	TB1-CH-12.7
ABCD Parameter	2	Practice	Assignment-5 (Question No 12 to 15)	TB1-CH-12.9
H-Parameter	2	Practice	Assignment-5 (Question No 16 to 18)	TB1-CH-12.8
Reciprocity and Symmetry, Interrelation of two-port parameters	1	Lecture	Assignment-5 (Question No 17 to 19)	TB1-CH-12.10-12.11
Interconnection of two-port networks	1	Lecture	Assignment-5 (Question No 20 to 22)	TB1-CH-12.13
Module – VI: Fourier Series (Theory-8 hours, Practice- 0 hours)				
Fourier analysis and evaluation of coefficients	2	Lecture	Assignment-6 (Question No 1 to 4)	TB1-CH-15.1 to 15.4
Fourier analysis of periodic signals	2	Lecture	Assignment-6 (Question No 5 to 8)	TB1-CH-15.6 to 15.8
Fourier transform and convergence	2	Lecture	Assignment-6 (Question No 9,10)	TB1-CH-15.10

Fourier transform of some functions	2	Lecture	Assignment-6 (Question No 11 to 14)	TB1-CH-15.11
Module – VII: Filters(Theory-2 hours, Practice- 8 hours)				
Brief idea about network filters	2	Lecture		TB1-CH-19.1 to 19.7
Frequency response of Low pass filters	2	Practice	Result of Experiments and Viva	TB1-CH-19.8,19.10
Frequency response High pass filters	2	Practice	Result of Experiments and Viva	TB1-CH-19.12
Frequency response Band pass filters	2	Practice	Result of Experiments and Viva	TB1-CH-19.14
Frequency response Band elimination filters	2	Practice	Result of Experiments and Viva	TB1-CH-19.16
Total (hrs)= 60 (Theory- 30 hours + Practice-30 hours)				

Electronic Measurement & Instrumentation

Course Title	Code	Type of course	T-P-P	Prerequisite
Electronic Measurement & Instrumentation	EECC0409	Theory & Practice	2-1-0	Nil

Objective

- To teach the students about various types of instruments their operation working of different electronic instruments viz. signal generators, signal analyzers, recorders and measuring equipment .

Course Outcome

- Gain knowledge to identify the various electronic instruments based on their specifications for carrying out a particular task of measurement.
- Gain skill to use various types of signal generators, signal analyzers for generating and analyzing various real-time signals.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Module I : Basics of Measurements (3 Hours)

Theory

Accuracy, Precision, resolution, reliability, repeatability, validity, Errors and their analysis.

Module II: Temperature measurement (12 Hours)

Theory

Introduction to Temperature Measurement Non electrical type temperature sensor: Bimetallic Strip. Electrical type temperature sensors: Thermistor, RTD, Principles, Types, Selection of RTD's and signal conditioning circuits. Thermocouples, Principle, Types, Selection, Standard table of Thermocouples and signal conditioning circuits. Measurement of temperature using Diodes. IC temperature Transducer using LM35 and AD590.

Practice

- Study of types of Thermocouple and characteristics of Thermocouple.
- Study of RTD and characteristics of RTD
- Temperature sensing using Diodes. Using LM35 and AD590 as temperature sensor
- Study of ON OFF control using temperature controller using Thermocouple and RTD.

Module III : Pressure Measurement (7 Hours)

Theory

Introduction to pressure measurement, Pressure Standards, Conventional Pressure sensors, Electrical and Electronic pressure transducers. Introduction to Calibration and Calibration of Pressure Gauge.

Practice:

5. Finding error in the given pressure gauge with respect to Digital Gauge
6. Finding error in the given pressure gauge with respect to Dead Weight Tester.

Module IV: Displacement measurement (10 Hours)

Theory

Introduction to displacement measurement. Potentiometer Sensor, Types, Construction, Operation and Errors. LVDT, Principle, Operation and Application. Inductive Proximity Switch. Digital Encoder: Contact, Magnetic and Optical Encoder. Rotational Displacement/Angular position : Using optical Encoder and Signal Conditioning circuits.

Practice:

7. To determine output characteristics of LVDT and measure displacement using LVDT.
8. Familiarization of Inductive Proximity, Capacitive Proximity, IR and Reed Switch.

Module V: Converters and Flow measurement (7 Hours)

Theory

Converters: Voltage to Frequency Converter and Frequency to Voltage Converter

Force, weight and flow measurement: Introduction to force, weight and flow measurement. Strain gauge and its function, Load Cell, principle and operation of load cell. Flow measurement using Orifice plate.

Practice:

9. V to F Converter using ICL 8038 F to V Converter using LM2907.
10. Measurement of load by using Load cell Expansion Method.
11. Measurement of load by using Load cell Compression method.

Module VI: Signal Analyzers (9 Hours)

Theory

AF, HF Wave Analyzers, Harmonic Distortion, Heterodyne wave Analyzers, Spectrum Analyzers, Power Analyzers, Capacitance-Voltage Meters, Oscillators.

Signal Generators: AF, RF Signal Generators, Sweep Frequency Generators, Pulse and Square wave Generators, Function Generators, Arbitrary Waveform Generator, Video Signal Generators, and Specifications.

Practice:

12. Analyse sine/square wave in frequency domain using spectrum analyser.
13. To study block wise construction of an Function Generator.

Module VII: Oscilloscopes (12 Hours)

Theory

CRT, Block Schematic of CRO, Time Base Circuits, Lissajous Figures, CRO Probes, High Frequency CRO Considerations, Delay lines, Applications: Measurement of Time, Period and

Frequency Specifications. Special Purpose Oscilloscopes: Dual Trace, Dual Beam CROs, Sampling Oscilloscopes, Storage Oscilloscopes, Digital Storage CROs.

Practice:

- 14. Measure voltage, frequency and phase using CRO.
- 15. Demonstrate features of digital storage oscilloscope.
- 16. Measure Unknown frequency using Lissajous patterns.

Text Books:

1. A K Sawhney, "A Course in Electrical and Electronic Measurements and Instrumentation," Dhanpat Rai & Co
2. H.S. Kalsi, "Electronic Instrumentation," TMH, 2nd Edition 2004.

REFERENCE BOOKS:

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – I : Basics of Measurements (THEORY-3 HRS)				
Basics of Measurements: Accuracy, Precision, resolution, reliability, repeatability, validity, Errors and their analysis.	3	Lecture	Assignment 1.1-1.5	Text Book (TB) 1-Chapter (CH) -1 and CH 3
Module – II : Temperature measurement (THEORY-4 HRS & PRACTICE-8 HRS)				
Temperature measurement: Introduction to Temperature Measurement, Non electrical type temperature sensor: Bimetallic Strip. Electrical type temperature sensors: Thermistor, RTD, Principles, Types, Selection of RTD's and signal conditioning circuits. Thermocouples, Principle, Types, Selection, Standard table of Thermocouples and signal conditioning circuits. Measurement of temperature using Diodes. IC temperature Transducer using LM35 and AD590.	4	Lecture	Assignment 1.6-1.10	TB 1-CH 13
✓ Study of types of Thermocouple	8	Practice	<i>Result of</i>	

<p>and characteristics of Thermocouple.</p> <p>✓ Study of RTD and characteristics of RTD</p> <p>✓ Temperature sensing using Diodes. Using LM35 and AD590 as temperature sensor</p> <p>✓ Study of ON OFF control using temperature controller using Thermocouple and RTD.</p>			<i>Experiments and Viva</i>	
Module – III :Pressure Measurement(THEORY-3 HRS & PRACTICE-4 HRS)				
Pressure Measurement:Introduction to pressure measurement, Pressure Standards, Conventional Pressure sensors, Electrical and Electronic pressure transducers. Introduction to Calibration and Calibration of Pressure Gauge.	3	Lecture	Assignment 1.11-1.13	TB 1-CH 18
<p>✓ Finding error in the given pressure gauge with respect to Digital Gauge</p> <p>✓ Finding error in the given pressure gauge with respect to Dead Weight Tester.</p>	4	Practice	<i>Result of Experiments and Viva</i>	
Module – IV : Displacement measurement(THEORY-6 HRS & PRACTICE-4 HRS)				
Displacement Measurement: Introduction to displacement measurement. Potentiometer Sensor, Types, Construction, Operation and Errors. LVDT, Principle, Operation and Application. Inductive Proximity Switch. Digital Encoder: Contact, Magnetic and Optical Encoder. Rotational Displacement/Angular position : Using optical Encoder and Signal Conditioning circuits.	6	Lecture	Assignment 1.14-1.16	TB 1-CH 25
✓ To determine output characteristics of LVDT and measure displacement using LVDT.	4	Practice	<i>Result of Experiments and Viva</i>	TB 1-CH 25

✓ Familiarization of Inductive Proximity, Capacitive Proximity, IR and Reed Switch.				
Module – V : Converters and Flow measurement(THEORY-3 HRS & PRACTICE-4 HRS)				
Converters:Voltage to Frequency Converter and Frequency to Voltage Converter Force, weight and flow measurement:Introduction to force, weight and flow measurement. Strain gauge and its function, Load Cell, principle and operation of load cell. Flow measurement using Orifice plate.	3	Lecture	Assignment 1.17-1.20	TB 1-CH 26
✓ V to F Converter using ICL 8038 F to V Converter using LM2907 ✓ Measurement of load by using Load cell Expansion Method ✓ Measurement of load by using Load cell Compression method	4	Practice	<i>Result of Experiments and Viva</i>	
Module – VI: Signal Analyzers(THEORY-5 HRS & PRACTICE-4 HRS)				
Signal Analyzers:AF, HF Wave Analyzers, Harmonic Distortion, Heterodyne wave Analyzers, Spectrum Analyzers, Power Analyzers, Capacitance-Voltage Meters, Oscillators. Signal Generators: AF, RF Signal Generators, Sweep Frequency Generators, Pulse and Square wave Generators, Function Generators, Arbitrary Waveform Generator, Video Signal Generators, and Specifications	5	Lecture	Assignment 1.21-1.25	TB 1-CH 28
✓ Analyse sine/square wave in frequency domain using spectrum analyser. ✓ To study block wise construction of an Function Generator	4	Practice	<i>Result of Experiments and Viva</i>	
Module – VII: Oscilloscopes (THEORY-6 HRS & PRACTICE-6 HRS)				

Oscilloscopes: CRT, Block Schematic of CRO, Time Base Circuits, Lissajous Figures, CRO Probes, High Frequency CRO Considerations, Delay lines, Applications: Measurement of Time, Period and Frequency Specifications. Special Purpose Oscilloscopes: Dual Trace, Dual Beam CROs, Sampling Oscilloscopes, Storage Oscilloscopes, Digital Storage CROs.	6	Lecture	Assignment 1.26-1.28	TB 1-CH 21
<ul style="list-style-type: none"> ✓ Measure voltage, frequency, phase and modulation index (trapezoidal method) using CRO. ✓ Demonstrate features of digital storage oscilloscope. ✓ Measure Unknown frequency using Lissajous patterns. 	6	Practice	<i>Result of Experiments and Viva</i>	TB 1-CH 21
Total (hrs)= 60 (Theory- 30 hours + Practice-30 hours)				

Linear Integrated Circuit and its Application

Course Title	Code	Type of course	T-P-P (Credit)	Prerequisite
Linear Integrated Circuit And its Application	ELCC0403	Theory + Practice	2-1-0	Nil

Objective

<ul style="list-style-type: none"> To make the students understand how to design a circuit using different ICs(Opamp, 555 Timer, PLL etc)
--

Course Outcome

<ul style="list-style-type: none"> On successful completion of this course, students will be able to: Understand how to Design a linear circuit for different application.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I: Operational Amplifier And its Characteristics

(6Hours)

Theory

Operational Amplifier: Introduction, basic information of Op-Amp, The ideal operational amplifier. **Operational amplifier characteristics:** introduction, DC characteristics, AC characteristics, analysis of datasheet of an Op-amp.

Practice

- Study of Op-Amp.
- Study and design of a simple circuit using Op-Amp.

Module II: Operational Amplifier applications

(12 Hours)

Theory

Operational Amplifier applications: Introduction, basic op-amp applications, instrumentation amplifier, AC amplifier, V to I & I to V converter, sample and hold circuits, log and anti-log amplifier, multiplier and divider, differentiator, integrator, electronic analog computation

Practice

- Design a Summing Amplifier, Subtractor
- Design a Sample and hold circuits
- Design Multiplier and divider, differentiator, integrator

Module III: Comparators and waveform generator

(10 Hours)

Theory

Comparators and waveform generator: introduction, comparator, regenerative comparator, square wave generator, mono stable multivibrator, triangular wave generator, sine wave generator.

Practice:

6. Design a Regenerative comparator
7. Design a Square wave generator
8. Design a Mono stable multi-vibrator
9. Design a Triangular wave generator

Module IV: Voltage regulator And Active filter

(10Hours)

Theory

Voltage regulator: introduction, series op-amp regulator, IC voltage regulators, 723 general purpose regulators. **Active filter:** Introduction, RC active filter.

Practice

10. Design of voltage regulator circuit using 78XX.
11. Design of voltage regulator circuit using 723IC.
12. Design of Active filter
13. Design of RC active filter

Module V : 555 Timer

(7 Hours)

Theory

555 Timer: Introduction, description of functional diagram, monostable operation, astable operation

Practice

14. Design of Monostablemultivibrator using 555.
15. Design of Astablemultivibrator using 555.

Module VI: Phase locked Loop

(9 Hours)

Theory

Phase locked Loop: Introduction, basic principle, phase detector/comparator, VCO, LPF, monolithic PLL

Practice

16. Design of PLL using Op-Amp
17. Design of Phase comparator using Op-Amp.

Module VII: D-A & A-D converter

(8 Hours)

Theory

D-A & A-D converter: Introduction, Basic DAC Techniques, A-D converter.

Practice

18. Design DAC.
19. Design ADC

Text Books

1. D.RoyChoudhary, SheilB.Jani, 'Linear Integrated Circuits', II edition, New Age, 2003.

Reference Books

1. Fiore,"Opamps& Linear Integrated Circuits Concepts & Applications",Cengage,2010.
2. Floyd ,Buchla,"Fundamentals of Analog Circuits, Pearson, 2013.
3. Jacob Millman, Christos C.Halkias, 'Integrated Electronics - Analog and Digital circuits system',Tata McGraw Hill, 2003.
4. Robert F.Coughlin, Fredrick F. Driscoll, 'Op-amp and Linear ICs', PHI Learning, 6th edition,2012.

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module I: Operational Amplifier And its Characteristics (6 Hours)				
Operational Amplifier: Introduction, basic information of Op-Amp, The ideal operational amplifier. Operational amplifier characteristics: introduction, DC characteristics, AC characteristics, analysis of datasheet of an Op-amp.	2	Lecture	Assignment 1.1-1.3	TB-1 Ch-2,3
Study of Op-Amp.	2	Practice		TB-1 Ch-2
Study and design of a simple circuit using Op-Amp.	2	Practice		TB-1 Ch-2
Module II: Operational Amplifier applications (12 Hours)				
Operational Amplifier applications: Introduction, basic op-amp applications, instrumentation amplifier	3	Lecture+ Practice	Assignment 1.1-1.2	TB-1 Ch-4
AC amplifier, V to I & I to V converter, sample and hold	3	Lecture+	Assignment 1.3-	TB-1 Ch-4

circuits		Practice	1.4	
Log and anti-log amplifier, multiplier and divider	3	Lecture+ Practice	Assignment 1.5	TB-1 Ch-4
Differentiator, integrator, electronic analog computation	3	Lecture+ Practice	Assignment 1.6	TB-1 Ch-4
Module III: Comparators and waveform generator (10 Hours)				
Comparators and waveform generator: introduction, comparator, regenerative comparator	3	Lecture+ Practice	Assignment 3.1- 3.2	TB-1 Ch-5
Square wave generator	2	Lecture+ Practice	Assignment 3.3	TB-1 Ch-5
Mono stable multivibrator	2	Lecture+ Practice	Assignment 3.4	TB-1 Ch-5
Triangular wave generator, sine wave generator.	3	Lecture+ Practice	Assignment 3.5	TB-1 Ch-5
Module IV: Voltage regulator (10 Hours)				
Voltage regulator: introduction, series op-amp regulator, IC voltage regulators	3	Lecture+ Practice	Assignment 4.1- 4.2	TB-1 Ch-6
723 general purpose regulators	3	Lecture+ Practice	Assignment 4.3	TB-1 Ch-6
Active filter: Introduction	2	Lecture+ Practice	Assignment 4.4	TB-1 Ch-7
RC active filter	2	Lecture+ Practice	Assignment 4.5	TB-1 Ch-7
Module V : 555 Timer (7 Hours)				
555 Timer: Introduction, description of functional diagram	3	Lecture+ Practice	Assignment 5.1	TB-1 Ch-8
Monostable operation	2	Lecture+ Practice	Assignment 5.2	TB-1 Ch-8

Astable operation	2	Lecture+ Practice	Assignment 5.3	TB-1 Ch-8
Module VI :Phase locked Loop (9 Hours)				
Phase locked Loop: Introduction, basic principle	3	Lecture+ Practice	Assignment 6.1	TB-1 Ch-9
Phase detector/comparator, VCO, LPF	3	Lecture+ Practice	Assignment 6.2	TB-1 Ch-9
Monolithic PLL	3	Lecture+ Practice	Assignment 6.3	TB-1 Ch-9
Module VII: D-A & A-D converter (8 Hours)				
D-A & A-D converter: Introduction	2	Lecture+ Practice	Assign ment 7.1	TB-1 Ch-10
Basic DAC Techniques,	3	Lecture+ Practice	Assignment 7.2	TB-1 Ch-10
A-D converter.	3	Lecture+ Practice	Assignment 7.3	TB-1 Ch-10
Total- 60 Hours				

Power Electronics

Course Title	Code	Type of course	T-P-Pr	Prerequisite
Power Electronics	EECC0405	Theory + Practice	3-2-0	Nil

Objective

- To make the students meet industry requirement for power electronic engineers, adequate practical knowledge on power semiconductor devices, converters and their control techniques for typical applications in motor drives

Course Outcome

- Apply their knowledge of the electrical characteristics of power semiconductor devices, to select power semiconductor devices for a range of applications.
- Understand the basic topology of converters, inverters and power supplies and design calculations for drive and power converter applications, and understand the approximations used.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30 (20+30)	Lab work+ Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
<i>Total</i>		100	

Course outline

Module I: Power semiconductor devices

(12 Hours)

Theory

Power semiconductor devices: Introduction (difference between general semiconductor devices and Power semiconductor devices), characteristics and specifications of Power semiconductor switches, control characteristics of power semiconductor devices, Comparisons between different types of Power devices, Use of Power semiconductor devices in power electronic circuit, Different types of power electronics circuits.

Practice

- Study of switching characteristics of Power semiconductor device.

2. Study and design of a simple power electronics circuit.

Module II Power Diode And Diode rectifier

(14

Hours)

Theory

Power Diode: Power Diode characteristics, power diode types, freewheeling diode

Diode rectifier: Introduction, single phase half wave rectifiers, single phase full-wave rectifiers with R & RL Load, three phase bridge rectifier.

Practice

3. Study of V-I characteristics of diode.
4. Study of single phase half-wave and full-wave diode rectifier using R & L load.

Module III: Silicon controlled Rectifier

(10 Hours)

Theory

Silicon controlled Rectifier: Introduction, Principle of operation, triggering and firing techniques, Different type of commutation circuits and techniques.

Practice

5. Study of V-I characteristics of silicon controlled rectifier.
6. Study of different methods of triggering of SCR (a) RC-Triggering method (b) UJT-Triggering method.
7. Study of class-A, class-B, class-C, class-D, class-E commutation circuits.

Module IV: Phase controlled Converters

(24 Hours)

Theory

Phase controlled Converters: Introduction, control techniques, single phase half wave controlled converter, single phase full wave controlled converter, single phase semi converter, three phase controlled converters: three pulse converter(M3 Connection), six pulse converters(M6 Connection), three phase fully controlled bridge converter(with R and RL load), three phase semi converter (with R load only)

Practice

8. Study of single phase fully controlled converter using R & L load.
9. Study of single phase semi converter using R - L load.
10. Study of 3-phase bridge converter with R, R-L and D.C motor load with/ without freewheeling diodes.
11. Study of 3-phase semi converter with R, R-L and D.C motor load with/ without freewheeling diodes.

Module V: Chopper and Thyristor Chopper Circuit

(16 Hours)

Theory

Chopper: Introduction, basic chopper classification, basic chopper operation, control strategies, class A, B, C, D, E (principle of operation only) **Thyristor chopper circuit:** Voltage commutated chopper, current commutated chopper, load commutated chopper

Practice

12. Study of different types of chopper.

Module VI: Inverter

(10 Hours)

Theory

Inverter: classification of inverter, single phase half bridge voltage source inverters, single phase full bridge inverter, three phase inverter (180 degree and 120 degree conduction mode) with R Load.

Practice

13. Study of three phase bridge inverter(180 degree & 120 degree)
14. Study of IGBT based 3-ph voltage source inverter.

Module VII: Basic series inverter**(19 Hours)****Theory**

Basic series inverter: circuit analysis, design aspect, modified series inverter, parallel inverter, single phase SCR bridge inverter.

Practice

15. Study of parallel inverter.
16. Study of series inverter.
17. Study of single phase bridge inverter.

Text Book:

1. M H Rashid, "Power Electronics: Circuits, Devices and Applications" 3rd Edition, Pearson
2. MD Singh & K B Khanchandani, "Power electronics", Tata McGraw-Hill

Reference Books:

1. J. Vithayathil, "Power Electronics: Principles and Applications", TMH Edition
2. Mohan, Undeland and Robbins, "Power Electronics: Converters, Applications and Design" Wiley Student Edition.

Session Plan

<i>Topic</i>	<i>No. of Sessions</i>	<i>Activity</i>	<i>Assignment</i>	<i>Suggested Reading</i>
Module I: Power semiconductor devices (12 Hours)				
Power semiconductor devices, types of power electronic circuit, Comparisons of power devices	2	Lecture	Assignment 1.1	TB1(ch-1,5-9,20-22)TB2(ch-5,247-249)
Control characteristics of power devices Characteristics and specifications of switches,	6	Lecture+ Practice	Assignment 1.2	TB1(ch-1,10-19)
Design of power electronics equipment	4	Practice	Assignment 1.3	TB1(ch-1,23-24)
Module II Power Diode And Diode rectifier (14 Hours)				
Diode characteristics	3	Lecture+ Practice	Assignment 2.1	TB1(ch-2,33-34)
Power diode types	1	Lecture	Assignment 2.2	TB1(ch-2,38-39)
freewheeling diode	1	Lecture	Assignment 2.3	TB1(ch-2,56-57)
Diode rectifier: introduction, single phase half wave rectifiers	3	Lecture+ Practice	Assignment 2.4	TB1(ch-3,68-69)
Single phase full wave rectifier	3	Lecture+	Assignment	TB1(ch-3,68-

with R and RL Load		Practice	2.5	69)
Three phase bridge rectifier	3	Lecture+ Practice	Assignment 2.6	TB1(ch-3,92-100)
Module III: Silicon controlled Rectifier (10 Hours)				
Silicon controlled Rectifier: Introduction, Principle of operation	2	Lecture	Assignment 3.1	TB2(ch-2,17-18)
Triggering and firing techniques	4	Lecture+ Practice	Assignment 3.2	TB2(ch-3,71-75)
Different type of commutation circuits and techniques.	4	Lecture+ Practice	Assignment 3.3	TB2(ch-7,-311-312)
Module IV: Phase controlled Converters (24 Hours)				
Phase controlled Converters: Introduction, control techniques	1	Lecture	Assignment 4.1	TB2(ch-6,258-262)
single phase half wave controlled rectifier,	3	Lecture+ Practice	Assignment 4.2	TB2(ch-6,263-272)
Single phase full wave controlled rectifier	3	Lecture+ Practice	Assignment 4.3	TB2(ch-6,272-290)
Single phase semiconverter	4	Practice	Assignment 4.4	TB2(ch-6,291-301)
Three phase controlled converters	1	Lecture	Assignment 4.5	TB2(ch-6,307-308)
Three pulse converter(M3 Connection)	3	Lecture+ Practice	Assignment 4.6	TB2(ch-6,308-322)
Six pulse converters(M6 Connection)	3	Lecture+ Practice	Assignment 4.7	TB2(ch-6,323-328)
Three phase fully controlled bridge converter(with R and RL load)	3	Lecture+ Practice	Assignment 4.8	TB2(ch-6,329-345)
Three phase semiconverter (with R load only)	3	Lecture+ Practice	Assignment 4B.9	TB2(ch-6,346-358)
Module V: Chopper And Thyristor chopper circuit (16 Hours)				
Chopper: Introduction, basic chopper classification	2	Lecture	Assignment 5.1	TB2(ch-8,434-436)
Basic chopper operation, control strategies	8	Lecture+ Practice	Assignment 5.2	TB2(ch-8,444-447)
Thyristor chopper circuit: Voltage commutated chopper	2	Lecture	Assignment 5.3	TB2(ch-8,481-495)

Current commutated chopper	2	Lecture	Assignment 5.4	TB2(ch-8,496-505)
Load commutated chopper	2	Lecture	Assignment 5.5	TB2(ch-8,496-505)
Module VI: Inverter (10 Hours)				
Classification of inverter, single phase half bridge voltage source inverters	2	Lecture	Assignment 6.1	TB2(ch-9,535-544)
Single phase full bridge inverter, three phase inverter(180 and 120 conduction mode) with R Load	8	Lecture+ Practice	Assignment 6.2	TB2(ch-9,545-550)TB1(ch-6,237-247)
Module VII: Basic series inverter(19 Hours)				
Basic series inverter circuit analysis	1	Lecture	Assignment 7.1	TB2(ch-9,594-605)
Basic series inverter design aspect	5	Lecture+ Practice	Assignment 7.2	TB2(ch-9,594-605)
Modified series inverter	1	Lecture	Assignment7.3	TB1(ch-8,253-261)
Parallel inverter	6	Lecture+ Practice	Assignment 7.4	TB2(ch-9,609-614)
Single phase SCR bridge inverter	6	Lecture+ Practice	Assignment 7.5	TB2(ch-9,615-642)
Total- 105 Hours				

Microcontroller for Industrial Applications (PIC)

Course Name	Code	Type of course	T-P-P	Prerequisite
Micro Controllers for Industrial Application (PIC)	EECC0402	Theory +Practice	2-2-0	Nil

Objective

- To make the students understand how to activate PIC Micro-controller using assembly language and embedded C.

Course Outcome

- On successful completion of this course, students will be able to write a PIC Microcontroller by assembly language and Embedded-C programming.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course outline

Module I: Introduction to Microcontroller

(8 hours)

Theory

Introduction to Microcontroller: Introduction, Microcontroller versus microprocessors, CISC Vs RISC, Pipelining, Assembly Language vs Embedded C

Module II: PIC Microcontroller PIC16C6X/7X Architecture and Organization (10hours)

Theory

PIC Microcontroller PIC16C6X/7X Architecture and Organization:

Overview and Features, PIC16C6X/7X, PIC Reset Actions, PIC Oscillator Connections, PIC Memory Organization

Module III: PIC16C6X/7X in Assembly Language

(27 hours)

Theory

PIC16C6X/7X in Assembly Language

PIC 16C6X/7X Instructions, Addressing Modes, I/O Ports, Interrupts in PIC 16C61/71, PIC 16C61/71 Timers, PIC 16C71 ADC.

Practice:

- Create delay using 'decfsz' instruction
- Selecting Register Bank and loading value in specific Register.
- PORT A Initialization
- External Interrupt Programming
- AD Conversion

Module IV:PIC 16F8XX Flash Microcontrollers(5 hours)

Theory

PIC 16F8XX Flash Microcontrollers: Introduction, Pin Diagram of 16F8XX, STATUS Register, OPTION_REG Register, Power Control Register (PCON), PIC 16F8XX Program Memory, PIC 16F8XX Data Memory, DATA EEPROM and Flash Program EEPROM

Module V:PIC 16F8XX Flash Microcontrollers in Embedded C (9 hours)

PIC 16F8XX Flash Microcontrollers in Embedded C:Interrupts in 16F877, I/O Ports(94 -99), Timers(108-113)

Practice:

6. Initializing and operating I/O Port
7. Stopwatch
8. Set-up counter using timer 0

Module VI:PIC 16F877

(19 hours)

Theory

PIC 16F877Capture/Compare/PWM (CCP) Modules in PIC 16F877, Master Synchronous Serial Port (MSSP) Module

Practice:

9. Initialize CCP1 module in capture mode
10. Initialize CCP1 module in compare mode
11. Generate PWM signal using CCP1 module
12. Transmit a byte serially on SDO line using SPI master mode
13. Receive a byte serially on SDO line using SPI master mode
14. Transmit a byte serially on SDO line using SPI slave mode
15. Initializing MSSP module in I2C master mode(including start condition, stop condition, Transmission of address, read and write operation)

Module VII:USART

(12 hours)

Theory

USART: Universal Synchronous Asynchronous Receiver Transmitter (USART), Analog-to-Digital Converter (ADC)

Practice:

16. USART initialization to receive and transmit continuously in asynchronous mode
17. Initialize the AD module

Text Book:

1. Ajay V Deshmukh, “Microcontrollers-Theory and Applications”, , Tata McGraw-Hill Publishing Company Limited, 2005.
2. Richard Barnett, Larry O’Cull, Sarah Cox “Embedded C Programming and the Microchip PIC”, , Thomson Delmar Learning, 2006.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Introduction to Microcontroller (8 hours)				
Introduction to Microcontroller: Introduction, Microcontroller versus microprocessors, CISC Vs RISC	4	Lecture	Assignment 1.1	Suggested Links
Pipelining, Assembly Language vs Embedded C	4	Lecture	Assignment 1.2	Suggested Links
Module II: PIC Microcontroller PIC16C6X/7X Architecture and Organization (10 hours)				
PIC Microcontroller PIC16C6X/7X Architecture and Organization: Overview and Features, PIC16C6X/7X, PIC Reset Actions	5	Lecture	Assignment 2.1	Text Book 1 (Pg. No.115-131)
PIC Oscillator Connections, PIC Memory Organization	5	Lecture	Assignment 2.2	Text Book 1 (Pg. No.115-131)
Module III: PIC16C6X/7X in Assembly Language (27 hours)				
PIC16C6X/7X in Assembly Language: PIC 16C6X/7X Instructions, Addressing Modes, I/O Ports in PIC 16C61/71, Interrupts in PIC 16C61/71, PIC 16C61/71 Timers, PIC 16C71 ADC.	3	Lecture	Assignment 3.1	Text Book 1 (Pg. No.132-147)
<ol style="list-style-type: none"> 1. Create delay using 'decfsz' instruction 2. Selecting Register Bank and loading value in specific Register. 3. PORT A Initialization 4. External Interrupt Programming 5. AD Conversion 	24	Practice (MPLA B & Proteus)		Text Book 1 (Pg. No.132-147)
Module IV: PIC 16F8XX Flash Microcontrollers (5 hours)				
PIC 16F8XX Flash Microcontrollers: Introduction, Pin Diagram of 16F8XX, STATUS Register, OPTION_REG Register, Power Control	3	Lecture	Assignment 4.1	Text Book 1 (pg. No.150-165)

Register (PCON),				Data sheet in Suggested link section
PIC 16F8XX Program Memory, PIC 16F8XX Data Memory, DATA EEPROM and Flash Program EEPROM	2	Lecture	Assignment 4.2	Text Book 1 (pg. No.150-165) Data sheet in Suggested link section
Module V: PIC 16F8XX Flash Microcontrollers in Embedded C (9 hours)				
PIC 16F8XX Flash Microcontrollers in Embedded C: Interrupts in 16F877, I/O Ports, Timers,	1	Lecture	Assignment 5.1	Text Book 2 (Pg. No.94-156)
6..Initializing and operating I/O Port 7..Stopwatch 8.Set-up counter using timer 0	8	Practice (MPLAB &Proteus)		
Module VI:PIC 16F877 (19 hours)				
PIC 16F877 Capture/Compare/PWM (CCP) Modules in PIC 16F877, Master Synchronous Serial Port (MSSP) Module,	2	Lecture	Assignment 6.1	Text Book 2 (Pg. No.113-119, Pg. No.123-127, Pg. No.138-149)
8.Initialize CCP1 module in capture mode 9.Initialize CCP1 module in compare mode 10.Generate PWM signal using CCP1 module 11.Transmit a byte serially on SDO line using SPI master mode 12.Receive a byte serially on SDO line using SPI master mode 13.Transmit a byte serially on SDO line using SPI slave mode 14.Initializing MSSP module in I2C master mode(including start condition stop condition	17	Practice (MPLAB &Proteus)		
Module VII:USART (12 hours)				
Universal Synchronous Asynchronous Receiver Transmitter (USART), Analog-to-Digital Converter (ADC)	1	Lecture	Assignment 7.1	Text Book 2 (Pg. No.129-137) (Pg. No.149-156)
15.USART initialization to receive and transmit continuously in asynchronous mode	11	Practice (MPLAB &Proteus)		

16.Initialize the AD module)		Data sheet in Suggested link section
Total- 90 Hours				

Control System

Course Title	Code	Type of course	T-P-Pr	Prerequisite
Control System	ELCC0406	Theory & Practice	3-2-0	Nil

Objective

- To teach the Mathematical Models of Physical Systems, Analysis of System in Time Domain and Frequency Domain & Application of Controllers

Course Outcome

- Students will gain knowledge of Physical Systems, Stability Analysis of System and Controller
- Students will develop skill of designing Automatic Control System and Controller for a particular application

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		<i>100</i>	

Course Outline

Module I: Introduction and Mathematical Models of Physical Systems(23 Hours)

Theory

Introduction to Control Systems: Basic Concepts of Control Systems, Open loop and closed loop systems; Mathematical Models of Physical Systems: Differential Equations of Physical Systems, Mechanical Translational Systems, Rotational systems, Electrical Systems, Analogy between Mechanical and electrical quantities, Derivation of Transfer functions, Block Diagram Algebra, Signal Flow Graphs and Mason's Gain Formula; Control Components: D.C. Servomotors, Synchros and Stepper Motors.

Practice: Hardware

- Study of D.C. Servomotors
- Study of AC Servomotor
- Study of Synchros
- Study of Stepper Motors

Module II: Time Response Analysis

(20 Hours)

Theory

Time Response Analysis: Type Test Signals, Time response of first order systems to unit step and unit ramp inputs, Time Response of Second order systems to unit step input, Time Response specifications, Steady State Errors and Static Error Constants of different types of systems.

Practice: Mat lab

5. Standard Test Signals
6. Time response of first order systems to unit step and unit ramp inputs
7. Time Response of Second order systems to unit step input
8. Time Response specifications
9. Simulate a D. C. position control system and obtain its step response

Module III: Stability in Time Domain

(12 Hours)

Theory

Stability in Time Domain: Stability and Algebraic Criteria, concept of stability, Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion, Application of the Routh stability criterion to linear feedback system and Relative stability by shifting the origin in s-plane.

Practice: Mat lab

10. Study of stable and unstable system.

Module IV: Root Locus Technique

(10 Hours)

Theory

Root Locus Technique: Root locus concepts, Rules of Construction of Root locus and Determination of Roots from Root locus for a specified open loop gain.

Practice: Mat lab

11. Construct the root locus for 2nd, 3rd and 4th order system and analyze its stability (Gain)

Module V: Frequency Response Analysis

(20 Hours)

Theory

Frequency Response Analysis: Frequency domain specifications, correlation between Time and Frequency Response with respect to second order system, Polar plots, Bode plot, Determination of Gain Margin and Phase Margin from Bode plot.

Practice: Mat lab

12. Determine experimentally the frequency response of a 2nd system and evaluation of frequency domain specifications
13. Construct the polar plot for 2nd, 3rd and 4th order system and analyze its stability (PM & GM)
14. Construct the bode plot for 2nd, 3rd and 4th order system and analyze its stability (PM & GM)

Module VI: Stability in Frequency Domain

(10 Hours)

Theory

Stability in Frequency Domain: Principle of argument, Nyquist stability criterion and Application of Nyquist stability criterion for linear feedback system.

Practice: Mat lab

- 15. Construct the Nyquist plot for 2nd, 3rd and 4th order system and analyze its stability (PM & GM)
- 16. Draw the frequency response characteristic of a given lag- lead compensating network

Module VII: Controllers

(10 Hours)

Theory

Controllers: Concept of Proportional, Derivative and Integral Control actions, P, PD, PI and PID controllers.

Practice: Mat lab

- 17. Design of P,PD, PI and PID Controller for 2ndor 3rdorder system
- 18. To study the effect of P, PI, PD and PID controller on step response of a feedback control system
- 19. To design a PI controller and study its effect on steady state error
- 20. Controller Tuning

Session Plan

Topics	No. of Sessions (in hrs)	Activity	Assignment	Suggested Reading
Module I: Introduction and Mathematical Models of Physical Systems (23 Hours)				
Introduction to Control Systems: Basic Concepts of Control Systems, Open loop and closed loop systems.	03	Lecture	Assignment No. 1.1	Text Book (TB) Chapter (CH)-1
Mathematical Models of Physical Systems: Differential Equations of Physical Systems, Mechanical Translational Systems, Rotational systems, Electrical Systems, Analogy between Mechanical and electrical quantities, Derivation of Transfer functions, Block Diagram Algebra, Signal Flow Graphs and Mason’s Gain Formula.	10	Lecture	Assignment No. 1.2-1.7	TB CH- 1

Control Components: D.C. Servomotors, Synchros and Stepper Motors.	02	Lecture	Assignment No. 1.8	TB CH- 9
1. Study of D.C. Servomotors 2. Study of AC Servomotor 3. Study of Synchros 4. Study of Stepper Motors	08	Practice	Result of Experiments and Viva voce	TB CH- 9
Module II: Time Response Analysis (20 Hours)				
Time response Analysis: Standard Test Signals, Time response of first order systems to unit step and unit ramp inputs, Time Response of Second order systems to unit step input, Time Response specifications, Steady State Errors and Static Error Constants of different types of systems.	08	Lecture	Assignment No. 2.1-2.5	TB CH- 2
5. Standard Test Signals 6. Time response of first order systems to unit step and unit ramp inputs 7. Time Response of Second order systems to unit step input 8. Time Response specifications 9. Simulate a D. C. position control system and obtain its step response	12	Practice	Result of Experiments and Viva voce	
Module III: Stability in Time Domain (12 Hours)				
Stability in time domain: Stability and Algebraic Criteria, concept of stability, Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion, Application of the Routh stability criterion to linear feedback system, Relative stability by shifting the origin in s-plane	10	Lecture	Assignment No. 3.1-3.5	TB CH- 5
10. Study of stable and unstable system.	02	Practice	Result of Experiments and Viva voce	
Module IV: Root Locus Technique (10 Hours)				
Root locus Technique: Root locus concepts, Rules of Construction of Root locus and Determination of Roots from Root locus for a specified open loop gain.	06	Lecture	Assignment No. 4.1-4.3	TB CH- 5
11. Plot the root locus for 2 nd , 3 rd and 4 th order system and analyze its stability (Gain)	04	Practice	Result of Experiments and Viva voce	
Module V: Frequency Response Analysis (20 Hours)				

Frequency Response Analysis: Frequency domain specifications, correlation between Time and Frequency Response with respect to second order system.	04	Lecture	Assignment No. 5.1-5.2	TB CH- 4
Polar plots	02	Lecture	Assignment No. 5.3-5.5	TB CH- 4
Bode plot, Determination of Gain Margin and Phase Margin from Bode plot.	04	Lecture	Assignment No. 5.6-5.9	TB CH- 4
12. Determine experimentally the frequency response of a second -order system and evaluation of frequency domain specifications. 13. Construct the polar plot for 2 nd , 3 rd and 4 th order system and analyze its stability (PM & GM) 14. Construct the bode plot for 2 nd , 3 rd and 4 th order system and analyze its stability (PM & GM)	10	Practice	Result of Experiments and Viva voce	
Module VI: Stability in Frequency Domain (10 Hours)				
Stability in frequency domain: Principle of argument, Nyquist stability criterion, Application of Nyquist stability criterion for linear feedback system.	04	Lecture	Assignment No. 6.1-6.2	TB CH- 5
15. Construct the Nyquist plot for 2 nd , 3 rd and 4 th order system and analyze its stability (PM & GM). 16. Draw the frequency response characteristic of a given lag-lead compensating network.	06	Practice	Result of Experiments and Viva voce	
Module VII: Controllers (10 Hours)				
Controllers: Concept of Proportional, Derivative and Integral Control actions, P, PD, PI and PID controllers.	02	Lecture	Assignment No. 7.1	TB CH- 11
17. Design of P,PD, PI and PID Controller for 2 nd or 3 rd order system 18. To study the effect of P, PI, PD and PID controller on step response of a feedback control system 19. To design a PI controller and study its effect on steady state error 20. Controller Tuning	08	Practice	Result of Experiments and Viva voce	
Total- 105Hours (Theory- 55 hours Practice-50 hours)				

Microprocessor and its Interfacing

Course Title	Code	Type of course	T-P-P (Credit)	Prerequisite
Microprocessor and its Interfacing	ELCC0407	Theory + Practice	1-1-0	Nil

Objective

- Familiarization with architecture, instruction set and assembly language programming concept of a microprocessor for design of hardware interfacing circuit.

Course Outcome

- Design of microprocessors based systems.
- Analyze and design hardware and software for small digital systems involving microprocessors.

Evaluation Systems

Internal Examination	Component	Marks	Method of Evaluation
	Internal Theory	20	Written examination
	Internal Practice	30 (20+10)	Lab work+ Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I: 8085 Microprocessor Architecture (2 Hours)

Theory

Introduction to Microprocessor, Components of a Microprocessor: Registers, ALU and control & timing, System bus (data,address and control bus), Microprocessor systems with bus organization.

Module II: 8085 Instruction set (11 Hours)

Theory

Assembly Language Programming Basics, Classification of Instructions, Addressing Modes, Writing 8085 assembly language programs with decision, making and looping using, data transfer, logical and branch instructions.

Practice

- Data transfer and Arithmetic Group
- Logical and Branch Group

Module III: Stack and Subroutines (4 Hours)

Theory

Stack & Subroutines stack and machine control groups of instruction set,

Practice:

3. Stack, I/O and Machine Control Group

Module IV: Peripheral device and Interfacing (4 Hours)

Theory

Address space partitioning, memory and I/O interfacing, data transfer schemes

Module V: Interrupts of Intel 8085 (8 Hours)

Theory

Interrupt structure of 8085A microprocessor, processing of vectored and non-vectored interrupts.

Practice:

4. Find the calling location of different Interrupt
5. Solve a pending task (addition) when interrupt occurs

Module VI: Programmable peripheral Interface (Intel-8255) (8 Hours)

Theory

Intel 8255, pin configuration, internal structure of a port bit, modes of operation.

Practice:

6. Operate 8255 in Mode 0,1
7. Operate 8255 in Mode 2

Module VII: Programmable Counter/ Interval Timer (8 Hours)

Theory

Intel 8253, pin configuration, internal block diagram of counter and modes of operation

Practice:

8. Operate 8253 in Mode 0,1
9. Operate 8253 in Mode 3

Session Plan

Topics	No. of Sessions (in hrs)	Activity	Assignment	Suggested Reading
Module I: 8085 Microprocessor Architecture (2 Hours)				
Introduction to Microprocessor, Components of a Microprocessor: Registers, ALU and control & timing, System bus (data, address and control bus), Microprocessor systems with bus organization.	2	Lecture	Assignment 1.1	TB CH-3 Sec 3.1
Module II: 8085 Instruction set (11 Hours)				
Assembly Language Programming Basics	1	Lecture	Assignment 2.1	TB CH-3 Sec 3.2
Classification of Instructions	3	Lecture	Assignment 2.2	TB CH-4 Sec 4.3
Addressing Modes	2	Lecture	Assignment 2.3	TB CH-4 Sec (4.6.1-4.6.4)
8085 assembly language programs with decision, making and looping using, data transfer, logical and branch instructions.	5	Practice		TB CH-6
Module III: Stack and Subroutines (4 Hours)				
stack and machine control groups of instruction set	2	Lecture	Assignment 3.1	TB CH-4 Sec 4.6.5
Stack, I/O and Machine Control Group	2	Practice		TB CH-6
Module IV: Peripheral device and Interfacing (4 Hours)				
Address space partitioning	1	Lecture	Assignment 4.1	TB CH- 7 Sec 7.2
memory and I/O interfacing	1	Lecture	Assignment 4.2	TB CH- 7

				Sec 7.3
data transfer schemes	2	Lecture	Assignment 4.3	TB CH- 7 Sec 7.4
Module V: Interrupts of Intel 8085 (8 Hours)				
Hardware Interrupts	2	Lecture	Assignment 5.1	TB TB CH- 7 Sec 7.5.1
Software Interrupts	2	Lecture	Assignment 5.2	TB TB CH- 7 Sec 7.5.2
Find the calling location of different Interrupt Solve a pending task (addition) when interrupt occurs	4	Practice		
Module VI: Programmable peripheral Interface (Intel-8255) (8 Hours)				
Intel 8255, pin configuration, internal structure of a port bit, modes of operation	3	Lecture	Assignment 6.1	TB TB CH- 7 Sec 7.7
Operate 8255 in Mode 0,1	2	Practice		
Operate 8255 in Mode 2	1	Practice		
Module VII: Programmable Counter/ Interval Timer (8 Hours)				
Programmable Counter/ Interval Timer Intel 8253, pin configuration, internal block diagram of counter and modes of operation	3	Lecture	Assignment 7.1	TB CH 7 Sec (7.11.1- 7.11.2)
Operate 8253 in Mode 0,1	2	Lecture+Practice	Assignment 7.2	TB CH 7 Sec (7.11.3- 7.11.5)
Operate 8253 in Mode 2,3	3	Lecture+Practice	Assignment 7.3	TB CH 7 Sec (7.11.6- 7.11.7)
Total- 45 Hours				

Digital Electronic Circuits

Course Title	Code	Type of course	T-P-P	Prerequisite
Digital Electronic Circuits	ECCC0402	Theory +Practice	3-1-0	Nil

Objective:

- The objective of this subject is to provide a good understanding on digital logic and different combinational and sequential circuits

Course Outcome:

- Student will able to Develop, Analyze, Design and Implement combinational and Sequential Logic Circuits
- Student will able to acquire the skill on Simulating and implementing combinational and Sequential Circuits using Verilog

Evaluation Systems:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: NUMBER SYSTEMS AND CODES

(4 Hours)

Theory

Different number systems: Binary, Octal, Decimal and Hexadecimal, Interpretation of base r system, Number-Base Conversion. Binary Arithmetic, 1's and 2's Complements, subtraction using 2's complement, Signed Binary Numbers. Codes: BCD, Gray, Excess-3, ASCII Character Code, BCD Addition

Module II: BOOLEAN ALGEBRA AND LOGIC MINIMIZATION

(5 Hours)

Theory

Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Complement of a function, Canonical and Standard forms- Minterms, Maxterms, SOP, POS, Conversion between canonical forms. Logic Minimization Techniques: 3, 4, 5 variable K-Map, POS simplification, don't care conditions

Practice

- Study of different digital logic gates
- Simplification of Boolean function, logic minimization and implementation with logic gates

Module III: LOGIC MINIMIZATION

(5 Hours)

Theory

Prime implicants, Essential prime implicants, Quine-McCluskey technique for simplification, Circuit Implementation, NAND and NOR implementation, AND-OR-INVERT, OR-AND-INVERT, Ex-OR function, Parity generation and checking

Practice

3. VERILOG/VHDL Tutorial
4. NAND-NOR implementation of logic circuits

Module IV: ARITHMETIC CIRCUITS

(6 Hours)

Theory

Combinational Circuit- Design and analysis, Code conversion, Binary Adder-Subtractor- Half Adder/ Subtractor, Full Adder/Subtractor, Ripple carry adder, Carry look ahead generator, Adder-Subtractor, BCD Adder, Binary Multiplier, Magnitude Comparator

Practice

5. Design, implement and test of Combinational Circuit- Parity Generator
6. Design, implement and test of Code Converters
7. Design, implement and test of Adders
8. Design, implement and test of Subtractor

Module V: COMBINATIONAL LOGIC

(6Hours)

Theory

Decoders, Function implementation using decoder, Encoders, Multiplexers, function implementation using multiplexer, De-multiplexers

Practice

9. Design, implement and test of Decoder circuits
10. Design, implement and test of LSB/ MSB Priority Encoder
11. Design, implement and test of Multiplexers
12. Design, implement and test of Magnitude Comparator

Module VI: SEQUENTIAL LOGIC

(6 Hours)Theory

Sequential Circuits, Latches-SR, JK, Flip-Flops-JK, D, T, Design and Analysis of Clocked Sequential Circuit, Introduction to FSM, Mealy and Moore Models, Design of sequence detector using both types of FSM;Registers- SISO, SIPO, PIPO and PISO Registers, Universal Shift Register.

Practice

13. Design, implement and test of Flip Flop Circuits
14. Design, implement and test of Shift Register

Module VII: COUNTERS, MEMORY AND PROGRAMMABLE LOGIC (10 Hours)**Theory**

Counter- Asynchronous/Synchronous- Up/Down Counter, Termination of Count (MOD Counter), Ring Counter, Johnson Counter; Memory Characteristics, Memory hierarchy, Different types of memory, Concept of CPLD and FPGA, Programmable Read Only Memory, PLA, PAL, Error Detection and Correction- Hamming Code

Practice

15. Design, implementation and test of Counters

Practice will be through hardware implementation and software simulation using Xilinx.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Number Systems and Codes (5 hrs. lecture)				
Number System: - Binary, Octal, Decimal, Hexadecimal, Interpretation of base r system	1	Lecture	Assignment-1.1	Text Book-1 Chapter-1
Number-Base Conversion, Binary Arithmetic	1	Lecture	Assignment-1.2	Text Book-1 Chapter-1
1's and 2's Complements, subtraction using 2's complement, Signed Binary Numbers	1	Lecture	Assignment-1.3	Text Book-1 Chapter-1

Codes: - BCD, Gray, Excess-3, ASCII Character Code	1	Lecture	Assignment-1.4	Text Book-1 Chapter-1
BCD Addition	1	Lecture	Assignment-1.5	Text Book-1 Chapter-1
Module II: Boolean Algebra and Logic Minimization (6hrs. lecture+3 hrs. practice)				
Basic Theorems and Properties of Boolean Algebra	1	Lecture	Assignment No- 2.1	Text Book-1 Chapter-2
Boolean Functions, Complement of a Function	1	Lecture	Assignment No- 2.2	Text Book-1 Chapter-2
Canonical and Standard Forms-Minterms, Maxterms, SOP, POS, Conversion between two canonical form	1	Lecture	Assignment No- 2.3	Text Book-1 Chapter-2
Logic Gates	1	Practice		
The map method-3,4,5 variable K-Map	2	Lecture	Assignment No- 2.4	Text Book-1 Chapter-3
Simplification of Boolean function, logic minimization and implementation with logic gates	2	Practice		
POS simplification, Don't care conditions	1	Lecture	Assignment No- 2.5	Text Book-1 Chapter-3
Module III: Logic Minimization(6hrs. lecture+3 hrs. practice)				
Prime Implicants, Essential Prime Implicants	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
Quine-McCluskey Technique for simplification.	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
Circuit Implementation,	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
NAND and NOR implementation,	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
AND-OR-INVERT, OR-AND-INVERT,	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
Ex-OR function, Parity generation and checking.	1	Lecture	Assignment No- 3.1	Text Book-1 Chapter-3
VERILOG/VHDL Tutorial	1	Practice		
NAND-NOR implementation of logic circuits.	2	Practice		
Module IV [6 hrs. lecture+8 hrs. practice]				

Combinational Circuit-Design and Analysis	1	Lecture		Text Book-1 Chapter-4
Design, implement and test of Combinational Circuit- Parity Generator	2	Practice		
Code Conversion Circuits	1	Lecture	Assignment-4.1	Text Book-1 Chapter-4
Design, implement and test of Code Converters	2	Practice		
Binary Adder-Subtractor- Half Adder/Subtractor, Full Adder/Subtractor	2	Lecture	Assignment-4.2	Text Book-1 Chapter-4
Design, implement and test of Adders	2	Practice		
Ripple Carry Adder, Carry Lookahead Generator	1	Lecture	Assignment-4.3	Text Book-1 Chapter-4
Design, implement and test of Subtractor	2	Practice		Lab Manual
Adder-Subtractor, BCD Adder	1	Lecture	Assignment-4.4	Text Book-1 Chapter-4
Module V [6hrs. Lecture+8 hrs. Practice]				
Binary Multiplier	1	Lecture	Assignment-5.1	Text Book-1 Chapter-4
Magnitude Comparator	1	Lecture	Assignment-5.2	Text Book-1 Chapter-4
Design, implement and test of Magnitude Comparator	2	Practice		Lab Manual
Decoders, Encoders	2	Lecture	Assignment-5.3	Text Book-1 Chapter-4
Design, implement and test of Decoder circuits	2	Practice		Lab Manual
Design, implement and test of LSB/ MSB Priority Encoder	2	Practice		Lab Manual
Multiplexers, Demultiplexers	2	Lecture	Assignment-5.4	Text Book-1 Chapter-4
Design, implement and test of Multiplexers	2	Practice		Lab Manual
Module VI [6hrs. Lecture+4 hrs. Practice]				
Sequential Circuits, Latches-SR,JK	1	Lecture	Assignment-6.1	Text Book-1 Chapter-5

Flip-Flops-JK,D,T	1	Lecture	Assignment-6.2	Text Book-1 Chapter-5
Design, implement and test of Flip Flop circuits	2	Practice		Lab Manual
Analysis and Design of Clocked Sequential Circuit	1	Lecture	Assignment-6.3	Text Book-1 Chapter-5
Introduction to FSM, Mealy and Moore Models, Design of sequence detector using both types of FSM.	1	Lecture	Assignment-6.4	Text Book-1 Chapter-5
Registers- SISO, SIPO, PIPO and PISO Registers	1	Lecture	Assignment-6.5	Text Book-1 Chapter-6
Universal Shift Register	1	Lecture	Assignment-6.6	Text Book-1 Chapter-6
Design, implement and test of Shift Register	2	Practice		Lab Manual
Module VII [7hrs. Lecture+3 hrs. Practice]				
Asynchronous/Synchronous-Up/Down Counter	2	Lecture	Assignment-7.1	Text Book-1 Chapter-6
Termination of Count (MOD Counter), Ring Counter, Johnson Counter	2	Lecture	Assignment-7.2	Text Book-1 Chapter-6
Design, implementation and test of Counters	2	Practice		Lab Manual
Memory Characteristics, Memory hierarchy, Different types of memory, Concept of CPLD and FPGA,	2	1 hr. Lecture + 1 hrs. Practice	Assignment-7.3	Text Book-1 Chapter-7
Programmable Read Only Memory, PLA, PAL,	1	Lecture	Assignment-7.4	Text Book-1 Chapter-7
Error Detection and Correction Code - Hamming Code.	1	Lecture	Assignment-7.5	Text Book-1 Chapter-7
Total (hrs.)	70	42 hrs. Lecture + 28 hrs. Practice		

Digital Signal Processing

Course Title	Code	Type of course	T-P-P	Prerequisite
Digital Signal Processing	ECCC0404	Theory +Practice	3-1-0	Nil

Objective

- To teach students the Time Domain to Frequency Domain Conversion for Discrete Time Signal and Digital Filter Design Technique

Course Outcome

- Students will gain the knowledge in handling DSP processor for real time signal processing
- Student will acquire skill on Developing and implementing new algorithm in signal processing

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

Course Outline

Module I: ANALYSIS OF LTI SYSTEMS USING Z-TRANSFORM (12 Hours)

Theory

The Z-Transform: The Direct Z-Transform, Theinverse Z-Transform, Properties of The Z-Transform, Linearity, Time Shifting, Scaling, Time Reversal, Differentiation, Convolution, Correlation, Accumulation, Rational Z-Transforms: Poles and Zeros, Pole Location And Time-Domain Behavior for Causal Signals, The System Function of a Linear Time-Invariant System

Practice

- Hands on to MATLAB & Simulink
- Signal generation using MATLAB & Simulink
- Analysis of LTI system using MATLAB and Z-transform of signal using MATLAB

Module II: INVERSION OF THE Z-TRANSFORMS (5 Hours)

Theory

The Inversion of the Z-Transform by Power Series Expansion, The Inversion of The Z-Transform by Partial-Fraction Expansion, The One-Sided Z-Transform: Definition and Properties, Analysis and Characterization Of LTI System using Z-Transform, Solution of Difference Equations.

Module III: THE DISCRETE FOURIER TRANSFORM (8 Hours)

Theory

Properties and applications, the discrete Fourier transform, Properties of the DFT: periodicity, linearity, and symmetry properties, relationship of the DFT to other transforms, DFT as a linear transformation, multiplication of two DFT and circular convolution

Practice

4. MATLAB simulation for DFT & IDFT.

Module IV: FAST FOURIER TRANSFORM (10 Hours)

Theory

Efficient Computation of the DFT, FFT Algorithms: Radix-2 FFT Algorithms: Decimation-in-Time (DIT), Decimation-in-Frequency (DIF)

Practice

5. DIT FFT by MATLAB simulation
6. DIF FFT by MATLAB simulation

Module V: DESIGN AND REALIZATION OF DIGITAL FIR FILTERS (14 Hours)

Theory

Design of FIR Filters: Symmetric and Anti-Symmetric FIR Filters, Design of Linear-Phase FIR Filters by Using Windowing Techniques, Design of FIR Filter by Frequency Sampling
Realization of FIR Filter: Recursive and Non-Recursive Structure, Factors Influencing Choice of Structure, Block Diagram Representation of Signal Flow Graph, FIR Filter Structure: Direct Form-I, Direct Form-II, Linear Phase Structure, Frequency Sampling Structure

Practice

7. MATLAB Simulation of FIR filters using windows technique (Rectangular, Hamming and Hanning)
8. MATLAB simulation of LPF and high pass filter by FIR filter

Module VI: DESIGN AND REALIZATION OF DIGITAL IIR FILTERS (14 Hours)

Theory

Design of IIR Filters from Analog Filters (Butterworth Approximation): IIR Filter Design by Impulse Invariance, IIR Filter Design By The Bilinear Transformation, Realization of Digital Filter by using Direct Form-I, Direct Form-II, Cascade Form and Parallel Form Structures.

Practice

9. MATLAB simulation for design of Butterworth filter
10. Design of IIR Butterworth filter from filter specification (both programming & and by using FDA tool box)
11. Design of IIR low pass Butterworth filter using impulse invariant transformation from filter specification

Module VII: DIGITAL SIGNAL PROCESSOR

(12 Hours)

Theory

Introduction, Evolution of Digital Signal Processor, Digital Signal Processor Architecture, Processor Hardware Unit, Fixed Point and Floating Format, Pipelining, Memory Access Scheme, VLIW, TMS320c Family

Practice

12. Signal generation (sine wave, step signal) by using processor
13. Linear convolution by using DSP processor
14. Filter design and implementation by using DSP processor

Text Books

1. V. K. Ingle and J.G. Proakis, J.G, “Digital Signal Processing-A MATLAB Based Approach”, Cengage Learning Publisher
2. S. Salivahanan, A. Vallavaraj and C. Gnanapriya, “Digital Signal Processing”, McGraw-Hill Publication

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module-I [6 hrs. Lecture + 6 hrs. Practice]				
The Z-Transform: The Direct Z-Transform,	3	1hr. Lecture + 2 hrs. Practice	Assignment1 QN-1	Text Book-1, Chapter 3
The Inverse Z-Transform,	1	Lecture	Assignment 1 QN-2	Text Book-1, Chapter 3

Properties of the Z-Transform	3	Lecture	Assignment 1 QN-3	Text Book-1, Chapter 3
Introduction to MatLab and Simulink.	2	Practice	Assignment 1 QN-4	Text Book-2, Chapter 15
Standard Signal Generation by MatLab& Simulink	2	Practice	Assignment 1 QN-4	Text Book-2, Chapter 15
Rational Z-Transforms: Poles and Zeros, Pole Location and Time-Domain Behavior for Causal Signals	1	Lecture	Assignment 1 QN-5	Text Book-1, Chapter 3
Module-II [5 hrs. Lecture]				
Inversion of the Z-Transforms: The Inversion of the Z-Transform by Power Series Expansion,	1	Lecture	Assignment 2 QN-1	Text Book-1, Chapter 3
The Inversion of the Z-Transform by Partial-Fraction Expansion	1	Lecture	Assignment 2 QN-2	Text Book-1, Chapter 3
The One-sided Z-Transform: Definition and Properties, Solution of Difference Equations.	3	Lecture	Assignment 2 QN-3	Text Book-1, Chapter 3
Module-III [6 hrs. Lecture+ 2 hrs. Practice]				
Relationship of the DFT to other Transforms	1	Lecture	Assignment 3 QN-1	Text Book-1, Chapter 5
Properties of the DFT: Periodicity problems on Properties of the DFT: Periodicity	1	Lecture	Assignment 3 QN-2	Text Book-1, Chapter 5
Properties of the DFT, Linearity, and Symmetry Properties,	1	Lecture	Assignment 3 QN-3	Text Book-1, Chapter 5
Multiplication of Two DFTs and Circular Convolution	3	1hr. Lecture + 2 hrs. Practice	Assignment 3 QN-4	Text Book-1, Chapter 5
Twiddle factor, The DFT as a Linear transformation Overlap add method, Overlap Save method	2	Lecture	Assignment 3 QN-5	Text Book-1, Chapter 5
Module-IV [6hrs. Lecture + 4 hrs. Practice]				
Fast Fourier Transform Algorithms, Efficient Computation of the DFT, problems on FFT Algorithms: Direct Computation of the DFT	2	Lecture	Assignment 4 QN-1	Text Book-1, Chapter 6
Radix-2 FFT Algorithms: Decimation-In-Time (DIT), problems on Decimation-In-Time	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 4 QN-2	Text Book-1, Chapter 6

Radix-2 FFT Algorithms: Decimation-In-Frequency (DIF), problems on Decimation-In Frequency	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 4 QN-3	Text Book-1, Chapter 6
Module-V [10 hrs. Lecture + 4 hrs. Practice]				
Design of FIR Filters: Symmetric and Ant symmetric FIR Filters	2	Lecture	Assignment 5 QN-4	Text Book-1, Chapter 8
Design of Linear-Phase FIR Filters by using Windows	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 5 QN-5	Text Book-1, Chapter 8
Design of FIR filter By Frequency Sampling Method	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 5 QN-6	Text Book-1, Chapter 8
Realization of FIR Filter: recursive and non-recursive structure, factors influencing choice of structure, Block diagram representation of Signal flow graph	2	Lecture	Assignment 5 QN-7	Text Book-1, Chapter 8
FIR filter structure: Direct form-I, Direct form-II, Linear phase structure, frequency sampling structure.	2	Lecture	Assignment 5 QN-8	Text Book-1, Chapter 7
Module-VI [8 hrs. Lecture + 6 hrs. Practice]				
Implementation of Discrete- TimeSystems, Structure for the Realizationof Discrete-Time Systems	2	Lecture	Assignment 6 QN-1	Text Book-1, Chapter 7
Structure for IIR Systems: Direct Form Structures, Cascade- FormStructures, Parallel-Form Structures	2	Lecture	Assignment 6 QN-2	Text Book-1, Chapter 7
Design of IIR Filters: Design byImpulse Invariance method	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 6 QN-3	Text Book-1, Chapter 8
Design by the Bilinear Transformation	3	1 hrs. Lecture + 2 hrs. Practice	Assignment 6 QN-4	Text Book-1, Chapter 8
Design and realization of IIR Butterworth filter from filter specification	3	1 hrs. Lecture + 2 hrs. Practice	Assignment6 QN-7	Text Book-1, Chapter 8
Module-VII [4 hrs. Lecture + 8 hrs. Practice]				

Introduction, DSP processor memory Architecture	4	2 hrs. Lecture + 2 hrs. Practice	Assignment 7 QN-1	Text Book-2, Chapter 15
Examples of DSP processor, pipelining	1	Lecture	Assignment 7 QN-2	Text Book-2, Chapter 15
First generation TMS320c1x processors, second generation TMS320c2x processors, third generation TMS320c3x processors, fourth generation TMS320c4x processors	3	1 hrs. Lecture + 2 hrs. Practice	Assignment 7 QN-3	Text Book-2, Chapter 15
Filter design and implementation by using DSP processor	4	Practice	Assignment 6 QN-4	Text Book-2, Chapter 15
Total (hrs.)	75	45 hrs. Lecture + 30 hrs. Practice		

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Domain- Industrial Automation

Course Code	Course Title	Course Nature	Credits
DEIA0101	General PLC	Theory	2
DEIA0201	Basic Electrical (Automation based) and Panel Designing	Practice	2
DEIA0401	Supervisory Control and Data Acquisition (SCADA)	Theory+ Practice	3
DEIA0402	Micro Range Programmable Logic Controller	Theory+ Practice	3
DEIA0403	Small Range Programmable Logic Controller	Theory+ Practice	3
DEIA0404	Medium Range Programmable Logic Controller	Theory+ Practice	3
DEIA0202	Human Machine Interface (HMI)	Practice	2

DEIA0203	Variable Frequency Drive	Practice	2
DEET0300	Project		6
DEET0800	Internship		4
		Total	30

General PLC

Course Title	Code	Type of course	T-P-PJ	Prerequisite
General PLC	DEIA0101	Theory	2-0-0	Nil

Objective

- To teach the concept of Programmable Logic Controller and the application of the controllers.

Course Outcome

- Students will gain knowledge of Programmable logic controller used in industries.
- Students will develop skill of designing Automatic Control System using PLC.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written Examination

	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on Class Attended
External Examination	External Theory	60	Written Examination
Total		100	

Course Outline

Module I: What Is PLC

(4 Hours)

Theory

Definition of PLC. Brief description about PLC. Why to use PLC in industry. How to choose a PLC for industry.

Module-II: Types of PLC

(5 Hours)

Theory

Block Diagram. Functional block diagram of PLC. Detail description of each component of PLC.

- a) Power Supply
- b) CPU & its role
- c) Memory and type
- d) Input & Output Modules and their role
- e) Rack & Slot.

Module-III: Operation of PLC

(3 Hours)

Theory

Input & Output wiring. Signal flow. Internal structure of PLC.

Module-IV: Different PLC Brands

(5 Hours)

Theory

Leading PLC Brands. Different CPUs series. Different groups of PLC.

Module-V: PLC Driver Communication

(4 Hours)

Theory

Discussion on serial & parallel communication.

