SYLLABUS

FCBS0401 APPLIED ANALYTICAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.

The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

1. Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
2. Determination of Turbidity by nephelometer, pH, Conductivity.
3. Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell

Practice:

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Course outcome

Explain fundamental principles for environmental analytical methods (titration, electro-chemistry, instrumentation and basic parameters of water, soil, fuel etc)

Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

*Point out suitable techniques for sampling and handling of environmental samples
 Apply quality control on chemical analysis and laboratory work and explain its importance
 Plan and carry out laboratory experiments, including data analysis and conclusions
 Describe simple approaches for troubleshooting*

FCBS0402 INDUSTRIAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cement as well as dyes, oils, soaps

Introduce the students to industrial processing principles as applicable to chemical and allied industries.

Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.

Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

Preparation of soap by saponification

Determination of the properties different type of soap

1. pH test

2. Foam test

Hard water test

Determination of iodine number of oil

Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline

Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores.

Practice:

Estimation of Cu in copper ore

Determination of Fe as ferrous iron in an ore sample

Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

Estimation of calcium in Portland cement
 Cement hydration and pH evaluation during curing
 To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Course outcome

Appreciate better their future roles as chemists in Industrial establishments

Be able to explain the origin of raw materials used in the chemical and allied industries

Have a good understanding of how chemical raw materials are processed into finished products.

Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.

FCBS0403 APPLIED ENGINEERING MATERIALS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

To understand the importance of the chemical approach to nanomaterials

To study the preparation, analysis and applications of metal nanoparticles

To develop an understanding of conjugated polymers and their applications

To understand how polymer composition and architecture imparts unique properties and behavior

To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

Synthesis of Ag, Au nano particles by wet chemical methods.

Synthesis of ZnO Nanoparticles by Precipitation Method

Synthesis of Cu nano particles Sonochemical method.

Synthesis of Fe nano particles Co-precipitation method.

Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

Synthesis of Thiokol Rubber

Synthesis of a Rubber Ball from Rubber Latex

Synthesis of Polystyrene (PS)

Synthesis of Polymethyl Methacrylate (PMMA)

Synthesis of Nylon-6:6.

Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites“ refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

Synthesis of bio composite materials by using jute fibres and wood fibres

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials
- Know the application of Nanotechnology and nanomaterials

FCBS0404 ELECTRICITY AND MAGNETISM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

- To understand electric circuit components and their use.*
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices.*
- Understanding magnetic properties of matter and performing experiments to realize magnetism.*

Practice I

Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection, Kirchhoff's laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.
2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Foster's Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.

- To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis.

Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

- To study the induced e.m.f. as a function of the velocity of the magnet.
- Measurement of field strength B and its variation in a solenoid.
- Determination of ratio.

Course outcome

Realizing the importance and use of electrical components in a circuit.

Learning how to do different connections and their purpose.

Understanding magnetism of matter and its applications

Text Book:

- Electricity and Magnetism By K. K. Tiwari, S. Chand Publishing

References:

- Electricity and Magnetism, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan
- Introduction to Electrodynamics, by David J. Griffiths Prentice-Hall; 3 edition (2011)
- Electricity and Magnetism by - D. C. Tayal, Himalaya Publishing, 2009.

FCBS0405 BASIC MECHANICS AND PROPERTIES OF MATTER

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To give the students overall idea about material properties and also hands on experience to measure them.

To make them realize the applications of material properties.

To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.

Encouraging them to build simple models to explain the mechanical properties.

Theory:

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder, bending of beams, Vibration of loaded cantilever.

Lab:

- Young's modulus by single/double cantilever
- Young's modulus by Searle's method
- Rigidity modulus using Barton's apparatus
- Poisson's ratio

Practice II

Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseulle's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface.

Lab:

1. Viscosity by Stokes method
2. Viscosity by Poiseulle's method
3. Metacentric height of floating body
4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Course outcome

To understand material properties and perform experiments on them.

To understand the applications of material properties in real life.

To be able to make small models for explain few mechanical properties.

Text Book:

1. *Elements of Properties of Matter, Dec 2010 by D.S. Mathur, S.Chand (G/L) & Company Ltd*

Reference Books:

1. *A Text Book of Fluid Mechanics by R.K. Bansal, Laxmi Publishers, 2005*
2. *Engineering Mechanics Statics and Dynamics by A. K. Tayal, Umesh Publications.*

FCBS0406 OPTICS AND OPTICAL FIBRE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To understand optical phenomena.

To understand different light sources and their use

Understand designing of microscope and artificial light sources

Understanding optical fiber and its applications

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Practice II

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

Practice-III

Theory: Optical properties—scattering, refraction, reflection, transmission & absorption. Introduction, principle of Laser, stimulated and spontaneous emission, Coherence (temporal and spatial) Ruby Laser, Application of Lasers.

Optical Fibres: Introduction, numerical aperture, step index and graded index fibres, attenuation & dispersion mechanism in optical fibers (Qualitative only), application of optical fibres, optical communication (block diagram only)

Lab:

1. Measurement of attenuation and bending losses of an optical fibre.
2. Measurement of numerical aperture of an optical fibre
3. Study of spatial and temporal coherence of LASER
4. Making of a light guide

Course outcome

Students should understand optical phenomena.

Students should learn about different light sources and their use

Students should be able to understand optical fiber principle, operations and its applications.

Text Book:

1. *A Text Book of Optics* by M.N. Avadhanulu, Brij Lal, N. Subrahmanyam, S Chand; 23rd Rev. Edn.

References:

2. *Optics* by Ajoy Ghatak, McGraw Hill Education; 5 edition
3. *Physics-I for engineering degree students* by B.B. Swain and P.K.Jena.
4. *Concepts in Engineering Physics* by I Md. N. Khan.

FCBS0101 ENVIRONMENTAL SCIENCE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

1. *To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.*
2. *Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.*
3. *One must be environmentally educated.*

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Course Outcome:

1. Understand the natural environment and its relationships with human activities.
2. Characterize and analyze human impacts on the environment.
3. Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
4. Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Text Book: Anubhav Kaushik & C.P. Kaushik : Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph : Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha : Text book of Environmental Studies for Under graduate courses– Universities Press. (Book prepared by UGC Committee.

FCBS0102 DIFFERENTIAL EQUATIONS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

- 1) To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- 2) To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- 3) To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- 2) Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- 3) Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Non-homogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Text Book:

1) *Higher Engineering Mathematics* by B.V. Raman Publisher: TMH
Chapters: 8 (8.1 to 8.10); 9 (9.1 to 9.7), 18 (18.1 to 18.8)

Reference Book:

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson

FCBS0103 LINEAR ALGEBRA & VECTOR CALCULUS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
2. To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
3. To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
2. Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
3. Determine the important quantities associated with scalar and vector fields.

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11)

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson
- 2) *Mathematical Methods* by Potter & Goldberg ; Publisher : PHI

FCBS0103 INTEGRAL TRANSFORM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

1. To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
2. To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
2. Solve differential & integral equations with initial conditions using Laplace transform.
3. Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
4. Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac's Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig
 Publisher: Johnwiley & Sons Inc-8th Edition
 Chapters: 5 (5.1 to 5.6); 10 (10.1 to 10.4, 10.8, 10.9)

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V.O'Neil .Publisher: Thomson
- 2) *Higher Engineering Mathematics* by B.V.Raman .Publisher: TMH

FCBS0105 COMPLEX ANALYSIS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	3

Course Objectives:

- 1) *To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.*
- 2) *To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.*

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) *To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.*
- 2) *Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.*
- 3) *Illustrate the applications of the calculus of residues in the evaluation of real integrals.*

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation , Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
 Chapters: 12 (12.1 to 12.4 ,12.9) ; 13, 14 (14.2,14.4) & 15.

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson
- 2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

FCBS0106 Discrete Mathematics

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.
2. To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.
3. To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Evaluate elementary mathematical arguments and identify fallacious reasoning.
2. Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
3. Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus.
4. Model and solve real-world problems using graphs, both quantitatively and qualitatively.

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal & Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring,

Text Books:

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition Chapters:1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4)

Reference Books:

- Discrete and Combinatorial Mathematics* by R.P.Grimaldi Publisher: Pearson
Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier
Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI

SYLLABUS

FCHU1201 FOUNDATIONS OF ENGLISH COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

To develop vocabulary and grammar knowledge

To develop reading comprehension skills

COURSE OUTCOMES

Development of academic and sub-technical vocabulary

Enhancement of basic language skills, i.e., listening, speaking, reading and writing

Development of grammatical competence

Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of Course communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

Animal Farm

Alice in Wonderland

Guide

Malgudi Days

Harry Potter

Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

FCHU1202 COMMUNICATIVE PRACTICE LABORATORY –I

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

To expose the students to a variety of self- instructional, learner- friendly modes of language learning.

To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

Ability to communicate fluently in different business situation

Effective oral and written communication

Appropriate word usage with correct pronunciation

Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade

Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.

Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

Elimination of common errors

Editing passages

Word power A-Z: Easy and quick techniques

Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

Pronunciation Guidelines: Consonants and Vowels

Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences

Speaking Techniques: Using correct stress patterns, developing voice quality

Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHUI203 BUSINESS COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.

This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

- Understand the differences between general communication and business communication*
- Development of basic language skills, i.e., listening, speaking, reading and writing*
- Effective participation in group discussion and job interviews*

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

General Communication and Business Communication

Communication in Organizational Settings: Patterns of Communication in the Business World

– Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal

Introduction to Cross Cultural Communication

Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

Importance of Developing Reading Skills

Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making

Importance of Writing Skills and Principles of Effective Writing

Writing Process: Pre-writing, Drafting and Re-Writing

Paragraph Writing

Summaries and Abstracts

Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
 Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies

Common forms of Oral Communication in the Business World:

Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes

Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality

Making an Oral Presentation: Planning, Preparing and Delivery

Facing an Interview: Preparation, Types of Interview, Do's and Don'ts

Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204 COMMUNICATIVE PRACTICE LABORATORY –II

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

To master Study Skills

To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies

To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.

Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.

Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

Situational Dialogues / Role Play: Organization Communication

Oral Presentations- Prepared and Extempore

'Just a minute' Sessions (JAM)

Debates

Mock Meetings

Cracking Job Interviews: Mock Sessions

Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

Review Presentation (Movie/ Article/ Book)

Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

Short Paragraphs on current general and technical topics

Creative Writing: Idea Generation

Business Letters, Email Messages, Project Writing

Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205 CORPORATE READINESS LABORATORY

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

- Understand the process of communication*
- View communication from the perspective of each stakeholder*
- Plan and manage communication difficulties*
- Learn exactly how, when and what of communication*

COURSE OUTCOMES

- Understanding the convention of project report*
- Understanding the process of data collection and documentation*
- Preparation and presentation of project report*
- Preparation for various academic and professional needs*

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes

(E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206 IT ENABLED COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- *Speak confidently and fluently, in both formal and informal contexts.*
- *Write clearly, correctly and cogently*
- *Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence*
- *Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.*

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

Pre-Course Assessment

Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...

Do you know?

Introduction to IT Enabled Communication

Communication in the New Age Context and Demand for Communication Interventions
(*This module includes pre-course assessments and presentations*)

MODULE II: BLOG DESIGNING & POSTING

Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing

Photoshop for Image, Editing and graphic design

(*This module will be driven through methods like self-learning, learning by doing, and workshop*)

MODULE III: TECHNOLOGY AND COMMUNICATION

Tools for Business Correspondence and web-based exercises

Creating and delivering high impact presentations with Slides and other Visuals

Video Documentaries

Video Conferencing Sites, Skype, Team Viewer

(*This module will be facilitated through presentations, use of tools and technology*)

TEXT BOOKS

FCHU1207 CAREER COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

OBJECTIVES

- Prepare the graduates to acquire their dream jobs.*
- Build their mindset with right attitude, self-awareness, pro-activeness.*
- Build confidence, and enhance their communication skills to handle all situations.*

OUTCOMES

- Build the confidence of students*
- Trigger the thinking and analyzing ability of the learners to solve problems.*
- Readiness to work on their dream jobs.*

List of Experiments

LAB 1: Introduction to Career Communication

LAB 2: Presentation on Corporate House

Create an awareness and exposure on corporate life and culture.

Learners get exposure to corporate life and culture.

LAB 3: Corporate Quiz

LAB 4: Telephonic Conversation

Learners are equipped with basic knowledge and skill practice for improved telephonic communication.

LAB 5: Email Writing

Learn the characteristics of successful e- mail messages.

Create an effective e-mail message.

LAB 6: Mini Test on Email Writing

LAB 7: Learning Etiquette

Understand what etiquette is & why it's important.

Provide practical techniques and generally-accepted professional and ethical conduct or behaviour that will help create a favourable impression in social and professional life.

Practice proper manners like greeting, saying 'please', 'thank you'.

Appear professional and well groomed.

LAB 8 :Identifying Traits for Professional and Interpersonal Success

Understand the importance of effective interpersonal communication and traits for professional success.

Explore the significance of Active Listening, Problem Solving, Respect, Decision Making, Empathy, Co-operation and Non-verbal communication for professional success.

LAB 9: Job-Application -Cover Letter

Develop the career writing skills of the learners with special emphasis on their interest in specific job positions, their strengths and what values they will bring to the organisation.

LAB 10: Job-Applications – CV

Produce a polished and impressive CV that can be tailored to each specific job application.

Develop the career writing skills of the learners with special emphasis on Statement of Purpose.

Provide with tools to showcase Unique Selling Points for the specified job description.

LAB 11: Participating in Group Discussion (GD)

Mock Interview on basic questions

LAB 12: Facing an Interview

6	Team Building and Teamwork	Activity Based Learning	Coin Logo Time Required: 5-10 minutes Begin by asking all participants to empty their pockets, purses, and wallets of any coins they may have and place them on the table in front of them. If someone doesn't have any coins or only has very few, others in the room can share their coins with them. Instruct each person to create their own personal logo using the coins in front of them in just one minute. Other materials they may have on them, such as pens, notebooks, wallets, etc. can also be used in creation of the logo. If there is a particularly large group, people can be broken up into teams of 3-6 people and instructed to create a logo that represents them as a team or the whole room can gather to use the coins to create a logo for the organization/group/department/etc. Each	0	1	1	0

			solitary participant can explain their logo to the group or if the room was split into groups, the leader can have each group discuss what led to the team logo and what it says about them. Not only does this activity promote self and mutual awareness, but it also enables participants to get to know each other on a more personal level. http://www.livestrong.com/article/219775-team-building-exercises-for-small-groups/

12	Time Management	Group Activity	<p>How long is a minute?</p> <p>At the beginning of session ask people to close their eyes for 30 seconds and after that to open it. Nobody can watch the clock and don't measure the time. Ask of participants to open their eyes after what they believe has been 30 seconds. Of course, they all open them at different times. Afterwards, we talk about our understanding of time. Even though everyone has an equal (24 hours a day or 30 seconds for exercise), in fact, we experience it and use it in different ways. Some of us experienced it as a short period, other as a long. This always works as a good opener.</p> <p>2) Cover all the clocks in the room, then ask participants to remove their wrist watches and stand up. Instruct them to sit down when they think 1 minute has elapsed after you shout "Start" to begin the countdown. You will be surprised with the results. Just enjoy the fun that follows this activity</p>	0	1	0	0

FCHU1209 SEMINAR AND TECHNICAL WRITING

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

Seminar allows students the opportunity to put all of information together. The students are required to prepare technical reports including oral presentations supported by written technical papers. Seminar is designed to assist students in preparing for their career.

COURSE OBJECTIVES

Understand the requirements and ethics of technical writing in the 21st Century workplace.

Work professionally, individually and in a team to produce effective technical documents incorporating verbal, visual, and multimedia materials as necessary.

Communicate effectively by analyzing audience, organizing documents, writing clearly and precisely with no grammar errors and presenting the document with skillful design.

Locate, evaluate, and incorporate pertinent information.

Write clear, intelligent technical reports

Make seminar presentations

COURSE OUTCOMES

Understand how technical communication is used in the workplace.

Understand and use the principles of design in business and technical communication.

Apply useful descriptive language to your technical documents.

Students will gain experience in preparing a technical report including an oral presentation supported by a written technical paper.

MODULE-I: TECHNICAL COMMUNICATION ESSENTIALS

COURSE OUTCOMES

Describe the writing process most useful in today's technical writing environment.

Analyze an audience and consider appropriate writing situations to meet the audience's needs.

Understand the ethics of the workplace and apply those ethics to their technical and business writing.

OUTLINE: Communicating in the Workplace, Technical Writing Process Today, Readers and Contexts of Use, Ethics in the Technical Workplace

MODULE- II: DOCUMENT DESIGN

COURSE OUTCOMES

Create and use graphics that complement your business and technical communication.

OUTLINE: Designing Documents and Interfaces, Creating and Using Graphics

MODULE-III: TECHNICAL COMMUNICATION STRATEGIES AND RESEARCHED REPORT WRITING

COURSE OUTCOMES

Define terms clearly in technical documents.

Explain instructions and processes clearly.

Write clear proposals for business and technical situations.

Research and manage information.

Write an analytical report.

OUTLINE: Researching and Managing Information, Organizing and Drafting, Technical Definitions, Technical Descriptions, Instructions and Documentation, Proposals, Analytical Reports

MODULE-IV: SEMINAR PRESENTATION

COURSE OUTCOME

Students will not only learn from the experience gained in preparing and presenting their seminar, but will have the opportunity to observe and participate in the seminar given by their classmates.

OUTLINE: Technical Report, Seminar Presentation

(Planning, Preparing, Organizing and Seminar Presentation are the 4 stages of this module)

FCHU1211 CREATIVE WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The aim of the course is to prepare students for careers in a workplace that is information-rich and that increasingly values communication skills and the ability to think creatively and critically. The class time will be devoted to writing workshop, innovation exercises, and the critical appreciation of write-ups. The Creative Writing course will focus on

Reading
Writing Creatively
Presentations

Thus the main objective is to breed a culture of learning where students learn a variety of approaches to creative writing in a cooperative learning environment.

COURSE OBJECTIVES

Develop thinking skills
Acquire basic skills and techniques to develop a suitable practice of creative writing in context
Use a constructive approach to critique his/her own work, as well as work by his/her peers
Organize, prepare and present spoken presentations clearly and expressively

COURSE OUTCOMES

Upon the Completion of the course, a student will
Create Blog/ Online Presence
Submit works for publication
Compose a variety of written responses for different purposes and audiences
Collaborate by sharing ideas, examples and insights, productively and respectfully in informal conversations and discussions.
Students will put into practice the learning into the personal, professional and technical sphere.

MODULE -I: WRITING CREATIVELY (12hrs)

FCHU1212 ENGLISH FOR COMPETITION (GRE/GMAT/TOEFL/IELTS)

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE

Familiarize the learners with the pattern of the TOEFL/GMAT/IELTS/GRE examination and improve overall English skills to face the competitive exams confidently.

COURSE OUTCOME

Learners understand the pattern of the TOEFL, IELTS and GRE examination and apply test-taking strategies in exams.

A student is required to take up five laboratory tests of 100 marks.

LIST OF EXPERIMENTS

1: TOEFL Listening

Developing Listening Comprehension by taking notes after the short recorded conversations.

2: TOEFL Speaking

Developing test taking strategies to face speaking test of TOEFL exam through role play and Mock Interview.

3: TOEFL Reading

Practicing and improving student's confidence in completing the various sections of reading test in TOEFL examination.

4: TOEFL Writing

Learning and enhancing writing skills required for TOEFL writing test.

5: IELTS Listening

Practicing the listening comprehension of the students and handling questions while listening the recorded conversations.

6: IELTS Speaking

Developing test taking strategies to face speaking test of IELTS examination through role plays and mock interviews.

7: IELTS Writing

Summarizing or explaining information presented in a graph, chart, table or diagram.

8: IELTS Reading

Understanding and interpreting the text in its particular use of language, ideas and style.

9: GRE Reading Comprehension

Taking GRE Reading Comprehension examination with confidence utilizing the methods and strategies.

10: GRE SENTENCE COMPLETION

Developing sentence completion strategies through logical thinking.

11: GRE SENTENCE EQUIVALENCE

Learning and developing strategies to deal with sentence equivalence questions.

12: GRE VOCABULARY

Understanding and using appropriate choice of vocabulary in GRE vocabulary section.

13. GRE Vocabulary & Verbal-Sentence Corrections

14. GMAT Verbal-Critical Reasoning

15. GMAT Verbal- Reading Comprehension

(The entire lab will be facilitated through online quizzes, and practice sets available in language lab)

FCMG0101 ECONOMICS

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

In today's dynamic economic environment, effective managerial decision making requires timely and efficient use of information. The basic purpose of this course is to provide students with a basic understanding of the economic principles, methodologies and analytical tools that can be used in business decision making problems. It provides an understanding of the economic environment and its impact on strategy formulation. The course also focuses on the impact of economic policies on managerial decision-making by providing an understanding of fiscal policy, and national and global economic issues affecting business.

The language of science (and all analytical thinking) is mathematics. Since economics is a social science, use of some mathematical tools, basically the constrained and un-constrained optimization

techniques will help in measuring and solving the basic economic problems and thus improves decision-making. It becomes difficult and totally un-practicable to solve business (economic) problems logically and systematically without use of mathematics. The basic objective is to solve problems mathematically and interpret the results economically.

Module-1: Micro Economics

Introduction to economics: Scarcity, Choice and Efficiency, Fundamental issues of what, how and for whom to produce to make the best use of economics. Demand for a commodity: Law of demand, Demand schedule and demand curve, Individual and market demand, Change in demand, Consumer behavior: Analysing law of demand through Marshallian utility analysis, Indifference curve technique and Consumer Surplus.

Elasticity of demand: Price Elasticity of demand: Estimation, Types, Elasticity and revenue, Factors affecting price elasticity of demand. Income elasticity, Cross elasticity, Uses of different concepts of elasticity in business decisions.

Analysis of Supply: Law of Supply, Supply schedule and supply curve, Change in supply, Price elasticity of supply, Equilibrium of demand and supply: Equilibrium with demand and supply curves, Effect of a shift of demand and supply curves.

Production Function: Production function with one variable input, Production function with two variable inputs, optimal combination of inputs, Returns to scale

Cost Theory: Types of costs, Production and cost, Short-run cost functions, Long-run cost functions, Economies of scale and scope, Cost-Volume-profit Analysis

Market: Meaning, types and characteristics of different market structure (Perfect competition, Monopoly, Monopolistic competition and Oligopoly)

Module: 2: Macro Economics

National Income Accounting: Circular flow of Income, National Income Concept, Eight variants of national product aggregates, Measurement (Income, Value Added and Expenditure), Real and Nominal GNP, Difficulties in measuring the national income, Uses of National income statistics, Money and Inflation: Demand for and supply of money. Causes and consequences of Inflation. Commercial and central banking: Role and functions of commercial banks and R.B.I., Monetary Policy and Fiscal policy: Objectives and Instruments, Balance of Payment (BoP): Meaning, BoP Account, Disequilibrium in BoP, Measures to correct disequilibrium in BoP, Foreign Exchange: Floating Exchange Rate and Fixed Exchange Rates

FCMG0102 ACCOUNTING AND FINANCE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
-------------------------	--------------------	----------------

<i>Nil</i>	<i>Theory</i>	<i>2</i>
------------	---------------	----------

Course Objective:

- a) To familiarise the students with basic terms of accounting, accounting principles, concepts and convention.
- b) To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- c) To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis: Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity
Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. *Accounting for Management—Ashok Sehgal, Taxxman*
2. *Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI*
3. *Khan & Jain – Management Accounting, TMH.*
4. *Hornrgren ,Datar, Foster- Cost Accounting, Pearson.*
5. *Financial Accounting, Jain/Narang/Agrawal, Kalyani.*
6. *Basic Financial Accounting for Management, Shah, Oxford.*
7. *Financial Management by I. M. Pandey*
8. *Financial Management – Theory and Practice by Chandra*
9. *Financial Management – Text and Problems by Khan & Jain*

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content

Unit: I

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

Unit: II

Individual System: Learning, Perception, Personality and Motivation,

Unit: III

Social System: Group Dynamics and Leadership.

Books Recommended:

1. Robins & Sanghii; Organizational Behavior, Pearson
2. Luthans ,F; Organizational Behavior-TMH
3. Udai Pareek ; Understanding Organizational Behavior, Oxford
4. Prasad,L.M; Organization behavior, S.Chand.
5. K. Aswathappa; Organization behaviour
6. Prasad.L.M ; Principles of Management,

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- ✓ Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- ✓ The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- ✓ They can use specialized knowledge in Operations Management to solve business processes.
- ✓ They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - "Operations Management", TMH
- 2) Krajewski, Ritzman, Kansal, - "Operations Management", Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - "Production and Operations Management", PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - "Operations Management", Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - "Production and Operations Management", HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- ✓ The students will understand the various marketing approach in today's competitive scenario.
- ✓ The students will learn the application of various marketing tools for solving business problems

The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL),Porter’s five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP);What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning , Effective positioning strategies, Positioning of brands and repositioning ,introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. *Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication*
2. *Marketing Mangement: Fourth edition- RajanSaxena*
3. *Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA*

FCMG0108 INTRODUCTION TO RESEARCH

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

1. *To introduce the students about research, methods and techniques.*
2. *To understand the process and apply in other areas.*

Course outcome:

1. *Students will be able to understand the process of doing a research.*
2. *Students will be able to write a research report.*

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, *Sampling:* Census and sample survey, different types of sample design, *Measurement:* Measurement and scaling techniques, *Methods of Data Collections:* Experimentation,

observation, interview, Survey, case study; *Data Analysis and Interpretation*: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

1. Ranjit Kumar, 2011, *Research Methodology: A Step by Step Guide*, Sage South Asia Publication.

FCMG0113 INDIAN SOCIETY AND CULTURE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswati and Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. *Indian Society and Culture: Continuity and Change* – by N. Hasnain
2. *Social and Cultural History of India* – O.M. Prakash
3. *Makers of Modern India* – RamachandraGuha

SYLLABUS

Introduction to Aerospace Engineering

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Introduction to Aerospace Engineering	ENFC0105	Theory	3-0-0(3)	Nil

1. Objective

- ✓ To familiarize with the Basic Concepts of Flying, Aircraft Structures, Systems, Instruments and Power Plants used in Airplanes.

2. Course Outcome

- ✓ To Identify the Component of Flight and Suitable Materials for Aircraft Structure.
- ✓ To Perform Basic Calculation on Mechanics using Newton Law for Lift, Drag and Moment.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	30	Written examination
	Assignment	5	Submission of assignment
	Learning record	5	Report and presentation
External Examination		60	Written examination
Total		100	

4. Course Outline

Module I (08 Hrs)

History of Flight: Early flying vehicles by Wright brothers, hot air balloons, Classification of flight vehicles, biplanes and monoplanes, developments in aerodynamics airplanes and Helicopters, Components of an airplane and their functions.

Module II (06 Hrs)

Basics of Aeronautics: Physical properties and structure of the atmosphere, temperature, pressure and altitude relationships.

Module III(08 Hrs)

Newton's law of motions applied to aeronautics - evolution of lift, drag and moment. aerofoils, mach number, subsonic, transonic, supersonic, hypersonic flows.

Module IV(06 Hrs)

Airplane Structures and Materials: General types of construction, monocoque and semi-monocoque constructions, typical wing and fuselage structure.

Module V (06 Hrs)

Airplane Structures and Materials: Materials used in aircraft metallic and non-metallic materials, use of aluminium alloy, titanium, stainless steel and composite materials.

Module VI (06 Hrs)

Systems and Instruments: Conventional control, Powered controls, Basic instruments for flying, typical systems for control actuation.