Description about:-

- a) Protocol.
- b) Standard.
- c) Baud rate.
- d) Bus system.
- e) Time Cycle
- f) Scan time

Module-VI: Programming Languages**(7 Hours)****Theory**

Programming standards. Programming rules. Different programming languages. NO-NC Concept. How to write a program (concept).

Module-VII: Number System**(2 Hours)****Theory**

Brief discussion on number systems and their conversions.

Reference Book

1. Madhuchhanda Mitra and Samarjit Sengupta, "Programmable Logic Controllers and Industrial Automation: An Introduction" 2nd Edition"

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (WHAT IS PLC) (Theory- 1 hours)				
Definition of PLC. Description. Compact and modular PLC. Why to use PLC in industry. How to choose a PLC for industry	4	Lecture	Assignment 1.1	Reference Book (RB)
Module – 2 (TYPES OF PLC) (Theory- 5 hours)				
General Block Diagram. Functional block diagram of PLC. Detail description of each component of PLC. a) Power Supply b) CPU & its role c) Memory and type d) Input & Output Modules and their role e) Rack & Slot.	5	Lecture	Assignment 1.2	RB
Module – 3 (OPERATION OF PLC) (Theory- 3 hours)				
Input & Output wiring. Signal flow. Internal structure.	3	Lecture	Assignment 1.3	RB
Module – 4 (PLC BRANDS) (Theory- 4 hours)				
Leading brands of plc. Different CPUs series. Different groups of PLC.	4	Lecture	Assignment 1.4	RB
Module – 5 (PLC DRIVER COMMUNICATION) (Theory- 5 hours)				
Discussion on serial & parallel communication. Description	5	Lecture	Assignment 1.5	RB

about :- a) Protocol. b) Standard. c) Baud rate. d) Bus system. e) Time Cycle f) Scan time				
Module – 6 (PROGRAMMING LANGUAGE) (Theory- 7 hours)				
Programming standards. Programming rules. Different programming software. NO-NC Concept. How to write a program (concept).	7	Lecture	Assignment 1.6	RB
Module – 7 (NUMBER SYSYEMS) (Theory- 2 hours)				
Discussion on number systems and their conversions.	2	Lecture+ Practice	Assignment 1.7	RB
Total- 30 Hours (Theory- 30 hours)				

Basic Electrical (Automation based) and Panel Designing

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Basic Electrical (Automation based) and Panel Designing	DEIA0201	Practice	0-2-0	Nil

Objective

- To teach the concept of Programmable Logic Controller based electrical panel design.

Course Outcome

- Students will gain knowledge of PLC based wiring concept of panel as used in industries.
- Students will develop skill of designing electrical panels.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
----------------------	-----------	------------	----------------------

	Internal Practice	50 (40+10)	Lab Work + Learning Record
External Examination	External Practice	50	Lab Work
Total		100	

Course Outline

Module-I: Introduction

(1 Hours)

Theory

Fundamentals of electrical and electronic components required for electrical panel designing using PLC.

Module-II: Power Supply

(7 Hours)

Theory

Power Supply Systems, Conversion of 230 Vac to 24 V dc and vice-versa with circuit description, Basic concept of SMPS.

Practice

1. Conversion of 230 Vac to 24Vdc
2. Transformers, diodes and regulator ICs.

Module-III: Basic Industrial Switches & Sensors

(4 Hours)

Theory

Pushbuttons, toggle switches, Limit switch, proximity switch, optical switch, pressure switch, etc

Practice

3. Checking the operations of different Sensors and switches.

Module-IV: RELAY

(10 Hours)

Theory

Basic description of RELAY, Practical uses of relay, Latching using relay, how to switch a 230Vac load using 24Vdc.

Practice

4. Latching and unlatching circuit using relay.
5. Interlocking circuit using relay.
6. Switching of 220Vac devices using (24Vdc).

Module-V: CONTACTOR

(10 Hours)

Theory

Basic description of CONTACTORS and auxiliary contacts, Holding(latching) circuit & interlocking with Aux contacts.

Practice

7. Latching and unlatching circuit using relay & contactor.
8. Interlocking circuit using relay & contactor..
9. Switching of 440Vac devices using PLC's output (24Vdc).

Module-VI: PANEL DESIGNING

(2 Hours)

Theory

Introduction to Control & Power Circuit, Control Wiring with PLC.

Module-VII: STARTER WIRING

(11 Hours)

Theory

Control circuit of starter using PLC, power circuit of starter.

Practice

10. DOL Starter control wiring, power wiring using PLC
11. FWD-REV Starter control wiring, power wiring using PLC
12. STAR-DELTA Starter control wiring, power wiring using PLC

Reference Book

1. Madhuchhanda Mitra and Samarjit Sengupta, "Programmable Logic Controllers and Industrial Automation: An Introduction" 2nd Edition"

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION) (Theory- 4 hours)				
Fundamentals of electrical and electronic components required for electrical panel designing using PLC	1	Lecture	Assignment 1.1	Reference Book (RB)
Module – 2 (POWER SUPPLY) (Theory- 3 hours + Practice- 4 hours)				
Supply Systems. Conversion of 230 Vac to 24 V dc and vice-versa with circuit description. Basic concept of SMPS. Conversion of 230 Vac to 24Vdc transformers, diodes and regulator ICs	3+4	Lecture+ Practice	Assignment 1.2	RB
Module – 3 (BASIC INDUSTRIAL SWITCHES & SENSORS) (Theory- 2 hours + Practice- 2 hours)				
Pushbuttons, toggle switches, Limit switch, proximity switch, optical switch, pressure switch, etc. Checking the operations of different Sensors and switches	2+2	Lecture+ Practice	Assignment 1.3	RB
Module – 4 (RELAY) (Theory- 2 hours + Practice- 8 hours)				
Basic description of Relay, Practical uses of relay. Latching using relay, How to switch a 230Vac load using 24Vdc. a) Latching and unlatching circuit using relay. b) Interlocking circuit using relay. c) Switching of 220Vac devices using (24Vdc).	2+8	Lecture+ Practice	Assignment 1.4	RB
Module – 5 (COTACTOR) (Theory- 2 hours + Practice- 8 hours)				
Basic description of contactors and auxiliary contacts. Holding (latching) circuit & interlocking with Aux contacts. a) Latching circuit using relay & contactor.	2+8	Lecture+ Practice	Assignment 1.5	RB

b) Interlocking circuit using relay & contactor.. c) Switching of 440Vac devices using PLC's output (24Vdc).				
Module – 6 (PANEL DESIGNING) (Theory- 2 hours)				
Introduction to Control & Power Circuit. Control Wiring with PLC	2	Lecture	Assignment 1.6	
Module – 7 (STARTER WIRING) (Theory- 3 hours + Practice- 8 hours)				
Control circuit of starter using PLC. Power circuit of starter. a) DOL Starter control using PLC, power wiring b) FWD-REV Starter control using PLC, power wiring c) STAR-DELTA Starter control wiring using PLC, power wiring	3+8	Lecture+ Practice	Assignment 1.7	RB
Total- 45 Hours(Theory- 15 hours + Practice- 30 hours)				

Supervisory Control and Data Acquisition (SCADA)

Schneider Wonderware in Touch & RS-VIEW-32

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Supervisory Control and Data Acquisition (SCADA)	DEIA0401	Theory+ Practice	2-1-0	Nil

Objective

- To teach the concept of SCADA, total control system of industry.

Course Outcome

- Students will gain knowledge of SCADA designing.
- Students will develop skill of designing SCADA based control system..

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module-I: Introduction to SCADA

(2 Hours)

Theory

Introduction and SCADA Basics, General SCADA theory, Importance of SCADA in Industrial Automation, Benefit of SCADA, DATA ACQUISITION. Leading SCADA Vendors, Architecture of SCADA (Open & Proprietary)

Module-II: Introduction to INTOUCH & RS-VIEW-32

(4 Hours)

Theory

Introduction to InTouch, Basic operations related to Intouch Editor, types of windows, How to Open window, windows property.

Practice

- Basic operation of Intouch SCADA software.

Module-III: TOOLBARS

(5 Hours)

Theory

General Toolbar, New window, Open window, close window, save window, save all, duplicate selection, cut to clipboard, copy, paste, undo and redo.

Practice

2. Operation & utility of general toolbars.

Module-IV: WIZARDS**(15 Hours)****Theory**

Wizard toolbar, Alarm display, Buttons, clock, lights, meter, runtime tools (for alarm monitor), slider, switches, SYMBOL FACTORY, Text Display, Trend, Value Display Fonts, Bold/Italic/Underline, Enlarge/ reduce font, Left/Centre/Right.

Practice

3. Wizard toolbar details, value display, user input.
4. Symbol factory toolbar.
5. Different operational properties

Module-V: INTOUCH & RS-View 32 SCADA FEATURES**(14 Hours)****Theory**

Dynamic graphical display, How to use the dynamic features, Alarms, Real Trend, Historical trend.

Practice

6. Dynamic graphical display.
7. Alarms
8. Real trends / Historical trends

Module-VI: INTOUCH RS-View 32 SCADA FEATURES**(11Hours)****Theory**

Data base connectivity, Report generation, Recipe management, Security.

Practice

9. Data base connectivity
10. Report Generation
11. Recipe Management
12. Security

Module-VII: INTOUCH and RS-View 32 SCADA FEATURES**(9 Hours)****Theory**

Script, Networking, Device connectivity.

Practice

13. Script.
14. Networking
15. Device connectivity.

Reference Book

1. K S Manoj, “Industrial Automation with SCADA: Concepts, Communications and Security”

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION OF SCADA) (Theory- 2 hours)				
Introduction and SCADA Basics, General SCADA theory, Importance of SCADA in Industrial Automation, Benefit of SCADA, DATA ACQUISITION. Leading SCADA Vendors, Architecture of SCADA (Open & Proprietary).	2	Lecture	Assignment 1.1	Reference Book (RB)
Module – 2 (INTRODUCTION TO INTOUCH) (Theory- 2 hours + Practice- 2 hours)				
Introduction to InTouch & RS-View 32, Basic operations related to Intouch Editor, types of windows, How to Open window, windows property. a) Basic operation of Intouch & RS-View 32 SCADA software.	2+2	Lecture+ Practice	Assignment 1.2	RB
Module – 3 (TOOLBARS) (Theory- 3 hours + Practice- 2 hours)				
General toolbar, New window, Open window, close window, save window, save all, duplicate selection, cut to clipboard, copy, paste, undo and redo. a) Operation of general toolbars.	3+2	Lecture+ Practice	Assignment 1.3	RB
Module – 4 (WIZARDS) (Theory- 9 hours + Practice- 6 hours)				
Wizard toolbar, Alarm display, Buttons, clock, lights, meter, runtime tools (for alarm monitor), slider, switches, Text Display. SYMBOL FACTORY, Trend, Value Display. Fonts, Bold /Italic / Underline, Enlarge / reduce font,	9+6	Lecture+ Practice	Assignment 1.4	RB

Left/Centre/Right. a) Wizard toolbar details, value display, user input. b) Symbol factory toolbar. c) Different operational properties				
Module – 5 (INTOUCH & RS-VIEW FEATURES) (Theory- 4 hours + Practice-10 hours)				
Dynamic graphical display, How to use the dynamic features, Alarms, Real Trend, Historical trend. a) Dynamic graphical display. b) Alarms c) Real trends / Historical trends.	4+10	Lecture+ Practice	Assignment 1.5	RB
Module – 6 (INTOUCH & RS-VIEW FEATURES) (Theory- 5 hours + Practice- 6 hours)				
Data base connectivity, Report generation, Recipe management, Security a) Data base connectivity b) Report Generation c) Recipe Management d) Security	5+6	Lecture+ Practice	Assignment 1.6	RB
Module – 7 (INTOUCH & RS-VIEW FEATURES) (Theory- 5 hours + Practice- 4 hours)				
Script, Networking, Device connectivity. a) Script. b) Networking c) Device connectivity.	5+4	Lecture+ Practice	Assignment 1.7	RB
Total- 60 Hours(Theory- 30 hours + Practice- 30 hours)				

Micro Range Programmable Logic Controller

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Micro range Programmable Logic Controller	DEIA0402	Theory+Practice	2-1-0	Nil

Objective

- To teach the concept of Allen Bradley PLC Control system.

Course Outcome

- Students will gain knowledge of AB PLC Programming & design.
- Students will develop skill of designing PLC based control system..

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Allen Bradley SLC 500

Course Outline

Module-I: Introduction

(4 Hours)

Theory

Introduction to controller Family, SLC 500 features: Details about CPUs, Memory Organisation, Program files and Data files

Module-II: ARCHITECTURE OF AB CONTROLLERS

(3 Hours)

Theory

Architecture, Rack, slot, channel, full structure description and max expansion.

Module-III: ADDRESSING

(3 Hours)

Theory

Physical I/O addressing (both Digital & Analog), Memory Instructions Addressing like Timer, Counters, Binary, Integers etc.

Module-IV: HARDWARE LINKNING

(4 Hours)

Theory

Hardware linking Using RSLinx, details about protocols AB_DF1-1, TCP-1, EMU-500

Practice

1. Opening of RS-Linx software and setting the parameters.
2. Setting the communication protocol.

Module-V: PROGRAMMING BASICS

(8 Hours)

Theory

Programming concept using Ladder diagram, Basics of Ladder Programming (rung, rail, rules, New rung, Rung branch, XIC, XIO, OTE, OTL, OUT.), NO-NC concept, Logic Gates implementation .

Practice

3. Basic ladder logic programming .
4. NO-NC concept.
5. Digital gate's logic creation.

Module-VI: TIMERS, COUNTER, COMPARE

(18 Hours)

Theory

Timer basics, Detail programming of TON, TOF, RTO, RES with applications.

Basics of Counter, Detail Programming of CTU, CTD, RES with applications.

Basics of comparators, Implementation of LIM, MEQ, EQU, NEQ, LES, GRT, LEQ, GEQ.

Practice

6. TON / TOF / RTO / RES programming
7. CTU / CTD / RES programming
8. LIM, MEQ, EQU, NEQ, LES, GRT, LEQ, GEQ programming

Module-VII: DIFFERENT OPERATIONAL BLOCKS

(20 Hours)

Theory

Compute math block: CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD

Move logic block : MOV,MVM, AND, OR, XOR, NOT. CLR.

File shift block : BSL, BSR, SQC, SQL,SQO, FFL,FFU,LFL,LFU

Program control block : JMP,LBL,JSR,MCR

Practice

9. CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD
10. MOV,MVM, AND, OR, XOR, NOT. CLR
11. BSL, BSR, SQC, SQL,SQO, FFL,FFU,LFL,LFU
12. JMP,LBL,JSR,MCR

Reference Book

1. Gary D Anderson, “PLC Programming using RS Logix”

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION) (Theory- 4 hours)				
Introduction to controller Family. SLC 500 features: Details about CPUs, Memory Organisation, Program files and Data files	4	Lecture+ Practice	Assignment 1.1	Reference Book (RB)
Module – 2 (ARCHITECTURE OF CONTROLLERS) (Theory- 3 hours)				
Architecture, Rack, slot, channel, full structure description and max expansion.	3	Lecture+ Practice	Assignment 1.2	RB
Module – 3 (ADDRESSING) (Theory- 3 hours)				
Physical I/O addressing (both Digital & Analog). Memory Instructions Addressing like Timer, Counters, Binary, Integers etc	3	Lecture+ Practice	Assignment 1.3	RB
Module – 4 (HARDWARE LINKING) (Theory- 2 hours + Practice- 2 hours)				
Hardware linking Using RSLinx. Details about protocols AB_DF1-1, TCP-1, EMU-500. a) Opening of RS-Linx software and setting the parameters. b) Setting the communication protocol.	2+2	Lecture+ Practice	Assignment 1.4	RB
Module – 5 (PROGRAMMING BASICS) (Theory- 4 hours + Practice- 4 hours)				
Programming concept using Ladder diagram. Basics of Ladder Programming (rung, rail, rules, New rung, Rung branch. XIC, XIO, OTE, OTL, OUT.), NO-NC concept, Logic Gates implementation. a) Basic ladder logic programming . b) NO-NC concept. c) Digital gate’s logic creation	4+4	Lecture+ Practice	Assignment 1.5	RB
Module – 6 (TIMERS, COUNTER, COMPARE) (Theory- 6 hours + Practice- 12 hours)				

<p>Timer basics, Detail programming of TON, TOF, RTO, RES with applications. Basics of Counter, Detail Programming of CTU, CTD, RES with applications. Basics of comparators, Implementation of LIM, MEQ, EQU, NEQ, LES, GRT, LEQ, GEQ.</p> <p>a) TON / TOF / RTO / RES programming b) CTU / CTD / RES programming. c) LIM, MEQ, EQU, NEQ, LES, GRT, LEQ, GEQ programming</p>	6+12	Lecture+ Practice	Assignment 1.6	RB
Module – 7 (DIFFERENT OPERATIONAL BLOCKS) (Theory- 8 hours + Practice- 12 hours)				
<p>Compute math block: CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD. Move logic block : MOV,MVM, AND, OR, XOR, NOT. CLR. File shift block : BSL, BSR, SQC, SQL,SQO, FFL,FFU,LFL,LFU. Program control block : JMP,LBL,JSR,MCR. ANALOG OPERATION Description of analog standards for field signals and SCP instruction implementation in ladder</p> <p>ADDITIONAL STUDIES Forcing of I/Os, Uploading, simulation Device Connectivity with SCADA.</p> <p>a) CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD b) MOV,MVM, AND, OR, XOR, NOT. CLR a) BSL, BSR, SQC, SQL,SQO, FFL,FFU,LFL,LFU b) JMP,LBL,JSR,MCR c) Analog communication d) Device connectivity</p>	8+12	Lecture+ Practice	Assignment 1.7	RB
Total- 60 Hours(Theory- 30 hours + Practice- 30 hours)				

Small Range Programmable Logic Controller

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Small range Programmable Logic Controller	DEIA0403	Theory+Practice	2-1-0	Nil

Objective

- To teach the concept of Siemens PLC Control system.

Course Outcome

- Students will gain knowledge of Siemens PLC Programming & design.
- Students will develop skill of designing Siemens PLC based control system.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Siemens S7-300

Course Outline

Module-I: INTRODUCTION

(4 Hours)

Theory

Introduction: Siemens Family controllers, S7-200, S7-300, S7-400.

Module-II: ARCHITECTURE OF SIEMENS CONTROLLERS

(3 Hours)

Theory

PLC components like Power Supply, CPU, rail, IM, SM, CP etc Architecture, Rack, slot, channel, full structure description and max expansion.

Module-III: ADDRESSING

(3 Hours)

Theory

Physical I/O addressing (both Digital & Analog), Memory Instructions Addressing like Timer, Counters, Binary, Integers etc.

Module-IV: HARDWARE LINKING

(4 Hours)

Theory

Hardware linking Using Simetic Manager, details about protocols , Linking with PG/PC using MPI and simulation

Practice

1. Opening of Simetic Manager software and setting the parameters.
2. Setting the communication protocol.

Module-V: PROGRAMMING BASICS

(8 Hours)

Theory

Programming concept using Ladder diagram, Basics of Ladder Programming (Network, rail, rules, New network, branch, NO, NC, R-S.), NO-NC concept, Logic Gates implementation .

Practice

3. Basic ladder logic programming .
4. NO-NC concept.
5. Digital gate's logic creation.

Module-VI: TIMERS, COUNTER, COMPARE

(18 Hours)

Theory

Timer basics, Detail programming of timers with applications.
Basics of Counter, Detail Programming of CU, CD with applications.
Basics of comparators and their Implementation

Practice

6. Timer programming
7. CU / CD programming
8. Comparator programming

Module-VII: DIFFERENT OPERATIONAL BLOCKS

(20 Hours)

Theory

Integer block: ADD, SUB, MUL, DIV.
Move logic block : MOV
Program control block : JMP,LBL,MCR
Function, Function block, Data block.

Practice

9. ADD, SUB, MUL, DIV,
10. MOV, JMP,LBL,MCR

Reference Book

1. [EAL COURSE TECH,"SIEMENS S7 BASIC PLC PROGRAMMING"](#)[Print Replica] Kindle Edition,

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION) (Theory- 4 hours)				
Introduction to controller Family S730 features: Details about CPUs, Memory Organisation, Program files and Data files	4	Lecture	Assignment 1.1	Reference Book (RB)
Module – 2 (ARCHITECTURE OF CONTROLLERS) (Theory- 3 hours)				
Architecture, Rack, slot, channel, full structure description and max expansion.	3	Lecture	Assignment 1.2	RB
Module – 3 (ADDRESSING) (Theory- 3 hours)				
Physical I/O addressing (both Digital & Analog). Memory Instructions Addressing like Timer, Counters, Binary, Integers etc.	3	Lecture	Assignment 1.3	RB
Module – 4 (HARDWARE LINKING) (Theory- 2 hours + Practice- 2 hours)				
Hardware linking Using Simetic manager. Linking with PG/PC using MPI and simulation. a) Opening of Simetic Manager software and setting the parameters. b) Setting the communication protocol.	2+2	Lecture+ Practice	Assignment 1.4	RB
Module – 5 (PROGRAMMING BASICS) (Theory- 4 hours + Practice- 4 hours)				
Programming concept using Ladder diagram. Basics of Ladder Programming (rung, rail, rules, New rung, Rung branch. NO-NC concept, Logic Gates implementation. a) Basic ladder logic programming b) NO-NC concept. c) Digital gate's logic creation	4+4	Lecture+ Practice	Assignment 1.5	RB
Module – 6 (TIMERS, COUNTER, COMPARE) (Theory- 6 hours + Practice- 12 hours)				
Timer basics, Detail programming of timers with applications. Basics of Counter, Detail Programming of CU, CD, with applications. Basics of comparators and their Implementation. a) TON / TOF / RTO programming b) CU / CD programming c) Comparator programming	6+12	Lecture+ Practice	Assignment 1.6	RB

Module – 7 (DIFFERENT OPERATIONAL BLOCKS) (Theory- 8 hours + Practice- 12 hours)				
Compute math block: ADD, SUB, MUL, DIV Move logic block : MOV, AND, OR, XOR, NOT. File shift block Program control block : JMP,LBL,MCR. a) ADD, SUB, MUL, DIV b) MOV, AND, OR, XOR, NOT c) JMP,LBL,JSR,MCR d) FC. FB, DB e) ANALOG OPERATION f) Uploading, simulation Device g) Connectivity with SCADA	8+12	Lecture+ Practice	Assignment 1.7	RB
Total- 60 Hours(Theory- 30 hours + Practice- 30 hours)				

Medium Range Programmable Logic Controller

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Medium range Programmable Logic Controller	DEIA0404	Theory+ Practice	2-1-0	Nil

Objective

- To teach the concept of FESTO & GE-FANUC PLC Control system.

Course Outcome

- Students will gain knowledge of FESTO & GE-FANUC PLC Programming & design.
- Students will develop skill of designing PLC based control system..

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

FESTO PLC, GE-Versamax- Microplus

Course Outline

Module-I: INTRODUCTION (4 Hours)

Theory

Introduction to FESTO & GE Family controllers.

Module-II: ARCHITECTURE OF SIEMENS CONTROLLERS (3 Hours)

Theory

PLC components like Power Supply, CPU, Architecture, full structure description and max expansion.

Module-III: ADDRESSING (3 Hours)

Theory

Physical I/O addressing (both Digital & Analog), Memory Instructions Addressing like Timer, Counters, Binary, Integers etc.

Module-IV: HARDWARE LINKING

(4 Hours)

Theory

Hardware linking Using software, details about protocols, Linking of PLC and computer .

Practice

1. Opening of software and setting the parameters.
2. Setting the communication protocol.

Module-V: PROGRAMMING BASICS

(8 Hours)

Theory

Programming concept using Ladder diagram, Basics of Ladder Programming (rung, rail, rules, New rung, Rung branch, NO, NC, R-S.), NO-NC concept, Logic Gates implementation .

Practice

3. Basic ladder logic programming .
4. NO-NC concept.
5. Digital gate's logic creation.

Module-VI: TIMERS, COUNTER, COMPARE

(18 Hours)

Theory

Timer basics, Detail programming of timers with applications.
Basics of Counter, Detail Programming of CU, CD with applications.
Basics of comparators and their Implementation

Practice

6. Timer programming
7. CU / CD programming
8. Comparator programming

Module-VII: DIFFERENT OPERATIONAL BLOCKS

(20 Hours)

Theory

Integer block: ADD, SUB, MUL, DIV.
Move logic block : MOV
Program control block : JMP,LBL,MCR

Practice

9. ADD, SUB, MUL, DIV,
10. MOV, JMP,LBL,MCR

Reference Book

1. Madhuchhanda Mitra and Samarjit Semgupta, "Programmable Logic Controllers and Industrial Automation: An Introduction 2nd Edition"

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION) (Theory- 4 hours)				
Introduction to controller Family.Fes features: Details about CPUs, Memo Organisation, Program files and Data files	4	Lecture+ Practice	Assignment 1.1	Reference Book (RB)
Module – 2 (ARCHITECTURE OF CONTROLLERS) (Theory- 3 hours)				
Architecture, Rack, slot, channel, full structure description and max expansion.	3	Lecture+ Practice	Assignment 1.2	RB
Module – 3 (ADDRESSING) (Theory- 3 hours)				
Physical I/O addressing (both Digital & Analog). Memory Instructions Addressing like Timer, Counters, Binary, Integers etc	3	Lecture+ Practice	Assignment 1.3	RB
Module – 4 (HARDWARE LINKNING) (Theory- 2 hours + Practice- 2 hours)				
Hardware linking Using software. Linking with PLC to PC and simulation. a) Opening of software and setting the parameters. b) Setting the communication protocol.	2+2	Lecture+ Practice	Assignment 1.4	RB
Module – 5 (PROGRAMMING BASICS) (Theory- 4 hours + Practice- 4 hours)				
Programming concept using Ladder diagram. Basics of Ladder Programming (rung, rail, rules, New rung, Rung branch. NO-NC concept, Logic Gates implementation. a) Basic ladder logic programming . b) NO-NC concept. c) Digital gate's logic creation	4+4	Lecture+ Practice	Assignment 1.5	RB
Module – 6 (TIMERS, COUNTER, COMPARE) (Theory- 6 hours + Practice- 12 hours)				
Timer basics, Detail programming of timers with applications. Basics of Counter, Detail Programming of CU, CD, with applications. Basics of comparators and their Implementation	6+12	Lecture+ Practice	Assignment 1.6	RB

a) TON / TOF / RTO programming b) CU / CD programming c) Comparator programming				
Module – 7 (DIFFERENT OPERATIONAL BLOCKS) (Theory- 8 hours + Practice- 12 hours)				
Compute math block: ADD, SUB, MUL, DIV. Move logic block : MOV, AND, OR, XOR, NOT. File shift block. Program control block : JMP,LBL,MCR. a) ADD, SUB, MUL, DIV b) MOV, AND, OR, XOR, NOT c) JMP,LBL,JSR,MCR d) ANALOG OPERATION e) Device Connectivity with SCADA	8+12	Lecture+ Practice	Assignment 1.7	RB
Total- 60 Hours (Theory- 30 hours + Practice- 30 hours)				

Human Machine Interface (HMI)

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Human machine Interface (HMI)	DEIA0202	Practice	0-2-0	Nil

Objective

- To teach the concept of Human Machine Interface system.

Course Outcome

- Students will gain knowledge of HMI.
- Students will develop skill of designing HMI based control system..

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab Work + Learning Record
External Examination	External Practice	50	Lab Work
Total		100	

Course Outline

Module-I: INTRODUCTION

(2 Hours)

Theory

Introduction Details of Human Machine Interface, HMI Basics, Difference between SCADA & HMI, Requirements, Leading Vendors, Specification of Panel view family, Features, Communication settings in HMI & PC

Module-II: APPLICATION DEVELOPMENT

(2Hours)

Theory

New application development, HMI Screen development, Dashboard, Terminal setting, file transfer

Module-III: WORKING ON SOFTWARE

(6 Hours)

Theory

Introduction to software, tag declaration, tag type, screen type, control, screen, property.

Practice

1. Opening of software and setting the parameters.
2. Setting the communication protocol.

Module-IV: CONTROL WINDOW**(6 Hours)****Theory**

Entry, display, Drawing tools, Advance, Library.

Practice

3. Display & Drawing tools operation and application.
4. Advance Library operation and utility.

Module-V: PROPERTY WINDOW BASICS**(6 Hours)****Theory**

Property window, Appearance, Common, Navigation, Connections, Screen.

Practice :

5. Working of property window.
6. Navigation operation.
7. Connection screen configuration.

Module-VI: DESIGNING OF APPLICATION**(12 Hours)****Theory**

Designing of application, discrete type, Analog type

Practice

8. Discret type display design
9. Analog type display design.

Module-VII: DIFFERENT DYNAMIC DISPLAYS**(11 Hours)****Theory**

Alarm, Trend, Security, Recipe, Device Connectivity,

Practice

10. Alarm, Trend, Security
11. Recipe, Device Connectivity

Reference Book

1. K S Manoj, “Industrial Automation with SCADA: Concepts, Communications and Security”

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION) (Theory- 2 hours)				
Introduction Details of Human Machine Interface, HMI Basics. Difference between SCADA & HMI, Requirements, Leading Vendors, Specification of Panel view family, Features, Communication settings HMI & PC.	2	Lecture+ Practice	Assignment	Reference Book (RB)
Module – 2 (APPLICATION DEVELOPMENT) (Theory- 2 hours)				
New application development, HMI Screen development, Dashboard, Terminal setting, file transfer	2	Lecture+ Practice	Assignment	RB
Module – 3 (WORKING ON SOFTWARE) (Theory- 2 hours + Practice- 4 hours)				
Introduction to software, tag declaration, tag type. Screen type, control, screen, property. a) Opening of software and setting the parameters. b) Setting the communication protocol.	2+4	Lecture+ Practice	Assignment	RB
Module – 4 (CONTROL WINDOW) (Theory- 2 hours + Practice- 4 hours)				
Entry, display, Drawing tools. Advance Library. a) Display & Drawing tools operation and application. b) Advance Library operation and utility	2+4	Lecture+ Practice	Assignment	RB
Module – 5 (PROPERTY WINDOW BASICS) (Theory- 2 hours + Practice- 4 hours)				
Property window, Appearance, Communication. Navigation, Connections, Screen. a) Working of property window. b) Navigation operation. c) Connection screen configuration.	2+4	Lecture+ Practice	Assignment	RB
Module – 6 (DESIGNING OF APPLICATION) (Theory- 2 hours + Practice- 10 hours)				
Designing of application , Discrete type. Designing of application, analog type. a) Discreet type display design b) Analog type display design.	2+10	Lecture+ Practice	Assignment	RB

Module – 7 (DIFFERENT DYNAMIC DISPLAYS) (Theory- 3 hours + Practice- 8 hours)				
Alarm, Trend, Security. Recipe, Device Connectivity. a) Alarm, Trend, Security b) Recipe, Device Connectivity	3+8	Lecture+ Practice	Assignment	RB
Total- 45 Hours (Theory- 15 hours + Practice- 30 hours)				

Variable Frequency Drive

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Variable Frequency Drive	DEIA0203	Practice	0-2-0	Nil

Objective

- To teach the concept of VFD Controller.

Course Outcome

- Students will gain knowledge of operation of VFD.
- Students will develop skill of designing VFD based control system..

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab Work + Learning Record
External Examination	External Practice	50	Lab Work
Total		100	

Course Outline

Module-I: INTRODUCTION TO DRIVES (2 Hours)

Theory

Introduction to drives. Working principle of drives. Types of drives.

Module-II: APPLICATION (2 Hours)

Theory

Applications of VFD, Features, inside components of VFD, Block Diagram and Architecture.

Module-III: INTRODUCTION TO AB POERFLEX (4M) (2 Hours)

Theory

Introduction to Allen Bradley Powerflex (4M). Parameters in AB Power flex 4M,

Module-IV: BASIC PROGRAMMING OF DRIVES (8 Hours)

Theory

Display group parameters, Parameter of commissioning

Practice

- Understanding of display parameters.

- Quick commissioning technique.

Module-V: OPERATIONAL MODES OF DRIVES

(8 Hours)

Theory

Local control using Basic Operators Panel, Remote control using pushbuttons and sensors.

Practice

- Local control mode operation using BOP.
- Remote control mode operation using sensors and push buttons.

Module-VI: ADVANCE PROGRAMMING CONCEPT

(12 Hours)

Theory

Ramp time, DC Brake. Skip Frequency. Frequency control. Direction control.

Practice

- Different parameter setting of drive.

Module-VII: PLC & DRIVE COMMUNICATION & CONTROL

(11 Hours)

Theory

Remote mode control connecting with PLC VFD.

Practice

- Input & output connection technique of drive.
- Connection technique of PLC & Drive.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module – 1 (INTRODUCTION TO DRIVES) (Theory- 2 hours)				
Introduction Details of Human Machine Interface, HMI Basics. Working principle of drives. Types of drives.	2	Lecture	Assignment 1.1	Reference Book (RB)
Module – 2 (APPLICATION) (Theory- 2 hours)				
Applications of VFD. Features, inside components of VFD, Block Diagram and Architecture.	2	Lecture+ Practice	Assignment 1.2	RB
Module – 3 (INTRODUCTION TO AB POWERFLEX (4M) (Theory- 2 hours)				
Introduction to Allen Bradley Powerflex (4M). Parameters in AB Power flex 4M. Screen type, control, screen, property	2	Lecture+ Practice	Assignment 1.3	RB
Module – 4 (BASIC PROGRAMMING OF DRIVES) (Theory- 2 hours + Practice- 6 hours)				

Display group parameters. Parameter of commissioning. a) Understanding of display parameters. b) Quick commissioning technique.	2+6	Lecture+ Practice	Assignment 1.4	RB
Module - 5 OPERATIONAL MODES OF DRIVES) (Theory- 2 hours + Practice- 6 hours)				
Local control using Basic Operators Panel. Remote control using pushbuttons and sensors. a) Local control mode operation using BOP. b) Remote control mode operation using sensors and push buttons.	2+6	Lecture+ Practice	Assignment 1.5	RB
Module – 6 (ADVANCE PROGRAMMING CONCEPT) (Theory- 62hours + Practice- 10 hours)				
Ramp time, DC Brake. Skip Frequency. Frequency control. Direction control. a) Different parameter setting of drive.	2+10	Lecture+ Practice	Assignment 1.6	RB
Module – 7 (PLC & DRIVE COMMUNICATION) (Theory- 3 hours + Practice- 8 hours)				
Remote mode control connecting with PLC VFD. a) Input & output connection technique of drive. b) Connection technique of PLC & Drive.	3+8	Lecture+ Practice	Assignment 1.7	RB
Total- 45 Hours (Theory- 15 hours + Practice- 30 hours)				

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Domain: Operation and Maintenance of Transmission and Distribution Systems

Sl. No	Course Code	Course Title	Course Nature	Credits
1	DEOM0101	Modern Transmission and Distribution System	Theory	3
2	DEOM0401	Operation and Testing of Power and Distribution Transformer	Theory + Practice	3
3	DEOM0402	System Protection and Auxiliaries	Theory + Practice	3
4	DEOM0102	Construction of HT and LT lines and Cables	Theory	3

5	DEOM0201	Safety Practice and First Aid	Practice	2
6	DEOM0202	Electrical System Layout and Drawing	Practice	2
7	DEOM0103	Power System Market, Act and Regulations	Theory	4
8	DEET0300	Project	Project	6
9	DEET0800	Internship	Practice	4
			Total	30

Course Objective:

To create technically trained manpower readily available for recruitment to the power companies in the area of Transmission & Distribution of electrical power

Course Outcome:

After completion of the course the students will acquire extensive basic and advanced knowledge of

- Operation & Maintenance of Transmission and Distribution accessories
- Necessary safety aspects required in T&D
- Details of associated equipment's
- T&D project management Process flow

Modern Transmission and Distribution System

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Modern Transmission and Distribution System	DEOM0101	Theory	3-0-0	Nil

Objective

- To know the different methods of power transmission and distribution, the different equipment used in transmission and distribution system also to know the operation and maintenance of equipment used in transmission and distribution system.

Course Outcome

- The students will be able to rate and compute the parameters of the major components of the system: lines, cables, transformers, circuit breakers, capacitors and grounding systems.
- The students will understand the principles of protection for short-circuit, lightning strikes and some internal transients.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module-I: General Introduction To Power Generation And Transmission (8 Hours)

Theory

GENERAL INTRODUCTION: Generation, Transmission & Distribution Scenario of India

POWER GENERATION: Types of generation: Conventional and Non-conventional, Thermal Power Plant, Hydro Power Plant, Gas Power Plant, Nuclear Power Plant, Co-generation Various sources Non-conventional Energy Sources.

POWER TRANSMISSION (A) SWITCHYARD/SUBSTATION Types: Generation sub-station, Grid sub-station, Gas Insulated s/s etc, Indoor/outdoor, general comparison.

Module-II: Sub-Station Switchgears And Grounding

(8 Hours)

Theory

SUB-STATION/TRANSMISSION EQUIPMENTS AND SWITCHGEARS - Circuit breaker: Types (MOCB, ABCB, VCB, SF6), constructional details, specifications, interlocks (a) Isolator: Types earth switch, Bus bar (b) CT/CVT. Lighting Arrestors/Lighting Mask (c) Power Line Carrier Communication (PLCC):- Principle, purpose, types of coupling (d) Relays: Types, functions, constructional details, (e) Protection System: Philosophy, types, protection of transformer/reactor, motor, line/feeder generator, bus etc.

GROUNDING:- Ground and Neutral. Touch and Step Potentials. Petersen Coil. Resonant Grounding

AUXILIARY FACILITIES: DG Set Station Battery System etc.

Module-III: Sub-station Maintenance

(9 Hours)

Theory

SUB-STATION MAINTENANCE: (a) Types-Routine, preventive, planned, predictive, break-down, emergency maintenance, online maintenance of different equipments, (b) Transformer/Reactor Maintenance-Factors affecting the life of transformer/Reactor. Inspection/preliminary testing of various components-oil sampling and testing, oil filtration, Dissolved Gas Analysis (DGA), maintenance schedule (c) Switchgear & protection Maintenance:- Maintenance of CB, Isolator, Earth switch, Support Insulators, CT/CVT,LA,LM, Protective relay maintenance testing . Erection and commissioning pre-commissioning checks/Tests of sub-station.

Module-IV: Characteristics of Loads

(4 Hours)

Theory

Characteristics of Loads: Customer Classes and Categories. Voltage Sensitivity of Loads. Constant Power. Constant Current. Constant Impedance. ZIP Coefficients. Load Curves and Duty Cycle. Coincidental and Non-coincidental Loads. Load Growth.

Module-V: Loss Optimization

(4 Hours)

Theory

Optimization: Loss Minimization. System Reconfiguration. Capacitor Switching. (Energy) Conservation Voltage Reduction. Introduction to System Restoration.

Module-VI: Capacitors

(8 Hours)

Theory

Capacitors: Construction . Application of Capacitors in Transmission, Distribution and Industrial Systems. Shunt Capacitors (Voltage Control and Power Factor Correction). Series Capacitors (Line Reactance Compensation). Rating. Capacitor Switching and Operating Problems with Capacitors (Inrush Currents).

Module-VII: Modern Grids

(4 Hours)

Theory

Modern Grids: Distribution Automation. Distributed Generation. Grid 2030. Nano Grid. Micro Grid. Mini Grid. Smart Grid. Super Grid. The Issues.

Text Books:

1. TuranGonen “Electrical Power Transmission System Engineering: Analysis and Design”, Third Edition, ,CRC Press
2. Kamaraju, “Electrical Power Distribution System”, Tata McGraw-Hill

Reference Books:

2. J B Gupta, S. K. Kataria& Sons, “Transmission & Distribution Of Electrical Power”, 2009
3. TuranGonen,“Electric Power Distribution Engineering”, Third Edition, CRC Press
4. A S Pabla,“Electrical Power Distribution”, Tata McGraw-Hill,Sixth Edition

Session Plan

Topics	No. of Sessions	Activity	Assignment	Suggested Reading
Module-I: General Introduction To Power Generation And Transmission(8 Hours)				
GENERAL INTRODUCTION Generation, Transmission & Distribution Scenario of India	2	Lecture	Assignment 1.1	TB 1
POWER GENERATION Types of generation: Conventional and Non-conventional, Thermal Power Plant, Hydro Power Plant, Gas Power Plant, Nuclear Power Plant, Co-generation Various sources Non-conventional Energy Sources.	3	Lecture	Assignment 1.2	TB 1
POWER TRANSMISSION SWITCHYARD/SUBSTATION . Types: Generation sub-station, Grid sub-station, Gas Insulated s/s etc. Indoor/outdoor, general comparison	3	Lecture	Assignment 1.3	TB 1
Module-II: Sub-Station Switchgears And Grounding (8 Hours)				
SUB- STATION/TRANSMISSION EQUIPMENTS Switchgears - Circuit breaker: Types (MOCB, ABCB, VCB, SF6) constructional details, pecifications, interlocking	1	Lecture	Assignment 2.1	TB 1
Isolator: Types earth switch, Bus bar,	1	Lecture	Assignment 2.2	TB 1
CT/CVT. Lighting Arrestors/Lighting Mask	1	Lecture	Assignment 2.3	TB 1
Relays: Types, functions, constructional details	1	Lecture	Assignment 2.4	TB 1

Protection System: Philosophy, types, protection of transformer/reactor, motor, line/feeder generator, bus etc	2	Lecture	Assignment 2.5	TB 1
Grounding:- Types of grounding, earth testing & treatment, earthmat design, step potential, Neutral grounding reactor Auxiliary facilities: DG Set Station Battery System etc. Cables-Types, Control cables, power cables, cable termination & jointing	2	Lecture	Assignment 2.6	TB 1
Module-III: Sub-station Maintenance (9 Hours)				
Sub-station operation: Grid operation, communication with RLDC/SLDC etc.	2	Lecture and field studies	Assignment 3.1	TB 1
Sub-Station Maintenance: (a) Types-Routine, preventive, planned, predictive, break-down, emergency maintenance, online maintenance of different equipments	2	Lecture	Assignment 3.2	TB 1
Transformer/ Reactor Maintenance-Factors affecting the life of transformer/Reactor. Inspection/preliminary testing of various components-oil sampling and testing, oil filtration, Dissolved Gas Analysis (DGA), maintenance schedule	2	Lecture	Assignment 3.3	TB 1
Switchgear & protection Maintenance:- Maintenance of CB, Isolator, Earthswitch, Support Insulators, CT/CVT,LA,LM, Protective relay maintenance testing	2	Lecture	Assignment 3.4	TB 1
Erection and commissioning pre-commissioning checks/Tests of	1	Lecture	Assignment	TB 1

sub-station;			3.5	
Module-IV: Characteristics of Loads (4 Hours)				
Characteristics of Loads. Customer Classes and Categories. Voltage Sensitivity of Loads. Constant Power. Constant Current. Constant Impedance. ZIP Coefficients. Load Curves and Duty Cycle. Coincidental and Non-coincidental Loads. Load Growth.	4	Lecture	Assignment 4.1	TB 1
Module-V: Loss Optimization (4 Hours)				
Optimization. Loss Minimization. System Reconfiguration. Capacitor Switching. (Energy) Conservation Voltage Reduction. Introduction to System Restoration.	4	Lecture	Assignment 5.1	TB 1
Module-VI: Capacitors (8 Hours)				
Capacitors. Construction . Application of Capacitors in Transmission, Distribution and Industrial Systems. Shunt Capacitors (Voltage Control and Power Factor Correction). Series Capacitors (Line Reactance Compensation). Rating. Capacitor Switching and Operating Problems with Capacitors (Inrush Currents).	8	Lecture	Assignment 6.1	TB 1
Module-VII: Modern Grids (4 Hours)				
Modern Grids. Distribution Automation. Distributed Generation. Grid 2030. Nano Grid. Micro Grid. Mini Grid. Smart Grid. Super Grid. The Issues.	4	Lecture	Assignment 7.1	TB 1

Operation and Testing of Power and Distribution Transformer

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Operation and Testing of Power and Distribution Transformer	DEOM0401	Theory + Practice	2-1-0	Nil

Objective

- To know detail about the operation and testing of both power and distribution transformers

Course Outcome

- Identify power/instrument and distribution transformer types, components and auxiliary equipment.
- Simulate appropriate tests to evaluate the condition and perform maintenance on transformers.
- Perform oil sampling, testing, drying, filling and filtering, Analyze test results to troubleshoot transformer problems.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module-I: Transformer

(6 hours)

Theory

Transformer: Basic principles of transformer, magnetization and hysteresis, electromagnets. Flux density Ampere-turn Ratio

Practice:

- Ampere-turns Ratio test of transformer
- Magnetic balance test of transformer

Module-II: Equations related to transformers

(14 hours)

Theory

Equation for transformation: Two/ three winding & Auto Transformer

Silent features of core & shell type, transformer constructional details, Grounding transformers

Practice:

3. Grounding test of a transformer

Module-III: Transformer fixtures and oil

(8 hours)

Theory

Transformer fixtures : buchholz relay, breather, conservators, bushing of different types, thermometers, indicators, alarms. Cooling of Transformer, Transformer Oil: Specifications & Characteristics. Sources, manufacturing and Handling. Methods of Sampling and testing.

Practice:

4. Oil testing of transformer

Module-IV: Maintenance of Transformer Oil

(8 hours)

Theory

Maintenance of Transformer Oil: Filter Machine O&M,DGA. Importance of Oil Filtration & drying out of transformer. Working principles of OLTC & its' O/M.

Practice:

5. Dissolved gas analysis of transformer

6. Maintenance of oil filter machine

Module-V: Transformer Test

(7 hours)

Theory

Transformer Test: Failures and causes, maintenance & repairs. Power Transformers Testing and commissioning - Significance & importance of tests protection of transformers

Practice:

7. Study of Protection scheme of Power Transformer

Module-VI: Test on transformer

(9 hours)

Theory

Test on transformer: Insulation resistance measurement, winding resistance measurement, magnetic current test, magnetic balance test, vector group confirmation short circuit test and differential stability test, etc.

Practice:

8. IR test of transformer

9. Winding resistance test of transformer

10. Vector grouping test of transformer

Module-VII: Conditions leading to faults

(8 hours)

Theory

Conditions leading to faults: Protective relays, differential protection, overcurrent protection , ground fault protection and monitors for protection – Factory testing of power transformers

Practice:

11. Testing of protective relay connected to transformer

Text Book

1. Indrajit Dasgupta, “Design of Transformers”, Tata McGraw-Hill, Eighth Edition

Reference Books

1. Bhel, “Transformers”, Tata McGraw-Hill, Second Edition
2. Indrajit Dasgupta, “Power Transformers Quality Assurance”, Tata McGraw-Hill

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module-I: Transformer (6 hours)				
Basic principles of transformer, magnetization and hysteresis, electromagnets	4	Lecture+ Practice	Assignment 1.1	TB1
Flux density Ampere-turn Ratio	2	Lecture+ Practice	Assignment 1.2	TB1
Module-II: Equations related to transformers (14 hours)				
Two/ three winding & Auto Transformer	4	Lecture	Assignment 2.1	TB1
Silent features of core & shell type, transformer constructional details	4	Lecture	Assignment 2.2	TB1
Grounding transformers	6	Lecture+ Practice		
Module-III: Transformer fixtures and oil (8 hours)				
Buchholz relay, breather, conservators, bushing of different types, thermometers, indicators, alarms. Cooling of Transformer	4	Lecture+ Practice	Assignment 3.1	TB1
Specifications & Characteristics. Sources, manufacturing and Handling. Methods of Sampling and testing.	4	Lecture+ Practice	Assignment 3.2	TB1
Module-IV: Maintenance of Transformer Oil (8 hours)				
Filter Machine O&M,DGA.	4	Lecture+ Practice	Assignment	TB1

Importance of Oil Filtration & drying out of transformer.			4.1	
Working principles of OLTC & its' O/M	4	Lecture+ Practice	Assignment 4.2	TB1
Module-V: Transformer Test (7 hours)				
Failures and causes, maintenance & repairs. Power Transformers Testing and commissioning -	4	Lecture+ Practice	Assignment 5.1	TB1
Significance & importance of tests protection of transformers	3	Lecture+ Practice	Assignment 5.2	TB1
Module-VI: Test on transformer(9 hours)				
Insulation resistance measurement	3	Lecture+ Practice	Assignment 6.1	TB1
winding resistance measurement, magnetic current test, magnetic balance test	3	Lecture+ Practice	Assignment 6.2	TB1
vector group confirmation short circuit test and differential stability test, etc	3	Lecture+ Practice	Assignment 6.3	TB1
Module-VII: Conditions leading to faults (8 hours)				
Protective relays, differential protection, over current protection	4	Lecture+ Practice	Assignment 7.1	TB1
Ground fault protection and monitors for protection – Factory testing of power transformers	4	Lecture+ Practice	Assignment 7.2	TB1
Total- 60 Hours				

System Protection and Auxiliaries

Course Title	Code	Type of course	T-P-P	Prerequisite
System Protection And Auxiliaries	DEOM0402	Theory + Practice	2-1-0	Nil

Objective

- To know the different methods used for power system protection
- To Know the different equipment's and auxiliaries used in power system protection and to know the maintenance schedule of different equipment's.

Course Outcome

- Operate the protective equipment efficiently
- Can perform the maintenance of that protective equipment and also can test the protective equipment before commissioning

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module-I: CT & PTs

(6 hours)

Theory

CT & PTs: Types of CT & PTs' – their working principles, ratings and accuracy. Functions of CT & PTs' Failures of CT & PTs – their causes.

Practice

1. Testing of CT and PT

Module-II: Metering Schemes

(12 hours)

Theory

Metering Schemes: Protection of Transmission Line with Schemes. Protection of Transformer with different Schemes. Local & Back-up Protection. New Generation Relays.

Practice

2. Testing of different types of relay

Module-III: Breakers**(10 hours)****Theory**

Breakers: Function of breakers. Different types of indoor and outdoor breakers e.g. Bulk oil, MOCB, Air blast, SF₆ and Vacuum Breaker - principle and their application. Operating Mechanism – springs, hydraulic, pneumatic, Current ratings, rupturing capacity, clearance time, Commissioning procedures.

Practice

3. Study the Operation of different types of breaker
4. Determining the current rating of circuit breaker

Module-IV :Breaker Maintenance**(8 hours)****Theory**

Breaker Maintenance: failures and their causes. CB Control Circuit description and fault finding procedures.

Practice

5. Maintenance of circuit breaker
6. Testing of the control circuit of the CB

Module-V: Lightning Arrestors/Surge Arrestors**(7 hours)****Theory**

Lightening Arrestors/Surge Arrestors: Simple description of lightening phenomena and surges. Constn. of S.As' and principles of their working. Different types of Surge Arrestor and ratings. Earthing and Location of S.A. Testing&Maint.of S.As.

Practice

7. Study of different types of Lightning Arrestors
8. Testing of Surge arrestor

Module-VI: Isolators And Insulators**(9 hours)****Theory**

Isolators : Tilting and rotating isolators with & without arcing horns – earth blades – current ratings. Breaking of circuits by isolators. Interlocking with circuit Breaker. Maintenance of isolators. Insulators : Types - their electrical & mechanical characteristics.

Practice

9. Study of different types of isolators.
10. Practicing the interlocking of Isolators with Circuit breaker

Module-VII : Auxiliary facilities**(8 hours)****Theory**

Auxiliary facilities: DG Set Station Battery System etc. V. Cables-Types, Control cables, power cables, cable termination & jointing. Auxiliary D.C. Supply. Battery:- Current & Ampere Hours Ratings. Battery Charging Equipment – Checking of Specific Gravity of Electrolyte – Maintenance of batteries – Trouble Shootings. Condition monitoring and hotline maintenance.

Practice

11. Preparing a maintenance schedule for the battery bank.
12. Preparing a maintenance schedule for the DG set.

Text Book

1. IEEE Guide for Power System Protection Testing, IEEE, 2009

Reference Books

1. T. S. Madhava Rao, "Power System Protection: Static Relays", Second Edition, Tata McGraw-Hill
2. Clarence Herbert Sanderson, "Electric system handbook", McGraw-Hill

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module-I: CT & PTs (6 hours)				
CT & PTs: Types of CT & PTs' – their working principles, ratings and accuracy.	2	Lecture	Assignment 1.1	TB1
Functions of CT & PTs' Failures of CT & PTs – their causes.	4	Lecture+ Practice	Assignment 1.2	TB1
Module-II: Metering Schemes (12 hours)				
Metering Schemes: Protection of Transmission Line with Schemes.	3	Lecture	Assignment 2.1	TB1
Protection of Transformer with different Schemes.	4	Lecture+ Practice	Assignment 2.2	TB1
Local & Back-up Protection. New Generation Relays.	5	Lecture+ Practice	Assignment 2.3	TB1
Module-III: Breakers (10 hours)				
Breakers: Function of breakers. Different types of indoor and outdoor breakers e.g. Bulk oil, MOCB, Air blast, SF6 and Vacuum Breaker - principle and their application.	5	Lecture+ Practice	Assignment 3.1	TB1
Operating Mechanism – springs, hydraulic, pneumatic, Current ratings, rupturing capacity, clearance time, Commissioning procedures	5	Lecture+ Practice	Assignment 3.2	TB1
Module-IV :Breaker Maintenance (8 hours)				
Failures and their causes	2	Lecture	Assignment 4.1	TB1

CB Control Circuit description and fault finding procedures.	6	Lecture+ Practice	Assignment 4.2	TB1
Module-V: Lightening Arrestors/Surge Arrestors (7 hours)				
Simple description of lightening phenomena and surges. Construction .of S.As' and principles of their working.	4	Lecture+ Practice	Assignment 5.1	TB1
Different types of Surge Arrestor and ratings. Earthing and Location of S.A.Testing&Maint.of S.As	3	Lecture+ Practice	Assignment 5.2	TB1
Module-VI: Isolators And Insulators (9 hours)				
Isolators: Tilting and rotating isolators with & without arcing horns – earth blades – current ratings. Breaking of circuits by isolators. Interlocking with circuit Breaker. Maintenance of isolators.	5	Lecture+ Practice	Assignment 6.1	TB1
Insulators : Types - their electrical & mechanical characteristics	4	Lecture+ Practice	Assignment 6.2	TB1
Module-VII : Auxiliary facilities (8 hours)				
Auxiliary facilities: DG Set Station Battery System etc. V. Cables-Types, Control cables, power cables, cable termination & jointing. Auxiliary D.C. Supply.	4	Lecture+ Practice	Assignment 7.1	TB1
Battery:- Current & Ampere Hours Ratings. Battery Charging Equipment – Checking of Specific Gravity of Electrolyte – Maintenance of batteries – Trouble Shootings. Condition monitoring and hotline	4	Lecture+ Practice	Assignment 7.2	TB1

maintenance.				
Total- 60 Hours				

Construction of HT and LT lines and Cables

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Construction of HT and LT lines and Cables	DEOM0102	Theory	3-0-0	Nil

Objective

- | |
|--|
| <ul style="list-style-type: none"> To identify various types of LT / HT cables and lines and its application. |
|--|

Course Outcome

- | |
|---|
| <ul style="list-style-type: none"> Test underground cables, trouble shooting, Locating faults, open circuit, short circuit & leakage in cables, Repairs of faulty cables. Current carrying capacity and selection of cables |
|---|

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I: Transmission Lines

(8 hours)

Theory

TRANSMISSION LINES: Transmission system in India, Tower types, Conductors, Earth wire, Insulators

Module II: IE rules and Acts

(8 hours)

Theory

IE rules and Acts:Statutory clearances, Surveying, Route Alignment Maintenance of transmission line, Thermo vision scanning

Module III: Modern trends in Underground Cabling Basic Concepts (9 hours)

Theory

Modern trends in Underground Cabling Basic Concepts: Selection, Types and Design of Underground including Standards of Cables Primary & Detailed Survey, Laying of Cable, Jointing

Module IV: Testing and Commissioning (4 hours)

Theory

Testing and Commissioning: Fault Location of Cables Maintenance & Trouble Shooting & Earthing of Underground Cables Problems encountered during conversion of overhead lines to underground cables.

Module V: Materials Used in Cables, Conductors (4 hours)

Theory

Materials Used in Cables, Conductors: Voltage Drop; Conductor Ampacity calculation; Conductor resistance; Conductor Inductance and capacitance calculation.

Module VI: Testing (8 hours)

Theory

Testing : Ampacity, Calculation of losses, AC resistance of conductor, Dielectric losses, Loss factor, Thermal resistance Test

Module VII: Buried cables (4 hours)

Theory

Drying-out of the soil does not occur, Buried cables where partial drying-out of the soil occurs Ampacity in two cases.

Text Book:

1. "Electrical Power Equipment Maintenance and Testing", Second Edition, CRC PRESS

Reference Books:

1. James E. Mack, Thomas M. Shoemaker, "The Lineman's and Cableman's Handbook", Thirteenth Edition, McGraw Hill Professional

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module I: Transmission Lines (8 hours)				
TRANSMISSION LINES Transmission system in India, Tower types, Conductors, Earth wire, Insulators	8	Lecture	Assignment 1	TB1

Module II: IE rules and Acts (8 hours)				
IE rules and Acts, Statutory clearances, Surveying, Route Alignment Maintenance of transmission line, Thermo vision scanning	8	Lecture	Assignment 2	TB1
Module III: Modern trends in Underground Cabling Basic Concepts (9 hours)				
Modern trends in Underground Cabling Basic Concepts, Selection, Types and Design of Underground including Standards of Cables Primary & Detailed Survey, Laying of Cable, Jointing	9	Lecture	Assignment 3	TB1
Module IV: Testing and Commissioning (4 hours)				
Testing and Commissioning Fault Location of Cables Maintenance & Trouble Shooting & Earthing of Underground Cables Problems encountered during conversion of overhead lines to underground cables.	4	Lecture	Assignment 4	TB1
Module V: Materials Used in Cables, Conductors(4 hours)				
Materials Used in Cables, Conductors; Voltage Drop; Conductor Ampicity calculation; Conductor resistance; Conductor Inductance and capacitance calculation.	4	Lecture	Assignment 5	TB1
Module VI: Testing(8 hours)				
Testing Ampacity, Calculation of losses, AC resistance of conductor, Dielectric losses, Loss factor, Thermal resistance Test	8	Lecture	Assignment 5	TB1
Module VII: Buried cables(4 hours)				

Buried cables where drying-out of the soil does not occur, Buried cables where partial drying-out of the soil occurs Ampacity in two cases.	4	Lecture	Assignment 7	TB1
Total- 45 Hours				

Safety Practice & First Aid

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Safety Practice & First Aid	DEOM0201	Practice	0-2-0	Nil

Objective

- To learn the basics of safety practice to be carried out in industry

Course Outcome

- Deal with emergency situations
- Know the limits of basic first aid
- Identify signals of a heart attack.
- Identify the most important action you can take in a life-threatening emergency.

Evaluation scheme

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Lists of Experiments

(i) Safety Requirement, Hazards, Electrical Accidents and prevention,

(ii) Safety

- Safety Philosophy.
- Safety Procedures.
- GRID Safety Norms.
- Procedures for issuing L.C.P. and cancellation.
- Maintenance of Safety records.

(iii) First Aid

- Places of Potential Hazards.
- Electric Shock Treatment.
- Artificial Respiration.
- Handling Emergency Conditions.

- Treatment of Wounds, Injuries & Burns.
- (iv) Fire Fighting
- Causes of Fire.
 - Fire Extinction.
 - Classification of Fires.
 - Fire Fighting Equipment: their operation – maintenance & refilling.
 - Fire prevention.

Session plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Safety Requirement, Hazards, Electrical Accidents and prevention	10	Demonstration and mock drill		Electrical safety handbook
Safety <ul style="list-style-type: none"> • Safety Philosophy. • Safety Procedures. • GRID Safety Norms. • Procedures for issuing L.C.P. and cancellation. • Maintenance of Safety records. 	15	Demonstration and mock drill		Electrical safety handbook
First Aid <ul style="list-style-type: none"> • Places of Potential Hazards. • Electric Shock Treatment. • Artificial Respiration. • Handling Emergency Conditions. • Treatment of Wounds, Injuries & Burns. 	15	Demonstration and mock drill		Electrical safety handbook
Fire Fighting <ul style="list-style-type: none"> • Causes of Fire. • Fire Extinction. 	20	Demonstration and mock drill		Electrical safety handbook

<ul style="list-style-type: none"> • Classification of Fires. • Fire Fighting Equipment: their operation – maintenance & refilling. • Fire prevention. 				
Total- 60 Hours				

Electrical System Layout & Drawing

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Electrical System Layout & Drawing	DEOM0202	Practice	0-2-0	Nil

Objective

- To list out the various design aspects of earthing in indoor and outdoor substation.
- List the basic steps for drawing a electrical layout diagram.

Course Outcome

- Design the Relays, Relaying schemes and auxiliaries Wiring Diagram for the given specifications.
- Design the Substation control room wiring diagram
- Prepare the winding diagram and sketches of the designed layout of a power system network using AUTOCAD Software

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Lists of Experiments

1. Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires.
2. Symbol creation.
3. General layout of a power system network.
4. Single line diagram/equipments[Equipments-transformer, CB, fuse etc.]
5. Relays, Relaying schemes and auxiliaries Wiring Diagram
6. Relay panel wiring diagram

7. Substation control room wiring diagram
8. Layout diagram of earthing system in outdoor substation.
9. Layout of Sub-Station (33/11KV S/S, 220/33KV S/S)
10. Indoor and outdoor busbars — bus-bar mountings and their clearances.
11. Layout of different Busbar arrangement in a substation.
12. Designing Electrical Transmission Tower Types and Design
13. Layout diagram of a GIS substation.
14. Layout diagram of earthing system in outdoor substation.
15. Designing tower earthing layout and pole earthing layout.

Note: Using AUTOCAD or Smart Draw

Session Plan

Topics	No. of Sessions	Activity	Assignment	Suggested Reading
Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires.	4	Practice	Designing	AutoCAD Manual
Symbol creation.	4	Practice	Designing	AutoCAD Manual
General lay out of a power system network.	4	Practice	Designing	AutoCAD Manual
Single line diagram/equipments[Equipments-transformer, CB, fuse etc.]	4	Practice	Designing	AutoCAD Manual
Relays, Relaying schemes and auxiliaries Wiring Diagram	4	Practice	Designing	AutoCAD Manual
Relay panel wiring diagram	4	Practice	Designing	AutoCAD Manual
Substation control room wiring diagram.	4	Practice	Designing	AutoCAD Manual
Layout diagram of earthing system in outdoor substation.	4	Practice	Designing	AutoCAD Manual
Layout of Sub-Station(33/11KV S/S,	4	Practice	Designing	AutoCAD Manual

220/33KV S/S)				
Indoor and outdoor busbars — bus-bar mountings and their clearances.	4	Practice	Designing	AutoCAD Manual
Layout of different Busbar arrangement in a substation.	4	Practice	Designing	AutoCAD Manual
Designing Electrical Transmission Tower Types and Design	4	Practice	Designing	AutoCAD Manual
Layout diagram of a GIS substation.	4	Practice	Designing	AutoCAD Manual
Layout diagram of earthing system in outdoor substation.	4	Practice	Designing	AutoCAD Manual
Designing tower earthing layout and pole earthing layout.	4	Practice	Designing	AutoCAD Manual
Total- 60 Hours				

Power System Market, Act and Regulations

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Power System Market, Act and Regulations	DEOM0103	Theory	4-0-0	Nil

Objective

- To know the Restructuring and economic evaluation of power system
- To acquire the knowledge of power system restructuring and economics of regulation

Course Outcome

- Prepare an effective contracts for different markets
- Demonstrate the factors affecting the bill structure

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I: Overview of Power System Market

(10 Hours)

Theory

Overview: Types of Markets: Spot market, Forward contracts and forward , Future contracts and futures markets, Options, Contracts for different markets.

Module II: Markets For Electrical Energy

(10 hours)

Theory

MARKETS FOR ELECTRICAL ENERGY: Difference Between a Megawatt-Hour and a Barrel of Oil, The Need for a Managed Spot Market, Operation of the managed spot market, Open Electrical

Energy Markets, Bilateral trading, Electricity pools, Comparison of pool and bilateral trading , The Settlement Process

Module III: Participating in Markets For Electrical Energy (10 Hours)

Theory

PARTICIPATING IN MARKETS FOR ELECTRICAL ENERGY: The Consumer's Perspective, Retailers of electrical energy, The Producer's Perspective, Perfect competition, The production versus purchase decision, Imperfect competition.

Module IV: System Security And Ancillary Services (12 Hours)

Theory

SYSTEM SECURITY AND ANCILLARY SERVICES: Describing the Needs, Balancing issues, Network issues, System restoration, Obtaining Ancillary Services, Compulsory provision of ancillary services, Market for ancillary services, Demand-side provision of ancillary services, Selling Ancillary

Module V: Energy Conservation (10 Hours)

Theory

ENERGY CONSERVATION: Energy Audit Basic, Energy Accounting & Analysis, Understanding the utility bill: energy charge, Demand charge, fuel cost arrangement, power factor charge.

Module VI: Electricity Rate Structure (4 Hours)

Theory

ELECTRICITY RATE STRUCTURE: state example, Energy Economics: LCC, IRR, Energy & taxation: tax consideration & analysis. General Procedure of detail energy audit. Common Energy conservation measures.

Module VII: Energy Costing (4 Hours)

Theory

ENERGY COSTING: Block pricing rate, seasonal pricing rate, innovative rate, Real time pricing rate, Electric lighting system, energy.

Text Books:

1. Moncef Krarti, "Energy Audit of Building Systems: An Engineering Approach", Second Edition, CRC Press.

Reference Books:

1. James Momoh, Lamine Mili, "Economic Market Design and Planning for Electric Power Systems", Wiley & IEEE

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module I: Overview of Power System Market (10 Hours)				
Overview, Types of Markets: Spot market, Forward contracts and forward , Future contracts and futures markets, Options, Contracts for different markets.	8	Lecture	Assignment	TB1 (Ch-1)
Module II: Markets For Electrical Energy (10 hours)				
MARKETS FOR ELECTRICAL ENERGY: Difference Between a Megawatt-Hour and a Barrel of Oil, The Need for a Managed Spot Market, Operation of the managed spot market, Open Electrical Energy Markets, Bilateral trading, Electricity pools, Comparison of pool and bilateral trading , The Settlement Process	8	Lecture	Assignment	TB1 (Ch-2)
Module III: Participating in Markets For Electrical Energy (10 Hours)				
PARTICIPATING IN MARKETS FOR ELECTRICAL ENERGY: The Consumer"s Perspective, Retailers of electrical energy, The Producer"s Perspective, Perfect competition, The production versus purchase decision, Imperfect competition.	9	Lecture	Assignment	TB1 (Ch-3)
Module IV: System Security And Ancillary Services (12 Hours)				
SYSTEM SECURITY AND ANCILLARY SERVICES: Describing the Needs, Balancing issues, Network issues, System restoration, Obtaining Ancillary Services, Compulsory provision of	8	Lecture	Assignment	TB1 (Ch-4)

ancillary services, Market for ancillary services, Demand-side provision of ancillary services, Selling Ancillary				
Module V: Energy Conservation (10 Hours)				
ENERGY CONSERVATION: Energy Audit Basic, Energy Accounting & Analysis, Understanding the utility bill: energy charge, Demand charge, fuel cost arrangement, power factor charge.	4	Lecture	Assignment	TB1 (Ch-5)
Module VI: Electricity Rate Structure (4 Hours)				
ELECTRICITY RATE STRUCTURE: state example, Energy Economics: LCC, IRR, Energy & taxation: tax consideration & analysis. General Procedure of detail energy audit. Common Energy conservation measures.	4	Lecture	Assignment	TB1 (Ch-6)
Module VII: Energy Costing (4 Hours)				
ENERGY COSTING: Block pricing rate, seasonal pricing rate, innovative rate, Real time pricing rate, Electric lighting system, energy	4	Lecture	Assignment	TB1 (Ch-6)
Total- 60 Hours				

School of Forensic Sciences

B.Sc. Forensic Science (2019)

Programme Objectives:

POs: Forensic Science Graduates will be able to:

POs Outcomes	POs Outcomes
PO1	Forensic knowledge: Apply knowledge of mathematics, various disciplines of science and basic principles of forensic in investigation.
PO2.	Perform experiments as well as to carry out problem analysis and data interpretation of instrumental analysis
PO3	The crime and society: Apply reasoning informed by the contextual knowledge to assess civil and criminal laws,society,health and cultural issues and the consequent responsibilities relevant to forensics
PO4	Individual and team work: Function affectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings in the field of forensic Science.
PO5	Conduct investigations: Visit crime scene and help the police officials in proper collection, preservation and handling of scientific evidences which will aid in maintaining the integrity of evidences
PO6	Understanding of professional and ethical responsibility of forensic scientist
PO7	Communication: Communicate effectively on various activities of forensics with proper understanding of scientific and legal terminologies
PO8	Understand psychology of criminal mind
PO9	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of forensic science.
PO10	Project Management: Demonstrate knowledge & understanding of the forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in forensic science.
PO11	Use of modern techniques, skills, and instruments necessary for forensic expert or any person working in such field.

PO12	Make a robust report on the basis of scientific analysis.
------	---

PSO (Program Specific Outcomes)

Sl No.	Program Specific Outcomes
PSO1	Graduate will be able to develop skill which can be applied in the jobs of Forensic Science
PSO2	Graduate will be able to pursue higher studies and research
PSO3	Graduate will be able to use software and technologies that can be effectively used to solve various problems encountered during investigations.

Course Outcome (CO)

BSFS0401 : Basics of Forensic Science

Course Objective : To teach in depth knowledge of forensic science, it's disciplines and importance and working of FSL.

Course Outcome : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	know the significance of forensic science to human society.
CO-2	understand fundamental principles and functions of forensic science.
CO-3	get idea about working of the forensic establishments in India and abroad.

BSFS0402 : Crime and Society

Course Objective : To obtain knowledge about criminology i.e. crime and its causes, its impact on society and basic elements of justice delivery system.

Course Outcome : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Student will know about importance of criminology.
CO-2	Understand the causes of criminal behaviour.
CO-3	Understand the significance of criminal profiling to mitigate crime.
CO-4	Understand the elements of criminal justice system.

BSFS0403 : Criminal Law

Course Objective : To obtain knowledge about basic law which governs our society

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about Elements of Criminal Procedure Code related to forensic science.
CO-2	Understand the acts and provisions of the Constitution of India related to forensic science.
CO-3	Understand the acts governing socio-economic crimes.
CO-4	Understand acts governing environmental crimes

BSFS0404 : Forensic Psychology

Course Objective : To obtain knowledge about forensic psychology and various psychological investigative tools.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about importance of psychological assessment in gauging criminal behaviour.

CO-2	Understand the legal aspects of forensic psychology.
CO-3	Understand the significance of criminal profiling.
CO-4	Do critical assessment of advanced forensic techniques like polygraph, Narco analysis and brain electrical oscillation signatures.

BSFS0405 : Forensic Dermatoglyphics

Course Objective : To study fingerprints and its fundamental principles, its role in linking a person to the crime scene, techniques to develop prints

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about physical and chemical techniques of developing fingerprints on crime science evidence.
CO-2	Understand the significance of foot, palm, ear and lip prints.
CO-3	Understand pattern types and matching

BSFS0406 : Technological Methods in Forensic Science

Course Objective : To gain knowledge about various instruments and techniques used in analysis and examination of evidences

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the importance of chromatographic and spectroscopic techniques in processing crime scene evidence.
CO-2	Understand the significance of microscopy in visualizing trace evidence and comparing it with control samples.
CO-3	Understand usefulness of photography and videography for recording the crime scenes.

BSFS0407: Criminalistics

Course Objective: To gain knowledge about crime scene and its processing including securing, searching and documentation as well as collection and packaging of evidences.

Course Outcome: On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the methods of securing, searching and documenting crime scenes.
CO-2	Understand the tools and techniques for analysis of different types of crime scene evidence.
CO-3	Understand about legal importance of chain of custody.

BSFS0408 : Forensic Chemistry

Course Objective : The study enhances ability of investigating officer in arson cases. Scientific study to analyse the explosives and Petroleum product and investigation in cases of IED.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the methods of analysing trace amounts of petroleum products in crime scene evidence.
CO-2	Understand the classification of explosives, including the synthesis and characterization of representative analogues.
CO-3	Understand significance of bomb scene management.

BSFS0409 : Questioned Documents

Course Objective : helps in understanding nature of paper and some other characteristics of written as well printed document with respect to class and individual characteristics and helps to examine fraud cases.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the importance of examining questioned documents in crime cases.
CO-2	Understand the tools required for examination of questioned documents.
CO-3	Understand significance of comparing hand writing samples.
CO-4	Know about the importance of detecting frauds and forgeries by analysing questioned Documents.

BSFS0410: Forensic Biology

Course Objective: To teach about biological fluid this helps to determine source of origin among the individuals. Hair evidence distinguishes between human and animal. Study of wild life forensic science enhances skill and knowledge of investigator in investigation smuggling cases.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the significance of biological and serological evidence.
CO-2	Understand importance of biological fluids – blood, urine, semen, saliva, sweat and milk – in crime investigations.
CO-3	Know about how wildlife forensics aid in conserving natural resources.
CO-4	Know about how forensic entomology assists in death investigations

BSFS0411 : Forensic Ballistics

Course Objective: It helps to identify class and individual characteristics of firearm and ammunition. Enhance the skill and knowledge of investigating officer.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about classification of firearms and their firing mechanisms..

CO-2	Understand importance of firearm evidence
CO-3	Know about methods of identifying firearms.
CO-4	Know about methods for characterization of gunshot residue.

BSFS0412 : Forensic Toxicology

Course Objective : To study qualitative and quantitative analysis of poison in body fluids. It also helps understanding mode of administration of poison and their absorption.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the significance of toxicological studies in forensic science.
CO-2	Classify poisons and their modes of actions.
CO-3	Understand classification and characteristics of the narcotics, drugs and psychotropic substances.
CO-4	Know about menace of designer drugs.

BSFS0413 : Forensic Anthropology

Course Objective : Study focuses on skeletal parts and their significance in determining identification of person, characteristics that helps in identifying missing person as well facial reconstruction through sketching of individual characteristics.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the importance of forensic anthropology in identification of persons.
CO-2	Classify poisons and their modes of actions.
CO-3	Understand different techniques of facial reconstruction and their forensic importance.
CO-4	Know about significance of somatoscopy and somatometry

BSFS0414: Forensic Medicine

Course Objective Study helps to distinguish between postmortem and anti-mortem characteristics of corpus delicti. Age and sex can also be determined by forensic odontology.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the importance of forensic odontology
CO-2	Understand the importance of autopsy
CO-3	Understand the importance of bloodstain patterns in reconstructing the crime scene.
CO-4	Importance of bloodstain patterns in reconstructing the crime scene.

Ability Enhancement Elective Course

BSFL1101 : English

Course Objective : To expose the students to a variety of self-instructional, learner-friendly modes of language learning and to enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Communicate fluently in different business situation
CO-2	Use appropriate words with correct pronunciation
CO-3	Do effective oral and written communication

FCBS0101 : Environmental Science

Course Objective : To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
CO-2	Characterize and analyze human impacts on the environment
CO-3	Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.
CO-4	Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.

Ability Enhancement Elective (Skill Based) course

BSSE0201 : Introduction to Biometry

Course Objective: To understand the concept of biometry and its role in identification and various kinds of biometrics.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basis of biometry.
CO-2	Know about the classification of biometric processes
CO-3	Know about the importance of behavioural biometry

BSSE0202 : Handwriting Identification and Recognition

Course Objective : To understand the important features of handwriting identification and perform detection of document forgery or alteration.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand important features in handwriting identification.
CO-2	Learn about basis of handwriting characteristics.
CO-3	Know about significance of forensic documentation.

Discipline Specific Elective

DEFS0401 : Digital Forensics

Course Objective : To understand the basic concepts of digital forensics and types of digital forensics, malwares and investigation methods applied in such cases.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basics of digital forensics.
CO-2	Analyse the cases which fall under the purview of digital crimes.
CO-3	Understand the types of digital crimes.
CO-4	Understand the elements involved in investigation of digital crimes.

DEFS0402 : Economic Offences

Course Objective: To introduce to terminologies related to economic offences, some common economic offences and its impact on society.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand basic economic and financial terminology.
CO-2	Understand steps involved in mitigating economic crimes.
CO-3	Know about types of common economic offences and their consequences.

DEFS0403: Forensic Serology

Course Objective: To gain knowledge about serological evidences and their importance in crucial cases and methods of their detection.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the significance of serological evidence.
CO-2	The importance of biological fluids – blood, urine, semen, saliva, sweat and milk – in crime investigations.
CO-3	Know about the usefulness of genetic markers in forensic investigations.

DEFS0404: Accident Investigations

Course Objective: To study methods of investigation in accidental cases, types of injuries in accidents, documentation, collection and preservation of evidences and their analysis.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the significance of tiremark evidence.
CO-2	Understand the importance of air bags and photography of accident cases
CO-3	Know about the usefulness of trace evidences in forensic investigations.

DEFS0405 : DNA Forensics

Course Objective: Understanding basic concepts of DNA Analysis, DNA Typing, STR markers.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basic principle of DNA analysis and it's significance
CO-2	Understand the importance of short tandem repeats and restriction fragment length polymorphism in DNA technique.
CO-3	Know about role of DNA typing in parentage testing

DEFS0406 : Audio Recognition and Video Analysis

Course Objective: To Understand the role of voice in forensic investigations, understanding speaker recognition and identification and their analysis.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basic principle of voice production and forensic significance speaker identification and recognition.
CO-2	Know about the importance of audio recording evidences.
CO-3	Use various software in audio recognition and video analysis.

DEFS0407 : Explosives Analysis & Post Blast Investigation

Course Objective: To study the protocols followed for analysis of explosives and get in depth knowledge about post blast investigations.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about History and development of explosives.
CO-2	Understand processing of crime scene.
CO-3	Know about clandestine Laboratories.

DEFS0408 : Quality Control and Quality Assurance

Course Objective : To study the various aspects of quality control and assurance aspects and understand important parameters such as cGMP, QC tests, documentation, Quality certifications, GLP and regulatory affairs.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the cGMP aspects in a pharmaceutical industry.
CO-2	Know about the importance of documentation.
CO-3	Understand the Scope of quality certifications applicable to Pharmaceutical industries and responsibilities of QA and QC department.

School of Forensic Sciences

M.Sc. Cyber Security and Digital Forensics

Programme Outcomes (PO) :

POs	Outcomes
PO1	Cyber forensic knowledge: Apply knowledge of mathematics, tools, techniques various disciplines of science and basic principles of digital forensic in investigation.
PO2	Perform live hands on as well as to carry out problem analysis and data interpretation of tools analysis.
PO3	The cybercrime and digital society: Apply cognitive informed by the circumstantial knowledge to assess corporate and digital criminal laws, society, health and educational issues and the consequent responsibilities relevant to the cyber forensics
PO4	Discrete and team work: Functions affectively as an individual, and as a member or leader in assorted teams, and in multidisciplinary settings in the field of digital forensics.
PO5	Conduct digital investigations: Tracing cyber victims and help the cyber police officials in proper collection, preservation and handling of digital evidences which will aid in maintaining the integrity of digital evidences.
PO6	Understanding of professional and ethical responsibility of cyber security professionals.
PO7	Communication: Communicate effectively on various activities of digital forensics with proper understanding of scientific tools and legal terminologies.
PO8	Understand thinking of felonious mind and finding digital signatures.
PO9	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of cyber forensic science.
PO10	Project Management: Demonstrate knowledge & understanding of the digital forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in cyber forensic science.
PO11	Use of modern techniques, tools, skills, and digital devices necessary for forensic expert or any person working in such field.
PO12	Make a robust documentation on the basis of scientific tools analysis.

Programme Specific Outcomes (PSO):

PSO1: Masters will be able to develop skill which can be applied in the jobs of Cyber Forensic Science in private and public sector.

PSO2: Masters will be able to pursue higher studies and research.

PSO3: Masters will be able to use software and technologies that can be effectively used to solve various problems encountered during digital investigations.

MSCS1101: PRINCIPLES OF INFORMATION SECURITY

Course Objective: The objective of this course is to focus on the models, tools, and techniques for enforcement of security. Student will also learn security from multiple perspectives.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Will gain familiarity with computer network, defences against them, and forensics to investigate the aftermath.
CO-2	Develop a basic understanding of Risk assessment
CO-3	Develop an understanding of security policies as well as protocols to implement such policies.

MSCS1102: DIGITAL FORENSICS

Course Objective : This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Explain the origins of forensic science.
CO-2	Explain the difference between scientific conclusions and legal decision-making
CO-3	Explain the role of digital forensics and the relationship of digital forensics to traditional forensic science, traditional science and the appropriate use of scientific methods
CO-4	Outline a range of situations where digital forensics may be applicable
CO-5	Identify and explain at least three current issues in the practice of digital forensic investigations.

MSCS1103 : COMPUTER NETWORKS

Course Objective: The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	explain the concepts of confidentiality, availability, and integrity (CIA) in context of Information Assurance; articulate the threats to CIA and be able to analyse a given architecture, discern vulnerabilities, and recommend physical, logical, or administrative controls to mitigate the threat; (Cybersecurity Fundamentals—Theory)
CO-2	demonstrate expertise in configuring host and network level technical security controls, to include host firewalls, user access controls, host logging, network

	filtering, intrusion detection, and prevention and encryption at all levels; (Managing Security—Applied)
CO-3	describe the hardware, software, and services that comprise an enterprise network, and be able to articulate how these components integrate to form a network solution; (Network Integration—Theory)
CO-4	Explain key networking protocols, and their hierarchical relationship in the context of a conceptual model, such as the OSI and TCP/IP framework; be able to articulate the low-level data communications and subsequent abstractions that allow networked hosts and applications to communicate across the internet; (Networking Protocols—Theory)
CO-5	Build multiple host and network architectures, given business requirements and constraints; student will configure operating systems, network specific services, routing, switching, and remote access solutions; (Networking—Applied)

MSCS1104: CYBER CRIME & INVESTIGATIONS

Course Objective: This course focusses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Discuss data and identify data sources
CO-2	Describe and discuss digital evidence
CO-3	Compare and contrast the differences between digital evidence and traditional evidence
CO-4	Describe and critique digital forensics process models
CO-5	Describe and critique digital forensics process models
CO-6	Critically evaluate standards and good practices for digital evidence and digital forensics

MSCS1105: INTELLECTUAL PROPERTY RIGHTS

Course Objective : The main objective of the IPR is to make the students aware of their rights for the protection of their invention done in their project work. The students will get a basic idea about registration in India and abroad of their invention, designs, thesis written/developed by them during their project work and for this they must have knowledge of patents, copy right, trademarks, designs.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Once the students complete their syllabus and assessment, they will develop the basic knowledge and awareness of acquiring the patent and copyright for their innovative works.
CO-2	They will also get an idea about plagiarism while writing any article, blog, research or review paper and learn how to avoid it.

MSCS1201: NUMBER THEORY & CRYPTOGRAPHY

Course Objective : Covers fundamental algorithms for integer arithmetic, greatest common divisor calculation, modular arithmetic, and other number theoretic computations. Algorithms are derived, implemented and analysed for primality testing and integer factorization. Applications to cryptography are explored including symmetric and public-key cryptosystems. A cryptosystem will be implemented and methods of attack investigated. To be able to implement and analyse algorithms for integer factorization and primality testing. To be able to use a system like Maple to explore concepts and theorems from number theory. To understand fundamental algorithms from symmetric key and public key cryptography.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	To understand fundamental number theoretic algorithms such as the Euclidean algorithm, the Chinese Remainder algorithm, binary powering, and algorithms for integer arithmetic.
CO-2	To understand fundamental algorithms for symmetric key and public key cryptography.
CO-3	To understand the number theoretic foundations of modern cryptography and the principles behind their security.
CO-4	To implement and analyze cryptographic and number theoretic algorithms.
CO-5	To be able to use Maple to explore mathematical concepts and theorems.

MSCS1202: ADVANCED INFORMATION SECURITY

Course Objective: The objective of this course is to focus on the models, tools, and techniques for enforcement of security. Students will learn security from multiple Perspectives.

Course Outcomes:

CO	Statements
CO-1	Will gain familiarity with computer network, defences against them, and forensics to investigate.
CO-2	Develop a basic understanding of Risk assessment
CO-3	Develop an understanding of security policies as well as protocols to implement such policies

MSCS1203: CYBER FORENSICS

Course Objective: The aim of this course is to equip you with the knowledge and techniques to computer forensics practices and evidence analysis. It prepares you to use various forensic investigation approaches and tools necessary to start a computer forensics investigation. It also aims at increasing the knowledge and understanding in cyber security and ethical hacking.

Course Outcomes:

CO	Statements
CO-1	Define computer forensics.
CO-2	Identify the process in taking digital evidence.
CO-3	Describe how to conduct an investigation using methods of memory, operating system, network and email forensics.
CO-4	Assess the different forensics tools.
CO-5	Differentiate among different types of security attacks.
CO-6	Describe the concept of ethical hacking.

MSCS1204: SYSTEM & NETWORK SECURITY

Course Objective: The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Able to understand the concepts of confidentiality, availability, and integrity (CIA) in context of Information Assurance.
CO-2	Articulate the threats to CIA and be able to analyze a given architecture.
CO-3	Discern vulnerabilities.
CO-4	Recommend physical, logical, or administrative controls to mitigate the threat; (Cybersecurity Fundamentals—Theory)

MSCS1205: CYBER LAW

Course Objective: The Objectives of This Course Is to Enable Learner to Understand, Explore, And Acquire A Critical Understanding Cyber Law. Develop Competencies for Dealing with Frauds and Deceptions (Confidence Tricks, Scams) And Other Cyber Crimes for Example, Child Pornography Etc. That Are Taking Place Via the Internet.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Make Learner Conversant with The Social and Intellectual Property Issues Emerging From 'Cyberspace.
CO-2	Give Learners in Depth Knowledge of Information Technology Act and Legal Frame Work Of Right to Privacy, Data Security and Data Protection.
CO-3	Make Study on Various Case Studies on Real Time Crimes.

3RD SEMESTER

MSCS2101: MOBILE SECURITY ANALYSIS

Course Objective: This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Students learn cryptography basics (concepts, algorithms, techniques,

	implementation, and evaluation) for mobile apps.
CO-2	Students learn basic cryptography implementation for Android mobile security.
CO-3	Understand how to outsource application and data to a cloud in mobile computing which will leverage services provided by cloud providers.
CO-4	Deal with the various aspects arising in architecting secure complex systems, such as analysing and identifying system threats and vulnerabilities, and investigating operating systems security.

MSCS2102: IT GOVERNANCE, RISK& COMPLIANCE

Course Objective: This course focusses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the concepts of governance, risk management and compliance (GRC) and regulatory environment.
CO-2	Identify high-risk areas and compliance in your organization and apply Risk-based Approach
CO-3	Develop and implement a governance, risk management and compliance strategic plan
CO-4	Understand, define, and enhance organizational culture as it relates to performance, risk, and compliance
CO-5	Implement governance, risk management and compliance processes that are effective and efficient
CO-6	Using a risk-based audit approach

MSCS2103: BUSINESS CONTINUITY PLANNING & DISASTER RECOVERY

Course Objective: This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital

Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the concept of business continuity
CO-2	Learn the importance of a BCP (business continuity planning)
CO-3	See how load balancing maintains business continuity
CO-4	Discover how a DCP (Disaster recovery plan) is a second line of defence
CO-5	Learn how to choose the right failure over solution

MSCS2104: PENETRATION TESTING & VULNERABILITY ASSESSMENT

Course Objective: In the end, the goal is to identify security weaknesses in a network, machine, or piece of software. Once they're caught, the people maintaining the systems or software can eliminate or reduce the weaknesses before hostile parties discover them. "Security" isn't limited to how well the machines and software stand up against penetration attempts.

Course Outcomes :

CO	Statements
CO-1	Explain the basic principles and techniques of how attackers can enter computer systems.
CO-2	Put acquired knowledge into practice by performing ethical penetration tests and hide the intrusion.
CO-3	Perform analyses of data breaches and audits of information technology security.
CO-4	Evaluate the strengths and weaknesses of various information technology solutions in terms of data security.
CO-5	Independently present and perform demonstrations of pen-tests for educational purposes.
CO-6	Evaluate the societal role of hacking from a social, ethical and economic standpoint

MSCS2105 : DIGITAL FRAUDS

Course Objective: To provide students with a comprehensive overview of collecting, investigating, preserving, and presenting evidence of cybercrime left in digital storage devices. To introduce topics of forensic data examination of computers and digital storage media.

Investigation of computers used for wrong-doing. Understand file system basics and where hidden files may lie on the disk, as well as how to extract the data and preserve it for analysis. Understand some of the tools of e-discovery. Legal aspects must form a constant background for these types of investigations.

Course Outcomes :

CO	Statements
CO-1	Understand the importance of a systematic procedure for investigation of data found on digital storage media that might provide evidence of wrong-doing.
CO-2	Understand the file system storage mechanisms of two common desktop operating systems (i.e., versions of Microsoft Windows and LINUX)
CO-3	Use tools for faithful preservation of data on disks for analysis. Find data that may be clear or hidden on a computer disk.

4TH SEMESTER

MSCS0301 : PROJECT/ DISSERTATION

Course Objective: To help in training of students with hands on experience of instruments while working on any research topic.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Have understanding of research methodology and lab work/field work.

**CENTURION UNIVERSITY OF TECHNOLOGY AND
MANAGEMENT, ODISHA**

SCHOOL OF PARAMEDICS & ALLIED HEALTH SCIENCES

Centurion
UNIVERSITY

BACHELORE OF SCIENCE IN CLINICAL MICROBIOLOGY

2019

SYLLABUS

Preface: Clinical Microbiology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as Collection of samples like body fluid, tissue, and blood and diagnoses them. It also covers micro-organism screening, sterilization of laboratorial environment and equipments, Antibiotic sensitivity tests.

Clinical Microbiologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Microbiological Laboratory.

With adequate knowledge and experience, Clinical Microbiologist having +2 Sc with biology qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Clinical Microbiology.

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre/ government or private organization, equipped with modern microbiology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of B. Sc. in Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit load of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Clinical Microbiology (B. Sc. CMB)**” from Centurion University.

**BACHELOR OF SCIENCE IN
CLINICAL MICROBIOLOGY**

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in a 6 months)

Skill Courses:

Students can choose any suitable skill course offered by the University

Value Added Courses:

**Suggested courses:*

SL NO	SUBJECT CODE	SUBJECT
1	FCMG0115	Human Rights
2	FCMG0401	Gender Issues in Development

**(Or courses suggested by the respective School)*

Note: Skill course & Value-added course, to be opted by the student along with the regular courses, as suggested in the syllabus.

Syllabus

1st semester B. Sc Clinical Microbiology

BSCM1101- Introductory Cell Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Introductory Cell Biology	BSCM1101	Theory	4-0-0	Fundamental Science

Course Objectives

1. Determine the parts of the cell membrane and the cell wall

2. Distinguish the types and mechanism of mutation
3. Compare and contrast the events of cell cycle and its regulation
4. Understand the dynamic character of cellular organelles

Course outcome

- Describe the fundamental principles cellular biology
- Develop a deeper understanding of cell structure and how it relates to cell functions.
- Understand how cells grow, divide, and die and how these important processes are regulated.
- Understand cell signaling and how it regulates cellular functions. Also how its dis-regulation leads to cancer and other diseases.

Unit-1

Biology & Its Branches; Scientific methods in Biology; Scope of biology and career options in Medical Laboratory Sciences; Characters of living organisms (elementary idea of metabolism, transfer of energy at molecular level, open and closed systems, homeostasis, growth and reproduction, adaptation, survival, death). Origin and Evolution of life - Theories of Evolution; Evidence of Evolution; Sources of Variations (mutation, recombination, genetic drift, migration, natural selection); Concept of species; Speciation and Isolation (geographical and reproductive); Origin of species.

Unit-2

Diversity of living organisms, Systematics; Need, history and types of classification (artificial, natural, polygenetic); biosystematics; binomial nomenclature; Two kingdom system, Five kingdom System, their merits and demerits, status of bacteria and virus.

Unit-3

Cell as a basic unit of life - discovery of cell, cell theory, cell as a self - contained unit; prokaryotic and eukaryotic cell; unicellular and multicellular organisms; Ultrastructure of prokaryotic and eukaryotic cell - cell wall, cell membrane - unit membrane concept (Fluid-Mosaic model); membrane transport; cellular movement (exocytosis, endocytosis)

Unit-4

Cell organelles and their functions- nucleus, mitochondria, plastids, endoplasmic reticulum, Golgi complex, lysosomes, microtubules, centriole, vacuole, cytoskeleton, cilia and flagella, ribosomes. Molecules of cell; inorganic and organic materials - water, salt, mineral ions, carbohydrates, lipids, amino acids, proteins, vitamins, hormones and steroids.

Suggested Readings

1. Molecular biology of the cell by Alberts Bruce, publisher Garland Science
2. Molecular Biology by Friefelder David, Publisher Narosa
3. Introduction to Cell biology by John K Young, World Scientific publishing company
4. Introduction to biology, 3rd edition by D G Maackean
5. A Term wise Text book on biology by VIDYA

BSCM1102-Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	BSCM1102	Theory	4-0-0	Fundamental Science

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Describe about the elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue. Cell division, meiosis and mitosis

Skeletal System: Structure and function of different human Bones, Skelton & Joints. Classification of joints and their function. Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Unit-2

Blood, Composition, Structure, classifications, Rh factor, Grouping, Normal and Abnormal Structure of different blood cells, synthesis of blood cells, mechanism of blood clot, blood circulation in body.

Cardiovascular System: Structure and functions and Position of Heart. Various parts of the heart. Blood supply in Artery and veins. Conducting system of the Heart. Cardiac output. Blood pressure and Pulses and its normal recording. Brief information about cardiovascular disorders. Respiratory system: Various parts of respiratory system and their functions, physiology of respiration. Other respiratory organs, their structure and functions. Mechanism of respiration.

*Practice: Demonstration the morphology of different blood cells
Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.*

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Identification of different organs and system from chart.

Suggested Readings:

- (b) Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber& Faber.
- (c) Text book Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
- (d) Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
- (e) Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
- (f) Anatomy and Physiology for nurses by Pearson, Publisher Marieb& Hoehn.
- (g) Anatomy and Physiology by N Murgesh, Publisher satya.

BSCM1103- Basic Haematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Haematology	BSCM1103	Theory	4-0-0	Basic Medical science

Course Objectives

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course outcome

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.
- To learn about tests carried out for hematological investigations.
- To be able to carry out blood sampling.

Unit-1

Introduction to Haematology, definition, importance, important equipment and chemicals, various test performed in Haematology laboratory. Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in haematology- Microscope, Blood Cell counter, Shari's Apparatuses.

Unit -2

Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis

Anticoagulants, definition, Uses, Different types of Anticoagulants, mode of action, their merits and demerits.

Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart.

Demonstration the normal and abnormal morphology of different blood cells.

Unit-3

Collection and preservation of blood: Different methods of collection, preservation, changes in stored blood normal and absolute values in haematology, RBC count, WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, ESR, PCV.

Blood Film: different types, methods of preparations, staining, Different types of stains, Romanowsky stains: principle of staining, different stains, their composition and preparation, methods of staining.

Practice: Collection of blood by different methods. Preparation of DLC, TLC, TRBC etc Estimation of ESR, Hb and diagnosis procedure of different blood tests.

Unit-4

Hematological Disorders

- Classification of Anemia: Morphological & etiological.
- Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
- Megaloblastic Anemia: Causes, Lab findings.
- Haemolytic Anemia: Definition, causes, classification & lab findings.
- Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow- Periodic Acid Schiff, Sudan Black

f. Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Estimation procedure of sickle cell, Identification of different abnormal morphology of blood. Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Suggested Reading

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (IInd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvt limited

BSCM1104-Basic Medical Instrumentation and Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Medical Instrumentation and Techniques	BSCM1104	Theory	4-0-0	Fundamental Science

Course Objectives

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Principle of Spectroscopy

Course outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.
- Each graduate will meet expected outcomes in communications, computation, and human relations, per the University General requirements.

Unit -1

Microscope: different types of microscope, operation and care of binocular and monocular microscope, Light, phase contrast, interference, fluorescence, polarization and electron microscopy (principle, parts and its application). Photometry: Basic principal and operation.

Practice: Demonstration, operation, and Quality control of different types of microscopes.

Unit-2

Colorimetric instrumentation and UV-Vis spectrometry and its application. Centrifuge: Basic principle, types; analytical and preparative centrifuges, different density gradient centrifuge and its application. Blood analyzer: Principle, working and its application. Demonstration and Maintenance of Laminar Flow.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Unit-3

Microtome: Principle, working and its uses. Incubator, Hot air oven and Autoclave: Principle, working and its uses. Operation Techniques and Maintenance of different another microbiological instruments

Practice: Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Reading

1. A Textbook of Medical Laboratory Technology by P Godkar, Publisher Bhalani
2. Textbook of Clinical laboratory methods and diagnosis by Ales C. Sonnenwirth& Leonard Jarret.
3. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee, Publisher McGraw Hill education Pvt limited
4. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, New York, Fischbach, 2005.
5. Microbiology by Prescott
6. Principles and Techniques of Biochemistry and Molecular Biology by Wilson and Walker
7. Medical laboratory science theory and practice by J Ochei and Kolhatkar, Publisher TBS

BSCM1105-Anatomy, Physiology & Haematology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Anatomy, Physiology & Haematology Lab	BSCM1105	Practice	0-6-0	Basic Medical Science

Course Objectives

- To identify the cell, different organelles and describe their functions.
- To identify the major organ systems of the human body and describe their functions.
- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.

Anatomy, Physiology

Demonstrate the different body parts, their position, Structure from charts, models.

Identification of different joints and bones.

Demonstration of various parts of body, tissues of body, parts of digestive system, parts of respiratory system, parts of excretory system.

Haematology Lab

Cleaning and drying of glass and plastic ware.

Preparation of various anticoagulants, Collection of venous and capillary blood, Cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents, Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (oxy Hb and cyanmethaemoglobin method).

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count.

Determination of ESR by wintrobes, Determination of ESR by Westergren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.

Suggested reading:

1. A Textbook of Medical Laboratory Technology by P. Godkar, Publisher Bhalani
2. Hand book of Medical Lab Technology by V. S. Talib, Publisher CBS
3. Practical Haematology (8th edition) by Sir John, Publisher Churchill Livingstone
4. Clinical Hematology by Christopher A. Ludlam

5. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by K. L. Mukherjee
 Publisher McGraw Hill education Pvt. limited.

2nd semester B. Sc Clinical Microbiology

FCBS0101-Environmental Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Environmental Science	FCBS0101	Theory	3-0-0	Fundamental Science

Course Objectives

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course outcome

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Unit-1

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

Unit-2

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

Unit-3

Social issues and the environment; Sustainable environment, Water conservation measures; Rain

water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book:

1. Anubhav Kaushik & C.P. Kaushik: Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph: Environmental Studies-Tata Mac Graw Hill
2. Bharucha: Text book of Environmental Studies for under graduate courses– Universities Press. (Book prepared by UGC Committee)

FCHU1201- Foundations of English Communication

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Foundations of English Communication	FCHU1201	Practice	0-3-0	Fundamental Science

Course Objectives

- To develop vocabulary and grammar knowledge
- To develop reading comprehension skills

Course outcome

- Development of academic and sub-technical vocabulary
- Enhancement of basic language skills, i.e., listening, speaking, reading and writing
- Development of grammatical competence
- Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of learning communications skills. The essential elements of this course will include:

Unit-1

READING SKILLS (7hrs.)

Read one of the following books:

- Animal Farm
- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

Unit-2

WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

Unit-3

LISTENING SKILLS (6hrs.) Students respond to questions based on listening to videos, audio, or

speaking assignments of classmates.

Unit-4

SPEAKING SKILLS (7hrs.) Speaking assignments based on chosen book or contemporary topics.

TEXT BOOKS:

Esteras, Santiago Remacha and Fabre, Elena Marco. (2007).

Professional English in Use ICT Student's Book. Cambridge: Cambridge University Press.

BSCM1201- General Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
General Microbiology	BSCM1201	Theory	4-0-0	General Microbiology

Course Objectives

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.
- To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course outcome

- Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.
- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- Developes laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Unit-1

Introduction to Microbiology, Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms.

Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve

Practice: Preparation of culture media, demonstrate aerobic and anaerobic culture.

Demonstration the different culture plate and bacterial growth, identification of bacteria

Unit-2

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:- Demonstrate the different methods of sterilization with handling Hot air oven, Autoclave. Handling Of compound microscope. Demonstration of Antiseptics, Spirit, Cetrimide & Povidone-iodine.

Demonstration the disinfectants and precaution while using disinfectants

Unit-3

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice: Demonstration the different staining procedure like Gram stain, Zn stain, Albert's stain etc Demonstrate different microbial growth in different media. Identify the morphology.

Suggested Reading:

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. Microbiology by Prescott
3. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
4. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
6. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai

7. Text book of Medical Microbiology by Gruckshiank

BSCM1202- Clinical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Biochemistry	BSCM1202	Theory	4-0-0	Fundamental Science

Course Objectives

- To understand the concept of metabolism of carbohydrates
- To understand the significance of amino acids, proteins
- Use of enzymes in enhancing metabolic reactions
- Role of lipids

Course outcome

- After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.
- Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.
- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Unit-1

Enzymes - Introduction, definition, classification, coenzymes, isoenzymes, properties, factors affecting enzyme action, enzyme inhibition, enzyme kinetics, diagnostic value of serum enzymes - Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Unit- 2

Chemistry of carbohydrates & their related metabolism - Introduction, definition, classification, biomedical importance & properties. Brief outline of metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, HMP shunt & Gluconeogenesis, regulation of blood glucose level. Components of respiratory chain, energy relationships during cell respiration, types of respiration. Pathways in intermediary metabolism of carbohydrates.

Unit- 3

Amino acids - Definition, classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism - Introduction, definition, classification, biomedical importance. Metabolism: Transamination, Decarboxylation, Ammonia formation & transport, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids especially Phenylalanine, Tyrosine & Tryptophan, Creatine, Creatinine, and Proteinuria.

Practice: Operation procedure of Centrifuge machine, colorimeter, spectrophotometer etc. Estimation of Liver function test, Kidney function test, Thyroid, Lipid profile. Estimation of bile pigment, bile salt, bilirubin etc.

Unit- 4

Chemistry of Lipids & their related metabolism - Introduction, definition, classification, biomedical importance, essential fatty acids. Brief out line of metabolism: Beta oxidation of fatty acids, fatty liver, Ketosis, Cholesterol & it's clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus - definition, types, features, gestation diabetes mellitus, glucose tolerance test, glycosurias, Hypoglycaemia& its causes.

Practice: - Demonstrate the estimation of Blood sugar by manual method and through Auto Analytic Technique. Demonstrate different biochemical test comes under the above unit

Suggested Reading

- Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
- Text book of Biochemistry, M. A. Siddique 8th Edn.1993 Vijay Bhagat Scientific Book Co., Patna.
- Medical Biochemistry by AC Dey.
- Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

BSCM1203-Clinical Pathology & Diagnosis

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Pathology & Diagnosis	BSCM1203	Theory	4-0-0	Fundamental Science

Course Objectives

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease
- Analysis of pregnancy

Course outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites
- Analysis of Infertility disorder

Unit-1

Composition, collection and preservation of urine for various tests, physical chemical and microscopic examination of urine, estimation of total albumin, Specific gravity, litmus paper, tests for albumin, sugar, blood, bile salts and pigments, urobilinogen, ketones bodies etc. Urine meter, Esbachl'sAlbuminometer, preparation of various reagents.

Practice: Collection procedures of urine, Important precursors for collecting samples.

Physical and Chemical and Microscopic examination of urine.

Unit-2

Stool- Sample collection, physical, chemical and microscopic examination.

Sputum- Sample collection, stain and study of A.F.B.

Cerebrospinal Fluid: Pandy's test, Cell count, cell type differential count and malignant cells. Cells start; sell morphology and detection of malignant cells in peritoneal fluid, pleured fluid, pericardial fluid, and synovial fluid. Differences between transuded and exudates.

Semen Sample collections microscopic examination for count and malignant and morphology.

Practice: Collection procedures and important precursors for collecting samples like STOOL, CSF, SEMEN and different bodies fluid.

Physical and Chemical and Microscopic examination of different samples.

Unit-3

ANATOMIC PATHOLOGY: 1. Reception, Registration, preservation and processing of specimens. Haematoxyline and eosine staining procedure, mounting of stained sections, Filing of paraffin blocks, and slides. Method of decalcification, Sharpening and holing Knives techniques, using of microtome.

2. Museum: Mounting of specimens, labeling, maintenance of specimens and catalogue etc.

Post mortem/ Autopsy: Maintenance of the records of the Dead Bodies and specimens received, Autopsy techniques, Autopsy instruments, cold storage plants, legal aspects etc.

Practice: Handling clinical laboratorial equipment.

Preparation of some stains, and reagents for clinical diagnosis purpose.

Suggested Reading

- Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
- Manual Text book of lab and diagnostic tests by Lippincott Williams Wilkins, New York.
- Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

BSCM1205-Clinical pathology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology Lab	BSCM1205	Practical	0-3-0	Fundamental Science

Course Objectives

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understand Physiological disorder and infectious disease

Course outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.

Urine analysis Physical, Chemical, Microscopic, Microbiological.

Stool analysis Physical, Chemical, Microscopic, Microbiological.

Sputum analysis Physical, Chemical, Microscopic, Microbiological.

Semen analysis Physical, Chemical, Microscopic, Microbiological.

Bacteriological examination of pus.

Bacteriological examination of trout swab.

Laboratory study of parasites in stool, blood. Giardia lamblia, Entamoeba

BSCM1206- Microbiology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Microbiology Lab	BSCM1206	Practice	0-3-0	Fundamental Science

Course Objectives

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course outcome

- This study demonstrates the practical skills in microscopy and their handling techniques and staining procedures.
- Provides knowledge on growth of microorganism.
- Provides knowledge Culturing microorganism.

Handling of Microscope

To learn techniques for Inoculation of bacteria on culture media To isolate specific bacteria from a mixture of organisms.

To demonstrate simple staining (Methylene blue)

To prepare India ink preparation to demonstrate negative staining.

Bacterial identification: To demonstrate reagent preparation and procedure for

Gram stain, Albert stain, Neisser's staining, Z-N staining, Capsule staining, Demonstration of flagella by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure

To prepare the reagent and demonstrate following biochemical tests with positive and negative control bacteria:

Catalase, Coagulase, Indole, Methyl Red (MR), Voges Proskauer (VP), Urease, Citrate, Oxidase, TSIA, Nitrate reduction, Carbohydrate fermentation, Huger and Leifson, Bile solubility, H₂S production Demonstration and motility, Decarboxylases, CAMP, Hippurate hydrolysis, Nagler's reaction

Antibiotic susceptibility test

Suggested Reading

1. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, Fischbach, 2005 New York.
2. Clinical laboratory methods and diagnosis by Gradwohl, 2000, Publisher Mosby
3. Medical laboratory science theory and practice, J Ochei and Kolhatkar, 2002, publisher TBS
4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, publisher Tata McGraw Hill.

3rd semester B. Sc Clinical Microbiology
BSCM2301- Immunology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology	BSCM2301	Theory	4-0-0	Fundamental Science

Course Objectives

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.

Course outcome

- Application of Immunology in disease diagnosis.
- Students will be able to understand and explain the basis of allergy and allergic diseases along with immunological tolerance and autoimmunity.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Unit-1

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity.

Antigens: Types of antigen, Antigenic Determinant or Epitome, Determinants of Antigenicity Tolerogens, Biological Classes of antigens, Superantigens.

Antibodies-Immunoglobulins: Antibody structure, Immunoglobulin classes of Antigens, Antigenic Determinants on Immunoglobins.

Practice: Collection of blood sample by vein puncture, separation and preservation of serum. Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test.

Unit-2

The Complement System: Principal pathways of Complement activation, Quantitation of Complement

(C) and its Components. Biosynthesis of complement, Complement Deficiencies. Antigen-Antibody Reactions: Antigen-Antibody Interactions, General characteristics of Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests, Serological Reactions.

Practice: - Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsonsbuffer Buffers of different pH and molarity, tris buffer, Standardization of cell concentration by spectrophotometer

Unit-3

Immune Response: Types of Immune response, Humoral immunity, Fate of Antigen in tissues, Production of Antibodies, Cell-mediated Immune Responses, Cytokines, Immunological tolerance, Theories of immune Response.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity- Immune Complex-mediated, Type IV Hypersensitivity- Delayed Hypersensitivity, Shwartzman

Reaction.

Practice: Performance of Serological tests i.e. Widal, Brucella Tube Agglutination, VDRL(including Antigen Preparation), ASO (Antistreptolysin 'O'), C-Reactive Protein (Latex agglutination), Rheumatoid factor (RF) Latex agglutination, Rose Waalest

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan&Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupta, Publisher Jaypee brotthers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by MoniaCheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and David Male
6. Practical Medical Microbiology by Mackie &MacCartney Volume 1 and 2
7. Immunology by Kuby

BSCM2302- Systemic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	BSCM2302	Theory	4-0-0	Fundamental Science

Course Objectives

- To learn opportunities in the basic principles of medical microbiology and infectious disease.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit 1

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of:

a. Cocci (Gram Positive):

Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp.

Anaerobic: Peptococcus spp., Peptostreptococcus spp., Villanelle spp., Acidaminococcus spp.

Megasphaeria spp., Coprococcus spp., Ruminococcus spp. and others.

b. Cocci (Gram Negative): Aerobic: Neisseria spp., Anaerobic Gram-negative bacteria.

Unit 2

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of:

a. Aerobic non-spore forming gram positive bacilli:

Bacillus spp., Corynebacterium spp., Antinomycespyogens, Nocardia spp., Mycobacterium spp.-

pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and Hansen's bacilli and others.

b. Anaerobic: Bifidobacterium spp., Eubacterium spp., Actinomyces spp., Propionebacterium, Arachenia spp., Clostridium spp., and others.

Unit 3

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of Gram-Negative Bacilli

Aerobic: Enterobacteriaceae , Citrobacter spp , Edwardsiella spp ,Enterobacter spp , Escherichia coli, Ewingella , Hafnia spp., Klebsiella spp., Kluyvera ,Leclercia , Leminorella, Moellerella, Morganella spp., Pantoea ,Proteus spp., Porvidencia spp., Rahnella Salmonella spp., Serratia spp., Shigella spp., Tatumella, Yersinia spp., Vibrio spp., Pseudomonas spp., Clamidia and chlamydophila, Brucella spp., Bordetella spp., Haemophilus spp., mycoplasma spp.

BSCM2303- Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	BSCM2303	Theory	4-0-0	Fundamental Science

Course Objectives

- To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.
- Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course outcome

1. Conduct independent work in a laboratory.
2. Read scientific articles and gain a critical understanding of their contents.
3. Give a spoken and written presentation of scientific topics and research results.
4. Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Unit 1

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell, Evolution and Molecular structure of cell and its organelles.

Types of cells. Including different kinds of Prokaryotic and eukaryotic cells,

Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles, Cell cycle, Cell membrane and its structure (fluid-mosaic model)

Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Unit 2

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells:

Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, DNA Replication, Transferring information from DNA to RNA, Synthesis of RNA, Translation

RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes

Unit 3

General Concept on:

a. Regulation of the Gene Expression

b. Regulating the Metabolism:

The Lac- Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions

Unit 4

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA, RNA polymerase, Initiation and Termination of Transcription, Post transcription modification of the RNA

Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

BSCM2304- Systemic Virology & Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Virology & Mycology	BSCM2304	Theory	4-0-0	Fundamental Science

Course Objectives

- To learn opportunities in the basic principles of medical microbiology and infectious disease.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Know the methods used in studying viruses and fungi.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit 1

Introduction and Scope of Virology.

General Properties of Viruses and Structure (Morphology).

Classification of Medically Important Viruses.

Genetic material, Organ system involved, Transmission

Unit 2

Replication of Viruses, Virus Host Interaction, Bacteriophage

Epidemiology, Pathogenesis, Treatment, Prevention and Control of Viral Diseases (DNA Viruses) *Adenoviridae, Poxviridae, Herpesviridae, Papoviridae, Parvoviridae, Hepadnaviridae*

Epidemiology, Pathogenesis, Treatment, Prevention & Control of Viral Diseases (RNA Viruses):

Orthomyxoviridae, Paramyxoviridae, Picornaviridae, Corona viridae, Togaviridae, Rhabdoviridae,

Retroviridae, Coronaviridae, Bunyaviridae, Arenaviridae, Filoviridae, Reoviridae and Calciviridae

Unit 3

Mycology: Introduction: Scope and medical importance of fungi- Molds, Mushroom, Yeast. Definition: Mycology, Medical Mycology, Mycetes, Mycosis, Thallus, Hypha, Mycelium, Coenocyte, Rhizoids and Club.

Classification, Structure and Physiology of fungi:

Cryptogam (Thallophyta: Fungi Algae), Phanerogam, Pseudomycetes, Schizomycetes (Bacteria Actinomycetes, Actinomycetalia, Nocardia, Yeasts)

Myxomycetes (Slime, Molds), Eumycetes (True fungi), Ascomycetes (Histoplasma, Candida, Blastomycosis), Basidiomycetes (Cryptococcus, Rhizopus), Phycomycetes Mucor, Epidermophyton

Fungi imperfecti: (Trichophyton).

Unit 4

Vegetative Structure (Morphology) of Fungi: Septate, aseptate, Plectenchyma, Prosenchyma, Pseudoparenchyma, Modification of Plectenchyma (Rhizomorph, Sclerotia, Stroma).

Mode of Nutrition of Fungi: Saprophytes, Parasites (Obligate parasite, Facultative parasite, Ecto-parasite, Endo-parasite), Symbionts: Lichen

Pathogenic Group of Fungi: Opportunistic pathogens, True pathogens:

Blastomyces dermatitidis, Cooccidioides immitis, Paracoccidioides brasiliensis, Histoplasma capsulatum.

A. Dermatophytes: *Mycrosporium* (Hair, skin), *Trichophyton* (Skin, hair, nail), *Epidermophyton* (Skin, nail), *Aspergillus spp.*

1. Dermatomycosis (*Candida albicans, Cryptococcus neoformans*)

FCHU1204- Communicative Practice Laboratory-2

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Communicative Practice Laboratory-2	FCHU1204	Practice	0-3-0	Fundamental Science

Course Objectives

- To master Study Skills
- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

Course outcomes

- The students will be able to Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.
- Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge

collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver an engaging oral presentation. A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

Module I

LISTENING (6 HOURS) Exercises on Active Listening:

- The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

Module II

SPEAKING (8 HOURS)

- Situational Dialogues / Role Play: Organization Communication
- Oral Presentations- Prepared and Extempore
- 'Just a minute' Sessions (JAM)
- Debates
- Mock Meetings
- Cracking Job Interviews: Mock Sessions
- Group Discussions on current topics (This module will be practiced through speaking activities like role plays, presentations, and discussions)

Module III

READING (8 HOURS)

- Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.
- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making
- Review Presentation (Movie/ Article/ Book)
- Vocabulary Building Exercises (This module encourages extensive use of reading materials)

Module IV

WRITING (8 HOURS)

- The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.
- Short Paragraphs on current general and technical topics
- Creative Writing: Idea Generation
- Business Letters, Email Messages, Project Writing
- Writing Resumes and Cover Letters (* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

BSCM2307- Virology & Mycology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Virology & Mycology Lab	BSCM2307	Practice	0-3-0	Fundamental Science

Course Objectives

- To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course outcome

- The course provides the conceptual basis and methods used in studying viruses and fungi.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Aware and train in aseptic handling of microbial specimens. Practice safe microbiology, using appropriate protective and emergency procedures.

Virology

Demonstration of virus isolation techniques.

Demonstration of cell and tissue culture techniques used for virus isolation.

Serological techniques used in diagnostic virology.

Mycology

Organization of laboratory – Mycology

Preparation of different media, chemical and stain for fungus study.

Isolation and identification of different fungi of medical important.

4th semester BSc Clinical Microbiology

BSCM2407- Public Health Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Public Health Microbiology	BSCM2407	Theory	3-0-0	Fundamental Science

Course Objectives

- To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.
- To understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – Water pollution and waterborne diseases, Air pollution and airborne infections.

Course outcome

- Explain prognosis of diseases and become aware about the role of medical microbiology in public health
- Understanding the role of microbiologist in public health

- Study of Air borne & water borne infection

Unit 1

Introduction to Public Health: Definition, scope, concept and importance of public health microbiology, Roles of microbiologist in public health, Concept of health and disease, Indicators of health, Microbial association of water, air and soil, Basic concept on pollution (air, water, noise, radiation and waste pollution) and public health hazard in the community.

Unit 2

Air Borne Infections: 1. Introduction: Air and its composition, Microbial air pollution, Sources of air pollution & control, Indicator of air pollution – WHO guide line (microbial pollution).

2. Air borne diseases: Transmission of pathogens, Respiratory infection (Viral, bacterial, fungal), Sources of infection, characters of organisms and controls of:

Bacterial pneumonia, Diphtheria, Tuberculosis, Influenza, Measles.

3. Method of measuring microorganisms in air.

Practice:- Selection, collection, perseveration and transportation of samples from the community to the laboratory.

Unit 3

Water Borne Infections: 1. Introduction: Definition of wholesome and safe water, Nature, cycle, sources, importance and quality (WHO guide line) of water. Water pollution and sanitation,

2. Microorganisms in water: Transmission of pathogens, Water borne diseases (Viral, bacterial, protozoal), Sources of infection, characters of organisms and control of:

Hepatitis, Cholera, Typhoid, Amoebiasis, Giardiasis, Poliomyeliti

Water Pollution Control. Method of Measuring Microorganisms in Water. Water Treatment, Control of Water Borne Diseases.

Practice:- Isolation and Identification of microorganisms from air.

Isolation and Identification of microorganisms from water and evaluation of water quality

Suggested Reading

1. A Text Book of Microbiology, by Ghimire P. & Parajuli K. VidhyarthiPustakBhandar Publication, Kathmandu.
2. Text Book of Social and Preventive Medicine by Park JE and Park K
3. Evidence Based Public Health by Brownson, RC., Baker, EA., Leet. TL., Follespie. KN, Oxford University Press
4. The Quest for Health, Educational Enterprises, Kathmandu, by Dixit H.
5. Epidemiology for Public Health Practice, by Friis, RH., and Sellers, TA, 2nd Edition, Gaithersburg, MD: Aspen Publication,
6. Modern Food Microbiology, by Jay, J, H 3rd Edition CBS Publication and Distributors Delhi 1987.
7. Introduction to Soil Microbiology, Martin Alecender, by Academic press, 1961.

BSCM2402- Pharmaceutical Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Pharmaceutical Microbiology	BSCM2402	Theory	4-0-0	Fundamental Science

Course Objectives

- Understanding of types & synthesis of antimicrobial agents
- Manufacture of antibiotics
- To understand the mechanism of action of antibiotics
- To study how microorganisms are known to develop resistance to antibiotics

Course outcome

- With the completion of the course, the students will acquire detailed knowledge of antimicrobial agents, their mechanism of action and basis of resistance of microbes to these antimicrobials, formulations.
- They will develop an understanding of different types of disinfectants/antiseptics and their uses, evaluation of their bactericidal and bacteriostatic action.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Unit 1

Introduction to Pharmaceutical Microbiology: Scope, Importance, Chemical disinfectants, Antiseptic, Antibiotics, Preservatives, Static and cidal activity (fungus, bacteria), Germicidal activities Types of Antibiotics and Synthetic Antimicrobial Agents:
Antibiotics, Types and Classification of antibiotics, Synthetic antibiotics, Antiviral drug

Unit 2

Manufacture of Antibiotics: Production of penicillin, Production of streptomycin
Assessment of New Antibiotics: Parameters, determination of the usefulness of antibiotics (in vitro and in vivo), Pharmacokinetics and Pharmacodynamics of Antimicrobial agents
Antibiotic Assay: Microbiological method, Disc diffusion technique, Dilution technique, Rapid method.

Unit 3

Mechanisms of Action of Antibiotics: Cell wall synthesis inhibitors, Inhibitors of protein biosynthesis, Inhibitors of tetrahydrofolate, Disorganize the cytoplasm membrane. Mode of Action of Antibiotics and Bacterial Resistance to Antibiotics:
Mode of action of antibiotics (cell wall cytoplasmic membrane, cytoplasm and compounds), Biochemical mechanisms of resistance, Genetic basis of antibiotic resistance, Problems in antibiotic therapy due to resistance
Evaluation of Antibiotics and Non-antibiotics Agents: Preliminary evaluation, Evaluation of Static activity (fungus, bacteria), Evaluation of Germicidal activities (fungus, bacteria)
Microbial Spoilage and Preservation of Pharmaceutical Products.

Suggested Reading

1. W B Hugo and A D Russel, Pharmaceutical Microbiology, 2nd Edition
2. Ghimire P. Hand book of Practical Microbiology, 2003, Pravesh Publication, Kathmandu

BSCM2408-Industrial Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Industrial Microbiology	BSCM2408	Theory	3-0-0	General Microbiology

Course Objectives

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.
- To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course outcomes

- Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.
- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- Develops laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Unit 1

Introduction to Industrial Microbiology: Introduction, History, Definition and scope.

Industrial Equipment and Uses.

Fermentation Process: Primary and secondary screening, Detection and assay of fermentation products- Physical and chemical assays, Biological assay

Stock culture, Fermentation media, Inoculums preparation, Increasing products, Phage

Practice-: Observational visit to a beer/alcohol factory.

Observational visit to pharmaceutical, food and dairy industry.

Unit 2

Typical Fermentation Process:

Antibiotic drug fermentation - Penicillin, Streptomycin, Bacterial insecticide, Other antibiotics- Acetone, Lactic acid, Brewing

Biological Waste Treatment / Bioremediation: Anaerobic fermentation

Production of: Vitamin, Vaccines, Milk & Milk Products, Food, Baker's yeast, Food and feed yeasts, Mushrooms, Vinegar

Enzymes: Amylase, Proteolytic enzyme, Pectinases, Invertase Other enzymes

Unit 3

Industrial effluent: Introduction, Industrial pollution, Microbiology of Domestic sewage Methods for the treatment of industrial effluent and sewage.

Practice- Detection of Fermentation, Biological waste treatment.

Suggested Reading

L. E. Casida, JR., *Industrial Microbiology*, 1991, Wiley Eastern Limited, New Delhi,

BSCM2404- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	BSCM2404	Theory	4-0-0	Fundamental Science

Course Objectives

- Understanding the concept of Biochemical analyzing instruments both automated and semi-automated.

- To learn about how to Care & Maintenance of Equipment & Chemicals.
- To learn normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course outcome

- Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.
- To learn about Various tests carried out for biochemical analysis & Hormone investigations.
- To learn about safety precautions and handling the equipment in biochemical laboratory.

Unit-1

Principle of colorimetry and Spectrophotometry, Chromatography: Basics of chromatography (Paper chromatography, Thin Layer Chromatography, Column chromatography, Gas chromatography, Ion exchange chromatography, Gel chromatography)

Unit-2

Electrophoresis: Introduction, principle, Instrumentation, types of electrophoresis - paper and gel electrophoresis, application

Unit-3

Automation in clinical Biochemistry, Method of estimation and assessment for: a. Glucose tolerance test, b. Insulin tolerance test, c. Xylose excretion test.

Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Suggested readings

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H.Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book
4. Principle of Biochemistry by Lehninger
5. Biochemistry by Voet&Voet
6. Biochemistry by Stryer

BSCM2409- Basic Computer & Information Technique

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Computer & Information Technique	BSCM2409	Practice	0-3-0	Fundamentals of Computer

Course Objectives

- Identify the function of computer hardware components.
- Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.
- Identify how to maintain computer equipment and solve common problems relating to computer hardware.
- Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded

- Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course outcome

- Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.
- Understand the difference between an operating system and an application program, and what each is used for in a computer.
- Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Unit-1

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.

Input output devices: input devices (keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices (monitors, pointers, plotters, screen image projector, voice response systems).

Unit-2

Processor and memory: The Central Processing Unit (CPU), main memory.

Storage Devices: sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

Unit-3

Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.

Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs. Introduction of Operating System: introduction, operating system concepts, types of operating system. Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external).

Unit-4

Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.

Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in various fields: Medical, Education, Railway, Defense, Industry, Management, Sports, Commerce, Internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

BSCM2410- Industrial Microbiology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Industrial Microbiology Lab	BSCM2410	Practice	0-3-0	General Microbiology

Course Objectives

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.

Course outcomes

- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- Understand the basics of fermentation technology, screening techniques, microbial culture preservation techniques etc.
- Aware about the detail downstream process of fermentation of important microbial products.

- Observational visit to a beer/alcohol factory.
- Observational visit to pharmaceutical, food and dairy industry.
- Detection of Fermentation
- Biological waste treatment.

BSCM2411- Public Health Microbiology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Public Health Microbiology Lab	BSCM2411	Practice	0-3-0	Fundamental Science

Course Objectives

- To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.

Course outcome

- Understanding the role of microbiologist in public health
- Get a clear vision about various aspects of infectious diseases
- Carry out fundamental or applied research in the field of Public Health Microbiology

- Isolation and identification of microorganism from different food products: meat, canned juice, milk, cheese and ice cream.
- Isolation and identification of microorganism transmitted through vector, insect.
- Isolation and identification of microorganism (STIs)
- Isolation and Identification of microorganisms (hospital acquired infection)

BSCM2412- Biochemistry lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry Lab	BSCM2412	Practice	0-3-0	Fundamental Science

Course Objectives

- To understand the significance of carbohydrates in energy generation and as storage food molecules for cells. To understand the significance of amino acids, proteins.

Course outcome

- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education and would have understood the principles of Liver function test, kidney function test, lipid profile etc.

1. Demonstration of centrifuge machine, colorimeter
2. Estimation of Liver function test, kidney function test, lipid profile
3. Estimation of Glucose in Urine and in Blood.
4. Estimation of Protein in Urine and Blood.
5. Estimation of Urea in blood.
6. Estimation of uric acid in blood.
7. Estimation of serum bilirubin
8. Estimation of Total Cholesterol in blood.
9. Estimation of HDL Cholesterol.
10. Estimation of LDL Cholesterol.
11. Estimation of TG, Estimation of Creatinine in Blood.
12. Estimation of serum calcium.
13. To measure electrolytes Sodium, Potassium & Chloride.

5th semester B. Sc. Clinical Microbiology

BSCM3508 –Epidemiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Epidemiology	BSCM3508	Theory	2-0-0	Fundamental Science

Course Objectives

- Understand the basic epidemiological methods and study designs.
- Understand and discuss population based perspective to examine disease and health – related events.
- Discuss the ethical issues in epidemiological research.
- Explain the importance of epidemiology for informing scientific, ethical, economic and political discussion of health issues.
- Describe a public health problem in terms of person, place, and time.
- Evaluate the strengths and limitations of epidemiologic reports

- Apply concepts, methods, and tools of public health data collection, analysis and interpretation, and the evidence-based reasoning and informatics approaches that are essential to public health practice.

Course outcome

- Distinguish between definitions of epidemiology and clinical epidemiology and public health research.
- Apply the terminology of the Epidemiologic Triad to an infectious disease.
- Describe the important historic events in the field of epidemiology.

Unit 1

Introduction to Principles of Epidemiology:

History, Definition, and scope of epidemiology, Achievements in epidemiology, Terms & Terminologies used in epidemiology.

Measuring Health and Disease: Definitions of health and disease, Measures of disease frequency Use of available information, Comparing disease occurrence

Unit 2

Concept of Epidemiological Study: Basic concepts of epidemiology Descriptive / Analytical, Applied/Experimental, Field Epidemiology

Concept of Prevention and Control of Diseases:

Causation in epidemiology: The concept of cause, Establishing the cause of a disease Epidemiological markers, Phenotypic and genetic markers including molecular epidemiology.

Disease surveillance: Clinical, Laboratory

Unit 3: Applied Epidemiology:

Communicable disease epidemiology, Clinical epidemiology, Environmental & occupational epidemiology, Nutritional epidemiology, Reproductive epidemiology, Social epidemiology

Food epidemiology.

Epidemiology, Health services and health Policy:

Health care planning, Monitoring & evaluation, The planning cycle, Epidemiology, public policy and health policy, Healthy public policy in practice

Suggested Reading

1. Basic Epidemiology. By Beaglehole R., Bonita R., Kjellstrom , World Health Organization, Geneva,
2. Field Epidemiology, By B Gregg, 2nd Edition, Oxford University Press, 2002
3. Gordis L. *Epidemiology*, 2nd Edition, WB Saunders Company Aharcourt Health Sciences Company, Philadelphia.
4. Epidemiology in Medicine, by LippincottEilliams and Wilkins, and Walters Kluwer Company
5. Epidemiology, Principle and Method, McMahon B, Trichopoulos D, by 2nd Edition, Boston, Little, Brown.

BSCM3509 -Diagnostic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Bacteriology	BSCM3509	Theory	3-0-0	Fundamental Science

Course Objectives

- To confirm the suspicion of infectious bacterial disease.
- To identify the etiologic agent by isolating the causative bacterial pathogen.

Course outcome

- Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections.
- Study of control measures for nosocomial infection.
- Student can safeguard himself & society and can work diagnostics and hospitals

Unit 1

Aerobic Culture: Scope and importance of aerobic culture, Factors affecting aerobic culture, Various media and techniques of aerobic culture.

Laboratory Diagnosis of Enteric Infections: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Enteric fever / Typhoid fever, Bacterial endocarditis, Bacteraemia, Septicemia, Pyrexia of unknown origin (PUO).

Unit 2

Laboratory Diagnosis of Respiratory Tract Infection (RTI): (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Lower RTI, Upper RTI.

Laboratory Diagnosis of Urinary Tract Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods)

Unit 3

Laboratory Diagnosis of Oral, Throat and Stomach Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Gingivitis and anaerobic infection of oral cavity.

Peptic ulcer (with emphasis in mechanism of peptic ulcer caused by *Helicobacter pylori*).

Laboratory Diagnosis of Eye Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Corneal ulcer, Conjunctivitis.

Suggested Reading

1. Medical Laboratory Manual for Tropical Countries, by Cheesbrough M., Vol. I & II, Edition, ELBS.
2. *Clinical Microbiology*, by Stoker, Edward Arnold.
3. *Manual Clinical Microbiology*, by Lynnette, E. H., 8th Edition, American Society for Microbiology, Washington DC.
4. Basic Bacteriology Laboratory manual, WHO

BSCM3503- Diagnostic Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Virology	BSCM3503	Theory	4-0-0	Basic virology

- Understanding laboratory diagnosis of virus by both conventional and molecular approach.
- To produce a cadre of specialized medical virologists who would help establish clinical diagnostic services in various hospitals/centres.

Course Objectives

Course outcome

- Organise sample collection, transportation, processing and storage in an appropriate manner.
- Plan, write and implement research projects in virology, analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Unit 1

Laboratory Organization:

Room (space), Electricity, Water supply, Sterility Sampling in Diagnostic Virology: Selection, collection, storage, transportation and processing of samples

Electron Microscope: Principle, importance and use

Unit 2

Laboratory Diagnosis of Viral Infections:

Virus isolation, Inoculation in laboratory animal, Egg inoculation, Tissue culture, Recognition of viral growth-Cytopathic effect, Haemadsorption (Hd), Immunofluorescence or immunoperoxidase staining, Interference.

Identification of virus- Neutralization (N), Haemagglutination – inhibition (HI), Immunofluorescence or immunoperoxidase staining, Electronic microscope (EM).

Direct demonstration of virus or virus antigens - Serology - Immunofluorescence, Electronic Microscopy, Histological demonstration of inclusion bodies,

Serological tests: Detection of viral antigen, Detection of anti-viral antibodies. (Rising titer in paired sera: 4–fold or more -Detection of IgM

Complement fixation (CF), Haemagglutination inhibition (HAI), Neutralization (N), Immunofluorescence (IFA), Enzyme immunoassay.

Unit-3

Laboratory Diagnosis of Important

- a. DNA Viruses and b. RNA Viruse, Antiviral Drugs

Practice-: Practical sessions (Laboratory Practices) will be based in the Hospital Laboratory performing diagnostic tests available / requested, in Diagnostic Virology laboratory

BSCM3504- Diagnostic Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Mycology	BSCM3504	Theory	4-0-0	Fundamental Science

Course Objectives

- To confirm the suspicion of fungal disease.
- To identify the etiologic agent by isolating the causative fungal pathogen.

Course outcome

- This course provides learning opportunities in the basic principles of medical microbiology and infectious fungal diseases.
- The course provides the conceptual basis for understanding pathogenic fungi and the mechanisms by which they cause disease in the human body.

- Student can safeguard himself & society and can work diagnostics and hospitals

Unit 1

Introduction to Diagnostic Mycology:

Medically important fungi, Opportunistic Fungi

Fungal Diseases: Mycoses

1. Superficial mycoses:

2. Subcutaneous mycoses:

3. Cutaneous mycoses: Trichophytosis, Microsporiosis, Epidermophytosis.

4. Systemic mycoses: Histoplasmosis, Blastomycosis, Cryptococcosis, Coccidioidosis, Paracoccidioidosis .

Unit 2

Pathogenesis and Laboratory Diagnosis of Mycotic Infections:

Aspergillus spp, Candida albicans, Fusarium spp, Cryptococcus neoformans, Histoplasma capsulatum, Sporothrix spp, Philophora spp., Trichophyton microsporium, Epidermophyton spp.