Module VII(08 Hrs)

Power Plants: Basic ideas about piston, turboprop and jet engines - use of propeller and jets for thrust production - comparative merits, principles of operation of rocket, types of rockets and typical applications, exploration into space.

Material Sciences

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Material Sciences	ENFC0102	Theory	3-0-0(3)	Nil

1. Objective

- To study classification and properties of materials used in day to day life
- To understand the material application and it's need.

2. Course outcome

- Students will able to identify materials for engineering use.
- Students will able to select best materials for a specific design and production.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm/Class Test	30	Written Examination
	Assignment-2	05	Report and Presentation
	Learning Record	05	Report
External Examination		60	Written Examination
Total		100	

4. Course Outline

Module I (8 Hrs)

Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminium & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys, Magnesium Alloys, Titanium Alloys, Super Alloys.

Module II (7 Hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geosynthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, C64, Bucky Ball Structures, Graphene.

Module III (5 Hrs)

Prefabricated Materials: Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module IV (8 Hrs)

Electrical & Magnetic Materials: Classifications, Properties, Advantages & Applications, Photo Voltaic Material, Dielectric Materials.

Module V (6 Hrs)

Solar Cell and Super Conductivity, Ferro Electricity, Electro-active Polymers, Piezoelectric Material, Magneto Electric Materials, Electrorheological Fluids.

Module VI (6 Hrs)

Fiber Optic Sensors, Photoconductivity; Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses.

Module VII (8Hrs)

Smart Material, Shape Memory Alloys, Piezoelectric Ceramics, Biomaterials, Bioactive Glass & Ceramic, Polymer & Composite, UHTC, Soft Materials, Energy Materials.

FCEN0101CHEMICAL PROCESS CALCULATIONS

<i>Pre – requisites</i>	<i>L+T+P</i>	<i>Credits</i>
FCBS0402 Industrial Chemistry	3+1 + 0	3

OBJECTIVE:

To teach concept of degree of freedom and its application to solution of mass and energy balance equations for single and network of units and introduce to process simulators.

OUTCOME:

This course gives an idea to the students, an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances, energy balances and to present an overview of industrial chemical processes.

Module I

BASIC CHEMICAL CALCULATIONS

Units and Dimensions - Basic and derived units –Use of model units in calculations – Methods of expression –Compositions of mixture and solutions. Gas Calculations Ideal and real gas laws –Gas constant –Calculations of pressure, volume and temperature using ideal gas law –Use of partial pressure and pure component volume in gas calculations –Applications of real gas relationship in gas calculation.

MATERIAL BALANCE

Stoichiometric principles –Application of material balance to unit operations like distillation – Evaporation, crystallisation, drying etc., –Material balance with chemical reaction –Limiting and excess reactants –Recycle –Bypass and purging –Unsteady state material balances.

Module II

HUMIDITY AND SATURATION

Properties of atmospheric air –Humidity of air –Calculation of absolute humidity, molal humidity, relative

humidity and percentage humidity –Use of humidity in condensation and drying –Psychrometric

chart, dew point –Wet and dry bulb thermometry. FUELS AND

COMBUSTION

Determination of composition by Orsat analysis of products of combustion of solid, liquid and gas fuels –Calculation of excess air from Orsat technique, problems on sulphur and sulphur burning compounds –Theoretical flame temperature.

Module III

ENERGY BALANCE

Thermo Physics Heat capacity of solids, liquids, gases and solutions –Use of mean heat capacity in heat calculations –Problems involving sensible heat and latent heats –Evaluation of enthalpy. Thermo Chemistry Standard heat of reaction, heats of formation, combustion, solution, mixing etc.,

–Calculation of standard heat of reaction –Effect of pressure and temperature on heat of reaction –Energy balance for systems with and without chemical reaction –Unsteady state energy balances.

FCEN0102 BASIC ELECTRONICS

<i>Pre - requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>Nil</i>	<i>3+1 + 0</i>	<i>3</i>

Course Objectives: The objectives of this subject are to
Learn Fundamentals of electronic devices.
Design and Applications of electronic circuits.

Course Outcomes:

Upon successful completion of this subject, students should be able to:
Identify the applications and functions of electronics in Engineering.
Recognize basic electronic components and devices used for different electronic functions.
Use basic techniques for analyzing analogue and digital electronic circuits.
Design analogue and digital electronic circuits at block level.
Manage the tools in a basic electronics laboratory and use electronic simulation.

Module-1 (15 Hours) Semiconductor Physics and Junction Diode

Characteristics:

Various properties of Conductor, Semiconductor & Insulator, n and p –type semiconductors, Mass Action Law, Continuity Equation, Hall Effect, Comparison of Si & Ge Semiconductor, Fermi level in intrinsic and extrinsic semiconductors, Open-circuited, forward bias & reverse bias of p-n junction diode, Energy band diagram of PN diode, Drift & Diffusion Current, Mobility & Conductivity, Diode equation, Volt-ampere characteristics of p-n diode, Temperature dependence of VI characteristic, Transition and Diffusion capacitances, Breakdown Mechanisms in Semiconductor (Avalanche and Zener breakdown), Zener diode characteristics, Characteristics of Tunnel Diode with the help of energy band diagrams, Varactor Diode, LED And photo diode, **(topics will be delivered through Class room teaching + Hands on Practice based experiments)**

Module- II (12 Hours) Rectifiers, Filters and Regulators:

Half wave rectifier, ripple factor, full wave rectifier, Application of p-n diode as clipper, clamper. Types of filter, Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter. Simple circuit of a regulator using Zener diode, Series and Shunt voltage regulators. **topics will be delivered through Class room teaching + Hands on Practice based experiments)**

Module- III (15 Hours) BJT and FET Characteristics:

Bipolar Junction Transistor, Types, Construction & study of currents in a Transistor, Input and Output characteristics of transistor in Common Base(CB), Common Emitter(CE), and Common collector(CC) configurations, comparison of CE, CB, CC transistor configuration, Relation between Alpha, Beta & Gamma, JFET characteristics (Qualitative and Quantitative discussion), , MOSFET characteristics (Enhancement and depletion mode), Symbols of MOSFET, Introduction to SCR and UJT, Thermal run away, Thermal stability, (**topics will be delivered through Class room teaching + Hands on Practice based experiments)**)

FCEN0103 SIGNALS AND SYSTEMS

<i>Pre – requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>Nil</i>	3+ 0 + 0	3

Course Objectives:

The objectives of this subject are to

*To introduce the student to the idea of signals, system analysis and its characterization.
To provide a foundation to numerous other courses that deal with signal and system concepts directly or indirectly: viz: communication, control, instrumentation etc.*

Course Outcomes:

Upon successful completion of this subject, students should be able to:

Understand about various types of signals, classify them, analyze them, and perform various operations on them.

Understand about various types of systems, classify them, analyze them and understand their response behavior.

Appreciate use of transforms in analysis of signals and system. Carry simulation on signals and systems for observing effects of applying various properties and operations.

Create strong foundation of communication and signal processing to be studied in the subsequent semester.

Module –I (14+4 hours) Continuous-Time and Discrete-Time Signals and Systems:

Continuous and discrete time signals: Some Elementary Continuous-time and Discrete-Time signals. Classification of Signals –Periodic and a periodic even –odd –energy and power signals –Deterministic and random signals –Causal and non causal signals and anti causal signals -- complex exponential and sinusoidal signals ---Simple Manipulations of Continuous and discrete time signals. **(Topics will be covered through CRT & Practice)**

Continuous-Time Systems: Mathematical equation governing LTI Continuous-Time systems, Block diagram and signal flow graph representation, response of LTI Continuous-Time system in time domain, classification of Continuous-Time systems, convolution of Continuous-Time signals. **(Topics will be covered through CRT & Tutorial)**

Discrete-Time Systems: Input-Output Description, Block Diagram Representation, Classification, Interconnection; Analysis of Discrete-Time LTI Systems: Techniques, Response of LTI Systems, Properties of Convolution, Causal LTI Systems, Stability of LTI Systems; Discrete-Time Systems Described by Difference Equations; Implementation of Discrete-Time Systems; Correlation of Discrete-Time Signals: Cross correlation and Autocorrelation Sequences, Properties. **(Topics will be covered through CRT & Tutorial)**

Module –II (09 Hours) The Continuous-Time Fourier Series:

Basic Concepts and Development of the Fourier Series, Calculation of the Fourier Series, Properties of the Fourier Series. **(Topics will be covered through CRT & Tutorial)** The Continuous-Time Fourier Transform:

Basic Concepts and Development of the Fourier Transform, Properties of the Continuous-Time Fourier Transform. **(Topics will be covered through CRT & Tutorial)**

Discrete time Fourier transform(DTFT) :The discrete time Fourier transform of Aperiodic signal, Convergence of Fourier transform, the Fourier transform of signal with poles on unit circle, frequency domain and time domain signal properties,properties of DTFT **(Topics will be covered through CRT & Tutorial)**

Module- III

(15 Hours)

The Laplace transforms and its application to system analysis:

The Laplace Transform: Region of convergence, properties of Laplace transform, poles and zeros of rational

functions of s, Inverse Laplace transform by partial fraction method and convolution method, Analysis of LTI Continuous-Time system, stability in s-domain, **(Topics will be covered through CRT & Practice)**

The Z Transform and Its Application to the Analysis of LTI Systems:

The Z-Transform: The Direct Z-Transform, The Inverse Z-Transform; Properties of the Z-Transform; Rational Z-Transforms: Poles and Zeros, Pole Location and Time-Domain Behavior for Causal Signals, The System Function of a Linear Time-Invariant System; Inversion of the Z-Transforms: The Inversion of the Z-Transform by Power Series Expansion, The Inversion of the Z-Transform by Partial-Fraction Expansion; The One-sided Z Transform: Definition and Properties, Solution of Difference Equations. **(Topics will be covered through CRT & Practice)**

Text Books:

1. *Digital Signal Processing –Principles, Algorithms and Applications* by J. G. Proakis and D. GManolakis, 4th Edition, Pearson.

Chapter 1 (1.2), Chapter 2 (2.1, 2.2, 2.3, 2.4, 2.5, 2.6.1, 2.6.2) , Chapter 3 (3.1, 3.2, 3.3, 3.4.2, 3.4.3, 3.6.1, 3.6.2) , Chapter 4 (4.1, 4.2.3, 4.2.4, 4.2.5, 4.2.8, 4.3, 4.4)

2. *Fundamentals of Signals and Systems* - M. J. Roberts, TMH Chapter 8 (8.3, 8.4, 8.7) , Chapter 10 (10.3, 10.6)

3. *Signals and Systems –A NagoorKani, TMH*

Chapter 1 [1.1, 1.2, 1.3, 1.4, 1.5 (for Module-1)], Chapter 2 [2.1,2.2,2.3,2.4,2.5,2.6,2.7,2.8,2.9, 2.10(for module-1)], Chapter 3 [3.1, 3.2, 3.3, 3.4, 3.5,3.6,3.7(for module-3)], Chapter 4 [4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.9, 4.10, 4.11, 4.12

(for Module-2)], Chapter 6 [6.1 to 6.6, 6.8 to 6.9, 6.12, 6.13 (for Module-1); 6.7 (for module-3)], Chapter 7 [7.1 to 7.6 (for module-3)], Chapter 8 [8.1 to 8.4 (for module-2)] **Reference**

FCEC0104 DIGITAL ELECTRONICS CIRCUITS

<i>Pre - requisites</i>	L+T+P	Credits
Nil	3+ 0 + 0	3

Course Objectives:

The objectives of this subject are to

Learn basic concepts on various digital designs

Implementation and simulation of various digital circuits through Hardware description languages.

Course Outcomes:

Upon successful completion of this subject, students should be able to:

Minimize the circuit complexity.

Design and implement different combinational and sequential circuit

Develop new digital design. Design high speed memories.

MODULE - I: (14 hours) Number System and Codes

Binary Number base Conversations, Octal and Hexadecimal numbers, Complements, Signed Binary Numbers, Binary Codes- BCD Codes, Gray Code, ASCII Character Code, Codes for serial data transmission and storage.

(topics will be delivered through Class room teaching)

Boolean Algebra and Logic Gates

Axiomatic definition of Boolean algebra. Basic theorems and properties of Boolean algebra, Boolean functions; Canonical and Standard forms; min-terms and max-terms standard forms; min-terms and max-terms, standard forms , Digital Logic Gates, multiple inputs. **(topics will be delivered through Class room teaching+**

Handson Practice based experiments) Gate Level Minimization:-

The Map Method, K Maps, input five variables, Produ and NOR implementation. AND –OR invent, OR-AND invent implementation, Ex-OR function, Parity generation and checking. **(topics will be delivered through Class room teaching+ Hands on Practice based experiments)**

MODULE - II: (14 hours) Combinational Logic

Combinational Circuits, Analysis and Design Procedure; Binary Adder-Sub tractor, Decimal Adder, Binary Multiplier, Magnitude Comparator, Decoders, Encoders, Multipliers, HDL for Combinational Circuits. **(topicswill be delivered through Class room teaching + Hands on Practice based experiments)****SynchronousSequential Logic**

Sequential Circuit, Latches, Flip-flop, Analysis of Clocked sequential Circuits, HDL for Sequential Circuits,

State Reduction and Assignment. Design Procedure. **(topics will be delivered through Class room teaching+ Handson Practice based experiments)**

MODULE - III: (14 hours) Registers and Counters

Shift Register, Ripple Counters, Synchronous Counters Asynchronous Counter, Ring Counters, and Modulo-N Counters. **(topics will be delivered through Class room teaching+ Hands on Practice based experiments)****Hardware**

Description Language

Introduction to HDL, Structure of HDL coding, Analysing basic gates using HDL, HDL for various Boolean circuits and techniques (Boolean algebra, gate level minimization, comparators, code converters), HDL for various Synchronous, Sequential Circuits and Applications. **(topics will be delivered through Simulation usingsoftware tool)**

Memory and Programmable Logic

Random Access Memory (RAM), Memory Decoding, Error detection and Correction, Read only Memory, Programmable Array Logic, Sequential Programmable Devices. **(topics will be delivered through Class roomteaching)**

Text Book

1. *Digital Design, 3rd Edition* by M. Morries Mano, Pearson Edu. India (Ch: 1, 2, 3, 4, 5, 6, 7, 8)
2. *Fundamentals Of Digital Circuits, A. Anand Kumar, 3rd Edition, PHI learning, ISBN: 978-81-203-5052-6*
3. *Circuit Design and Simulation with VHDL, second edition* By Volnei A. Pedroni, ISBN-13: 978-8120343016

Reference Books:

1. *Digital Principles and Applications, 6th Edition, Donald P. Leach, Albert Paul Malvino and GoutamSaha, Tata McGraw Hill Publishing Company Ltd., New Delhi.*
2. *Digital Fundamentals, 5th Edition, T.L. Floyd and R.P. Jain, Pearson Education, New Delhi.*
3. *Digital Electronics, Principles and Integrated Circuit, Anil K. Jain, Wiley India Edition* 4. *Digital Design – Principle & Practice, 3rd Edition* by John F. Wokerly, Pub. Pearson Education.

Module I

S. No.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
	Introduction & Overview of Digital Electronics, Binary number, base conversations, Octal & Hexadecimal numbers						

1	Key topics: - Introduction to binary, octal & hexadecimal numbers, binary to decimal, octal & hexadecimal conversion, Decimal to binary, octal & hexadecimal conversion. Reference:-MM –1.2 to 1.4, JFW-2.1 to 2.4	CRT		2	0	0	0
2	Complements, signed binary numbers. Key topics:-1's complement, 2' complement, 10's compl binary numbers and related problems. Reference: - MM –1.5 to 1.6, JFW- 2.5 to 2.9	CRT		2	0	0	0

Module I (Contd...)

S. No.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
3	Binary codes –BCD codes, Gray code, ASCII character code, code for serial data transmission and storage. Key topics:-Weighted & non –weighted codes, Binary to BCD & gray code conversion, and related problems. Reference: - MM –1.7 to1.8, JFW-2.10 to 2.11	CRT		1	0	0	0

No.							
15	Binary adder , subtractor, Key topics: - Introduction to combinational circuits, Logic diagram, designing procedures, Half adder & subtractor , Full adder & subtractor, BCD adders. Reference : - MM-4.1 to 4.5 , JFW-4.2 , JFW- 5.10.1 to 5.10.4	CRT + Practice	Component Level Design	2	3	0	0
16	Binary multiplier Key topics :- Implementation of 2-bit & 4-bit Multiplication using Adders/ IC- 74283(Binary adders) Block diagram, Reference: - MM-4.6, 4.7 JFW-5.11	CRT		2		0	0
17	Magnitude comparator. Key topics :- Mathematical modeling of 4-bit Magnitude comparator. Reference :- MM-4.6,4.7 JFW- 5.11	CRT + Practice	Component Level Design	2	2	0	0
18	Decoders, encoder Key topics: - Introduction to 3 to 8, 2 to 4 line decoder, Parity encoder, Boolean function implementation using Decoders, encoder, Reference : - MM-4.8 to 4.10, JFW- 5.4.1 to 5.7.4	CRT		2	0	0	0
19	Multiplexer	CRT + Practice	Component Level Design	1	3	0	0
	Key topics: - n to 1 line multiplexer , Boolean function implementation using multiplexer, DeMux Reference :- MM-4.8 to 4.10, JFW- 5.4.1 to 5.7.4						
20	Sequential circuits: Latches. Key topics :- Introduction sequential circuits, S-R latch, , D latch: Truth table, Logic diagram, Excitation Table.	CRT + Practice	Component Level Design	1	2	0	0
21	Sequential circuits: Flip flop Key topics : - J-K Flip-flop, T flip-Flop, D Flipflop: Truth table, Logic diagram, Excitation Table. Reference : - MM-5.1 to 5.2, JFW- 7.2 to 7.2.5	CRT + Practice	Component Level Design	1	2	0	0
22	Analysis of clocked sequential circuits: State reduction and assignment, Key topics: - State equation, state table, state Diagram Reference: - MM-5.4-5.6, JFW- 7.4.1 to 7.4.6,7.9	CRT		3	0	0	0
				14	16

Module III

S. no.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
23	Shift register. Key topics :-Introduction to registers, Shift register: Serial in, parallel in, serial out, parallel out, shift right, shift left, Universal shift resistors . Reference : - MM–6.1 to 6.2, JFW- 8.5 to 8.5.2	CRT		2	0	0	0
24	Ripple counters. Key topics :- Introduction to binary ripple counter , state diagram, timing diagram Reference : - MM–6.3, JFW - 8.5.5	CRT		2	0	0	0
25	Synchronous counter Key topics :-Binary counter, Up-down binary counter, BCD counter with parallel load. Reference : - MM–6.4	CRT		2	0	0	0

Module III (Contd...)

S. no.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
26	Ring counters. Key topics :- Ring counter & Johnson counter : Timing Diagram Reference : - MM –6.5, JFW- 8.5.6 to 8.5.7	CRT		1	0	0	0
27	Module –N counters. Key topics :- designing of mod counters. Reference : - MM 6.4	CRT		1	0	0	0
28	Introduction to HDL, HDL for various Boolean circuits and techniques (gate level minimization, comparators, code converters)	Practice	VERILOG Programming (Software: xilinx)	0	3	0	0
29	HDL for combinational circuits. Key topics :- Gate level modeling , Data flow modeling , behavioral modeling . Reference : - MM –4.11	Practice		0		0	0
30	HDL description of Design, examples. Key topics : Structural description of Multiplier and Multiplexers Reference : - MM –8.5	Practice		0	3	0	0
31	HDL for registers & counter. Key topics :- HDL for synchronous counter & ripple counter . Reference : - MM –6.6, JFW- 8.5.10	Practice		0		0	0
32	Random Access Memory Reference : - MM –7.1,, JFW- 10.1 to 10.2	CRT		1	0	0	0
33	Memory decoding. Key topics :- coincident decoding , address multiplication. Reference : - MM –7.2, 7.3, JFW- 10.3 to 10.4	CRT		1	0	0	0
34	Error detection & correction. Key topics :- Hamming code, single error correction, double error detection. Reference : - MM –7.4	CRT		1	0	0	0
35	Read only memory Key topics :-Internal logic of RAM, combinational circuit implementation, types of ROMs, Reference : - MM –7.5 to 7.6, JFW- 10.1.1 to 10.1.6	CRT		1	0	0	0
36	programmable array logic. Key topics :- conditional PLD, PAL with 4 inputs & 4 outputs. Reference : - MM –7.5 to 7.6, JFW- 10.1.1 to 10.1.6	CRT		1	0	0	0
37	Sequential programmable devices. Key topics :-Sequential programmable logic device (SPLD), complex programmable logic device (CPLD), field programmable gate array(FPGA). Reference : - MM –7.8, JFW- 10.5	CRT		1	0	0	0
				14	6	0	0

FCEN0105 Basic Electrical Engineering

<i>Pre - requisites</i>	<i>L+T+P</i>	<i>Credits</i>
Nil	3+ 0 + 0	3

Course Objectives:

- *Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.*
 - *Provide working knowledge for the analysis of basic D.C. and A.C. circuits used in electrical and electronic devices.*
 - *Develop selection skill to identify the type of generators or motors required for particular application.*
 - *Highlight the importance of transformers in transmission and distribution of electric power.*
 - *Emphasize the effects of electric shock and precautionary measures.*
 - *Improve the ability to function on multi-disciplinary teams. **Course Outcomes:***
- After studying this course, students will be able to:*
- *Understand electrical circuit concepts*
 - *Understand electromagnetic and electromagnetic induction*
 - *Understand DC Machines*
 - *Understand single and three phase A.C circuits, and Understand AC machines and measuring instruments*

Module-1 (16 Hours)

Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference, Emf, electric power, ohm's law

Sources, Source Conversion, Induced EMF, Energy Stored in Inductor & Capacitor.(PPT & Animated videos) DC Networks: Laws and Theorems applicable to DC networks (KCL & KVL, Node voltage & Mesh current

analysis, Delta-Star & Star-Delta conversion, Superposition principle in R-L and R-C circuits with DC excitation, Simple problems. (e-content& simulations using PSICE)

Magnetic Circuits: Introduction to Electromagnetism, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. (Class room teaching)

D.C. Machines: Construction, Classification and Principle of operation of DC machines, EMF equation of DC generator, Speed Equation of DC Motor. (Class room teaching & videos)

Module-2 (16 Hours)

Single-Phase AC Circuits: Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor. (Class room teaching & videos)

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits. (Class room teaching)

Single-Phase Transformers: Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers. (Class room teaching)

Module-3 (13 Hours)

Induction Motors: Introduction to Three-phase and Single-phase Induction Motors, Concept of Slip, Slip-Torque characteristics (no derivations). (Class room teaching e-content)

Measuring Instruments: Introduction, PMMC Ammeters and Voltmeters with extension of range, Moving-Iron Ammeters and Voltmeters, Dynamometer type Wattmeter, Energy meter. (Class room teaching & e-content)

FCEN0106 Electrical Machines- I

Pre - requisites	L+T+P	Credits
Nil	3+ 0 + 0	3

Course Objectives:

- To introduce the students about the principles of electromagnetism applicable to dc and ac machines.
- To familiarize the students about fundamentals laws that governs the operation of generator and its application. -To introduce the students about construction and associated with starting of dc motor.
- To analyse the behaviour and performance of dc machine under different operating conditions. -To make student understand about various three phase transformer connections.

Course Outcomes:

On successful completion of this course, students will be able to:

- Distinguish the constructional similarity and dissimilarity between various dc and ac machine.
- Demonstrate appropriate behaviours and knowledge of electrical machines when working with the class room teaching and lab experience.
- Students will be able to prepare professional quality graphical presentations of laboratory data and computational results.
- Students will demonstrate an understanding of the fundamental control practices associated with AC

and DC machines.

-In the lab, at least for 50% experiments, students will write a software programme for logic (mathematical equation).

Module-I (14 Hrs): DC Generator

Dc Generators: Armature winding- Lap and wave, Simplex and duplex(Autocad), Method of excitation, Classification, Derivation of emf,, Process of commutation, Armature reaction, Interpoles, Compensating winding and equalizer rings(***class room teaching***)

Dc Generator Characteristics: Characteristics for Separately Excited DC Generator (No-Load and Load), Conditions for Self Excitation, Critical Resistance and Critical Speed, Characteristics for Self Excited DC Shunt Generator (No-Load and Load), Process of building up of voltage, Causes of failure of voltage build-up and remedies, Voltage Regulation, Parallel Operation of DC Shunt Generators and DC Series Generators. (***class room teaching+ Practice in electrical machine lab***)

Module-II (15 Hrs) : DC Motor

Dc Motor Characteristics: Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC

Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors and their Application. (Lecture & practice)

Dc Motor Starting And Performance Characteristics: Starting of DC Shunt, Series and Compound Motors, Condition for maximum power, Speed Control of DC Shunt and Series

Motors, Classification of Losses, Efficiency Evaluation from Direct and Indirect Methods (i) Brake Test

(Direct method), (ii) Swinburne's Test (Indirect method).(***class room teaching+ practice in electrical machine lab.***)

MODULE-III (13 Hrs): Transformer

Single phase transformer: Phasor Diagrams at No-Load and Load Conditions, Equivalent Circuit, Determination of Parameters From Tests (Open Circuit Test and Short Circuit Test, Back to Back test), Per unit calculation, Polarity test, Voltage regulation, all day efficiency.(***class room teaching+ practice in electrical machine lab.***)

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply. Delta-delta, Star-delta, Delta-star, Zig-zag connections.Scott connection, Open delta connection. (***class room teaching+ practice in electrical machine lab***) Auto Transformers (***class room teaching***)

16	Efficiency Evaluation from Direct and Indirect Methods (i) Brake Test (Direct method), (ii) Swinburne's Test (Indirect method), (iii) Regenerative/Hopkinson Test	CRT + PRACTICE	e-Content & Practice in electrical machine lab.(all tests)	1	2	0	0
<u>Module III</u>							
TRANSFORMER							

17	Single Phase Transformer: Phasor Diagrams at NoLoad and Load Conditions,	CRT	e-content	1	0	0	0
18	Equivalent circuit of transformer	CRT	e-content	1	0	0	0

19	Determination of Parameters From Tests (Open Circuit Test and Short Circuit Test, Back to Back test), Per unit calculation, Polarity test, Voltage regulation, all day efficiency.	CRT + practice	e-Content & Practice in electrical machine lab. (all tests)	1	2	0	0
20	Three Phase Transformers: Three-phase transformer connections- Star-star, Two SinglePhase Transformers connected in Open Delta (V Connection) and their rating, T Connection (Scott Connection) of Two SinglePhase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply	CRT	e-content	3	0	0	0
21	Delta-delta, Star-delta, Delta-star, Zig-zag connections. Scott connection, Open delta connection,	CRT	e-content	2	0	0	0
22	Auto Transformers	CRT	e-content	1	0	0	0

FCEN 0107 Analog and Digital Electronics

Pre –requisites	L+T+P	Credits
Nil	3+ 0 + 0	3

Course Objectives:

- To make the students understand the various electronics circuit by using semiconductor devices. -To train the students to analysis different amplifier (small signal & large signal).
- To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

- On successful completion of this course, students will be able to: -Construct small analog and digital electronics circuit.
- Design circuit parameter, so that it will give better performance in complicated electronics circuit.