Blastomyces dermatitidis, Coccidioides immitis.

Unit 3

Isolation and Identification of Fungi (Laboratory Diagnosis):

A. Selection, collection and transportation of specimens 5 hours

Skin, Hair, Nail, Mucous membranes, Ear, eye, Corneal ulcer, Pus, Blood, Biopsy, Sputum, Urine, Vaginal and Cervical swab, Stool samples, Plural and peritoneal fluid, Superficial, sub-cutaneous and cutaneous samples.

B. Smear Preparation: 2 hours

KOH Preparation, 20% KOH with 20% Glycerol, KOH – DMSO (Dimethylsulphoxide) 100% Lactophenol Cotton Blue, India ink preparation.

Practice: Antifungal Sensitivity Test: Antibiotics. Stock solution of drug Dilution technique, Sensitivity test by different method, Minimal inhibitory concentration (MIC) and Minimal fungicidal concentration (MFC)

Serological Test: Identification of Antigen, Antibody and Metabolites in Body Fluid & Serum.

BSCM3505- Diagnostic Parasitology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Parasitology	BSCM3505	Theory	4-0-0	Basic Parasitology

Course Objectives

- To explain the mechanisms of pathogenesis from a gross, microscopic and molecular perspective.
- Recognize the diagnostic stage of the infection under the microscope and to manage the infected patient.
- To examine parasites and parasitism, emphasizing the influence of parasites on the ecology and evolution of free-living species, and the role of parasites in global public health.

Course outcome

- rganise sample collection, transportation, processing and storage in an appropriate manner.
- Plan, write and implement research projects in parasitology, analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding protozoan and helminth diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to protozoan diseases.

Unit 1

Laboratory Organization (Parasitology Lab)

Selection, Collection, Perseveration and Transportation of Samples

Unit-2

Laboratory Diagnosis, of the Intestinal and Vaginal Parasites: 28 hours

(Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods)

Protozoa: Entamoeba histolytica, Giardia lamblia, Trichomonas spp, Cyrtosporidium, Cyclospora cayantensis, Isospora

Helminthes: Ascaries lumbricoides, Hook worm: Anacylostoma and Necator, Enterobius vermicularis, Trichuris trichuira, Strongloides spp., Taenia spp., Echinococcus spp., Hymonolepis nana

Tissue and Blood Parasites: Malaria spp, Kalaazar, Wacheria spp. Brugia, Loa loa, Oncocerca, Dracuhculus, Paragonimuswestermani/hertmani

Unit 3

Laboratory Diagnosis of Various Parasites: 6 hours

Direct method, Indirect method, Rapid methods, Molecular Technique

Parasite Culture. Different Stains used in Diagnostic Parasitology.

Practice:- Practical sessions (Laboratory Practices) will be based in the Hospital Laboratory performing diagnostic tests available / requested, in Diagnostic Parasitology laboratory

BSOP3504-Medical Law and Ethics

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Law and Ethics	BSOP3504	Theory	3-0-0	Fundamental Science

Course Objectives

- The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients. It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects,

organ donation, the rights of the dying and the legal definition of death.

Course outcome

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and
- The role of policy in the formation of law as it relates to medicine.

Module-1 (14HRS)

1. Medical ethics - Definition - Goal - Scope
2. Introduction to Code of conduct
3. Basic principles of medical ethics – Confidentiality

Module-2 (15 HRS)

1. Malpractice and negligence - Rational and irrational drug therapy
2. Autonomy and informed consent - Right of patients
3. Care of the terminally ill- Euthanasia
4. Organ transplantation

Module-3 (13 HRS)

1. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.
2. Professional Indemnity insurance policy
3. Development of standardized protocol to avoid near miss or sentinel events
4. Obtaining an informed consent

Books Recommended:

1. Reflections on Medical law and Ethics in India by B. Sandeepabhat, publisher Eastern law house.

BSCM3510 -Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	BSCM3510	Theory	3-0-0	Fundamental Science

Course Objectives

- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course outcome

- Students can understand the ethical and philosophical issues associated with research in education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Unit 1

Introduction to Research Methodology: 4 hours

Meaning and Nature of Research-

Meaning, definition and characteristics of health research Importance of health research in nursing field. Foundation of Scientific Research -

Scientific Thinking, Research Idea and the thought Process: Reasoning, Deduction, Induction, Combining Induction and Deduction, and Reflective thinking and the Scientific Method, Scientific Research. Identification and Analysis of Research Problem

Selection of a problem, Sources Criteria, defining a problem, Characteristics of a problem, Criteria of good research questions, Steps in analyzing the research problem.

Unit 2

Proposal Development:

Basic steps involved in the health research proposal development process

Literature Review:

Importance and Sources, Strategies for gaining access to information, Library search, Computer search. Research Title and Objectives

Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis.

Unit 3

Variables: Definition, Importance, Qualitative and Quantitative variables Dependent and Independent variables

Confounding variables, Background variables, Operational definition (defining variables), Indicator. Research Design: Purpose of research design,

Types of study designs: Interventional study design - Exploratory, Descriptive (case study / case series, cross-sectional, longitudinal), Analytical (case control, cohort) study designs; Non-Interventional study design - Pre experimental (pre-test post-test), Quasi experimental, True experimental (Completely Randomized, Completely Randomized Block, Factorial, Time Series) study

designs.

Unit 4

Sampling Design and Procedure:

Definition, Importance, Characteristics of a good sample

Qualities of sampling frame, Population concept and parameter, Types of sampling units,

Types of Sampling – Non probability sampling (purposive, quota, convenient, snowball etc.),

Probability sampling (simple random, systematic, stratified, cluster, multistage, PPS etc.)

Techniques to choose appropriate sampling procedure, Sampling errors, Sample size, Testing reliability of sample

Qualitative and Quantitative Techniques used in Health Research Process.

Data Collection Methods:

Pre-testing Data Collection Tools and Making Work Plan: Preparation of working schedule

Gantt chart.

Data Processing and Analysis

Coding/decoding, Editing, Preparation of master tables, Master field books, Dummy table

preparation, Data processing and analysis plan – Selection of appropriate statistical techniques.

Research Ethics and Research Proposal Format.

Suggested Reading

2. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
3. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research Council.
4. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

BSCM3511 - Diagnostic Bacteriology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Bacteriology Lab	BSCM3511	Practice	0-3-0	Fundamental Science

Course Objectives

- To confirm the suspicion of infectious bacterial disease.
- To identify the etiologic agent by isolating the causative bacterial pathogen.

Course outcome

- Study of Lab diagnosis for pus, mycobacterium, venereal diseases, GI Tract, Meningitis and Encephalitis.
- Handling of Clinical Specimen for Microbial Study
- Student can safeguard himself & society and can work diagnostics and hospitals

Diagnostic Bacteriology

1. Preparation and use of different stains in bacteriology laboratory Grams stain, ZN stain, Albert stain, Spore stain, Capsule stain, Flagella stain, Motility test.
2. Isolation & identification of different groups of bacteria in laboratory Antimicrobial susceptibility testing.
3. Anaerobic Culture
4. Laboratory Diagnosis of Pus.

5. Laboratory Diagnosis of Mycobacterium Infection
6. Laboratory Diagnosis of Venereal Diseases
7. Laboratory Diagnosis of GI Tract.
8. Laboratory Diagnosis of Meningitis and Encephalitis
9. Laboratory Organization and Management
10. Handling of Clinical Specimen for Microbial Study
11. Performance of different Tests Rapid Diagnostic Tests
12. Molecular Tests 8 hours
13. Interpretation of Test Results 5 hours
14. Test reporting

Subject: BSCM3512 - Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mini Project	BSCM3512	Project	0-0-3	Basic Medical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

6th semester B.sc Clinical microbiology

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction

3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Subject: BSCM3603 -Project

Subject Name	Code	Type of course	Credits	Prerequisite
Project	BSCM3603	-	10	Basic Medical science

Project work:

Suggested Project title

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherchia coli isolated from wound infected.
2. The incidence of Salmonella and Escherchia coli in livestock (Poultry) feeds
3. Microbial evaluation of milk from a dairy farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

Subject: BSCM3604 - Internship

Subject Name	Code	Type of course	Credits	Prerequisite
Internship	BSCM3604	-	10	Basic Medical science

Internship

1. Case record
2. Lab management and ethics
3. Evaluation -Guide(internal)
 - Industries guide(external)
 - University-project report/ Viva

**VALUE ADDED COURSES:
FCMG0115- Human Rights**

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Rights	FCMG0115	Theory	2-0-0	Social science

Course Objectives

- Apply effective written and oral communication skills to business and legal situations.
- Analyze the global legal environment.
- Students will graduate with the ability to analyze complex problems, find and deploy a variety of legal authorities, and communicate effectively in a variety of settings.
- Use critical thinking skills in business situations.
- Apply an ethical understanding and perspective to business situations.

Course outcomes

- Students will ultimately be assessed on their ability to demonstrate a commitment to

- professionalism, rights, ethical behavior, service, and, as appropriate, leadership.
- Students will ultimately be assessed on their knowledge of the legal system and legal doctrine. Students will graduate with a broad knowledge of foundational and other core areas human rights, specialized knowledge in areas of interest, and experience with advanced study.
- Students will ultimately be assessed on the development of legal analysis, legal communication, and legal research.

Unit 1

Introduction to Human Rights: Meaning and Definition, History, Principles, Characteristics, Types

Unit 2

Human Rights Law: International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law

Unit 3

Conflicts of Rights and Future Challenges: Meaning and Definition, History, Principles, Characteristics, Types

Text Books:

1. Arihants UGC NET Human Rights and Duties
2. Kapoor, S. K. Central Law Agency's Human Rights under International Law and National Law

Reference Books:

1. Ciapham Andrew, 2015, Human Rights: A Very Short Introduction, Oxford University Press
- Smith Rhona, 2015, Textbook on International Human Rights, Oxford University Press

UNIVERSITY

Shaping Lives...
Empowering Communities...

**BACHELORE OF SCIENCE IN
MEDICAL LABORATORY TECHNOLOGY**

2019

SYLLABUS

Preface: Medical Laboratory Technology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as fluid, tissue, and blood. It also covers micro-organism screening, chemical analyses, and cell count.

Medical Technologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Biochemical Laboratories.

With adequate knowledge and experience, Medical Laboratory Technologists having B.Sc. MLT qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Medical Laboratory Technology

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre equipped with modern pathology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of B. Sc. in Medical Laboratory Technology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Medical Laboratory Technology (B.Sc. MLT)**” from Centurion University.

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in 6 months)

Skill Courses:

Students can choose any suitable skill course offered by the University

Value Added Courses:

**Suggested courses:*

SL NO	SUBJECT CODE	SUBJECT
1	FCMG0115	Human Rights
2	FCMG0401	Gender Issues in Development

**(Or courses suggested by the respective School)*

Note: Skill course & Value-added course, to be opted by the student along with the regular courses, as suggested in the syllabus.

Syllabus
First semester B.sc Medical Lab. Technology

BSMT1101-Introductory Biology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Introductory Biology	BSMT1101	Theory+ Practice	3-1-0	Fundamental Science

Objective:

- Determine the parts of the cell membrane and the cell wall
- Distinguish the types and mechanism of mutation
- Compare and contrast the events of cell cycle and its regulation
- Understand the dynamic character of cellular organelles

Course Outcome

- Describe the fundamental principals cellular biology
- Develop a deeper understanding of cell structure and how it relates to cell functions.
- Understand how cells grow, divide, and die and how these important processes are regulated.
- Understand cell signaling and how it regulates cellular functions. Also how its dis-regulation leads to cancer and other diseases.

Subject: BSMT1101- Introductory Biology

(T+P+Pj: 4+0+0) (Credit:

4) Unit-1

Biology & Its Branches; Scientific methods in Biology; Scope of biology and career options in Medical Laboratory Sciences; Characters of living organisms (elementary idea of metabolism, transfer of energy at molecular level, open and closed systems, homeostasis, growth and reproduction, adaptation, survival, death). Origin and Evolution of life - Theories of Evolution; Evidence of Evolution; Sources of Variations (mutation, recombination, genetic drift, migration, natural selection); Concept of species; Specification and Isolation (geographical and reproductive); Origin of species.

Unit-2

Diversity of living organisms, Systematic; Need, history and types of classification (artificial, natural, polygenetic); biosystematics; binomial nomenclature; Two kingdom system, Five kingdom System, their merits and demerits, status of bacteria and virus.

Unit-3

Cell as a basic unit of life - discovery of cell, cell theory, cell as a self - contained unit; prokaryotic and eukaryotic cell; unicellular and multicellular organisms; Ultrastructure of prokaryotic and eukaryotic cell - cell wall, cell membrane - unit membrane concept (Fluid-Mosaic model); membrane transport; cellular movement (exocytosis, endocytosis)

Unit-4

Cell organelles and their functions- nucleus, mitochondria, plastids, endoplasmic reticulum, Golgi complex, lysosomes, microtubules, centriole, vacuole, cytoskeleton, cilia and flagella, ribosomes. Molecules of cell; inorganic and organic materials - water, salt, mineral ions, carbohydrates, lipids, amino acids, proteins, vitamins, hormones and steroids.

Suggested Readings

1. Molecular biology of the cell by Alberts Bruce, publisher Garland Science
2. Molecular Biology by Friefelder David, Publisher Narosa
3. Introduction to Cell biology by John K Young, World Scientific publishing company
4. Introduction to biology ,3rd tropic edition by D G Maackean
5. A Term wise Text book on biology by VIDYA

BSMT1102-Human Anatomy & Physiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Human Anatomy and Physiology	BSMT1102	Theory	4-0-0	Fundamental Science

Objective:

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome:

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Subject: BSMT1102- Human Anatomy and Physiology(T+P+Pj: 4+0+0)

(Credit: 4)

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Structure and function of Skelton. Classification of joints and their function. Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Unit-2

Cardiovascular System: Composition of blood, functions of blood elements. Blood group and coagulation of blood. Brief information regarding disorders of blood. Name and functions of lymph glands. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Various parts of respiratory system and their functions, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Identification of different organs and system from chart.

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber& Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
3. Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb & Hoehn.
6. Anatomy and Physiology by N Murgesh, Publisher Satya.

BSMT1103-Basic Haematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Hematology	BSMT1103	Theory+Practice	3-1-0	Basic Medical science

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components .

Course Outcome:

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.
- To learn about tests carried out for hematological investigations.
- To be able to carry out blood sampling.

Subject: BSMT1103- Basic Haematology (T+P+Pj: 4+0+0) (Credit: 4)

Unit-1

Introduction to Hematology, definition, importance, important equipment and chemicals, various tests performed in Hematology laboratory.

Practice: Demonstration of instruments used in hematology- Microscope, Blood Cell counter, Shari's Apparatuses.

Unit -2

Composition and function of blood, Function of normal cellular components

Formation of blood, Erythropoiesis, leucopoiesis, thrombopoiesis

Anticoagulants, definition, Uses, Different types, mode of action, their merits and demerits.

Morphology of normal blood cells, abnormal morphology & diseases.

*Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart.
Demonstration the normal and abnormal morphology of different blood cells.*

Unit-3

Collection and preservation of blood: different methods of collection, preservation, changes in stored blood normal and absolutely values in hematology, RBC count, WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, ESR, PCV.

Blood Film: different types, methods of preparations, staining, Different types of stains, Romanowsky stains: principle of staining, different stains, their composition and preparation, methods of staining.

*Practice: Preparation of DLC, TLC, TRBC etc
Estimation of ESR, Hb and values of MCH, MCV, MCHC, ESR, PCV.*

Unit-4

Hematological Disorders

- a. Classification of Anemia: Morphological & etiological.
- b. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
- c. Megaloblastic Anemia: Causes, Lab findings.
- d. Hemolytic Anemia: Definition, causes, classification & lab findings.
Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black
- e. Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

*Practice: Collection of blood by different methods
Different normal and abnormal morphology of RBCs, WBCs, Platelet.*

Suggested Reading

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (IInd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvt limited

BSMT1104-Basic Medical Instrumentation & Techniques

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Medical Instrumentation and Techniques	BSMT1104	Theory+Practice	3-1-0	Fundamental Science

Objective:

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Principle of Spectroscopy

Course Outcome:

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Subject: BSMT1104-Basic Medical Instrumentation & Techniques (T+P+Pj: 4+0+0) (Credit: 4)

Unit -1

Microscope: different types of microscope, operation and care of binocular and monocular microscope, Light, phase contrast, interference, fluorescence, polarization and electron microscopy (principle, parts and its application). Photometry: Basic principal and operation.

Practice: Demonstration, operation, and Quality control of different types of microscopes.

Unit-2

Colorimetric instrumentation and UV-Vis spectrometry and its application. Centrifuge: Basic principle, types; analytical and preparative centrifuges, different density gradient centrifuge and its application. Blood analyzer: Principle, working and its application. Demonstration and Maintenance of Laminar Flow.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Unit-3

Microtome: Principle, working and its uses. Incubator, Hot air oven and Autoclave: Principle, working and its uses. Operation Techniques and Maintenance of different another microbiological instruments

Practice: Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Reading

1. A Textbook of Medical Laboratory Technology by P Godkar, Publisher Bhalani
2. Textbook of Clinical laboratory methods and diagnosis by Ales C. Sonnenwirth & Leonard Jarret.
3. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee, Publisher McGraw Hill education pvt limited
4. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, New York, Fischbach, 2005.
5. Microbiology by Prescott
6. Principles and Techniques of Biochemistry and Molecular Biology by Wilson and Walker
7. Medical laboratory science theory and practice by J Ochei and Kolhatkar, Publisher TBS

BSMT1105-Anatomy, physiology & Haematology Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Anatomy, physiology & Haematology Lab	BSMT1105	Practice	0-0-4	Fundamental Science

Objective:

- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components .

Course Outcome:

- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells.It will also cover Bone marrow examination.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Subject: BSMT1105- Anatomy, Physiology & Hematology Lab (T+P+Pj: 0+6+0) (Credit: 4)
Anatomy, Physiology lab

Demonstrate the different body parts, their position, Structure from charts, models.

Identification of different joints and bones.

Demonstration of various parts of body, tissues of body, parts of digestive system, parts of respiratory system, parts of excretory system.

Haematology lab

Cleaning and drying of glass and plastic ware.

Preparation of various anticoagulants, Collection of venous and capillary blood, Cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents, Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (oxy Hb and cyanmethaemoglobin method).

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count.

Determination of ESR by wintrobes, Determination of ESR by Westergeren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.

Suggested Reading:

FCBS0101-Environmental Science

Subject Name	Code	Type of course	L-T-P	Prerequisite
Environmental Science	FCBS0101	Theory+ Practice	3-1-0	Fundamental Science

Objective:

- Students will investigate and understand and model the concepts of ecology.
- Students will investigate and understand the earth's atmosphere and how it affects living organisms.
- Identify the major concerns of the atmosphere and the impact on living organisms.
- To explain the reasons for global warming, the ozone hole and acid rain and the measures being taken for prevention.
- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course Outcome:

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Subject: FCBS0101-Environmental Science

(T+P+Pj: 3+0+0) (Credit: 3)

Course Objectives:

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
-
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.

- One must be environmentally educated.

Unit-1

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

Unit-2

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

Unit-3

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Course Outcome:

1. Understand the natural environment and its relationships with human activities.
2. Characterize and analyze human impacts on the environment.
3. Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
4. Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Text Book:

1. Anubhav Kaushik & C.P. Kaushik: Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph: Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha: Text book of Environmental Studies for under graduate courses—Universities Press. (Book prepared by UGC Committee.

FCHU1201 Foundations of English Communication

Subject Name	Code	Type of course	L-T-P	Prerequisite
Foundations of English Communication	FCHU1201	Practice	0-0-3	General English

Objective:

- To develop vocabulary and grammar knowledge.
- To develop reading comprehension skills.

Course Outcome:

- Development of academic and sub-technical vocabulary.
- Enhancement of basic language skills i.e listening, speaking, reading and writing.
- Development of grammatical competence.
- Confidence level improvement.

Subject: FCHU1201 Foundations of English Communication (T+P+Pj: 0+3+0) (Credit: 2)

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of learning communications skills. The essential elements of this course will include:

Unit-1

READING SKILLS (7hrs.)

Read one of the following books:

- Animal Farm
- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

Unit-2

WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

Unit-3

LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

Unit-4

SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

TEXT BOOKS:

Esteras, Santiago Remacha and Fabre, Elena Marco. (2007).

BSMT1201-Basic Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Microbiology	BSMT1201	Theory-Practice	3-1-0	General Biology

Objective:

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus .
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.

Course Outcome:

- Understanding the details of microorganism morphology and metabolism.
- Broad idea regarding the different types of staining.
- Understanding the sterilization and its types.

Subject: BSMT1201- Basic Microbiology (T+P+Pj: 4+0+0) (Credit: 4)

Unit-1

Introduction to Microbiology, Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms.

Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve.

Practice: Preparation of culture media, demonstrate aerobic and anaerobic culture.

Demonstration the different culture plate and bacterial growth, identification of bacteria

Unit-2

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:- Demonstrate the different methods of sterilization with handling Hot air oven, Autoclave. Handling Of compound microscope. Demonstration of Antiseptics, Spirit, Cetrimide & Povidone-iodine. Demonstration the disinfectants and precaution while using disinfectants

Unit-3

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice: Demonstration the different staining procedure like Gram stain, Zn stain, Albert's stain etc Demonstrate different microbial growth in different media. Identify the morphology.

Suggested Reading:

2. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
3. Practical Book of Medical Microbiology by Satish Gupte; JP Brothers, New Delhi
4. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
5. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
6. Microbiology by Prescott
7. Text book of Medical Microbiology by Gruckshiank

BSMT1202-Basic Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Biochemistry	BSMT1202	Theory-Practice	3-1-0	Basic Medical Science

Objective:

- Understanding the different bio molecule structure and metabolism and metabolic pathway.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome:

- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.
- To learn normal ranges and abnormal ranges of biochemical components and hormones.
- To study about diseases related to biochemical and hormone imbalance in human body.

Subject: BSMT1202- Basic Biochemistry (T+P+Pj: 4+0+0) (Credit: 4)

Unit- 1

Enzymes - Introduction, definition, classification, coenzymes, isoenzymes, properties, factors affecting enzyme action, enzyme inhibition, enzyme kinetics, diagnostic value of serum enzymes - Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Unit- 2

Chemistry of carbohydrates & their related metabolism - Introduction, definition, classification, biomedical importance & properties. Brief outline of metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, HMP shunt & Gluconeogenesis, regulation of blood glucose level. Components of respiratory chain, energy relationships during cell respiration, types of respiration. Pathways in intermediary metabolism of carbohydrates.

Unit- 3

Amino acids - Definition, classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism - Introduction, definition, classification, biomedical importance. Metabolism: Transamination, Decarboxylation, Ammonia formation & transport, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids especially Phenylalanine, Tyrosine & Tryptophan, Creatine, Creatinine, and Proteinuria.

Practice: Operation procedure of Centrifuge machine, colorimeter, spectrophotometer etc. Estimation of Liver function test, Kidney function test, Thyroid, Lipid profile. Estimation of bile pigment, bile salt, bilirubin etc.

Unit- 4

Chemistry of Lipids & their related metabolism - Introduction, definition, classification, biomedical importance, essential fatty acids. Brief outline of metabolism: Beta oxidation of fatty acids, fatty liver, Ketosis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis, Diabetes mellitus - definition, types, features, gestation diabetes mellitus, glucose tolerance test, glycosurias, Hypoglycaemia & its causes.

Practice: - Demonstrate the estimation of Blood sugar by manual method and through Auto Analytic Technique. Demonstrate different biochemical test comes under the above unit

Suggested Reading

1. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
2. Text book of Biochemistry, M. A. Siddique 8th Edn.1993 Vijay Bhagat Scientific Book Co., Patna.
3. Medical Biochemistry by AC Dey.
4. Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

BSMT1203-Clinical Pathology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Pathology	BSMT1203	Theory-Practice	3-1-0	Basic biology

Objective:

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease

Course Outcome:

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites

Subject: BSMT1203-Clinical Pathology (T+P+Pj: 4+0+0) (Credit: 4)

Unit-1

URINE: Urine meter, Esbachl's Albuminometer, preparation of various reagents. Composition, collection and preservation of urine for various tests, physical chemical and microscopic examination of urine, estimation of total albumin, Specific gravity, litmus paper, tests for albumin, sugar, blood, bile salts and pigments, urobilinogen, ketones bodies etc.

*Practice: Collection procedures of urine, Important precursors for collecting samples.
Physical and Chemical and Microscopic examination of urine.*

Unit-2

STOOL: Sample collection, physical, chemical and microscopic examination.

SPUTUM: Sample collection, stain and study of A.F.B.

CEREBROSPINAL FLUID: Pandy's test, Cell count, cell type differential count and malignant cells.

BODIES FLUID: Cells count; cell morphology and detection of malignant cells in peritoneal fluid, pleural fluid, pericardial fluid, and synovial fluid. Differences between transudates and exudates.

SEMEN: Sample collection microscopic examination for count and morphology.

*Practice: Collection procedures and important precursors for collecting samples like STOOL, CSF, SEMEN and different bodies fluid.
Physical and Chemical and Microscopic examination of different samples.*

Unit-3

ANATOMIC PATHOLOGY: 1. Reception, Registration, preservation and processing of specimens. Haematoxyline and eosine staining procedure, mounting of stained sections, Filing of paraffin blocks, and slides. Method of decalcification, Sharpening and honing Knives techniques, using of microtome.

2. Museum: Mounting of specimens, labeling, maintenance of specimens and catalogue etc.

Post mortem/ Autopsy: Maintenance of the records of the Dead Bodies and specimens received, Autopsy techniques, Autopsy instruments, cold storage plants, legal aspects etc.

*Practice: Handling clinical laboratorial equipment.
Preparation of some stains, and reagents for clinical diagnosis purpose.*

Suggested Reading

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Manual Text book of lab and diagnostic tests by Lippincott Williams Wilkins, New York.
3. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS
4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGraw Hill.

BSMT1204-Clinical Pathology & microbiology lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Pathology & Microbiology lab	BSMT1204	Practice	0-0-4	Basic Pathology and microbiology

Objective:

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus .
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.

Course Outcome:

- Understanding the details of microorganism morphology and metabolism.
- Broad idea regarding the different types of staining.
- Understanding the sterilization and its types.
- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder

Subject: BSMT1205 -Clinical pathology Lab (T+P+Pj: 0+3+0) (Credit: 2)

Clinical Pathology Lab:

Urine analysis Physical, Chemical, Microscopic, Microbiological.
 Stool analysis Physical, Chemical, Microscopic, Microbiological.
 Sputum analysis Physical, Chemical, Microscopic,
 Microbiological. Semen analysis Physical, Chemical, Microscopic,
 Microbiological. Bacteriological examination of pus.
 Bacteriological examination of trout swab.
 Laboratory study of parasites in stool, blood. Giardia lamblia, Entamoeba

Subject: BSMT1206 - Microbiology Lab: (T+P+Pj: 0+3+0) (Credit: 2)

Handling of Microscope

To learn techniques for Inoculation of bacteria on culture media
 To isolate specific bacteria from a mixture of organisms.
 To demonstrate simple staining (Methylene blue)
 To prepare India ink preparation to demonstrate negative staining.
 Bacterial identification: To demonstrate reagent preparation and procedure for
 Gram stain, Albert stain, Neisser's staining, Z-N staining, Capsule staining, Demonstration of flagella
 by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure
 To prepare the reagent and demonstrate following biochemical tests with positive and
 negative control bacteria:
 Catalase, Coagulase, Indole, Methyl Red (MR), Voges Proskauer (VP), Urease, Citrate, Oxidase, TSIA,
 Nitrate reduction, Carbohydrate fermentation, Huger and Leifson, Bile solubility, H₂S production
 Demonstration and motility, Decarboxylases, CAMP, Hippurate hydrolysis, Nagler's reaction
 Antibiotic susceptibility test

Suggested Reading

1. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, Fischbach, 2005 New

York..

2. Clinical laboratory methods and diagnosis by Gradwohls, 2000, Publisher Mosby
3. Medical laboratory science theory and practice, J Ochei and Kolhatkar, 2002, publisher TBS
4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, publisher Tata McGraw Hill.

3rd semester B.sc Medical Lab. Technology

BSMT2301-Immunology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Immunology	BSMT2301	Theory-Practice	3-1-0	Fundamental Science

Objective:

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.

Course Outcome:

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and auto immune disease.

Subject: BSMT2301-Immunology (T+P+Pj: (4+0+0) (Credit:4) Unit-1

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. Antigens:

Types of antigen, Antigenic Determinant or Epitome, Determinants of Antigenicity

Tolerogens, Biological Classes of antigens, Superantigens.

Antibodies-Immunoglobulins: Antibody structure, Immunoglobulin classes of Antigens, Antigenic Determinants on Immunoglobins.

Practice: Collection of blood sample by vein puncture, separation and preservation of serum

Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test.

Unit-2

The Complement System: Principal pathways of Complement activation, Quantitation of Complement

(C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions: Antigen-Antibody Interactions, General characteristics of Antigen-

Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests, Serological Reactions.

Practice: - Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsons buffer Buffers of different pH and molarity, tris buffer, Standardization of cell concentration by spectrophotometer

Unit-3

Immune Response: Types of Immune response, Humoral immunity, Fate of Antigen in tissues, Production of Antibodies, Cell-mediated Immune Responses, Cytokines, Immunological tolerance, Theories of immune Response.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I

Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity

-Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity, Shwartzman Reaction.

Practice: Performance of Serological tests i.e. Widal, Brucella Tube Agglutination ,VDRL (including Antigen Preparation), ASO (Antistreptolysin 'O'), C-Reactive Protein (Latex agglutination), Rheumatoid factor (RF) Latex agglutination, Rose Waaler test.

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan & Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupte, Publisher Jaypee brothers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and David Male
6. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2

BSMT2302-Applied Haematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Applied Hematology	BSMT2302	Theory-Practice	3-1-0	Basic Medical science

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome:

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

BSMT2302-Applied Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Hematology	BSMT2302	Theory	4-0-0	Basic Medical science

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome:

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Subject: BSMT2302- Applied Hematology (T+P+Pj: 4+0+0) (Credit:4)

Unit-1

Definition and classification of anemia.

Definition, classification and laboratory diagnosis of leukaemias

Definition and laboratory diagnosis of Leukamoid reactions

Cytochemical staining, procedure and their significance in various haemopoietic disorders.

Laboratory diagnosis of iron deficiency anaemia, Laboratory diagnosis of megaloblastic anaemia

Laboratory diagnosis of haemolytic anemia.

Practice: Collection of blood from different body parts. Data and record Maintain, Handling hematological equipments.

Unit-2

Chromosomal studies in various haematological disorders and their significance.

Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis .

Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Laboratory diagnosis of Haemophilia and von-willebrand disease .

Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP), Platelet function tests and their interpretation . Various radioactive isotopes used in hematology

*Practice: - To estimate serum iron and total iron binding capacity. To detect whether the given specimen is G6PD deficient or normal. To estimate Hb-F in a given blood sample. To estimate plasma and urine Haemoglobin in the given specimens.
To demonstrate the presence of Hb-S by Sickling and solubility tests.*

Unit-3

L.E.cell phenomenon-

a. Definition of L.E.cell , b. Demonstration of L.E.cell by various methods c. Clinicals

Physiological variations in Hb, PCV, TLC and Platelets .

Investigations of a case suffering from bleeding disorders. Quantitative

assay of coagulation factors - a. Principle b. Procedure

Biomedical waste management in hematology laboratory (Other than Radioactive material)

Practice:- Demonstration of functional aspect of blood cell counter

Study the RBCs abnormal morphological form -a.Variation in size , shape and staining Character , b. Red cell inclusion

Identify morphologically the-Immature Erythroid series of cells

Immature Myeloid ad other WBCs series of cells

Suggested readings

1. Text book of Medical Laboratory Technology by Paraful B. Godkar, Bhalani Publisher
2. Text book of Practical Hematology by JB Dacie
3. Hand book of Medical Laboratory Technology (2nd edition) by V.H. Talib, publisher CBS
4. Hematology (International edition) Emmanuel C.Besa Harwal Publisher
5. Practical Hematology (8th edition) by Sir John, Publisher Churchill livingstone
6. Clinical Hematology by Christopher A. Ludlam, Publisher Churchill livingstone
7. Clinical Diagnosis & Management by Laboratory methods (20th edition) by John bernard Henary

BSMT2303-Applied Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Applied Biochemistry	BSMT2303	Theory-Practice	3-1-0	Basic Medical science

Objective:

- Understanding the concept of Biochemical analyzing instruments both automated and semi automated.
- Understanding about different biochemical test.

Course Outcome:

- Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.
- To learn about safety precautions and handling the equipment in a biochemical laboratory.
- Students will explain/describe the synthesis of proteins, lipids, nucleic acids, and carbohydrates and their role in metabolic pathways

Subject: BSMT2303-Applied Biochemistry LTP :(3+1+0)(Credit:4) Unit- 1

Automation in clinical Biochemistry,

Method of estimation and assessment for: a. Glucose tolerance test ,b. Insulin tolerance test, c. Xylose excretion test.

Practice:- Demonstration the centrifuge machine ,Demonstration of Colorimeter.

Unit-2

Clearance test for renal function . Gastric analysis, LFT , KFT, Lipid profile, Qualitative test for Urobilinogens ,Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice:- Estimation of Liver function test, Kidney function test, Lipid profile.

Unit-3

Qualitative analysis of renal calculi . Chemical examination of cerebrospinal fluid , Brief knowledge about rapid techniques in clinical biochemistry.

Practice:- Estimation of Glucose in urine and blood . Estimation of Protein in urine and blood .

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.

2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

BSMT2304- Basic Histology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Histology	BSMT2304	Theory-Practice	3-1-0	Basic Medical science

Objective:

- Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.
- perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.

Course Outcome:

- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.
- Reception and labeling of histological specimens.
- Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.

Subject: BSMT2304 –Basic Histology (T+P+Pj: 4+0+0) (Credit:4)

Unit-1

Introduction to histotechnology, Care, maintenance and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues Collection and transportation of specimens for histological examination, fixation Various types of fixatives used in a routine histopathology laboratory- Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Demonstration of instruments used for dissection.

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory.

Unit-2

Decalcification Criteria of a good decalcification agent, Technique of decalcification Followed with selection of tissue, fixation, decalcification, neutralization of acid and thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination, Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors.

Practice: -Method of Decalcification, fixation, Embedding, manual or automatic tissue processing.

Unit-3

Section Cutting, Sharpening of Microtome Knives, Honing, Stropping, various types of microtome and their applications, Freezing Microtome and various types of Cryostats, Staining, Impregnation and Mountains, Commonly used mountains in histotechnology lab. General Staining Procedures for Paraffin Infiltrated and Embedded tissue. Nuclear Stains and Cytoplasmic stain, Equipment and Procedure for manual Staining and Automatic Staining Technique. Mounting of Cover Slips, Labeling and Cataloguing the Slides.

Practice: - Procedure for manual Staining and Automatic Staining Technique.

Suggested readings

1. Color text book of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran, Publisher Elsevier

BSMT2306 - Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	BSMT2306	Theory	4-0-0	Fundamental Science

Objective

- To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.

- Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that, can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course Outcome

- Conduct independent work in a laboratory.
- Read scientific articles and gain a critical understanding of their contents.
- Give a spoken and written presentation of scientific topics and research results.
- Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Subject: BSMT2306 - Molecular Biology (T+P+Pj: 4+0+0) (Credit: 4) Unit 1

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell, Evolution and Molecular structure of cell and its organelles, Types of cells. Including different kinds of Prokaryotic and eukaryotic cells, Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles, Cell cycle, Cell membrane and its structure (fluid-mosaic model)

Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Unit 2

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells:

Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, DNA Replication, Transferring information from DNA to RNA, Synthesis of RNA, Translation RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes

Unit 3

General Concept on:

a. Regulation of the Gene Expression

b. Regulating the Metabolism:

The Lac- Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions

Unit 4

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA, RNA polymerase, Initiation and Termination of Transcription, Post transcription modification of the RNA

Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

FCHU1204 -Communicative Practice Laboratory-II

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Communicative Practice Laboratory II	FCHU1204	practice	0-2-0	General english
--------------------------------------	----------	----------	-------	-----------------

Objective:

To expose the students to a variety of self- instructional, learner- friendly modes of language learning. To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm. To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

Course Outcome:

- Ability to communicate fluently in different business situation
- Effective oral and written communication
- Appropriate word usage with correct pronunciation
- Clarity of word stress and intonation

**Subject: FCHU1204 -Communicative Practice Laboratory-II (T+P+Pj: 0+3+0)
(Credit: 2)**

Module I

LISTENING (6 HOURS) Exercises on Active Listening:

- The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

Module II

● **SPEAKING (8 HOURS)**

- Situational Dialogues / Role Play: Organization Communication

- Oral Presentations- Prepared and Extempore

- ‘Just a minute’ Sessions (JAM)

- Debates

- Mock Meetings

- Cracking Job Interviews: Mock Sessions

- Group Discussions on current topics (This module will be practiced through speaking activities like role plays, presentations, and discussions)

Module III

READING (8 HOURS)

- Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

- Review Presentation (Movie/ Article/ Book)

- Vocabulary Building Exercises (This module encourages extensive use of reading materials)

Module IV

WRITING (8 HOURS)

- The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

- Short Paragraphs on current general and technical topics

- Creative Writing: Idea Generation

- Business Letters, Email Messages, Project Writing

- Writing Resumes and Cover Letters (* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

BSMT2307-Immunology Lab

Subject Name	Code	Type of course	L-T-P-	Prerequisite
Immunology Lab	BSMT2307	Practice	0-2-0	Immunology

Objective:

- Perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.

Course Outcome:

- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.
- The student will learn the application of Immunology in disease diagnosis.

Subject: BSMT2307-Immunology Lab (T+P+Pj: 0+3+0) (Credit:2)

Collection of blood sample by vein puncture, separation and preservation of serum

Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test

Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsons buffer,

Buffers of different pH and molarity, tris buffer, Standardization of cell concentration by spectrophotometer

Performance of Serological tests i.e.

- Widal,
- Brucella Tube Agglutination,
- VDRL (including Antigen Preparation),
- ASO (Antistreptolysin 'O')
- C-Reactive Protein (Latex agglutination)
- Rheumatoid factor (RF) Latex agglutination
- Rose Waaler test,

Demonstration of antigen / antibody determination by Immunofluorescence, Immunodiffusion, precipitation in agarosegel(ouchterlony), CCIEP, ELISA, SDSPAGE and western blotting.

BSMT2308-Histology Lab

Subject Name	Code	Type of course	L-T-P-	Prerequisite
Histology Lab	BSMT2308	Practice	0-2-0	Histology

Objective:

- Perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.

Course Outcome:

- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.

Subject: BSMT2308- Histology Lab

(T+P+Pj: 0+3+0) (Credit:2)

Demonstration of instruments used for dissection

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory

Reception and labeling of histological specimens

Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid, Corney's fluid,

10% Neutral formalin, Formal saline, Formal acetic acid, Pereyn's fluid

To perform embedding and casting of block.

To process a bone for decalcification.

To prepare 70% alcohol from absolute alcohol.

Processing of tissue by manual and automated processor method

To demonstrate various part and types of microtome.

To learn sharpening of microtome knife (Honing and stropping technique)

To perform section cutting, learn mounting of stained smears.

To practice attachment of tissue sections to glass slides

To learn using tissue floatation bath drying of sections in incubator (-560 C)

To perform & practice the Haematoxylin and Eosin staining technique

To perform & practice the Mallory's Phosphotungstic Acid Haematoxylin (PTAH)

4th semester B. Sc. Medical Lab. Technology

BSMT2401-Parasitology

Subject Name	Code	Type of course	L-T-P-	Prerequisite
Parasitology	BSMT2401	Theory-Practice	3-1-0	Basic biology

Objective:

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites (Protozoa, metazoa and Helminth)
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites.

Course Outcome:

- Identification of pathogenic parasite in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Subject: BSMT2401- Parasitology (T+P+Pj:4+0+0) (Credit:4)

Unit-1

Introduction to Medical Parasitology, General characteristics of protozoa and helminthes
Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Practice:- Method of sample Collection, Transport, processing and preservation of samples for routine parasitological investigations

Unit-2

Morphology, life cycle and lab-diagnosis of Giardia and Entamoeba Morphology,
life cycle and lab-diagnosis of Roundworms and Hookworms

Morphology, life cycle and lab-diagnosis of T. solium and T. saginata

Morphology, life cycle and lab-diagnosis of Malarial parasite with special reference to P. vivax and P. falciparum.

*Practice:-Laboratory diagnosis of hydrated cyst and cysticercosis
Concentration techniques for demonstration of Ova (Principles and applications)
Routine Stool examination for detection of intestinal parasites.
Identification of adult worms from model's or slide's.
Identification of different parasites their morphology from slide's*

Suggested Reading

1. Text book of Parasitology by N C Dey, publisher New central book agency
2. Text book of Parasitology by Chaterjee, publisher CBS
3. Text book of microbiology by Ananthanereyan, Publisher universities press
4. Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, jaypee publisher
5. Short text book of medical microbiology by Satish Gupte, Publisher Jaypee

BSMT2403- Advance Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Advance Hematology	BSMT2403	Theory	4-0-0	Basic Medical science

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate

normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome:

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Subject: BSMT2403- Advance Hematology (T+P+Pj:4+0+0) **(Credit:4) Unit-1**

Definition and classification of anemia's, Laboratory diagnosis of iron deficiency anemia.

Laboratory diagnosis of megaloblastic anemia, Laboratory diagnosis of hemolytic anemia.

Definition, classification and laboratory diagnosis of leukemia's

Definition and laboratory diagnosis of Leukamoid reactions Cytochemical staining, procedure and their significance in various haemopoietic disorders. Chromosomal studies in various hematological disorders and their significance. Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis.

Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Practice: Demonstrate the different abnormal morphology of RBCs in Anemia cases.

Laboratory diagnosis of hemolytic anemia, leukemia's, Leukamoid reactions

Unit-2

Laboratory diagnosis of Hemophilia and von-will brand disease. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP), Platelet function tests and their interpretation.

Unit-3

Measurement of:

a. Blood volume, b. Determination of Red cell volume and Plasma volume, c. Red cell life span,

d. Platelet life span. Estimate serum iron, total iron, Hb-F, Plasma and urine hemoglobin.

Demonstrate the presence of Hb-S by Sickling and solubility, Perform various Platelet function test.

Practice: Demonstration the sickle cells

Suggested readings

1. Text book of Medical Laboratory Technology by Paraful B. Godkar Practical Hematology Publisher JB Dacie, Bhalani publisher
2. Text book of Medical Laboratory Technology (2nd edition) by V.H. Talib, publisher CBS
3. Hematology (International edition) Emmanuel C. Besa Harwal Publisher
4. Practical Hematology (8th edition) by Sir John, publisher Churchill livingstone

BSMT2407- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	BSMT2407	Theory	4-0-0	Fundamental Science

Objective

- Understanding the concept of Biochemical analyzing instruments both automated and semi-automated.
- To learn about how to Care & Maintenance of Equipment & Chemicals.
- To learn normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

- Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.
- To learn about various tests carried out for biochemical analysis & Hormone investigations.
- To learn about safety precautions and handling the equipment in biochemical laboratory.

Subject: BSMT2407- Analytical Biochemistry

(T+P+Pj:4+0+0) (Credit:4)

Unit-1

Principle of colorimetry and Spectrophotometry, Chromatography: Basics of chromatography (Paper chromatography, Thin Layer Chromatography, Column chromatography, Gas chromatography, Ion exchange chromatography, Gel chromatography)

Unit-2

Electrophoresis: Introduction, principle, Instrumentation, types of electrophoresis - paper and gel electrophoresis, application

Unit-3

Automation in clinical Biochemistry, Method of estimation and assessment for: a. Glucose tolerance test, b.

Insulin tolerance test, c. Xylose excretion test.

Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Suggested readings

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H. Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book

BSMT2408-Immunopathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunopathology	BSMT2408	Theory	4-0-0	Fundamental Science

Objective

- To understand how the immune system is working, about the components of the immune system, their functioning, the defense mechanisms against different pathogens (viruses, bacteria, and parasites), the pathogenesis of immune diseases (hypersensitivity, autoimmunity, immunodeficiencies), and on the mechanisms underlying the rejection of the transplants and the antitumor immune response.
- It also provides knowledge of the main immunological techniques used in research and diagnostics.

Course Outcome

- To know and describe the organization and functioning of the immune system, its cells and its molecules.
- To know the principles of diagnostic tests described on immunological techniques.
- To know the fundamental stages of the immune system and its changes over the course of life (intrauterine life, newborn, adult, elderly)
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Subject: BSMT2408-Immunopathology(T+P+Pj:4+0+0)(Credit:4)

Unit-1

Basic Components of the Immune System

Immunological Techniques, Immune Regulation, Immunological Aspects of Infection

Immunological Aspects of Immunodeficiency Diseases

Unit-2

Autoimmunity, Chronic Lymphocytic

Leukemia Immunology of HIV Infections

Immunological Aspects of Allergy and Anaphylaxis

Immunological Aspects of Skin Diseases

Unit-3

Experimental Approaches to the Study of Autoimmune Rheumatic Diseases

Immunological Aspects of Cardiac Disease

Immunological Aspects of Chest Diseases: The Case of

Tuberculosis Immunological Aspects of Gastrointestinal and Liver

Immunological Aspects of Endocrine Disease

Immunological Aspects of Renal Disease Immunological Aspects of Transplantation.

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan & Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupte, Publisher Jaypee brothers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, Jonathaan Brostoff and David Male.

BSMT2409 -Basic Computers & Information Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Computer and Information Science	BSMT2409	Practice	0-2-0	Fundamentals of Computer

Objective

- Identify the function of computer hardware components.
- Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.
- Identify how to maintain computer equipment and solve common problems relating

to computer hardware.

- Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded
- Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

- Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.
- Understand the difference between an operating system and an application program, and what each is used for in a computer.
- Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Subject: BSMT2409 -Basic Computers & Information Science (T+P+Pj:0+3+0)

(Credit:2)

Unit-1

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.

Input output devices: input devices (keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices (monitors, pointers, plotters, screen image projector, voice response systems).

Unit-2

Processor and memory: The Central Processing Unit (CPU), main memory.

Storage Devices: sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

Unit-3

Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.

Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs. Introduction of Operating System: introduction, operating system concepts, types of operating system. Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external).

Unit-4

Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.

Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in various fields: Medical, Education, Railway, Defense, Industry, Management, Sports, Commerce, Internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

BSMT2410- Biochemistry lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry Lab	BSMT2410	Practice	0-3-0	Basic Medical science

Objective

- Understanding the concept of Biochemical analyzing instruments, chemicals and normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course Outcome

- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.
- To learn normal ranges and abnormal ranges of biochemical components and hormones.
- To study about diseases related to biochemical and hormone imbalance in human body.

Subject: BSMT2410 - Biochemistry lab**(T+P+Pj:0+3+0) (Credit: 2)**

1. Demonstration of centrifuge machine, colorimeter
2. Estimation of Liver function test, kidney function test, lipid profile
3. Estimation of Glucose in Urine and in Blood.
4. Estimation of Protein in Urine and Blood.
5. Estimation of Urea in blood.
6. Estimation of uric acid in blood.
7. Estimation of serum bilirubin
8. Estimation of Total Cholesterol in blood.
9. Estimation of HDL Cholesterol.
10. Estimation of LDL Cholesterol.
11. Estimation of TG, Estimation of Creatinine in Blood.
12. Estimation of serum calcium.
13. To measure electrolytes Sodium, Potassium & Chloride.

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Parasitology	BSMT2411	Practice	0-3-0	Fundamental Science

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites (Protozoa, metazoa and Helminth)
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites.

Course Outcome

- Identification of pathogenic parasite in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Subject: BSMT2411 - Parasitology Lab**(T+P+Pj:0+3+0) (Credit: 2)**

Method of sample Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Laboratory diagnosis of hydrated cyst and cysticercosis

Concentration techniques for demonstration of Ova (Principles and applications) Routine

Stool examination for detection of intestinal parasites.

Identification of adult worms from model's or slide's.

Identification of different parasites their morphology from slide's

5th semester B.sc Medical Lab. Technology

BSMT3501-Transfusion Medicine

Subject Name	Code	Type of course	L-T-P	Prerequisite
Transfusion Medicine	BSMT3501	Theory-Tutorial	3-1-0	Basic biology

Objective:

- To provide an outstanding education in all aspects of blood banking and transfusion medicine and prepare fellows for a career in a blood center or in a hospital transfusion service, either in an academic center or in a community hospital.

Course Outcome:

- Describe the principles of patient identification.
- Perform pre-transfusion testing, including ABO and/or Rh testing, red blood cell (RBC) antibody screen and antibody identification.
- Learn adverse reactions of transfusion techniques.

Subject: BSMT3501-Transfusion Medicine

(T+P+Pj:4+0+0) (Credit:4)

Unit-1

Introduction of transfusion medicine.

Blood products and transfusion procedures, summary information about blood products and hemostatic agents.

Basics of red cell immunology and compatibility testing, Pre transfusion and transfusion procedure.

Practice: Demonstrate the different method for blood collection. Identify the different organs for transfusion medicine. Demonstrate Pre transfusion and transfusion procedure.

Unit-2

Clinical transfusion: Surgery and critical illness, planned surgery.

Clinical transfusion in the medical setting, Immunoglobulin for the prevention of infection.

Practice: Demonstrate routine test on blood donation, ABO blood grouping. Identify anemic disorders, renal disorders, congenital hemostatic disorders,

Immunological Disorders etc.

Unit-3

Transfusion in antenatal obstetric and neonatal care. Adverse effects of transfusion

Suggested Reading

1. Text book of Blood banking and transfusion medicine by Sally V. Rudmann
Publisher Elsevier Health Sciences
2. Handbook of Transfusion Medicine, Editor D B L McClelland, United Kingdom
Blood Services 4th Edition
3. Medical Laboratory Technology By K.L Mukherjee, Publisher McGraw Hill
education pvt limited

BSMT3502 –Medical Laboratory Management

Subject Name	Code	Type of course	L-T-P	Prerequisite
Medical Laboratory Management	BSMT3502	Theory-practice	3-1-0	Fundamental Science

Objective:

- Explain and apply principle of effective test utilization
- Interpret, implement and complying law, regulation, accrediting standards and guidelines of Govt. and NG organizations.
- Design, implement and evaluate resources in lab
- Communicate effectively with laboratory personnel and health care professional.
- Explain and apply the major principle and tactics of laboratory administration.

Course Outcome:

- Become professional competent in medical laboratory

- Exhibit a sense of commitment to the ethical and human aspect of patient care
 - Recognize the role of clinical laboratory scientist in the assurance of quality health care
- Application of safety and governmental regulation and standards as applied to medical laboratory practice.

Subject: BSMT3502– Medical Laboratory Management (T+P+Pj:4+0+0)
(Credit:4) Unit-1

Ethical Principles and standards for a clinical laboratory professional-
 Duty to the patient, Duty to colleagues and other professionals, Duty to the society
 Good Laboratory Practice (GLP) Regulations and Accreditation-
 Introduction to Basics of GLP and Accreditation, Aims of GLP and Accreditation, Advantages of Accreditation
 Brief knowledge about Nation and International Agencies for clinical laboratory accreditation
 Awareness / Safety in a clinical laboratory-General safety precautions, HIV: pre- and Post-exposure guidelines, Hepatitis B & C: pre- and Post-exposure guidelines, Drug Resistant Tuberculosis

Unit-2

Patient management for clinical samples collection, collection of sample, transportation and preservation, Sample accountability- Purpose of accountability, Methods of accountability
 Sample analysis-Introduction, Factors affecting sample analysis
 Reporting results-Basic format of a test report, Reported reference range, Clinical Alerts, Abnormal results, Turnaround time, Results from referral laboratories, Release of examination results
 Alteration in reports.

Unit-3

Quality Management system- Introduction,
 Ethical Principles and standards for a clinical laboratory professional-
 Duty to the patient-Duty to colleagues and other professionals, Duty to the society
 Good Laboratory Practice (GLP) Regulations and Accreditation-
 Introduction to Basics of GLP and Accreditation, Aims of GLP and Accreditation, Advantages of Accreditation, Brief knowledge about Nation and International Agencies for clinical laboratory accreditation
 Awareness / Safety in a clinical laboratory
 General safety precautions-HIV: pre- and Post-exposure guidelines, Hepatitis B & C: pre- and Post- exposure guidelines, Drug Resistant Tuberculosis.

Unit-4

Patient management for clinical samples collection, collection of sample, transportation and preservation, Sample accountability- Purpose of accountability,

Methods of accountability Sample analysis-Introduction, Factors affecting sample analysis
Reporting results, Basic format of a test report, Reported reference range, Clinical Alerts,
Abnormal results, Turnaround time, Results from referral laboratories, Release of examination results

BSMT3504-Introduction to Quality And Patient Safety

Subject Name	Code	Type of course	L-T-P	Prerequisite
Introduction To Quality And Patient Safety	BSMT3508	Theory-practice	3-1-0	Fundamental Science

Objective:

- Knowing patient safety
- Report Distribution system
- Laboratory infection control Policy
- Bio-Medical waste management
- Understanding Patient rights
- ISO Policy for medical laboratory

Course Outcome:

- Know about rights and duties of patient
- Know about right and duties of lab technician
- Understand various policy to manage lab
- Understand infection control procedure

Subject: BSMT3508- Introduction To Quality And Patient Safety (T+P+Pj:3+0+0)

(Credit:3)

Unit-1

Introduction – the science of safety Medical Error & Metacognition
Investigating an Error/ Root cause analysis Responding to Adverse
events Error reporting systems Disclosure
Health Literacy and Patient Safety Human Factors Engineering .

Unit-2

Teamwork and Communication Culture of Safety/
Leadership Thinking about Quality 1 Thinking about
Quality
Components of Measurement Measure development and
evaluation Regulation and accountability Case Mix
Adjustment
Spring Break, Patient Satisfaction Using large datasets for quality
evaluation Quality Measure Presentations.

Unit-3

Introduction to Quality Improvement Innovation and
Adoption Knowledge Translation Evaluation of
Implementation
Lean Methodology and Problem Solving Audit and Feedback; Process mapping; Trigger tool
Information Technology in Quality Improvement
Quality Improvement Project Presentations

BSMT3505-Medical law and Ethics

Subject Name	Code	Type of course	L-T-P	Prerequisite
Medical law and Ethics	BSMT3505	Theory-practice	3-1-0	Fundamental Science

Objective:

- The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients.
- It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome:

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and
- The role of policy in the formation of law as it relates to medicine.

Subject: BSMT3505-Medical law and Ethics (LTP:3+1+0)(Credit:4) Unit-1

Module-1 (14HRS)

1. Medical ethics - Definition - Goal - Scope
2. Introduction to Code of conduct
3. Basic principles of medical ethics – Confidentiality

Module-2 (15 HRS)

4. Malpractice and negligence - Rational and irrational drug therapy
5. Autonomy and informed consent - Right of patients
6. Care of the terminally ill- Euthanasia
7. Organ transplantation

Module-3 (13 HRS)

8. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.
9. Professional Indemnity insurance policy
10. Development of standardized protocol to avoid near miss or sentinel events
11. Obtaining an informed consent

Books Recommended:

1. Reflections on Medical law and Ethics in India by B. Sandeepabhat,

publisher Eastern law house.

BSMT3509-Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	BSMT3509	Theory	3-0-0	Fundamental Science

Objective

- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

- Students can understand the ethical and philosophical issues associated with research in education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Subject: BSMT3509-Research Methodology

(T+P+Pj:3+0+0) (Credit:3)

Unit 1

Introduction to Research Methodology:

Meaning and Nature of Research-

Meaning, definition and characteristics of health research

Importance of health research in nursing field. Foundation of Scientific Research -

Scientific Thinking, Research Idea and the thought Process: Reasoning, Deduction, Induction, Combining Induction and Deduction, and Reflective thinking and the Scientific Method, Scientific Research. Identification and Analysis of Research Problem

Selection of a problem, Sources Criteria, defining a problem, Characteristics of a problem, Criteria of good research questions, Steps in analyzing the research problem.

Unit 2

Proposal Development:

Basic steps involved in the health research proposal development process

Literature Review:

Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Title and Objectives

Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Research Hypothesis: Definition, Qualities of research hypothesis

Importance and types of research hypothesis.

Unit 3

Variables: Definition, Importance, Qualitative and Quantitative variables

Dependent and Independent variables

Confounding variables, Background variables, Operational definition (defining variables), Indicator. Research Design:

Purpose of research design,

Types of study designs: Interventional study design - Exploratory, Descriptive (case study / case series, cross-sectional, longitudinal), Analytical (case control, cohort) study designs; Non-Interventional study design - Pre experimental (pre-test post-test), Quasi experimental, True experimental (Completely Randomized, Completely Randomized Block, Factorial, Time Series) study designs.

Unit 4

Sampling Design and Procedure:

Definition, Importance, Characteristics of a good sample

Qualities of sampling frame, Population concept and parameter, Types of sampling units,

Types of Sampling – Non probability sampling (purposive, quota, convenient, snowball etc.), Probability sampling (simple random, systematic, stratified, cluster, multistage, PPS etc.)

Techniques to choose appropriate sampling procedure, Sampling errors, Sample size, Testing reliability of sample Qualitative and Quantitative Techniques used in Health Research Process.

Data Collection Methods:

Pre-testing Data Collection Tools and Making Work Plan: Preparation of working schedule Gantt chart.

Data Processing and Analysis

Coding/decoding, Editing, Preparation of master tables, Master field books, Dummy table preparation, Data processing and analysis plan – Selection of appropriate statistical techniques. Research Ethics and Research Proposal Format.

Suggested Reading

1. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO-WIPRO
2. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
3. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research Council.
4. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

BSMT3506- Mycology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mycology and virology	BSMT3506	Theory	4-0-0	General biology

Objective

- To describe the characteristics and diseases caused by pathogenic viruses and fungi.
- To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.
- Understanding different methods of virus cultivation.
- Understanding collection, transportation and preservation methods of clinical specimen.

Course Outcome

- Broad idea about structure and basic characteristics of virus and fungus.
- Plan, write and implement research projects in virology and mycology analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral and fungal diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Subject: BSMT3506- Mycology & Virology (T+P+Pj:4+0+0)

(Credit:4) Unit-1

Introduction to medical mycology, Basic concepts about superficial and deep Mycoses. Taxonomy and classification and general characteristics of various medically important fungi. Normal fungal flora.

Morphological, cultural characteristics of common fungal laboratory contaminants Culture media used in mycology.

Practice-: To prepare culture media used routinely in mycology. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.

Unit-2

Direct microscopy in Medical mycology laboratory.

Processing of clinical samples for diagnosis of fungal infections i.e. Skin, nail, hair, pus, sputum, CSF and other body fluids.

Techniques used for isolation and identification of medically important fungi

Methods for identification of yeasts and moulds.

Practice-: To identify given yeast culture (By performing various identification techniques studied in theory. To identify given mould culture (By performing various identification techniques studied in theory. To demonstrate dimorphism in fungi

Unit-3

Introduction to medical virology, Classification of viruses. Introduction to medically important viruses. Collection, transportation and storage of sample for viral diagnosis Staining techniques used in Virology. Processing of samples for viral diagnosis (Egg inoculation and tissue culture).

Practice-: Demonstration of fertilized hen egg. Demonstration of various inoculation routes in fertilized hen egg. Inoculation of fertilized hen egg through various routes.

BSMT3510 -Mycology &Virology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mycology and virology Lab	BSMT3510	Practice	0-2-0	General biology
<ul style="list-style-type: none">● To describe the characteristics and diseases caused by pathogenic viruses and fungi.● To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.● Understanding different				

methods of
virus
cultivation.

- Understanding collection, transportation and preservation methods of clinical specimen.

Objective

Course Outcome

- Broad idea about structure and basic characteristics of virus and fungus.
- Plan, write and implement research projects in virology and mycology analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral and fungal diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Subject: BSMT3510 -Mycology & Virology Lab (T+P+Pj:0+3+0) (Credit:2)

1. To prepare culture media used routinely in mycology.
2. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.
3. To identify given yeast culture (By performing various identification techniques studied in theory.
4. To identify given mould culture (By performing various identification techniques studied in theory.
5. To demonstrate dimorphism in fungi
6. To process clinical samples for laboratory diagnosis of fungal infections i.e.
 - a) Skin
 - b) Nail
 - c) Hair
 - d) Body fluids and secretions
7. To use mice for lab diagnosis of any fungal infection
8. Demonstration of fertilized hen egg.
9. Demonstration of various inoculation routes in fertilized hen egg
10. Inoculation of fertilized hen egg through various routes.

BSMT3511- Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mini Project	BSMT3511	Project	0-0-2	Basic Medical science

Subject: BSMT3511 - Mini Project

(T+P+Pj:0+0+3) (Credit:2)

The student is supposed to carry out project work in assistance with a mentor. The project should be

relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

6th semester B.sc Medical Lab. Technology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	BSMT3604	NA	0-10-0	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

- Search relevant scientific literature
- Develop a research proposal
- Employ appropriate data collection techniques and tools
- Manage collected data
- Analyze data with appropriate statistical techniques
- Write thesis
- Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have followed format:

1. Title
2. Introduction
3. Materials and Methods
4. Results

5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Project	CUTM1755	NA	0-0-10	Basic Medical science

Subject: BSMT3603 -Project

(Credit: 10)

Project work:-

Suggested Project title

1. Serum electrolytes/urea/creatinine in pregnant women with Malaria Parasitamia.
2. Urinary tract infection in adult students in CUTM Campus.
3. Blood groups, Prothrombin time (PT), Activated partial thromboplastin time (APTT) among Undergraduate student.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.

Subject: BSMT3604 – Internship

(Credit: 10)

Internship

- Case record
- Lab management and ethics Evaluation -
- Guide(internal)
-Industries guide(external)

-University-project report/viva

MASTER OF SCIENCE IN APPLIED & CLINICAL MICROBIOLOGY

2019
SYLLABUS

M.Sc. in Applied and Clinical Microbiology

Preface: Medical microbiology is the branch of medical science concerned with the prevention, diagnosis and treatment of infectious diseases. In addition, this field of science studies various clinical applications of microbes for the improvement of health. There are four kinds of microorganisms that cause infectious disease: bacteria, fungi, parasites and viruses and one type of infectious protein called Prion.

A medical microbiologist studies the characteristics of pathogens, their modes of transmission, mechanism of infection and growth. Using this information, a treatment can be revised.

Medical microbiologist often serves as consultant of physician, providing identification of pathogen and suggesting treatment option.

Scope: M. Sc in Applied and Clinical Microbiology gives opportunity for specialized study in the field of medical & clinical microbiology. Candidates who successfully complete M. Sc in Applied and Clinical Microbiology course may obtain jobs as

- Specialized technologist in Microbiology or supervisors of clinical laboratories in hospitals.
- Laboratory scientists in Biomedical and research institutes.
- Teachers in training institutes of Medical Laboratory Technology/graduate & post graduate programme of microbiology & related areas.
- Utilize or apply the concepts, theories and principles of laboratory science.
- Demonstrate the ability to plan an effect the change in laboratory practice and health care delivery system.
- Establish collaborative relationship with members of other disciplines.
- Demonstrate interest in continued learning and research for personal and professional advancement.
- Be able to interpret or guide the development of medical diagnostics in need locally and cheaply
- Be able to manage and guide appropriately equipped and staffed clinical microbiology laboratories
- Be a highly skilled human resource for the emerging pharmaceutical/medical industry
- Be able to participate in supervised or team-research in universities, industry or government
- Demonstrate advanced knowledge in the fields of Clinical Microbiology and Immunology, with excellent skills to teach and communicate this knowledge
- Demonstrate independent critical and analytical thinking, both within their field of study, and beyond, for the use of their knowledge for service to others.
- Be able to guide patient care and the public on the pathology, pathogenesis and clinical manifestation, mode of transmission, prevention and current control methods for infections of public health importance
- Be a highly skilled human resource in the management of an increasing number of patients with tissue/Organ transplants, Cancers and immunodeficiencies.
- Be able to critique and evaluate the impact of the existing national disease control programs on the epidemiology of infectious diseases and advise on improving them

- Have acquired critical and analytical skills required for further studies in specialized areas of microbiology or related studies
- Identify and suggest possible solutions to ethical dilemmas that occur in their work and field of study, and understand the importance of professional ethics in all aspects of scientific communication and laboratory work
- Demonstrate competence in the laboratory, including application of the scientific method and appropriate use of basic and state of the art laboratory tools and techniques
- Demonstrate written and oral skills necessary for communication of research, knowledge, and ideas to scientists and non-scientists alike.

Programme: M.Sc. in Applied and Clinical Microbiology

Duration: Two years (Fourth semesters) full-time programme with 6 months internship in the last semester.

Eligibility: Bachelor's degree in any branch of Life Science/ Agriculture/ Pharmacy/ Veterinary /Medicine (MBBS/BDS).

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre /Research Institution equipped with modern laboratory facility, which fulfills the norms decided by the University. Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of M. Sc. in Applied and Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than two academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of two years programme, with a minimum course credit of **96 credits**, the candidate will be awarded with “**Master of Science in Applied and clinical microbiology (M. Sc. CMB)**” from Centurion University.