MODULE –I (10 Hours)

1. Diode Circuits: Zener Diode as Voltage Regulator, Diode Circuits with Time-Varying Sources, Switching Characteristics of a Diode, Special Purpose Diodes. **(class room teaching+ Lab practice) (Multisim)**
2. Small Signal Amplifier: BJT, FET small signal models, AC Gain, Input and Output Impedances, Some Special Circuits, Darlington Pairs and Feedback Pairs, Frequency Response of Single Stage RC Coupled Amplifiers and Multistage Transistor Amplifiers. **(class room teaching)**

MODULE –II (20 Hours)

3. Large Signal Amplifiers: Classification, Class-A and Class-B Power Amplifiers Complimentary and Symmetry Amplifiers, Class-C Amplifiers. **(class room teaching + Lab practice) (Multisim)**
4. Feed Back Amplifiers and Oscillators: Feedback Concepts, Types of Feedback Circuits, Effects of Negative Feedback Circuits, Unijunction Oscillator and PLL. **(class room teaching)**
5. Operational Amplifier: Basic Operational Amplifier, Differential Amplifier, Basic Operational Amplifier Circuits, Application of OPAMPs, Linear Application of OPAMPs, OPAMP Filters. **(classroomteaching + Lab practice) (Multisim)**
6. Combinational Circuits: Introduction to Digital Electronics Circuits, K-maps and their Simplification, Adder, Subtractors, Digital Comparator Circuits, Parity Checkers/Generators, Multiplexers and Decoders, Demultiplexers/Decoders, Programmable Logic Arrays. **(class room teaching + Practiceusing software)(LogiSim)**
7. Sequential Circuits and Systems: Introduction, Memory Cells and Flip-Flops, Registers, Counters, Asynchronous Counters, State Diagrams**(class room teaching)Text Books:**
 1. *Electronics: Analog and Digital, I.J. Nagrath, PHI Learning Pvt. Ltd., New Delhi.*
 2. *Digital Design Principle& Practice, 3rd Edition by John F. Wokerly, Pub. Pearson Education*

Reference Books:

1. *Millman's Electronic Devices and Circuits, 2ndEdition Education Pvt. Ltd., New Delhi.*
2. *Electronic Devices and Circuit Theory, 9th/10thEdition R.L. Boylestad and L. Nashelsky, Pearson Education, New Delhi.*
3. *Digital Fundamentals, 5thEdition, T.L. Floyd and R.P. Jain, Pearson Education, New Delhi.*
4. *Fundamentals of Digital Circuits, 2ndEdition, A. Anand Kumar, PHI Learning Pvt. Ltd., New Delhi.*

FCEN0108 WORKSHOP TECHNOLOGY

Pre-requisites	Course type	Credits
NIL	Theory	3

Course Objectives:

1. To learn about basic manufacturing processes such as casting, forming, joining Course Outcomes:

On successful completion of this course, students will be able to:

1. Can suggest suitable manufacturing technique for given component.

Module-I (24 Hrs): Introduction to Work Holding Devices and Manufacturing Tools

Work holding, Tool Holding Devices, measuring and cutting tools for Carpentry, Fitting, Plumbing
 Work holding, Tool Holding Devices, measuring and cutting tools for Blacksmith & Welding. Carpentry:
 Making simple joints: a) Half-lap b) Mortise joints. Carpentry: Job using Wood Turning Lathe –
 Stepped Pulley, cot leg Fittings: Making of simple mating profiles a) VEE b) Dovetail c) Half round
 joints. Basic Pipe Fittings

, Sanitary Fittings, Water Meter Installation. (Most of the topics will be through learn by doing and laboratory mode)

Module-II (20 Hrs): Introduction to Casting and Welding

Casting Terminology- Sand Moulding Practice, Moulding Materials Patterns- Types, Allowances
 Melting Practice (Cupola, electrical furnace) Introduction to Welding, Brazing & Soldering Oxy
 Acetylene Gas Welding-Process, Techniques Arc Welding- Process, Techniques, Defects. Lap
 Joint, Butt Joint, T-Joint, V joint MIG, TIG and spot welding. (Most of the topics will be through learn
 by doing and laboratory mode)

MODULE-III (14 Hrs): Introduction To Forming

Cold & Hot Working of Metals- Black Smithy, Forging and forging tools Black-smithy:
 Converting round rod into Square Ring, Converting round rod into square S-Hook Cold & Hot
 Working of Metals- Extrusion, Drawing Cold & Hot Working of Metals- Sheet metal Operations,
 tools, Preparation of Square Tray. (Most of the topics will be through learn by doing and
 laboratory mode)

TEXT BOOKS:

1. Workshop Technology Vol. I & II, S.K. Hazra Chaudhary, A.K. Hazra Chaudhary, Asian Book Comp., New Delhi.
2. Production Engineering - P.C. Sharma, S. Chand
3. Workshop Practice : R.K. Rajput, Laxmi Publication

REFERENCE BOOKS:

1. Workshop Technology, Vol. 1, 2 & 3 –W.A.J. Chapman, WAJ, Edward Arnold.
2. Workshop Technology (Vol. 1 and 2) –B. S. Raghuvanshi, Dhanpath Rai and Sons, New Delhi.

FCEN0109 ENGINEERING MECHANICS

Pre-requisites	Course type	Credits
NIL	Theory	3

Course objectives:-

1. This course teaches students about the effect of forces during static and dynamic Conditions.
2. It gives insight about friction, virtual work and forces in the trusses
3. To determine axial forces, shear forces, and bending moments.
4. To study the bending phenomenon in beams and stress developed in them.

Course outcomes:-

1. To provide the student with a thorough understanding of concept, drawing and free body diagrams.

2. *Able to draw SF and BM diagram of a loaded beam*

- Identify the stress developed in beams due to bending.

Module-I (20 Hrs):

Concurrent and non-concurrent forces on a plane: Principle of statics, composition and resolution of forces, free body diagram, equilibrium of concurrent coplanar forces, Lami's theorem, moment and principle of moment, types of supports and support reactions, equilibrium of general case of forces in a plane. **(The topic will be through class room teaching)**

Center of gravity- General case of parallel forces in a plane, centre of parallel forces in a plane, centroid and centre of gravity, centroid of composite plane figures and curves, distributed forces in a plane. **(The topic will be through class room teaching)**

Friction: Types of friction, laws of friction, angle of friction, coefficient of friction, angle of repose, equilibrium of bodies on rough inclined planes, equilibrium of ladder. **(The topic will be through class room teaching)**

Module-II (17 Hrs):

Moment of Inertia: Rectangular and polar moment of inertia, radius of gyration, parallel axis theorem and perpendicular axis theorem, moment of inertia of plane composite figures and material bodies.

(The topic will be through class room teaching and experiments)

Plane trusses: Classification of truss, assumptions, method of joints and method of sections. **(The topic will be through class room teaching and ANSYS software)**

Principle of virtual work: Equilibrium of ideal systems, application to practical problems. **(The topic will be through class room teaching)** **MODULE-III (15 Hrs):**

Shear Force and Bending Moment: Types of beams—Concept of shear force and bending moment—S.F and B.M diagrams for cantilever, simply supported and overhanging beams subjected to point loads, U.D.L., uniformly varying loads and combination of these loads, point of contra flexure, relation between S.F., B.M and rate of loading at a section of a beam. **(The topics will be through class room teaching and ANSYS software)** **Flexural Stresses in beams:** Theory of simple bending, assumptions, flexure formula, determination bending stresses, section modulus for various beam sections, neutral axis. **(The topics will be through class room teaching and ANSYS software)**

Shear stresses in beams: Shear stress at a section, shear stress distribution for different sections. **(The topics will be through class room teaching)**

Text books:

- Engineering Mechanics by S Timoshenko, D.H Young and J.V.Rao, Revised 4th edition (Special Indian Edition), McGraw Hill.
- Engineering Mechanics, S.S. Bhavikatti, New Age International Publisher

FCEN0110 THERMAL ENGINEERING

<i>Pre –requisites</i>	<i>Course type</i>	<i>Credits</i>
NIL	Theory	3

COURSE OBJECTIVES:

To make the student understand

1. *To be able to state various laws of thermodynamics and to define heat, work, thermal efficiency and the difference between various forms of energy*
2. *To be able to identify and describe energy exchange processes (in terms of various forms of energy, heat and work)*
3. *To be able to apply the steady-flow energy equation or the First Law of Thermodynamics to a system of thermodynamic components (heaters, coolers, pumps, turbines, pistons, etc.) to estimate required balances of heat, work and energy flow.*
4. *The importance of reversibility in the maximization of the efficiency of an engine*

COURSE OUTCOMES:

1. *Students will be able to prepare energy balance sheet*
2. *Will be able to understand various processes of thermodynamic cycles*
3. *Will be familiar with the steam table which will further help them in advanced thermodynamics for understanding power cycles*
4. *Capability to determine thermodynamic efficiency of various energy related processes*

MODULE-I (18 Hours)

Basic concepts and definition: Scope of Thermodynamics, Macroscopic and Microscopic approaches; Types of Systems, Properties, State and its representation on a property diagram, Process and its representation, point and path function; Reversible and Irreversible processes; Thermodynamic equilibrium and quasi-static processes, Zeroth Law of Thermodynamics and temperature, Measurement of temperature and calibration of thermometers, the ideal gas temperature scale. **(The topic is taught through PPT presentation and practice)**

Energy Transfer: Work Transfer (definition and calculation), Different modes of work, Displacement Work for various processes, Free expansion; Heat Transfer. **(The topic is taught through class room teaching)** **First Law of Thermodynamics:** Formal statement (using cyclic processes), First law for processes of fixed masses (closed systems) and introduction of internal energy as a thermodynamics property, Introduction of enthalpy as a thermodynamic property; Definition of specific heats and their use in calculation of internal energy and enthalpy with emphasis on ideal gases. Application of First Law to control volumes; Nozzle, Diffuser, Compressor, Turbine, Throttling device, Heat Exchanger (only steady flow need be considered). **(Application of First Law to control volumes will be through video presentation)**

MODULE-II (18 Hours)

Second Law of Thermodynamics: Limitations of First law, Kelvin-Planck and Clausius statements of Second Law, corollaries, Heat engine, Refrigerator and heat Pump, Clausius inequality.

Entropy: Definition, Principles of increase of entropy, Change of entropy of perfect gas in various

processes.

Properties of pure substances: p-v, p-T, T-S, h-S diagram for steam, different types of steam, Introduction to steam tables with respect to specific volume, pressure, temperature, enthalpy and entropy. **(Properties of pure substances will be through class room teaching & video presentation)**

MODULE-III (18 Hours)

IC engines: Introduction, Working of IC engines. Classification of IC engines, 2-Stroke and 4-Stroke engines, petrol and diesel engines, engine nomenclature. **(Topics related to IC engines will be through Practice & video presentation)**

Gas Power Cycles: Carnot Cycle, Air standard cycles-Otto, Diesel, Dual Combustion.

Vapour Power Cycles: Introduction Power cycles, The Carnot vapour cycle and its limitations, The Rankine cycle, Means of increasing the Rankine cycle efficiency, The reheat cycle, The regenerative feed heating cycle. **(Topics related to Gas & Vapour power cycles will be through class room teaching & video presentation)**
Introduction to Gas Turbine Cycles- Open & Closed Cycle. **(Topics related to gas turbine will be through video presentation)**

TEXT BOOKS:

1. *Engineering Thermodynamics, P.K. Nag, Tata McGraw Hill Companies*
2. *Thermodynamics: An Engineering Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.*

REFERENCE BOOKS:

1. *Fundamentals of Thermodynamics*, C. Borgnakke, R. E. Sonntag, WILEY Publication.

FCEN0111 EARTH SYSTEM SCIENCE Credits 3[3 0 0] Pre-requisites : Nil

Credit 3

Space Science: Solar System, Age of the Earth, Origin of Solar system. Meteors and Meteorites.

Earth Dynamics: Interior of the Earth, Composition of the Earth, Seismic waves, Seismograph, Plate Tectonics, Basics of Earthquake Engineering, Landslides, Volcanoes.

Geological Oceanography: Sea waves, Tides, Ocean currents, Geological work of seas and oceans, Tsunami and its causes, Warning system and mitigation.

Hydrogeology: Water table, Aquifer, Groundwater fluctuations and groundwater composition, Hydrologic cycle.

Glaciology: Glacier types, Different type of glaciers, Landforms formed by glacier.

Geological bodies and their structures: Rock, mineral, batholiths, dyke, sill, fold, fault, joint, unconformity.

Earth's Atmosphere: Structure and composition of atmosphere, Atmospheric circulation, Geological work of wind, Greenhouse effect and global warming, Carbon dioxide sequestration. Steps to maintain clean and pollution free atmosphere with governing laws, precautionary measures against disasters.

Biosphere: Origin of life, Evolution of life through ages, Geological time scale, biodiversity and its conservation.

Natural Resources: Renewable and non-renewable resources, Mineral and fossil fuel resources and their geological setting, mining of minerals and conservation, effect of mining on surface environment.

Recommended Books:

1. Earth's Dynamic – W. Kenneth Systems and Eric H. Christiansen
2. Exploring Earth: An introduction to Physical Geology – John P. Davidson
3. Holmes Principles of Physical Geology – A. Holmes (Revised Ed. Doris L. Holmes)
4. A Textbook of

Geology
–P K Mukherjee

5. Earth System Science from biogeochemical cycles to global changes –M. Jacobson, R.J. Charlson, H. Rodhe and G.H. Orians (2002)
6. Fundamentals of Geophysics –W. Lowrie.

FCEN0112 INTRODUCTION TO MINING [3 0 0]

Pre-requisites: Nil

Credit 3 Mining-

Definition and economic importance; Mine –definition, different types and classification; Mine life cycle; Mineral deposit –different types and their classification; Mineral resources of India; Modes of entry to a mine –shaft, incline, decline, adit and box-cut.

Overview of surface mining:

Types of surface mines, unit operations, basic bench geometry, applicability & limitations and advantages & disadvantage **Overview of underground mining:**

Different coal mining methods and their applicability & limitations; Different metal mining methods and their applicability & limitations; Basic concepts of transportation, ventilation, illumination and support in underground mines.

FCEN0113 MINE DEVELOPMENT [3 0 0]

Pre-requisites : Nil

Credit 3

Opening-up of Deposits: Choice of mode of entry- adit, shaft, decline and combined mode, their applicability, number and disposition.

Vertical and Inclined Shafts: Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.

Shaft Sinking Operations: Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.

Insets: Design, excavation and lining.

Mechanized Sinking: Simultaneous sinking and lining; slip - form method of lining; high speed sinking.

Shaft Boring: Methods and equipment.

Special Attributes: Widening and deepening of inclined and vertical shafts; staple shafts, raised shafts.

Main Haulage Drifts and Tunnels: Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting.

High Speed Drifting/Tunneling: Application of mechanized methods; road headers and tunnel boring machines.

Recent Developments in shaft sinking and drifting/tunneling.

Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings

FCEN0114 MINE SURVEYING - I [3 0 0]

Pre-requisites : Nil

Credit 3

Surveying: Definition, objective, classification and principles of surveying.

Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.

Angular Measurement: Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments; Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.

Leveling: Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, cross-sectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.

Total Station: Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.

Plane Table Surveying: Methods **Contours:** Concepts; Characteristics of contour; Contour Interval; Methods of contouring and uses of contours.

FCEN0115 INTRODUCTION TO BIOTECHNOLOGY (3 0 0 3)

Pre-requisites : Nil Credit 3

OBJECTIVES

■ To introduce students basic knowledge about biotechnology

MODULE I: Biochemistry 15

Component of the cell, structure and biochemical functions, Biomolecules-Carbohydrates, lipids, proteins,

Nucleic acids, Structure and classification of enzymes

MODULE II Cell Biology 15

Eukaryotic, Prokaryotic cells, Cell cycle –Mitosis and Meiosis, Cell fractionation and flow cytometry.

Molecular Biology

Introduction to nucleic acids: Nucleic acids as genetic material, Structure and physicochemical properties of

elements in DNA and RNA, Biological significance of differences in DNA and RNA.

MODULE III 15

Immunology :Cells of immune system, Development, maturation, activation and differentiation of T cells and B cells, Phagocytosis process

Biotechnology Applications: Industrial production, Drug discovery and development

TOTAL: 45 PERIODS

The students will be able to understand fields of Biotechnology and their specialized functions.

· They will acquire precise knowledge of various aspects of a living cell, its

structure, genetics and gene interactions and immune system.

· Also the students will get knowledge about Biotechnology application in industry and health care field.

FCEN0116 INTRODUCTION TO BIOPHYSICS (3 0 0 3)

Credits 3

Prerequisite: Nil

OBJECTIVES

1. Learn the structures of biological molecules
2. To understand the concept of structural analysis
3. Learn the techniques for analysis and determination of structure of biomolecules

MODULE 1: Structures of Biological macromolecules 17

Levels of structures in proteins, nucleic acids and polysaccharides - primary, secondary, tertiary and quaternary structures

Conformational analysis of proteins

Polypeptide chain geometries, internal rotation angles, Ramachandran plot, potential energy calculations, forces that determine protein structure –hydrogen bonding, hydrophobic interactions, ionic interactions, disulphide bonds –prediction of protein structure.

MODULE 2 : Conformational analysis of Nucleic acid 12

General characteristics of nucleic acid structure –geometric –Glycosidic bond –

rotational isomers, ribose puckering–backbone rotation angles and steric hindrances
–forces stabilizing ordered forms –base pairing and base stacking

MODULE 3: Technoques for the study of Biological structures 16

Electron Microscopy, Ultracentrifuge, Viscometry, Molecular –sieve chromatography, electrophoresis, NMR and EPR. X-Ray crystallography, X-ray fiber diffraction, light scattering, Neutron scattering **Total hours: 45**

TEXT BOOK:

Biophysical Chemistry, Cantor and Schimmel, part I and II, W.H. Freeman and co

FCEN0117 BIOSAFETY, BIOETHICS, IPR & PATENTS (2 0 0 2) Credits 2 Prerequisite Nil OBJECTIVES

1. To introduce the biosafety regulations and ethical concepts in biotechnology
2. To emphasize on IPR issues and need for knowledge in patents in biotechnology

MODULE I: Bioethics and Biosafety 12

Bioethics –Necessity of Bioethics, different paradigms of Bioethics –National & International. Ethical issues against the molecular technologies.

Biosafety–Introduction to biosafety and health hazards concerning biotechnology. Introduction to the concept of containment level and Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).

MODULE 2: Patent and Patent Laws 10

Objectives of the patent system - Basic principles and general requirements of patent law biotechnological inventions. Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions. Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

MODULE 3: Intellectual Property Rights 8

Intellectual property rights-TRIP- GATT-International conventions patents and methods of application of patents-Legal implications-Biodiversity and farmer rights.

TOTAL 30

FCEN 0118 Computer Fundamental and Organization

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN 0118	Computer Fundamental and Organization	Theory	3	Nil	3-0-0

Learning Objectives:

The basic knowledge of how a computer works is very important for any fresh networking or operating system professional. The functional knowledge of a computers working and its main building parts are paramount. The computers of today may come with variety of features but the basic working principles remain the same. Students will explore the fundamentals of organization of a computer and the principles and building units of a computer (its hardware). Also, they will be introduced to the basics of networking and MS Office.

Course Outcomes:

Student will able to know about Basic knowledge about computers. Fundamental hardware components that make up

a computer's hardware and Word the processing role and electronic of each spreadsheet of. An overview these of MSWORD, MSEXCEL and MSPOWER POINT. Attain the knowledge about basics of Networking

Syllabus

Unit I: General Features of a Computer(12hrs)

General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super

computers. Computer applications –data processing, information processing, commercial, office automation, industry and

engineering, healthcare, education, graphics and multimedia.

Unit II: Computer Organization (6hrs)

Computer organization, central processing unit, computer memory –primary memory and secondary memory. Secondary storage devices –Magnetic and optical media. Input and output units. OMR, OCR, MICR, scanner, mouse, modem.

Unit III: Computer Hardware and Software (11hrs)

Computer hardware and software. Machine language and high level language. Application software, computer program,

operating system. Computer virus, antivirus and computer security. Elements of MS DOS and Windows OS. Computer

arithmetic, Binary, octal and hexadecimal number systems. Algorithm and flowcharts, illustrations, elements of a database

and its applications

Basic Gates (Demorgans theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions

UNIT IV: MS Office (4hrs)

Word processing and electronic spread sheet. An overview of MSWORD, MSEXCEL and MSPOWER POINT

UNIT V: Introduction to Networking (6hrs)

Network of computers.Types of networks, LAN, Intranet and Internet.Internet applications. World Wide Web, E-mail, browsing and searching, search engines, multimedia applications.

FCEN0119 Operating System Building Blocks (Theory) Credit 3 T-P-Pr (3-0-0)

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0119	Operating System Building Blocks	Theory	3	Nil	3-0-0

Course Objectives:

The operating system is the most important program that runs on a computer. Every general-purpose computer must have an operating system to run other programs. Operating systems perform basic tasks, such as recognizing input from the keyboard, sending output to the display screen, keeping track of files and directories on the disk, and controlling peripheral devices such as disk drives and printers. This course covers the concept of operating system and its applications.

Course Outcome:

After learning the fundamental concepts in Operating system including how OS has evolved over the years and different components of OS, students will continue to more significant functions of OS like Process management, storage and memory management etc. This will provide the necessary information for students to extract maximum benefits out of the OS while developing programs, working with applications and etc.

Syllabus

Unit I: Introduction to Operating System (6 Hrs.)

Objectives and Functions of OS, Evolution of OS, OS Structures, OS Components, OS Services, System calls, System

programs, Virtual Machines.

Unit II: Process Management –Processes and Threads (8 Hrs.)

Processes: Process concept, Process scheduling, Co-operating processes, Operations on processes, Inter process

communication, Communication in client-server systems. Threads: Introduction to Threads, Single and Multi-threaded

processes and its benefits, User and Kernel threads, Multithreading models, Threading issues. CPU Scheduling: Basic

concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm

Evaluation, Process Scheduling Models.

Unit III: Process Management –Synchronization and Deadlocks (8 Hrs.)

Process Synchronization: Mutual Exclusion, Critical –section problem, Synchronization hardware, Semaphores, Classic

problems of synchronization, Critical Regions, Monitors, OS Synchronization, Atomic Transactions. Deadlocks: System

Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock

Detection, Recovery from Deadlock.

Unit IV: Storage Management (10 Hrs.)

Memory Management: Logical and physical Address Space, Swapping, Contiguous Memory Allocation, Paging, Segmentation with Paging. Virtual Management: Demand paging, Process creation, Page Replacement Algorithms,

Allocation of Frames, Thrashing, Operating System Examples, Page size and other considerations, Demand segmentation.

File-System Interface: File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics. File-System Implementation: File-System structure, File-System Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery. Disk Management: Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable- storage Implementation

Unit V: Protection and Security (7hrs)

Protection: Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability- Based Systems, Language –Based Protection. Security: Security Problem, User Authentication, One –Time Password, Program Threats, System Threats, Cryptography, Computer –Security Classifications

Aerodynamics Laboratory

Subject Name	Code	Type of course	T-P-P	Prerequisite
Aerodynamics Laboratory	ENFC0208	Practice	0-2-0(2)	Nil

1. Objective

• To Predict Different Aerodynamic Propulsion in Aero Applications
--

2. Course Outcome

• Ability to Use the Fundamental Dynamics Principles in Aircraft Applications.
--

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Experiments	40	Lab work
	Learning record	10	Report and presentation
External Examination		50	Lab work
Total		100	

4. List of Experiments

1. Application of Bernoulli's Equation – venturimeter and orifice meter.
2. Frictional loss in laminar flow through pipes.
3. Frictional loss in turbulent flow through pipes.
4. Calibration of a subsonic Wind tunnel.
5. Determination of lift for the given airfoil section.
6. Pressure distribution over a smooth circular cylinder.
7. Pressure distribution over a rough circular cylinder.
8. Pressure distribution over a symmetric aerofoil.
9. Pressure distribution over a cambered aerofoil.
10. Flow visualization studies in subsonic flows.
11. Calculation of drag over smooth cylinder
12. Calculation of drag over rough cylinder

6. List of Equipment for a Batch of 30 Students

S.N.	Name of Equipment	Quantity	Experiment No.
1	Venturimeter	1	1
2	Orificemeter	1	1
3	Pipe friction apparatus	1	2, 3
4	Subsonic Wind tunnel	1	4, 5, 6, 7, 8, 9, 10, 11, 12

Introduction to Robotics

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Introduction to Robotics	ENFC0203	Practice	0-2-0(2)	Geometric Drawing

1. Objectives

- To Provide An Overview To Students On Various Types of Industrial Robots and Their Configurations.
- To Educate The Students on Use Of DELMIA To Carryout Simulation Exercises of Various Types of Robotic Arms Suiting to Specific Applications.

2. Course Outcome

- Students Will Have Knowledge and Skill To Program Industrial Robots For Performing Various Tasks.
- Students Will Be Able To Undertake Simulation Exercises Of Various Types Of Robotic Arms As A Pre-Requisite Leading To A Safe, Cost Effective, Reliable And Optimum Design.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test		
	Assignment		
	IPR	50	Lab work, report
	Project		
	Quiz		
External Examination	EPR	50	Lab work & Report
Total		100	

4. List of Experiments (45 Hours)

1. DELMIA: Simulated Models of Various Types Industrial Robots & Its Architecture.
2. DELMIA: Simulation of Activities Like: Pick and Place, Coordinated Movement, Spot Welding and Arc Welding.
3. DELMIA: Designing Own Robotic Arm with Insight to Robot Kinematics.
 - i) A Prismatic Robotic Arm.
 - ii) A Revolute Joint Robotic Arm.
 - iii) Articulated Robotic Arm
 - iv) Spherical Robotic Arm

4. Robot Programming: Use of Brabofor Pick and Place Actions.
5. An Understanding of Different Sensors, Their Operation and Application. Demonstration of Use of Sensors for At Least 3 Applications of Robot.
6. Commanding A Robot To Achieve Tasks On The Basis Of Sensor Information, A Description Of Motors, And How Their Velocity Is Set, And Other Robotic Actuators.

5. Reference

Text Books:

1. M.P. Groover, Industrial Robotics, Second Edition, TMH Publishers.
2. S.R. Deb and S. Deb, Robotics Technology and Flexible Automation, Second Edition, TMH Publishers.

Reference Books:

1. Y Koren, Robotics for Engineers, TMH Publishers.

FCEN0201 INTRODUCTION TO INTERNET TECHNOLOGY

Course Nature: Practice

Credit: 5

Course Objectives:

1. To introduce the concepts of Internet and Impact of Internet in human life.
2. To introduce the basic concepts of web designing.
3. To make the students understand the web designing languages like HTML, CSS and Java Script.
4. To train the students on the methods of designing the responsive sites.
5. To make the students understand various concepts related web design. Course Outcomes:

On successful completion of this course, students will be able to: 1. Design a complete responsive, attractive, static website.

Module-I (12 Hrs): INTERNET AND HTML BASICS

(A) **Internet Technology:** Basic Concepts of Internet, How it Works ?, Browser Types, Server Types, Site Advantages, Skills Required, Tools Required, Domain Names, Site Construction, Hosting

Concepts, Ecommerce Hosting, Site Backup, Site Statistics, Site Popularity, Free Graphics. **(Most**

of the topics will be through presentation and live demonstration)

(B) **HTTP:** Home, Overview, Parameters, Messages, Requests, Responses, Methods, Status Codes, Header Fields, Caching, URL Encoding, Security, Message Examples, HTTPs. **(Most of the topics will be through presentation and live demonstration)**

(C) **HTML:** Overview, Basic Tags, Elements, Attributes, Formatting, Phrase Tags, Meta Tags, Comments, Images, Tables, Lists, Text Links, Image Links, Email Links, Frames, Iframes,

Blocks, Backgrounds, Colors, Fonts, Forms, Embed Multimedia, Marquees, Header, Style Sheet, Javascript, Layouts. **(Most of the topics will be through presentation and live demonstration)**

Module-II (20 Hrs) : HTML5 & CSS3

(A) **HTML5:** Overview, Syntax, Attributes, Events, Web Forms 2.0, SVG, MathML, Web Storage, WebSQL, Server-Sent Events, Web Socket, Canvas, Audio & Video, Geolocation, Microdata, Drag & drop, Web Workers, IndexedDB, Web Messaging, Web CORS, Web RTC. . **(Most of the topics will be through presentation and live demonstration)**

(B) **CSS:** Introduction, Syntax, Selectors, Backgrounds, Text, Fonts, Links, Lists, Tables, Box Model, Border, Outline, Margin, Padding, Dimension, Display, Position, Float, Align, Combinators, Pseudo-class, Pseudo-element, Navigation Bar, Image Gallery, Image Opacity, Image Sprites, Media Types, Attr Selectors, Rounded Corners, Border Images, Backgrounds, Colors, Gradients, Shadows, Text, Fonts, 2D Transforms, 3D Transforms, Transitions, Animations, Multiple Columns, User Interface, Box Sizing. Viewport, Grid View, Media Queries,

(C) Images, Videos,

Frameworks. **(Most of the topics will be through presentation and live demonstration)**

MODULE-III (20 Hrs) : JAVASCRIPT & BOOTSTRAP

(A) **JavaScript:** Overview, Syntax, Enabling, Placement, Variables, Operators, If...Else, Switch Case, While Loop, For Loop, For...in, Loop Control, Functions, Events, Cookies, Page Redirect, Dialog Boxes, Void Keyword, Page Printing, Objects, Number, Boolean, Strings, Arrays, Date, Math, RegExp, HTML DOM, Error Handling, Validations, Animation, Multimedia, Debugging, Image Map, Browsers. . **(Most of the topics will be through presentation and live demonstration)**

(B) **Bootstrap:** Introduction, Environment Setup, Grid System, CSS Overview, Typography, Code, Tables, Forms, Buttons, Images, Helper Classes, Responsive utilities, Glyphicons, Drop downs, Button Groups, Button Drop downs, Input Groups, Navigation Elements, Navbar, Breadcrumb,

Pagination, Labels, Badges, Jumbotron, Page Header, Thumbnails, Alerts, Progress Bars, Media Object, List Group, Panels, Wells, Bootstrap Plugins. . **(Most of the topics will be through presentation and live demonstration)**

TEXT BOOKS:

1. *Web Warrior Guide to Web Design Technologies*, Don Gosselin, Joel Sklar & others, Cengage Learning
2. *Teach yourself web technology*, Ivan Bayross, BPB Publication
3. *Web Programming: Building Internet Applications*, Chris Bates, Wiley Dreamtech
4. *Web Technologies*, Uttam K Roy, Oxford
5. *Web Technology: A developer perspective*, Gopalan & Akilandeswari, PHI

FCEN0202 BASIC ELECTRONICS LABORATORY

PRACTICE **Credits: 02** **Hours: [36]**

Course Objectives:

The objectives of this Laboratory are to

- 1. Identify schematic symbols and verifying the characteristics of electronic devices e.g. Diode, Zener Diode, LED, BJT, JFET and MOSFET etc.*
- 2. Design, analysis and verification of electronic circuits e.g. Rectifiers, Clipper, Clamper, Filters, Amplifiers and Operational Amplifiers etc.*

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

- 1. Get the exposure of electronics engineering which allows training students with good scientific and engineering breadth so as to comprehend, analyze, design, and create novel products and solutions for the real life problems.*
- 2. Apply this knowledge under supervision to solve engineering problem with core field.*
- 3. Get the knowledge of foundation course for further study.*

List of Experiments

1. Identification of basic electronic components & familiarization with bread board and measuring instruments
2. Study and use of Function generator & Oscilloscope to generate & view waveforms and also measure its amplitude and frequency.
3. Verification of the V-I characteristics of forward & reverse biased PN-junction diode.
4. Verification of the V-I characteristics of forward & reverse biased of Zener diode.
5. Implementation of Half wave and full wave rectifier without and with capacitor filter. Tracing of waveforms, Measurement of DC load voltage, AC load voltage & ripple factor values.
6. Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.
7. Plot and verify the input and output characteristics of BJT in Common Emitter Configuration.
8. Plot and verify the input and output characteristics of BJT in Common Base Configuration.
9. Implementation of DC biasing circuit of BJT and measurement of DC voltages and currents
10. Verification of the drain characteristics of JFET
11. Plot and verify the transfer characteristics of F.E.T and calculate various J.F.E.T parameters
12. RC based low pass filter and high pass filter design

FCEN0203 SIGNALS & SYSTEMS LABORATORY

PRACTICE

Credits:02

Hours [36]

Course Objectives:

The objectives of this Laboratory are to

1. *Introduce the concepts and techniques associated with the understanding of signals and systems.*
2. *Familiarize with techniques suitable for analyzing and synthesizing both continuous-time and discrete time systems and provide with an appreciation of applications for the techniques and mathematics used in this course.*

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

1. *Determine the response of an LTI system using convolution and classical methods. Analyze system properties based on impulse response.*
2. *Determine and analyze the responses of LTI system to periodic signals using Fourier series. **List***

of Experiments

1. Introduction to MATLAB/SCILAB programming
2. A) Generation of various types of waveforms (sine, cosine, square, triangular etc.)
B) Plot unit step, unit ramp, unit impulse
C) Study and analysis of different types of systems.
3. Computation of Energy and power of a given signal
4. A) Linear convolution of sequences
B) Computation of autocorrelation of a sequence, cross correlation of two sequences
5. Computation of the power spectral density of a sequence using SCILAB/MATLAB 6. Analysis of Fourier series and Transforms of different waveforms using SCILAB/MATLAB
7. Computation of Laplace Transform of different types of signal.
8. Computation of Z-transform of given signals.
9. Computation of DTFT of different types of signals.
10. Finding of stability of a LTI system

Tools to be used: MATLAB / SCILAB

Reference Books:

1. *Digital Signal Processing: A MATLAB-Based Approach –Vinay K. Ingle and John G. Proakis, Cengage Learning.*
2. *Fundamentals of Digital Signal Processing using MATLAB –Robert J. Schilling and Sandra L. Harris, Cengage Learning.*

FCEN0204 DIGITAL ELECTRONIC CIRCUITS LABORATORY

PRACTICE

Credits: 02

Hours: [36]

Course Objectives:

The objectives of this Laboratory are to:

1. Provide basic concepts on various digital designs through hands on practice.
2. Simulation platform for various digital circuits through Hardware description languages.

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

1. Develop new digital design
2. Design high speed memories through HDL programming.

List of Experiments

1. Verification of truth table of different digital logic gates: AND, OR, NAND, NOR, EX-OR, EX-NOR, NOT.
2. Design and implementation of Half Adder, Full Adder, Half Subtractor and Full subtractor using various logic gates.
3. Design, implement and test a given combinational circuit design example with (i) NAND Gates only (ii) NOR Gates only and (iii) using minimum number of Gates.
4. Gate-level minimization: Two level and multi level implementation of Boolean functions.
5. Combinational Circuits: design, assemble and test: code converters, a. gray code to binary and 7 segment display.
6. Implementation of combinational logic circuits with multiplexers and de-multiplexers.
7. Flip-Flop: implementation and verification of SR, D & J-K flip-flops.
8. Shift Registers: Design and investigate the operation of all types of shift registers with a. parallel load.
9. Counters: Design, assemble and test various ripple and synchronous counters - decimal a. counter, Binary counter with parallel load.
10. Clock-pulse generator: design, implement and test using 555 timer.
11. Mini Project: Binary Multiplier: design and implement.

Using VHDL:-

12. Verilog/VHDL simulation and implementation of Experiments 1, 2, 3, 6 & 7.

FCEN0205 ELECTRONICS WORKSHOP-I

PRACTICE

Credits: 02

Hours: [42]

Course Objectives:

The objectives of this Laboratory are to:

1. Understand and conceptually visualize the theoretical concepts of different components covered in the basic electronics.
2. Understand the use and application of surface mount technology in the manufacture of an electronic circuit and its hands on practice.

Course Outcomes:-

Upon successful completion of this laboratory, students should be able to:

1. Identify different tools and electronic components
2. Use and solder the electronic components on a Varo board with proper polarity to design simple circuits

List of Experiments

1. Identify the various tools & write down their uses.
Material required: various tools -Wire Cutter.Wire Stripper -Various types of Pliers-Vice.-Crimping Tools (RJ-11/RJ-45) -Screw-Drivers -Testers
2. Identify the various type of connector used in various Gadgets & Instruments/Equipments
Material Required :1. USB connector and cable, 2. Audio Cables and Connectors (3.5mm headphone jack, Digital Optical Audio), 3. Video Cables (VGA cable, DVI to VGA, S-Video cables, VGA to S-Video cables), 4. Audio and Video Cables (RCA Connector Cables, HDMI Cables, Display Port), 5.Data Cables (Fire wire IEEE 1394, eSATA Cables), 6. Networking Related Cables (Phone RJ11 Cable, Ethernet Cable)
3. Solder the joint connection of wires and check it. De-solder it and Re-solder.
Materials required: soldering iron. Solder wire, Flux, Desoldering Pump
4. Study of basic electronics components - Resistors and Capacitors (Find out the values from color bands/written values and compare it with measured values using multimeter)
Material required: Varioustypes of resistors, Capacitors and multimeter.
5. Study of basic electronics components - Identify the terminals of a Diode and its Polarity, Identify the terminals of a Transistor and its Type (n-p-n or p-n-p)
Material Required: Diode, Transistor, Multimeter, connecting wire
6. Study of Electrical wiring.
Material Required: Switch Board, Switches, Plugs, Electric Bulb, Fuse, Regulator, Two way switch, Wires
7. Design of rectifier circuit with filter, variable resistor, voltage regulator.
Material Required: Transformer (230-18), diodes, capacitor, variable resistor, voltage regulator for 5 volt and 12 volt.
8. Study of BJT as switch.
Material Required: Transistor, Resistors, Diode, Relay, LED
Study and use of Relay (design a simple relay circuit).
Material Required: Transistor, Resistors, Diode, Relay, LED
10. Check the continuity of a printed line on a PCB using Multi-meter. Study of different types of boards for electronics circuit design.
Material Required: PCB (single layer, double layer and multi layer) and Varo Board
11. Survey of optoelectronics devices (LED, Photo diode, photo transistor, LDR, Opto-isolator).
Materialrequired: different types of optoelectronics devices, data sheets.
12. Study of CRO, function generator & Measurement of voltage, frequency and Phase Angle.
13. Study of different types of transformer with different power supply (step down in particular if Step up transformer is not possible)

ECEN0206 Basic Electrical Engineering Laboratory

Credits: 02

Total Hours: 42

Course Objectives:

- Provide working knowledge for the analysis of basic D.C. and A.C. circuits used in electrical and electronic devices.

Course Outcomes:

- Understand DC Machines
- Understand single and three phase A.C circuits.
- Understand AC machines and measuring instruments.

List of Experiments

1. Connection & Measurement of power consumption of a fluorescent lamp.
2. Measurement of armature & field resistances of a D.C Compound Machine.
3. Connection & Testing of 1- \emptyset Energy Meter.
4. Calculation of No-Load losses of a 1- \emptyset Transformer.
5. Study of 1- \emptyset induction motor or fan motor.
6. Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
7. Starting of 3- \emptyset induction motor by star-delta- Δ) (Ystarter or DOL starte
8. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply.
9. Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.
10. V-I Characteristics of Incandescent lamp.
11. Verification of Thevenin's theorem.
12. Study of DC motor using three point starter.

FCEE0207 Electrical Workshop Practice

Credits: 02

Total Hours: 42

Course Objective:

- To develop special skills required for repairing small electrical domestic appliances, making joints and carrying out work and detecting faults etc. in electrical equipments and circuits.

Course outcomes:

After successful completion of the course, student will be able to

- *identify and understand importance of various electrical and electronics components*
- *understand basic construction and operation of various laboratory equipments*
- *develop basic relay contactor logic and operation of electric control panel*
- *perform basic maintenance and troubleshooting of house hold equipments, energy saving etc.*

List of Experiments1. To study safety precautions for electrical

engineering, draw the electrical symbol and general electrical house wiring.

2. To study the various types of accessories and tools.

3. Working of fuse and circuit breaker.
4. To setup a series, parallel and staircase wiring using the given lamps.
5. To study Earth-wire connection and Earth-wire measurement in electrical wiring.
6. To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.
7. Fault analysis of residential house wiring.
8. Study of multimeter, voltmeter, ammeter, wattmeter (both AC&DC)
9. Connection & fault analysis in Domestic appliances (Fan, electric iron, fluorescent tube).
10. Study of Industrial wiring in the workshop and study of bimetallic relay.
11. Study of a 11 0.4 KV transformer substation
12. PCB design

FCEN0208 Basic Electrical simulation Lab

Credits: 02
42

Total Hours:

Course Objectives:

- To make the students understand the various electrical circuit in software approach.
- To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

On successful completion of this course, students will be able to:

- Construct and analyse a practical circuit without having practical knowledge.
- Design circuit parameter, so that it will give better performance in complicated electrical network.

List of experiments:

1. Simulation of DC & AC Circuits
2. DC & AC Transient response of R-L Series network
3. DC & AC Transient response of R-C Series network
4. DC & AC Transient response of R-L-C Series network
5. Mesh Analysis
6. Nodal Analysis
7. Simulation of Norton and Superposition theorem
8. Star Delta Transformation
9. Clipper designing and finding out the i/p and o/p waveforms.
10. Clamper designing and finding out the i/p and o/p waveforms

11. Half wave and full wave rectifier designing and finding out the i/p and o/p waveforms.
 12. Transformer

FCEN0209 Electrical Machines-I Lab

Credits: Total Hours: 42

Course Objectives:

- To introduce about construction and associated parts of different machines.
- To analyse the behaviour and performance of dc machine under different operating conditions. -To make student understand about various three phase transformer connections.

Course Outcomes:

On successful completion of this course, students will be able to:

- Distinguish the constructional similarity and dissimilarity between various dc and ac machine. - Demonstrate appropriate behaviours and knowledge of electrical machines when working with the class room teaching and lab experience.
- In the lab, at least for 50% experiments, students will write a software programme. for logic(mathematical equation).

List of Experiments

1. Determination of critical resistance & critical speed from no load test of a DC Shunt generator.
2. Plotting of external and internal characteristics of a DC shunt generator.
3. Determination of efficiency of DC machine by direct loading.
4. Determination of efficiency of DC machine by
5. Determination of Efficiency and Voltage Regulation by Open Circuit and Short Circuit test on single phase transformer.
6. Speed control of DC Motor by Ward-Leonard Method.
7. Study of current, voltage & frequency of a 1-ph transformer & to calculate voltage and current of the transformer using CRO.
8. Polarity test and Parallel operation of two single phase transformers.
9. Back to back test of a single phase transformer.
10. Load characteristics of DC (i) self (ii) separately excited DC generator.
11. Calculation of earth resistivity of industrial earthing.
12. Separation of core losses of a DC machine.

FCEN0210 Analog & Digital Electronics Lab

Credits: 02 Total Hours: 42

Course Objectives:

-To make the students understand the various electronics circuit by using semiconductor devices in practical mode.

-To train the students to analysis different amplifier (small signal & large signal) in practical mode. -To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

On successful completion of this course, students will be able to: -Construct analog and digital electronics circuit.

-Design circuit parameter, so that it will give better performance in complicated electronics circuit.

List of experiments:

1. Switching characteristics of Diode
2. Switching characteristics of transistor
3. Switching characteristics of thyristor
4. Design & fabrication of Analog DC power supply
5. Verifications of Boolean function using logic gate
6. Use of NAND gate as universal gate
7. Use of NOR gate as universal gate
8. Verifications of multiplexer and de-multiplexer using ICs
9. Study of FLIP-FLOP
10. Design of 4 bit CPU, which can perform different operations

FCEN0211 Automation Lab (PLC)

Credits: 02
42

Total Hours:

Course Objective

Experimenting the theory by

-Prepare the students competency in the area of Automation.

-Prepare students having good balance between analytical skills and hands-on Skills

- Prepare students with multi-disciplinary

*competency **Course Outcomes:** On successful completion of this course, students will be able to:*

-Use a number of PLC programming languages to develop control solutions. - Describe the input output interface circuits and their role in the PLC's reliability.

LIST OF EXPERIMENTS

1. Study hardware and software used in PLC

2. Implementation of Logic gates
3. Develop a ladder program for DOL starter
4. Develop an application using On-Delay timer.
5. Develop an application using OFF Delay Timer
6. Develop an application using UP/DOWN counter
7. Implementation of PLC Arithmetic instructions
8. Study of PID controller instruction for a pilot plant
9. Study of open loop control system using PLC
10. Study of closed loop control system using PLC

Reference Book(s):

FCEN0212 GEOMETRICAL DRAWING LAB

Pre –requisites	Course type	Credits
NIL	Practice	2

Course Objectives:

At the end of Session, participants are able to learn:

1. Advanced solutions for conceptual design, 3D modelling, and documentation.
2. To do product design, industrial design and styling 3D Surface Model,
3. To perform Assembly design & template based design ,
4. To Create Kinematics with visual analysis and validation which will give you high quality performance insights for product decisions.
5. To perform Manufacturing and generating of different views from a 3D model.

Course Outcomes:

On successful completion of this course, students will be able to:

1. At the end of Session, participants are able to create :
2. 3D Solid Model,
3. 3D Surface Model,
4. Assembly of parts,
5. Creating Kinematics,
6. Manufacturing and generating of different views from a 3D model.

Module-I (12 Hrs): Part Modelling

Creation of simple solids, Parametric modelling, Booleans and Functional Modelling, Rendering **(All of the topics will be through learn by doing and laboratory mode)**

MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Module-II (12Hrs) : Assembly Modelling

Simple Assembly, Constraints, Digital Mockup

(All of the topics will be through learn by doing and laboratory mode) MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

MODULE-III (14 Hrs) : Drafting

Creation of layout, Part Drawing, Detailed drawing

(All of the topics will be through learn by doing and laboratory mode) MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Note: Platform is Solid works / Catia /Pro-E

FCEN 0213 WORKSHOP TECHNOLOGY PRACTICE

Pre –requisites	Course type	Credits
NIL	Practice	2

Learning Objectives: To know various tool, work loading devices in carpentry, fitting, joining, sheet metal forming and plumbing.

Course Outcomes: Can manufacture simple components.

(Two jobs from each trade are to be done)

Module I

Carpentry:

1. Handling of carpentry tools: Practice in marking, sawing, planing and chiseling to size
2. Making simple joints: a) Half-lap b) Mortise joints.
3. Job using Wood Turning Lathe –Stepped Pulley.

Fitting:

1. Use of fitting tools: practice in marking, fitting to size
2. making of simple mating profiles
 - a) VEE b) Dovetail c) Half round joints.

Module II Welding:

1. Introduction to Tools & Welding Equipment
 - a) Edge Preparation for Various Joints: Lap Joint, Butt Joint, T-Joint
2. Brazing & Soldering (Demonstration)

House Wiring:

1. Parallel or series connection of two bulbs
2. To control two lamps by two independent switches located at two different places
3. To prepare a House wiring circuit with PVC conduit wiring system including 5Amps , 15Amps socket , fluorescent lab, MCB and Energy meter.

Module III Plumbing:

1. Introduction to Plumbing Tools

2. Basic Pipe Fittings
3. Sanitary Fittings
4. Water Meter Installation **Black-smithy:**
 1. Introduction to Forging & Forging Tools- Use (Demonstration)
 2. Converting round rod into Square Ring
 3. Converting round rod into square S-Hook

FCEN0214 Mining SURVEYING LAB [0 0 2]

Study and sketch the linear measuring instruments & carrying out Chain Surveying; Prismatic Compass and carrying out Compass Traversing; Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite; Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling; Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring; Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.

Mobile App Development for Android

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Mobile App Development for Android	ENFC0207	Practice	0-2-0(2)	Programming for Problem Solving – Java

1. Objective

✓ Learn to develop Android mobile Apps

2. Course outcome

✓ Develop Android mobile Apps using Kotlin

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	<i>NIL</i>	Written examination
	Assignment	<i>NIL</i>	Report and Presentation
	Experiments (Internal)	<i>50</i>	Practice work, report and viva voce
	Project	<i>NIL</i>	Report and presentation
	Quiz	<i>NIL</i>	Surprise/preannounced ones
External Examination	Semester	<i>NIL</i>	Written examination
	Practice	<i>50</i>	Practice test with viva-voce

Total		100	
--------------	--	-----	--

✓ **Android App projects to work on along with practice (Non-exhaustive list)**

1. Quiz Android App
 - a) Without online database connectivity
 - b) With online database connectivity
2. Course Recommendation Android App
3. Smart Messaging Android App
4. Dictionary Android App
5. Online Shopping Android App
6. Voting System Android App
7. Reminder Application Android App
8. Sentence Framer Android App
9. PC Control over the Internet Android App
10. Password Based Remote Door Open System Android App
11. Wi-Fi Library Book Locator Android App
12. Pick and Place Robotic Arm Android App
13. **Course outline**

Module – I (6 hrs.)

Introduction to Android OS, Development environment (Android Studio, Kotlin)

Module – II (10 hrs.)

Android application basics (Activity, Service, Content provider, Broadcast receiver, Intents)

Module – III (8 hrs.)

User Interface – Layouts, Widgets, Event handling, Notifications

Module – IV (8 hrs.)

Data Storage – Shared preference, Internal storage, External storage

Module –V (8 hrs.)

Data Storage – SQLite, Content provider

Module – VI (12 hrs.)

Networking – Android network overview and management, Socket and HTTP, Wi-Fi and Bluetooth, GPS; Handler, AsyncTask

Module – VII (8 hrs.)

Multimedia – Voice recording, Image capturing, Drawing & animatio

4. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module – I (6 hrs.)				
Introduction to Android OS, Development environment (Android Studio)	2	Lab practice	Experiment	Book, Online source: www.codeproject.com/Articles/803424/Article-Introduction-to-Android-OS
Introduction to Kotlin	4	Lab practice	Experiment	Book, Online source: https://kotlinlang.org/docs/tutorials/kotlin-android.html
Module – II (12 hrs.)				
Android application basics (Activity, Service)	4	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Android application basics (Content provider, Broadcast receiver)	4	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Android application basics (Intents)	2	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Module – III (8 hrs.)				
User Interface– Layouts	2	Lab practice	Experiment	Book, Online source: developer.android.com/guide/topics/ui
Widgets, Event handling, Notifications	6	Lab practice	Experiment, Assignment	Online source
Module – IV (8 hrs.)				
Data Storage – shared preference	4	Lab practice	Experiment	Online source: developer.android.com/guide/topics/data/data-storage
Internal storage, External storage, SQLite, Content	4	Lab practice	Experiment, Assignment	Book, Online source

<i>provider</i>				
Module – V (8 hrs.)				
<i>SQLite</i>	4	<i>Lab practice</i>	<i>Experiment , Assignment</i>	<i>Book, Online source: developer.android.com/guide/topics/data/data-storage</i>
<i>Content provider</i>	4	<i>Lab practice</i>	<i>Experiment , Assignment</i>	<i>Book, Online source: developer.android.com/guide/topics/data/data-storage</i>
Module – VI (12 hrs.)				
<i>Networking – Android network overview and management</i>	2	<i>Lab practice</i>	<i>Assignment</i>	<i>Book, Online source: www.vogella.com/tutorials/AndroidNetworking/article.html</i>
<i>Socket and HTTP, Wi-Fi and Bluetooth, GPS.</i>	4	<i>Lab practice</i>	<i>Experiment</i>	<i>Book, Online source</i>
<i>Handlers, AsyncTask</i>	6		<i>Experiment</i>	<i>Book, Online source</i>
Module – VII (8 hrs.)				
<i>Multimedia – Voice recording, image capturing, basic drawing & animation</i>	4	<i>Lab practice</i>	<i>Experiment , Assignment</i>	<i>Online source: https://www.javatpoint.com/playing-audio-in-android-example</i>
<i>Basic drawing & animation</i>	4	<i>Lab practice</i>	<i>Experiment , Assignment</i>	<i>Book, Online source</i>
Total (hrs.)	60			

FCEN0304 Electrical Load Survey

Credits: 02 Total Hours: 42

1. Conceptual development about load forecast as a tool for planning capacity addition by various utilities and stakeholders and to serve as a guideline to plan growth of industries & infrastructural development
 2. Area Load Survey : For project report choose a semi-urban area i.e, an area with mixed load. Based on the field study design an electrical installation considering the existing as well as expected load growth during the next 5 years.

Data to be collected for all consumer categories in the project area:

Domestic & Commercial (Number of Consumers, Electrical Energy Consumption per consumer), Public Lighting, Public Water Works (Estimated connected electric load (kW) and the average electricity consumption per Kilo-watt of connected load (kWh / kW) i.e. Hours of operation), Irrigation

(Numbers of Pump Set / Tube wells, Capacity of pump sets, Hours of operation, Electrical Energy Consumption), Lift Irrigation Scheme(Major), Industrial (L.T Industries, H.T. Industries with a demand less than 1 MW, H.T, Industries with a demand of 1 MW and above), Railway Traction, Bulk Non-Industrial HT Supply,

Total Electrical Energy Consumption at Consumer

Electrical Energy Requirement at Generating End, Annual Electric Load Factor, Maximum Demand Factor category wise, Draw a load curve considering(variation during different hours of the day, Daily maximum and minimum value of the load, Seasonal Variation, peak of the load during a year, Draw an average load curve), Decide additional capacity requirement of lines and substations, Choose appropriate location mark it in the map, Prepare an estimate for investment, Prepare the cost benefit analysis including loss reduction and revenue inflow, Submit this report to a competent authority as a consulting engineer.

3. Methodology for forecasting adopted in India currently for 17th EPS: partial end use methodology for forecasting electricity demand for short and medium term i.e. time series analysis and end use method, extrapolation technique based on growth rates for long term electricity demand forecasting, forecast demand of electricity using econometric model, considering demand influencing factors for which econometric indicators were available and also taking into account the projected growth rates of different sectors of the economy.

4. Annual electricity demand forecast in terms of electrical energy requirement in MU and peak electric load in MW at Power Station Bus bars of electricity utilities for each State, Union Territory, Region and All India

Engineering Metrology and Measurements

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Engineering Metrology and Measurements	ENFC0401	Theory + Practice	1-2(3)	Nil

1. Course Objective

- ✓ To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- ✓ Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- ✓ Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- ✓ Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- ✓ Analyze Measurement Requirement.
- ✓ Can Choose Transducer & Sensors for Products.

2. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	ITR/Cass Test	20	Best of 2 (Written Test)
	IPR	30	Lab Work & Report
External Examination	ETR	30	Written Examination
	EPR	20	Lab Work & Report
Total		100	

3. Course Outline

Module I: (6 Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice: (Laboratory Mode- Learn by Doing)

Calibration of Measuring Instruments Using Slip Gauge Blocks.

Module II: (9 Hours)

Limit System; Limits Fits & Tolerances; Allowances; Hole Basis & Shaft Basis Systems; Interchangeability; Gauge Design. (Class room Teaching and videos)

Practice: (Laboratory Mode- Learn by Doing)

1. Introduction to Metrology Laboratory (Steel Rule, Tape, Right Angle, Protractor, Surface Plate).
2. Gauges- Filler, Radius, Thread, Wire, Snap & GO-NOGO.