MASTER OF SCIENCE IN APPLIED & CLINICAL MICROBIOLOGY

Programme Structure

SEMESTER-I				
SL NO	CODE	SUBJECT	SUBJECT TYPE Theory+ Practice+ Project (T+P+Pj)	CREDITS
1.	MSCM1101	General Microbiology	4+0+0	4
2.	MSCM1102	Human Anatomy & Physiology	4+0+0	4
3.	MSCM1103	Biomolecules	4+0+0	4
4.	MSCM1104	Analytical Techniques	4+0+0	4
5.	MSCM1105	Basic Microbiology Lab	0+4+0	4
Total				20

SEMESTER-II				
SL NO	CODE	SUBJECT	SUBJECT TYPE (T+P+Pj)	CREDITS
1.	FCBS0101	Environmental Science	3+0+0	3
2.	FCHU1203	Business Communication	0+2+0	2
3.	MSCM1201	Systematic Bacteriology	4+0+0	4
4.	MSCM1202	Molecular Biology and Clinical Biochemistry	4+0+0	4
5.	MSCM1203	Medical Parasitology and Mycology	4+0+0	4
6.	MSCM1206	Clinical Pathology	4+0+0	4
7.	MSCM1204	Applied microbiology	4+0+0	4
8.	MSCM1207	Parasitology & Mycology Lab	0+2+0	2
			Total	27
		SKILL COURSE- I		2/ 4

SEMESTER-III				
SL NO	CODE	SUBJECT	SUBJECT TYPE (T+P+Pj)	CREDITS
1	MSCM2301	Immunology & Virology	4+0+0	4
2	MSCM2302	Diagnostic Bacteriology	4+0+0	4
3	MSCM2303	Biochemistry	4+0+0	4
4	MSCM2304	Histology	4+0+0	4
5	MSCM2307	Research Methodology	3+0+0	3
6	FCHU1204	Communicative Practice Laboratory–II	0+2+0	2
7	MSCM2308	Immunology Lab	0+2+0	2
8	MSCM2309	Histopathology Lab	0+2+0	2
9	MSCM2310	Biochemistry Lab	0+2+0	2
10	MSCM2311	Mini Project	0+2+0	2
			Total	29
		SKILL COURSE- II		2/ 4

SEMESTER-IV				
SL NO	CODE	SUBJECT	SUBJECT TYPE(T+P+Pj)	CREDIT S
1.	MSCM2403	Project	-	10
2.	MSCM2404	Internship	-	10
Total				20

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in 6 months)

Skill Courses:

Students can choose any suitable skill course offered by the University

Value Added Courses:

***Suggested courses:**

SL NO	SUBJECT CODE	SUBJECT
1	FCMG0115	Human Rights
2	FCMG0401	Gender Issues in Development

**(Or courses suggested by the respective School)*

Note: Skill course & Value-added course, to be opted by the student along with the regular courses, as suggested in the syllabus.

Syllabus

1st semester M.Sc. in Applied and Clinical Microbiology

MSCM1101- General Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
General Microbiology	MSCM1101	Theory	4-0-0	Fundamental Science

Objective

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

- This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.
- Understanding the details of microbial cell organelles.
- Provides knowledge on growth of microorganism.
- Provides knowledge culturing microorganism.

Unit-1

History and scope of Microbiology, Recent trends and developments in modern microbiology. Identification, characterization and classification of microorganisms. Distinguishing characteristics between prokaryotic and eukaryotic cells. Structure and function of Cell wall of bacteria, cell membranes, flagella, pili, capsule, gas vesicles, carboxysomes, magnetosomes and phycobolismes.

Unit-2

Methods of sterilization: Physical methods – Dry heat, moist heat, radiation methods, filtration methods, chemical methods and their application. Concept of containment facility, sterilization at industrial level. Different staining techniques used in bacteriology.

Practice: - Demonstration the different type of Sterilization technique and operation of the Instruments used in microbiological lab. Demonstration of various parts of microscope. Demonstrate the different staining techniques.

Unit-3

Bacterial nutrition – Nutritional requirement of bacteria. Cultivation of aerobes and anaerobes, Reproduction in bacteria and spore formation. Bacterial growth curve and bacterial nutrition Media. Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media).

Practice: - Preparation and demonstration of different culture media, biochemical tests, growth Bacteria.

Suggested Readings

1. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalani
1. Text book of Medical Microbiology by Gruckshiank
2. Medical Laboratory Technology by Kanai Lal Mukherjee, Publisher Tata McGraw Hill
3. An Introduction to Medical Laboratory Technology by FJ Baker, Publisher Butterworth
4. Practical Book of Medical Microbiology by Satish Gupta, Publisher Jaypee Brothers
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough

MSCM1102- Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	MSCM1102	Theory	4-0-0	Fundamental Science

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Structure and function of Skelton. Classification of joints and their function. Joint disorders.

Practice: Demonstration of individual bone from skeleton Identification of different organs and system from chart.

Unit-2

Cardiovascular System: Composition of blood, functions of blood elements. Blood group and coagulation of blood. Brief information regarding disorders of blood. Name and functions of lymph glands. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Various parts of respiratory system and their functions, physiology of respiration.

*Practice: Demonstration the morphology of different blood cells
Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.*

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system Structure and function of senseorgans.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.
3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones &Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, Publishersatya.

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biomolecules	MSCM1103	Theory	4-0-0	Fundamental Science

Objective

- To study the structure and function of biomolecules and the vital processes that occurs in living organisms.

Course Outcomes

- Provide students with learning experiences that help in still deep interests in learning biochemistry
- Develop broad and balanced knowledge and understanding of biomolecules, key biochemical concepts, principles and theories related to biochemistry
- Equip students with appropriate tools of analysis and with theoretical, technical and analytical skills to tackle issues and problems in the field of biochemistry.

Unit-1

Major Biomolecules: Carbohydrates – Classification, chemistry, properties, and function – mono, di, oligo and polysaccharides. bacterial cell wall polysaccharides. Conjugated polysaccharides– glycoproteins, mureins and lipopolysaccharides.

Lipids – classification, chemistry, properties and function – free fatty acids, triglycerides, phospholipids, glycolipids & waxes. Conjugated lipids – lipoproteins. Major steroids of biological importance – prostaglandins.

Unit -2

Amino acids and proteins – classification, structure and function. Essential amino acids & amphoteric nature of amino acids and reactions and functions of carboxyl and amino groups and side chains. Peptide structure. Ramachandran's plot. Methods for isolation and characterization of proteins. Structural levels of proteins – primary, secondary, tertiary and quaternary, denaturation of proteins. Hydrolysis of proteins. Protein sequencing using various methods.

Unit -3

Nucleic acids – structure, function and their properties. Structural polymorphism of DNA, RNA. Structural characteristics of RNA.

Sources, Chemistry and biochemical functions of water-soluble vitamins. Chemistry of Porphyrins – Heme, Cytochromes, Chlorophylls, xanthophylls, Bacteriochlorophylls & algal pigments, Carotenoids

Unit-4

Biological oxidation, Biological redox carriers, biological membranes, electron transport, oxidative phosphorylation and mechanism. Bacterial photosynthesis, photosynthetic electron transport
 Mineral metabolism – phosphorus, potassium, calcium and Trace elements – molybdenum, zinc, manganese, cobalt and copper. Influence of minerals on the production of toxins. Role of trace elements on microbial enzymes.

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.
2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

MSCM1104-Analytical Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Techniques	MSCM1104	Theory	4-0-0	Fundamental Science

Objective

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Chromatographic techniques
- Electrophoretic techniques
- Principle of Spectroscopy

Course Outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi-automated Biochemistry analyzer.
- They will gain knowledge on the principle behind and the application of NMR, X-ray diffraction, ESR.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Unit-1

Microscopy– Microscopic techniques: Basic principles and applications of light, phase – contrast microscopy

(phase annulus, phase plate, specimen preparations), fluorescent microscopy (filters, dark field condenser, complex optical system, sample preparations) and electron microscopy (Magnetic lenses, electron beams, condensers, types of electron microscopy – scanning and transmission, sample preparations - fixing of specimens, preparation of blocks, Microtomy – sectioning, microtomy and staining, negative staining techniques of biological samples), cytometry and flowcytometry

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Preparing specimens for observing under above microscopes.

Unit-2

Principles of Centrifugation – Centrifugation techniques-preparative and analytical methods, density gradient centrifugation.

General principles and applications of chromatography – Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gelfiltration, Gas, HPLC, FPLC.

Electrophoresis – moving boundary, zone (Paper Gel) electrophoresis, Immunoelectrophoresis, Immunoblotting Isoelectric focusing, 2-Delectrophoresis.

Practice: Demonstration the Centrifuge, Different Electrophoresis, Auto /Semi auto Analyzer, Microtome. Maintenance and Quality control of Medical Lab Equipment 's.

Unit-3

Principles, Laws of absorption and radiation. Visible, ultraviolet, infrared and mass spectrophotometry. Absorption spectra, fluorescence flame photometry, Principles of colorimetry, Turbidometry, Viscometry. Determination of size, shape and molecular weight of macromolecules– osmotic pressure, flow birefringence, optical rotatory dispersion. light scattering, diffusion, sedimentation and X-ray diffraction, NMR, ESR.

Suggested Reading

1. Instrumental Methods of Chemical Analysis by CHATWAL &ANANAD.
2. Practical Biochemistry: Principles and techniques by WILSON &WALKER.
3. Physical Biochemistry: Application to Biochemistry and Molecular biology (2nd edition) by FREIFELDER.
4. Biochemical methods (2nd edition) by SADASIVAM &MANICKAM.
5. Biophysical Chemistry: Principles and techniques by UPADHYAY, UPADHYAY &NATH.
6. HAWK'S Physiological Chemistry by OSER.

MSCM1105- Basic microbiology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
General	MSCM1105	Practice	0-6-0	Fundamental Science

Microbiology				
---------------------	--	--	--	--

Objective

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

- This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.
- Understanding the details of microbial cell organelles.
- Provides knowledge on growth of microorganism.
- Provides knowledge culturing microorganism.

1. Demonstration of various parts of centrifuge; its functioning and care , Demonstration of various parts of microscope its functioning and care ,Cleaning and drying of glass and plastic ware , Preparation of various anticoagulants , Collection of venous and capillary blood ,Cleaning of glass ,syringes and its sterilization. Preparation of buffers ,Preparation of the stains and other reagents , Preparation of peripheral blood film (PBF) ,To stain a peripheral blood Film by Leishman , stain ,Hemoglobin estimation (oxy Hb and cyanmethaemoglobin method)
2. Preparation of bacterial smear and staining – Gram’s ,Acid-fast, Staining of bacterial spores flagella, capsule, spirochaetes
3. Preparation of media, cultivation of bacteria, Biochemical tests for identification of bacteria, Preservation of stock cultures of bacteria.
4. Demonstration of various parts of body ,tissues of body, parts of digestive system, parts of respiratory system ,parts of excretory system

Suggested Reading

1. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee; Tata McGraw Hill Publishers, New Delhi
2. A Textbook of Medical Laboratory Technology by P Godkar, Bhalani Publishing House, Mumbai

2nd semester M.Sc. in Applied and Clinical Microbiology

FCBS0101-Environmental Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Environmental Science	FCBS0101	Theory	3-0-0	Fundamental Science
------------------------------	----------	--------	-------	---------------------

Objectives

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course Outcome

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

UNIT-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

UNIT -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

UNIT-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book:

1. AnubhavKaushik& C.P. Kaushik: Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph: Environmental Studies-Tata Mac GrawHill
2. E. Bharucha: Text book of Environmental Studies for under graduate courses– Universities Press. (Book prepared by UGCCCommittee.

FCHU1203-Business Communication

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Business Communication	FCHU1203	Practice	0-3-0	Fundamental Science

Objectives

- The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.
- This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture-oriented approach of teaching with the task based skill oriented methodology of learning.

Course Outcomes

- Understand the differences between general communication and business communication
- Development of basic language skills, i.e., listening, speaking, reading and writing
- Effective participation in group discussion and job interviews

Unit-1**UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)**

- The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.
- General Communication and Business Communication
- Communication in Organizational Settings: Patterns of Communication in the Business World – Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal
- Introduction to Cross Cultural Communication
- Strategies to Overcome Communication Barriers

Unit-2**READING AND WRITING (10 hrs.)**

- This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan

writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

- Importance of Developing Reading Skills
- Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making
- Importance of Writing Skills and Principles of Effective Writing ♣ Writing Process: Pre-writing, Drafting and Re-Writing
- Paragraph Writing
- Summaries and Abstracts Page |10
- Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
- Career Communication: Writing Resume/ CV and Job Application Letter

Unit-3

LISTENING AND SPEAKING (9 HOURS)

- Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.
- Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies
- Common forms of Oral Communication in the Business World:
- Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes
- Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality
- Making an Oral Presentation: Planning, Preparing and Delivery
- Facing an Interview: Preparation, Types of Interview, Do's and Don'ts
- Group Discussions: Debate and GD, Types of GD, GD Etiquette (Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

TEXT BOOKS:

- An Introduction to Professional English and soft skills by B.K Das et al., Cambridge University Press

Williams, Thomson *Business Communication Today*, Courtland L Bovee, John V Thill & Mukesh Chaturvedi, Pearson Education. *Business communication* by Meenakshi Raman and Prakash Singh (Oxford) *Business Communication*, Urmila Rai & S.M Rai, Himalaya Publishing House

MSCM1201-Systematic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	MSCM1201	Theory	4-0-0	Fundamental Science

Objective

- To learn opportunities in the basic principles of medical microbiology and infectious disease.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit-1

Morphology, culture, identification, pathogenesis, clinical findings, laboratory diagnosis, epidemiology and pathogenesis of following bacterial infections

Staphylococci, Streptococci, Enterococci, Micrococci, Gram positive anaerobic cocci, Neisseria, Moraxella, Branhamella

Unit-2

Bacillus, Corynebacteria, Listeria, Erysipelothrix, Lactobacillus, Clostridium, Brucella, Propionibacterium, Prevotella, Eubacterium, Leptotrichia, Fusobacterium, Gardnerella, Actinobacilli, Bordetella, Legionella, Calymato bacterium, Campylobacter, Helicobacter, Bacteriodes, Spirillum minus, Tropheryma.

Unit-3

Mycobacterium, Actinomyces, Nocardia, Mycoplasma, Ureaplasma, Rickettsiae, Chlamydia, Spirochaetes, Enterobacteriaceae- Escherichia coli, Shigella, Salmonella, Klebsiella, Proteus, Morganella, Providencia, Citrobacter, Enterobacter, Serratia, Yersinia, Pasteurella, Francisella, Vibrio, Aeromonas, Plesiomonas, Pseudomonas, Acinetobacter, Alcaligenes, Achromobacter. Normal bacterial flora of human beings.

Suggested Reading

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
3. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
4. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge

University Press;UK

5. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
6. Text book of Medical Microbiology by Gruckshiank

MSCM1202-Molecular Biology and Clinical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology and Clinical Biochemistry	MSCM1202	Theory	4-0-0	Fundamental Science

Objective

- Understanding the central dogma of life
- To understand the concept of gene regulation and its impact
- The use of several molecular diagnostic techniques for disease interpretation
- Understanding the concept of Biochemical analyzing instruments, chemicals and normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course Outcome

- After completion of the course the student will be gain knowledge of the significance of genes and proteins.
- They will understand the mechanism of gene expression and protein synthesis,
- The significance of gene expression regulation will become clear.
- The students will understand the use of several molecular techniques in disease diagnosis.
- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.

Unit-1

Chemistry of Nucleic acids: DNA Structure and function, RNA Types: Structure and function. Replication, Transcription, genetic code, Translation, Regulation of transcription and translation, Ageing, malignant transformation of cells and role of oncogenes. Apoptosis, cell regeneration.

Unit-2

Molecular diagnostics: Recombinant DNA Technology, Polymerase chain reaction, application of PCR in diagnosis of pathogens, Site directed mutagenesis, DNA finger printing, DNA Foot Printing, antisense RNA

technology, chromosomal walking, inherited genetic disorders in man and gene therapy

Unit-3

Metabolic disorders and Diagnostic enzymology: Disorders of metabolism: carbohydrate, Lipids, Amino acids and Nucleic acids. Diagnostic enzymes: Role of Enzymes in Clinical Practice: Marker enzymes in myocardium, liver and pancreas. Tumour markers, Radio isotope techniques

Unit-4

Organ function tests: Liver function tests, Bile pigment metabolism, tests for liver function. Jaundice and its type, Functions of Kidney, Urine formation and renal function tests disease of kidney, Renal Calculi: Theory of formation and analysis, Gastric Analysis, Composition of gastric juice, concepts of free and bound acid, Fractional Test Meal.

*Practice: Operation procedure of Centrifuge machine, colorimeter, spectrophotometer etc Estimation of Liver function test, Kidney function test, Thyroid, Lipid profile.
Estimation of bile pigment, bile salt, bilirubin etc.*

Suggested Reading

1. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
2. Text book of Biochemistry, M. A. Siddique 8th Edn. 1993 Vijay Bhagat Scientific Book Co., Patna.
3. Medical Biochemistry by ACDey.
4. Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

MSCM1203-Medical Parasitology & Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Parasitology and Mycology	MSCM1203	Theory	4-0-0	Fundamental Science

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites and fungi.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.
- Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Course Outcome

- Identification of pathogenic parasite and fungus in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Unit-1

General Parasitology, Classification of medically important parasites, epidemiology of parasitic infections, immunology of human parasitic infections. Diagnostic parasitology- Systematic study of following parasites (Geographical distribution, habitat, morphology and life cycle, risk of infection, pathogenesis, laboratory diagnosis prophylaxis and serological diagnosis)

Unit-2

Protozoa – Intestinal amoeba, free living pathologic amoeba, giardia, trichomonas, balantidium, isospora, cryptosporidium, microspora, cyclospora Plasmodia, leishmania, trypanosoma, toxoplasma, babesia.

Helminthes – Cestodes – Taenia, Echinococcus, Diphylobothrium, Hymenolepis, Multiceps Trematodes – Schistosoma, Fasciola, Fasciolepis, Paragonimus, Clonorchis, Opisthorchis, Nematodes – Ascaris, Hookworm, Trichuris, Enterobius, Strongyloides, Filaria, Trichinella, Toxocara, Dracunculus Biological vectors.

Practice: Collection & transport of specimens. Examination of stool for parasites. Examination of blood & bone marrow for parasites. Demonstrate different staining techniques

Unit-3

General Mycology – Fungus – Classification Fungal Structure & Morphology, Reproduction in fungi, Immunity to Fungal Infections. Culture Media in Mycology, Stains in Mycology. Normal fungal flora of human beings. Diagnostic Mycology - Epidemiology, Pathogenesis, Laboratory Diagnosis of Fungal Infections. Specimen collection, preservation, Transportation & Identification of Mycological Agent. Biochemical tests for fungal identification Anti-fungal agents, invitro tests. Serological tests for mycotic infections. Use of laboratory animals in Mycology. Typing of fungi Preparation of fungal antigens & their standardization.

Unit-4

Method of different sample collection and preservation for mycological examination.

Media & Stains preparation for Mycology, Diagnostic Methods in Mycotic Infections, Identification test in Mycology, Serological tests in Mycology Skin tests. Animal inoculation techniques.

Practice: Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Culture techniques for parasites. Serological diagnostic methods, skin tests.

Suggested Reading

1. Text book of Parasitology by N C Dey, publisher New central bookagency
2. Text book of Parasitology by Chaterjee, publisherCBS
3. Text book of microbiology by Ananthanereyan, Publisher universitiespress
4. Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, Jaypeepublisher
5. Short text book of medical microbiology by Satish Gupta, PublisherJaypee

MSCM1206 -Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	MSCM1206	Theory	4-0-0	Fundamental Science

Objective

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease
- Analysis of pregnancy

Course Outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites
- Analysis of Infertility disorder

Unit-1

URINE: Urine meter, Esbachl'sAlbumino meter, preparation of various reagents. Composition, collection and preservation of urine for various tests, physical chemical and microscopic examination of urine, estimation of total albumin, Specific gravity, litmus paper, tests for albumin, sugar, blood, bile salts and pigments, urobilinogen, ketones bodies etc.

Practice: Collection procedures of urine, important precursors for collecting samples. Physical and Chemical and Microscopic examination of urine.

Unit-2

STOOL: Sample collection, physical, chemical and microscopic examination. SPUTAM: Sample collection, stain and study of A.F.B.

CEREBROSPINAL FLUID: Pandy's test, Cell count, cell type differential count and malignant cells. BODIES FLUID: Cells stain; cell morphology and detection of malignant cells in peritoneal fluid, pleural fluid, pericardial fluid, and synovial fluid. Differences between transudates and exudates.

SEMEN: Sample collections microscopic examination for count and malignant and morphology.

Practice: Collection procedures and important precursors for collecting samples like STOOL, CSF, SEMEN and different body fluids.

Physical and Chemical and Microscopic examination of different samples.

Unit-3

ANATOMIC PATHOLOGY

1. Reception, Registration, preservation and processing of specimens. Haematoxyline and eosine staining procedure, mounting of stained sections, Filing of paraffin blocks, and slides. Method of decalcification, Sharpening and holding Knives techniques, using of microtome.

2. Museum: Mounting of specimens, labeling, maintenance of specimens and catalogue etc.

Post mortem/ Autopsy: Maintenance of the records of the Dead Bodies and specimens received, Autopsy techniques, Autopsy instruments, cold storage plants, legal aspects etc.

Practice: Handling clinical laboratory equipment.

Preparation of some stains, and reagents for clinical diagnosis purpose.

Suggested Reading

1. Manual of lab and diagnostic tests, Fischbach, 2005. Publisher Lippincott Williams Wilkins, New York.
2. Clinical laboratory methods and diagnosis Gradwohls, 2000 by (ed) Ales C. Sonnenwirth and Leonard Jarret, M.D.B.I., New Delhi.
3. Medical laboratory science theory and practice, J Ochei and Kolhatkar, 2002. Publisher Tata McGraw, Hill, New Delhi.
4. Medical laboratory technology Vol.1 by Kanai L. Mukherjee, 2007, Publisher Tata McGraw Hill.

MSCM1204- Applied Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Microbiology	MSCM1204	Theory	4-0-0	Fundamental Science

Objective

- To impart knowledge of the basic principles of bacteriology, virology, including the nature of pathogenic microorganisms, pathogenesis, laboratory diagnosis, transmission, prevention and control of diseases common in the country

Course Outcome

- To know the applications of microbiology in diagnostics, hospitals and community
- Learn principles underlying diagnostic tests and handle kits for diagnosis of diseases
- Explain prognosis of diseases and become aware about the role of medical microbiology in public health aware about the role of medical microbiology in public health

Unit-1

The normal flora, collection and transport of clinical specimens Collection and preliminary processing of specimens.

Unit-2

Diagnostic microbiology- an approach to laboratory diagnosis Rapid and automation methods in diagnostic microbiology Molecular techniques in microbiology. Serological and skin tests

Unit-3

Microbiology in the service of human being Community microbiology. Emerging and re-emerging Microbial disease Nosocomial infections

Unit-4

Hospital and laboratory waste. Diagnostic virology, Emergency microbiology Bacteriology of Milk, Air and Water

Suggested Reading

1. Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, jaypeepublisher
2. Short text book of medical microbiology by Satishgupt, PublisherJaypee

MSCM1207- Parasitology & Mycology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Parasitology & Mycology Lab	MSCM1207	Practice	0-3-0	Fundamental Science
-----------------------------	----------	----------	-------	---------------------

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites and fungi.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.
- Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Course Outcome

- Identification of pathogenic parasite and fungus in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

1. Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Laboratory diagnosis of hydrated cyst and cysticercosis, Concentration techniques for demonstration of Ova (Principles and applications), Routine Stool examination for detection of intestinal parasites.
2. Identification of adult worms from model's or slide's. Identification of different parasites their morphology from slide's. Culture techniques for parasites. Serological diagnostic methods, skin tests.
3. Media & Stains preparation for Mycology, Diagnostic Methods in Mycotic Infections, Identification test in Mycology, Serological tests in Mycology Skin tests. Animal inoculation techniques.
4. To prepare culture media used routinely in mycology
5. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus. To identify given yeast culture (By performing various identification techniques studied in theory.

3rd semester M. Sc. Applied and Clinical Microbiology
MSCM2301- Immunology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology and Virology	MSCM2301	Theory	4-0-0	Fundamental Science

Objective

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.
- To understand the properties of virus, diagnosis of important viruses and vaccination.

Course Outcome

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and auto immune disease.
- They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Unit –1

Introduction to Immunology: Immunity, Type (Innate & adaptive immune response). Organs of Immune System: Primary and Secondary lymphoid organ. Ontogeny and phylogeny of Lymphocytes: T and B Lymphocytes, Null Antigen, Antibody. Cell of Immune System: Mononuclear cell and granulocytes, Antigen presenting cell. Antigen, Heptanes: Factors effecting immunogenicity, epitopes (Properties of it) Antibodies: Structure, Types and function.

Unit – 2

Complement System: Role of complement system in immune response, complements and Components and Activation pathways. Monoclonal antibodies: Production characterization and applications in diagnosis, therapy and basic research. Antigen-Antibody interaction, avidity & affinity measurement.

Hypersensitivity: Definition, factor causing hypersensitivity. Common hypersensitivity reaction,

types, classification based on the time taken for reaction. Auto Immune disease.
Serological Reactions.

Unit-3

Medical Virology General Properties of viruses, Detection of viruses and antigens in clinical specimens, Serological diagnosis of virus infections. Cultivation of viruses. Arthropod borne and rodent borne virus diseases, Picorna viruses and diseases. Hepatitis viruses; Rabies and other neuro viruses: Orthomyxoviruses and paramyxoviruses. Pox, Adeno, Herpes, Reo, Rota and HIV Viruses, Oncogenic viruses, Viral vaccines, their Preparation and their immunization schedules. Viruses of importance to bacteria, Bacteriophages, their structure, types, Typing and application in bacterial genetics.

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Text book of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical laboratory Technology vol. I, II, III by Mukherjee
5. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough
6. Immunology by Ivan Roitt, Jonathan Brostoff and David Male
7. Immunology by Kuby

MSCM2302-Diagnostic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Bacteriology	MSCM2302	Theory	4-0-0	Fundamental Science

Objective

- To confirm the suspicion of infectious bacterial disease.
- To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

- Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections.
- Study of control measures for nosocomial infection.
- Student can safeguard himself & society and can work diagnostics and hospitals

Unit-1

Laboratory strategy in the diagnosis of various Infective syndromes: Samples of choice, Collection, transportation and processing of samples for laboratory diagnosis of the following complications:

- a) Septicemia and bacteraemia, b) Upper Respiratory tract infections, c) Lower Respiratory tract infections
- d) Wound, skin, and deep sepsis, e) Urinary tract infections, f) Genital Tract infections, g) Meningitis,

h) Gastro intestinal infections, i) Enteric fever, j) Tuberculosis (Pulmonary and Extra- pulmonary), k) Pyrexia of unknown origin

Practice: collection of different specimens from different organs. Record maintaining process.

Preparation and use of different media in bacteriology laboratory. Isolation and identification of different groups of bacteria in laboratory.

Unit-2

Antibiotic susceptibility testing in bacteriology- a. Definition of antibiotics, b. Culture medium used for Antibiotic susceptibility testing, c. Preparation and standardization of inoculum, d. Control bacterial strains,

e. Choice of antibiotics, f. MIC and MBC, g. Various methods of Antibiotic susceptibility testing with special reference to Stokes method and Kirby-Bauer method, h. Tests for production of β -lactamase

Practice: Antimicrobial susceptibility testing

Unit-3

Bacteriological examination of water, milk, food and air –

- a. Examination of water - Collection and transportation of water sample, Presumptive coliform count, Eijkman test, Introduction and importance of other bacteria considered as indicators of faecal contamination
- b. Examination of Milk and milk products - Basic Concepts regarding gradation of milk, Various tests for Bacteriological examination
- c. Examination of food articles -Basic Concepts regarding classification of food like frozen food, canned food, raw food, cooked food etc. Various tests for Bacteriological examination with special reference to food poisoning bacteria
- d. Examination of Air -Significance of air bacteriology in healthcare facilities, Collection processing and reporting of an air sample.

Practice: Sterility testing of I/v fluids -a. Collection, transportation and processing of I/v fluids for bacterial contamination, b. Recording the result and interpretation

Nosocomial Infection, Epidemiological markers.

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Text book of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical laboratory Technology vol. I, II, III by Mukherjee
5. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough

MSCM2303-Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry	MSCM2303	Theory	4-0-0	Basic Medical science

Objective

- Understanding the concept of Biochemical analyzing instruments, chemicals and normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course Outcome

- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.
- To learn normal ranges and abnormal ranges of biochemical components and hormones.
- To study about diseases related to biochemical and hormone imbalance in human body.

Unit -1

Carbohydrate: Introduction, Carbohydrate Metabolism: Glycolysis, Gluconeogenesis, HMP, and its regulations, Disorders of carbohydrates metabolism related to each cycle (inborn error of metabolism)
Proteins: Different metabolic pathway of amino acid. Amino acids oxidation. Transamination, deamination and pathways leading to acetylco-A. Decarboxylation of Amino acids, formation of nitrogenous excretion products. Urea cycle and ammonia excretion. Lipid: Biosynthesis and oxidation of fatty acids, Ketone bodies formation and their oxidation. Regulation and inborn error of lipid metabolism

Unit -2

Biochemical aspects of Hormone: Hormone receptors and intracellular messengers, Adenylatecyclase, protein kinase and phosphodiesterase. Role of Insulin, glucagon's, epinephrine and their mechanism. Various endocrine and regulatory systems mediated by cyclic AMP. Vitamin: Fat and Water soluble and their deficiency. Mineral metabolism: Minor and Major (cu, Fe, Ca, Mg & P). Inborn error of Nucleic acids metabolism

Unit- 3

LFT, KFT, Lipid profile, Estimation of Glucose / GOD – POD method. Draw a standard graph of GTT curve, Introduction of electrophoresis.

Practice- Demonstration the centrifuge machine, Demonstration of Colorimeter, Estimation of Glucose in urine and blood, Estimation of Protein in urine and blood, Estimation of Liver function test, Kidney function test, Lipid profile.

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.
2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

MSCM2304- Histology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histology	MSCM2304	Theory	4-0-0	Basic Medical Science

Objective

- Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.
- Perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Accurately and proficiently embed tissue and understand the principles of microtomy.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outcome

- In this section students will be made aware of terminology used in histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.
- Reception and labeling of histological specimens.
- Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.
- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.

Unit-1

Introduction to histotechnology, Care, maintenance and Safety measures of laboratory equipment used

in histotechnology. Basic concepts about routine methods of examination of tissues Collection and transportation of specimens for histological examination, fixation Various types of fixatives used in a routine histopathology laboratory- Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Demonstration of instruments used for dissection.

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory.

Unit-2

Decalcification Criteria of a good decalcification agent

Technique of decalcification followed with selection of tissue, fixation, decalcification, neutralization of acid and thorough washing. Various types of decalcifying fluids

Processing of various tissues for histological examination, Embedding

Schedule for manual or automatic tissue processing, Components & principles of various types of tissue processors.

Practice: -Method of Decalcification, fixation, Embedding, manual or automatic tissue processing.

Unit-3

Section Cutting, Sharpening of Microtome Knives, Honing, Stropping, various types of microtome and their applications, Freezing Microtome and various types of Cryostats.

Staining, Impregnation and Mountants, Commonly used mountants in histotechnology lab. General Staining Procedures for Paraffin Infiltrated and Embedded tissue.

Nuclear Stains and Cytoplasmic stain, Equipment and Procedure for manual Staining and Automatic Staining Technique. Mounting of Cover Slips, Labeling and Cataloguing the Slides.

Practice: Demonstration of instruments used for dissection .Use of antiseptics, disinfectants and insecticides in tissue processing laboratory. Preparation of various fixatives- Hell's fluid, Zenker's fluid, Formal saline, Formal acetic acid etc.

Demonstration various parts and types of microtome.

Suggested Readings

1. Color text book of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini Kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran, Publisher Elsevier.

MSCM2307- Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	MSCM2307	Theory	3-0-0	Fundamental Science

Objective

- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

- Students can understand the ethical and philosophical issues associated with research in education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Unit-1

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process. Research Designs.

Project: Related to above unit.

Unit-2

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales Scale Construction Techniques, Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques Sample Size Decision.

Practice: Demonstrate the data collection technique, scaling and sampling.

Unit-3

Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire. Interviewing. Tabulation, Coding, Editing. Interpretation and Report Writing.

Suggested Readings

1. Research Methodology kindle edition by R. Panneerselvam publisher PHI Learning; 2 edition
2. Research Methodology: Methods and Techniques Paperback – Abridged, Audiobook, Box set by C R Kothari, publisher newage

FCHU1204- Communicative Practice Laboratory–II

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Communicative Practice Laboratory-II	FCHU1204	Practice	0-3-0	Fundamental Science

--	--	--	--	--

Objectives

- To master Study Skills
- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

Course Outcomes

- The students will be able to Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.
- Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation. A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

Unit-1

LISTENING (6 HOURS) Exercises on Active Listening:

- The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

Unit-2

SPEAKING (8 HOURS)

- Situational Dialogues / Role Play; Organization Communication
- Oral Presentations- Prepared and Extempore
- 'Just a minute' Sessions (JAM)
- Debates
- Mock Meetings
- Cracking Job Interviews: Mock Sessions
- Group Discussions on current topics (This module will be practiced through speaking activities like role plays, presentations, and discussions)

Unit-3

READING (8 HOURS)

- Students will be given practice in reading and comprehension 6-8 passages of 100-300 words

each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making
- Review Presentation (Movie/ Article/Book)
- Vocabulary Building Exercises (This module encourages extensive use of reading materials)

Unit-4

WRITING (8 HOURS)

- The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.
- Short Paragraphs on current general and technical topics
- Creative Writing: Idea Generation
- Business Letters, Email Messages, Project Writing
- Writing Resumes and Cover Letters (* Students will be required to produce and submit by the end of second semester a 350- 500 words project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

TEXT BOOK:

An Introduction to Professional English and soft skills by B.K Das et al., Cambridge University Press

REFERENCES:

Effective Business Communication, Asha Kaul, Prentice Hall Professional Communication, Aruna Koneru, TMH

MSCM2308- Immunology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology Lab	MSCM2308	Practice	0-3-0	Fundamental Science

Objective

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.
- To understand the properties of virus, diagnosis of important viruses and vaccination.

Course Outcome

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and auto immune disease.
- They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Collection of blood sample by vein puncture, separation and preservation of serum

Performance of Serological tests i.e.-Widal, Brucella Tube Agglutination, VDRL (including Antigen Preparation), ASO (Antistreptolysin 'O'), (Latex agglutination), Rheumatoid factor (RF) Latex agglutination, Rose Waaler test,

Demonstration of antigen / antibody determination by Immunofluorescence, Immunodiffusion, precipitation in agarosegel(ouchterlony), CIEP, ELISA, SDSPAGE and western blotting.

MSCM2309-Histopathology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histopathology Lab	MSCM2309	Practice	0-3-0	Fundamental Science

Objective

Distinguish normal tissues and organs by microscopic appearance when shown a microscopic image (light or electron microscopic photomicrograph) or glass slide.

Course Outcome

- After completion of the Practical student will be able to understand the use of instruments used for dissection , embedding and casting of block and use of microtome.
- Recognise the histological appearance of a number of pathological tissues
- Understand how sections can be photographed, presented and reported

1. Demonstration of instruments used for dissection.
2. Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory Reception and labeling of histological specimens.
3. To perform embedding and casting of block. To process a bone for decalcification
4. To prepare 70% alcohol from absolute alcohol
5. Processing of tissue by manual and automated processor method
6. To demonstrate various part and types of microtome
7. To learn sharpening of microtome knife (Honing and stropping technique).

8. To perform section cutting.
9. To practice attachment of tissue sections to glass slides.

MSCM2310-Biochemistry Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry Lab	MSCM2310	Practice	0-3-0	Fundamental Science

Objective

- Analyze body fluid for diagnosis of disease
- Understand Physiological disorder and infectious disease

Course Outcome

- Able to detect Glucose ,Proteins, Urea, Uric acid, Creatinine, Bilirubin, Lipids
- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education and would have understood the principles of Liver function test, kidney function test, lipid profile etc.

Hazards & safety measures in clinical Biochemistry laboratory .

Quality control and quality assurance in a clinical biochemistry laboratory . Laboratory organization, management and maintenance of records

Principles of assay procedures, Normal range in blood, Serum, Plasma and Urine and reference values for

- a. Glucose b. Proteins c. Urea d. Uric acid e. Creatinine f. Bilirubin g. Lipids

Principles, procedures for estimation & assessment of the following including Errors involved and their corrections:

- a. Sodium, Potassium and Chloride, Iodine. b. Calcium, Phosphorous and Phosphates

MSCM2311 - Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mini Project	MSCM2311	Project	0-0-3	Basic Medical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

4th semester M. Sc. in Applied and Clinical Microbiology

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

- Search relevant scientific literature
- Develop a research proposal
- Employ appropriate data collection techniques and tools
- Manage collected data
- Analyze data with appropriate statistical techniques
- Write thesis
- Defend the findings

Proposal Development:

At the ending of second year (fourth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (fourth Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

MSCM2403-PROJECT

Subject Name	Code	Type of course	Credits	Prerequisite
Project	MSCM2403	-	10	Basic Medical science

Project work:

- **Microbiology:**

Suggested Project title

1. Hepatitis C viruses among pregnant women/people living with HIV/AIDS.
2. Antibacterial activity of honey on staphylococcus Aureus, escherichia coli and streptococcus Pyogen isolated from wound.
3. Susceptibilities of salmonella Typhi and other bacterial pathogens to antibiotics and hot aqueous extract of hibiscus sabdariffa.
4. Isolation and identification of bacteria from food vendors and some vegetable available.
5. Urinary tract infections in adult students of centurion university, BBSR campus
6. Air borne microbiological disorders (DOTS centre)

MSCM2404 - INTERNSHIP

Subject Name	Code	Type of course	Credits	Prerequisite
Internship	MSCM2404	-	10	Basic Medical science

Internship

- Caserecord
- Lab management and ethics
- Evaluation-Guide(internal)

-Industries guide(external)

-University-project report/ Viva

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Environmental Science

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Environmental Science	FCBS0101	Theory	3	Nil

Course Objective:

- *To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.*
- *Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.*
- *One must be environmentally educated.*

Course Outcome:

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book: Anubhav Kaushik & C.P. Kaushik : *Environmental Studies-New age International Publishers.*

Differential Equations

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Differential Equations	FCBS 0102	Theory	3	Nil

Course Objectives:

- To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
<i>External Examination</i>		60	Written examination
<i>Total</i>		100	

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Nonhomogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Text Book:

1) Higher Engineering Mathematics by B.V. Raman Publisher: TMH

Chapters: 8 (8.1 to 8.10); 9 (9.1 to 9.7), 18 (18.1 to 18.8)

Reference Book: 1) Advanced Engineering Mathematics by P.V.O'Neil Publisher: Thomson

Linear Algebra & Vector Calculus

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
-------------	------	----------------	-----------------	--------------

Linear Algebra & Vector Calculus	FCBS 0103	Theory	3	Nil
----------------------------------	-----------	--------	---	-----

Course Objectives:

- To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
- To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
- Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
- Determine the important quantities associated with scalar and vector fields.

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
<i>External Examination</i>		60	Written examination
<i>Total</i>		100	

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11)

Reference Books:

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson

Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Integral Transform

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Integral Transform	FCBS 0104	Theory	3	Nil

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
- To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
- Solve differential & integral equations with initial conditions using Laplace transform.
- Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac's Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any

Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig

Publisher: Johnwiley & Sons Inc-8th Edition

Chapters: 5 (5.1 to 5.6); 10 (10.1 to 10.4,

10.8, 10.9) Reference Books:

1) Advanced Engineering Mathematics by P.V.O'Neil .Publisher: Thomson

2) Higher Engineering Mathematics by B.V.Raman .Publisher: TMH

Complex Analysis

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Complex Analysis	FCBS 0105	Theory	3	Nil

Course Objectives:

- *To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.*
- *To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.*

Course Outcomes: Upon successful completion of this course, the student will be able to:

- *To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.*
- *Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.*
- *Illustrate the applications of the calculus of residues in the evaluation of real integrals.*

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation, Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: John Wiley & Sons Inc-8th Edition Chapters: 12 (12.1 to 12.4, 12.9); 13, 14 (14.2, 14.4) & 15.

Reference Books:

1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson

2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

Discrete Mathematics

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Discrete Mathematics	FCBS 0106	Theory	3	Nil

Course Objectives:

- To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.
- To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes: Upon successful completion of this course, the student will be able

to:

- Evaluate elementary mathematical arguments and identify fallacious reasoning.
- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus.
- Model and solve real-world problems using graphs, both quantitatively and qualitatively.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal

& Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring,

Text Books:

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition Chapters:1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4) **Reference Books:**
Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson
Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier
Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI

Calculus

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Calculus	FCBS0107	Theory	3	Nil

Objective

- To study how things change. It provides a framework for modeling systems in which there is change, and a way to deduce the predictions of such models.
- To construct a relatively simple quantitative models of change, and to deduce their consequences.
- The fundamental idea of calculus is to study change by studying “instantaneous” change, by which we mean change over tiny interval of time.

Course Outcome

- Upon successful completion of this course, students will be able to:
- Understand the importance of linear functions in mathematics.
 - Understand the major problems of differential and integral calculus.
 - Understand and recognize other important classes of functions (such as trigonometric and rational functions), and be able to use calculus with these functions.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

Asymptotes

(6 Hours)

MODULE-II

Curve Tracing

(6 Hours)

MODULE-III Curvature	(6 Hours)
MODULE-IV Reduction Formulae	(6 Hours)
MODULE-V Vector Integral Calculus: Line Integrals.	(6 Hours)
MODULE-VI Surface Integrals, Green's Theorem	(6 Hours)
MODULE-VII Volume Integrals, Gauss's Theorem, Stokes' Theorem (without proof).	(6 Hours)

Text Books:

- 1) A Text book of Calculus Part-III : Shantinakaran
Chapters: 1 (Art 1 & 3), 3(Art 7, 8, 9)
- 2) A Text book of Calculus Part – II : Shantinakaran
Chapter: 8 (Art. 24, 25, 26),
- 3) A Text book of Calculus Part – II : Shantinakaran
Chapter: 10 (Art.33, 34, 35, 36, 37)
- 4) A Textbook of Vector Calculus by Shanti Narayan & P. K. Mittal, S. Chand & Co. , 2003
Chapters: 7 (7.1 to 7.6, 7.8 & 7.11)

Probability & Statistics

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Probability & Statistics	FCBS0108	Theory	3	Nil

Objective

- To translate real-world problems into probability models.
- To motivate in students an intrinsic interest in statistical thinking.
- To recognize the role of and application of probability theory, descriptive and inferential statistics in many different fields of engineering.

Course Outcome

- Upon successful completion of this course, students will be able to:
- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
 - Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
 - Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
 - Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Evaluation Systems

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	

<i>External Examination</i>		<i>60</i>	Written examination
<i>Total</i>		<i>100</i>	

MODULE-I (6 Hours)
Probability: Sample space and Events, Principles of Counting, Classical definition of probability.

MODULE-II (6 Hours)
Axioms of probability, Elementary theorems, Addition and Multiplication rules, Conditional probability.

MODULE-III (6 Hours)
Probability Distributions: Discrete and Continuous Random Variables.

MODULE-IV (6 Hours)
Probability Density and Distribution functions, Mean and Variance of Distributions. Binomial Distribution.

MODULE-V (6 Hours)
Poisson Distribution, Normal Distributions, Poisson and Normal Distributions as Limiting forms of Binomial Distribution.

MODULE-VI (6 Hours)
Statistics: Random Sampling, Population and Sample, Sample Mean and Variances.

MODULE-VII (6 Hours)
Point and Interval Estimations, Confidence Intervals, Fitting Straight Lines, Correlation and Regression.

Text Book:

- 1) Advanced Engineering Mathematics by E. Kreyszig
Publisher: John Willey & Sons Inc-8th Edition
Chapters: 22(22.1 to 22.8), 23(23.1 to 23.3, 23.9, 23.10)

Reference Books:

- 1) Statistical Methods By S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.
- 2) Mathematical Statistics By S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Numerical Methods

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Numerical Methods	FCBS0109	Theory	3	FCBS0102 Differential Equations

Objective

<ul style="list-style-type: none"> To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems. Ability to decide and to derive appropriate numerical methods for approximating the solutions of various types of problems in engineering and science and analyze the error incumbent in any such numerical approximation. Ability to report analysis, solution and results in a standard engineering format.

Course Outcome

<p>Upon successful completion of this course, students will be able to:</p> <ul style="list-style-type: none"> Perform error analysis to select an appropriate numerical model and to estimate errors in numerical solution of a given problem. Derive a variety of numerical algorithms/methods & compare the viability of different approaches to the numerical solutions of various mathematical problems arising in roots of linear and non-linear equations, interpolation and approximation, numerical differentiation and integration, system of linear algebraic equations and differential equations. Analyze and evaluate the accuracy of common numerical methods.
--

Evaluation Systems

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

(6 Hours)

Approximation and round of errors, Truncation error and Taylor's series, Roots of equation using Bisection Method.

MODULE-II

(6 Hours)

Roots of equation using the false-position method, fixed point iteration, Newton-Raphson method, Secant method.

MODULE-III

(6 Hours)

Solution of System of Linear algebraic equations: Gauss-Seidel method, Lagrange Interpolation.

MODULE-IV

(6 Hours)

Newton divided difference interpolation, Inverse Interpolation, Lagrange Interpolation, Newton's forward and backward interpolation.

MODULE-V (6 Hours)

Numerical Differentiation, Numerical integration by the trapezoidal rule.

MODULE-VI (6 Hours)

Numerical integration by the Simpson's rules, Gauss quadrature rule.

MODULE-VII (6 Hours)

Solution of Ordinary Differential Equations: Euler's method, Improvement of Euler's method, Runge-Kutta methods.

Text Book:

Publisher: John Willey & Sons Inc-8th Edition
Chapters: 17 (17.1 to 17.3, 17.5), 18 (18.3), 19 (19.1)

Reference Books:

- 1) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 2) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Applied Analytical Chemistry

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Applied Analytical Chemistry	FCBS0401	Theory + Practice	3	Nil

Course Objective

- The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.
- The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Course outcome

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix
- Point out suitable techniques for sampling and handling of environmental samples
- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Describe simple approaches for troubleshooting

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

- Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
- Determination of Turbidity by nepheloturbidity meter, pH, Conductivity.
- Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell **Practice:**

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Industrial Chemistry

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Industrial Chemistry	FCBS0402	Theory + Practice	3	Nil

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cemenas well as dyes, oils, soaps

- *Introduce the students to industrial processing principles as applicable to chemical and allied industries.*
- *Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.*
- *Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.*

Course outcome

- *Appreciate better their future roles as chemists in Industrial establishments*
- *Be able to explain the origin of raw materials used in the chemical and allied industries*
- *Have a good understanding of how chemical raw materials are processed into finished products.*
- *Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.*

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

- Preparation of soap by saponification

- Determination of the properties different type of soap
 1. pH test
 2. Foam test
- Hard water test
- Determination of iodine number of oil
- Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline
- Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores. **Practice:**

- Estimation of Cu in copper ore
- Determination of Fe as ferrous iron in an ore sample
- Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

- Estimation of calcium in Portland cement
- Cement hydration and pH evaluation during curing
- To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Applied Engineering Materials

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Applied Engineering Materials	FCBS0403	Theory + Practice	3	Nil

Course Objective

- To understand the importance of the chemical approach to nanomaterials
- To study the preparation, analysis and applications of metal nanoparticles
- To develop an understanding of conjugated polymers and their applications
- To understand how polymer composition and architecture imparts unique properties and behavior
- To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials □ Know the application of Nanotechnology and nanomaterials

Evaluation System

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

- Synthesis of Ag, Au nano particles by wet chemical methods. □ Synthesis of ZnO Nanoparticles by Precipitation Method □ Synthesis of Cu nano particles Sonochemical method.
- Synthesis of Fe nano particles Co-precipitation method.
- Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

- Synthesis of Thiokol Rubber
- Synthesis of a Rubber Ball from Rubber Latex
- Synthesis of Polystyrene (PS)
- Synthesis of Polymethyl Methacrylate (PMMA) □ Synthesis of Nylon-6:6.
- Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites" refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

- Synthesis of bio composite materials by using jute fibres and wood fibres

Electricity and Magnetism

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Electricity and Magnetism	FCBS0404	Theory + Practice	4	Nil

Course Objective

- To understand electric circuit components and their use.
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices. Understanding magnetic properties of matter and performing experiments to realize magnetism.

Course outcome

- Realizing the importance and use of electrical components in a circuit.
- Learning how to do different connections and their purpose.
- Understanding magnetism of matter and its applications

Evaluation Criteria

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Practice I

Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection,

Kirchhoff's laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.

2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Foster's Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.
3. To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
4. To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis. Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

2. To study the induced e.m.f. as a function of the velocity of the magnet.
3. Measurement of field strength B and its variation in a solenoid.
4. Determination of μ_r ratio.

Text Book:

1. *Electricity and Magnetism* By K. K. Tiwari, S. Chand Publishing References:
2. *Electricity and Magnetism*, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan

4. *Electricity and Magnetism* by - D. C. Tayal, Himalaya Publishing, 2009.

Basic Mechanics and Properties of Matter

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Basic Mechanics and Properties of Matter	FCBS0405	Theory + Practice	4	Nil

Course Objective

- To give the students overall idea about material properties and also hands on experience to measure them.
- To make them realize the applications of material properties.
- To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.
- Encouraging them to build simple models to explain the mechanical properties. **Theory:**

Course outcome

- To understand material properties and perform experiments on them.
- To understand the applications of material properties in real life.
- To be able to make small models for explain few mechanical properties.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder,

bending of beams, Vibration of loaded cantilever.

Lab:

1. Young's modulus by single/double cantilever
2. Young's modulus by Searle's method
3. Rigidity modulus using Barton's apparatus
4. Poisson's ratio

Practice II Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseuille's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface. **Lab:**

1. Viscosity by Stokes method

2. Viscosity by Poiseuille's method
3. Metacentric height of floating body
4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Text Book:

1. Elements of Properties of Matter, Dec 2010 by D.S. Mathur, S.Chand (G/L) & Company Ltd Reference Books:

- 2. Engineering Mechanics Statics and Dynamics by A. K. Tayal, Umesh Publications.*

Optics and Optics Fibre

Course Name	Code	Type of course	T-P-PJ (Credit)	Prerequisite
Optics and Optics Fibre	FCBS0406	Theory + Practice	4	Nil

Course Objective

To understand optical phenomena.

- *To understand different light sources and their use*
- *Understand designing of microscope and artificial light sources*
- *Understanding optical fiber and its applications*

Course outcome

- *Students should understand optical phenomena.*
- *Students should learn about different light sources and their use*
- *Students should be able to understand optical fiber principle, operations and its applications.*

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Practice II

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

Practice-III

Theory: Optical properties—scattering, refraction, reflection, transmission & absorption.

Introduction, principle of Laser, stimulated and spontaneous emission, Coherence (temporal and spatial) Ruby Laser, Application of Lasers.

Optical Fibres: Introduction, numerical aperture, step index and graded index fibres, attenuation & dispersion mechanism in optical fibers (Qualitative only), application of optical fibres, optical communication (block diagram only)

Lab:

1. Measurement of attenuation and bending losses of an optical fibre.
2. Measurement of numerical aperture of a optical fibre
3. Study of spatial and temporal coherence of LASER
4. Making of a light guide

Text Book:

1. *A Text Book of Optics by M.N. Avadhanulu, Brij Lal, N. Subrahmanyam, S Chand; 23rd Rev. Edn.*

References:

2. *Optics by Ajoy Ghatak, McGraw Hill Education; 5 edition*

SYLLABUS
FCHU1201 FOUNDATIONS OF ENGLISH COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVES

- To develop vocabulary and grammar knowledge
- To develop reading comprehension skills

COURSE OUTCOMES

- Development of academic and sub-technical vocabulary
- Enhancement of basic language skills, i.e., listening, speaking, reading and writing
- Development of grammatical competence
- Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of learning communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

- Animal Farm
- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.
MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

FCHU1202 COMMUNICATIVE PRACTICE LABORATORY –I

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

- To expose the students to a variety of self- instructional, learner- friendly modes of language learning.
- To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.
- To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

- Ability to communicate fluently in different business situation
- Effective oral and written communication
- Appropriate word usage with correct pronunciation
- Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in

written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

- Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade
- Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.
- Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

- Elimination of common errors
- Editing passages
- Word power A-Z: Easy and quick techniques
- Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

- Pronunciation Guidelines: Consonants and Vowels
- Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences
- Speaking Techniques: Using correct stress patterns, developing voice quality
- Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHU1203 BUSINESS COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVES

- The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.
- This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

- Understand the differences between general communication and business communication
- Development of basic language skills, i.e., listening, speaking, reading and writing
- Effective participation in group discussion and job interviews

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

- General Communication and Business Communication
- Communication in Organizational Settings: Patterns of Communication in the Business World – Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal
- Introduction to Cross Cultural Communication
- Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

- Importance of Developing Reading Skills
- Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making
- Importance of Writing Skills and Principles of Effective Writing
- Writing Process: Pre-writing, Drafting and Re-Writing
- Paragraph Writing
- Summaries and Abstracts
- Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
- Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

- Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies
- Common forms of Oral Communication in the Business World:
- Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes
- Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality
- Making an Oral Presentation: Planning, Preparing and Delivery
- Facing an Interview: Preparation, Types of Interview, Do's and Don'ts
- Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204COMMUNICATIVE PRACTICE LABORATORY –II

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

- To master Study Skills
- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

- Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.
- Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

- Situational Dialogues / Role Play: Organization Communication
- Oral Presentations- Prepared and Extempore
- 'Just a minute' Sessions (JAM)
- Debates
- Mock Meetings
- Cracking Job Interviews: Mock Sessions
- Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

- Review Presentation (Movie/ Article/ Book)
- Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

- Short Paragraphs on current general and technical topics
- Creative Writing: Idea Generation
- Business Letters, Email Messages, Project Writing
- Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205CORPORATE READINESS LABORATORY

Pre - requisites	Course Type	Credits
Nil	Workshop	2

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

- Understand the process of communication
- View communication from the perspective of each stakeholder
- Plan and manage communication difficulties
- Learn exactly how, when and what of communication

COURSE OUTCOMES

- Understanding the convention of project report
- Understanding the process of data collection and documentation
- Preparation and presentation of project report
- Preparation for various academic and professional needs

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes (E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206IT ENABLED COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- Speak confidently and fluently, in both formal and informal contexts.
- Write clearly, correctly and cogently
- Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence
- Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

- Pre-Course Assessment
- Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...
- Do you know?
- Introduction to IT Enabled Communication
- Communication in the New Age Context and Demand for Communication Interventions
(This module includes pre-course assessments and presentations)

MODULE II: BLOG DESIGNING & POSTING

- Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing
- Photoshop for Image, Editing and graphic design
(This module will be driven through methods like self-learning, learning by doing, and workshop)

MODULE III: TECHNOLOGY AND COMMUNICATION

- Tools for Business Correspondence and web-based exercises
- Creating and delivering high impact presentations with Slides and other Visuals
- Video Documentaries
- Video Conferencing Sites, Skype, Team Viewer
(This module will be facilitated through presentations, use of tools and technology)

TEXT BOOKS

- Shirley Taylor, Model Business Letters (MBL) and Other Business Documents, 5th Edition. Krizen. Merrier.Logan. Williams, Business Communication, and Thomson (BC: Krizen).

FCHU1207CAREER COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

OBJECTIVES

- Prepare the graduates to acquire their dream jobs.
- Build their mindset with right attitude, self-awareness, pro-activeness.
- Build confidence, and enhance their communication skills to handle all situations.

OUTCOMES

- Build the confidence of students
- Trigger the thinking and analyzing ability of the learners to solve problems.
- Readiness to work on their dream jobs.

List of Experiments

LAB 1: Introduction to Career Communication

LAB 2: Presentation on Corporate House

- Create an awareness and exposure on corporate life and culture.
- Learners get exposure to corporate life and culture.

LAB 3: Corporate Quiz

LAB 4: Telephonic Conversation

- Learners are equipped with basic knowledge and skill practice for improved telephonic communication.

LAB 5: Email Writing

- Learn the characteristics of successful e- mail messages.
- Create an effective e-mail message.

LAB 6: Mini Test on Email Writing

LAB 7: Learning Etiquette

- Understand what etiquette is & why it's important.
- Provide practical techniques and generally-accepted professional and ethical conduct or behaviour that will help create a favourable impression in social and professional life.
- Practice proper manners like greeting, saying 'please', 'thank you'.
- Appear professional and well groomed.

LAB 8 :Identifying Traits for Professional and Interpersonal Success

- Understand the importance of effective interpersonal communication and traits for professional success.
- Explore the significance of Active Listening, Problem Solving, Respect, Decision Making, Empathy, Co-operation and Non-verbal communication for professional success.

LAB 9: Job-Application -Cover Letter

- Develop the career writing skills of the learners with special emphasis on their interest in specific job positions, their strengths and what values they will bring to the organisation.

LAB 10: Job-Applications – CV

- Produce a polished and impressive CV that can be tailored to each specific job application.
- Develop the career writing skills of the learners with special emphasis on Statement of Purpose.
- Provide with tools to showcase Unique Selling Points for the specified job description.

LAB 11: Participating in Group Discussion (GD)

- Mock Interview on basic questions

LAB 12: Facing an Interview

EVALUATION SYSTEM (CONTINUOUS INTERNAL ASSESSMENT)

Methods	Presentation	Corporate Quiz	Telephonic Conversation	Email Writing	CV	GD	Interview	% of Marks 100(Best 5)

6	Team Building and Teamwork	Activity Based Learning	Coin Logo Time Required: 5-10 minutes Begin by asking all participants to empty their pockets, purses, and wallets of any coins they may have and place them on the table in front of them. If someone doesn't have any coins or only has very few, others in the room can share their coins with them. Instruct each person to create their own personal logo using the coins in front of them in just one minute. Other materials they may have on them, such	0	1	1	0

			as pens, notebooks, wallets, etc. can also be used in creation of the logo. If there is a particularly large group, people can be broken up into teams of 3-6 people and instructed to create a logo that represents them as a team or the whole room can gather to use the coins to create a logo for the organization/group/department/etc. Each solitary participant can explain their logo to the group or if the room was split into groups, the leader can have each group discuss what led to the team logo and what it says about them. Not only does this activity promote self and mutual awareness, but it also enables participants to get to know each other on a more personal level. http://www.livestrong.com/article/219775-team-building-exercises-for-small-groups/

	Management	Activity	<p>At the beginning of session ask people to close their eyes for 30 seconds and after that to open it. Nobody can watch the clock and don't measure the time. Ask of participants to open their eyes after what they believe has been 30 seconds.</p> <p>Of course, they all open them at different times. Afterwards, we talk about our understanding of time. Even though everyone has an equal (24 hours a day or 30 seconds for exercise), in fact, we experience it and use it in different ways. Some of us experienced it as a short period, other as a long. This always works as a good opener.</p> <p>2) Cover all the clocks in the room, then ask participants to remove their wrist watches and stand up. Instruct them to sit down when they think 1 minute has elapsed after you shout "Start" to begin the countdown. You will be surprised with the results. Just enjoy the fun that follows this activity</p>

FCHU1209 SEMINAR AND TECHNICAL WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

Seminar allows students the opportunity to put all of information together. The students are required to prepare technical reports including oral presentations supported by written technical papers. Seminar is designed to assist students in preparing for their career.

COURSE OBJECTIVES

- Understand the requirements and ethics of technical writing in the 21st Century workplace.

- Work professionally, individually and in a team to produce effective technical documents incorporating verbal, visual, and multimedia materials as necessary.
- Communicate effectively by analyzing audience, organizing documents, writing clearly and precisely with no grammar errors and presenting the document with skillful design.
- Locate, evaluate, and incorporate pertinent information.
- Write clear, intelligent technical reports
- Make seminar presentations

COURSE OUTCOMES

- Understand how technical communication is used in the workplace.
- Understand and use the principles of design in business and technical communication.
- Apply useful descriptive language to your technical documents.
- Students will gain experience in preparing a technical report including an oral presentation supported by a written technical paper.

MODULE-I: TECHNICAL COMMUNICATION ESSENTIALS

COURSE OUTCOMES

- Describe the writing process most useful in today's technical writing environment.
- Analyze an audience and consider appropriate writing situations to meet the audience's needs.
- Understand the ethics of the workplace and apply those ethics to their technical and business writing.

OUTLINE: Communicating in the Workplace, Technical Writing Process Today, Readers and Contexts of Use, Ethics in the Technical Workplace

MODULE- II: DOCUMENT DESIGN

COURSE OUTCOMES

- Create and use graphics that complement your business and technical communication.

OUTLINE: Designing Documents and Interfaces, Creating and Using Graphics

MODULE-III: TECHNICAL COMMUNICATION STRATEGIES AND RESEARCHED REPORT WRITING

COURSE OUTCOMES

- Define terms clearly in technical documents.
- Explain instructions and processes clearly.
- Write clear proposals for business and technical situations.
- Research and manage information.
- Write an analytical report.

OUTLINE: Researching and Managing Information, Organizing and Drafting, Technical Definitions, Technical Descriptions, Instructions and Documentation, Proposals, Analytical Reports

MODULE-IV: SEMINAR PRESENTATION

COURSE OUTCOME

- Students will not only learn from the experience gained in preparing and presenting their seminar, but will have the opportunity to observe and participate in the seminar given by their classmates.

OUTLINE: Technical Report, Seminar Presentation

(Planning, Preparing, Organizing and Seminar Presentation are the 4 stages of this module)

FCHU1211 CREATIVE WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The aim of the course is to prepare students for careers in a workplace that is information-rich and that increasingly values communication skills and the ability to think creatively and critically. The class time will be devoted to writing workshop, innovation exercises, and the critical appreciation of write-ups. The Creative Writing course will focus on

- Reading
- Writing Creatively
- Presentations

Thus the main objective is to breed a culture of learning where students learn a variety of approaches to creative writing in a cooperative learning environment.

COURSE OBJECTIVES

- Develop thinking skills
- Acquire basic skills and techniques to develop a suitable practice of creative writing in context
- Use a constructive approach to critique his/her own work, as well as work by his/her peers
- Organize, prepare and present spoken presentations clearly and expressively

COURSE OUTCOMES

Upon the Completion of the course, a student will

- Create Blog/ Online Presence
- Submit works for publication
- Compose a variety of written responses for different purposes and audiences
- Collaborate by sharing ideas, examples and insights, productively and respectfully in informal conversations and discussions.
- Students will put into practice the learning into the personal, professional and technical sphere.

MODULE -I: WRITING CREATIVELY (12hrs)

Foundational activities

- Introduction to Class Standards
(Workshops, peer conferencing, blogging, reading outside the classroom)
- Collaborative Creation of Classroom Philosophy

- Basics of Creative Writing

Different forms of expression

- Memoirs/Writing the Personal Narratives
- Situational Writing/ Writing for the Target Audience
- Dialogues, Essay, Poetry Slam
- Script Writing
- Writing for Blogs
- Cooking Up Interview Stories

Writing from visuals

- Pictures, Graphs, Images, Diagrams and Designs, Cartoons
- Brochures and Newsletters

(This module will be facilitated through creative writing and speaking activities)

MODULE-II: READING AND CRITICAL APPRECIATION (8hrs)

- Book

(Independent Study: Two Master Piece)

- Article
- Movie

(Student Work: Free Choice, Discussion and Oral/ Written Critiquing, Editing/ Revision

- Publication/ Sharing, Short Report on Two Authors

(This module will be facilitated through reading activities and critical appreciation)

MODULE-III: POWER OF LATERAL THINKING TO CREATE NEW IDEAS (7hrs)

- General Concepts: Creativity and Lateral Thinking
- Using the Technique of Lateral Thinking in Writing
- Idea Generation Games and Activities
- Six Thinking Hats

(This module will be facilitated through idea generation activities and presentation)

FCHU1212ENGLISH FOR COMPETITION (GRE/GMAT/TOEFL/IELTS)

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVE

- Familiarize the learners with the pattern of the TOEFL/GMAT/IELTS/GRE examination and improve overall English skills to face the competitive exams confidently.

COURSE OUTCOME

- Learners understand the pattern of the TOEFL, IELTS and GRE examination and apply test-taking strategies in exams.

A student is required to take up five laboratory tests of 100 marks.

LIST OF EXPERIMENTS

1: TOEFL Listening

Developing Listening Comprehension by taking notes after the short recorded conversations.

2: TOEFL Speaking

Developing test taking strategies to face speaking test of TOEFL exam through role play and Mock Interview.

3: TOEFL Reading

Practicing and improving student's confidence in completing the various sections of reading test in TOEFL examination.

4: TOEFL Writing

Learning and enhancing writing skills required for TOEFL writing test.

5: IELTS Listening

Practicing the listening comprehension of the students and handling questions while listening the recorded conversations.

6: IELTS Speaking

Developing test taking strategies to face speaking test of IELTS examination through role plays and mock interviews.

7: IELTS Writing

Summarizing or explaining information presented in a graph, chart, table or diagram.

8: IELTS Reading

Understanding and interpreting the text in its particular use of language, ideas and style.

9: GRE Reading Comprehension

Taking GRE Reading Comprehension examination with confidence utilizing the methods and strategies.

10: GRE SENTENCE COMPLETION

Developing sentence completion strategies through logical thinking.

11: GRE SENTENCE EQUIVALENCE

Learning and developing strategies to deal with sentence equivalence questions.

12: GRE VOCABULARY

Understanding and using appropriate choice of vocabulary in GRE vocabulary section.

13. GRE Vocabulary & Verbal-Sentence Corrections

14. GMAT Verbal-Critical Reasoning

15. GMAT Verbal- Reading Comprehension

(The entire lab will be facilitated through online quizzes, and practice sets available in language lab))

FCHU1213BE A CONTRIBUTOR

Pre - requisites	Course Type	Credits
Nil	Workshop	2

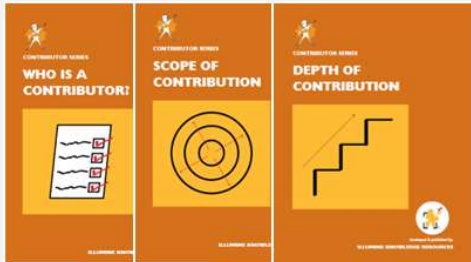

PROGRAM OBJECTIVES:

1. Build consciousness of ‘contributor thinking’ in students systematically by exposing them to the essential building blocks of contributor thinking. [The 4 sets of the program represent the 4 fundamental building block of the program]
2. Through projects expose students to the ‘realness’ of contributor way of thinking in the world around them.

SESSION PLAN:

Semester 1 of program delivery	SET 1: CONTRIBUTOR BASICS	
	UNIT 1: Who is a Contributor?	~5hrs
	UNIT 2: Scope of Contribution (Self, Organization, Society)	~5hrs
	UNIT 3: Depth of Contribution (From ‘opportunities to contribute’ to a ‘life of Purpose’)	~5hrs
	SET 2: BASIC AXIOMS OF LIFE	
	UNIT 4: The Contributor’s Response (From ‘victim’ to ‘creator of my destiny’)	~5hrs
	UNIT 5: The Contributor’s Identity (From ‘static identities’ to ‘dynamic identities’)	~5hrs
Semester 2 of program delivery	UNIT 6: The Contributor’s Vision of Success & Career (From an ‘acquisitive vision’ to a ‘contributive vision’)	
	SET 3: CONTRIBUTOR EFFECTIVENESS	
	UNIT 7: Engage Deeply	~5hrs
	UNIT 8: Design Solutions	~5hrs
	UNIT 9: Create Value	~5hrs
	SET 4: CONTRIBUTOR CONDUCT	
	UNIT 10: Thinking Win-win (Enlightened Self-Interest)	~5hrs
	UNIT 11: Thinking Human-impact (Imaginative Sympathy)	~5hrs
UNIT 12: Building Trust-surplus (Trust Behaviors)	~5hrs	
Full program duration		~60hrs

1.0 | Faculty can utilise the 5 hours of classroom as follows –

<p>i. The Class Engagement Books (for each unit)</p>  <p>Students fill in the book, in the class, while going through a class engagement</p>	
<p>ii. The Program App (Channel Illumine App)</p>  <p>The app is used along with the book to create a rich learning experience</p> <p>Participants scan the QR-code given in the book to open the relevant app unit.</p>	<p>~ 4hrs for Book and App engagement.</p>
<p>iii. Projects (for each unit)</p> <p>Students can do 1-2 projects in each semester. The project is done out of class. In-class time is only for student presentation.</p>	<p>~1hr for project presentations</p>

Source: This document is an abridged version of ‘Overview of Become a Contributor Program’ given in your Facilitator Guide. It is strongly recommended that faculty refer the detailed Facilitator Guide for more details.