Module III: (9 Hours)

Standards of Measurement; Dial Indicators; Vernier Apparatus; Micrometers; Comparators (Mechanical, Electrical, Pneumatic).

Practice: (Laboratory Mode- learn by Doing)

3. Vernier Caliper- Inside, Outside, Depth Measurement & Height Gauge.
4. Micrometers, Outside, Inside Micrometer & Depth Micrometer.
5. Three Points Bore Micrometer

Module IV: (10 Hours)

Measurement of Angles & Tapers using Bevel Protractor; Angle Gauges; Sine Bars; Flatness Spirit Level & Surface Plate.

Practice: (Laboratory Mode- learn by Doing)

6. Sine Bar/Bevel Protractor-Measurement of Angles.
7. Flatness Test Using Sprit Level.
8. Use of Dial Indicators-in-lathe.

Module V: (9 Hours)

Gear Tooth Metrology; Inspection & Alignment Tests. Transducers; Variable Resistance Transducer; LVDT; Comparative Transducer; Piezoelectric Transducer; Photo Voltaic Cells; Devices for Pressure Measurement- Dead Weight Tester; Bourdon Tube Pressure Gauge; Diaphragm and Bellow Gauges. (Topics will be covered by explaining and followed by practice mode)

Practice: (Laboratory Mode- Learn by Doing)

9. Gear Tooth Metrology, Inspection & Alignment Tests.

Module VI: (10 Hours)

Low Pressure Measurements; Force Measuring Using Proving Rings; Torque Measuring Using Dynamometers; Strain Measurements; Profile Projector; Tool Maker's Microscope; Optical Flats; Laser Interferometers; Autocollimators.

Practice: (Laboratory Mode- Learn by Doing)

10. Optical Flat Use & Surface Plate Test Using Spirit Level & Dial Gauge.

11. Measurement of Template Using Profile Projector.

Module VII: (12 Hours)

Assessment of Surface Roughness; Machining Symbols for Surface Finish; Measuring Instruments; Tally-Surf; Screw Thread Measurement- Terminology; Precision Instruments Based on Laser Principles- Laser Interferometer Application; Coordinate Measuring Machine (CMM).

Practice: (Laboratory Mode- Learn by Doing)

12. Surface Finish by Taylor's Apparatus –LVDT.

13. Measurement of Tool angle in Tool Maker’s Microscope.

14. Repeat Laboratory-1 or Test.

(50% of the topics will be covered by “Learn by Doing” principle and few video presentations)

Total Hours	65			

FCEN0401 BASIC FLUID MECHANICS

[5 0 0]

Module-I: FLUID KINEMATICS AND FLUID DYNAMICS (16 Hrs):

Recapitulation of Fluid Properties and Hydrostatics (Not for external examination)

- (A) Principle of conservation of mass - Continuity equation in differential form for three dimensional flow in Cartesian co-ordinates. Rotational & Irrotational flows - Irrotationality condition. Continuity equation for one dimensional flow.
(Most of the topics will be through video presentation)
- (B) **Fluid Dynamics:** Euler's equation of motion flow-Principle along of conservation a stream l of energy through integration-Bernoulli's of E-Practical Principle equation a applications of- Kinematics Bernoulli's of free jets. **(Topics Principle on practical applications will be through practice and field demonstration)**
- (C) **Flow Measurement in pipes and channels:** Pitot tube, Prandtl tube, Flow meters and Weirs. Flow through orifices and mouthpieces **(All the topics will be through practice and field measurement)**
- (D) **Principle of Conservation of momentum:** Impulse momentum equation. Application of momentum principle for forces on pipe bends and reducers. (Simple problems on pipe bends and reducers in x-y plane) **(Most of the topics will be through class room teaching with a project on pipe bends.)**

Module-II: STEADY FLOW THROUGH PIPES (14 Hrs)

- (E) **Laminar Flow:** Laminar and turbulent flow characteristics, Reynolds experiment, Reynolds number -Laws of laminar and turbulent friction. Laminar flow through circular pipes - Hagen Poiseuille equation for loss of head. **(Topics related to laminar flow & turbulent flow and Reynolds experiment will be through Multimedia presentation)**
- (F) **Turbulent flow through pipes:** Darcy - Weisbach equation for loss of head. Hydro-dynamically Smooth and rough boundaries (Velocity distributions for smooth & rough boundaries to be appraised and not to be included in external examination), Relative roughness - Laminar sub-layer. Variation of friction factor with Reynolds number and relative roughness **(Topics related. Moody' to pipe friction and determination of friction factor will be through practice mode. Pipe design problems will be through Project mode using pipe analysis software.)**
- (G) **Practical problems in pipe flows:** Minor losses in pipes, Pipes in series and parallel - Equivalent pipe. Branched pipes - HGL and TEL. Simple Pipe. Reservoir problems and Syphon. Network Problems. Power transmission through a pipe and power transmission through a nozzle. **(Most of the topics will be through project mode)**

MODULE-III: DIMENSIONAL ANALYSIS AND MODEL TESTING (12 Hrs)

- (H) **Fundamental Concepts of Dimensional Analysis:** Importance of Dimensional Analysis & Model Study- Units and Dimensional Formulae for Various Engineering Quantities- Dimensional Homogeneity. Non-dimensional Parameters- Raleigh's-Buckingham's Method- Omitted π and Theorem Superfluous variables. Capillary Rise, Drag on Cylinder, Resistance of a Ship, Discharge over a Sharp Crested Weir, Fall Velocity of a Sphere, Head Characteristics of a Pump, Thrust on a Propeller.

(I) **Similarity Laws:** Concepts of Similarity- Geometric, Kinematic and Dynamic Similarities- Important Dimensionless Numbers- Reynolds Number, Froude Number, Mach Number, Euler Number, Weber Number - Similarity Laws- Reynolds law and Froudes law - Modelling Criteria- Distorted Models and River models. Practical applications of modelling and similarity.

Text Books:

2. *Fluid mechanics: A.K.JAIN, Khanna publishers*
3. *Fluid Mechanics* <http://www.eolss.net/eolsssamplechapters/c07/e2-15-01-01/E2-15-01-01-TXT-03.aspx> 4. <http://www.msubbu.in/ln/fm/>

PEDAGOGY

Note:

- 1) **Project hrs shown are not part of class room teaching. Students to carry out the assigned project and submit for evaluation.**
- 2) **Evaluation - External 50 Marks Internal 50 Marks.**
- 3) **Internal evaluation of Practical work - Will be based on the day to day work at practice sessions and project works submitted.**
- 4) **External evaluation of Practical work - Will be by an external examiner.**
- 5) **Internal evaluation of work carried through projects - Will be part of the regular evaluation. No separate external evaluation for topics under project mode.**

MODULE - I

S. No.	Topic	Pedagogy	Video links / Software	Instructional Hrs			
				Th	Video	Proj.	Pract
<i>Fluid Kinematics & Fluid Dynamics: (Theory - 18 Hrs Practice - 12 Hrs)</i>							
(A)	Fluid Kinematics: Lagrangian and Eulerian description of fluid flow- Different types of fluid flow - One, two and three dimensional flows, Uniform & non-uniform flows, Steady & unsteady flows, Compressible & incompressible flows and Laminar & turbulent flows.	CRT + Video	See List Below for Video Links	1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Description of flow pattern - Stream line, Streak line, Path line. Stream surface and stream tube.	CRT + Video		1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Principle of conservation of mass - Continuity equation in differential form for three dimensional flow in Cartesian co-ordinates.	CRT		2	0	0	0
	<i>Fluid Kinematics (Continued):</i> Continuity equation in differential form for three dimensional flow in Cartesian coordinates. Rotational & Irrotational flows - Irrotationality condition.	CRT		1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Continuity equation for one dimensional flow.	CRT		1	0	0	0
(B)	Fluid Dynamics: Euler's equationline for ideal flow -	CRT		2	0	0	0
	<i>Fluid Dynamics (Continued):</i> Principle of conservation of energy through integration line - Bernoulli's Principle	CRT		2	0	0	0
	<i>Fluid Dynamics (Continued):</i> Practical applications of Bernoulli's Principle.	CRT		0	0	2	2

	<i>Fluid Dynamics (Continued): Kinematics of free jets</i>		1	0	2	1
(C)	Flow Measurement in pipes and channels: Pitot tube, Prandtl tube, Flow meters and Weirs.	CRT + Proj, + Pract.	1	0	1	9
(D)	Principle of Conservation of momentum: Impulse momentum equation. Application of momentum principle for forces on pipe bends and reducers.	CRT + Video + Proj.	1	1	1	0

FCEN0402 INTRODUCTION TO PROGRAMMING IN C

Pre – requisites	Course Type	Credits
Nil	Theory + Pracice	5

Course Objectives:

1. To provide basic knowledge of programming tools and techniques.
2. To familiarize the programming environment and syntax of C programming.
3. To understand the working of basic programming constructs.
4. To learn different powerful concepts that can be applied in project development.
5. To develop art of writing efficient programs. **Course Outcomes:**

1. The students will be able to apply programming skills to problem solving.
2. The student will able to write 150 to 200 line programs without any error. 3. At the end of the session the students can come out with a mini project applying their programming skills.

Module I:

(23Hours)

(A) Problem solving techniques: Algorithm, flow chart; Structure of C program, Character set, Identifiers, Keywords, Data Types, Constants and Variables, Input-output statements, relational and logical operators, increment and decrement operators, conditional operator, bit-wise operators, assignment operators, expressions, type conversions, conditional expressions, precedence and order of evaluation, statements and blocks, if and switch statements, loops:-while, do-while and for statements, break, continue, goto. **(Most of the topics will be**

Module II:

(30 Hours)

(B) Arrays-concepts, declaration, definition, accessing elements, two-dimensional and multi-dimensional arrays, applications of arrays. Designing structured programs:-Functions, parameter passing, user defined functions, recursive functions, storage classes-extern, auto, register, static, scope rules. pointers-

S. No.	Topic	Pedagogy	Details	Instructional Hrs				
				Theory	Practice	video	Project	
1	Problem solving techniques: Algorithm	CRT & Learn by example	Class Assignment on algorithm writing	1	0	0	0	
2	Problem solving techniques: flow chart		Class Assignment on flow chart writing	1	0	0	0

FCEN0403 OBJECT ORIENTED PROGRAMMING USING C++

Pre - requisites	Course Type	Credits
Nil	Theory + Pracice	5

Course Objective As a result of successful completion of this course, the students will:

1. Get a clear understanding of object-oriented concepts.
2. Understand object oriented programming through C++.
3. Understand the concept of classes and objects, inheritance, polymorphism.

Course outcome Upon successful completion of this course, students should be able to:

1. Students will able to write 150 to 200 lines programs without any error.
2. The student will understand the advantage of object oriented program over structured oriented program.

Module-I (25 hours)

(A) Introduction to object oriented programming: object oriented concepts (Class, object, encapsulation, aggregation, inheritance and polymorphism). How to write a C++ program. Data types, expressions, operators, control structures. Functions: definition, parameter passing, inline function, function overloading. Classes: data members, function members, static data members, constant members function, and friend function. **Most of the topics will be through power point presentation and practice mode)**

Module-II (30 hours) (A) More about classes: Constructors, destructors, friend classes, nested classes, local classes, this pointer, namespaces. Overloading: Operator overloading (binary, unary, String Concatenation, increment, decrement), operator overloading using friend function (Stream operators). Type conversion (Using constructor, Operator function). Inheritance: Derived classes, member accessibility, forms of inheritance, virtual base classes. Polymorphism: Pointers to objects, virtual functions, Abstract class, virtual destructors. **Most of the topics will be through power point presentation and practice mode)**

Module - III (20 hours)

(A) Streams & Files: streams, hierarchy of stream classes. Unformatted I/O operators, formatted i/operations manipulators, user defined manipulators, exception handling. Templates, Standard template Library. **Most of the topics will be through power point presentation and practice mode)**

Text Books:

1. E. Balguruswamy, "Object Oriented Programming with

FCEN0404 DATABASE MANAGEMENT SYSTEM

Pre – requisites	Course Type	Credits
Nil	Theory + Pracice	5

Course Objectives:

1. To introduce the fundamental concepts of database systems and their importance in practical life.
2. To introduce the basic concepts necessary for designing, using, and implementing database systems and applications.
3. To make the students understand the principles behind relational database management systems including the database environment, the relational model, relational languages (SQL).
4. To make students able to develop simple SQL queries. Course Outcomes:

On successful completion of this course, students will be able to:

1. Understand, appreciate and effectively explain the underlying concepts of database technologies
2. Solve simple database problems related to manipulating data present in the database by writing SQL Queries.
3. Design and implement a relational model for a given problem-domain.

Module-I (14 Hrs): INTRODUCTION TO DATABASES

- (A) **Introduction to Database Systems and File Based Systems:** Database Systems, Common uses of Database Systems, File Based Approach, Limitations of File Based Approach, File-oriented Systems vs. Database Systems (Most of the topics will be through power point presentation: Demonstration of Fileoriented System and Database System)
- (B) **Database Approach:** Database, Database Management System (DBMS), Database Application Programs, Components of DBMS Environment, Advantages and Disadvantages of DBMS. (Most of the topics will be through power point presentation)
- (C) **Roles in Database Environment:** Data and Database Administrators (DBA), Database Designers, Application Developers, End-Users. (Most of the topics will be through power point presentation)

models, Network and Object Oriented Data models, Mapping E-R model to Relational model. **(Most of the topics will be through practice mode)**

(G) **Normalization:** Normal forms: 1NF, 2NF, 3NF **(Most of the topics will be through practice mode)**

MODULE-III (30 Hrs): RELATIONAL MODEL AND SQL

(H) **Terminologies of Relational Model:** Relational Data Structure, Mathematical Relations, Database Relations, Properties of Relations, Relational Keys, Representing Relational Database Schema.

(I) **Integrity Constraints and Views:** Nulls, Entity Integrity, Referential Integrity, General Constraints, Views, Purpose of Views.

(J) **SQL: Introduction:** Objectives of SQL, Writing SQL Command.

(K) **SQL: Data Definition:** Data Definition, Creating a Database, Table Operations (Create, Alter, and Drop), Creating an Index, Removing an Index.

(L) **SQL: Data Manipulation:** Simple Queries, Sorting Results (Order By), Aggregate Functions, Join, Grouping Results (Group By)

(M) **Query-By-Example:** Introduction to QBE, Building Select queries using QBE.

TEXT BOOKS:

FCEN0405 MECHANICAL UNIT OPERATIONS

Pre –requisites	L+T+P	Credits
NA	3+2 + 0	5

OBJECTIVE:

The students will learn characterization of solids, size reduction, techniques of solid fluid separation and mixing.

OUTCOME:

1. The students would understand about solids, their characterization, handling and various Processes involving solids.
2. The students will have knowledge on basic theory, calculations and Machinery involved in various solid handling operations.

MODULE - I

General characteristics of solids, different techniques of size analysis, shape factor, surface area determination, estimation of particle size. Screening methods and equipment, screen efficiency, ideal and actual screens.

Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipments, crushers, grinders, disintegrators for coarse, intermediate and fine grinding, power requirement, work index; size enlargement - principle of granulation, briquetting, pelletisation, and flocculation. **(Topics related to size reduction experiment (Ball mill, Jaw crusher, smooth roll crusher will be through laboratory)**

MODULE - II

Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removing equipment, cyclones and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging

Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, Compressible and incompressible filter cakes, filtration equipments - selection, operation and Design of filters and optimum cycle of operation, filter aids. **(Topics related to filtration , sedimentation cyclone separator experiment will be through practice mode)**

MODULE - III

II Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of Suitable mixers, power requirement for mixing. Storage and Conveying of solids - Bunkers, Silos, bins and hoppers, transportation of solids in bulk, conveyer selection, different types of Conveyers and their

performance characteristics. **(Topics related to transportation and storage tanks will be through practice mode)**

TEXT BOOKS:

FCCE0406 BUILDING MATERIALS and CONSTRUCTION

Pre –requisites	Course type	Credits
Nil	Theory +Practice	4

Course Objectives: The objectives of this course is to

- Provide knowledge about development, production, standardisation of cost- effective innovative building materials and construction technologies in housing and building sector. Show the role of materials in construction.
- Demonstrate the different bonding of bricks
- Impart the knowledge on various methods of construction for conventional civil engineering structures. Provide the knowledge about maintenance of buildings.

Course Outcomes: At the end of this course the students will be able to

- Select proper constructional materials specific to the structure to be built.
- Decide on the type of foundation required for a specific structure.
- Select the proper type of brick bonds for a wall.
- Know about the construction of brick masonry and stone masonry and their causes of failure
Know about the grade and strength of concrete.
- Supervise the construction works using - brick, stone, concrete, tile, mosaic, terrazzo, asphalt
- Know about the methods of plastering and the materials used
- Know about different types of stairs and their essential requirements

Module I (26 Hrs)

Bricks: Brick as a construction material and its importance, materials suitable for manufacture of bricks, methods of brick manufacture, types of bricks, qualities of a good brick, testing of Bricks, uses of bricks.

Stone: Introduction, classification, composition and characteristics, useful Indian stone, method of quarrying and dressing

Cement: Classification, chemical composition, Manufacturing of cement, hydration, tests for cement, uses of cement, types of cement, Mortar: Definition, composition and uses of mortar.

Concrete: Quality of mixing water, Workability, Factors affecting workability, Measurement of workability, Segregation, Bleeding, Uniformity of mixing, Mixing time, vibration of concrete, concrete mix design, admixtures, Grade and strength of Concrete.

Module II (16 Hrs)

Foundation: Types of foundation, spread foundations, pile foundations, pier foundations, excavation of foundation
Brick Masonry: Terminology used, Materials used, Causes of failure of brick masonry, Types of bonds, Brick laying, Joints in brick work, Reinforced brickwork, Joint between old and new masonry, Maintenance of brick work.

Stone Masonry: Terminology used, Materials used, Cutting and dressing of stones, Types of stone masonry, Rubble and Ashlar, General principles of construction, Joints of stone, Stone lining, maintenance of stone work, Artificial stones. Cavity walls: Purpose and method of construction.

Module III (11 Hrs)

Damp Proofing: Causes and effects, materials used for damp proofing, methods of preventing Dampness, Damp Proof Course.

Stairs: Terms used types of stairs, essential requirements, wooden stairs, concrete stairs, and metal stairs.

Flooring: Types of flooring and their construction- brick, stone, concrete, tile, mosaic, terrazzo, asphalt Plastering: Definition. Materials used for plastering, types of plastering, methods of plastering, defects and remedial measures in plastering.

Maintenance of Buildings: Causes and prevention of cracks in building, special repair of buildings, annual maintenance.

Text Books:

FCEN0407 BASIC SURVEYING

Pre - requisites	Course Type	Credits
Nil	Theory + Pracice	4

Course objectives:

1. To make students able to apply knowledge of mathematics, science, and engineering to understand the measurement techniques and equipment used in land surveying.
2. To make students able to measure horizontal distances across clear landscape or across obstacles using surveying instruments like chain, tape etc.
3. To make students able to measure different elevation points
4. To enable students to sketch contour maps of the given topography using dumpy levelling instruments.

Course Outcomes:

On successful completion of course students will be able to

1. Apply math, science, and technology in surveying activities.
2. Measure horizontal distances across clear landscape and across obstacles.
3. Measure horizontal angles between geographical entities.
4. Plot given geographical area on drawing sheet.
5. Preparation of contour maps using Theodolite and Total station
6. Measure altitude of points at different elevation.
7. Function effectively as team members (or team leaders)

Module I (22hr)

Introduction to Surveying

Introduction to surveying: Classification, Basic Principle, List of Instruments used in surveying.

Linear measurement and chain survey: Use of various types of chains and tapes, measurement of correct length of lines, direct and indirect ranging, chaining along sloping ground. Obstacle in chaining, errors and their elimination. Compass surveying.

Module II (16hrs)

Levelling: Use of dumpy level and levelling staff. Temporary and Permanent adjustment of dumpy level, Reduction of levels by height of instrument and rise and fall method. Curvature and refraction error, sensitiveness of level tube, reciprocal levelling, levelling difficulties and common errors

Module III (17hrs)

Contouring: Characteristics, methods and types of contouring (topographical map study) Preparation of contours using auto level/Dumpy level through Surfer software

Text Books:

1. "A Text Book-I", of Surveying. K. Duggal, TMH Publisher chapters 2,3,6,
 2. Surveying- Vol-1, B.C. Punmia Chapters 4,5,6,9,11
- Reference Books:**
3. Surveying and Levelling Vol-1, T. P. Kanetkar and S. V. Kulkarni
 4. Surveying Vol-1 by R Agor

Prerequisite: Nil

OBJECTIVES

develop understanding and provide scientific basics of the life processes at the molecular level and explain the structure, function and inter-relationships of biomolecules and their deviation from normal and their consequences for interpreting and solving clinical problems.

Module I: Biochemical Organization And Bioenergetics 13

Scope of clinical biochemistry, component of the cell, structure and biochemical functions, membrane structure and functions, transport through biological cell membrane, the concept of free energy, determination of change in free energy from equilibrium constant and reduction potential, bioenergetics and biological oxidation – general concept of oxidation and reduction, electron transport chain, oxidative phosphorylation, uncouplers and theories of biological oxidation and oxidative phosphorylation.

Module II: Biomolecules 17

Carbohydrates: classification, properties. starch, glycogen, dextrin, inulin, cellulose, metabolism of carbohydrates, gluconeogenesis, glycogenolysis, glycolysis. citric acid cycle and its biological significance, role of sugar in nucleotide biosynthesis and pentose phosphate pathway.

Lipids: Classification, properties. sterols, essential fatty acids, eicosanoids, phospholipids, sphingolipids, metabolism of lipids, - oxidation and biosynthesis of ketone fatty bodies, cholesterol, acids, α, β porphyrin biosynthesis, metabolism of bile pigments.

Amino acids and nucleic acids: Classification, properties, biosynthesis of amino acids and proteins, essential amino acids, metabolism of amino acids and proteins, Nitrogen balance.

Nucleic acids: genetic code, nucleic acids, and structure of DNA and RNA, purine biosynthesis and pyrimidine biosynthesis.

Module III Macromolecules, Vitamins, Hormones, Enzymes 15

Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein, classification and their properties, occurrence, functions, requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties, hormones, Nomenclature, enzyme kinetics, Michelles-Menten equation, classification and their properties, mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical importance.

TEXTBOOKS:

1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. CBS publishers and distributors
2. Murray R.K., Granner D.K., Mayes P.A. and Rodwell V.W. Harpers Biochemistry. Appleton and Lange, Stanford, Conneticut.
3. Thomas M. Devlin. Textbook of Biochemistry with clinical correlations. Wiley Liss Publishers

3. Donald Voet & Judith G. Voet. Biochemistry. John Wiley and Sons, Inc.

FCEN0409 CELL BIOLOGY Credits 5 Prerequisite: Nil

OBJECTIVES

1. To study cell structure and functions of organelle functions
2. Exposure on transportations through cell membrane
3. To focus on different receptors and model of signaling
4. To introduce the concept of cell signaling

MODULE 1: Cell Structure and function 15

Origin and evolution of cells, molecular composition of cells, central role of enzymes, metabolic energy, biosynthesis of cell constituents, cell membrane, Nucleus, Endoplasmic reticulum, Golgi apparatus and Lysosomes, Bioenergetics and Metabolism –Mitochondria, chloroplasts, Peroxisomes.

MODULE II: Cell Division 15

Cell cycle –Mitosis, Meiosis, Molecules controlling cell cycle, Extra cellular matrix, role of matrix in cell enthore : Gap junctions, Tight junctions, Plasmodesmata.

Trnapt across cell membrane

Passive and Active Transport, Permeases, Ion channels, ATP pumps. Na^+ / K^+ / Ca^{2+} pumps uniport, symport antiporter system. Ligand gated / voltage gated channels, Agonists and Antagonists.

MODULE III Signal Trnaduction 15

Receptors –extracellular signaling, Cell surface / cytosolic receptors and examples, Different classes of receptors antocrine / paracrine / endocrine models, Secondary messengers molecules.

The Development and causes of cancer, tumour viruses, oncogenes, prevention and treatment.

Total Hours: 45

TEXT BOOK:

The Cell: A molecular approach by Geoffrey M.Cooper.ASM Press, Pages:673

REFERENCE BOOKS:

1. *Molecular Biology of the Cell Edition 4*, Roberts, Keith Alberts, Bruce Johnson, Alexander Raff, Martin Walter,

Peter Lewis, Julian, Garland

2. *Molecular Cell Biology*, Lodish, Harvey Krieger, Monty Kaiser, Chris A. Berk, Arnold, W H

**FCEN0410 Introduction to Web Technology (Theory +Pract)
Credit 4**

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0410	Introduction to Web Technology	Theory+ Practice	4	Nil	3-1-0

Course Objective

This course is intended to teach the basics involved in publishing content on the World Wide Web. the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web publishing.

The student will be able to Analyze a web page and identify its elements and attributes.Create web pages using XHTML and Cascading Style Sheets.Build dynamic web pages using JavaScript (Client side programming).Create XML documents and Schemas.Build interactive web applications using AJAX.

Syllabus

Unit 1: Introduction to Web (8hrs)

What is Web?, What is WWW, Web site - Static and Dynamic web site, Web application - Client-server, Web development

Technologies- Html, CSS, Js , XML, Servlet & JSP, PHP and Ajax.

Unit 2: HTML (7hrs)

Introduction to Html, Html structure, Html Editors, Html element/tag & attributes, Designing simple page - Html tag, Head

tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag, Frame tag, Div tag ; Html forms - Input type,

Text area, Select , Button.

Unit 3: CSS (6hrs)

Introduction to CSS, Syntax, Selectors ,Embedding CSS to Html, Formatting fonts, Text & background colour, Borders &

boxing.

Unit 4: JavaScript (9hrs)

Introduction to JS, Embedding JS into Html, Variables, Data types, Operators, Conditional statements, Looping statements,

Strings, Arrays, Math Object, Date Object, Functions, Objects, Event Handling.

Unit 5: XML (9hrs)

Introduction to XML, Difference b/w Html & XML, XML editors, XML Elements & Attributes XML DTD, XML Schema,

XML DOM.

Reference Books:

HTML, XHTML & CSS Bible, Brian Pfaffenberger, Steven M.Schafer, Charles White, Bill Karow- Wiley Publishing Inc, 2010

HTML Black Book by Steven Holzner

Web Design with HTML, CSS, JavaScript and jQuery Set by Jon Duckett

Beginning Java Script with DOM scripting and Ajax By Christian Heilmann- Apress Publisher, 2010

Learning PHP & My SQL, Michele Davis, Jon Philips- O'Reilly Publisher, 2009

PHP Cook book By: David Sklar, Adam Trachtenberg- O'Reilly Publisher, 2008

Introduction to Web Technology Lab

List of Programs:

1. Create a simple web page using HTML
2. Create and HTML page with a table and a set of ordered and unordered list.
3. Use CSS in the above web page
4. Design a web page for a company XYZ
5. Develop a static web page that shows basic animation
6. Develop a web page for an audio company
7. Develop a dynamic web page
8. Develop a dynamic web page using DHTML and CSS
9. Consider a company ABC which is into selling movie CDs. Develop a web page for the company.
10. Create a web site in which you can navigate from one page to another
11. Create a dynamic web page for a college
12. Organize a set of data using XML

FCEN0411 Data Structures and algorithms (Theory+ Practice) Credit 4 L-T-P (3-0-1)

Unit I: Introduction to Data structures

Definition,

Classification of data structures: primitive and non primitive, Elementary data organization, Time and space complexity of an algorithm (Examples), String processing. Dynamic memory allocation and pointers: Definition of dynamic memory allocation, Accessing the address of a variable, Declaring and initializing pointers, Accessing a variable through its pointer, Meaning of static and dynamic memory allocation, Memory allocation functions: malloc(), calloc(), free() and realloc(). Recursion: Definition, Recursion in C (advantages), Writing Recursive programs –Binomial coefficient, Fibonacci, GCD.

Unit II: Searching and Sorting

Basic Search Techniques: Sequential search: Iterative and Recursive methods, Binary search: Iterative and Recursive methods, Comparison between sequential and binary search. Sort: General background and definition, Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort

Unit III: Stack and Queue

Stack Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations, Conversion of an arithmetic expression from Infix to postfix, Applications of stacks. Queue: Definition, Array representation of queue, Types of queue: Simple queue, Circular queue, Double ended queue (deque) , Priority queue , Operations on all types of Queues

Unit IV: Linked List

Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list: Singly linked list, doubly linked list, Circular linked list, Operations on singly linked list: creation, insertion, deletion, search and display.

Unit V: Tree Graphs and their Applications:

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology: Root, Node, Degree of a node and tree, Terminal nodes, Non-terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree: Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and postorder. Graphs, Application of Graphs, Depth

First search, Breadth First search.

Books for References:

9. Hanumanthappa M., *Practical approach to Data Structures, Laxmi Publications, Fire Wall media 2006*
10. Langsam, Ausenstein Maoshe & M. Tanenbaum Aaron *Data Structures using C and C++ Pearson Education*

List of Programs

Part A

1. Use a recursive function to find GCD of two numbers.
2. Use a recursive function to find the Fibonacci series.
3. Use pointers to find the length of a string and to concatenate two strings.
4. Use pointers to copy a string and to extract a substring from a given a string.
5. Use a recursive function for the towers of Hanoi with three discs.
6. Insert an integer into a given position in an array.
7. Deleting an integer from an array.
8. Write a program to create a linked list and to display it.
9. Write a program to sort N numbers using insertion sort.
10. Write a program to sort N numbers using selection sort.

Part B

1. Inserting a node into a singly linked list.
2. Deleting a node from a singly linked list.
3. Pointer implementation of stacks.
4. Pointer implementation of queues.
5. Creating a binary search tree and traversing it using in order, preorder and post order.
6. Sort N numbers using merge sort.

FCEN0412 Designing Enterprise Network (Theory+ Practice) Credit 5 L-T-P (3-1-1)

Unit I: Networking Fundamentals

The TCP/IP and OSI Networking Models, Fundamentals of Ethernet LANs, Fundamentals of WANs, Fundamentals of IPv4 Addressing and Routing, Fundamentals of TCP/IP Transport and Applications

Unit II: Ethernet LANs and Switches

Building Ethernet LANs with Switches, Cisco LAN Switches, Configuring Ethernet Switching.

Unit III: IP Version 4 Addressing and Subnetting

Perspectives on IPv4 Subnetting, Analyzing Classfull IPv4 Networks, Analyzing Subnet Masks, Analyzing Existing Subnets, Implementing IP Version 4: Operating Cisco Routers, Configuring IPv4 Addresses and Routes, Implementing Ethernet

Virtual LANs, Troubleshooting Ethernet LANs, Spanning Tree Protocol Concepts, Troubleshooting LAN Switching

Unit IV: LAN Routing

Configure IPv4 Routing, Configure and Verify Host Connectivity, Advanced IPv4 Addressing Concepts, Describe the boot process of Cisco IOS routers; Operation status of a serial interface; Manage Cisco IOS files; Routing and Routing Protocols; OSPF (multi-area); EIGRP (single AS); Passive Interface

Unit V: IPv4 Services and IP Version 6

Basic IPv4 Access Control Lists, Advanced IPv4 ACLs and Device Security, Network Address Translation, Recognize high availability (FHRP); Describe SNMP v2 and v3, IPV6 addressing **Reference**

Books:

1. CCNA Cisco Certified Network Associate: Study Guide (With CD) 7th Edition (Paperback), Wiley India, 2011 **Text Books:**
2. CCENT/CCNA ICND1 640-822 Official Cert Guide 3 Edition (Paperback), Pearson, 2013

3. Routing Protocols and Concepts CCNA Exploration Companion Guide (With CD) (Paperback), Pearson, 2008
4. CCNA Exploration Course Booklet : Routing Protocols and Concepts, Version 4.0 (Paperback), Pearson, 2010

DESIGNING ENTERPRISE NETWORKS –Lab

1. Switch Configuration - Basic Commands
2. Switch Configuration - Switch Port Security
3. Router - Configuration
4. Configuration of IP Address for a Router
5. Setting up of Passwords
6. PPP Encapsulation, PPP PAP Authentication, PPP CHAP Authentication
7. Configuration of Static and Dynamic Routing
8. Configuration of Default Route
9. Implementation of EIGRP
10. Implementation of OSPF
11. VLAN Configuration
12. Switch Troubleshooting
13. Configuration of Access-lists - Standard & Extended ACLs
14. Cisco Discovery Protocol
15. DHCP, DHCP Relay & DHCP Exclusions
16. Configuring Logging to a Remote Syslog Server

FCEN0413 Installation and configuration of Linux Desktop

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0413	Installation and configuration of Linux Desktop	Theory+ Practice	4	Basic computer knowledge	3-1-0

Course Objectives:

The course provides an overview of the Linux Operating System, geared toward new users as an exploration tour and getting started guide. This unit provides examples to help the learners get a better understanding of the Linux system. The unit also provides the guidelines for the learners to take up vendor certifications. The unit explores the basics of Linux, the underlying management of the Linux operating system and its network configuration. The complete system services of Linux is explained along with the troubleshooting.

Course Outcome:

To enable the students to have a hands on practical exposure to the Linux Red Hat Enterprise and make them prepared for the RHCE Certification.

Syllabus

Unit I: Linux Introduction (9hrs)

Introduction to

Multi user System, History of UNIX, Features & Benefits, Versions of UNIX, Features of UNIX File System,, Commonly Used Commands like who, pwd, cd, mkdir, rm, rmdir, ls, mv, ln, chmod, cp, grep, sed, awk ,tr, yacc etc. getting Started (Login/Logout) . Creating and viewing files using cat, file comparisons, View files, disk related commands, checking disk free spaces.

Exploring Linux Flavors

to various

Introduction

Linux flavors. , Debian and rpm packages, Vendors providing DEBIAN & RPM distribution & Features. Ubuntu.History, Versions, Installation, Features, Ubuntu one. Fedora: History, Versions, Installation, Features.

Unit II: The Unix File System (7hrs)

Inodes - Structure of a regular file –Directories - Conversion of a path name to an inode -Super block - Inode assignment to a new file - Allocation of disk blocks. System calls for the file System: Open –Read - Write - Lseek –Close - File creation - Creation of special files - Changing directory and root - changing owner and mode –stat and fstat - pipes - Dup - Mounting and Un mounting file systems - Link and Un link.

Unit III: Unix Process Management(6hrs) The Structure of Processes: Process States and Transitions - Layout of system memory - Context of a process. Process Control: Process Creation –Signals –Process Termination –Invoking other programs –PID & PPID –Shell on a Shell.

Unit IV: (7hrs)

VI editor

Vi Editor: Introduction to Text Processing, Command & edit Mode, Invoking vi, deleting & inserting Line, Deleting & Replacing Character, Searching for Strings, Yanking, Running Shell Command Macros, Set Window, Set Auto Indent, Set No. Communicating with Other Users: who, mail, wall, send, mesg, ftp.

Unit V: (10hrs)

System Administration

Common administrative tasks, identifying administrative files configuration and log files, Role of system administrator, Managing user accounts-adding & deleting users, changing permissions and ownerships, Creating and managing groups, modifying group attributes, Temporary disabling of monitoring system performance - file security & Permissions, becoming super user using su.

Getting system information with uname, host name, disk partitions & sizes, users, kernel, installing and removing packages with rpm command

Books for Reference

1. The Design of Unix Operating System, Maurice J. Bach, Pearson Education, 2010
2. Advance UNIX, a Programmer's Guide, S. Prata, BPB
3. Unix Concepts and Applications, Sumitabh Das, 2010
4. The UNIX Programming Environment, B.W. Kernighan & R. Pike, Prentice Hall of India. 2009
5. Guide to UNIX Using LINUX, Jack Dent Tony Gaddis, Vikas/ Thomson Pub. House Pvt. Ltd. 2010

List of Programs

1. Execute 25 basic commands of UNIX.
2. Basics of functionality and modes of VI Editor.
3. WAP that accepts user name and reports if user is logged in.
4. WAP which displays the following menu and executes the option selected by user:
1. ls 2. Pwd 3.ls -l 4. ps -fe
5. WAP to print 10 9 8 7 6 5 4 3 2 1 .
6. WAP that replaces all "*.txt" file names with "*".
7. WAP that echoes itself to stdout, but backwards.
8. WAP that takes a filename as input and checks if it is executable, if not make it executable.
9. WAP to take string as command line argument and reverse it.
10. Create a data file called employee in the format given below:

- a. EmpCode Character
- b. EmpName Character
- c. Grade Character
- d. Years of experience Numeric
- e. Basic Pay Numeric

\$vi employee

A001	ARJUN	E1	01	12000.00
A006	Anand	E1	01	12450.00
A010	Rajesh	E2	03	14500.00
A002	Mohan	E2	02	13000.00
A005	John	E2	01	14500.00
A009	Denial Smith	E2	04	17500.00
A004	Williams	E1	01	12000.00

Perform the following functions on the file:

- a. Sort the file on EmpCode.
- b. Sort the file on
 - (i) Decreasing order of basic pay
 - (ii) Increasing order of years of experience.
- c. Display the number of employees whose details are included in the file.
- d. Display all records with 'smith' a part of employ
- e. Display all records with EmpName starting with 'B
- f. Display the records on Employees whose grade is E2 and have work experience of 2 to 5

years.

g. Store in 'file 1' the names of all employees whos

h. Display records of all employees who are not in grade E2.

Pedagogy

S I . N o	Topic	Teaching Method	Refere nce/To OI	Instructional Hours	
				Theo ry	Pract ical
	Installation and configuration of Linux Desktop				

.					
1	Introduction to Multi user System, History of UNIX, Features & Benefits, Versions of UNIX, Features of UNIX File System,	Class Room Teaching + PPT		2	0
2	Commonly Used Commands like who, pwd, cd, mkdir, rm, rmdir, ls, mv, ln, chmod, cp, grep, sed, awk ,tr, yacc etc	Class Room Teaching + Lab Practice		2	3
3	getting Started (Login/Logout) . Creating and viewing files using cat, file comparisons, View files, disk related commands, checking disk free spaces.			2	3
4	Introduction to various Linux flavors. , Debian andrpm packages, Vendors providing DEBIAN & RPM distribution & Features. Ubuntu. History, Versions, Installation, Features, Ubuntu one. Fedora: History, Versions, Installation, Features. _			3	3
5	Inodes - Structure of a regular file –Directories - Conversion of a path name to an inode -Super block - Inode assignment to a new file - Allocation of disk blocks. System calls for the file System: Open –Read - Write - Lseek – Close - File creation - Creation of special files -	Class Room Teaching + ppt Lab Practice		4	3
6	Changing directory and root - changing owner and mode –stat and fstat - pipes- Dup - Mounting and Un mounting file systems - Link and Un link	Class Room Teaching + Lab Practice		3	3
7	The Structure of Processes: Process States and Transitions - Layout of system memory - Context of a process. _____	Class Room Teaching + PPT		2	0
8	Process Control: Process Creation –Signals – Process Termination			2	0
9	Invoking other programs –PID & PPID –Shell on a Shell			2	0

**FCEN 0414 Information Security-I (Theory+ Practice)
Credit 4**

T-P-Pr (3-1-0)

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN 0414	Information Security-I	Theory+ Practice	4	Nil	3-T-0

Course Objectives : The course primarily covers the Types of Threats, Vulnerabilities, Risks and various terminologies in Information Security. It explains the formation of Security policy at various levels inside the Organization and provides the definition Procedures, Standard and Guidelines. The units emphasize the need of Performing Asset Classification and Declassification, Retention and Disposal of Information Asset also it identifies the various levels of Authorization for access Viz., Owner, Custodian and User. The course covers the different types of Access Controls and Physical security measures to safeguard the Assets and conclusively, it deals with the Digital Rights Management also covering the concepts of Common Authentication protocols and Real world Protocols. This course enables the students to understand the concepts of IT security, Threats, Vulnerabilities, Impact and control measures. And also to get familiarized with Asset management along with the objective to create awareness in Digital Rights management.

Course Outcome:

To enable the students to have a hands on practical exposure towards Configuration and Security of Windows7, Password Cracking Techniques, Windows Registry, Firewall, Kelogger, Monitoring security.

Syllabus

Unit I: (6hrs)

Introduction:

Security Definition, Why Security, Security and its need, Current Trends and Statistics, Basic Terminology, The C I A of Security the Relation: Security functionality and Ease of Use Triangle.

Unit II : (11hrs)

USER IDENTITY AND ACCESS MANAGEMENT

User identity and Access Management: Authentication, Account Authorization, Validation, Access Control and Privilege management. Hashing and Cryptography- Encryption and Decryption

Unit III: (11hrs)

SYSTEM AND SERVER SECURITY

System Security, Desktop & Server Security, Firewalls, Password cracking Techniques, Key-logger, viruses and worms, Malwares & Spy wares, Windows Registry

Unit IV: INTERNET SECURITY (6hrs)

Internet Security: LAN Security, Email Security, Hacking attacks, preventive measures.

Unit V: RISK ASSESSMENT AND CYBER LAWS(6hrs)

Vulnerability Assessment, Penetration Testing, Cyber Laws

TEXT BOOK:

1. Information Systems Security: Security Management, Metrics, Frameworks And Best Practices - Nina Godbole, ISC2 Press, 2010

REFERENCE BOOK:

1. Information Security Management Handbook, Volume 4 - Micki Krause, ISC2 Press, 2007

List of Programs

1. System Security Configuration in Windows 7 I
2. System Security Configuration in Windows 7 II
3. Password based Authentication process
4. Hashes and message digests calculation using has calculators
5. Service Management of Windows 7 for prevention of attacks
6. Password cracking tool usage
7. Event logger analysis
8. Windows Registry analysis
9. Securing LAN using firewall
10. DOS attacks and its prevention
11. Install a key logger , capture useful information and analyze.
12. Usage of vulnerability assessment tool (nmap / wireshark) and analyze the results.

Python Programming

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Python Programming	ENFC0411	Theory + Practice	1-2-0 (3)	Nil

1. Objective

- ✓ Learn problem solving using object-oriented concepts
- ✓ Implement object oriented programming using Python

2. Course outcome

- ✓ Use object oriented concept to solve problems
- ✓ To quickly and easily draw plot or visualize the information through visualization Technique
- ✓ Write an error free program of minimum 200 lines of code

3. Evaluation Systems

<i>Internal</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
-----------------	------------------	-------------------	-----------------------------

Examination	Midterm Test	20	Written examination
	Assignment		Report and Presentation
	Experiments	30	Practice work, report
	Project		Report and presentation
	Quiz		Surprise/ preannounced ones
External Examination		30	Written examination
	Practice	20	Practice test with viva-voce
Total		100	

Projects

1. To create a text editor application
2. To create a Graphics Equalizers for Audio system
3. To a GUI based Calculator
4. Moving Ball Game
5. Students Phone Book
6. Result Analysis by GUI interface
7. Students Admission Analysis by GUI Interface

4. Course outline

Module-I (8 Hrs):

Familiarization of Python: Features and Installation, Setting up Path, Working with Python Basic Syntax, Variable and Data types, Basic operators, Numbers, Array, Tuples, Dictionary, Date and Time

Module-II (12 Hrs):

String Manipulation: Accessing Strings, Basic Operations, String slices

List: Accessing lists, Operations, Working with lists List (Functions)

Decision Making Statement: Boolean Expressions, if-else Statement, Nested if Else Statement, elif Statement, Switch Statement

Module-III (10 Hrs):

Iteration Statement: The while Statement, for Statement, Nested Loops, Break and Continue statement

Functions Operation: Types of Function, Function Arguments, Pass by reference vs value, Recursion Function

Module-IV (9 Hrs):

Object Oriented Concept: OOP Terminologies, Defining Classes, Creating Objects, Regular expressions, Constructors, Inheritance and Overloading

Module-V (8 Hrs):

Files Operation: Create Text & Binary Files, Different modes of opening a file, Reading and Writing into Files, File Positions

Module-VI (14 Hrs):

GUI Programming: Example GUI Program, Environment Variables, Label, Message Widget, Text Area, Button, Radio Button, CheckBox, Listbox/ DropDown Box, Frames, Menu Widget, Menu Button Widget, Scrollbar, Forms: GET method and POST method, Sliders (Tkinter), Uploading files, Database access, Sending email

Module-VII (14 Hrs):

Data Visualization: Visualization Libraries, Data frame: Data types, Attributes, methods (mean(), median(), std(), var(), cor(), min()/ max(), describe()), groupby method, Selecting Column, Filtering, Selecting row and column, Missing values, Data read from excel, CSV and txt file

Plotting: Basic plot(), Histogram, Bar Plot, Box Plots, Area Plot, Scatter Plot, Pie Chart

Sensors and IOT

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Sensors and IOT	ENFC0417	Theory & Practice	2-1-0(3)	NIL

1. Objective:

The objective of this subject is:

- To learn what “Internet of Things”, is.
- To introduce the implementation of web-based services on IOT devices.

2. Course Outcome:

Upon successful completion of this subject students should be able to:

- Write codes for the various interfacing of sensors, and how to access them through web.
- They will be able to make the smart controlling even smarter.
- They can float the data from sensors into the web or Google drive and can access the anywhere in a relatively secured manner.

3. Evaluation Systems:

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination

	Assignment		Report and Presentation
	Attendance		
	Experiments	30	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
		20	Lab Examination
Total		100	

4. Course Outline:

Module I (15 Hours)

[3 hrs. Theory + 12 hrs. Practice]

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR, PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11), Stress Sensors, Load Sensors, Force Sensors, Wi-Fi modules.

Introduction to IOT: Background, what is IOT, what device makes it to IOT, IOT platforms, what IOT means for the developer, challenges of IOT.

Practice

1. Interfacing and testing the Ultrasonic Module, Relay and Infra-Red Module.
2. Interfacing and testing PIR, Laser LED, and Accelerometer.
3. Interface the LPG sensor, Monoxide sensor, Temperature and Humidity sensor.
4. Interfacing and testing stress sensor, load sensor, force sensor, Wi-Fi modules.

Module II (12 Hours)

[2 hrs.Theory + 10 hrs. Practice]

Connecting an Arduino to the Web: Introduction, setting up the Arduino development environment, Options for Internet connectivity with Arduino, interacting with basic sensors, interacting with basic actuators, configuring your Arduino board for the IoT.

Practice

5. Installing the Arduino IDE.
6. Learning the steps to interface the Controller board to the system through the interface.
7. Connecting the Arduino to the Internet.
8. Interacting of various sensors to the internet through the controller board.
9. Interfacing actuators to the Controller board and control through the internet.

Module III (5 Hours)

[1 hrs.Theory + 4 hrs. Practice] **Data extraction from**

Web: Grabbing the content from a web page, Sending data to the web, troubleshooting basic Arduino issues

Practice

10. Extracting data from a web page.
11. Sending data to a web page

Module IV (10 Hours)

[2 hrs.Theory + 10 hrs. Practice]

Internet Data Monitoring: Introduction, Internet of Things platforms for Arduino, Posting the sensor data online, Retrieving your online data, Securing your online data, Monitoring sensor data from a web based dashboard, Monitoring several Arduino boards at once, Troubleshooting issues with web data monitoring.

Practice

12. Posting the data to the internet through internet on-line.
13. Monitor the sensor output from a remote computer through Internet.
14. Parallel monitoring multiple controller boards connected to the internet.

Module V (7 Hours)

[3 hrs.Theory + 4 hrs. Practice]

Interacting with Web Services: Introduction, Discovering the Temboo platform, Tweeting from an Arduino board, Posting updates on Facebook, Automation with IFTTT, Sending push notifications

Practice

15. Posting an update to Facebook
16. Sending a Push notification through the controller by Internet

Module VI (15 Hrs.)

[1 hrs.Theory + 14 hrs. Practice]

Interacting with Web Services: Sending text message notifications, Storing data on Google Drive, Troubleshooting issues with web services.

Practice

17. Sending a text notification through Internet.
18. Control Light and Fan via Internet. (prototyped as LEDs)
19. Operate a DC motor to simulate the opening and closing of door using servo motor.

Module VII (11 Hours)

[3 hrs.Theory + 8 hrs. Practice]

Machine-to-Machine Interactions: Introduction, Types of IoT interaction, Basic local M2M interactions, Cloud M2M with IFTTT, M2M alarm system, Automated light controller, Automated sprinkler controller, Troubleshooting basic M2M issues.

Practice

20. Operate the smoke detector from internet.
21. Extract the reading of Temperature, Humidity and Monitoring through internet.
22. Automating the control of Light, Sprinkler.
23. Operate the robot through internet which has facility of communication to and fro through web and the sensor data.

5. Reference

Text Books:

1. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

6. Session Plan:

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (Lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)</i>	<i>Assignment (Projects, assignment, field study, seminar, etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Module I [3 hrs. Lecture + 12 hrs. Practice]				
What is Sensor? Types of sensors.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing the URM 37, Relay, IR Module.	4	Practice		
PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11).	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing PIR, Laser, Accelerometer, MQ2, MQ3, DHT-11	4	Practice		
Stress Sensors, Load Sensors, Force Sensors, Wi-Fi Modules.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing stress sensor, load sensor, force sensor, Wi-Fi modules.	4	Practice		
Background, What is IOT, What device makes it to IOT, IOT platforms, what IOT means for the developer.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Module II [2 hrs. Lecture + 10 hrs. Practice]				
Introduction, Setting up the Arduino development environment.	2	Practice		
Interacting of various sensors to the internet through the controller board.	4	Practice		
Interacting with basic actuators, Configuring your Arduino board for the IoT.	4	Practice		
Module-III [1 hrs. Lecture + 4 hrs. Practice]				

Grabbing the content from a web page, sending data to the Web, Troubleshooting basic Arduino issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Extracting data from a web page.	2	Practice		
Sending data to a web page.	2	Practice		
Module IV [2 hrs. Lecture + 8 hrs. Practice]				
Introduction, Internet of Things platforms for Arduino	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting the sensor data online, retrieving your online data, and Securing your online data, Monitoring sensor data from a web-based dashboard.	4	Practice		
Monitoring several Arduino boards at once, Troubleshooting issues with web data monitoring.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Parallel monitoring multiple controller boards connected to the internet.	4	Practice		
Module V [3 hrs. Lecture + 4 hrs. Practice]				
Introduction, Discovering the Temboo platform, Tweeting from an Arduino board. Tweeting from an Arduino board	2	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting updates on Facebook, Automation with IFTTT, Sending push notifications.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting updates on Facebook, Sending push notifications	4	Practice		
Module-VI [1 hrs. Lecture +14 hrs. Practice]				
Sending text message notifications, Storing data on Google Drive.	2	Practice		
Troubleshooting issues with web services.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Control Light & Fan from the internet.	4	Practice		
Remote controlled door (opening & closing) using servo Motor.	4	Practice		
Smoke detector and Remote control room temperature from internet.	2	Practice		
Extract the reading of Temperature, Humidity and Monitoring through internet.	2	Practice		

Module VII [3 hrs. Lecture + 8 hrs. Practice]				
Introduction, Types of IoT interaction, Basic local M2M interactions.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Cloud M2M with IFTTT, M2M alarm system, Troubleshooting basic M2M issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Automated light controller, Automated sprinkler controller,	4	Practice		
Introduction, choosing a robotic platform, Building a mobile robot, Configuring your mobile robot, Basic robot control, Using distance sensors, Controlling your robot from anywhere, Troubleshooting basic robotic issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Operate the robot through internet which has facility of communication to and fro through web and the sensor data.	4	Practice		
Total (hrs.)	75	15 hrs. Lecture	+ 60 hrs. Practice	

Programming for Problem solving- Java

Subject Name	Code	Type of course	T-P-P	Prerequisite
Programming for Problem solving- Java	ENFC0412	Theory + Practice	1-2-0(3)	Nil

1. Objective

- ✓ Learn problem solving using object-oriented concepts
- ✓ Implement object oriented programming using Java
- ✓ Analyze several alternative solutions to determine the best approach

2. Course outcome

- ✓ Able to use object oriented concept to solve problems

· Write an error free program of minimum 200 lines of code

3. Evaluation System

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test	20	Written examination
	Assignment	NIL	Report and Presentation
	Experiments	30	Practice work, report
	Project	NIL	Report and presentation
	Quiz	NIL	Surprise/preannounced ones
<i>External Examination</i>		30	Written examination
		20	Practice Exam with viva voce
<i>Total</i>		100	

Projects:

1. Simple Currency Converter
2. Designing a Calculator
3. Generating the mark sheet of a student
4. Create a phone directory and search a number
5. Create a tic tac toe game
6. Developing a library maintenance system
7. Desktop applications
8. Exam System (Without Database)
9. Create Country MAP and Different banners

Course outline

Module-I (10Hrs):

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block: The Fear of Starting, Object Oriented Problem Solving, and Case Study.

Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program.

Object-Oriented Programming: Object Oriented Concepts, Java Programming Environment, Feature of Java, Elements of Java Program: Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module-II(15 Hrs):

Classes: Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword.

Inheritance and Polymorphism: Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module-III (10 Hrs):

Packages: Packages, Access Protection, Importing Package

Interfaces: Interface, Implementing Interfaces.

Module-IV (10 Hrs):

StringHandling: String, String Buffer, String Builder.

Excepting Handling: Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, MultipleCatches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception.

Module-V (10 Hrs):

Multi-Threading: Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util).

Module-VI (10 Hrs):

Java.IO: I/O Streams, Serialization

AWT: AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module-VII (10 Hrs):

Event Handling: Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components.

FCEN0603 Electrical Circuit Drawing (AutoCAD)

Credits: 02
42

Total Hours:

Course Objective

-To make student analyze the electrical system through computer simulation using software packages (AutoCAD)

Course Outcomes:

-Students should able to create an electrical wiring diagram by using AutoCAD software.

List of Experiments

1. Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires
2. Symbol creation
3. General lay out of a power system network.
4. Simple house wiring (1-phase): light, fan
5. Simple house wiring (3-phase): light, fan, AC, geezer, 3-phase motor
6. Agricultural pump-set wiring (star-delta) with panel wiring.
7. Workshop panel wiring for machine lab

8. Four wheeler electrical wiring
9. Forklift wiring harness
10. Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)
11. CIT new substation layout (schneider) or JITM Substation
12. Differential protection of transformer
13. Layout drawing of a power plant

				<i>Theor y</i>	<i>Practic e</i>	<i>Video</i>	<i>Project</i>
1	Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires	PRAC	AutoCAD	1	2	0	0
2	Symbol creation	PRAC	AutoCAD	1	2	0	0
3	General lay out of a power system network.	PRAC	AutoCAD	1	2	0	0
4	Simple house wiring (1-phase): light, Fan	PRAC	AutoCAD	1	2	0	0
5	Simple house wiring (3-phase): light, fan, AC, geezer, 3-phase motor	PRAC	AutoCAD	1	2	0	0
6	Agricultural pump-set wiring (stardelta) with panel wiring.	PRAC	AutoCAD	1	2	0	0
7	Workshop panel wiring for machine lab	PRAC	AutoCAD	1	2	0	0
8	Four wheeler electrical wiring	PRAC	AutoCAD	1	2	0	0
9	Forklift wiring harness	PRAC	AutoCAD	1	2	0	0
10	Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)	PRAC	AutoCAD	1	2	0	0

Product Development

Subject Name	Code	Type of course	T-P-P	Prerequisite
Product Development	ENFC0601	Practice + Project	0-2-1(3)	Nil

1. Objectives

- ✓ To educate the students on various stages of development of design of a product beginning from intent-to-actual design.
- ✓ Educate the students on usage of design software like ENOVIA, SIMULIA.