EVALUATION PARAMETERS (Total-100 Marks)

A] ENGAGEMENT IN CLASS		40 marks
1	Regular attendance across classes	10 marks
2	Quality of class participation (involvement in discussions, asking thoughtful questions, sharing examples, etc.)	15 marks
3	In-class assignments <ul style="list-style-type: none"> • Students can be asked to submit their filled books for specific in-class assignments (Illumine can provide a list of which class engagements in each book, can be checked for this) • Any 4 books (one from each set), can be considered for marking. 	15 marks
B] PROJECT WORK		30 marks
<ul style="list-style-type: none"> • Project assignments are provided by Illumine for the course. • Mark students on their best 3, from these project assignments. 		
1	Completion & submission of assigned projects, with basic quality	10 marks
2	Design and execution of the project (Methodology of project work) (students present how they went about the project – their approach, method, documentation of research work)	10 marks
3	Project presentation & project output uploads (assessed against the project goal)	10 marks
C] PRE & POST TEST		20 marks
1	Completion of pre-test	5 marks
2	Completion of post-test	5 marks
3	Improvement (sent by Illumine, based on test results)	10 marks
D] APP USAGE (sent by Illumine, based on app usage pattern)		10 marks

FCHU0213 LIFE SKILLS DEVELOPMENT-I [Aptitude & Reasoning]

Pre - requisites	Course Type	Credits
Nil	Practice	2

OBJECTIVES

- To provide ample opportunities for practice.
- To make the students solve each & every question within 30-40 seconds.
- To make the students visit all the questions in any exam.
- To make them learn the art of skipping questions which require more time.
- To make the students eligible to score 70% or more in each written tests.

OUTCOMES

- Quantitative Ability skills will be increased.
- Calculation & Logical thinking skills will be increased.
- Time spent per questions will be minimized.
- Students will be able to score minimum of 70%.
- Improved skills to qualify all competitive exams like Campus Written tests, Banking Exams, SSC Exams, Railway Exams, GATE Exams.

FCMG0114 ECONOMICS

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

In today's dynamic economic environment, effective managerial decision making requires timely and efficient use of information. The basic purpose of this course is to provide students with a basic understanding of the economic principles, methodologies and analytical tools that can be used in business decision making problems. It provides an understanding of the economic environment and its impact on strategy formulation. The course also focuses on the impact of economic policies on managerial decision-making by providing an understanding of fiscal policy, and national and global economic issues affecting business.

The language of science (and all analytical thinking) is mathematics. Since economics is a social science, use of some mathematical tools, basically the constrained and un-constrained optimization techniques will help in measuring and solving the basic economic problems and thus improves decision-making. It becomes difficult and totally un-practicable to solve business (economic) problems logically and systematically without use of mathematics. The basic objective is to solve problems mathematically and interpret the results economically.

Module-1: Micro Economics

Introduction to economics: Scarcity, Choice and Efficiency, Fundamental issues of what, how and for whom to produce to make the best use of economics. Demand for a commodity: Law of demand, Demand schedule and demand curve, Individual and market demand, Change in demand, Consumer behavior: Analysing law of demand through Marshallian utility analysis, Indifference curve technique and Consumer Surplus.

Elasticity of demand: Price Elasticity of demand: Estimation, Types, Elasticity and revenue, Factors affecting price elasticity of demand. Income elasticity, Cross elasticity, Uses of different concepts of elasticity in business decisions.

Analysis of Supply: Law of Supply, Supply schedule and supply curve, Change in supply, Price elasticity of supply, Equilibrium of demand and supply: Equilibrium with demand and supply curves, Effect of a shift of demand and supply curves.

Production Function: Production function with one variable input, Production function with two variable inputs, optimal combination of inputs, Returns to scale

Cost Theory: Types of costs, Production and cost, Short-run cost functions, Long-run cost functions, Economies of scale and scope, Cost-Volume-profit Analysis

Market: Meaning, types and characteristics of different market structure (Perfect competition, Monopoly, Monopolistic competition and Oligopoly)

Module: 2: Macro Economics

National Income Accounting: Circular flow of Income, National Income Concept, Eight variants of national product aggregates, Measurement (Income, Value Added and Expenditure), Real and Nominal GNP, Difficulties in measuring the national income, Uses of National income statistics, Money and Inflation: Demand for and supply of money. Causes and consequences of Inflation. Commercial and central banking: Role and functions of commercial banks and R.B.I., Monetary Policy and Fiscal policy: Objectives and Instruments, Balance of Payment (BoP): Meaning, BoP Account, Disequilibrium in BoP, Measures to correct disequilibrium in BoP, Foreign Exchange: Floating Exchange Rate and Fixed Exchange Rates

FCMG0102 ACCOUNTING AND FINANCE

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- To familiarize the students with basic terms of accounting, accounting principles, concepts and convention.
- To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis:

Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity

Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
 Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. Accounting for Management—Ashok Sehgal, Taxxman
2. Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI
3. Khan & Jain – Management Accounting, TMH.
4. Horngren ,Datar, Foster- Cost Accounting, Pearson.
5. Financial Accounting, Jain/Narang/Agrawal, Kalyani.
6. Basic Financial Accounting for Management, Shah, Oxford.
7. Financial Management by I. M. Pandey
8. Financial Management – Theory and Practice by Chandra
9. Financial Management – Text and Problems by Khan & Jain

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content

Unit: I

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

Unit: II

Individual System: Learning, Perception, Personality and Motivation,

Unit: III

Social System: Group Dynamics and Leadership.

Books Recommended:

1. Robins & Sanghii; Organizational Behavior, Pearson
2. Luthans ,F; Organizational Behavior-TMH
3. Udai Pareek ; Understanding Organizational Behavior, Oxford
4. Prasad,L.M; Organization behavior, S.Chand.
5. K. Aswathappa; Organization behaviour
6. Prasad.L.M ; Principles of Management,

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- They can use specialized knowledge in Operations Management to solve business processes.
- They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - "Operations Management", TMH
- 2) Krajewski, Ritzman, Kansal, - "Operations Management", Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - "Production and Operations Management", PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - "Operations Management", Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - "Production and Operations Management", HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- The students will understand the various marketing approach in today's competitive scenario.
- The students will learn the application of various marketing tools for solving business problems
- The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL), Porter's five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP); What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning, Effective positioning strategies, Positioning of brands and repositioning, introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication
2. Marketing Mangement: Fourth edition- RajanSaxena
3. Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA

FCMG0108 INTRODUCTION TO RESEARCH

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objectives:

- To introduce the students about research, methods and techniques.
- To understand the process and apply in other areas.

Course outcome:

- Students will be able to understand the process of doing a research.
- Students will be able to write a research report.

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, Sampling: Census and sample survey, different types of sample design, Measurement: Measurement and scaling techniques, Methods of Data Collections: Experimentation, observation, interview, Survey, case study; Data Analysis and Interpretation: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

1. Ranjit Kumar, 2011, Research Methodology: A Step by Step Guide, Sage South Asia Publication.

FCMG0113 INDIAN SOCIETY AND CULTURE

Pre – requisites	Course Type	Credits
-------------------------	--------------------	----------------

Nil	Theory	2
-----	--------	---

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswatiand Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. Indian Society and Culture: Continuity and Change – by N. Hasnain
2. Social and Cultural History of India – O.M. Prakash
3. Makers of Modern India – RamachandraGuha

Introduction to Human Rights

Course	Code	Type of course	Credit
--------	------	----------------	--------

Introduction to Human Rights	FCMG1203	Workshop	2
------------------------------	----------	----------	---

Objective

- The course is an introduction to human rights. Human beings are rational beings. They by virtue of their being human possess certain basic and inalienable rights which are commonly known as human rights. Human Rights are defined as all those rights which are essential for the protection and maintenance of dignity of individuals and create conditions in which every human being can develop his or her personality to the fullest extent. The purpose of this course is for students to gain a holistic view of human rights

Course outcome

- Develop an understanding of human rights, its history, characteristics and types,
- Gain a nuanced understanding of protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law

Course outline

Module I	Introduction to Human Rights
Topic	Meaning and Definition, History, Principles, Characteristics, Types
Pedagogy	Example: lecture (ppt), videos, etc
Lab/Activity	
Assignment/practice	
No. of hours	6
Reference materials: Book/e-content/ online source	

Module 2	Human Rights Law
Topic	Protection, violation and the legal framework for their protection - International Human Rights Law, Council of Human Rights, Universal Declaration of Human Rights, Legal Effects of the Declaration, International Humanitarian Law
Pedagogy	Example: lecture, videos, Case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	8
Reference materials: Book/e-content/ online source	

Module 3	Conflicts of Rights: Challenges of the past and challenges for the future
Topic	Persistence of discrimination, poverty, and inequality in the region, efforts in the search for justice for past violations, continued struggle for human rights and accountability

Pedagogy	Example: lecture, videos, case studies, etc
Lab/Activity	
Assignment/practice	
No. of hours	16
Reference materials: Book/e-content/ online source

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module 1				
Meaning and Definitions of Human Rights	2	Lecture		Lecture Notes and reference in books, online resources
History of Human Rights?	2	Lecture		Lecture Notes and reference in books, online resources
Principles, Characteristics and Types	2	Lecture		Lecture Notes and reference in books, online resources
Module 2				
Introduction - Protection, violation and the legal framework for the protection of Human Rights	2	Lecture		Lecture Notes and Articles, online resources
International Human Rights Law	2	Lecture		Lecture Notes and Articles, online resources
Council of Human Rights and Universal Declaration of Human Rights	1	Lecture		Lecture Notes and Articles, online resources
Legal Effects of the Universal Declaration of Human Rights	1	Lecture		Lecture Notes and Articles, online resources
International Humanitarian Law	2	Lecture		Lecture Notes and Articles, online resources
Module 3				
Persistence of discrimination, poverty, and inequality in the region	2	Lecture		Handouts and online resources
Efforts in the search for justice for past violations	2	Lecture		Handouts and online resources
Continued struggle for human rights and accountability	2	Lecture		Handouts and online resources
Project work and presentations	8 hours			

Introduction to Ethics

Course	Code	Type of course	Credit
Introduction to Ethics	FCMG1204	Workshop	2

Course Objective

- The course is an introduction to Ethics. This course will introduce to the meaning of ethics and the historical development – utilitarianism, ethical relativism and virtue ethics. Will also examine some current ethical issues. Questions which will be considered are: what is the good life? Do we have a moral duty to act in certain ways? Are there such things as natural human rights? Are some values more compelling than

Course outcome

- Demonstrate knowledge of important ethical systems
- Demonstrate their respect of different ethical perspectives
- Critique some aspects of an ethical position
- Clearly formulate their ethical position on an issue and develop arguments based on sound inferences and clear premises (through project)

Course outline

Module I	Introduction to Ethics
Topic	What is the study of ethics, Introduction to Indian and Western Ethics
Pedagogy	lecture (ppt),
Lab/Activity	
Assignment/practice	
No. of hours	6
Reference materials: Book/e-content/ online source	

Module 2	Different Ethical systems and Perspectives
Topic	Ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics
Pedagogy	lecture, Case studies, small group work
Lab/Activity	
Assignment/practice	
No. of hours	8
Reference materials: Book/e-content/ online source	

Module 3	Critique of various aspects of ethical positions
Topic	Critique an ethical issue/ problem and formulate own ethical position on the issue/ problem
Pedagogy	lecture, small group work
Lab/Activity	
Assignment/practice	
No. of hours	16
Reference materials: Book/e-content/ online source

FCMG1201 DISASTER MANAGEMENT

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> To provide students an exposure to disasters, their significance, types & Comprehensive understanding on the concurrence of Disasters and its management. To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention, risk reduction and the basic understanding of the research

<p>methodology for risk reduction measures.</p> <ul style="list-style-type: none"> • Equipped with knowledge, concepts, and principles, skills pertaining to Planning, Organizing, Decision-making and Problem solving methods for Disaster Management. • The course also facilitates students to globally share their views, ideas and information pertaining to Disaster Management on a common platform. • To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity. 			
GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT			
A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments, presentations and written test.			
COURSE CONTENT			
Module - 1			
UNIT I – Introduction to Disaster Management (2hrs)			
Session	Topic	Coverage	Reading/Reference
4hrs	Disaster & Emergencies : Concept & Fundamentals of Disaster Management	<ul style="list-style-type: none"> • Introduction/ Brain storming/ Group formation • History of Disasters • Concepts and Definitions • Hazard, Risk, Vulnerability, Capacity, Disaster & Equations of Disaster Management 	
		<ul style="list-style-type: none"> • Types & Classification of Disasters • Factors responsible for disasters like flood, cyclone and Earthquake. 	
UNIT II – Effect and Impact of Disaster (4 Hrs)			
1hr	Effect and Impacts of Disasters (Group work)	<ul style="list-style-type: none"> • Disasters Impact – Social, Economic, Political, Environmental, Health, Psychosocial, etc. • Differential impacts- in terms of Caste, Class, Gender, Age, Location, Disability. 	Disaster Mgmt. and India: Responding Internally and Simultaneously in Neighboring Countries Kailash Gupta, BE (Elec.), MBA(IIMA)
1 hr	Disaster vs Development	<ul style="list-style-type: none"> • Disaster is the causes of destruction • Disaster leads to development 	
2 hrs	Global warming and climate change	<ul style="list-style-type: none"> • Concept and understanding of 	

		<p>global warming and climate change</p> <ul style="list-style-type: none"> • Causes and factors • Remedial measures 	
Module – II		•	
UNIT III – Disaster Risk Management - (6 hours)			
2 hrs	<p>Community Managed Disaster Risk Reduction And Village Contingency Plan (Group work)</p> <p>Role of Task force/ ODRAF/ NDRF for DRR at community level.</p>	<ul style="list-style-type: none"> • Hazard analysis and assessment • Vulnerability analysis • Resource capability assessment • Mapping & Seasonality Calendar • Structural and Non Structural assessment. • Task forces with various roles for DRR. 	<p>CBDRM for Local Authorities: PARTICIPANT'S WORKBOOK – adpc www.adpc.net</p>
2 hours	Rapid Need Assessment Pre and Post Disaster (Group work and Practical demo)	<ul style="list-style-type: none"> • Meaning and Importance • Rapid Need Assessment in emergency and its significance • Process and Methods 	
2 hrs	Stress Management	<ul style="list-style-type: none"> • Causes and consequences of Stress • What are the best ways to handle pressure • Psychosocial Support 	
UNIT IV – Disaster Management (8 hrs)			
2 hrs	Disaster Management Cycle	<ul style="list-style-type: none"> • Disaster Management Cycle • Phases of Disasters • Prevention, Mitigation Preparedness, Warning, Response, Rehabilitation, Reconstruction 	
2 hrs	Fire safety (Practical)	• Practical	
2 hours	First Aid & Driving Learning (Theory and Practical)	<ul style="list-style-type: none"> • ABCD of First Aid • Dressing and Bandages Practical session 	

		<ul style="list-style-type: none"> Emerging need and importance of learning driving 	
2hrs	Building Rescue operation or Demonstration of ODRAF/NDRAF rescue materials	<ul style="list-style-type: none"> Practical 	
Module – III		•	
UNIT V – Humanitarian Charter and Minimum Standards in Humanitarian Response (4 hrs)			
2hrs	Sphere Standards (Group Work)	<ul style="list-style-type: none"> The Humanitarian Charter Protection Principles Core Standards 	
2hrs	Restoring Life Line Services (WASH) (Group work)	<ul style="list-style-type: none"> Water , Sanitation & Hygiene Promotion Food Security & Nutrition Health Services Health Services Shelter and Settlement 	The Sphere Project , Humanitarian Charter and Minimum Standards In Humanitarian Response
UNIT VI – Disaster Management Projects –(6 hours)			
6hrs	Seminars / Workshop	<ul style="list-style-type: none"> Adapting Climate Change Disaster Resilience Structures and Buildings IT in Disaster Management Inter-relationship between Disasters and Development Urban Disaster Rain Water Harvesting Inclusions – Disability, Aged, Social etc 	
		•	
		•	

- Team of 10 – 15 members would be formed
- Each Team would take up a project work in one of the topics above or related topics with prior approval : 2 Weeks
- Each Team would organize one Seminar / Workshop during the session

FCMG1202MS Excel

Pre – requisites	Course Type	Credits
Nil	Workshop	2

Course Objective	
<p>The aim is to impart knowledge on</p> <ul style="list-style-type: none"> • Indicate the names and functions of the Excel interface components. • Enter and edit data. • Format data and cells. • Construct formulas, including the use of built-in functions, and relative and absolute references. • Create and modify charts. • Preview and print worksheets. • Use the Excel online Help feature. 	
Course Outcome	
<ul style="list-style-type: none"> • Navigate your way around Microsoft Excel • Work with data analysis and presentation • Create and work with formulas and functions, understand and use formula cell • Use Excel for Business application 	
GUIDELINES ON GRADING AND STANDARDS OF ASSESSMENT	
A continuous evaluation system will be adopted to evaluate the students. There will be an individual and group assignments and presentations.	

Course Contents:

Unit 1: Excel Introduction, direct right, The Excel Interface, direct right, Basic Navigation and Editing,

Unit 2: Getting Going, Orientation & efficiency, Editing, Viewing, Spreadsheet Structure, Cell References, Named Ranges, Basic Macros, Design

Unit 3: Administration, Customising Excel, Housekeeping, Connecting Workbooks Documentation, Protecting and Sharing, Google Docs, Excel Troubleshooting, Data Handling, Sorting and Filtering, Controlling User Input, - Working with Dates & Times

Unit 4: U- Working with Text, Lookup and Reference, Logical Functions, Data Analysis, Working with Numbers, Summarising Data, PivotTables 1 - Simple Summaries, PivotTables 2 - Manipulating Data,

Unit 5: PowerPivot: Handling Big Data, Formula Auditing, Advanced Macros and VBA, Modelling, Presentation, Cell Formatting, Number Formatting, Conditional Formatting, Graphs and Charts, Page and print setup

Introduction to Gender

Subject Name	Code	Type of course	Credit
Introduction to Gender	FCMG1205	Workshop	2

Objective

- In the traditional social order women have been assigned a subordinate status in society for centuries. They have been deprived of many social privileges and suffered from discriminations that prevented them from contributing to the development process. They have remained marginalized in society. To remedy the prevailing situation, gender concerns have become increasingly important in the development agenda in the last few decades. In spite of special policies and programmes being implemented, gender based injustice continues to exist and

Course outcome

- Develop an understanding of perspectives on gender and development
- Discuss in detail the gender question in selected development sectors and globalisation
- Familiarise with the different tools and techniques for gender planning, analysis and evaluation in the development sector

The course has three modules covering these three aspects of gender and

Course outline

Module I

UNDERSTANDING AND CONCEPTUALISING GENDER RELATIONS

Module II

GENDER ISSUES IN DEVELOPMENT SECTORS

Module III

GENDER ANALYSIS, TOOLS, TECHNIQUES AND FRAMEWORKS

Quality Control and Reliability Engineering

Course Title	Code	Type of course	T-P-P	Prerequisite
Quality Control and Reliability Engineering	MECC0101	Theory	2-0-0	Nil

Objective

- To introduce the concept of SQC
- To understand process control and acceptance sampling procedure and their application.
- To learn the concept of reliability

Course outcomes

- Upon successful completion of this course, the students can able to apply the concept of SQC in process control for reliable component production

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I: Introduction to Quality Control (3Hrs)

Theory

Definition of Quality, Basic Concept of Quality, Definition of SQC, Benefits and Limitation of SQC, Quality Assurance, Quality Control: Quality Cost-Variation in process Causes of Variation

Module II: Control Charts (5Hrs)

Theory

Theory of Control Chart, Uses of Control Chart, Control Chart for Variables, X Chart, R Chart and σ Chart (Most of used in MINI TAB Software), Process Capability, Process Capability Studies and Simple Problems. Concepts of Six Sigma. Control Chart for Attributes, Control Chart for Non-conforming p- Chart and np- Chart; Control Chart for nonconformities– C and U Charts, (Most of used in MINI TAB Software) State of Control and Process out of Control Identification in Charts, Pattern Study.

Module III : Acceptance Sampling in Quality Control (6 Hrs.)

Theory

Lot by Lot Sampling Types, Probability of Acceptance in Single, Double, Multiple Sampling Techniques, O.C. Curves (Use for MINI TAB 17) , Producer's Risk and Consumer's Risk. AQL, LTPD, AOQL (Most of used in MINI TAB Software). Standard Sampling Plans for AQL and LTPD- uses of Standard Sampling Plans. (Most of used in MINI TAB Software), Single Sampling, Double Sampling.

Module IV: Reliability Concepts (5Hrs)

Theory

Reliability engineering fundamentals; Life testing – Objective – Failure data Analysis, Failure rate; Mortality Curve (Used in MINI TAB Software); Concept of burn in period; Useful life and wear out phase of a system; Mean Time to Failure (MTTF) (Used in MINI TAB Software); and Mean Time to Repair (MTTR) Reliability in terms of Hazard rate and failure density, Conditional Probability and Multiplication Rules.

Module V : Reliability Improvement (3Hrs)

Theory

Techniques, Use of Pareto Analysis, Design for Reliability, Redundancy Unit and Standby Redundancy, Optimization in Reliability.

Module VI: Total Productive Maintenance (TPM) (3Hrs)

Theory

Introduction, Content, Methods and Advantages. Product Design, Product Analysis, Product Development, Product Life Cycles, TQM& TPM.

Module VII :Total Quality Management TQM (5Hrs)

Theory

Introduction, Definitions and Principles of Operation, Tools and Techniques, such as, Quality Circles, 5 S Practice, Total Quality Control (TQC), Total Employee, Involvement (TEI), Problem Solving Process, Quality Function Deployment (QFD), Failure Mode and Effect Analysis (FMEA), Fault Tree Analysis (FTA), Kizen, Poka-Yoke, QC Tools, PDCA Cycle, Quality Improvement Tools, TQM Implementation and Limitations.

Text Books

1. Mahajan, M, Stastical Quality Control, 2016, Dhanpat Rai & Co.
2. Srinath, L S, Reliability Engineering, 2005, East West Press

Reference Books

1. Park, S H, Robust Design for Quality Engineering and Six Sigma, 2009, World Scientific Publisher.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I (3 Hrs)				
Introduction, Definition of Quality, Basic Concept of Quality	1	Lecture		Text Book(TB)1
Definition of SQC, Benefits and Limitation of SQC	1	Lecture		TB-1
Quality Assurance, Quality Control: Quality Cost-Variation in process Causes of Variation	1	Lecture	Assignment 1	TB-1
Module II (5 Hrs)				
Theory of Control Chart- Uses of Control Chart – Control Chart for Variables – X Chart, R Chart and σ Chart	1	Lab practice,(MINI TAB)		Reference Book(RB)1
Process Capability Studies and Simple Problems	1	Lecture		RB-1
Concepts of Six Sigma.	1	Lecture		RB-1
Control Chart for Attributes Control Chart for non-conforming p- Chart and np-Chart; Control Chart for nonconformities– C and U Charts	1	Lab practice,(MINI TAB)		RB-1
State of Control and Process out of Control Identification in Charts, Pattern Study	1	Lab practice,(MINI TAB)	Assignment 2	RB-1
Module III(6 Hrs)				
Lot by Lot Sampling – Types – Probability of Acceptance in Single, Double, Multiple Sampling techniques – O.C. curves	2	Lab practice,(MINI TAB)		RB-1
Producer’s Risk and Consumer’s Risk. AQL, LTPD, AOQL	2	Lab practice,(MINI TAB)		RB-1

Concepts Standard Sampling Plans for AQL	2	Lab practice,(MI NI TAB	Assignment 3	RB-1
Module IV (5 Hrs)				
LTPD- Uses of Standard Sampling Plans. Single Sampling, Double Sampling	1	Lab practice,(MI NI TAB		RB-1
Reliability Concepts: Reliability engineering fundamentals; Life testing – Objective – Failure data Analysis	1	Lecture		TB-1
Mortality Curve; Concept of burn in period; Useful life and wear out phase of a system; Mean Time to Failure (MTTF) and Mean Time to Repair (MTTR)	2	Lab practice,(MI NI TAB		TB-1
Reliability in terms of Hazard rate and failure density, Conditional Probability and Multiplication Rules	1	Lecture	Assignment 4	TB-1
Module V (3 Hrs)				
Reliability Improvements – Techniques- Use of Pareto Analysis	1	Lecture		TB-1
Design for Reliability – Redundancy Unit and Standby Redundancy –	2	Lab practice,(MI NI TAB	Assignment 5	RB-1
Module VI (3 Hrs)				
Introduction to Total Productive Maintenance (TPM): Introduction, Content, Methods and Advantages	1	Lecture		TB-1
Product Design – Product Analysis – Product Development – Product Life Cycles. TOM& TPM	2	Lecture	Assignment 6	TB-1
Module VII (5 Hrs)				
Total Quality Management TQM: Introduction, Definitions and Principles of Operation, Tools and	1	Lecture		RB -1

Techniques, such as, Quality Circles, 5 S Practice, Total Quality Control (TQC),				
Total Employee Involvement (TEI), Problem Solving Process, Quality Function Deployment (QFD), Failure Mode and Effect analysis (FMEA),	2	Lecture		TB-1
Fault Tree Analysis (FTA), Kizen, Poka-Yoke, QC Tools, PDCA Cycle, Quality, Improvement Tools, TQM Implementation and Limitations.	2	Lecture	Assignment 7	TB- 2
Total	30			

Fluid Power Control

Course Title	Course Code	Type of Course	T-P-Pr	Prerequisite
Fluid Power Control	MECC0102	Theory	2-0-0	Nil

Objective

- To impart knowledge to students on fundamentals of hydraulic and pneumatic power and their circuits with industrial applications

Course Outcomes

- Students will be able to identify various elements used in fluid power systems and will be able to deliver fluid power circuit diagrams

- Students will be able to design and test various control circuits using Fluidsim software
- Students will be able to apply the knowledge in PG program related to thermal field.

Evaluation System

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Evaluation	External Theory	60	Written examination
Total Marks		100	

Course Outline

Module I : Hydraulic Power Generating Systems (04 Hours)

Introduction to fluid power system-Hydraulic Fluids- Functions, Types, Properties, Selection & Application; **Power Generating Elements:** Hydraulic Turbines- Classification, Working and application of different turbines such as Pelton Wheel, Reaction turbine, Selection of turbines (No Numerical to be asked in examination) Pumps, Classification, Working of different Pumps such as Gear, Vane, Piston (Axial and Radial), Pump Performance or Characteristics, Pump Selection Factors

Module II : Hydraulic Power Utilizing Elements (03 Hours)

Fluid Power Actuators: Linear Hydraulic Actuators- Types and Construction of Hydraulic Cylinders-Single Acting, Double Acting, Special Cylinders like Tandem, Rod less, Telescopic, Cushioning Mechanism, Hydraulic Motors, Types- Gear, Vane, Piston (Axial & Radial)- Performance of Motors

Module III: Hydraulic Valves and Accessories (05 Hours)

Hydraulic Valves: Directional, Pressure and Flow Control Valves-Types and Applications; **Intensifier:** Applications of Intensifier-Intensifier Circuit; **Servo Systems:** Hydro Mechanical Servo Systems, Electro Hydraulic Servo Systems and Proportional Valves; **Accessories:** Switches, Filters, Seals, Fittings and other Accessories; **Accumulators:** Types and Applications

Module IV: Pneumatic Systems (07 Hours)

Introduction, Comparison with Hydraulic Systems and Electrical Systems, Construction, Operation, Characteristics and Symbols of Pneumatic Components, Air Treatment-Principles and Components; **Fluidics:** Introduction to Fluidic Devices, Simple Circuits, Introduction to Elector Pneumatic Logic Circuits, Ladder Diagrams For Various Fluid Power applications; **Pneumatic Sensors:** Types, Characteristics and Applications

Module V: Fluid Power Circuit (6 Hours)

Hydraulic/Pneumatic circuit: Design of Hydraulic/Pneumatic Circuit For Various Valves, Actuators, Filters, Pumps, Simple Reciprocating, Regenerative, Speed Control(Meter in ,meter Out and Bleed Off),Sequencing, Synchronization, Transverse and Feed, Cascading Circuit (two and Three Cylinders),Automatic Reciprocating, fail Safe Circuit, Counter balance Circuit, Actuator Locking (**Most of topics will be taught through practice in Fluid sim software**)

Module VI: Applications (2 hours)

Industrial Circuits: Riveting Machine, Actuator Locking, Hydraulic Press, Unloading Circuit and Material handling systems

Module VII: Maintenance and Trouble Shooting (3 Hours)

Maintenance and Troubleshooting: Maintenance in fluid Power Systems, Preventive and Break down Maintenance Procedures. Trouble Shooting of Fluid Power Systems -Fault Finding Process, Equipment/Tools Used Causes and Remedies, Safety Aspects Involved

Text Books

1. Oil Hydraulic Systems: Principles and Maintenance by S.R Majumdar, Tata McGraw Hill.
2. Pneumatic Systems: Principles and Maintenance by S.R Majumdar, Tata McGraw Hill.

Reference Books:

1. Hydraulics and pneumatics by Andrew Parr, Jaico Publishing House.
2. Fundamentals of Pneumatics by FESTO Vol I, II, III.
3. Fluid Power with applications by Anthony Esposito Prentice Hall International.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Hydraulic power generating systems (4 Hours)				

Introduction to fluid power system-Hydraulic Fluids- Functions, Types, Properties, Selection & Application	1	Lecture	Assignment - 1.1	Text Book(TB)-1 Chapter(Ch)-1,2
Hydraulic Turbines- Classification, Working and application of different turbines such as Pelton Wheel, Reaction turbine, Selection of turbines	1	Lecture	Assignment - 1.2	TB-1 Ch-2
Pumps, Classification, Working of different Pumps such as Gear, Vane, Piston (Axial and Radial), Pump Performance or Characteristics, Pump Selection Factors	2	Lecture	Assignment - 1.3	TB-1 Ch-4
Module II : Hydraulic Power Utilizing Elements (03 Hours)				
Linear Hydraulic Actuators- Types and Construction of Hydraulic Cylinders-Single Acting, Double Acting, Special Cylinders like Tandem, Rod less, Telescopic, Cushioning Mechanism	2	Lecture	Assignment - 2.1	TB-1 Ch-8
Hydraulic Motors, Types- Gear, Vane, Piston (Axial & Radial)- Performance of Motors	1	Lecture	Assignment - 2.2	TB-1 Ch-9
Module III: Hydraulic Valves and Accessories (05 Hours)				
Directional, Pressure and Flow Control Valves-Types and Applications	1	Lecture	Assignment - 3.1	TB-1 Ch-5,6
Applications of Intensifier- Intensifier Circuit	1	Lecture	Assignment - 3.2	TB-1 Ch-7
Hydro Mechanical Servo Systems, Electro Hydraulic Servo Systems and Proportional Valves	1	Lecture	Assignment - 3.3	TB-1 Ch-7
Switches, Filters, Seals, Fittings and other Accessories	1	Lecture	Assignment - 3.4	TB-1 Ch-13,14
Accumulators: Types and Applications	1	Lecture	Assignment - 3.5	TB-1 Ch-11
Module IV: Pneumatic Systems (07 Hours)				
Introduction, Comparison with Hydraulic Systems and Electrical Systems, Construction, Operation, Characteristics and Symbols of Pneumatic Components, Air Treatment-Principles and Components	3	Lecture	Assignment - 4.1	TB-2 Ch-6,7

Introduction to Fluidic Devices, Simple Circuits, Introduction to Elector Pneumatic Logic Circuits, Ladder Diagrams For Various Fluid Power applications	3	Lecture	Assignment - 4.2	TB-2 Ch-9
Pneumatic Sensors: Types, Characteristics and Applications	1	Lecture	Assignment - 4.3	TB-2 Ch-11
Module V: Fluid Power Circuit (6 Hours)				
Design of Hydraulic/Pneumatic Circuit For Various Valves, Actuators, Filters, Pumps,	2	Lecture+ Practice (Fluid Sim software will be used to design the circuits)	Assignment - 5.1	TB-2 Ch-10,11
Simple Reciprocating, Regenerative, Speed Control(Meter in ,meter Out and Bleed Off)	2		Assignment - 5.2	TB-2 Ch-10,11
Sequencing, Synchronization, Transverse and Feed, Cascading Circuit (two and Three Cylinders)	1		Assignment - 5.3	TB-2 Ch-10,11
Automatic ,Reciprocating, fail Safe Circuit, Counter balance Circuit, Actuator	1		Assignment - 5.4	TB-2 Ch-10,11
Module VI: Applications (2 hours)				
Industrial Circuits: Riveting Machine, Actuator Locking, Hydraulic Press, Unloading Circuit and Material handling systems.	2	Lecture	Assignment - 6.1	TB-1 Ch-15
Module VII: Maintenance and Trouble Shooting (3 Hours)				
Maintenance in fluid Power Systems, Preventive and Break down Maintenance Procedures.	1	Lecture	Assignment - 7.1	TB-2 Ch-12
Trouble Shooting of Fluid Power Systems -Fault Finding Process, Equipment/Tools Used Causes and Remedies. Safety Aspects Involved.	2	Lecture	Assignment - 7.2	TB-2 Ch-12
TOTAL SESSIONS	30			

Introduction to Hybrid and Electric Vehicles

Course Title	Course Code	Type of Course	T-P-Pr	Pre-requisite
Introduction to Hybrid and Electric Vehicles	MECC0103	Theory	2-0-0	Nil

Objective

- To teach the students on principles, technology and applications of electric and hybrid vehicles

Course Outcomes

- Students will acquire knowledge regarding the testing and performance of electric vehicles
- Students will learn the skill to carry out basic maintenance of these vehicles

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course outline

Module I: Introduction to Hybrid Vehicles (5 Hours)

Theory

Introduction to Hybrid Vehicles: History of Hybrid Vehicles, Pollution Comparison, Social and Environmental Importance, Roadway Fundamentals, Impact of Modern Drive-Train on Energy Supplies, Working Principle of Hybrid Vehicles.

Module II: Hybrid Drive-Trains (4 Hours)

Theory

Hybrid Drive-Trains: Basic Concept of Hybrid Traction, Types of Drive Train in Hybrid Vehicles, Power Flow Control in Hybrid Drive-Train Topologies.

Module III: Introduction to Electric Vehicles (4 Hours)

Theory

Introduction to Electric Vehicles: Reasons for Electric Vehicle Development, Advantages, Main Components of Electric Vehicles (Battery, Motor, Controller, DC To DC Converter), Working of Main Components.

Module IV: Energy Storage (5 Hours)

Theory

Energy Storage: Energy Storage Requirements in Electric Vehicles, Battery Monitoring and Charging Control, Combination of Batteries, Sizing of Battery Cell, Principles of Operation of Fuel Cell, Regenerative Braking System.

Module V: Energy Management Strategies (4 Hours)

Theory

Energy Management Strategies: Introduction to Energy Management Strategies Used in Hybrid and Electric Vehicles, Classification of Different Energy Management Strategies, Comparison of Different Energy Management Strategies, Implementation Issues of Energy Management Strategies.

Module VI: Electric Propulsion Unit (4 Hours)

Theory

Electric Propulsion Unit: Introduction to Electric Components Used in Hybrid and Electric Vehicles, DC Motor, Control of DC Motor Drives, BLDC (Brushless DC) Motor

Module VII: Types of Motors and Drives (4 Hours)

Theory

Types of Motors and Drives: Induction Motor and Drives, Permanent Magnet Synchronous Motor Drives, Switched Reluctance Motor Drives.

Text Books

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Introduction to Hybrid Vehicles (5 Hours)				
History of Hybrid Vehicles, Pollution Comparison, Social and Environmental Importance, Roadway Fundamentals, Impact of Modern Drive-Train on Energy Supplies, Working Principle of Hybrid Vehicles	5	Lecture	Assignment-1	Text Book(TB)- 1, Chapter(Ch)- 1,10 https://www.youtube.com/watch?v=pMTPUjfiQQw http://nptel.iitm.ac.in
Module II: Hybrid Drive-Trains (4 Hours)				
Basic Concept of Hybrid Traction, Types of Drive Train in Hybrid Vehicles, Power Flow Control in Hybrid Drive-Train Topologies,	4	Lecture	Assignment-2	TB-1,Ch-9 https://www.youtube.com/watch?v=axzTZZKm3mc http://nptel.iitm.ac.in
Module III: Introduction to Electric Vehicles (4 Hours)				
Reasons for electric vehicle development, Advantages and disadvantages of electric vehicle, Main components of electric vehicles (Battery, Motor, Controller, DC to DC converter),	4	Lecture+Practice	Assignment -3	TB-1,Ch-1 https://www.youtube.com/watch?v=ytVyj10p0BI http://nptel.iitm.ac.in

Working of main components				
Module IV: Energy Storage (5 Hours)				
Energy storage requirements in electric vehicles, Battery monitoring and charging control, Combination of batteries. Sizing of battery cell, Principles of operation of Fuel cell, Regenerative braking system	5	Lecture+Practice	Assignment-4	TB-1,Ch-5 https://www.youtube.com/watch?v=N10IPLUxNWM https://www.youtube.com/watch?v=uLrCFStQQUU https://www.youtube.com/watch?v=2SQ2SYhVaaE http://nptel.iitm.ac.in
Module V: Energy Management Strategies (4 Hours)				
Introduction to Energy Management Strategies Used in Hybrid and Electric Vehicles, Classification of Different Energy Management Strategies, Comparison of Different Energy Management Strategies, Implementation Issues of Energy Management Strategies.	4	Lecture	Assignment-5	TB-1,Ch-7 https://www.youtube.com/watch?v=0DqPmACIeKA https://www.youtube.com/watch?v=gK6UUY3nTko http://nptel.iitm.ac.in
Module VI: Electric Propulsion Unit (4 Hours)				
Introduction to Electric Components Used in Hybrid and Electric Vehicles, DC Motor, Control of DC Motor Drives, BLDC	4	Lecture+Practice	Assignment-6	TB-1,Ch-5 https://www.youtube.com/watch?v=jAGTEAtPEzY https://www.youtube.com/watch?v=bCEiOnuODac https://www.youtube.com/watch?v=LtJoJBUSE28 https://www.youtube.com/watch?v=Vk2jDXxZIhs&list=P

(Brushless DC) Motor				LMHo_80Gkmb0ZNvZ4hV Solj7JrUf56wPN https://www.youtube.com/watch?v=dAW8e3N9xDE http://nptel.iitm.ac.in
Module VII: Types of Motors and Drives (4 Hours)				
Induction motor and drives, Permanent magnet synchronous motor drives, Switched reluctance motor drives	4	Lecture+ Practice	Assignment-7	TB-1,Ch-6 TB-2
Total (hrs)	30			

Renewable Energy Systems

Course Title	Code	Type of course	T-P-P	Prerequisite
Renewable Energy Systems	MECC0104	Theory	3-0-0	Nil

Objective

- To expose the students about energy demand and supply situation in India
- To expose students about Renewable energy systems in use

Course outcomes

- To have a knowledge of energy scene in India
- To acquire the skill of analyzing and designing renewable energy systems

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Evaluation	External Theory	60	Written examination
Total		100	

Course outline

Module I: Energy Demand and Supply Situation in India, Introduction to Energy System (7 Hours)

Theory

Energy Demand and Supply Situation in India: Sectorial energy demands in India, Different Energy sources in India, Systems view of energy, Institutions and policies affecting energy systems.

Introduction to Energy System: Basic Principle of solar energy and its conversion to thermal and electrical energy.

Geothermal Energy: Structure of earth, Geothermal Regions, Geothermal Power generation.

Ocean Energy: Principle of ocean Thermal energy conversion, Ocean thermal power plants, important components of a Tidal Power plant.

Module II: Photovoltaic System (6 Hours)

Theory

Photovoltaic System: Principle of Photovoltaic effect, Types and Application: Domestic and Industrial, Photovoltaic system and its Components, PV system and its Design, PV system

Installation and Testing.

All the topics to be taught through practice mode.

Module III: Solar Thermal System (6 Hours)

Theory

Solar Thermal System: Types of Collector and its Application, Design of different types of Collectors, Testing and Installation of Solar Thermal System.

All the topics to be taught through practice mode.

Module IV: Wind Energy (5 Hours.)

Theory

Wind Energy: Basic Principle of Wind Energy Conversion, Wind Data and Energy Estimation, Wind Energy Sources and Potential, Wind Power Systems: System components, Types of Turbine, Turbine Rating, Choice of Generator.

Module V: Controlling Systems of Wind Turbine Generator (6 Hours.)

Theory

Controlling Systems of Wind Turbine Generator: Variable speed operation, maximum power operation, control systems, Application of Wind energy in different sectors, system design features, testing and installation of Wind systems.

All the topics to be taught through practice mode.

Module VI: Bio Energy (5 Hours.)

Theory

Bio Energy: Basic Principle of Biomass Generation and Conversion, Sources and Potential of Bio- Gas, Application of Bio-Gas in different Sectors.

ModuleVII: Conversion of Energy (7 Hours.)

Theory

Conversion of Energy: Thermo chemical Process, and Fermentation: Aerobic and Anaerobic digestion, Design and Construction details of Main Digester, Testing and Installation of Bio-Gas Plant. Alternative Liquid Fuels, Bio Diesel Production.

All the topics to be taught through practice mode.

Practice

1. Photo-Voltaic Power Output Vs Tilt Angle, Ambient Temperature and Shade.
2. Solar PV System Installation and Performance test.
3. Thermal Analysis of Solar Flat Plate Collector Using ANSYS.
4. Performance Test of a Solar Dryer.
5. Simulation for Wind Turbine Generator with DC Motor in Solar/Wind Energy Mobile Workstation.
6. Performance Testing of Bio gas Plant.
7. Energy Analysis of Different Biomass Products.

8. Preparation of Biodiesel.

Text Books

1. Rai G.D. Non-conventional Energy sources: Khanna Publishers, fifth edition, 2011.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours)	Activity	Assignment	Suggested Reading
Module I: Energy Demand and Supply Situation in India, Introduction to Energy System (7 Hours)				
Energy demands in India, Energy sources in India	1	Lecture	Assignment 1.1	Text Book (TB)-2, Chapter (Ch)-1
Systems view of energy, Institutions and policies affecting energy systems	1	Lecture	Assignment 1.2	TB-2, Ch-1
Introduction to Energy system: Solar Energy Basic Principle of solar energy and its conversion to thermal and electrical energy. Geothermal Energy: Structure of earth, Geothermal Regions.	2	Lecture	Assignment 1.3	TB-2, Ch-3
Geothermal Power generation. Ocean Energy: Principle of	2	Lecture	Assignment 1.4	TB-2, Ch-10,11

ocean Thermal energy conversion				
Ocean thermal power plants, important components of a Tidal Power plant.	1	Lecture	Assignment 1.5	TB-2,Ch-11
Module II: Photovoltaic System (6 Hours)				
Photovoltaic system: Principle of Photovoltaic effect, Types and application: domestic and industrial	1	Lecture	Assignment 2.1	Ref.- 2 ,Ch-13 https://www.youtube.com/watch?v=Rq5Nzv_6v98
Photovoltaic system and its components	1	Lecture	Field study	https://www.youtube.com/watch?v=f1QSPBTJs5I
PV system and it design	2	Lecture	Assignment 2.2	Ref.- 2,Ch-14 https://www.youtube.com/watch?v=q7hW9XQLf6g
PV system installation and testing	2	Lecture	Field study	https://www.youtube.com/watch?v=Q5X6sMScwvM https://www.youtube.com/watch?v=ffmsR_xdRkY
Module III: Solar Thermal System (6 Hours)				
Solar thermal system: Types of Collector and its application	2	Lecture	Assignment 3.1	TB-1,Ch-3
Design of different types of collectors	2	Lecture	Assignment 3.2	TB-1, Ch-3 https://www.youtube.com/watch?v=wvl0QAQCJyc
Testing and installation of solar thermal system	2	Lecture	Field study	
Module IV: Wind Energy (5 Hours)				
Wind Energy: Basic Principle of Wind Energy Conversion, Wind Data and Energy Estimation,	3	Lecture	Assignment 4.1	TB-1,Ch-6,sec-6.3.6.4,6.5

wind energy sources and potential				
Wind power systems: system components, Types of Turbine, Turbine rating. Choice of generators	2	Lecture	Assignment 4.2	TB-1, Ch- 6 https://www.youtube.com/watch?v=LNXTm7aHvWc https://www.youtube.com/watch?v=DILJJwsFl3w
Module V: Controlling Systems of Wind Turbine Generator (6 Hours)				
Controlling systems of Wind Turbine Generator: Variable speed operation, maximum power operation, maximum power operation, control systems, Application of Wind energy in different sectors	3	Lecture	Assignment 5.1	TB-1, Ch- 6
System design features, testing and installation of Wind systems.	3	Lecture	Assignment 5.2	
Module VI: Bio Energy (5 Hours)				
Bio Energy Basic Principle of Biomass Generation and Conversion	1	Lecture	Assignment 6.3	TB-1,Ch-7
Sources and potential of Bio- Gas	1	Lecture	Assignment 6.4	TB-1,Ch-7,sec.-7.9
Application of Bio-Gas in different sectors	1	Lecture	Assignment 6.5	TB-1, Ch-7,sec.- 7.11
Testing and installation of Bio-Gas Plant	2	Lecture	Field study	https://www.youtube.com/watch?v=PmBx5Zo8KZo
ModuleVII: Conversion of Energy (7 Hours)				
Types of Conversion: Thermal, Thermo chemical Process	2	Lecture	Assignment 7.1	TB-1,Ch-7, sec.- 7.27,7.28
Fermentation: Aerobic and Anaerobic digestion	2	Lecture	Assignment 7.2	TB-1 ,Ch-7

Design and Construction details of Main Digester, Testing and Installation of Bio-Gas Plant. Alternative Liquid Fuels, Bio Diesel Production.	3	Lecture	Field study	https://www.youtube.com/watch?v=24Zxr2KHW6s
---	---	---------	-------------	---

Manufacturing Technology I

Course Title	Code	Type of course	T-P-P	Prerequisite
Manufacturing Technology I	MECC0401	Theory+ Practice	2-1-0	Workshop Practice

Objective

- To understand the importance of manufacturing processes like primary shaping/forming processes and joining/fabrication processes
- To impart knowledge on practical applications of the technologies through actual experiments and to make Products

Course Outcomes

- Students will have knowledge and skills to understand actual manufacturing processes used in industry and will be able to correlate a specific process with the part / component being produced
- Students will be able to select the most optimum manufacturing process for a specific product design and application
- Students will be able to apply their knowledge of manufacturing in their higher

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I: Metal Casting Process (9 Hours)

Theory

Introduction, Basic Factors Involved in Casting, Patterns (Classifications, Allowances and Considerations), Mold Materials & Mould Making, Principles of Gating Design, Principles of Risers, Core Making Process, Chills and Chaplets, Solidification of Castings, Inspection and Defects in Castings.

Practice

1. Pattern & Mold Making in Sand Casting.

Module II: Special Casting Processes (9 Hours)

Theory

Permanent Mould Casting, Die Casting, Slush Casting, Centrifugal Casting, Investment Casting, Carbon Dioxide Casting, Stir Casting, Continuous Casting, Shell and Plaster Molding Process, Full Mould Process, Vacuum Sealed Molding Process, Ceramic Mould Casting.

Practice

2. To Prepare a Green Sand Mould for gear manufacturing.
3. Furnace Operation & Aluminum Melting to Pour a Casting.
4. Casting Simulation in CATIA.

Module III: Fundamentals of Arc and Gas Welding (9 Hours)

Theory

Physics of Welding, Welding Classification & Applications, Welding Positions, Edge Preparation, Gas Welding and Cutting, Types of Flame, Flux and Filler, Arc Welding: SMAW Principle and Power Source, Types of Electrodes, Functions of Flux Coatings and AWS Classification and Coding.

Practice

5. Butt Joint by using Oxy Acetylene Gas Welding.
6. Edge Preparation to make Lap Joint and Butt Joint.

Module IV: Welding Processes (9 Hours)

Theory

GTAW, GMAW, SAW, Resistance Welding (Spot, Seam, Projection & Flash Butt), Solid State Welding (Forge, Friction & Explosive), Thermit Welding, Radiant Energy Welding (LBW, EBW, Ultrasonic), Brazing and Soldering.

Practice

7. Bead on Plate Varying Current & Voltage for SMAW using E6013.
8. GTAW Torch Assembly and Bead on Aluminum Plate without & with Filler.
9. Joining of Sheets using Spot Welding.
10. Soldering & Brazing Practice.
11. Welding of Two Cylindrical Jobs using Friction Welding.

Module V: Defects, Testing & Economics of Welding (5 Hours)

Theory

Heat Affected Zone, Weld Defects, Testing of Weldments, Economics of Welding (Welding Costs, Standard Time).

Practice

12. Testing of Tensile Strength of a Welded Job.
13. Testing of Weld by Liquid Dye Penetrate.

Module VI: Metal Forming: Rolling & Forging of Metals (9 Hours)

Theory

Plastic Deformation and Yield Criteria, Relation between Tensile and Shear stress, Cold and Hot Working, Rolling: Principle and mechanism, Defects, Types of Rolling Mills, Forging: Classification, Open-Die Forging, Impression-Die and Closed-Die Forging, Drop and Press Forging, Forging defects.

Practice

14. Making a hexagon Section from 20mm Round MS Bar.

Module VII: Metal Forming: Drawing, Extrusion & Sheet Metalworking (10 Hours)

Theory

Drawing: Methods and Variables, Wire Drawing, Extrusions: Advantages and Disadvantages, Direct, Indirect, Impact and Hydrostatic Extrusion and their Applications, Extrusion of Tubes, Extrusion Defects.

Sheet Metal Work: Bending, Forming and Deep drawing, Shearing, Punching and Blanking-Method and Application.

Practice

15. Shearing of 2 mm MS Sheet to Manufacturing a Washer.

Text Books

1. Rao, PN, Manufacturing Technology, Volume 1, 2015, 4th Edition, Tata Mc-Graw Hill Education Private Limited, India.
2. Ghosh, A & Mallik, AK, Manufacturing Science, 2010, 2nd Edition, Pearson India.

Reference Books

1. Kaushish, J P, Manufacturing Processes, 2010, 2nd Edition, PHI Learning Pvt. Ltd.
2. Sharma, P C, A Text Book of Production Technology (Manufacturing Processes), 2014, 8th Edition, S. Chand & Company Pvt. Ltd.

Manufacturing Technology II

Course Title	Code	Type of Course	T-P-P	Prerequisite
Manufacturing Technology II	MECC0402	Theory+ Practice	2-2-0	Nil

Objective

- To understand the importance and application of conventional & unconventional machining processes
- To understand the basic classification, components and functions of conventional and NC machine tools used in manufacturing

Course Outcomes

- Students will be to do machining of usable products
- Students will have knowledge in computer-aided part programming and ISO coding system

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course Outline

Module I: Conventional Machining (15 Hours)

Theory

Mechanics of Metal cutting; Cutting Tool Materials (Principal Tool Materials, Advanced Tool Materials, Indexable Inserts, Tool Coatings); Cutting Fluids and Lubricants (Characteristics, Types, Selection Criteria, Dry machining, MQL).

Practice

1. Kinematic study of machine tools.
2. Chip characteristics study.
3. Measurement of Cutting Tool Temperature using Thermocouple.

Module II: Machine Tools and Machining Processes (20 Hours)

Theory

Tool Signature, Theory of Machinability (Tool Life, Cutting Forces, Power Consumption, Surface Roughness, Thermal Aspects).

Metal Cutting using Single Point Cutting Tool- Lathe & Operations, Shaper, Planer and Slotter; Metal Cutting using Multipoint Cutting Tool- Milling Machine, Shaper Machine and Drilling Machine.

Practice

4. Measurement of Cutting Forces using Dynamometer.
5. Design of single point cutting tool in CATIA.
6. Measurement of Surface Roughness using Talysurf.
7. Process Optimization using Minitab and Matlab.

Module III: Finishing Operations (5 Hours)

Theory

Abrasives, Grinding Process, Super-finishing Operations, Deburring Operations

Practice

8. Grinding of Single Point Cutting Tool.

Module IV: Unconventional Machining (10 Hours)

Theory

Unconventional Machining Process, Principle and Equipment (Electro-Chemical Machining; Electric Discharge Machining, Abrasive Jet Machining, Laser Beam Machining; Electron Beam Machining).

Practice

9. Study of EDM working Principle and Process Parameters. Die Sinking, micro-hole drilling

Module V: Additive Manufacturing (10 Hours)

Theory

Additive Manufacturing (3D Printing, Rapid Prototyping); Developments in Additive Manufacturing; Classifications of Additive Manufacturing systems.

Practice

10. Component Manufacturing Using 3D Printer.

Module VI: Computer Aided Manufacturing (25 Hours)

Theory

CAM-Introduction, Types- NC, CNC, DNC, Machining Centers, Adaptive Control, Part Programming G-Codes, M-Codes, Programming & Machining for Simple Components, Automation.

Practice

11. Manual Programming Related to Facing, Turning, Drilling, Boring & Pocketing in CNC Machines.
12. Simple Contouring Operation using CNC Milling Machine.
13. 3D Modeling & Product Design with CATIA and Solidworks (3D Experience)
14. Generation of NC Program and Product Manufacturing by Using Master CAM Software.
15. Process Planning, Programming, Simulation and Optimization of Machining Processes Using DELMIA.

Module VII: Micro-manufacturing & Surface Treatment (5 Hours)**Theory**

Film Deposition, Oxidation, Lithography, Etching, Vapor Deposition, Thermal Spraying.

Text Books:

1. Rao, P N, Manufacturing Technology, Volume 2, 2015, 4th Edition, Tata Mc-Graw Hill.
2. Chattopadhyay, A B, Machining & Machine Tools, 2011, Wiley India.
3. Groover, M P, CAD/CAM: Computer Aided Design & Manufacturing by M P Groover, 1st Edition, 2003, Pearson Education.

Reference Books:

1. Shaw, M C, Metal Cutting Principles, 2005, 2nd Edition, Oxford University Press.
2. Bhattacharya, A, Metal Cutting -Theory and Practice, 2008, New Central Book Agency.
3. Raghuvanshi, B S, A Course in Workshop Technology, Volume 2, 2013 by B S, Dhanpat Rai & Co.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module I (15 Hrs)				
Mechanics of Metal cutting	1	Lecture		1. https://www.youtube.com/channel/UCCqGTvGZgWw8mFX5KYTHCkw NPTEL: 2. http://nptel.ac.in/courses/112105127/ 3. Text Book (TB)-1, Page-5; T2, Page-6
Cutting Tools-Types, Materials	1	Lecture	Assignment 1.1	1. http://nptel.ac.in/courses/112105127/ 2. Text Book (TB)-1, Page-26
Cutting Fluids and Lubricants (Characteristics, Types, Selection Criteria, Dry Machining, MQL)	1	Lecture	Assignment 1.2	1. http://nptel.ac.in/courses/112105127/ 2. https://www.youtube.com/watch?v=81Fdif5e85c 3. nptel.ac.in/courses/112104225/21 4. Text Book (TB)-1, Page-50

Total (hrs)	90			

Design for Manufacturing

Course Title	Code	Type of course	T-P-P	Prerequisite
Design for Manufacturing	MECC0403	Theory+ Practice	2-2-0	Workshop Practice

Objective

- To provide the students detailed understanding of primary manufacturing processes and product design from concept-to-mass production
- To impart knowledge on use and application of software to solve design engineering problems in metal casting, forging and sheet metal forming processes

Course outcomes

- Students will be able to select appropriate manufacturing technology and process to produce a product effectively with quality and optimized production cost
- Students will have skills and knowledge to use software's like CATIA, Nova flow and Solid CV, ProCAST, Flow-3D Cast, DEFORM-3D and PAM-STAMP 2G

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I: Introduction (8 Hrs)

Theory

Introduction to Design: Problem and Solutions, Design as Model-making, Design, Creativity, Innovation and Invention, Concept of DFMA, The Boothroyd Dewhurst Design for Manual Assembly Method, Product Complexity, Product Variants, Reusable/ Modularity/Standard Design, Product Costs, Quality , Regulatory & Safety Requirements, Aesthetic and Ergonomic Considerations in Design, Design for Maintenance.

Module II: Selection of Materials & Manufacturing Processes (10 Hrs)

Theory

Assembly, Shipping, Maintenance, Design Efficiency, Materials Selection, Manufacturing Considerations in Design: Role of Processing in Design, Types of Manufacturing Processes,

Design for Manufacturability, Design for Castings, Forgings, Sheet Metal Forming, Design for Machining, Powder Metallurgy, Welding, Heat Treatment, Assembly, Corrosion Resistance, Designing with Plastic Processing.

Module III: Cost-Efficient Design (6 Hrs)

Theory

Economics of Manufacturing: Product Target Cost Evaluation: Categories of Costs, Methods of Developing Cost Estimates, Cost Indexes, Cost Capacity Factors, Estimating Plant Cost, Design to Cost, Manufacturing Costs, Value Analysis in Costing.

Module IV: Design for Metal Casting (15 Hrs)

Theory

Design for Castability; Introduction to Casting, Types of Casting, Mathematical Modeling of Liquefying the Material, Viscosity and Fluidity Parameter included as Flow Equation, Casting Microstructure and Defects, Casting Design Process; Sprue, Gate, Runner Design according to Flow Equations, Analysis Prediction for Metal Casting, Liquid Phase Fraction, Shrinkage Prediction, Calculating Feeder, Secondary Dendrite Arm Spacing (SDAS).

Module V: Simulation of Casting Process (15 Hrs)

Theory

STL Part Design Generation from CAD Package, Simulation of Solidification, Calculation of Riser, Design of Gating and Simulation of Mold Filling, Simulation of Riser and Gating System. Components: Die Casting Design and Simulation of Casting of Engine Block using Aluminum Alloy Specifically Al-Si-Cu-Mg-Fe Alloy. Simulation of Casting for Shell Housing.

Practice

1. Casting Design & Analysis using CATIA, Novaflow and Solid CV, ProCAST, Flow-3D Cast.

Module VI: Design for Forging (15 Hrs)

Theory

Design Aspect of Forging and its Significance, Procedure of Working out of Forging Drawing and Technology for Open and Close Die Forgings. Developing the Forging Drawing of Some Jobs. Factors Affecting the Metal Flow in Closed Dies. Forgeability, Friction and Lubrication, Die Temperature, Size and Shape Factor, Flash and Gutter. Designing Performing, Finisher, Trimming and Punching Dies; Selection of Forging Equipments; Die Wear, Die Materials, Forging Defects, Heat Treatments of Dies and Forgings.

Practice

2. Forging Design & Flow Simulation using CATIA and DEFORM-3D.

Module VII: Design for Sheet Metalworking (15Hrs)

Theory

Design for Formability; Formability of Sheet Metal, Press for Sheet Metal Process, Die & Punch, High Energy Rate Forming Process, Extrusion Process and Bulk Deformation Process. Blank Holder Force Estimation, Incremental Forming Analysis Residual Stress Vs Blanking Force Analysis and Optimization, Hot Stamping Process.

Analysis Prediction: Differential heating and Differential Cooling in Hot Forming Process, Force Required for Product Shape. Components: B-pillar Trim, Bonnet, Suspension Rocker Arms, Roof Liner, Body Side Outer.

Practice

3. Sheet Metal Tool Design in CAD.
4. Use of CATIA and PAM-STAMP 2G.

Text Books

1. Boothroyd, G, Dewhurst, P, & Knight A W, Product Design for Manufacture & Assembly, 2011, 3rd Edition, CRC Press.
2. Chitale, A K, Gupta, R C, Product Design & Manufacturing, 2013, 6th Edition, PHI Learning Pvt. Ltd.

Reference Books

1. Bralla, J G, Design for Manufacturability Handbook, 1998, 2nd Edition, Tata McGraw-Hill.
2. Ulrich, K T & Eppinger, S D, Product Design & Development, 2008, 3rd Edition, Tata McGraw-Hill.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I (8 Hrs)

Design as Model-making, Design, Creativity, Innovation and Invention. The Concept of DFM/A,	02	Lecture		1. Text Book (TB)-1, Page-19

The Boothroyd Dewhurst Design for Manual Assembly Method,	02	Lecture		1. Text Book (TB)-1, Page-22
Product Complexity, Product Variants, Reusable/Modularity/Standard Design, Product Costs, Quality, Regulatory & Safety Requirements, Design for Maintenance	02	Lecture	Assignment 1	1. Text Book (TB)-1, Page-28
Module II (10 Hrs)				
Assembly, Shipping, Maintenance, Design Efficiency	02	Lecture		1. http://nptel.ac.in/courses/112101005/20
Materials Selection, Manufacturing Considerations in Design: Role of Processing in Design, Types of Manufacturing Processes, Economics of Manufacturing	02	Lecture		1. http://nptel.ac.in/courses/112101005/4 2. Text Book (TB)-1, Page-29
Design for Castings, Forgings, Sheet Metal Forming, Design for Machining	03	Lecture		1. Text Book (TB)-2, Page-100 2. http://nptel.ac.in/downloads/112101005/

Powder Metallurgy, Welding, Heat Treatment, Assembly, Corrosion Resistance	03	Lecture	Assignment 2	1. http://nptel.ac.in/downloads/112101005/ 2. Text Book (TB)-1, Page-461
Module III (6Hrs)				
Product Target Cost Evaluation: Categories of Costs, Methods of Developing Cost Estimates, Cost Indexes, Cost Capacity Factors,	03	Lecture		1. http://www.nptel.ac.in/courses/110101010/downloads/mod3/Module%20III-Lec1.pdf
Estimating Plant Cost, Design to Cost, Manufacturing Costs, Value Analysis in Costing.	03	Lecture	Assignment 3	1. http://www.nptel.ac.in/courses/110101010/downloads/mod3/Module%20III-Lec1.pdf
Module IV (15 Hrs)				
Design for Castability; Introduction to Casting, Types of Casting	02	Lecture		1. efoundry.iitb.ac.in/TechnicalPapers/1999/1999Sourcecon_DesignForCasting.pdf 2. nptel.ac.in/courses/112101005/12 3. Text Book (TB)-1, Page-527
Mathematical Modelling of Liquefying the Material, Viscosity and Fluidity Parameter included as Flow Equation	03	Lecture		1. Text Book (TB)-1, Page-545
Casting Design Process; Sprue, Gate, Runner Design according	10	Lecture	Assignment 4	1. Text Book (TB)-1, Page-527

Flow Equations, Simulation of Casting Process				
Module V (15 Hrs)				
Simulation of Casting Process; STL Part Design Generation from CAD Package, Simulation of Solidification	03	Practice		
Calculation of Riser, Design of Gating and Simulation of Mold Filling, Simulation of Riser and Gating System.	03	Lecture		1. Text Book (TB)-2, Page- 101
Analysis Prediction: Liquid Phase Fraction, Shrinkage Prediction, Calculating Feeds, Secondary Dendrite Arm Spacing (SDAS).	03	Practice		
Components: Die Casting Design and Simulation of Casting of Engine Block using Aluminium Alloy Specifically Al-Si- Cu-Mg-Fe Alloy.	03	Practice	Assignment 5	
Simulation of Casting for Shell Housing. Casting Design & Analysis using CATIA, Novaflo and Solid CV, ProCAST, Flow-3D Cast	03	Practice	Lab. Practice	

Module VI (15 Hrs)				
Forging Design: Design Aspect of Forging and their Significance. Procedure of Working out of Forging Drawing and Technology for Open and Close Die Forgings.	03	Lecture		1. Text Book (TB)-1, Page-599
Developing the Forging Drawing of Some Jobs. Factors Affecting the Metal Flow in Closed Dies. Forgeability, Friction and Lubrication	03	Lecture		2. Text Book (TB)-1, Page-599
Die Temperature, Size and Shape Factor, Flash and Gutter. Designing Performing, Finisher, Trimming and Punching Dies; Selection of Forging Equipments; Die Wear, Die Materials, Forging Defects	03	Lecture		1. nptel.ac.in/courses/107103012/module4/lec7.pdf
Heat Treatments of Dies and Forgings.	03	Lecture	Assignment 6	
Forging Design & Flow Simulation using CATIA and DEFORM-3D	03	Practice	Lab. Practice	
Module VII (15 Hrs)				
Sheet Metal: Design for Formability;	02	Lecture		1. web.mit.edu/2.810/www/files/lectures/2015.../lec6-sheet-metal-forming-

Die & Punch, High Energy Rate Forming Process, Extrusion Process and Bulk Deformation Process.	02	Lecture		<ol style="list-style-type: none"> http://nptel.ac.in/courses/112101005/downloads/Module_3_Lecture_5_final.pdf Text Book (TB)-1, Page-375
Blank Holder Force Estimation, Incremental Forming Analysis Residual Stress vs Blanking Force Analysis and Optimization, Hot Stamping Process. `	02	Lecture		<ol style="list-style-type: none"> Text Book (TB)-1, Page-375
Analysis Prediction: Differential heating and Differential Cooling in Hot Forming Process, Map of Meso Patch on the component, Force Required for Product Shape	02	Lecture		
Components: B-pillar Trim, Bonnet, Suspension Rocker Arms, Roof Liner, Body Side Outer.	01	Lecture	Assignment 7	
Sheet Metal Tool Design in CAD	03	Practice	Lab. Practice	
Use of CATIA and PAM-STAMP 2G	03	Practice	Lab. Practice	
Total	84 hrs			

Finite Element Analysis (FEA)

Subject Name	Code	Type of course	Credit	Prerequisite
Finite Element Analysis	MECC0404	Theory+ Practice	3-1-0	Strength of materials

Course Objective

- To Teach the Students Principles and Applications of Finite Element Analysis

Course Outcome

- Students will Acquire Knowledge Application of Matrix Algebra
- Students will Learn the Skill of using Finite Element Technique to solve Physical and Thermal Problems of Solids and Fluids
- Students will be able to apply the knowledge to undertake different research project related to Design and Thermal Engineering.