2. Course Outcome

- ✓ Students will have knowledge and skills to undertake design projects through making design decisions and evolve design of a product using the theoretical knowledge and hands-on-experience provided on design software.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test		
	Assignment		
	Experiments		
	I PRO	40+10	Lab work & Report
	Quiz		
External Examination	E PRO	50	Project & Report
Total		100	

4. Course Outline

Module I (08 Hours)

Intent, Impact, Import & Use of Core Mechanical Principles for Concept Design, Engineering Design, Problems Engineering can Solve, How to Identify Opportunities for Design, Needs Assessment & Problem Definition.

Module II (10 Hours)

Defining Requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing Possible Design Solutions, Making Design Decisions.

Module III (08 Hours)

Introduction to CAD Process through 3D Experience Free Modeling, Modeling & Managing Subassemblies in the Robot

Module IV (09 Hours)

Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps Involved in Controlling the Product Updates in ENOVIA.

Module V (20 Hours)

Introduction to FEA in Industry, Pre-Processing Using SIMULIA.

Module VI (15 Hours)

Understanding the Mathematical Modeling for Product in Physical Behavior

Module VII (15 Hours)

Introduction to Design of Experiments, How to Use SIMULIA to Make an Incremental Design Decision. Type of Engineering Analysis.

E-content: Peer Learning Experience by Dassault Systemes.

Text Books:

1. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India.
2. Ulrich, K T, Eppinger, S D, Product Design & Development, 2016, 5th edition, Tata McGraw-Hill Companies, Inc.

Reference Books:

- Kumar, P, Product Design - Creativity, Concepts & Usability, 2011, 2nd Edition, PHI publication, India.

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I				
Intent, Impact, Import, Use of core Mechanical Principles for concept Design, What is Engineering Design, Problems Engineering can solve, How to identify opportunities for design, Needs Assessment & Problem Definition,	08	Tutorial	Project	
Module-II				
Defining requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing a possible design Solutions, Making Design Decisions.	10	Tutorial	Project	

Module-III				
Introduction to CAD Process through 3D Experience free modeling, Modeling & managing subassemblies in the Robot,	08	Tutorial , Practice	Project	
Module-IV				
Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps involved in controlling the product updates in ENOVIA.	09	Tutorial , Practice	Project	
Module-V				
Introduction to FEA in Industry, Pre-processing using SIMULIA, Understanding the Mathematical modeling for Product in physical behavior, Introduction to design of experiments, How to use SIMULIA to make a incremental design decision. Type of Engineering analysis. Projects such as Disc Brake analysis by DOE, Door trim Substrate by DOE, MBD of Suspension by DOE.	20	Practice, tutorial	Project	
Module-VI				
Consumer Sentimental Analysis, Behavior Loyalty Metric, Emotional Loyalty Metric, Understanding decision making dashboards in NetVibes,	15	Lecture, Practice	Project	
Interpreting the Real time social data, Creation of different metric for business condition in Net Vibes, Automate Business logic to respond.	15	Lecture, Practice	Project	
Total (hours)	85			

Programming Internet of Things

Subject Name	Code	Type of course	T-P-P(Credit)	Prerequisite
Programming Internet of Things	ENFC1401	Workshop	0-2-0(2)	

1. Objective

- ✓ To familiarize the students with IoT (Internet of Things) and their applications
- ✓ To make students learn devices, programming and technology for IOT

2. Course outcome

- ✓ Interface different sensors with Raspberry Pi and perform experiments
- ✓ Students will work together in teams
- ✓ Develop an IoT project which can be showcased at the end of the course

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	<i>NIL</i>	Written examination
	Assignment	<i>NIL</i>	Report and Presentation
	Experiments (Internal)	<i>50</i>	Practice work, report and viva-voce
	Project	<i>50</i>	Report and presentation
	Quiz	<i>NIL</i>	Surprise/preannounced ones
External Examination	Semester	<i>NIL</i>	Written examination
	Practice	<i>NIL</i>	Practice test with viva-voce
Total		<i>100</i>	

Course outline

All the students shall be distributed in teams for project development. They will choose the project at the beginning of the course. A team shall not consist more than 4 members.

Module I: (20 Hours)
 Internet of Things: Definition and Characteristics of IoT, Physical Design of IoT – IoT Protocols, IoT communication models, IoT Communication APIs, IT enabled Technologies, Communication protocols
 Domain Specific IoTs: Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Lifestyle.

Embedded Systems: Introduction, Sensors and Actuators, Different types of Sensors
Module II: (20 Hours)
 Raspberry Pi: Configuration of OS on to Raspberry Pi, Commands used in Raspberry Pi coding (Linux), Raspberry Pi pin descriptions.

Experiments like the following will be performed:
 Simple LED Blink Example, Simple Pattern of LED, Complex Pattern of LED, Simple Automated Light System using LDR, Simple project on Temperature Sensor using LCD display, LED action via Bluetooth.

Module III: (20 Hours)
 Experiments like the following will be performed:
 Ultra Sonic Sensor of Distance Finder, Data Logger with Temperature Sensor and LDR, Cloud Access and Storage of Sensor Data, IR Module Interfacing, PIR Module Interfacing, Relay Module Interfacing. Network setup WIFI/LAN, LED blinking using Pi, Web Monitoring of Sensor outputs through API keys, Sensor based automated E-Mail Sending through Pi.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I (Practice-28 hours)				

<i>Introduction to Internet of Things – Definition and Characteristics of IoT, Physical Design of IoT – IoT Protocols</i>	<i>4</i>	<i>practice</i>	<i>Assignment</i>	<i>RB-1, RB-2, RB-3</i>
<i>IoT communication models, IoT Communication APIs, IoT enabled Technologies, Communication protocols</i>	<i>4</i>	<i>practice</i>	<i>Assignment</i>	<i>RB-1, RB-2, RB-3</i>
<i>Domain Specific IoTs – Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Embedded Systems – Introduction, the basics of sensors and actuators</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Different types of sensors</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>

Module-II (Practice- 28 hours)				
<i>Introduction to Raspberry Pi, Configuration of OS on to Raspberry Pi</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Commands used in Raspberry Pi coding (Linux), Raspberry Pi pin descriptions</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Simple LED Blink Example, Simple Pattern of LED</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Complex Pattern of LED, Simple Automated Light System using LDR</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Simple project on Temperature Sensor using LCD display, LED action via Bluetooth</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
Module-III (Practice- 34 hours)				
<i>Ultra Sonic Sensor of Distance Finder, Data Logger with Temperature Sensor</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>

<i>and LDR</i>				
<i>Cloud Access and Storage of Sensor Data, IR Module Interfacing</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>PIR Module Interfacing, Relay Module Interfacing</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Network setup WIFI/LAN, LED blinking using Pi</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Web Monitoring of Sensor outputs through API keys, Sensor based automated E-Mail Sending through Pi</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
Total (hrs)	60	Practice 60		

Build Your Computer

Subject Name	Code	Type of course	T-P-P	Prerequisite
Build Your Computer	ENFC1402	Workshop	0-2-0(2)	Nil

1. Objective

- ✓ Develop ability to understand the internals of Computer and peripherals
- ✓ To have an overall idea about networking concepts and devices
- ✓ To have an overall idea about secure computing

2. Course outcome

- ✓ Build your computing device
- ✓ Troubleshoot various faults in a computer system and network
- ✓ Construct small LAN for resource sharing

3. Evaluation Systems

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test		Written examination
	Assignment		Report and Presentation
	Experiments	50	Assessment based on Individual Lab sessions, Lab report
	Project	50	Report and presentation
	Quiz		Surprise/ preannounced ones
<i>External Examination</i>	<i>Practice</i>		Practice Test
Total		100	

Projects

1. *Developing your own computing device*
2. *Setup a camp to provide free servicing of laptops and desktops*
3. *Setup and configure a small secured LAN for file sharing*

4. Course outline

- I. **Build Computing Device:** Building computing device using Raspberry-Pi Board
- II. **Inside The PC:** Opening a Desktop/Laptop and Identification of Various Components, Study of

Different Blocks of PC

- III. **Assembling and Disassembling of PC:** Assembling and Disassembling of Different Components like Motherboard, Processor, RAM, Hard Disc and Other Components
- IV. **SMPS and Peripherals:** Identification of Various Power Supply Units and Peripherals along with Pin Configuration
- V. **BIOS:** Study of Basic Input Output System, Morden BIOS (UEFI), Security Features
- VI. **Installation of OS and Application Software:** Installation of GNU/Linux, Ubuntu LTS (Latest), Application Software
- VII. **Usage of Libreoffice:** Writer (Document), Calc (Spreadsheet), Impress (Presentation)
- VIII. **Basic Commands:** Working With Linux Commands, Vi Editor, Shell Scripting
- IX. **Basic Networking:** Wired LAN, Wireless LAN, Wireless Security and Troubleshooting
- X. **Introduction to Various Networking Devices:** Routers, Switches, Modems, Hubs, Firewall and Wireless devices
- XI. **Network Configuration:** Setting IP Addresses, Sharing Files and Folders, Network Troubleshooting, PING Test, ifconfig etc.
- XII. **Introduction To Servers and Network Security:** Files Servers, Email Servers, Proxy Servers; Essential Security Measures: Encrypt Critical Data, Secure Systems With Passwords, Back Up and Isolate Information

Session Plan

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)</i>	<i>Assignment (project, assignment, field study, seminar, etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Build Your Own Device: Building Your First PC Using Raspberry Pi Board.	8	Workshop	project	https://howtoraspberrypi.com/build-pc-for-less-than-200-raspberry-pi/
Inside The PC: Opening a Desktop/Laptop and Identification of Various Components,	4	Demonstration and practice	Practice and Report writing.	https://web.stanford.edu/class/cs101/hardware-1.html

Study of Different Blocks of PC.				
Assembling and Disassembling of PC: Assembling and Disassembling of Different Components like Motherboard, Processor, Ram, Hard Disc and Other Components.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://www.youtube.com/watch?v=nBZovA_kMWA
SMPS and Peripherals: Identification of Various Power Supply Units and Peripherals along with Pin Structure.	4	<i>Demonstration and practice</i>	Practice and Report writing.	
BIOS: Study of Basic Input Output System, Modern BIOS (UEFI), Security Features.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://whatis.techtarget.com/definition/BIOS-basic-input-output-system

Installation of OS and Application Software: Installation of Ubuntu LTS (Latest), Application Software.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://tutorials.ubuntu.com/tutorial/tutorial-install-ubuntu-desktop#0
Usage of Libreoffice: Writer (Document), Calc (Spreadsheet), Impress (Presentation).	6	<i>Demonstration and practice</i>	Practice and Report writing.	
Basic Commands: Working With Linux Commands, Vi Editor, Shell Scripting.	6	<i>Demonstration and practice</i>	Practice and Report writing.	https://maker.pro/linux/tutorial/basic-linux-commands-for-beginners
Basic Networking: Wired LAN, Wireless LAN, Wireless	4	<i>Demonstration and practice</i>	Practice and Report writing.	

Security and Troubleshooting.				
Introduction to Various Networking Devices: Routers, Switches, Modems, Hubs, Firewall, wireless devices.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://www.geeksforgeeks.org/network-devices-hub-repeater-bridge-switch-router-gateways/
Network Configuration: Setting IP Addresses, Sharing Files and Folders, Network Troubleshooting, PING Test, ifconfig Etc.	4	<i>Demonstration and practice</i>	Practice and Report writing.	
Introduction To Servers and Network Security: Files Servers, Email Servers, Proxy	8	<i>Demonstration and practice</i>	Practice and Report writing.	https://w4university.wordpress.com/2013/07/01/http-dhcp-dns-ftp-smtp-proxy-and-client-server-architecture/

Servers; Essential Security Measures: Encrypt Critical Data, Secure Systems With Passwords, Back Up and Isolate Information.

Cloud Computing Application

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Cloud Computing Application	ENFC1403	Workshop	0-2-0(2)	

1. Objective

Key points: Briefly explain what the course covers. Indicate why the course is to be studied. Specify who should study the course and requirement of prior knowledge and skill, if any.

- | |
|---|
| <ul style="list-style-type: none"> · Learn fundamentals of cloud computing · Learn to build distributed applications and microservices with AWS Step Functions · Learn step-by-step to setup up AWS platform |
|---|

2. Course outcome

Key points: State clearly what knowledge and skill a student is expected to learn at the end of the course.

- | |
|---|
| <ul style="list-style-type: none"> · Setup AWS Account and AWS infrastructure · Deploying serverless microservices · Implementing scalability and implementing high availability |
|---|

3. Evaluation Systems

Key points: State clearly the components, weights and methods of evaluation system.

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test		Written examination
	Assignment		Report and Presentation
	Experiments	50	Lab work, report
	Project	50	Report and presentation
	Quiz		Surprise/preannounced ones
<i>External Examination</i>	<i>Practice Examination</i>		Written examination
Total		100	

Course outline

Module I (8 Hrs)

UNDERSTANDING CLOUD BASICS

Defining cloud computing, Introducing public, private, and hybrid clouds, Introducing cloud service models – IaaS, PaaS, and SaaS, Introducing multi-tenancy models, Compare cloud value proposition with conventional models. Understand Global Infrastructure – Region, Availability Zones, Edge Locations; Setting up AWS account, Getting Familiarity with AWS Management Console; Understanding cloud-based workloads

Module II (10 Hrs)

DESIGNING CLOUD APPLICATIONS

Introducing cloud-based multitier architecture, Designing for multi-tenancy, Understanding cloud applications design principles, Understanding emerging cloud-based application architectures, Estimating your cloud computing costs, A typical e-commerce web application

Module III (8 Hrs)

INTRODUCING AWS COMPONENTS

AWS components, Managing costs on AWS cloud, Application development environments
Setting up the AWS infrastructure

Module IV (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SCALABILITY

Defining scalability objectives, Designing scalable application architectures, Leveraging AWS infrastructure services for scalability, Evolving architecture against increasing loads, Event handling at scale, Setting up Auto Scaling

Module V (8 Hrs)

DESIGNING FOR AND IMPLEMENTING HIGH AVAILABILITY

Defining availability objectives, Nature of failures, Setting up high availability

Module VI (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SECURITY

Defining security objectives, Understanding the security responsibilities, Best practices in implementing AWS security, Setting up security

Module VII (10 Hrs)

DEPLOYING TO PRODUCTION AND GOING LIVE

Managing infrastructure, deployments, and support at scale, Creating and managing AWS environments using CloudFormation, Using CloudWatch for monitoring, Using AWS solutions for backup and archiving, Planning for production go-live activities, Setting up for production

<i>Total</i>		<i>100</i>	

Course outline

- All the students shall be distributed in groups for project development. They will choose the project from the list of projects (not exhaustive) to be given at the beginning of the session, which they need to develop along with the coverage of the course. A group shall not consist more than 4 members

- Some of the sample projects are:

School Management
E-Learning Web Portal
Reservation System (Railway, Airlines, etc.)
Accounting System
Voting System
Logistics Management
Contact Management

Module-I (8 Hrs.)

Integrated Development Environment, Version Control (Git), Documentation

Module-II (16 Hrs.)

Software Development Models: Principles of Life Cycle Models, Waterfall Software Development, Agile Software Development, Lean Software Development, DevOps

Module-III (12 Hrs.)

DevOps Processes and Continuous Delivery:

Requirements (Functional and Non-functional) and Specifications, Developers, Revision Control System, Build Server,

Module-IV (12 Hrs.)

Artifact Repository, Package Managers, Test Environments, Staging/Production, Release Management

Module-V (9 Hrs.)

DevOps – Architecture & Design:

DevOps Architecture, Separation of Concerns, DevOps Design (Modularity, Coupling, Cohesion)

Module-VI (9 Hrs.)

Three-tier Systems, Presentation Tier, Logic Tier, Data Tier, Handling Database Migrations

Module-VII (9 Hrs.)

Testing (Unit Testing, Integration Testing), Implementation, Deployment (Rollback, Cutover Strategies)

Text Books:

- Joakim Verona, *Practical DevOps*, Packt Publishing, 2nd Edition, 2018.

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I (8 Hrs.)				
<i>Integrated Development Environment</i>	2 + 2	<i>lecture + practice</i>	<i>Assignment</i>	<i>TB-1, RB-1</i>
<i>Version Control (Git), Documentation</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1, RB-1</i>
Module-II (16 Hrs.)				
<i>Principles of Life Cycle Models</i>	4	<i>Lecture</i>	<i>Assignment + Experiments</i>	<i>RB-1</i>
<i>Waterfall Software Development</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1</i>
<i>Agile Software Development</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Lean Software Development, DevOps</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
Module-III (12 Hrs.)				
<i>DevOps Processes and Continuous Delivery:</i>	2 + 4	<i>lecture + practice</i>	<i>Assignment + Experiments</i>	<i>TB-1, RB-2</i>
<i>Requirements (Functional and Non-functional) and Specifications</i>				
<i>Developers, Revision Control System, Build</i>	6	<i>practice</i>	<i>Assignment +</i>	<i>TB-1, RB-2</i>

<i>Server</i>			<i>Experiments</i>	
Module-IV (12 Hrs.)				
<i>Artifact Repository, Package Managers</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Test Environments, Staging/Production</i>	6	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Release Management</i>	2	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
Module-V (9 Hrs.)				
<i>DevOps – Architecture & Design: DevOps Architecture, Separation of Concerns</i>	2 + 2	<i>lecture + practice</i>	<i>Assignment + Experiments</i>	<i>TB-1, RB-1</i>
<i>DevOps Design (Modularity, Coupling, Cohesion)</i>	1 + 4	<i>lecture + practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
Module-VI (9 Hrs.)				
<i>Three-tier Systems, Presentation Tier,</i>	3 + 2	<i>lecture + practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Logic Tier, Data Tier</i>	2	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Handling Database Migrations,</i>	2	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
Module-VII (9 Hrs.)				
<i>Testing (Unit Testing, Integration Testing)</i>	1 + 2	<i>lecture + practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
<i>Implementation, Deployment (Rollback, Cutover Strategies)</i>	6	<i>practice</i>	<i>Assignment + Experiments</i>	<i>TB-1</i>
Total (Hrs.)	75	Theory (15 Hrs.) + Practice (60 Hrs.)

Syllabus

Estimation & Quantity Surveying

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Estimation & Quantity Surveying	CECC0201	Practice	0-3-0(2)	Nil

1. Objective

- To make familiar with calculation of quantities for different item of works.
- To provide knowledge about estimation of buildings through Estimator-2.0 software.

2. Course outcome

Gain knowledge about how to schedule & estimate different construction works both manually and using software.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Experiments	50	Lab work, report
External Examination		50	Lab work, Report/Viva
Total		100	

Module - I: BUILDING

(16hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to buildings; preparation of Quantities and Units.

Practice Sessions:

1. Study of construction drawings and preparation of WBS.
2. Detailed estimates for a Shopping Complex using Estimator-2.0 software.
3. Detailed estimates for a hostel Building using Estimator-2.0 software.
4. Detailed estimates for a hospital using Estimator-2.0 software.

Module -II :CULVERT

(10hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to irrigation structures; preparation of Quantities and Units.

5. Detailed estimates (Manual) for a Slab culvert with right angled/ Splayed wing wall.
6. Detailed estimates (Manual) for a box culvert.
7. Detailed estimates (Manual) for a Hume pipe Culvert.

Module -III:ROAD

(6hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Roads structures; preparation of Quantities and Units.

8. Detailed estimates (Manual) for a road.

Module -IV :SLOPED ROOF**(6hrs)**

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Sloping roof/Roof truss structures; preparation of Quantities and Units.

9. Detailed estimate (Manual) for a timber roof truss.
10. Detailed estimate (Manual) for a roof cover of GI sheets.

Module -V:QUANTITY SURVEY**(06hrs)**

Estimations and Quantity Surveying; Preparation of Quantity of materials per unit rate of work; Estimating labour.

11. Quantity of materials required for different items of works in buildings (Manual).
12. Quantity of different types of labor required for different items of works (Manual).

Module-VI: RATE ANALYSIS OF BUILDING**(10hrs)**

Specifications; Rate Analysis as per State Govt. and CPWD Standards

13. Development of Excel Sheet for Rates, Specifications and Cost Estimates.
14. Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software.
15. Rate Analysis and Cost Estimates for a hostel Building and a hospital, using Estimator-2.0 software.

Module-VII:RATE ANALYSIS OF CULVERT & ROAD (6hrs)

Specifications; Rate Analysis as per State Govt. and CPWD Standards

16. Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software.
17. Rate Analysis and Cost Estimates for an arch culvert using Estimator-2.0 software.
18. Rate Analysis and Cost Estimates for a road using Estimator-2.0 software.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	(project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Estimations and Quantity Surveying; Reading of Plans, Sections and detailed Drawings Related to buildings, irrigation structures and Roads; preparation of Quantities and Units. Study of construction drawings and preparation of WBS.	2	lecture	1	RB ₁ ;chapter I & II
Detailed estimates for a Shopping Complex using Estimator-2.0 software.	6	Practice	2	http://estimator.in/tutorial/index.htm https://www.youtube.com/watch?v=d-EP/0M4XZS&list=PLuX_PtBw-QK1-c-B5D8SiJjfOttjxmHf6 Seen on 11 th Jun, 2019
Detailed estimates for hostel Building using Estimator-2.0 software.	4	Practice		
Detailed estimates for a hospital using Estimator-2.0 software.	4	Practice		
Sub-total (hrs)	16			
Module II				
Detailed estimates (Manual) for a Slab culvert with right angled/ Splayed wing wall.	6	Practice	3	TB ₁ ;chapter no-8 page-373 to 414
Detailed estimates (Manual) for a box culvert.	2	Practice		
Detailed estimates (Manual) for a Hume pipe Culvert.	2	Practice		
Sub-total (hrs)	Practice 10			
Module III				
Detailed estimates (Manual) for a road.	6	Practice	4	TB ₁ ; chapter no-7, page-328 to 372
Sub-total (hrs)	Practice 06			

Module IV				
Detailed estimate (Manual) for a timber roof truss	4	Practice	5	RB1; chapter VII, Page-215-299
Detailed estimate (Manual) for a roof cover of GI sheets	2	Practice		
Sub-total (hrs)	Practice 06			
Module V				
Quantity of materials required for different items of works in buildings (Manual).	04	Practice	6	RB1;chapter XIII, Page-415-528
Quantity of different types of labour required for different items of works (Manual).	02	Practice		
Sub-total (hrs)	Practice 06			
Module VI				
Specifications; Rate Analysis as per State Govt. and CPWD Standards. Development of Excel Sheet for Rates, Specifications and Cost	2	Practice	7	RB1;chapter no-13
Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software.	4	Practice		https://www.youtube.com/watch?v=NQIHnHWTRQc&list=PLuX_PtBw-QK1-C-B5D8SiJfOttjxmHf6&index=10
Rate Analysis and Cost Estimates for a hostel Building and a hospital, using Estimator-2.0 software.	4	Practice		Seen on 12 th Jun, 2019
Sub-total (hrs)	Practice 10			

Module VII				
Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software.	2	Practice	8	https://www.youtube.com/watch?v=NW8ODPKgtFw&list=PLuX_PtBw-QK1-c-B5D8SiJfOttjxmHf6&index=15 Seen on 12 th Jun, 2019
Rate Analysis and Cost Estimates for a arch culvert using Estimator-2.0 software.	2	Practice		
Rate Analysis and Cost Estimates for a road using Estimator-2.0 software.	2	Practice		
Sub-total (hrs)	PRACTICE 06			
Total (hrs)	60	PRACTICE		

Concrete Technology

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Concrete Technology	CECC0412	Theory+ Practice	1-1-0	Nil

Objective

- To teach the student about different property of concrete and its use in different work.

Course outcome

- Students will able to apply core concepts of Concrete technology to solve engineering problems.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written Examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written Examination
	External Practice	20	Lab Work
Total		100	

COURSE OUTLINE

Module I :Properties of Cement (6Hrs)

Cement-Different types Chemical composition and Properties Tests on cement-IS Specifications; Portland cement chemical composition Hydration; Setting of cement Structure of hydrate cement Test on physical properties for Different grades of cement

Practice 1

- XRF analysis of cement
- Specific gravity of cement (comparison study)

Practice 2

- Compressive strength of cement(comparison study)
- Soundness test of cement (comparison study)
- Setting time(comparison study)

Module II: Aggregates (5Hrs)

Classification; Mechanical properties and tests as per BIS Grading requirements Classification of aggregate Particle shape & texture strength & other mechanical properties of aggregate Specific gravity; Bulk density; porosity; adsorption& moisture content of aggregate Bulking of sand

Practice 3

- Specific gravity of coarse aggregate
- Specific gravity of fine aggregate
- Zoning of aggregates
- Water absorption of coarse aggregate

Module III :PROPERTIES OF CONCRETE (4Hrs)

Workability- Factors affecting workability; Measurement of workability by different tests Setting times of concrete; Effect of time and temperature on workability Segregation & bleeding Mixing and vibration of concrete

Practice 4 Workability test of Fresh Concrete by

10. Slump cone method
11. Compaction factor method
12. Flow table method
13. Preparation of cube mould for durability test

Module IV : CHEMICAL AND MINERAL ADMIXTURES(6 Hrs)

Accelerators; Retarders; Plasticizers- Super plasticizers; Water proofers ;Mineral Admixtures like Fly; Ash, Silica Fume; Ground Granulated Blast Furnace Slag and Metakaoline Their effects on concrete properties

Practice 14. Preparation of Design Mix of concrete

Practice 15.: Prepare the design mix using Retarder and Accelerator

Module V :SPECIAL CONCRETE(10Hrs)

Special Concretes: Introduction to light weight concrete ;Cellular concrete no-fines concrete high density concrete fiber reinforced concrete

Practice 16: Preparation of Fiber reinforced concrete

Practice 17:Preparation of Light weight concrete mix and reactive Powder concrete

Practice 18: Preparation of concrete with plastic aggregates

Practice 19: Design of concrete using construction demolition waste

Module VI :PROPERTIES OF HARDENED CONCRETE (11Hrs)

Properties of Hardened concrete Determination of Compressive and Flexural strength by Destructive tests and non-destructive tests.

Practice 20: Splitting tensile strength of cylinder and Flexural strength of beam

Practice 21: Compressive strength of cube and cylinder specimen

Practice 22: Stress-strain curve for concrete Determination of Young's Modulus.

Practice 23:

- (a) Non-destructive tests by Rebound hammer.
- (b) Destructive tests by core cutter.