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Evaluation	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Course Outline

Module I: Introduction to FEA (8 Hours)

History of FEA; Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry and Principle of Convergence; General Procedure of FEA; Review of Matrix Algebra and Simultaneous Linear Equations.

Module II: Analysis through Simulation (10 Hours)

Role of Computer; General Steps of Commercial Software Packages; Preprocessing: Type of Analysis, Geometric Modelling, Material Properties, Mesh Generation and Refining, Load Data, Boundary Conditions; Solution/Analysis; Post processing: Graphical Output, Contour Plot, Animation; Result Interpretation; Report Generation.

Practice

1. Introduction to ANSYS Workbench
2. Defining Material Properties

Module III: Static Structural Analysis (10 Hours)

Field Variable, Shape Functions, Element Stiffness Matrix and Load Vector, Element and Global Equations, Material Assignment and Imposition of Boundary Conditions.

Practice

3. Part Modelling I
4. Part Modelling II
5. Part Modelling III
6. Mesh Generation and Material Assignment

Module IV: Analysis of Bar and Spring (10 Hours)

1D Finite Element Modelling; Shape Functions and Element Stiffness Matrix of 2-noded linear bar/spring element; Uniform and Tapered Bar under Axial Load; Consideration of Self-weight and Temperature Effect. Truss and Beam Elements.

Practice

7. Solution of Axially Loaded Bar/Spring Problems
8. Solution of Strut/Column Problems

Module V: Analysis of Truss and Beam (12 Hours)

Stiffness Matrix for a Truss and Beam Element; Transverse Loading on Beams with Point, UDL and UVL loads.

Practice

9. Solution of Plane Truss Problems
10. Solution of Beam/Frame Problems

Module VI: Dynamic Analysis (13 Hours)

Fundamentals of Vibration; Consistent and Lumped Mass Matrix; Evaluation of Natural Frequencies and Mode Shapes (Eigenvalues and Eigenvectors); Non-linear Analysis, Fatigue Analysis.

Practice:

11. Dynamic Analysis of Spring-mass System
12. Dynamic Analysis of Bar/Truss/Beam Problems
13. Analysis of Material and Geometric Non-linear Problems
14. Solution of Fatigue Analysis Problems

Module VII: Heat Transfer and Fluid Flow Analysis (12 Hours)

Modes of Heat Transfer; 1D Steady-state Heat Transfer; Element Stiffness Matrix for Conduction and Convection; Fluid Flow in Pipes, Formulation of Fluid Flow Problems.

Practice

15. Thermal Analysis of Heat Transfer Problems
16. Analysis of Fluid Flow Problems

Text Books

1. Senthil S., Panneerdhass R., Finite Element Analysis, Lakshmi Publication, Chennai, 2016.
2. Tickoo Sham, ANSYS Workbench A Tutorial Approach, CADCIM Technologies, USA, 2012,
3. Bhavikatti S.S., Finite Element Analysis, New Age International Limited Publishers, New Delhi, 2005.

Reference Books

1. Hutton D.V, Fundamental of Finite Element Analysis, McGraw-Hill Publishing Company Limited, USA, 1st edition, 2004.
2. Moaveni S., Finite Element Analysis, Theory and Application with ANSYS, Pearson Prentice Hall, New Delhi, 3rd edition, 2011.

Session Plan

Topic	No. of Sessions	Activity	Assignment	Suggested Reading
Module I				
History of FEA	01	Lecture	Field study	Text book(TB)-1 Chapter (Ch)-1
Need for studying FEA	01	Lecture	Field study	TB-1 Ch-1
Types of Analysis	01	Lecture	Field study	TB-1 Ch-1
Discretization of a Structure; Element Shapes, Nodes, Degrees of Freedom	01	Lecture	Assignment 1.1	TB-1 Ch-1
Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence	01	Lecture	Assignment 1.2	TB-1 Ch-1
General Procedure of FEA	01	Lecture	Assignment 1.3	TB-1 Ch-1
Review of Matrix Algebra, Simultaneous Linear Equations	02	Lecture	Assignment 1.4	TB-1 Ch-1
Module II				
Analysis through Simulation: Role of Computer; General Steps of Commercial Software Packages;	02	Lecture	Assignment 2.1	TB-2 Ch-1,2
Preprocessing: Type of Analysis, Geometric Modeling, Material Properties, Mess	02	Practice	Assignment 2.2	TB-2 Ch-1,2

Generation and Refining, Load Data, Boundary Conditions				
Solution/Analysis; Post processing: Graphical Output, Contour Plot, Animation	03	Practice	Assignment 2.3	TB-2 Ch-1,2
Result Interpretation; Report Generation	03	Practice	Assignment 2.4	TB-2 Ch-1,2
Module III				
Static Structural Analysis: Field Variable, Shape Functions, Element Stiffness Matrix and Load Vector, Element and Global Equations, Material Assignment and Imposition of Boundary Conditions.	2	Lecture	Assignment 3.1	TB-1 Ch-2,3
Part Modeling I	2	Practice	Assignment 3.2	TB-2 Ch-3,4,5
Part Modeling II	2	Practice	Assignment 3.3	TB-2 Ch-3,4,5
Part Modeling III	2	Practice	Assignment 3.4	TB-2 Ch-3,4,5
Mess Generation and Material Assignment	2	Practice	Assignment 3.4	TB-2 Ch-6,7,8
Module IV				
Analysis of Bar and Spring: 1D Finite Element Modeling; Shape Functions and Element Stiffness Matrix of 2-noded linear bar/spring element	3	Lecture	Assignment 4.1	TB- Ch-2,3 TB-3 Ch-11
Uniform and Tapered Bar under Axial Load; Consideration of Self-weight and Temperature	3	Lecture	Assignment 4.2	TB-3 Ch-11

Effect. Truss and Beam Elements				
Solution of Axially loaded Bar/Spring problems	2	Practice	Assignment 4.3	TB-3 Ch-2,3
Solution of Strut/Column Problems	2	Practice	Assignment 4.3	TB-1 Ch-2,3
Module V				
Analysis of Truss and Beam: Stiffness matrix for a Truss and Beam element	2	Lecture	Assignment 5.1	TB-1 Ch-3
Transverse Loading on Beams with Point, UDL and UVL loads.	3	Lecture	Assignment 5.2	TB-1 Ch-3
Solution of Plane Truss Problems	3	Practice	Assignment 5.3	TB-1 Ch-3 TB-2 Ch-3,4,5
Solution of Beam/Frame Problems	4	Practice	Assignment 5.4	TB-2 Ch-3,4,5
Module VI				
Dynamic Analysis: Fundamentals of Vibration; Consistent and Lumped Mass Matrix	2	Lecture	Assignment 6.1	TB-1 Ch-4
Evaluation of Natural Frequencies and Mode Shapes (Eigenvalues and Eigenvectors)	1	Lecture	Assignment 6.2	TB-1 Ch-4
Non-linear Analysis, Fatigue Analysis.	1	Lecture	Assignment 6.3	TB-1 Ch-4
Dynamic Analysis of Spring-mass System	2	Practice	Assignment 6.4	TB-1 Ch-1 TB-2
Dynamic Analysis of Bar/Truss/Beam Problems	2	Practice	Assignment 6.5	TB-2 Ch-6,7,8

Analysis of Material and Geometric Non-linear Problems	2	Practice	Assignment 6.6	TB-2 Ch-6,7,8
Solution of Fatigue Analysis Problems	3	Practice	Assignment 6.7	TB-2 Ch-6,7,8
Module VII				
Heat Transfer and Fluid Flow Analysis: Modes of Heat Transfer	1	Lecture	Assignment 7.1	TB-1 Ch-5
1D Steady-state Heat Transfer;	1	Lecture	Assignment 7.2	TB-1 Ch-5
Element Stiffness Matrix for Conduction and Convection	2	Lecture	Assignment 7.3	TB-1 Ch-5
Fluid Flow in Pipes, Formulation of Fluid Flow Problems	2	Lecture	Assignment 7.4	TB-1 Ch-5
Thermal Analysis of Heat Transfer Problems	3	Practice	Assignment 7.5	TB-1 Ch-5
Analysis of Fluid Flow Problems	3	Practice	Assignment 7.6	TB-1 Ch-5
Total Hours	75			

Digital Manufacturing

Course Title	Code	Type of course	T-P-P	Prerequisite
Digital Manufacturing	MECC0405	Theory + Practice	1-2-0	Nil

Objective

- To Educate the Students on Entire Stages of Product Life Cycle Beginning From Concept Stage, Design, Testing, Validation, Manufacturing and Servicing etc.
- To Educate the Students on Industry 4.0 Standards

Course Outcomes

- Students will be Able to Use Modern Software Like DELMIA-Quest (Dassault System) to Conceptualise and Create 3D Factory Layouts and Optimise Resource Planning
- Students will be Able to Do Simulation of Manufacturing Processes Using Software Tools

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record

External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I: Digital Manufacturing (8 Hours)

Theory

Overview, Industry challenges, End to End solution for various industry, Digital Twin, Benefits, Industry Case studies, Introduction of Industry 4.0, Convention & Emerging Technological Solution.

Practice

1. Product Design and Development Software Tools.
2. Tear Down of Existing Product and Its Bench Marking.

Module II: Product Life Cycle (PLM) (8 Hours)

Theory

Overview of PLM, Design & Manufacturing BOM, Model & Variants

Practice

3. Study of System and Subsystem and Preparing BOM.
4. Designing and Development of Systems and Subsystems.
5. Product Validation by Using Simulia and Product Integration

Module III: Digital Twin (7 Hours)

Theory

Introduction of Facility/Layout Planning, Digital Factory with Plant Facilities & resources, Assembly/Di-assembly

Practice

6. Creation of Facility Layout.
7. Creation of Manufacturing Resources.

Module IV: Plant Layout Design (7 Hours)

Theory

Importance of plant layout, Objective of plant layout, factors influencing plant layout, Types of layout- fixed position layout, product layout, process layout, combined or group layout.

Practice

8. Creation of Manufacturing Support System.
(Tools : Creating a Catalog, Creating a Template, Defining the Resources, Managing a Resource footprint, positioning the Resources, Snapping the Resources, Repositioning the Resources.)

Module V: Process Planning (10Hours)

Theory

Manufacturing planning, types of production-job, batch and mass production, steps involved in process planning, calculation of man and machine hour, computer aided process planning

Practice

- 9. Introduction to DELMIA APP.
- 10. Manufacturing Item Definition.
- 11. Preparation of Process Planning.

(Tools: Setting up the Working Environment, Creating the Process Planning, Time Analysis, Planning Premises, Creating Automatic Line Balancing, Managing a Multi-model)

Module VI: Work Study (8 Hours)

Theory

Method study, objective of method and work study, Basic procedure for method study, Recording technique used in method study.

Practice

- 12. Defining the Manufacturing Resources in Equipment Allocation.
 - 13. Simulation of Resources using Delmia.
- (Tools: Equipment Allocation)

Module VII: Digital Machining (12 Hours)

Theory

Introduction to Machining, 3 axis and 5 axis CNC machining, Tools used in CNC machining, Machining parameters, DNC, FMS, Lean Manufacturing, Computer integrated manufacturing system.

Practice

- 14. Modeling of Manufacturing Support System and Application of Kinematics to It.
- 15. Modeling of NC Machine and its Simulation.
- 16. Generation of NC codes and its validation.

Textbooks

- 1. Zahou, Z, Fundamentals of Digital Manufacturing Science, 2012, Springer Series.
- 2. Jain, R K, Production Technology, 2004, 17th Edition, Khanna Publishers.

Reference Books

- 1. Kalpakjian, S, & Schmid, S R, Manufacturing Engineering & Technology, 2018, 7th Edition, Pearson Education.
- 2. Adithan, M, Process Planning & Cost Estimation, 2007, New Age International.

Session Plan

Sl. No	Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module-I (8 Hrs)					

1	Digital Manufacturing: Overview, Industry challenges, End to End solution for various industry, Digital Twin, Benefits, Industry Case studies, Introduction of Industry 4.0, Convention & Emerging Technological Solution.	2	Lecture	Assignment 1	1. https://www.youtube.com/watch?v=G3s4aPgcniw

Fundamentals of Heat Engines

Course Title	Code	Type of Course	T-P-P	Prerequisite
Fundamentals of Heat Engines	MECC0415	Theory +Practice	2-1-0	Thermodynamics

Objective

- To teach the students about various parameters and variables of IC engines.
- To enable students to learn about various systems used in IC engines and applications of IC engines.

Course Outcomes

- On successful completion of course, Students will acquire good knowledge on the basics of IC engines, influence of various parameters on performance of IC Engines.
- Students will be applying the knowledge while perusing PG in Thermal Science.

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Evaluation	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	
Marks			

Course outline

Module I: Heat Engine, Its Characteristics and Performance Parameters (12 Hours)

Theory

Heat Engine, Its Characteristics and Performance Parameters: Introduction to Heat Engine, Classification of Heat Engines, Indicated and Brake Power, Engine Efficiency, Engine Performance Characteristics, ECU, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.

Practice

1. Heat Balance Study of Petrol Engine.
2. Heat Balance Study of Diesel Engine.
3. Load Test on Petrol Engine.
4. Load Test on Diesel Engine

Module II: Fuel (6 Hours)

Theory

Fuel: Fuels of SI and CI Engine, Properties, Potential and Advantages of Alternative Fuels (Liquid and Gaseous) for SI and CI Engines.

Practice

5. Determination of Flash Point and Fire Point of a Liquid Fuel.
6. Determination of Calorific Value by Using Bomb Calorimeter.

Module III: Mechanical Injection Systems (8 Hours)

Theory

Mechanical Injection Systems: Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Governor, Fuel Injector, Nozzle.

Practice

7. Determination of Sensitivity of a Governor.

Module IV: Electronic Injection Systems (6 Hours)

Theory

Electronic Injection Systems: Multi-Point Fuel Injection (MPFI) System, Injection Timing, Gasoline Injection System, CRDI.

Module V: Ignition (6 Hours)

Theory

Ignition: Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.

Practice

8. Study of Electric Circuit and Ignition System of Automobile.

Module VI: Combustion (12 Hours)

Theory

Combustion: Stages of Combustion in SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock in SI and CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI And CI Engine Combustion Chambers.

Practice

9. To Verify the Combustion Characteristics of Diesel in VCR Engine.
10. To Verify the Characteristics of Pressure Rise During Combustion in VCR Engine.
11. Performance Test on Variable Compression Ratio I. C. Engine.

Module VII: Cooling, Lubrication, Engine Emission and Control Systems (10 Hours)

Theory

Cooling and Lubrication System: Air Cooling and Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System.

Engine Emission and Control Systems: Mechanism of Pollutant Formation and its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.

Practice

12. Study of air cooling and water cooling system
13. Exhaust emission analysis by using exhaust gas analyser.

Text Books

1. Ganesan V., Internal Combustion Engines, TMH, 3rd Edition
2. Rajput R. K., A Textbook of Internal Combustion Engine, LP.

Reference Books

1. Domkundwar V.M., A Course in IC Engines, Dhanpat Rai and Sons.
2. Heywood J.B., Internal Combustion Engine Fundamentals, McGraw Hill Book Co.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Heat Engine, Its Characteristics and Performance Parameters (12 Hours)				
Introduction to Heat Engine, Classification of Heat Engines, Indicated and Brake Power, Engine Efficiency, Engine Performance Characteristics, ECU, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.	12	Lecture+ Practice	Assignment -1	Text Book(TB)-1, Chapter(Ch)-1 https://www.youtube.com/watch?v=PgvD9mx9Do <u>o</u>
Module II: Fuel (6 Hours)				

Fuels of SI and CI Engine, Properties, Potential and Advantages of Alternative Fuels (Liquid and Gaseous) for SI and CI Engines.	6	Lecture+ Practice	Assignment -2	TB-1, Ch-6
Module III: Mechanical Injection Systems (8 Hours)				
Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Governor, Fuel Injector, Nozzle.	8	Lecture+ Practice	Assignment -3	TB-1, Ch-9 https://www.youtube.com/watch?v=P5-yxENaLDU&t=49s
Module IV: Electronic Injection Systems (6 Hours)				
Multi-Point Fuel Injection (MPFI) System, Injection Timing, Gasoline Injection System, CRDI.	6	Lecture	Assignment -4	TB-2, Ch-10
Module V: Ignition (6 Hours)				
Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.	6	Lecture+ Practice	Assignment -5	TB-1,Ch-11
Module VI: Combustion (12 Hours)				
Stages of Combustion in SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock in SI and CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI and CI Engine Combustion Chambers.	12	Lecture+ Practice	Assignment -6	TB-2,Ch-12 https://www.youtube.com/watch?v=ZxkLgv8c3OE
Module VII: Cooling, Lubrication, Engine Emission and Control Systems (10 Hours)				

Air Cooling and Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System.	6	Lecture+ Practice	Assignment -7.1	TB-2,Ch-13
Mechanism of Pollutant Formation and its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.	4	Lecture+ Practice	Assignment -7.2	TB-2,Ch-15
Total (Hrs)	60			

Design of Thermal Energy Systems

Course Title	Code	Type of course	T-P-P	Prerequisite
Design of Thermal Energy Systems	MECC0407	Theory + Practice	2-1-0	Thermodynamics

Objective

- To educate the students on principles, technology and applications of various thermal energy systems as used in industry
- To impart technical knowledge and skills on design of various thermal energy systems

Course Outcomes

- Students will be able to identify and select, design and implement appropriate thermal energy system corresponding to specific need
- Students will be able to take up testing, maintenance of thermal energy systems with minimum additional input

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Evaluation	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module I: Power Cycles, Power Generating Systems (8 Hours)

Theory

Power Cycles: Introduction, Power Cycles, Carnot Vapor Cycle and its Limitations, Rankine Cycle, Means of Increasing Rankine Cycle Efficiency, Reheat Cycle, Regenerative Feed Heating Cycle, Binary Vapor Cycle, Gas-Vapor Coupled Cycles.

Power Generating Systems: Types of steam turbines, Thermodynamics of steam Turbine Elements, steam Turbine operation, Turbine Performance at Varying Load, Performance of supersonic Turbine Nozzles.

Module II: Heat Transfer Systems (12 Hours)

Theory

Heat Transfer Systems: Classification and Thermal Design of Heat Exchangers, Overall Heat Transfer Coefficient, Fouling Factor or Dirt Factor, Temperature Profiles in Heat Exchangers, LMTD Correction Factor, Pressure Drop in Heat Exchanger, Correlation for Tube Side Pressure Drop, Correlation for Shell Side Pressure Drop, Heat Transfer Effectiveness and Number of Transfer Units, Calculation and Designing of the Heat Exchanger, Double-Pipe Heat Exchanger.

Practice

1. Determination of Overall Heat Transfer Coefficient of Concentric Tube Heat Exchanger.
2. Determination of Effectiveness and Efficiency of Cross Flow Heat Exchanger.
3. Determination of Overall Heat Transfer Coefficient of Shell and Tube Heat Exchanger.
4. Ansys Fluent analysis of Double pipe Heat exchanger.

Module III: Types of Refrigerants and Environmental Safety (6 Hours)

Theory

Types of Refrigerants and Environmental Safety: Introduction, Unit of Refrigeration, Coefficient of Performance, Characteristics of Different Refrigerants, Types of Refrigerants, Refrigerants with the least environmental impact, Ozone Depletion Potentials, Green House Potential Refrigerants, Natural Organic Refrigerants, Use of Non-Polluting Refrigerants.

Module IV: Vapor Compression System (12 Hours)

Theory

Vapor Compression System: Analysis of Theoretical Vapor Compression Cycle, Representation of Cycle on T-S and P-H Diagram, Simple Saturation Cycle, Sub-Cooled Cycle and Super-Heated Cycle, Effect of Suction and Discharge Pressure on Performance.

Practice

5. Determination of C.O. P of Vapor Compression Refrigeration System
6. Determination of C.O.P and Capacity of an Ice Plant.
7. Leak Detection and Charging of Refrigerants in a Domestic Refrigerator.
8. Hands on Practice on Soldering and Brazing.

Module V: Vapor Absorption System (4 Hours)

Theory

Vapor Absorption System: Simple Ammonia Absorption System, Improved Absorption System, Electrolux Refrigerator, Lithium-Bromide Absorption Refrigeration System.

Module VI: Air Conditioning (10 Hours)

Theory

Air Conditioning: Factors Affecting the Air Quality, Dry Bulb Temperature, Wet Bulb Temperature, Relative Humidity, Dew Point Temperature, Specific Humidity, Absolute Humidity, Specific Enthalpy, Pressure, Ventilation, Study on Psychometric Chart. HVAC System.

Practice

9. Calculation of C.O.P. Of Air Conditioning System
10. Performance Test of Window Type Air Conditioner
11. To Carry Out Cooling Process of Fresh Air and Find Out Relevant Parameter of Air
12. To Carry Out Heating Process of Fresh Air and Find Out Relevant Parameter of Air

Module VII: Heating and Cooling Load Calculation (8 Hours)

Theory

Heating and Cooling Load Calculation Building: Heat and Cooling Load Calculation, Air Distribution System, Calculation for Duct Size, Water and Air Cooled Chillers, Cooling Towers.

Practice

13. Determination of Efficiency of Cooling Tower
14. Calculation of Cooling Load of a Confined Space

Text Books

1. Holman J.P. and Bhattacharyya Souvik. Heat Transfer: McGraw-Hill Education, 10th Edition, 2016.
2. Nag P.K. Engineering Thermodynamics: Tata McGraw Hill Companies, fourth edition, 2008.

References

1. Raj put R.K. Refrigeration and Air Conditioning: Kataria and sons, 2005.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours)	Activity	Assignment	Suggested Reading
Module I: Power Cycles, Power Generating Systems (8 Hours)				
Introduction, Power Cycles, Carnot Vapor	8	Lecture	Assignment, 1	Text book (TB)-3, Chapter (Ch)-2,3

<p>Cycle and its Limitations, Rankine Cycle, Means of Increasing Rankine Cycle Efficiency, Reheat Cycle, Regenerative Feed Heating Cycle, Binary Vapor Cycle, Gas-Vapor Coupled Cycles.</p> <p>Types of steam turbines, Thermodynamics of steam Turbine Elements, steam Turbine operation, Turbine Performance at Varying Load, Performance of supersonic Turbine Nozzles.</p>				<p>https://www.youtube.com/watch?v=ouWOhk1INjo https://www.youtube.com/watch?v=ZJtobHM iXyQ https://www.youtube.com/watch?v=HtXjbA3h3wQ</p>
Module II: Heat Transfer Systems (12 Hours)				
<p>Classification and Thermal Design of Heat Exchangers, Overall Heat Transfer Coefficient, Fouling Factor or Dirt Factor, Temperature Profiles in Heat Exchangers, LMTD Correction Factor, Pressure Drop in Heat Exchanger, Correlation for Tube Side Pressure Drop, Correlation for Shell Side Pressure Drop, Heat Transfer Effectiveness and Number of Transfer Units, Calculation and Designing of the Heat Exchanger, Double-Pipe Heat Exchanger.</p>	<p>12 (Th-6, Pr-6)</p>	<p>Lecture+practice</p>	<p>Assignment, 2</p>	<p>TB-1,Ch-10 https://www.youtube.com/watch?v=-AdmxCJIWBk https://www.youtube.com/watch?v=eraQJ3Z9Mb8 https://www.youtube.com/watch?v=o0UJDQfwPaM</p>
Module III: Types of Refrigerants and Environmental Safety (6 Hours)				

Introduction, Unit of Refrigeration, Coefficient of Performance, Characteristics of Different Refrigerants, Types of Refrigerants, Refrigerants with the least environmental impact, Ozone Depletion Potentials, Green House Potential Refrigerants, Natural Organic Refrigerants, Use of Non-Polluting Refrigerants.	6	Lecture	Assignment, 3	TB-1,Ch1 https://www.youtube.com/watch?v=-AdmxCJIWBk https://www.youtube.com/watch?v=eraQJ3Z9Mb8 https://www.youtube.com/watch?v=o0UJDQfwPaM
Module IV: Vapor Compression System (12 Hours)				
Analysis of theoretical vapor compression cycle, representation of cycle on T-S and p-h diagram, simple saturation cycle, sub-cooled cycle and super-heated cycle, effect of suction and discharge pressure on performance	12 (Th-4,Pr-8)	Lecture + Practice	Assignment, 4	Ref.-1,Ch-3,4 https://www.youtube.com/watch?v=cobFAMZDS0o
Module V: Vapor Absorption System (4 Hours)				
Simple ammonia absorption system, improved absorption system, electrolux refrigerator, lithium-bromide absorption refrigeration system	4	Lecture	Assignment, 5	Ref.-1,Ch-5 https://www.youtube.com/watch?v=Ll8Ku-mFQxE https://www.youtube.com/watch?v=TFxbHp8uIyQ
Module VI: Air Conditioning (10 Hours)				

Factors Affecting the Air Quality, Dry Bulb Temperature, Wet Bulb Temperature, Relative Humidity, Dew Point Temperature, Specific Humidity, Absolute Humidity, Specific Enthalpy, Pressure, Ventilation, Study on Psychometric Chart.HVAC System.	10 (Th-3, Pr-7)	Lecture + Practice	Assignment, 6.1	Ref.-1,Ch-12 https://www.youtube.com/watch?v=fqvo7bSr6t8 https://www.youtube.com/watch?v=YrDZ9u2_GAQ
Module VII: Heating and Cooling Load Calculation (8 Hours)				
Building Heat and Cooling Load Calculation, Air Distribution System, Calculation for Duct Size, Water and Air Cooled Chillers, Cooling Towers.	8 (Th-4, Pr-4)	Lecture + Practice	Assignment, 7.1	Ref.-1,ch-18 https://www.youtube.com/watch?v=jygiuS-9ubU https://www.youtube.com/watch?v=1cvFIBLo4u0
Total (hrs)	60			

Mechanics of Machines

Subject Name	Code	Type of course	Credit	Prerequisite
Mechanics of Machines	MECC0410	Theory +Practice	3(2-1-0)	NIL

Objective

- To teach the students on basic theories, concepts and methods used for study and analysis of commonly used mechanisms in various applications
- To teach the students on some of the widely used mechanical power transmission elements

Course Outcomes

- Students will have knowledge and skills to analyse, design and develop mechanisms suiting specific applications
- Students will have knowledge skills to study and understand working of complex mechanisms and machines enabling them to safely operate and maintain such installations

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Course Outline

Module I: MECHANISMS (09 Hours)

Theory

Planar Mechanisms: Kinematic Link, Pair, Chain and Mechanism, Types of Links and Joints, Degree of Freedom, Grashof's Law for four bar Mechanism; Inversions of four bar Mechanism, Single Slider Crank Mechanism and Double Slider Crank Mechanism;

Practice

1. Position Analysis of Grashof and Non-Grashof four bar Mechanism
2. Position Analysis of Slider Crank Mechanism, Scotch Yoke Mechanism and Elliptical Trammel

Module II: MOTION ANALYSIS (14 Hours)

Theory

Instantaneous Centre of Rotation, Number and Types of Instantaneous Centers, Kennedy Theorem, Relative Velocity Method, Velocities in Four Bar and Slider Crank Mechanism, Crank and Slotted Lever Mechanism, Angular Velocity Ratio Theorem, Acceleration Diagram of Single Slider-Crank Mechanism, Coriolis Component of Acceleration;

Practice

3. Instantaneous Center Method to Find Velocity of Various Mechanisms

4. Klein's Construction for Determination of Velocity and Acceleration of Reciprocating Parts
5. Velocity Analysis of Grashof and Non-Grashof Four Bar Mechanism
6. Velocity Analysis of Slider Crank Mechanism and Scotch Yoke Mechanism
7. Acceleration Analysis of Slider Crank Mechanism

Module III: GEARS (09 Hours)

Theory

Classification and Basic Terminology, Fundamental Law of Gearing, Standard forms of Tooth, Length of Path of Contact and Arc of Contact, Contact Ratio, Interference in Involute Gears. Gear trains: Simple, Compound, Reverted and Epi-Cyclic Gear Trains;

Practice

08. Study of Various Gear Trains in Automobiles

Module IV: CAMS (07 Hours)

Theory

Various Types of Cams and Followers; Displacement, Velocity and Acceleration Diagrams for Different Follower Motions; Nomenclature of Cam Profile;

Practice

09. Construction of cam profile using Solid works software
10. Cam analysis of a Knife edge follower mechanism

Module V: INERTIA FORCES (05 Hours)

Theory

Inertia forces in reciprocating parts: Velocity and Acceleration of a Piston, Angular Velocity and Angular Acceleration of Connecting Rod, Engine Force Analysis, Dynamically Equivalent System.

Module VI: GYROSCOPE (08 Hours)

Theory

Gyroscopic Couple, Gyroscopic Effect on Naval Ships and Aeroplanes, Stability of four wheeler Vehicles. Static and Dynamic Balancing, Balancing of Several Masses Revolving in the Same Plane and Different Planes, Balancing of Reciprocating Mass, Partial Primary Balancing, Partial Balancing of four wheeler;

Practice

11. Determine Gyroscopic Couple on Motorized Gyroscope Balancing
12. Balancing of Several Masses Revolving in the Same and Different Planes
13. Balancing of Reciprocating masses by Simulation

Module VII: VIBRATION (08 Hours)

Theory

Basic Concepts and Types of Vibration, Methods of Vibration Analysis, Free Undamped Longitudinal, Transverse and Torsional Vibrations, Damped Free Vibrations, Logarithmic Decrement, Forced Vibration with Harmonic Excitation, Vibration Isolation and Transmissibility;

Practice

13. Determination of Critical or Whirling Speed of Shaft
14. Simple and Compound Pendulum

Text Book

1. Bansal R. K, Theory of Machines, Laxmi Publication
2. Rattan S.S, Theory of Machines, Tata McGraw-Hill.

Reference Books

1. Singh. S, Theory of Machines, Khanna publishers
2. Norton R.L, Design of Machinery, McGraw-Hill

Lesson Plan

Topics and Coverage	No.of Sessions (in hrs.)	Activity	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading(Books, Online source)
MODULE –I				
Kinematic link, pair, chain and mechanism; types of links and joints, degree of freedom; Grashof's law for four bar mechanism	3	Lecture	Assignment 1.1	Text book (TB)- 1 Chapter (Ch)-1 http://mm-nitk.vlabs.ac.in/index .
Inversions of four bar mechanism	2	Lecture	Assignment 1.2	TB- 1 Ch-1

Single slider crank mechanism Double slider crank mechanism.	4	Lecture	Assignment1.3	TB- 1 Ch-1 http://mm-nitk.vlabs.ac.in/index.html
MODULE II				
Instantaneous center of rotation, number and types of instantaneous centers, Kennedy theorem, relative velocity method	3	Lecture	Assignment2.1	TB-1 Ch-3
Velocities in four bar ,slider crank mechanism, crank and slotted lever mechanism	2+2	Lecture	Assignment2.2	TB-1 Ch-3 http://mm-nitk.vlabs.ac.in/index.html# http://mm-nitk.vlabs.ac.in/index.html#
Angular velocity theorem	1	Lecture	Assignment2.3	TB-1 Ch-3
Acceleration diagram of single slider crank mechanism	2+2	Lecture Practice	Assignment2.4	TB-1 Ch-4 http://mm-nitk.vlabs.ac.in/index.html
Coriolis component acceleration	2	Lecture		TB-1 Ch-4
MODULE -III				
Classification And basic terminology, fundamental law of gearing	2	Lecture	Assignment3.1	TB- 1 Ch-9 https://www.youtube.com/watch?v=Z1f29M4
Standard forms of tooth, Length of path of contact Arc of contact, contact ratio, Interference in involute gears.	3	Lecture		TB- 1 Ch-9
Simple, compound, reverted and epi-cyclic gear trains.	2+2	Lecture+ Practice		TB- 1 Ch-9

MODULE IV				
CAM: Cams and followers	1	Lecture	Assignment4.1	TB-1 Ch-18 https://www.youtube.com/watch?v=YbjmphKVVpA
Displacement, velocity and acceleration diagrams for different follower motions; nomenclature of cam profile+	2+2+2	Lecture+ Practice		TB-1 Ch-18 https://youtu.be/Wn7CW9y42Pg Cam profile practice by Solid works
MODULE - V				
Velocity and acceleration of a piston, Angular velocity and angular acceleration of connecting rod	3	Lecture	Assignment5.1	TB- 2 Ch-13
Engine force analysis, dynamically equivalent system	2	Lecture		TB- 2 Ch-13
MODULE - VI				
Gyroscope: Gyroscopic couple, Gyroscopic effect on naval ships	1+2	Lecture+ Practice	Assignment6.1	TB- 2 Ch-17
Gyroscopic effect on airplanes Stability of two wheeler vehicles	1	Lecture		https://www.youtube.com/watch?v=ZsaVIW1BFUQ
Balancing: Static and dynamic balancing.	1+1	Lecture +Practice		TB- 2 Ch-14 https://youtu.be/4jk9H5AB4IM https://youtu.be/QA-ffR0XV-Q
Balancing of several masses revolving in different planes	1	Lecture	Assignment6.2	https://www.youtube.com/watch?v=_CwACU8Zfug

Balancing of reciprocating mass. Partial primary balancing	1	Lecture		https://www.youtube.com/watch?v=Eg9AwoxvwIQ https://youtu.be/4jk9H5AB4IM
MODULE -VII				
Vibration: Basic concepts and types of vibration. Methods of vibration analysis Free vibrations Longitudinal, transverse and torsional vibrations	2+2	Lecture+Practice	Assignment7.1	TB- 2 Ch-18 https://www.youtube.com/watch?v=qV65LJ6LpI4 https://youtu.be/02w9lSii_Hs https://youtu.be/3uZ_Boyt_AI
Damped free vibrations, Logarithmic decrement	2	Lecture		https://www.youtube.com/watch?v=Zp9g0Xbv7G4
Forced Vibrations with harmonic excitation Vibration isolation and transmissibility	2	Lecture		https://www.youtube.com/watch?v=cGFjNhbGwUY
Total (hrs)	60			

Strength of Materials

Course Title	Code	Type of course	T-P-P	Prerequisite
Strength of Materials	CECC0411	Theory + Practice	1-2-0	Engineering Mechanics

Objective

- To teach the Students on basic theories behind Mechanics of Solids
- To teach the Students on using ANSYS for analysis of various mechanical structures and load transmitting elements

Course Outcomes

- Students will have Knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data
- Students will be able to deploy ANSYS to develop mechanical design solutions

Evaluation Systems

1. Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Evaluation	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Course Outline

Module I: Analysis of beams (07 Hrs)

Theory

Shear and Bending Moment in Beams: Types of Beams and Loads, Concept of Shear force, Bending moment and Sign Conventions, Relation Between Load, Shear force and Bending moment, Procedure for Drawing Shear force and Bending moment Diagrams, Point of Contra Flexure.

Practice

1. Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment
2. Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment

Module II: Stresses in Beams (04 Hrs)

Theory

Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination Bending Stresses, Shear Stress Distribution for Different Sections.

Practice

3. Simulation (Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam

<https://www.youtube.com/watch?v=ekKQvGna0ig>

Module III: Deflection of Beams (05 Hrs)

Theory

Equation of Elastic Curve, Direct Integration Method, Strain Energy Method, Castigliano's Theorem

Practice

4. Stress & Deflection Analysis of Mechanical Component (Using ANSYS)
5. Double Shear Test and Deflection Test Using UTM

Module IV: Analysis of Column and Shaft (06 Hrs)

Theory

Column Analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.

Practice

6. Simulation (Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam

Module V: Torsion (06 Hrs)

Theory

Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

Practice

7. Simulation (Using ANSYS): Static and Dynamic Analysis of Shaft
8. Simulation (Using ANSYS): Spring Structural Analysis
<https://www.youtube.com/watch?v=rJ2e4DximL0>
9. Simulation (Using ANSYS): Stress Analysis of Suspension System
https://www.youtube.com/watch?v=xI-NqAKZ_60
10. Stiffness Test of a Helical Spring

Module VI :Theories of Failure (06 Hrs)

Theory

Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

Practice

11. Simulation: Spur Gear Fatigue Analysis in Ansys
<https://www.youtube.com/watch?v=2SGqcLZISQ0>
12. Simulation: Chair Structural Analysis in ANSYS
<https://www.youtube.com/watch?v=DIII8bI-ea8>
13. Simulation(Using ANSYS): Bicycle Frame Structural Analysis
https://www.youtube.com/watch?v=p-CUK_pEfR4

Module VII: Fatigue (11 Hrs)

Theory

Failure under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

Practice

14. Fatigue Failure Analysis (Using ANSYS)
<https://www.youtube.com/watch?v=ywDsB3umK2Y>
15. Fatigue Analysis of a Plate with Hole (Using ANSYS)
<https://www.youtube.com/watch?v=c3yM5fT5Ztc>
16. Fatigue Analysis (Using ANSYS) of Crankshaft of Two Wheeler

Text Books

1. Rattan S.S. , Strength of materials, Tata Mc-Graw Hill Publication.
2. Bansal R K , Strength of materials, Laxmi Publication (P) Ltd.

Reference Books

1. Boresi A.P. and Schmidt R.J., Advanced mechanics of materials, Willey India
2. P. Popov Egor Engineering Mechanics of Solids, Pearson publication
Online Source: YouTube, NPTEL

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module-I				
Shear And Bending Moment In Beams: Types of Beams and Loads, Concept of Shear force, Bending moment and Sign Conventions	1		Assignment-1.1	Text book (TB)-1, chapter(Ch) no-4, page-99
Relation Between Load, Shear force and Bending moment, Procedure for Drawing Shear force and Bending moment Diagrams, Point of Contra Flexure.	2		Assignment-1.2	TB1, chapter no-4, page-103

Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment	2	Lab practice	Assignment-1.3	
Module-II				
Stresses in beams: Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination Bending Stresses, Shear Stress Distribution for Different Sections.	2		Assignment-2.1	TB ₁ ,chapter-5,page-129 2. https://www.youtube.com/watch?v=ekKQvGna0ig
Simulation(Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam	2	Lab practice	Assignment-2.2	
Module-III				
Deflection of beams: Equation of Elastic Curve, Direct Integration Method, Strain Energy Method,	1			TB 2 ,chapter-12,page-511

<p>Stress & Deflection Analysis of Mechanical Component(Using ANSYS)</p> <p>Double Shear Test and Deflection Test Using UTM</p>	4	Lab practice	Assignment-3.1	
Module-IV				
<p>Column analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.</p>	4		Assignment-4.1	TB ₁ , chapter-12,page-388
<p>Simulation(Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam</p>	2	Lab practice	Assignment-4.2	

<p>Torsion: Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-</p>	3		Assignment-5.1	<p>RB₂, chapter-6,page no-200</p> <p>2.https://www.youtube.com/watch?v=rJ2e4DximL0</p> <p>3.https://www.youtube.com/watch?v=xI-NqAKZ_60</p>
<p>Simulation (Using ANSYS): Spring Structural Analysis. Stiffness Test of a Helical Spring.</p>	4	Lab practice	Assignment-5.2	
Module-VI				
<p>Theories of failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.</p>	2		Assignment-6.1	<p>TB₁, chapter-3,page-91.</p> <p>2.https://www.youtube.com/watch?v=2SGqcLZISQ0</p> <p>3.https://www.youtube.com/watch?v=p-CUK_pEfR4</p> <p>4.https://www.youtube.com/watch?v=hETp6TDi7-k</p>

Simulation:Spur Gear Fatigue Analysis in Ansys. Simulation(Using ANSYS): Bicycle Frame Structural Analysis	5	Lab practice	Assignment-6.2	
Module-VII				
Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.	3		Assignment-7.1	RB1,chapter-16,page no-567.
Fatigue Analysis of a Plate With Hole(Using ANSYS). Fatigue Analysis(Using ANSYS) of Crankshaft of Two Wheeler	6	Lab practice	Assignment-7.2	
Tensile Test, Compression Test	2	Lab practice	Assignment-7.4	
Total (hrs)	45			

Design of Transmission Systems

Course Title	Code	Type of course	T-P-P	Prerequisite
Design of Transmission Systems	MECC0412	Theory + Practice	2-1-0	Mechanics of Solids

Objective

- To Familiarize the Various Mechanical Power Transmission Elements and Systems as used in Industry
- To Enable the Students to Design Basic Transmission Elements using prior theoretical Knowledge

Course outcomes

- To convert basic Input Data into Engineering Design and drawing using CATIA and ANSYS

Evaluation System

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Evaluation	External Theory	30	Written examination
	External Practice	20	Lab work
Total Marks		<i>100</i>	

Course outline

Module I: Basic Power Transmission Elements (10 Hrs)

Theory

Design of Shaft Coupling: Keys and Splines; Strength of a Sunk Key; Rigid and Flexible Coupling, Hooke's Joint and Constant Velocity Joint; Fluid Coupling.

Practice

1. Design of Flange Coupling using CATIA
2. Design of Hooke's Joint using CATIA

Module II: Design of Belt, Rope and Chain Drives (10 Hrs.)

Theory

Flat, V-Belt and Rope Belts; Slip and Creep of Belt; Velocity Ratio of Belt Drives; Centrifugal and Initial Tension; Maximum Power Transmission Through a Belt Drive, Power Transmitting Chains.

Practice

3. Design of Flat belt pulley using CATIA
4. Design of V-belt pulley using CATIA

Module III: Design of Gears (10Hrs)

Theory

Selection of Materials; Force Analysis, Beam Strength of Gear Tooth, Gear Tooth Failure.

Practice

4. Computer aided spur gear design and analysis using CATIA and ANSYS
5. Computer aided helical gear design and analysis using CATIA and ANSYS
6. Gear Box Used in Automobiles, Machine Tool, etc.

Module IV: Clutch & Brake (12 Hrs)

Theory

Clutch: Friction, Centrifugal, Vacuum and Free Wheel Clutch, Construction and Working Principle.

Brakes: Single and Double Shoe Brake, Internal Expanding Brake, Band Brake, Electromagnetic Brakes, Concept of Regenerative Braking.

Practice

5. Disc type and Drum types Brakes used in Automobiles
6. Power Transmission using Cardan Shaft in Rolling Mills and Conveyors

Module V: Application of Tribology (06 Hrs)

Theory

Lubrication, Tribology in Design - Mechanical design of oil seals and gasket - Tribological design of oil seals and gasket, Tribology in Industry (Maintenance), Rolling Contact Bearing, Journal Bearings - Finite Bearings. Friction Theory.

Practice

7. Journal Bearing Test: Experimental measurement of the pressure distribution and
8. frictional torque in the journal bearing for different applied load

Module VI: Material Handling Systems (06Hrs)

Theory

Load handling attachments, Standard forged hook, Hook weights, Hook bearings, Cross piece and casing of hook, Crane grab for unit and piece loads, Carrier beams and clamps, Load platforms and side dump buckets, Electric lifting magnets, Grabbing attachments for loose materials, Crane attachments for handling liquid materials.

Practice

9. Conveyor with the Application of Belt Drives
10. Electric Overhead Cranes and Goods/Passenger Lifts Using Rope Drives
11. Ball Screw Mechanisms Used in CNC Machines

Module VII: Mechanical Handling Equipment (6 Hrs)

Theory

Different drives of hosting gears like individual and common motor drive for several mechanisms, Traveling gear, Traveling mechanisms for moving trolleys and cranes on runway rails, Mechanisms for trackless, Rubber-tyred and crawler cranes motor propelled trolley hoists and trolleys, Rails and traveling wheels;

Practice

12. Measurement of Torque and Power using Rope Brake Dynamometer

Text Book

1. Kannaiah P., Machine Design, Scitech Publication Pvt. Ltd.
2. Khurmi R.S., Gupta J.K., Machine Design, S.Chand Publication
3. Jalaludeen S.Md., Design Data Handbook, Anuradha Publications
4. Ray Siddhartha., Material Handling, New Age Publications

Reference Book

1. Bhandari V.B., Design of Machine Elements, Tata McGraw Hill Education Private Limited

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I (10 Hrs)				
Keys and Splines; Strength of a Sunk Key	02	Lecture	Assignment 1.1	Text book(TB) -1 Chapter(Ch) -14 TB-3 Ch-5 https://www.youtube.com/watch?v=S8Qmy4fGnnE
Rigid and Flexible Coupling	03	Lecture	Assignment 1.2	TB-1 Ch-15 TB-3 Ch-6

				<p>2. https://www.youtube.com/watch?v=CwiaS075YzQ</p> <p>3. https://www.youtube.com/watch?v=9idc0CzMjCo</p>
Hooke's Joint and Constant Velocity Joint; Fluid Coupling	01	Lecture	Assignment 1.3	<p>TB-2 Ch-13</p> <p>2. https://www.youtube.com/watch?v=EJL9qHhQing.</p> <p>3. https://www.youtube.com/watch?v=LCMZz6YhbOQ</p>
Design of Flange Coupling using CATIA, Design of Hooke's Joint using CATIA	04	Lab Practice		<p>TB-2 Ch-13</p>
Module – II (10 Hrs)				
Flat, V-Belt and Rope Belts; Slip and Creep of Belt; Velocity Ratio of Belt Drive	04	lecture	Assignment 2.1	<p>TB-1 Ch-20 TB-3 Ch-21,22</p> <p>2. https://www.youtube.com/watch?v=0mb_XMGja_c</p> <p>3. https://www.youtube.com/watch?v=j7njM22izc</p>
Centrifugal and Initial Tension; Maximum Power Transmission Through a Belt Drive, Power Transmitting Chains	02	lecture	Assignment 2.2	<p>TB-1 Ch-20,21 TB-3 Ch-21,22</p> <p>2. https://www.youtube.com/watch?v=4PsJkXO70Xc</p>
Design of Flat belt pulley using CATIA, Design of V-belt pulley using CATIA	04	Lab. Practice		<p>TB-1 Ch-20,21</p>
Module III (10 Hrs)				

Selection of Materials; Force Analysis, Beam Strength of Gear Tooth, Gear Tooth Failure	03	lecture	Assignment 3.1	TB-1 Ch-22 TB-3 Ch-25 2. https://www.youtube.com/watch?v=P4rNX0gCm3E
Computer aided spur gear design and analysis using CATIA and ANSYS Computer aided helical gear design and analysis using CATIA and ANSYS Gear Box Used in Automobiles, Machine Tool, etc	07	Lab. Practice		TB-1 Ch-22
Module – IV (12 Hrs)				
Friction, Centrifugal, Vacuum and Free Wheel Clutch, Construction and Working Principle	04	lecture	Assignment 4.1	TB-1 Ch-26 TB-3 Ch-17 2. https://www.youtube.com/watch?v=devo3kdSPQY 3. https://www.youtube.com/watch?v=pqF-aBtTBnY&t=108s
Single and Double Shoe Brake, Internal Expanding Brake, Band Brake, Electromagnetic Brakes, Concept of Regenerative Braking.	05	lecture	Assignment 4.2	TB-1 Ch-27 TB-3 Ch-18 2. https://www.youtube.com/w45s
Disc type and Drum types Brakes used in Automobiles. Power Transmission using Cardan Shaft in Rolling Mills and	03	Lab Practice		TB-1 Ch-27

Conveyors				
Module – V (6 Hrs)				
Lubrication, Tribology in Design - Mechanical design of oil seals and gasket - Tribological design of oil seals and gasket, Tribology in Industry (Maintenance), Rolling Contact Bearing, Journal Bearings - Finite Bearings. Friction Theory	2	lecture	Assignment 5.1	TB-1 Ch-19 TB-3 Ch-19,20
Journal Bearing Test: Experimental measurement of the pressure distribution and frictional torque in the journal bearing for different applied load	4	Lab Practice		TB-1 Ch-19
Module – VI (6 Hrs)				
Load handling attachments, standard forged hook, hook weights, hook bearings, cross piece and casing of hook, crane grab for unit and piece loads, carrier beams and clamps, load platforms and side dump buckets, electric lifting magnets, grabbing attachments for loose materials, crane attachments for handling liquid materials	2	Lecture	Assignment 6.1	TB-4 Ch-1 Materials Handling Equipment – N. Rudenko , Envee Publishers, New Delhi
Conveyor with the Application of Belt Drives,	4	Lab Practice		TB-4 Ch-3,6

Electric Overhead Cranes and Goods/Passenger Lifts Using Rope Drives, Ball Screw Mechanisms Used in CNC Machines				
Module – VII (6 Hrs)				
Different drives of hosting gears like individual and common motor drive for several mechanisms, traveling gear, traveling mechanisms for moving trolleys and cranes on runway rails, mechanisms for trackless, rubber-tyred and crawler cranes motor propelled trolley hoists and trolleys, rails and traveling wheels	2	Lecture	Assignment 7.1	TB-4 Ch-5 Materials Handling Equipment – N. Rudenko , Envee Publishers, New Delhi
Measurement of Torque and Power using Rope Brake Dynamometer.	4	Lab Practice		TB-4 Ch-7
Total	60			

Fluid Mechanics and Heat Transfer

Course Title	Code	Type of Course	T-P-P	Prerequisite
Fluid Mechanics and Heat Transfer	MECC0414	Theory + Practice	2-1-0	Basic Fluid Mechanics

Objective

- To teach the students about concepts of fluid mechanics and Heat Transfer useful in different field of engineering applications
- To provide a good exposure for the students to various phenomena associated with fluid flow and different modes of heat transfer

Course Outcomes

- Students will be able to analyze and design various Equipment used in industry using principles of Fluid Mechanics and Heat Transfer

Evaluation Systems

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab Work + Learning Record
External Evaluation	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Course Outline

Module I: Compressible flow (12 Hours)

Theory

Compressible flow: Basic Equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation, Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow, Mach Number, Wave Propagation in Compressible Fluid, Stagnation Properties. Introduction to Air Foil Theory.

Module II: Compressors (8 Hours)

Theory

Compressors: Introduction to Centrifugal and Reciprocating Compressor, Classification of Compressors, Multistage Compression with Intercooling, Advantages of Multi Stage Compression. Uses of Compressors.

Practice

1. Determination of Efficiency of Reciprocating Compressor.
2. Determination of Efficiency of Centrifugal Compressor.

Module III: Conduction (8 Hours)

Theory

Conduction: Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, One Dimensional Steady State Conduction in Composite Cylinders and Composite Spheres With Convective Atmosphere. Electrical Analogy, Conduction with Internal Heat Generation.

Practice

3. Determination of Overall Heat Transfer Coefficient of Composite Slab.
4. Determination of Thermal Conductivity of Liquid.

Module IV: Fins and Transient Conduction (10 Hours)

Theory

Fins and Transient Conduction: Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.

Practice

5. Experiment on Transient Heat Conduction Apparatus.
6. Determination of Efficiency and Effectiveness of Pin Fin.

Module V: Convection (10 Hours)

Theory

Convection: Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces. Different Types of Heat Exchangers, Parallel Flow and Counter Flow Heat Exchangers.

Practice

7. Determination of Heat Transfer Coefficient in Forced Convection.
8. Determination of Heat Transfer Coefficient in Natural Convection.

9. Determination of Effectiveness and Efficiency of Parallel Flow and Counter Flow Heat Exchanger.
10. Simulation of Boundary Layer for Flow over a Flat Plate Using ANSYS FLUENT.

Module VI: Radiation (5 Hours)

Theory

Radiation: Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black And Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.

Practice

11. Determination of Surface Emissivity.
12. Verification of Stefan Boltzmann's Law.

Module VII: Heat Transfer with Phase Change (7 Hours)

Theory

Heat Transfer with Phase Change: Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.

Practice

13. Determination of Critical Heat Flux during Boiling Heat Transfer.
14. Determination of Heat Transfer in Drop and Film Wise Condensation.

Text Books

1. Bansal,R.K., Fluid Mechanics and Hydraulic Machines, Laxmi Publications.
2. Rajput,R.K., Heat Transfer, Laxmi Publication.

Reference Books

1. Sachdeva, R.C., Fundamentals of Heat and Mass Transfer
2. Modi,P.N., Seth, S.N., Hydraulics & Fluid Mechanics, Rajsons Publications.

Session Plan

Topics	No. of Sessions (in hrs)	Activity	Assignment	Suggested Reading
Module-I: Compressible flow (12 Hours)				
Basic Equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation, Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow, Mach Number, Wave Propagation in Compressible Fluid, Stagnation Properties. Introduction to Air Foil Theory.	12	Lecture	Assignment -1	Text Book(TB)-1, Chapter(Ch)-15 https://www.youtube.com/watch?v=5ltjFEei3AI
Introduction to Centrifugal and Reciprocating Compressor, Classification of Compressors, Multistage Compression with Intercooling, Advantages of Multi Stage Compression. Uses of Compressors.	8	Lecture+ Practice	Assignment-2	TB-1 https://www.youtube.com/watch?v=JH3l-NliCkM
Module III: Conduction (8 Hours)				
Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, One Dimensional Steady State Conduction in Composite Cylinders and Composite Spheres With Convective Atmosphere. Electrical Analogy, Conduction with Internal Heat Generation.	8	Lecture+ Practice	Assignment-3	TB-2.Ch-2 https://www.youtube.com/watch?v=4EADzHBIjtE

Module IV: Fins and Transient Conduction (10 Hrs)				
Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.	10	Lecture+ Practice	Assignment-4	TB-2,Ch-2,4 https://www.youtube.com/watch?v=gcY6832h_Nw https://www.youtube.com/watch?v=bA3EzToAWOE https://www.youtube.com/watch?v=pRnURDgfByE https://www.youtube.com/watch?v=Atnjo7dD_bA http://nptel.ac.in/courses/112108149/pdf/M1/Student_Slides_M1.pdf https://www.youtube.com/watch?v=VO_3WW6ZcWw https://www.youtube.com/watch?v=zFkJy_VocCk
Module V: Convection (10 Hours)				
Convection: Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces. Different Types of Heat Exchangers, Parallel Flow and Counter Flow Heat Exchangers.	10	Lecture+ Practice	Assignment-5	TB-2,Ch-5,7,8 http://nptel.ac.in/courses/112108149/pdf/M6/Student_Slides_M6.pdf
Module VI: Radiation (5 Hours)				

Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black And Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.	5	Lecture+ Practice	Assignment-6	TB-2,Ch-11,12 https://www.youtube.com/watch?v=5GoZZKcNZiQ https://www.youtube.com/watch?v=tZliZyoYT80 http://nptel.ac.in/courses/112108149/pdf/M9/Student_Slides_M9.pdf
Module VII: Heat Transfer with Phase Change (7 Hours)				
Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.	7	Lecture+ Practice	Assignment-7	TB-2,Ch-9
TOTAL(Hrs)	60			

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Domain - Automobile Engineering

Sl. No.	Course Code	Course Title	Course Type	Credits
1	DEAE0101	Introduction to Automobile Engineering	Theory	3
2	DEAE0102	Entrepreneurship Opportunities in Automobile Trade	Theory	2
3	DEAE0204	Maintenance of Automobile	Practice	5
4	DEAE0205	Design of Basic Automobile Components	Practice	2
5	DEAE0401	Subsystems of Automobile	Theory + Practice	5
6	DEAE0402	Design and Maintenance of Electric Vehicles	Theory + Practice	3
7	DEET0300	Project		6
8	DEET0800	Internship		4
Total				30

Domain Objectives:

- The students will gain knowledge about different systems and subsystems of automobile.
- Students will acquire basic skills in the maintenance of automobile.
- It will help them to explore the opportunities available in the industry or to start their own micro enterprises with great results.

Importance:

Automobile Engineering is a branch of engineering which deals with designing, manufacturing and operating automobiles that incorporates elements of mechanical, electrical, electronic, software and safety engineering as applied to the design, manufacture and operation of automobiles and their engineering subsystems. It also includes

modification of vehicles. Automobile Engineering domain deals with the creation and assembling the whole parts of automobiles. The automotive engineering field is research intensive and involves direct application of mathematical models and formulas.

Employment Opportunities:

- The students can get jobs in automobile manufacturing companies in India and abroad.
- There are large number of job opportunities in automobile designing, research & development, sales & service.
- The students can also successfully run their own business in this field.

Courses Covered: The students will be taught the basics of automobile in introduction to automobile course. Then they will be exposed to different subsystems of automobile with requisite practices in subsystems of automobile course. The students will know the design, manufacturing and maintenance of electric vehicle in electric vehicle course. Students will be acquainted with various opportunities for business in entrepreneurship opportunities in automobile trade subject. They will learn the basic, periodic and preventive maintenance of two and four wheeler with trouble shooting in maintenance of two and four wheeler course. The students will be taught the maintenance and operation of forklift in diesel forklift course. Finally they will do a project on automobile and go for internship in automobile companies.

Approach of Delivery: The subjects in this domain will be taught either in ‘theory+ practice’ mode or ‘practice’ mode. After learning the theory, the students will do hands on practice. They will disassemble and assemble each system of automobile and will learn the maintenance of each part which creates good opportunities for employability in automobile in

Introduction to Automobile Engineering

Course Title	Course Code	Type of Course	T-P-PJ	Prerequisite
Introduction to Automobile Engineering	DEAE0101	Theory	3-0-0	Nil

Objective

- To understand the working of automobiles and its sub-systems
- To learn the modern technologies used in automobiles

Course Outcomes

- Familiarise and explain working principles of automobile and its sub-systems

Evaluation System:

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Module I: Automobile Architecture and Stability of Vehicles (7 Hours)

Automobile Architecture: Definition and Classification of Automobiles, Major Units of the Automobile, Types of Automobile Layouts, Automobile Chassis Types and Components, Automobile Body Types and Components, Automobile Safety Parameters, Automobile Regulatory Bodies in India.

Stability of Vehicles: Load Distribution, Calculation of Tractive Effort and Reactions for Different Drives, Stability of a Vehicle on a Slope, on a Curve and on Banked Road.

Module II: Various Units of an Automobile(7 Hours)

Various Units of an Automobile: Various Units of Automobile, Engine and its Subsystems, Transmission System, Steering System, Suspension System, Brake System, Automotive Electrical System, Automobile Battery.

ModuleIII: Engine (5 Hours)

Engine:Classification of Engine, Engine Nomenclature, Components of Engine, Valve Timing Diagram of SI & CI Engines, Variable Valve Timing, Modern Engine Combustion Technologies (CRDI, GDI, HCCI, Dual Fuel Engine, Stratified Charge Engine).

ModuleIV: Carburetion & Fuel Injection (8 Hours)

Carburetion: Air-Fuel Ratio, Mixture Requirements for Different Load Conditions, Factors Affecting Carburetion, Principle of Carburetion, Limitations of Simple Carburettor, Additional Systems in Carburettor, Concept of Electronic Carburettor.

Fuel Injection: Construction and Working of Fuel Feed Pumps for Petrol and Diesel Engines, Types of Fuel Injection Pumps, Control of Fuel Injection Pumps, Types of Electronic Injection Systems for Petrol and Diesel Engines, Direct and Indirect Fuel Injection.

Module V: Transmission System (7 Hours)

Transmission System: Layout of Power Flow from Engine to Wheels, Brief Construction and Working Principles of - Clutch, Transmissions, Propeller Shaft, Final Drive and Differential, Front and Rear Axles.

ModuleVI: Cooling and Lubrication System (6 Hours)

Cooling and Lubrication System: Direct Air Cooled and Indirect Liquid Cooled Cooling Systems, Types and Components of Liquid Cooled Cooling System, Viscous Fan Drive, Engine Coolant and Antifreeze Solution, Desired Properties of Lubricants, Types of Lubricant, API System of Lubricant Classification, Construction, Working Principles and Components of Various Types of Lubricating Systems.

ModuleVII:Super Charging &Turbo Charging(5 Hours)

Super Charging &Turbo Charging: Naturally Aspirated and Forced Induction Engine, Effect of Forced Induction, Method of Supercharging, Typesof Super Chargers, Working Principles, Components Principle and Types of Turbo Charging, Turbocharger Boost Pressure Control and Wastegate Turbocharger, Turbo Lag, Concept of Variable Geometry Turbocharging.

Text Books

1. Gupta R. B., Automobile Engineering, SatyaPrakashan New Delhi.
2. GiriN. K., Automobile Technology, Khanna Publishers.

Reference Books

1. Gupta H. N., Fundamentals of Internal Combustion Engines, PHI Learning.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading

Module I: Automobile Architecture and Stability of Vehicles(7 hours)				
Definition and classification of automobiles, Major units of the automobile, Types of automobile layouts, Automobile chassis types and components, Automobile body types and components.	4	Lecture	Assignment-1	Text Book (TB)-1 Chapter(Ch)-1
Load distribution, Calculation of tractive effort and reactions for different drives, Stability of a vehicle on a slope, on a curve and on banked road.	3	Lecture	Assignment-1.1	TB-2 Ch-1
Module II: Various Units of an Automobile(7 Hours)				
Various units of automobile, Engine and its subsystems, Transmission system, Steering system, Suspension system, Brake system, Automotive Electrical system, Automobile Battery.	7	Lecture	Assignment-2	TB-2 Ch-2
ModuleIII: Engine (5 Hours)				
Classification of engine, Engine nomenclature, Components of engine, Valve timing diagram of SI & CI Engines, Variable	5	Lecture	Assignment-3	TB-1 Ch-2
ModuleIV: Carburetion & Fuel Injection (5 Hours)				

Air-fuel ratio, Mixture requirements for different load conditions, Factors affecting carburetion, Principle of carburetion, Limitations of simple carburetor, Additional systems in carburetor, Concept of electronic carburetor.	4	Lecture	Assignment-4	TB-1 Ch-10
Construction and working of fuel feed pumps for petrol and diesel engines, Types of fuel injection pumps, Control of fuel injection pumps, Types of electronic injection Systems for petrol and diesel engines, Direct and indirect fuel injection	4	Lecture	Assignment-4.1	TB-1 Ch-8
Module V: Transmission System (7 Hours)				
Layout of power flow from engine to wheels, Brief construction and working principles of - Clutch, Transmissions, Propeller shaft, Final drive and differential, Front and Rear axles.	7	Lecture	Assignment-5	TB-2 Ch-19,20,21,22
ModuleVI: Cooling and Lubrication System (6 Hours)				

Direct air cooled and Indirect liquid cooled cooling systems, Types and components of liquid cooled cooling system, Viscous fan drive, Engine coolant and antifreeze solution, Desired properties of lubricants, Types of lubricant, API system of lubricant classification, Construction, working principles and components of various types of lubricating systems.	6	Lecture	Assignment-6	TB-1 Ch-11
ModuleVII:Super Charging & Turbo Charging(5 Hours)				
Naturally aspirated and forced induction engine, Effect of forced induction, Method of supercharging, Types of super chargers, Working principles, components principle and types of turbo charging, Turbocharger boost pressure control and Wastegate turbocharger, Turbo lag, Concept of Variable geometry turbocharging.	5	Lecture	Assignment-7	TB-2 Ch-6

Entrepreneurship Opportunities in Automobile Trade

Course Title	Course Code	Type of Course	T-P-PJ	Pre-Requisite
Entrepreneurship Opportunities in Automobile Trade	DEAE0102	Theory	2-0-0	Nil

Objective

- To expose students to various opportunities in Automobile trade
- To provide basic knowledge on Entrepreneurship
- To expose them to business environment through Projects and Internship

Course Outcomes

- Explore various opportunities in Automobile trade
- Start their own business in Automobile sector

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Module I: Opportunities in Trading (5 Hours)

Opportunities in Trading: Opportunities in Trading - Battery, Lubricant, Spares, Tyres, Paints, Upholstery, Welding & Machining Consumables, Hardwares, Oil Seals, Hoses, Tools, Garage Equipment, Inventory Management & Control.

Module II: Opportunities in Service & Repair Work Shops (4 Hours)

Opportunities in Service & Repair Work Shops: Layout, Location, Water, Electricity, Drainage, Manpower & HR, Financing, Reports & Records, Management Info Systems, Sales & Marketing, Customer Relationship Management.

Module III: Opportunities in Operating Dealerships (3 Hours)

Opportunities in Operating Dealerships: Opportunities in Operating Dealerships in Sales, Service & Spare.

Module IV: Preparation of Project Report (5 Hours)

Preparation of Project Report: Long Term Fund - Land, Building, Furniture & Fixtures, Machinery & Tools, Working Capital - Stock, Work In Progress, Receivables, Advance To Suppliers, Investment - Debt Equity Ratio, Debt Servicing Coverage Ratio, Break Even Point - Capacity & Capacity Utilization, Return On Investment - Gestation Period.

Module V: Basic Accounting (4 Hours)

Basic Accounting: Revenue Expenditure, Capital Expenditure, Debit, Credit & Journal Entry, Heads of Accounts, Trial Balance, Study of Balance Sheet, PL Account, Depreciation, Provisioning & Taxes.

Module VI: Banking (5 Hours)

Banking: Current Account, Savings Account, Loan Account, Term Loan, Cash Credit Loan, Bank Guarantee, Letter of Credit, Demand Draft, NEFT, Negotiable Instrument Act, Primary Security, Collateral Security, CGTMSE, Insurance.

Module VII: Statutory Laws and Compliance (4 Hours)

Statutory Laws and Compliance: Shop & Establishment Act, Labour Laws, Pollution Control, GST, Income Tax, Weight & Measure, Packaged Commodities Act.

Text Book

1. Arora M.N., Accounting for Management, Himalaya Publishing House.
2. Gordon and Natarajan, Banking Theory Law and Practice, Himalaya Publishing House.

Reference Book

1. Entrepreneurship Development, Small Business Enterprises, Chavantimath, Pearson.
2. The Dynamics of Entrepreneurial Development & Management, Vasant Desai, HPH. Entrepreneurship, Roy, Oxford

Session Plan

Topics	No. of Sessions	Activity	Assignment	Suggested Reading
Module I: Opportunities in Trading (5 Hours)				
Opportunities in Trading - Battery, Lubricant, Spares, Tyres, Paints	5	Lecture	Assignment-1	Text Book(TB)-1 Chapter(Ch)-1
Module II: Opportunities in Service & Repair Work Shops (4 Hours)				
Layout, Location, Water, Electricity, Drainage, Manpower & HR , Financing, Reports & Records, Management Info Systems, Sales & Marketing, Customer Relationship Management.	4	Lecture	Assignment-2	TB-1 Ch-6, Ch-17
Module III: Opportunities in Operating Dealerships (3 Hours)				
Opportunities in Operating	3	Lecture	Assignment-3	TB-1 Ch-1

Dealerships in Sales, Service & Spare.				
Module IV: Preparation of Project Report (5 Hours)				
Long Term Fund - Land, Building, Furniture & Fixtures, Machinery & Tools, Working Capital - Stock, Work in Progress, Receivables, Advance to Suppliers,	5	Lecture	Assignment-4	TB-1 Ch-6
Module V: Basic Accounting (4 Hours)				
Revenue expenditure, Capital Expenditure, Debit, Credit & Journal Entry, Heads of Accounts, Trial Balance, Study of Balance Sheet, PL Account, Depreciation, Provisioning & Taxes.	5	Lecture	Assignment-5	TB-1 Ch-7
Module VI: Banking (5 Hours)				
Current account, Savings Account, Loan Account, Term Loan, Cash Credit Loan, Bank Guarantee, Letter of Credit, Demand Draft, NEFT, Negotiable Instrument Act, Primary Security, Collateral Security, CGTMSE, Insurance.	5	Lecture	Assignment-6	TB-2 Ch-1,6
Module VII: Statutory Laws and Compliance (4 Hours)				
Shop & Establishment Act, Labour Laws, Pollution Control, GST, Income Tax, Weight & Measure,	5	Lecture	Assignment-7	TB-2 Ch-33

Packaged Commodities Act.

Maintenance of Automobile

Course Title	Course Code	Type of Course	T-P-PJ	Pre-Requisite
Maintenance of Automobile	DEAE0204	Practice	0-5-0	Nil

Objective

- To be aware with the basic maintenance of four wheeler and two wheeler
- To learn the overhauling of each system of four wheeler and two wheeler

Course Outcomes

- Disassemble and assemble each system of an automobile
- To detect faults in various systems of automobile

Evaluation System

Evaluation	Component	Marks	Method of Assessment
Internal Evaluation	Internal Practice	50 (40+10)	Lab work + Learning Record
External Evaluation	External Practice	50	Lab work
Total		100	

Practice

1. Safety Precautions in Automobile Maintenance.
2. Identification and Functions of Various Tools and Equipments used in Automobile Workshop.
3. Identification of Vehicle Chassis No. & Engine No, Identification of Different Parts Of Engine.
4. Disassembling and Assembling of Engine of a Four Wheeler.
5. Disassembling and Assembling of Engine of a Two Wheeler.
6. Engine Troubleshooting.
7. Nomenclature of a Spark Plug and Spark Plug Reading, Testing and Cleaning of Spark Plug.
8. Checking and Replenishing Lubricating Oil, Engine Coolant, Power Steering Hydraulic Oil and Wind Screen Wiper Water.
9. Overhauling and Servicing of Fuel System including Air Filter.
10. Overhauling and Servicing of Cooling System.
11. Disassembling and Assembling Of Clutch, Clutch Troubles And Remedies.
12. Repairing and Adjustment of Brake System.
13. Disassembling and Assembling of Propeller Shaft.

14. Inspection and Servicing of Gear Box.
15. Inspection and Servicing Of CVT.
16. Tire Change Operation, Wheel Balancing, Wheel Alignment, Tire Inspection (Tubeless & Tube) and Inflation.
17. Overhauling of Suspension System.
18. Disassembling and Assembling of Steering System and Adjustment of Drag Link.
19. Dismantling and Assembling Starter Motor.
20. Preparation of Electrical Circuits using Switches and Fuses.
21. Checking of Battery Terminal Voltage, Electrolyte Level and Specific Gravity.
22. Inspection of Different Electrical Circuits and ECU.
23. Setting Valve Timing, Engine Remounting on Two-Wheeler.
24. Checking of Ignition System Circuit & Components.

Reference Book:

1. Training Manual Of Four Wheeler Maintenance (Ashok Leyland)
2. Training Manual Of Two Wheeler Maintenance (Yamaha).

Design of Basic Automobile Components

Course Title	Course Code	Type of Course	T-P-PJ	Pre-Requisite
Design of Basic Automobile Components	EAE0205	Practice	0-2-0	Nil

Objective

- To Convert Basic Input Data into Engineering Design and Drawing using CATIA
- To Enable the Students to Design Basic Automobile Components using Prior Theoretical Knowledge.

Course Outcomes

- Understand the Advance Automobile Design Process
- Undertake Automobile Design Project

Evaluation System

Evaluation	Component	Marks	Method of Assessment
Internal Evaluation	Internal Practice	50 (40+10)	Lab work + Learning Record
External Evaluation	External Practice	50	Lab work
Total		100	

Practice

1. Design of Piston using CATIA.
2. Design of Crankshaft using CATIA.
3. Design of Connecting Rod using CATIA.
4. Design of Flywheel using CATIA.
5. Design of a Single Plate Clutch using CATIA.
6. Design of Differential using CATIA.
7. Design of Propeller Shaft using CATIA.
8. Design of Universal Joint using CATIA.
9. Design of Gear Box using CATIA.
10. Design of Air Conditioning System of E-Rickshaw
11. Design of Battery Pack for E-Rickshaw
12. Design of Bumper of a car.
13. Design of Frame of a Car.
14. Design of Pitman Arm of Steering System.

Subsystems of Automobile

Course Title	Course Code	Type of course	T-P-PJ	Pre-Requisite
Subsystems of Automobile	DEAE0401	Theory + Practice	3-2-0	Nil

Objective

- To understand the construction and working principle of different sub-systems of automobile
- To get knowledge on latest technologies used in automobile engineering

Course Outcomes

- Identify various subsystems of automobiles including their components
- Will be able to disassemble and assemble major aggregates of the automobile

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		<i>100</i>	

Module I: Engine Emissions (10 Hours)

Theory

Engine Emissions: Sources of Air Pollution from Automobiles and Their Control, Crank Case Emission Control System, Evaporative Emission Control System, Exhaust Emission Control System: Air Injection, EGR, Catalytic Converters, Selective Catalytic Reduction (SCR) Technology, EURO/Bharat Stage Norms: I, II, III, IV, V And VI, Road Map for Implementation of Bharat Stage Norms In India.

Practice

1. Identification of Different Sub-Systems of Automobile.
2. Studies of Exhaust Gas Recirculation System (EGR) in KNOW Vehicle.

Module II: Ignition System (10 Hours)

Theory

Ignition System: Effect of Spark Timing on Emission And Ignition Timing Controls, Drawbacks of Conventional Ignition Systems, Electronic Ignition Systems (TCI And CDI), Engine Cylinder Numbering Scheme and Firing Order of Multi Cylinder Engines.

Practice

3. Study of Battery Ignition and Magneto Ignition System.
4. Disassembly and Assembly of 6-Cylinder Diesel Engine

Module III: Transmission System, Clutch System And Gear Box (20 Hours)

Theory

Transmission System: Power Transmission in Automobile (Front Wheel Drive, Rear Wheel Drive, Four-Wheel Drive, All-Wheel Drive).

Clutch System: Key Design Considerations of Clutches, Types of Clutches, Construction and Working Principle of Single Plate Friction Clutch, Diaphragm Clutch, Cone Clutch, Centrifugal Clutch, Dog Clutch, Vacuum Clutch, Hydraulic Clutches. Construction and Working Principle of Overrunning or Free Wheel Clutch.

Gear Box: Purpose of Gear Box, Types of Automobile Gear Boxes, Construction and Working Principle of Sliding Mesh, Constant Mesh, Synchronizer Mechanism and Synchromesh Gear Boxes, Planetary Gear Mechanism, Fluid Coupling and Torque Converter, Construction and Working Principle of Automatic Transmission, Construction and Working Principle of Continuously Variable Transmission (CVT) and Automated Manual Transmission (AMT).

Practice

5. Study of Single Plate Friction Clutches (Coil Spring Type And Diaphragm Type).
6. Study of Synchronizer Mechanism And Synchromesh Gear Box, Continuously Variable Transmission (CVT).

Module IV: Propeller Shaft, Differential and Axles (20 Hours)

Theory

Propeller Shaft: Function and Need of Propeller Shaft, Hotchkiss Drive and Torque Tube Drive, Construction of Propeller Shaft, Universal/Hooke's Joints, Slip Joint, Types of Propeller Shafts, Need and Types of Constant Velocity (CV) Joints.

Differential: Constructional Features and Working Principle of Differential Mechanism, Types of Differentials (Locking Type Differential, Limited Slip Differential).

Axles: Types of Automotive Axles, Constructional Features, Types and Working Principle of Front Axles, Lift Axles, Rear Axle, Third Differential in Tandem Axle Vehicles, Construction and Working Principle of Manual Transaxles and Transfer Cases.

Practice

7. Study of Propeller Shaft, Universal Joints, Slip Joints, Centre Bearing.
8. Study of Front Axle System.
9. Study of Rear Axle System Including Differential Mechanism.
10. Disassembly and Assembly of Manual Transaxle of Front Wheel Drive Car.

Module V: Steering and Braking System (15 Hours)

Theory

Steering System: Purpose of Steering System, Components of Steering System, Steering Geometry (Castor, Camber, Toe-In, Toe-Out, King Pin Inclination, Ride Height, Turning Radius, Thrust Angle And Thrust Line), Types of Steering Gear Boxes and Their Construction and Working Principles, Hydraulic and Electrically Power Assisted Steering Systems.

Braking System: Requirement and Key Design Parameters of Braking System, Classification and Types of Braking Systems, Mechanical Brake, Hydraulic Brake, Air Brake, Vacuum Brake, Disc Brake. Construction, Working Principle and Components of Anti-Lock Braking System (ABS), Electronic Brake Force Distribution System.

Practice

11. Study of Steering Gear Box And Hydraulic Power Assisted Steering System.
12. Identifying the Different Components and Working Of Drum Brake, Disc Brake, Hydraulic Brake, Air Brake System.
13. Study of Anti-Lock Braking System (ABS) In KNOW Vehicle.

Note:“Study” Includes Understanding The Construction, Working Principle and Identifying Various Parts of the Sub-System.

Module VI: Auto Electric System & Suspension System (10 Hours)

Theory

Auto Electric System: Wiring Diagram of Horn Circuit, Lighting Circuit, Cut-Out Circuit, Voltage and Current Regulator Circuit in Commutator Type Generator, Combined Three-Unit Regulator Circuit, Voltage and Current Regulator In Alternating Current Type Generator And Flasher Circuit (Sketch And Description), Common Ignition Troubles And Its Remedies, Basic Electronic Ignition Trouble Shooting Charts, Spark Plugs: Purpose, Construction and Specifications.

Suspension System: Purpose and Classification of Suspension Systems, Sprung and Unsprung Mass, Major Components of Suspension System, Description of the Conventional Suspension Systems for Rear and Front Axle. Panhard Rod, Macpherson Strut, Double Wishbone Suspensions. Description of Independent Suspension System Used In Cars (Coil Spring And Torsion Bars), Constructional Features and Working of Air Suspension System, Anti-Roll Bars, Constructional Features, Types and Working of Telescopic Shock Absorber.

Practice

14. Identification of Different Types of Suspension Systems: Coil Spring, Tension and Telescopic Suspension System.

Module VII: Trouble Shooting and Vehicle Maintenance (10 Hours)

Theory

Trouble Shooting and Maintenance: Onboard Diagnostic System, Symptoms for Engine Trouble and their Remedies.

Vehicle Maintenance: Types of Maintenance, Engine Tuning, Maintenance of Fuel And Air Filters, Monitoring of Lubricants and Other Fluids, Maintenance of Battery, Maintenance of Tyres.

Central Motor Vehicle Rules: Scope, Classification of Various Classes of Vehicles, GVW And GCW of Medium And Heavy Commercial Vehicles (Twin-Axle, Multi-Axle).

Checklist Preparation: Checklist for Daily Operator, Checklist for Accident Prevention, Checklist for Safety Precautions.

Automobile Technical Specification Sheets: Study of “Technical Specification Sheets”, Operation and Maintenance Manuals of Selected Car and Commercial Vehicle Models (Manufacturers in India And Abroad).

Function and Need of Propeller shaft, Hotchkiss drive and Torque tube drive, Construction of Propeller shaft, Universal/Hooke's	Th-3, Pr-2	Lecture+ Practice	Assignment-4	TB-1 Ch-22
Constructional features and working principle of differential mechanism, Types of differentials (Locking type differential, Limited slip differential).	3	Lecture	Assignment- 4.1	TB-1 Ch-22 TB-2 Ch-8

Types of automotive axles, Constructional features, types and working principle of Front axles, Lift axles, Rear axle, Third differential in Tandem axle vehicles, Construction and working principle of manual Transaxles and Transfer cases.	Th-6, Pr-6	Lecture + Practice	Assignment- 4.2	TB-1 Ch-24
Module V: Steering and Braking System (15 Hours)				
Purpose of Steering system, Components of Steering system, Steering geometry (Castor, Camber, Toe-in, Toe-out, King pin inclination, Ride height, Turning radius, Thrust angle and Thrust line), Types of Steering gear boxes and their construction and working principles, Hydraulic and Electrically power assisted steering systems.	Th-4, Pr-2	Lecture + Practice	Assignment-5	TB-1 Ch-24
Requirement and key design parameters of braking system, Classification and types of braking systems, Mechanical brake, Hydraulic brake, Air brake, Vacuum brake, Disc brake. Construction, working principle and components of Anti-lock braking system (ABS), Electronic	Th-5, Pr-4	Lecture +Practice	Assignment- 5.1	TB-2 Ch-7

Brake Force Distribution System				
Module VI: Auto Electric System & Suspension System (10 Hours)				
Wiring diagram of horn circuit, Lighting circuit, Cut-out circuit, Voltage and Current regulator circuit in Commutator type generator, Combined Three-unit regulator circuit, Voltage and Current regulator in Alternating current type generator and Flasher circuit (Sketch and description), Common ignition troubles and its remedies, Basic electronic ignition trouble shooting charts, Spark plugs: purpose, construction and specifications	Th-4, Pr-2	Lecture +Practice	Assignment- 6	TB-1 Ch-18
Purpose and Classification of Suspension systems, Sprung and Unsprung mass, Major components of suspension system, Description of the conventional suspension systems for rear and front axle. Panhard rod, Macpherson strut, Double wishbone suspensions. Description of independent suspension system used in cars (coil spring and torsion bars), Constructional features and working	4	Lecture +Practice	Assignment- 6.1	TB-1 Ch-25

of Air suspension system, Anti-roll bars, Constructional features, types and working of telescopic shock absorber				
Module VII: Trouble Shooting and Vehicle Maintenance (10 Hours)				
<p>Onboard Diagnostic system, Symptoms for Engine Trouble and their remedies.</p> <p>Types of maintenance, Engine tuning, maintenance of fuel and air filters, monitoring of lubricants and other fluids, maintenance of battery, maintenance of tyres.</p> <p>Scope, Classification of various classes of vehicles, GVW and GCW of Medium and Heavy Commercial vehicles (Twin-axle, Multi-axle).</p>	6	Lecture	Assignment-7	TB-1 Ch-28

<p>Checklist for daily operator, Checklist for accident prevention, Checklist for Safety precautions.</p> <p>Study of “Technical Specification sheets”, Operation and Maintenance manuals of selected Car and Commercial Vehicle Models (Manufacturers in India and abroad).</p>	4	Lecture		
--	---	---------	--	--

Design and Maintenance of Electric Vehicles

Course Title	Course Code	Type of Course	T-P-PJ	Pre-requisite
Design and Maintenance of Electric Vehicles	DEAE0402	Theory+ Practice	2-1-0	Nil

Objective

- To study electric drive vehicles & its applications
- To study fundamentals of component design of electric vehicle
- To know the basic maintenance of different parts of electric vehicle

Course Outcomes

- Understand the importance of EVs for environment, energy sustainability and climate change
- Decide the power rating of electric vehicle

Evaluation System

Evaluation	Component	Marks	Method of Evaluation
Internal Evaluation	Internal Theory	20	Written Examination
	Internal Practice	30 (20+10)	Lab Work + Learning Record
External Evaluation	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total Marks		100	

Module I: Principles of Energy and Conventional Vehicles (8Hours)

Theory

Principles of Energy: Motion, Force, Power, Work, Energy, Efficiency, Units of Forces (Drag, Lift, Inertia), Power and Energy.

Conventional Vehicles: Basics of Vehicle Performance, Vehicle Power Source Characterization, Performance Characteristics.

Practice:

1. Determination of Performance Parameters of Conventional Vehicle.

Module II: Introduction to Electric Vehicles (8Hours)

Theory

Introduction to Electric Vehicles: History of EV, EV Advantages and Disadvantages, EV Market and Promotion, Main Components of Electric Vehicle and Its Functions (Electrical and Mechanical).

Practice:

2. Study of Different Components of E-Rickshaw and Assembling Methods.
3. Working of Circuits in Controllers with respect to Current and Voltage Rating.

Module III: Electric Vehicle Drive Trains(4 Hours)

Theory

Electric Vehicle Drive Trains:EV Transmission Configurations, Basic Architecture of Electric Drive Trains, Single and Multi-Motor Drives, In Wheel Drives.

Module IV: Energy Sources(10 Hours)

Theory

Energy Sources: Working Principle of Battery, Types Of Batteries, Lead-Acid Battery, Nickel-Cadmium Battery, Nickel-Metal-Hydride (Nimh) Battery, Lithium Batteries, Battery Parameters, Fuel Cells,

Practice:

4. Maintenance of Lead Acid Batteries.
5. Wiring & Harnessing of Battery Circuit.

Module V: Electric Motors (15 Hours)

Theory

Electric Motors: Classification of Electric Motors, DC Motor, Types of DC Motors, Brushless DC Motor, AC Motor, Types of AC Motors, Induction Motor, Synchronous Motor, Regenerative Braking.

Practice:

6. Study of Different Parts of D.C. Motor and Make Connection.
7. Performance Characteristics of a Shunt and Series DC Motor
8. Load Test on Three Phase Induction Motor.
9. Speed Control of DC Shunt Motor by Armature and Field Control.

Module VI: Electric Vehicle Maintenance & Safety (10 Hours)

Theory

Electric Vehicle Maintenance & Safety: Maintenance & Trouble Shooting of Different Components of EV, High Voltage Electrical Safety, Tool and Equipment Usage, High Voltage Safety Rules, Electrical Isolation.

Practice:

10. Maintenance of BLDC Motor.
11. Maintenance of Hub Motor.
12. Maintenance & Trouble Shooting Of Electric Circuit

Module VII: Design of Electric Vehicle (5 Hours)

Theory

Design of Electric Vehicle:Power and Torque Calculation of Electric Vehicles, Sizing of Components, Initial Acceleration, Maximum Velocity, Maximum Gradability.

Text Book

1. HusseinIqbal, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press

2. Chau K. T., Electric Vehicle Machines and Drives: Design, Analysis and Application, Wiley.

Reference Book

1. Chan C.C. and Chau K.T., Modern Electric Vehicle Technology, London: Oxford University.

Session Plan

Topics	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I: Principles of Energy and Conventional Vehicles (8Hours)				
Motion, Force, Power, Work, Energy, Efficiency, Units of Forces (drag, lift, inertia), power and energy.	3	Lecture	Assignment-1	Text Book(TB)-1 Chapter(Ch)-1
Basics of vehicle performance, Vehicle power source characterization, Performance characteristics.	Th-3, Pr-2	Lecture+ Practice	Assignment-1.1	TB-1 Ch-1
Module II: Introduction to Electric Vehicles (8Hours)				
History of EV, EV advantages and disadvantages, EV market and promotion, Main components of electric vehicle and its functions (electrical and mechanical).	Th-4, Pr-4	Lecture+ Practice	Assignment-2	TB-1 Ch-1
Module III: Electric Vehicle Drive Trains(4 Hours)				

EV transmission configurations, Basic architecture of electric drive trains, Single and multi-motor drives, In wheel drives.	4	Lecture	Assignment-3	TB-1 Ch-2
Module IV: Energy Sources(10 Hours)				
Working principle of battery, Types of batteries, Lead-Acid battery, Nickel-Cadmium battery, Nickel-Metal-Hydride (NiMH) battery, Lithium batteries, Battery Parameters, Fuel Cells,	Th-6, Pr-4	Lecture+ Practice	Assignment-4	TB-1 Ch-3
Module V: Electric Motors (15 Hours)				
Classification of electric motors, DC motor, Types of DC motors, Brushless DC motor, AC motor, Types of AC Motors, Induction motor, synchronous motor, Regenerative braking.	Th-7, Pr-8	Lecture+ Practice	Assignment-5	TB-1 Ch-5
Module VI: Electric Vehicle Maintenance & Safety (10 Hours)				

Maintenance & trouble shooting of different components of EV, High voltage electrical safety, Tool and equipment usage, High voltage safety rules, Electrical isolation.	Th-4, Pr-6	Lecturer	Assignment-6	TB-2 Ch-6
Module VII: Design of Electric Vehicle (5 Hours)				
Power and torque calculation of electric vehicles, Sizing of components, Initial Acceleration, Maximum Velocity, Maximum Gradability.	5	Lecturer	Assignment-7	TB-1 Ch-7

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

**Conventional Machining & CNC

Jigs and Fixtures

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Jigs and Fixtures	DECM0101	Theory	3-0-0	Nil

Course Objectives

- To learn basic concepts, functions and design principles of Jigs and Fixtures
- To know the importance of work piece location & clamping

Course Outcomes

- Necessitate the need of jigs, fixtures and special tools in modern day production
- Identify appropriate combination of tools, jigs and fixture, suitable for a particular machining operation

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Introduction to Jigs & Fixtures (5 Hrs)

Theory

Fundamental Concept and Need of Jigs and Fixtures; Jigs and Fixtures Design Principles and Factors; Materials used in Jigs & Fixtures.

Module II Locators (10 Hrs)

Theory

General Principles of Degrees of Freedom and Constraints; Foolproofing; Basic Rules for Location; Locating Methods, Types of Locators.

Module III Clamps & Indexing Devices (8 Hrs)

Theory

Principles of Clamping, Types of Clamps, Linear Indexing, Precision Linear Indexing and Rotary Indexing

Module IV Drilling Jigs (5 Hrs)

Theory

Components of Jigs, Types of Jigs, Selection of Jigs

Module VMilling Fixtures (6 Hrs)

Theory

Salient Features of Milling Fixtures, Classification of Milling Fixtures, Facing Fixtures, Slotting Fixtures.

Module VIOther types of Fixtures(8 Hrs)

Theory

Turning (Standard Chucks, Spring Collets, Cylindrical Liners, Mandrels, Turning Fixtures), Grinding, Broaching, Welding and Modular Fixtures

Module VII Economics of Jigs & Fixtures(3 Hrs)

Theory

Calculation of Annual Cost, Relative Economics Analysis

Text Books

1. Joshi, P H, Jigs & Fixtures, 2010, 3rd Edition, McGraw Hill.
2. Nagpal, G R, Tool Engineering & Design, 2000, Khanna Publishers.

Reference Books

1. Venkataraman, K, Design of Jigs, Fixtures & Press Tools, 2015, Wiley & Sons
2. Mehta, N K, Metal Cutting and Design of Cutting Tools, Jigs & Fixtures, 2015, McGraw Hill

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module I (5 Hrs)				
Fundamental Concept and Need of Jigs and Fixtures	2	Lecture		1.Text Book (TB)-1, Page-1
Jigs and Fixtures design principles and factors	2	Lecture	Assignment 1	1. Text Book (TB)-1, Page-1
Materials used in jigs & Fixtures			Assignment 1	1. Text Book (TB)-1, Page-5
Module II (10 Hrs)				
General Principles of Degrees of Freedom and Constraints	2	Lecture		

Foolproofing; Basic rules for location; Locating methods, Types of locators.	8	Lecture		
Module III (8 Hrs)				
Principles of clamping, Types of clamps	4	Lecture		1.Text Book (TB)-1, Page-39
Liner indexing, precision linear indexing and rotary indexing	4	Lecture	Assignment 2	1.Text Book (TB)-1, Page-73
Module IV (5 Hrs)				
Components of Jigs, Types of Jigs, Selection of Jigs	5	Lecture	Assignment 3	1.Text Book (TB)-1, Page-85
Module V (6 Hrs)				
Salient features of milling fixtures, Classification of milling fixtures	3	Lecture		1.Text Book (TB)-1, Page-115
Facing fixtures, Slotting Fixtures.	3	Lecture	Assignment 4	
Module VI (8 Hrs)				
Turning(Standard chucks, Spring collets, Cylindrical liners, Mandrels, Turning Fixtures),	4	Lecture		1.Text Book (TB)-1, Page-135
Grinding, broaching, welding and modular fixtures	4	Lecture	Assignment 5	1.Text Book (TB)-1, Page-159
Module VII (3 Hrs)				
Calculation of annual cost, Relative economics analysis	3	Lecture		1.Text Book (TB)-1, Page-217
Total	45			

Process Planning and Cost Estimation

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Process Planning and Cost Estimation	DECM0102	Theory	3-0-0	Nil

Course Objective

- To learn fundamentals and execution of process planning and cost estimation for a component need to be manufactured

Course Outcomes

- To pick out best operational sequence with profitable outcome
- To create appropriate process plan chart for manufacturing of a component

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Course Outline

Module I Process Planning: Introduction (5 Hrs)

Theory

Objectives and Approaches to Process Planning; Process Planning Activities; Process Planning & Production Planning; Operating Sequences, Setup Documents for Process Planning.

Module II Selection Process (5 Hrs)

Theory

Factors Affecting Process Selection; Process & Equipment Selection Procedure; Process Sheet; Routing & Route Sheet; Determination of Man, Machine & Material Requirement.

Module III Material Requirement (10 Hrs)

Theory

Bill of Material, Selection of Machinery, Process Time Calculation, Selection of Cost Optimal Process; Breakeven Point & Breakeven Analysis

Module IV Computer Aided Process Planning (5 Hrs)

Theory

Shortcomings of Traditional Process Planning, Retrieval Type & Generative Process Planning; CAPP Developments and Trends; Group Technology

Module V Introduction to Cost Estimation(5 Hrs)**Theory**

Objectives of Cost Estimation; Components of a Cost Estimate; Cost Estimation Procedure; Classification of Costing; Elements of Cost; Expenses; Cost Accounting

Module VI Cost Estimation Methods (5 Hrs)**Theory**

Types of Cost Estimates; Methods of Cost Estimates; Data Requirements and Sources of Information; Allowances in Estimation (of Standard Time)

Module VII Production Cost Estimation (10 Hrs)**Theory**

Estimation of Material Cost, Labor Cost and Overhead; Cost Estimation in Foundry Shop (Casting); Cost Estimation in Welding Shop (Weldments & Welded joints); Cost Estimation in Forging Shop (Forging); Cost Estimation in Machine Shop (Machined components); Overhead Expenses; Allocation of Overhead Expenses or Distribution of Overhead Costs; Types of Overhead Costs.

Text Books

1. Kesavan, R, Process Planning and Cost Estimation, 2008, New Age Publication.
2. Nagpal, G R, Tool Engineering & Design, 2000, Khanna Publishers

Reference Books

1. Adithan, M, Process Planning & Cost Estimation, 2007, New Age Publication.
2. Groover, M P, CAD/CAM: Computer-Aided Design and Manufacturing, 2006, Pearson Education.

Session Plan

Topics	No. of Sessions (in hrs)	Activity	Assignment	Suggested Reading
Module I: Introduction (5 Hrs)				
Objectives and Approaches to Process Planning; Process Planning Activities	2	Lecture	Assignment 1	1. Text Book (TB)-1 Ch-1.7

Process Planning & Production Planning	1	Lecture		Text Book (TB)-1 Ch-1.7
Operating Sequences, Setup Documents for Process Planning	2			Text Book (TB)-1 Ch-1.7
Module II: Selection Process (5 Hrs)				
Factors affecting process selection; Process & Equipment selection procedure	2	Lecture	Assignment 2	Text Book (TB)-1 Ch-1.8
Process sheet; Routing & route sheet; Determination of man, machine & Material requirement.	3	Lecture		Text Book (TB)-1 Ch-1.8
Module III: Material Requirement (10 Hrs)				
Bill of Material, Selection of machinery	2	Lecture	Assignment 3	Text Book (TB)-1 Ch-1.9
Process time calculation, Selection of cost optimal process	6	Lecture		Text Book (TB)-1 Ch-1.9
Breakeven point & breakeven analysis	2	Lecture	Assignment 3.1	Text Book (TB)-1 Ch-1.13
Module IV: Computer Aided Process Planning (5 Hrs)				
Shortcomings of traditional process planning	2	Lecture		Reference Book (RB)- 2 Ch-13.1

Retrieval type & generative process planning; CAPP developments and trends; Group technology	3	Lecture	Assignment 4	Reference Book (RB)- 2 Ch-13.2
Module V: Introduction to Cost Estimation (5 Hrs)				
Objectives of Cost Estimation; Components of a Cost Estimate	2	Lecture		.Text Book (TB)-1 Ch-2.1
Cost Estimation Procedure; Classification of Costing; Elements of Cost; Expenses; Cost accounting	3	Lecture	Assignment 5	.Text Book (TB)-1 Ch-2.16
Module VI: Cost Estimation(5 Hrs)				
Types of Cost Estimates; Methods of Cost Estimates	3	Lecture		.Text Book (TB)-1 Ch-2.24
Data Requirements and Sources of information; Allowances in Estimation (of Standard Time)	2	Lecture	Assignment 6	.Text Book (TB)-1 Ch-2.24
Module VII: Production Cost Estimation (10 Hrs)				
Estimation of material cost, labour cost and overhead; Cost Estimation in Foundry Shop (Casting); Cost Estimation in Welding Shop (Weldments& Welded joints); Cost Estimation in Forging Shop (Forging)	5	Lecture		.Text Book (TB)-1 Ch-3.2
Cost Estimation in Machine Shop (Machined components); Overhead Expenses; Allocation of Overhead Expenses or Distribution of overhead costs: Types of Overhead	5	Lecture	Assignment 7	Text Book (TB)-1 Ch-4.1
Total	45			

Conventional Machining for Cylindrical Shape Component

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Conventional Machining for Cylindrical Shape Component	DECM0201	Practice	0-3-0	Nil

Course Objective

- To Practise Principles & Requirements of Machining and Machine Tools to Get Cylindrical Surfaces

Learning Outcome

- To Operate Machine effectively & efficiently.
- To Produce a Component by Executing Various Operations with Desired Tolerance

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

1. Cylindrical Turning Operations (Both Internal and External), Knurling, Thread Cutting, Stepped Turning)
2. Kinematic Study of Centre Lathe
3. Hole Making Operation in Turret Lathe
4. Work Holding and Tool Holding Devices For Turning Operations
5. Kinematic Study of Pillar Drilling Machine, Radial Drilling Machine and Boring Machine
6. Counter Boring , Counter Sinking and Threading Operations
7. Finishing Operations

Text Books

1. Rajput, R K, A Text Book of Manufacturing Technology, 2007, 1st Edition, Laxmi Publications.
2. Rao, P N, Manufacturing Technology, Volume 2, 2009, 2nd Edition, McGraw Hill.

Reference Books

1. Abdel, H, Fundamentals of Machining Processes: Conventional and Nonconventional Processes, 2008, CRC Press.
2. Sharma, P C, A Text Book of Production Technology: Manufacturing Processes, 2009, S Chand Publishers.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module I (80Hrs)				
Cylindrical Turning Operations (Both Internal and External), Knurling, Thread Cutting, Stepped Turning)	15	Lab. Practice		
Kinematic Study of Centre Lathe	10	Lab. Practice		
Hole Making Operation in Turret Lathe	10	Lab. Practice		
Work Holding and Tool Holding Devices For Turning Operations	10	Lab. Practice		
Kinematic Study of Pillar Drilling Machine, Radial Drilling Machine and Boring Machine	10	Lab. Practice		
Counter Boring , Counter Sinking and Threading Operations	15	Lab. Practice		
Finishing Operations	10	Lab. Practice		
Total	80			

Conventional Machining for Prismatic Shape Component

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Conventional Machining for Prismatic Shape Component	DECM0202	Practice	0-3-0	Nil

Course Objective

- To Practise Principles & Requirements of Machining and Machine Tools to Get Plane Surfaces

Course Outcome

- Able to Produce a Component by Executing Various Operations with Desired Tolerance Limits

Evaluation System:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

1. Kinematic Study of Shaping Machines and Planning Machine
2. Work Holding and Tool Holding Devices Used for Shapers, Planers and Grinders
3. Machining Operations Using Flat Grooves, Flat and Bevel Surfaces, Dovetailed Surfaces
4. Kinematic Study of Horizontal Milling Machine, Vertical Milling Machine
5. Surface Grinding Machines
6. Work Holding and Tool Holding Devices Employed in Milling Machines
7. Flats, Grooves, Slots and Keyways Cutting Using Milling Machine
8. Gear Cutting Using Milling Machine
9. Process Planning of Prismatic Components, Logical sequencing of Operations
10. Estimation of Machining Operations Time and Cost

Text Books

3. Rajput, R K, A Text Book of Manufacturing Technology, 2007, 1st Edition, Laxmi Publications.
4. Rao, P N, Manufacturing Technology, Volume 2, 2009, 2nd Edition, McGraw Hill.

Reference Books

3. Abdel, H, Fundamentals of Machining Processes: Conventional and Nonconventional Processes, 2008, CRC Press.
4. Sharma, P C, A Text Book of Production Technology: Manufacturing Processes, 2009, S Chand Publishers.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I (80Hrs)				
Kinematic Study of Shaping Machines and Planning Machine	08	Lab. Practice		
Work Holding and Tool Holding Devices Used for Shapers, Planers and Grinders	08	Lab. Practice		
Machining Operations Using Flat Grooves, Flat and Bevel Surfaces, Dovetailed Surfaces	08	Lab. Practice		
Kinematic Study of Horizontal Milling Machine, Vertical Milling Machine	08	Lab. Practice		
Surface Grinding Machines	08	Lab. Practice		
Work Holding and Tool Holding Devices Employed in Milling Machines	08	Lab. Practice		
Flats, Grooves, Slots and Keyways Cutting Using Milling Machine	08	Lab. Practice		

Gear Cutting Using Milling Machine	08	Lab. Practice		
Process Planning of Prismatic Components, Logical sequencing of Operations	08	Lab. Practice		
Estimation of Machining Operations Time and Cost	08	Lab. Practice		
Total	80			

Wood Engineering

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Wood Engineering	DECM0203	Practice	0-2-0	Nil

Course Objective

- To Provide In-Depth Technical Training & Knowledge of Latest Processing Technologies and Machineries Used in Wood Science and Engineering Which Strengthen The Industrial-Institutional Partnership

Course Outcome

- Develop manufacturing logic and knowledge
- Operate machines and to use jigs-fixtures effectively
- Build small-scale structures of wood having broader social and institutional context of sustainability

Evaluation Criteria

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Course Outline

1. Introduction, Safety and serviceability, Measurements & Marking
2. Identification of Timber & Hand Tools
3. Maintenance & Sharpening of Tools, Fasteners Carpentry hand tools and their maintenance.
4. Wood joints and Structural assemblies
5. Advanced Tools in Tool Engineering (Basic working principles and Operations)
6. Product Development: Interior Designs, Furniture, Structures & construction.

Text Books

1. Williamson, T G, Wood Engineering and Construction Handbook, 2016, McGraw Hill.
2. Garg, S K, Comprehensive Workshop Technology (Manufacturing Processes), 2008, Laxmi Publications.

Reference

1. John, K C, Mechanical Workshop Practice, 2nd Edition, 2010, PHI Learning Pvt.Ltd.
2. Hasluck, P N, Working with Hand Tools: Essential Techniques for Woodworking, 2012, Skyhorse Publishing.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module I (45Hrs)				
Introduction, Safety and serviceability, Measurements & Marking	03	Lab. Practice		
Identification of Timber & Hand Tools	03	Lab. Practice		
Maintenance & Sharpening of Tools, Fasteners Carpentry hand tools and their maintenance.	05	Lab. Practice		
Wood joints and Structural assemblies	04	Lab. Practice		
Advanced Tools in Tool Engineering (Basic working principles and Operations)	15	Lab. Practice		
Product Development: Interior Designs, Furniture, Structures & construction.	15	Lab. Practice		
Total	45			

CNC Machining

Course Name	Code	Type of course	T-P-PJ	Prerequisite
CNC Machining	DECM0603	Practice + Project	0-2-1	Nil

Course Objectives

- To acquire CNC operations skills and accomplish various jobs with desired dimensional accuracy

Course Outcomes:

- Do manual part programming effectively
- Operate CNC machine to produce component with desired dimensional accuracy

Evaluation Criteria:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module I Introduction to CNC (5 Hrs)

Numerical control, Functions of Machine Tool, Concept of numerical control, Feature of CNC, Machine control unit for CNC, Classification of CNC Machine Tool.

Module II CNC Fanuc Controller (15 Hrs)

CNC Fanuc Controller: Fanuc Control Panel, Modes of Control Panel, Hard Key, Soft Key, Chock, Hard Jaw, Soft Jaw, Job setting.

Module III Cutting Tools (10 Hrs)

Nomenclature of CNC Cutting Tools, Identification of Cutting Tools, Manual Cutting Operations, Offsetting and its Types.

Module IV Production Drawing (10 Hrs)

Concept of Projection, Understanding the Views, Orthographic view & Isometric View, Reading of Dimensional Tolerance and Geometrical Tolerance.

Module V CNC Programming (25 Hrs)

Developing program for Facing, Turning, Taper Turning, Drilling, Boring and Threading by following Process Plan.

Module VI CNC Milling (5 Hrs)

Fundamentals of CNC Milling, Tool Magazine, ATC, Manual Part Programming for Pocketing.

Module VII 5-Axis Machining (5 Hrs)

Fundamentals of 5-Axis Machining and Turn-Mill Machining.

Text Books

1. Groover, M P, CAD/CAM Computer-Aided Design and Manufacturing, 2008, Pearson Education.
2. Radhakrishnan, P, CAD/CAM/CIM, 2018, New Age International.

Reference Books

1. Jain, R K, Production Technology, 2008, 17th Edition, Khanna Publishers.
2. Agarwal, P M, CNC Fundamentals & Programming, 2014, 2nd Edition, Charotar Publishers.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online source, etc.)
Module I (9 Hrs)				
Numerical control, Functions of Machine Tool, Concept of numerical control, Feature of CNC, Machine control unit for CNC, Classification of CNC Machine Tool.	05	Lab. Practice		
Module II (15 Hrs)				
CNC Fanuc Controller: Fanuc Control Panel, Modes of Control Panel, Hard Key, Soft Key, Chock, Hard Jaw, Soft Jaw, Job setting.	15	Lab. Practice		
Module – III (10Hrs)				

Nomenclature of CNC Cutting Tools, Identification of Cutting Tools, Manual Cutting Operations, Offsetting and its Types.	10	Lab. Practice		
Module IV (10Hrs)				
Concept of Projection, Understanding the Views, Orthographic view & Isometric View, Reading of Dimensional Tolerance and Geometrical Tolerance.	10	Lab. Practice	Field study	
Module – V (25Hrs)				
Developing program for Facing, Turning, Taper Turning, Drilling, Boring and Threading by following Process Plan.	25	Lab. Practice		
Module – VI (5 Hrs)				
Fundamentals of CNC Milling, Tool Magazine, ATC, Manual Part Programming for Pocketing.	05	Lab. Practice		
Module VII (5Hrs)				
Fundamentals of 5-Axis Machining and Turn-Mill Machining.	05	Lab. Practice		
Total	75			

Non-Traditional Machining and 3D Printing

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Non-traditional Machining and 3D Printing	DECM0604	Practice + Project	0-2-1	Nil

Course Objectives

- To understand the principle, mechanism of metal removal of various unconventional Machining processes

Course Outcomes

- Identify different Non-traditional machines and its working principle
- Choose suitable non-traditional machine by identifying different man-machine-material limitations

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Course Outline

Module I Introduction (5 Hrs)

Need of Non -traditional Machining, Classification of NTM.

Module II Electric Discharge Machining (25 Hrs)

Electric Discharge Machining Fundamentals, Machine Structure, Machine Control Panel, Machine Input and Output Parameters.

Module III EDM Process Parameters (5 Hrs)

Machining Parameters, Plotting of Output graphs, Machining of Brass and Bright Steel. Performance Characteristics, Dielectric Fluid.

Module IV Wire EDM (5 Hrs)

Fundamentals of Wire-EDM, Machine Control Panel, Performance Characteristics by varying input parameters.

Module V Additive Manufacturing (10 Hrs)

Concept, Rapid Prototyping Process, Various Rapid Prototyping Technologies: SLA, LOM, SLS and FDM.

Module VI 3D Printing (25 Hrs)

Fundamentals of 3D Printing, Machine structure and its Controller. Advantage, Disadvantage and its Applications, Performance Evaluation.

Module VII Hybrid Machining Technology (3 Hrs)

Concept, Classification & benefits; Elements of hybrid machining

Text Books

1. Pandey, P C, Modern Machining Processes, 2008, McGraw Hill
2. Jain, V K, Advanced Machining Processes, 2010, Allied Publishers

Reference Books:

1. Abdel, H, Advanced Machining Processes: Nontraditional and Hybrid Machining Processes, 2005, McGraw Hill
2. Rao, P N, Manufacturing Technology, Volume 1, 2009, Tata McGraw Hill Publication.

Session Plan

Topic	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
Module I (5Hrs)				
Need of Non - traditional Machining, Classification of NTM.	05	Lab. Practice		
Module II (25 Hrs)				
Electric Discharge Machining Fundamentals, Machine Structure, Machine Control Panel, Machine Input and Output Parameters.	25	Lab. Practice		
Module – III (5Hrs)				

Machining Parameters:Plotting of Output graphs, Machining of Brass and Bright Steel. Performance Characteristics, Dielectric Fluid.	5	Lab. Practice		
Module IV (5Hrs)				
Wire EDM:Fundamentals of Wire-EDM, Machine Control Panel, Performance Characteristics by varying input parameters.	5	Lab. Practice	Field study	
Module – V (10Hrs)				
Additive Manufacturing:Concept, Rapid Prototyping Process, Various Rapid Prototyping Technologies: SLA, LOM, SLS and FDM.	10	Lab. Practice		
Module – VI (25Hrs)				
3D Printing:Fundamentals of 3D Printing, Machine structure and its Controller. Advantage, Disadvantage and its Applications, Performance Evaluation.	25	Lab. Practice		
Module VII (3Hrs)				
Concept, Classification & benefits; Elements of hybrid machining	3	Lab. Practice		
Total	78			

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Domain - Welding & Inspection

Course Code	Course Title	Pedagogy	Credit	Prerequisite
DEWD0102	Metal Transfer & Weld Metallurgy	Theory	3	Workshop Practice
DEWD0101	Design of Welded Joints (CATIA)	Theory	3	Geometric Drawing
DEWD0201	Arc welding, Gas welding & Brazing	Practice	3	
DEWD0403	Joining Processes & Technology	Theory+ Practice	4	
DEWD0603	Welding of Stainless Steel , Aluminium, Copper, Cast Iron and Hard Surfacing	Practice+ Project	4	

DEWD0604	Testing of Welded Joints (DT,NDT & Microstructure)	Practice +Project	3	
DEWD0300	Project	Project	6	
DEET0800	Internship		4	
	Total		30	

Domain Objectives:

- To develop skill & knowledge of B. Tech students for seamless induction into the production organisations.
- Additionally students pursuing this domain will be better prepared for higher education and research in Welding Engineering.

Importance:

Welding has tremendous potential for further development. The challenges emerging in this field are joining of new alloys, tiny components and process automation. Many industrial sectors like high pressure boilers manufacture, ship building, automobile, space engineering and cross country pipelines require welding skill for successful manufacture. Hazardous materials handling systems, high pressure equipment rely on welded joints for safe functioning. Thus quality and reliability too are important criteria to be met by welded joints. Thus it is apparent that Welding Technology is destined to play substantial role in future. More specifically, this domain will expose students on technological and institutional aspects of welding, both in theory and practice.

Employment Opportunities:

- Welding certification will make the candidate recognised in national and international levels in industry.
- He/she can be self employed by opening a small scale welding shop to a medium scale industry.

Courses covered:

The students will be taught the basics of Joining Processes and Welding Technology. They will learn different welding techniques along with metal transfer technology and weld metallurgy. Students will be taught Design for Welded Joints using CATIA and Welded joint testing as per ASME standard. They will learn by doing the welding of Stainless Steel structural joints, Aluminium, Copper, Cast Iron parts and Hard Surfacing methods. Students will be trained as certified welder in Destructive Testing (DT) and Non-Destructive Testing (NDT).

Approach of Delivery:

All the papers will be taught either in (Theory + Practice), (Practice + Project) or pure practice mode. One certification course also has been added to the curriculum. A student will be undergoing rigorous practice session to gain hands on skill experience after learning related theory of it. This domain is intended to create good opportunities for employability in welding industries.

Metal Transfer and Weld Metallurgy

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Metal Transfer and Weld Metallurgy	DEWD0102	Theory	3-0-0	Nil

Learning Objectives:

- To learn the Basic Welding Processes and related Bead Geometry
- To learn the Effect of Metal Transfer on Bead Appearance

Course Outcomes:

- Suggest suitable Welding Parameter like Current, Voltage and Welding Speed for a Weld Bead
- Identify Welding Defects and Rectify

Evaluation System:

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Module-I: Metal transfer (8 Hours)

Theory

Metal Transfer in AC and DC Arc Welding, Metal Transfer in TIG, MIG and MAG Welding, Study of different modes of Metal Transfer in MIG welding (Practice).

Practice

1. Metal transfer in TIG welding
2. Different modes of Metal transfer in MIG welding
3. Welding defects in TIG welding
4. Welding defects in MIG welding

MODULE-II: Diffusion in Soldering and Brazing (2 Hours)

Theory

Theory and Principle of Process, Key Variables, Intermediate Materials

Module-III: Weld Metallurgy (3 Hours)

Theory

Fe-C Equilibrium Diagram, Cooling Curve, HAZ, Microstructure, Pre Heat & Post Heat, Stress Relieving and Normalizing.

Practice

5. Practice on Stress Relieving and Normalising in Welding
6. Experiments for demonstrating Weld-ability

Module-IV:Weldability(9 Hours)**Theory**

Concept and significance, Percentage equivalence of Carbon in Weldability, Weldability of Carbon Steels, HCS.

Module -V:Defects in welded joints (9 Hours)**Theory**

Welding Defects due to improper Metal Transfer and improper Filler Material, Hot Cracks and Cold Cracks, Porosity, Embrittlement, Lamellar Tearing, Distortion etc.

Practice

7. Identification of general Welding Defects

Module -VI:Weldability(7 Hours)**Theory**

Weldability of stainless steels, Weldability of Titanium and Alloys, Weldability of High Strength Low Alloy Steels.

Module -VII: Heat treatment of welded structures(9 Hours)**Theory**

Shot Pinning, Stress Reliving through Vibration. Ultra-sonic Welding for Dissimilar Metals.

Practice:

8. Heat treatment of Welded Structures

Text books:

1. Welding Processes and Technology by R. S. Parmar. 3rd Edition, Reprint 2011, Khanna Publishers,
2. Welding Metallurgy by J.F. Lancaster, 6th Edition, WOODHEAD Publishing Limited

Design of Welded Joints (CATIA)

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Design of Welded Joints	DEWD0101	Theory	3-0-0	Nil

Learning Objectives:

- To learn about Design of Welded Joint according to Strength
- To know the use of Welding module in CATIA

Course Outcomes:

- Suggest suitable Welds based on Strength, Failure and Reliability
- Can produce Welding Design as per requirement

Examination System:

	Component	% of Marks	Method of Assessment
Internal Examination	Internal Theory	30	Written examination
	Assignment	5	Report or Presentation + Learning Record
	Attendance	5	Based on class attended
External Examination	External Theory	60	Written examination
Total		100	

Module: I: Design of weld joints (7 Hours)

Theory

Introduction to Design; Engineering Properties of Steels; Type of Welds and Weld Joints.

Module: II: Weld description (7 Hours)

Theory

Description of Welds: Terminology, Definitions and Weld Symbols; Edge Preparation; Sizing of Welds in Structure.

Module: III: Weld Calculations (5 Hours)

Theory

Design for Static Loading, Weld Calculations in Lap, Butt and Fillet Welds; Design for Fatigue Loading.

Practice

1. Design of Lap Joint

Module: IV: Fatigue (6 Hours)

Theory

Introduction to Fatigue; Nature of the Fatigue Process; Fatigue Strength; Factors Affecting Fatigue Life; Improvement Methods for Fatigue Strength; Reliability Analysis and Safety Factors applied to Fatigue Design.

Module: V: Failure mechanism (6 Hours)

Theory

Failure Mechanisms in Welded Joints, How to Design Various Kinds of Welding Joints. Design of a Butt Joint, the main Failure Mechanism of Welded Butt Joint.

Practice

2. Design of Butt Joint

Module-VI: Tensile failure of weld(7 Hours)

Theory

Design of Transverse Fillet Joint, Shear Mechanism in Fillet Weld, Design Stresses of Welds
Use of CATIA Weld Design Module

Practice:

3. Tensile Testing of Welded Joints
4. Bend Test of Welded Joints

Module-VII (7 Hrs):

ASME & IBR Evaluation, All Weld Tensile, Transverse Tensile, Bend Test 180° and 90°
Evaluation of Test Plate (Practice)

Text Books:

1. Lecture Notes , ASME section IX, IBR ,REFERENCE SOFTWARE: CATIA

S. No.	Topics	No. of Sessions (in Hrs)	Activity	Assignment	Suggested Reading

ARC Welding, Gas Welding & Brazing

Course Name	Code	Type of course	T-P-PJ	Prerequisite
Arc Welding, Gas Welding & Brazing	DEWD0201	Practice	0-3-0	Nil

Learning Objectives:

- To Know about Welding Safety
- To Practice Basic Welding Processes such as gas Welding & Brazing, SMAW, GTAW and GMAW to obtain hands on experience

Course Outcomes:

- Suggest suitable Welding Parameters
- Perform simple welding

Examination System:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50 (40+10)	Lab work + Learning Record
External Examination	External Practice	50	Lab work
Total		100	

Practices:

Expt. 1. **Welding Safety Practice:** Welding Fumes, Eye Protection, Personal Protective Equipment, Electrical Safety.

Expt. 2. **Brazing Practice:** Types and Equipment required, Preparation of Joints for Brazing, Cleaning, making of two types of Brazed Parts- Cu and Brass, A/C Tubes.

Expt. 3. **Soldering Practice:** Types of Solders, Equipment details, Preparation for Different Joints, making of two components through Soldering, viz. Electrical Elements, Electronics.

Expt. 4. **Gas welding Practice:** Gas Welding Equipment- Torch, Gas Cylinder, Hose, Three Types of Flames, Welding of M.S. Sheet and Pipe by Gas Welding process.

Expt. 5. **Gas Cutting Practice:** Oxy-acetylene cutting process Straight, Bevel & Circular Cutting on MS. Plate.

Expt. 6. **Shielded Metal Arc Welding–Manual Metal Arc Practice:** Welding of M.S. Plate in all position by SMAW process, Repair & Maintenance works.

Expt. 7. **GTAW Welding Practice:** GTAW Welding of M.S, SS & Aluminium Plate & Pipes.

Expt. 8. **GMAW Practice:** Welding Torch, Electrode, Shielding Gas, GMAW Welding on M.S

Sheet & M.S plate.

Expt. 9. **Resistance Welding Practice:** Operating skills of SPOT Welding machine, Resistance Welding Machine Operation and Parameters.

Expt. 10. AC, DC Welding, joint configuration and edge preparations for AC, DC welding.

Expt. 11. Identifying Defects and Remedial Measures for Welded Joints.

Expt. 12. PUG Cutting Machine, SAW and PAW Demonstration.

Text books:

Joining Processes and Technology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Joining Processes & Technology	DEWD0403	Theory + Practice	2-2-0	Nil

Learning Objectives:

- To learn about basic Welding Processes such as Arc Welding, Solid Phase Welding, High Energy Density Welding
- To learn about Welding Power Source

Course Outcomes:

- Understand the basics of Welding and can suggest suitable Welding Processes and Techniques for a given Component.
- Propose suitable Power Source for given Material

Examination System:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Module-I: Introduction to Welding (8 Hours)

Theory

Welding Classification, Advantages, Disadvantages and applications of various Welding Processes.

Module-II: Arc welding (8 Hours)

Theory

Physics of arc welding, SMAW Principle and Equipment, types of Electrodes, Functions of Coatings, TIG (GTAW), MIG (GMAW) & Flux-Cored Arc Welding, Submerged Arc Welding, Weld Cladding & Surfacing, Plasma Cutting and Spraying, Atomic Hydrogen Welding. Welding Positions, types of Joints, Residual Stress.

Practice:

1. Identification and Working of Arc Welding Equipment
2. Identification and Working of TIG Welding Equipment
3. Identification and Working of MIG Welding Equipment

Module-III:Gas Welding & Cutting (15 Hours)

Theory

Oxy-Acetylene Welding, Flux and Filler, types of Gas Flames, Gas Welding Techniques, difference between Gas Welding and Cutting Torch.

Practice:

4. Identification and working of gas welding equipment
5. Identification and working of gas cutting equipment

Module-IV: Resistance Welding (16 Hours)

Theory

Spot and Seam Welding Parameter, Projection Welding, different types of Resistance Welding Electrodes.

Practice:

6. Identification and working of Spot Welding Machine Parts

Module-V: Other Welding Methods (17 Hours)

Theory

Flash Butt Welding, Friction Welding, Explosive Welding Thermit welding of Rails, Electro-Slag Welding, Electro-Gas Welding, Stud Welding, Plasma Arc, Laser Beam, Electron Beam, Ultrasonic, Explosive Welding, Under Water Welding, high Frequency Resistance and Induction Welding.

Module-VI: Power Source &Welding Defects (13 Hours)

Theory

Electricity in Welding: Power Source and Equipment used for AC, DC Welding.

Welding Defects: Defects and remedial measures for Welded Joints.

Practice:

7. Identification and working of Power Source for Welding Equipment in AC and DC
8. Practice in different Welding Positions
9. Practice for producing different types of Welded Joints

Module-VII:AWS Classification and Coding(13 Hours)

Theory

ASME Section IX- WPS and PQR.

Welding of Stainless Steel, Aluminium, Cast Iron and Hard Surfacing

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Welding of Stainless Steel, Aluminum, Copper, Cast Iron and Hard Surfacing	DEWD0603	Practice + Project	0-2-2	Nil

Learning Objectives:

- Learn to weld different materials and to study its parameters and procedure
- Welding Fault and Cure techniques

Course Outcomes:

- Can suggest suitable procedure and technique to Weld given Material.
- Can suggest methods to identify and troubleshoot faults

Evaluation System:

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Practice	50(40+10)	Lab Work + Learning Record
	Internal Project	50	Project Work
External Examination	External Practice	50	Lab Work
	External Project	50	Project Work + Report
Total		200	

Module: I: Stainless Steel Welding (13 Hrs)

Theory

Stainless Steel-Types, properties of Stainless steels; Use in Industry, Type of Welds and Weld Joints; Austenite Promoter, Dilution.

Module: II: Weldability of Stainless Steel(10 Hours)

Theory

Weldability of Stainless Steel- δ -ferrite Schaeffer Diagram, DeLong Diagram, Ferritic Stainless Steels, Martensitic Stainless Steels, Austenitic Stainless Steels.

Practice

1. Weld ability of stainless steel

Module: III: Physical and Mechanical properties (8 Hours)

Sensitization, Hot Cracking, Precipitation Hardening Stainless Steels, Duplex Stainless Steels, Physical Properties, Mechanical Properties.

Practice:

2 Practice for Hot Cracking

Module: IV: Stainless steel welding (7 Hours)

Theory

Selection of a Stainless Steel, Design for Welding Stainless Steels, Selection of Filler Metals, Selection of a Welding Process, Procedures for Welding Stainless Steels.

Module: V: Aluminium Welding (13 Hours)

Theory

Properties of Aluminum, GTAW (TIG) Theory Fundamentals on Aluminum, AC Welding Machine Fundamentals, Shielding Gases (Purging), Filler Wire/Electrode Selection.

Practice:

3. Faults in welding and methods to solve them

Module: VI: Welding Procedure(12 Hours)

Theory

Material Preparation, Weld Faults (Causes and Cures), GTAW (TIG) Welding Techniques on Aluminum, SMAW Electrode for Aluminum.

Practice:

4. Selection of Electrode and its effect
5. Faults in Welding and methods to solve them

Module: VII: Hard facing, Cast Iron Crack Repair (27 Hours)

Theory

Surface Coating, Use of SMAW Electrode in Hard Facing, Flux Cored Wire Surfacing.

Practice:

6. Repair methods for Cast Iron Welded Parts
7. Surface Coating Procedure

Text Books:

1. AWS Hand Book, Volume- 4 and5 , 9th Edition, American welding society
2. **Lecture Notes**
3. **ASME section IX, IBR**

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function)),10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Highjer Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

- 1) Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
- 2) Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd& 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: Johnwiley& Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

1) Advanced Engineering Mathematics by P.V. O'Neil Publisher: Thomson

- 2) Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff & A.D. Snider Publisher: Pearson
- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs, both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II (3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III (3 Hours)

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV (3Hours)

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V (3 Hours)

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI (3 Hours)

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII (4 Hours)

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009.
Chapters: 1(1.1, 1.2, 1.3, 1.5); 7(7.1, 7.6); 8(8.1 to 8.5, 8.7, 8.8); 9(9.1, 9.4, 9.5).

Reference Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Trembkay, R. Manohar, Tata MC Graw – Hill Edition 38th reprint, 2010.
2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.
3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- To apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability

and conditional probability of events.

- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1.Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work,

circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd.
Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition
Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.
- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid

(2 Hrs.)

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia

(3 Hrs. + 2 Hrs. practice)

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion

(3 Hrs.)

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion

(3 Hrs. + 4 Hrs. Practice)

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Reference Books:

Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law .Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics

V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

1. A Text Book of Optics by M.N. Avadhanulu, BrijLal, N. Subrahmanyam, S Chand; 23rd Rev. Edn. [Module I&II]
2. Engineering Physics, by D.Thirupathi Naidu, M.Veeranjaneyulu, V.G.S Book links,2017.[Module-III,IV]
3. Principles of Engineering Physics-2 by Md.Khan, S.Panigrahi, Cambridge University Press 2016. [module-V,VI&VII]

Reference Books:

1. Optics by AjoyGhatak, McGraw Hill Education; 6 edition, 2017.
2. Physics-I for engineering degree students by B.B. Swain and P.K.Jena.
3. Concepts in Engineering Physics by I Md. N. Kha, 2016.

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)
4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using pycnometer. (V. lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Clomel/ Quinhydrone Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of

polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3: Water resources and its conservation

Assignment-4: Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4: Environmental protection act, 1986

Reference Books:

1. Environmental Studies by U.N. Dash & H. D. Kumar, India Tech Publication, New Delhi
2. Environmental Studies by R. Rajagopalan Oxford University Press
3. Environmental Science and Engineering, 2E, by Aloka Debi, University Press

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing

and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply. Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects. Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management; Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 1) Project Management: A Managerial Process, Clifford F Gray & Eric W Larson, Tata McGrawHill
[Text book]
- 2) A Guide to the Project Management Body of Knowledge, 6th Edition, PMI
- 3) Project Management- A system Approach to Planning, Scheduling and Controlling (Harold Kerzner). CBS Publishers and Distributors, New Delhi.
- 4) Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata McGraw Hill, New Delhi.
- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like

India

- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,
- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - Introduction to Gender

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - Gender issues in health

PPT 3 - Gender issues in education

PPT 4 - Gender issues in Governance

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - WID WAD GAD

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - Gender and Organisations

PPT 7 - Gender Equality in Organisations

PPT 8 - Gender Mainstreaming and Attitude in Workplace

PPT 9 - Gender Sensitisation

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

<https://www.youtube.com/watch?v=p6w-d1mmjFU>

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)

4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

- LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations
- LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)
- LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain
- LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)
2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGaIzqIw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk <https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>

2. Overview of Sustainable Development Goals - <https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers
4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job

Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:
<https://drive.google.com/file/d/1Wst-jdAJuHHvtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables

- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions
- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks

- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount
- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments

- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular
- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID

Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus

Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, cloud

Computing, fog or edge computing,

Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development

Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram
12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madiseti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS

Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALISATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators
3. ERP dashboarding
4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.

- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .
- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

- P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT
- P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

- P3.1 Port handling of 8951
- P3.2 Port handling of Arduino
- P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

- 4.1 Designing of sequential robot control system.
- 4.2 Writing of programs in different programming languages.
- 4.3 Controlling of input/output devices.

Practice

P4.1 Programming of controllers with different programming languages

P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

5.1 What is Ubuntu & ROS?

5.2 Requirement and application of ROS.

5.3 ROS based simulation of Turtlbot.

5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlbot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.
- Design a Fund raising campaign

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation Window, Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages,

Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=ZI592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_YI3RiTI14

Basket IV Core Courses Syllabus

Computer Aided Drafting

Code	Course Title	Credit	T-P-PJ
CUTM1075	Computer Aided Drafting	3	0-2-1

Objective

- How to create simple parts, assemblies and drawings.
- How to use different feature-based tools to build, review and modify a model.
- How to create and analyze assemblies and how to produce a drawing with different views.
- How to dimension the drawing and annotate the views.

Course outcomes

- Students will be able to use CATIA for creation of 3D models, Assembly Designs and Drawings

Course content

Module I: Sketcher - Creating Profiles 2 (hrs)

PLM Objects, Sketch Support, Simple elements, constraining sketches, simple and complex profiles, transforming sketches, saving documents

Practice-1 : Hands on Session on Sketcher Workbench

Module II: Part Design -Creating Basic Features 5 (hrs)

Extruded Features, revolved features, holes, threads, taps, drafts, fillets, chamfers, shelling and stiffeners, relational dimensions,

Practice-2 : Hands on Session on Sketch Based Features & Dress Up Features

Practice-3: Hands on Session on Transformation Features

Module III: Reviewing & Modifying 2 (hrs)

Measuring the model, re using the data, editing features

Practice-4: Hands on Session on Measuring Tools & Editing Features

Module IV: Finalizing Design 5 (hrs)

Adding parameters, reusing features, rendering, weight calculation,

Practice-5: Hands on Session on Parametric Design

Practice-6: Hands on Session on Rendering, Material Addition

Module V: Creating & Managing Products **6 (hrs)**

Positioning Components, constraining Components, Analyzing weight distribution, replacing and revising parts

Practice-7: Hands on Session on Assembly Design

Practice-8 : Hands on Session on Digital Mock Up

Module VI: Creating Drawings **4 (hrs)**

Creating Drawing, Modifying, dimensioning, Annotations, Finalizing & Printing

Practice-9: Hands on Session on Drawing Conventions

Practice-10: Hands on Session on Creating Drawings

Module VII: Master Exercise **(5 hrs)**

Heat Sink , PC Card Slide

Practice-11: Modeling of Heat Sink

Practice-12: Modeling and Assembly of PC card Slide

Text Books:

3. Mechanical Design Fundamentals : Dassault Systemes Companion Learning Space Material

Reference Books:

Note: 1 credit theory=10 hrs lecture, 1 credit practice/project=12.5 hrs lab/workshop/field work in a semester

Product Design & Development

Code	Course Title	Credit	T-P-PJ
CUTM1076	Product Design & Development	2	1-1-0

Objective

- Understand modern product development processes.
- Understand and explain the concept of Industrial design and robust design concepts.
- Understand the concept of Design for manufacture and assembly.
- Understand the legal factors, social issues, engineering ethics related to product design

Course outcomes

- Prepare primary designs taking into consideration all relevant ergonomics and aesthetic aspects of the product.

Course content

Module I: Introduction

2 (hrs)

Introduction to product design, Morphology of design, Modern product development process, Innovative thinking

Module II: Conceptual

3 (hrs)

Generation, Selection and embodiment of concept, Product Architecture

Practice 1: Concept Design using 3D Experience Platform

Module III: Industrial

5 (hrs)

Process and need, Robust design concepts: Taguchi Design and DOE, case studies on various robust design concepts

Practice 2: Failure Analysis through Simulia - Structural Analysis,

Practice 3: Thermal Analysis using Simulia

Module IV:

3 (hrs)

Optimization Optimization using 3D Experience- Function Generative Design

Practice 4: Shape Optimization using 3D Experience

Module V: Design for Manufacturing & Assembly 3 (hrs)

Methods, Design for Maintainability, Designs for Environment, Product costing

Practice 5: Assembly Design Review using 3D Experience

Module VI: Value Engineering & Analysis 3 (hrs)

Definition, Methodology & Case Studies, Economic analysis: Qualitative & Quantitative

Module VII: Ergonomics & Aesthetics 3 (hrs)

Gross human autonomy, Anthropometry, Man-Machine interaction, Concepts of size and texture, color, Comfort criteria, Psychological & Physiological Considerations

Practice 6 : Human Ergonomics using 3D Experience

Text Books:

4. Engineering Design , George E.Dieter, Fourth Edition, McGraw Hill
5. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India

Reference Books:

6. DassaultSystemes Companion Learning Space Material on Product Design
7. DassaultSystemes Companion Learning Space Material on Function Generative Design
8. DassaultSystemes Companion Learning Space Material on Virtual Ergonomics Simulation
Fundamentals- Delmia Ergonomics at Work

Reverse Engineering & Rapid Prototype

Code	Course Title	Credit	T-P-PJ
CUTM1077	Reverse Engineering & Rapid Prototype	4	1-2-1

Objective

- Understand concept of reverse engineering
- Understand principles of imaging, cross-sectional scanning, digital data, computational graphics
- Understand legality of reverse engineering concept

Course outcomes

- Use the Digitized Shape Editor (DSE) workbench
- Import and process the digitized data (scans or clouds of points),
- Quick Surface Reconstruction (QSR) from the digitized data.
- Create a mesh and extract characteristic curves to create surfaces using point cloud data

Course content

Module I: Introduction to Reverse Engineering

2 (hrs)

Historical Background & Industrial Evolution, Reverse Engineering in Modern Industries, Motivation and Challenge, Analysis and Verification, Applications of Reverse Engineering & 3D scanning.

Practice :1 Generate a Model from a Product

Module II: Processing the Point data & Creating Tessellated Mesh

2 (hrs)

Stages in the Process, Introduction to Digitized shape editor, Importing the Point data, editing the cloud, Creating & Correcting the mesh, editing the mesh, creating tessellated mesh

Practice:2 Cloud Point Generation

Practice :3 Mesh Generation from Cloud Point data

Module III: Curve Creation & Processing

2 (hrs)

Stages in the Process, creating and editing scans, creating curves, Additional tools, Introduction to quick surface reconstruction, creating scans by segmentation, processing curves

Practice : 4 Curve Generation

Module IV: Creating Surface

2 (hrs)

Stages in the Process, creating surface, using automatic processes, checking deviations

Practice :5 Surface Generation & Optimization

Module V : Additive Manufacturing

2 (hrs)

Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology, Classification – Stereo lithography Apparatus (SLA)- Principle, process, advantages –Fused Deposition Modeling – Principle, process, advantages. Selective Laser Sintering – Principle, Process, advantages, Three Dimensional Printing – Principle, process, advantages - Laser Engineered Net Shaping (LENS)