Module VII :Durability of Concrete (3 Hrs)

Factors affecting durability; Tests for durability of concrete

Practice 24:

- Carbonation test for concrete.
- Resistance to chemical attack (Sulphate attack, chloride attack)

Text Books:

- M.S Shety, S. CHAND Publication

Reference Books:

- Indian standards for tests on concrete materials and mix design.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.) Theory +Practice	Activity (lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)	A (Project, A, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I [2hrs.Lecture+4hrs.Practice]				
Cement-Different types Chemical composition and Properties -Tests on cement-IS Specifications- Portland cement – chemical composition	1+0=1	Lecture	1.1	Text Book(TB) Chapter(CH)- 1&2
Hydration, Setting of cements Structure of hydrate cement. Test on physical properties for Different grades of cement	1+0=1	Lecture	1.2	TB CH-2
XRF analysis of cement Specific gravity of cement (comparison study)	0+2=2	Practice		TB CH-2

Compressive strength of cement(comparison study) Soundness test of cement (comparison study)	0+2=2	Practice		TB CH-2
Module II [3 hrs.Lecture+2 hrs. Practice]				
Aggregates-Classification-Mechanical properties and tests as per BIS Grading requirements-	1+0=1	Lecture	2.1	TB CH-3
Classification of aggregate Particle shape & texture strength & other mechanical properties of aggregate	1+0=1	Lecture	2.2	
Specific gravity, Bulk density, porosity, adsorption & moisture content of aggregate Bulking of sand	1+0=1	Lecture	2.3	
(a) Specific gravity of coarse aggregate (b) Specific gravity of fine aggregate (c) Zoning of aggregates (d) Water absorption of coarse aggregate	0+2=2	Practice		
Module III [2 hrs.Lecture+2 hrs. Practice]				
Workability Factors affecting workability Measurement of workability by different tests	1+0=1	Lecture	3.1	TB CH-5
Setting times of concrete Segregation & bleeding Mixing and vibration of concrete	1+0=1	Lecture	3.2	

(a) Slump cone method (b) Compaction factor method (c) Flow table method (d) Preparation of cube mould for durability test	0+2=2	Practice		
Module IV[2 hrs.Lecture+4hrs.Practice]				
Accelerators-Retarders Plasticisers Super plasticizers- Water proofers Mineral Admixtures like Fly, Ash, Silica Fume	1+0=1	Lecture	4.1	TB CH-7
Ground Granulated Blast Furnace Slag and Metakaoline Their effects on concrete properties	1+0=1	Lecture	4.2	
Preparation of Design Mix of concrete	0+2=2	Practice		
Prepare the design mix using Retarder and Accelerator	0+2=2	Practice		
Module V [2 hrs.Lecture+8 hrs. Practice]				
Special Concretes Introduction to light weight concrete Cellular concrete	1+0=1	Lecture	5.1	TB CH-12
No fines concrete high density concrete	1+0=1	Lecture	5.2	
Preparation of Fiber reinforced concrete	0+2=2	Practice		
Preparation of Light weight concrete mix and Powder concrete	0+2=2	Practice		
Preparation of concrete with plastic aggregates	0+2=2	Practice		
Design of concrete using construction demolition waste	0+2=2	Practice		
Module VI [3 hrs.Lecture+8 hrs.Practice]				
Properties of hardened concrete Determination of Compressive and Flexural strength as per BIS	1+0=1	Lecture	6.1	

Properties of Hardened concrete Determination of Compressive and Flexural strength	1+0=1	Lecture	6.2	TB CH-10
Destructive tests and non-destructive tests.	1+0=1	Lecture	6.3	
Splitting tensile strength of cylinder and Flexural strength of beam	2+0=2	Practice		
Compressive strength of cube and cylinder specimen	2+0=2	Practice		
Stress-strain curve for concrete Determination of Young's Modulus	2+0=2	Practice		
(a) Non-destructive tests by Rebound hammer. (b) Non-destructive tests by core cutter	2+0=2	Practice		
Module VII [1 hrs.Lecture+2 hrs.Practice]				
Factors affecting durability. Tests for durability of concrete	1+0=1	Lecture	7	TB CH-9
(a) Carbonation test for concrete. (b) Resistance to chemical attack (Suphate attack, chloride attack)	0+2=2	practice		TB CH-8
Total (hrs)	30+30=60	30hrs.Lecture+30 hrs. Practice		

CCCE0401 GEOTECHNICAL ENGINEERING –I

Pre –requisites	Course Type	Credits
Nil	Theory + Practice	4

Course Objectives:

To make students understand the basic theoretical aspects and implementation of following topics in the real world situations.

Index properties of soil, Permeability of soils
Seepage through soils

Compaction and consolidation of soil
Shear strength of soil

Stress distribution in soil
Stability of slopes

Course Outcomes:

Upon successful completion of the course, students are expected to be able:

To classify soil on the basis of their index properties

Analyze different properties of soil such permeability, seepage, compaction and consolidation
Check shear strength of different soil with the help of laboratory experiments

Analyze stress distribution pattern for different types of soil

Analyze different types of slopes using different empirical methods and software aids.

MODULE - I (16 hours)

(a) INTRODUCTION: Soil formation - soil structure and clay mineralogy - Adsorbed water - Mass-volume relationship - Relative density. **(Most of the topics to be delivered in classroom teaching mode, Relative density to be dealt as practice and project module)**

(b) INDEX PROPERTIES OF SOILS: Grain size analysis - Sieve and Hydrometer methods - Consistency Limits and Indices - I.S. Classification of soils **(I.S. classification of soil to be delivered in classroom , all other topics to be dealt as dealt as practice and project module)**

(c) PERMEABILITY: Soil water - capillary rise - flow of water through soils - Darcy's-permeability law- Factors affecting - Determination of coefficient of permeability - Permeability of layered systems **(Determination of coefficient of permeability to dealt as dealt as project module, all other topics to be dealt in classroom teaching and practice mode)**

(d) SEEPAGE THROUGH SOILS: Total, neutral and effective stresses - quick sand condition - Seepage through soils - Flow nets: Characteristics and Uses (Basic appraisal only) **(All topics to dealt as classroom teaching module)**

MODULE - II (8 hours)

(e) COMPACTION: Mechanism of compaction - factors affecting - effects of compaction on soil properties. Field compaction Equipment - compaction control. **(Mechanism of compaction to be dealt as dealt as practice and project module, rest of the topics to be dealt in classroom teaching mode)**

(f) CONSOLIDATION: Stress history of clay; e-p and e-log p curves - magnitude and rate of 1-D consolidation - Terzaghi's **(To be delivered Theory in classroom)**.

MODULE - III (29 hours)

(f) SHEAR STRENGTH OF SOILS: Mohr - Coulomb Failure theories - Types of laboratory strength tests - strength tests based on drainage conditions, shear strength of clays. **(Types of shear strength test to be delivered as practice and project mode, rest of the topics to be dealt in classroom teaching mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation)**

(g) STRESS DISTRIBUTION IN SOILS: Normal and shear stresses on a plane, Boussinesq's solution for a point load, line load, strip load, uniformly loaded circular and rectangular areas, Isobar and pressure bulb concept, stress distribution on horizontal and vertical planes, contact pressure **(All topics to be dealt in classroom teaching and practice mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation)**

(h) STABILITY OF SLOPES: Types of slopes, failure types, causes of slope failure, factors contributing to instability of soil slope- high and low shear strength factors, slope stability analysis- analysis of finite and infinite slopes- Bishop's solution, soil stabilization measures), **(All the (S topics to be dealt in classroom teaching and practice mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation)**

Text Books:

CCCE0407 ADVANCED SURVEYING

Pre - requisites	Course Type	Credits
Nil	Theory + Practice	4

Course objectives:

1. To make students able to apply knowledge of mathematics, science, and engineering to understand the measurement techniques and equipment used in land surveying.
2. To make students able to measure horizontal distances across clear landscape or across obstacles using surveying instruments like theodolite, Total station.
3. To make students able to measure horizontal and vertical distances using total station
4. To enable students to sketch contour maps of the given topography using total station and surfer software.
5. To provide practical assist to student for their better understanding of modern GIS tools through open source software such as QGIS, Surfer

Course Outcomes:

On successful completion of course students will be able to

1. Apply math, science, and technology in surveying activities.
2. Measure horizontal distances across clear landscape and across obstacles.
3. Measure horizontal angles between geographical entities.
4. Plot given geographical area on drawing sheet.
5. Preparation of contour maps using Theodolite and Total station
6. Measure altitude of points at different elevation using GPS.
7. Function effectively as team members (or team leaders)

Module1

Theodolite Survey: Use of theodolite, temporary adjustment, measuring horizontal and vertical angles Traversing, checks and closing errors , balancing a traverse , adjustment of bearings, computation of area of closed traverse, trigonometric levelling,tachometry,methods of tachometry,.

MODULE-2

Curves, types of curves, simple circular curves, compound curves, reverse curves, transition curves and vertical curve, setting out of curves.

MODULE-3

Total station: Introduction to Total station, Functions, working principles of total station applications. Electronic data recording.

GPS Basics: Introduction –Satellite, Control and User Segments –Signal Components –Errors in GPS observations

–GPS positioning –Differential GPS.

GPS Mapping: Conventional –Static –Kinematic –Semi kinematic (Stop &Go)-Rapid static Mobile mapping GIS: GIS: introduction to GIS .components of GIS, Application of GIS in Civil engineering (All will be through Project mode)

Text Books :

Surveying, volume 1,2 &3 by B.C.PUNMIA chapters 5,6,11,14

Surveying, volume 1&2 BY S.K.Duggal , TMH publisher

Surveying by A.DE, S.Chand & co.

Foundation Engineering

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Foundation Engineering	CECC0402	Theory + Practice	2-1-0(3)	Soil Mechanics

1. Objective

- To make students understand the basic theoretical aspects and implementation of following topics in the real-world situations: Foundations and Retaining structures.

2. Course outcome

- Upon successful completion of the course, students are expected to be able to design different retaining structures and foundations in different conditions.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination
	Experiments	30	Lab work, Report
External Examination		50	
Total		100	

4. Course outline

Module I (04 Hrs): Shallow Foundation

SHALLOW FOUNDATION: Introduction, Different types of shallow foundations, Calculation of bearing capacity of soil (**Bearing capacity can be checked using Geomecanica Software/ Bearing Capacity Software**), Calculation of settlements of foundations.

Module II (12 Hrs): Mat Foundation Design

Practice Sessions:

- Generation of structural design documents including necessary plans and section of raft/mat foundation using STAAD.Foundation software.
- Calculation of geotechnical data of soil like ultimate soil bearing capacity, depth of footing, water table depth, unit weights, etc. using STAAD.Foundation software
- Service load design of raft/mat foundation using STAAD.Foundation software.
- Structural analysis of raft/mat foundation using STAAD.Foundation software.
- Checks and reinforcement design of raft/mat foundation using STAAD.Foundation software.
- Calculation and design of concrete slab/column connections for general/local/punching shear including effect of unbalanced joint moments using STAAD.Foundation software.

Module III (09 Hrs): Deep Foundation

DEEP FOUNDATION: Introduction, Different types of deep foundations, Design methodology for piles, Calculation of pile capacity, Analysis of pile group, Settlement of pile group, (Checking of pile settlement using **Group Pile Settlement Software**), Concept of negative skin friction, Piles subjected to lateral loads, Pile load test.

Module IV (10 Hrs): Pile Foundation Design

Practice Sessions:

- Calculation of geotechnical data of soil like soil bearing capacity, depth of footing, water table depth, unit weights, etc. of pile foundation in STAAD.Foundation software.
- Service load design of pile foundation using STAAD.Foundation software.
- Structural analysis of pile group using STAAD.Foundation software.
- Checks and reinforcement design of pile foundation using STAAD.Foundation software.
- Design of pile cap using STAAD.Foundation software.

Module V (05 Hrs): Design of Well Foundation

DESIGN OF WELL FOUNDATION: Introduction and construction of well foundation. (Introduction to be given in classroom, design calculation to be done using STADD.Prosoftware).

Practice Session:

12. Design of well foundation using STAAD.Foundation software.

Module VI (08 Hrs): Design of Earth Retaining Structures

DESIGN OF RETAINING STRUCTURES: Introduction, Different types of retaining structures, Stability analysis of rigid walls. (Entire topic to be delivered in classroom teaching mode).

Practice Sessions:

- 13. Design of cantilever sheet piles using STAAD.Foundation software.
- 14. Design of anchor sheet piles using STAAD.Foundation software.

Module VII (12 Hrs): Earth Pressure and Foundation in Difficult Grounds

EARTH PRESSURE: Introduction , Types of Earth pressure, Rankine’s active and passive earth pressure, Smooth vertical wall with horizontal backfill, Extension to Soil, Coulombs wedge theory.

(Entire topic & related numerical problems to be delivered in classroom teaching mode, Mathematical derivations to be limited to classroom activity, it should not be a part of external evaluation).

Practice Session:

- 15. Calculation of Rankine’s active and passive earth pressure (**Using Earth Pressure Coefficient Software**).

FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement, Foundations in swelling soil, Foundations in collapsible soil, Use of soil reinforcement. (Entire topic to be delivered in classroom teaching mode).

E-content:

Text Books:

- 1. Soil Mechanics and Foundation, B.C.Punmia, Ashok Kumar Jain and Arun Kumar Jain, Laxmi, publications Pvt. Ltd., New Delhi.

Reference Books:

- 1. Geotechnical Engineering, C. Venkataramiah, New age International Pvt .Ltd, (2002).
- 2. Geotechnical Engineering, Purushotham Raj, Tata Mcgraw Hill
- 3. Geotechnical Engineering, ManojDutta& S K Gulati, Tata McGraw-Hill Publishers, New Delhi.
- 4. Soil Mechanics and Foundation Engg.K.R. Arora, Standard Publishers and Distributors, Delhi.

5. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading (Book, Video, Online)
Module I				
SHALLOW FOUNDATION: Introduction, Different types of shallow foundations.	1	Lecture		
Calculation of bearing capacity of soil. (Bearing capacity can be checked using Geomechanica Software/ Bearing Capacity Software).	2	Lecture		
Calculation of settlements of foundation.	1	Lecture		
Sub-total (hrs)	04			
Module II				

Generation of structural design documents including necessary plans and section of raft/mat foundation using STAAD.Foundation software.	2	Practice		
Calculation of geotechnical data of soil like ultimate soil bearing capacity, depth of footing, water table depth, unit weights, etc. using STAAD.Foundation software.	2	Practice		
Service load design of mat foundation using STAAD.Foundation software.	2	Practice		
Structural analysis of mat foundation using STAAD.Foundation software	2	Practice		
Checks and reinforcement design of mat foundation using STAAD.Foundation software.	2	Practice		
Calculation and design of concrete slab/column connections for general/local/punching shear including effect of unbalanced joint moments using STAAD.Foundation software.	2	Practice		
Sub-total (hrs)	12			
Module III				
DEEP FOUNDATION: Introduction, Different types of deep foundations.	1	Lecture		
Design methodology for piles, Calculation of pile capacity.	2	Lecture		
Analysis of pile group, Settlement of pile group, (Checking of pile settlement using Group Pile Settlement Software)	3	Lecture		
Concept of negative skin friction, Piles subjected to lateral loads.	2	Lecture		
Pile load test.	1	Lecture		
Sub-total (hrs)	09			
Module IV				
Calculation of geotechnical data of soil like soil bearing capacity, depth of footing, water table depth, unit weights, etc. of pile foundation in STAAD.Foundation software.	2	Practice		
Service load design of pile foundation using STAAD.Foundation software.	2	Practice		

Structural analysis of pile group using STAAD.Foundation software.	2	Practice		
Checks and reinforcement design of pile foundation using STAAD.Foundation software.	2	Practice		
Design of pile cap using STAAD.Foundation software	2	Practice		
Sub-total (hrs)	10			
Module V				
DESIGN OF WELL FOUNDATION: Introduction and construction of well foundation.	3	Lecture		
Design of well foundation using STAAD.Foundation software.	2	Practice		
Sub-total (hrs)	05			
Module VI				
DESIGN OF RETAINING STRUCTURES: Introduction, Different types of retaining structures.	1	Lecture		
Stability analysis of rigid walls.	3	Lecture		
Design of cantilever sheet piles using STAAD.Foundation software.	2	Practice		
Design of anchor sheet piles using STAAD.Foundation software.	2	Practice		
Sub-total (hrs)	08			
Module VII				
EARTH PRESSURE: Introduction, Types of Earth pressure.	1	Lecture		
Rankine's active and passive earth pressure.	2	Lecture		
Smooth vertical wall with horizontal backfill, Extension to Soil, Coulombs wedge theory.	3	Lecture		
Calculation of Rankine's active and passive earth pressure (Using Earth Pressure Coefficient Software).	2	Practice		
FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement.	1	Lecture		

Foundations in swelling soil.	1	Lecture		
Foundations in collapsible soil.	1	Lecture		
Use of soil reinforcement.	1	Lecture		
Sub-total (hrs)	12			
Total (hrs.)	60			

CCCE0402 HIGHWAY ENGINEERING

Pre - requisites	Course Type	Credits
Nil	Theory +Practice	4

Course objectives:

To provide knowledge about the highway planning and the design of highways.

To enable students to gain knowledge on the materials used in the design of highway. To gain knowledge on traffic management.

Course Outcomes:

On successful completion of course students will be able to Carry out the geometric design of the highways.

Identify the properties of the materials used in highway construction and determine the properties in a laboratory.

Perform pavement design for highways. Understand the traffic management.

MODULE - I Planning & Geometric Design of Highways: (15 Hrs)

Modes of transportation, importance of highway transportation and limitations, history of road construction. Principle of highway planning, road development plans, highway alignment requirements, engineering surveys for highway location. Geometric design - Design controls, highway cross section elements, cross slope or camber, road width, road margins, typical cross sections of roads, design speed, sight distance, design of horizontal and vertical alignments, horizontal and vertical curves.

Highway Drainage - surface and sub soil drainage. Failure of pavement, maintenance and strengthening of Highways. **(Most of the topics will be through classroom teaching as well as use of Matlab for programming)**

MODULE - II Highway Materials & Testing: (14 Hrs)

Highway Materials: Properties of sub grade, sub-base, base course and surface course materials, test on sub grade soil, aggregates and bituminous materials. . **(Most of the topics will be through classroom teaching as well as practical)**

Bituminous mix design, low and high volume Road. IRC design method for rigid and flexible pavements by IRC and CBR Methods. . **(Most of the topics will be through classroom teaching as well as practical)**

MODULE - III Traffic Engineering: (13 Hrs)

Introduction to Traffic Engineering - Traffic Survey, Traffic Characteristics, Various Traffic Studies and their application - Traffic Regulations and Controls. Traffic Signals, Design of Signals, Traffic Signs and Road Marking. Traffic Operations - Accident Prevention - Safety Methods - Intersection Design. **(Most of the topics will be through classroom teaching as well as field work)**

Text Books:

1. Highway Engineering, by S.K.Khanna and CEG Justo
2. A course in bridge engineering by Dr. S.P. Bindra

PEDAGOGY

CCCE0403 WATER SUPPLY & SANITARY ENGINEERING

Pre –requisites	Course Type	Credits
Nil	Theory + Practice	4

Course Objectives:

- To enable the students understand about the drinking water quality through experiments.
- To make student understand the sources of drinking water.
- To train students to know the principles of water treatment and to design the treatment units.
- To train students to know the principles of waste water treatment and to design the treatment units.
- To make them understand the quality of sewage generated from different plants.

Course outcomes:

- To understand the principles of water treatment units and the design of the treatment units.
- To understand the principles of waste water treatment and the design of treatment units.
- To understand the distribution network of the drinking water and the treated waste water.
- To understand to treat the waste water and reuse to make an eco-friendly environment.

MODULE 1 (12Hrs) Water Supply Schemes & Demand

- (A) Planning and Execution of modern water supply schemes in Urban and Rural India, Sources- Surface Water and Underground water, Per capita demand, Domestic & Non-Domestic demand, Variation in demands, Design period for different components of a Water Supply System, Population Forecast, Collection, Pumping and Conveyance of water, Calculation of loss of head due to friction and minor losses, Pump and Motors, Quality of potable water. IS Standard. **(Topics related to design period, population forecast and head loss & power calculations will be through project using excel and software)**

MODULE II (12Hrs) Purification and Quality tests

- (B) Purification of water, Screening, aeration, coagulation, treatment and flocculation, Sedimentation, Filtration, Disinfection, Softening, Miscellaneous Treatments, Removal of colour, Odour, taste, Iron, Manganese, Fluoride, Dissolved Salts, Arsenic, Radioactivity, Domestic Water treatment, Distribution System, Design of Size of Pipes in simple distribution system, Valves and Fittings. **(All the topics will be through practice mode)**

MODULE III (18Hrs)

- (C) Systems of sanitation, Planning and Execution of Urban & Rural Sewage system, Collection, conveyance and system of Reuse, Quantity of sewage, Hydraulic design and construction of sewers, Appurtenances. **(Sewer design will be through HEC software)**
- (D) Quality and Characteristics of sewage, Preliminary, Primary, Secondary (Biological), Advanced (Tertiary) Treatment, Disposal and utilization, Principle of Treatment of Industrial Waste Water. **(All the topics will be through video presentation)**

Note: Detailed designs will be taken up in the sessional course related to the above theoretical paper.

Hydrology & Irrigation

Subject Name	Code	Type of course	T-P-PJ	Prerequisite
Hydrology & irrigation	CECC0405	Theory+ practice	2-1-0(3)	Nil

1. Objective

- To develop technical skills in students to make them familiar with hydrology, hydro-meteorology, surface and subsurface water, design water resources structures, surface and subsurface water management, integrated water resources planning, Irrigation processes, flood control, and basic of hydropower generation.

2. Course outcome

- To have knowledge of irrigation implementation on hydrology, water power and water quality along with acquaintance of planning, design, construction and application of irrigation/hydraulic structures in management of surface and subsurface water.
- Project oriented skills shall be gained by students to work efficiently in survey, planning, design and construction in irrigation sector.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination
	Experiments	30	Lab work, report
External Examination		50	Written examination, Report/Viva
Total		100	

4. Course outline

Module- I (06 Hrs)

Hydrology: Hydrological cycle, Types of Rainfall, Precipitation - measurement - average precipitation over a basin- check for consistency of records - double mass curve empirical and rational formulae, evaporation, transpiration, infiltration - Infiltration indices. Runoff - Overland flow.

Practice Sessions:

- Determination of infiltration capacity using double ring infiltrometer.

Module-II (10 Hrs)

Hydrograph: Direct runoff, Base flow, separation of base flow- Hydrograph, Unit hydrograph - Assumptions of Unit hydrograph, derivation of unit hydrograph from Direct runoff hydrograph, Computation of direct runoff hydrograph for different storms using unit hydrograph theory. (Most of the topics will be through video presentation. Topics related to Hydrograph Analysis will be through Practice mode)

Practice Sessions:

- Construction of double mass curve using EXCEL

3. Hydrograph analysis using EXCEL.

Module-III (6 Hrs)

Floods: Definition of (i) Design flood, (ii) Probable Maximum Flood and (iii) Probable maximum precipitation- Recurrence interval and flood frequency distributions.

Module-IV (08 Hrs)

Ground water flow: Specific yield, storage coefficient, coefficient of permeability, confined and unconfined aquifers, Types of aquifers, radial flow into a well under confined and unconfined conditions (only steady state conditions), Yield of a well.

Module-V (6Hrs)

Hydropower Engineering: Dams and their causes of failure, Planning of water resources projects, Single and multipurpose projects, Reservoir Planning: Storage capacity of reservoirs, Yield from reservoir, Mass curve, Reservoir losses, reservoir sedimentation (Basic concept only), Introduction to water power - Definition of terms: (i) Head, Power and efficiency, (ii) Average load, (iii) Peak load, (iv) Plant factor, (v) Pondage - Load curve. Description of components and their functions in a hydro power plant

Module-VI (12 Hrs)

Irrigation Engineering: Water requirements of crops, consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies.

Canals: Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributary canals, most efficient section, lined canals, their design, regime theory - Kennedys and Lacey's theories. lined canals, Water logging - causes and control. **(Canal design will be through practice mode using Excell sheet and open line sources)**

4. Design of irrigation canal using Kennedy's and Lacey's theory.
5. Design of lined canal.
5. Fixing of L-section of the canal.

Module-VII (12 Hrs)

Irrigation Structures: **(All the topics will be through field visit, practice mode only)**

- a. Regulators - Functions of cross regulators, head regulators, canal falls, aqueducts, metering flumes and canal outlets.
- b. Diversion head works- Principles and design of weirs on permeable and impermeable foundation, Khosla's theory- expressions for uplift pressure at key points - Various corrections and their calculations for simple cases.
- c. Storage works: Types of dams, design, principles of rigid gravity, stability analysis.
- d. Spillways: Spillway types, energy dissipation.
- e. River training: Objectives of river training, methods of river training.

Practice Sessions:

6. Apron design for weir on permeable foundations using Khosla's theory.
7. Design of tank surplus weir.
8. Design of vertical drop weir.
9. Design of Notch fall.
10. Design of head regulators.
11. Design of cross regulators.
15. Stability analysis of gravity dam.

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Hydrology: Hydrological cycle – Types of Rainfall(video)	1	lecture	assignment	Book, Video
Precipitation-measurement – average precipitation over a basin.(video)	1	lecture	assignment	Book, Video
Evaporation, transpiration, infiltration – Infiltration indices.	2	lecture	assignment	Book, Video
Determination of infiltration capacity using double ring infiltrometer.	2	practice	assignment	Book
Sub-total (hrs)	06			
Module II				
Runoff -Overland flow, Direct runoff, Base flow, separation of base flow-				

Hydrograph.	1	lecture	assignment	Book, Video
Unit hydrograph - Assumptions of Unit hydrograph, derivation of unit hydrograph from Direct runoff hydrograph.	2	lecture	assignment	Book, Video
Construction of double mass curve using EXCEL	2	practice	assignment	Book
Computation of direct runoff hydrograph for different storms using unit hydrograph theory	1	lecture	assignment	Book, Video
Hydrograph analysis using excels.	4	practice	assignment	Book
Sub-total (hrs)	10			
Module III				
Definition of (i) Design flood, (ii) Probable Maximum Flood	2	lecture	assignment	Book
Probable maximum Precipitation-Recurrence interval and flood frequency distributions.	4	lecture	assignment	Book
Sub-total (hrs)	06			
Module IV				
Ground water flow: Specific yield, storage coefficient, Types of aquifers. coefficient of permeability, confined and unconfined aquifers.	2	lecture	assignment	Book
Radial flow into a well under confined and unconfined conditions	4	lecture	assignment	Book
Yield of a well.	2	lecture	assignment	Book

Sub-total (hrs)	08			
Module V				
Water Resources Engineering: Planning of water resources projects, Single and multipurpose projects. Various Dams and failure of concrete dam	2	lecture	assignment	Book
Reservoir Planning: Storage capacity of reservoirs, yield from reservoir, Mass curve.	2	lecture	assignment	Book
Reservoir losses, reservoir sedimentation (concept only)	1	lecture	assignment	Book
Water power: Introduction to water power – Definition of terms: (i) Head, Power and efficiency, (ii) Average load, (iii) Peak load, (iv) Plant factor, (v) Pondage - Load curve. Description of components and their functions in a hydro power plant.	1	lecture	assignment	Book
Sub-total (hrs)	06			
Module VI				
Water requirements of crops, consumptive use, quality of water for irrigation.	1	lecture	assignment	Book
Duty and delta, irrigation methods and their	2			

efficiencies.(Including Micro-Irrigation)		lecture	assignment	Book
Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributary canals.	2	lecture	assignment	Book
Most efficient section, lined canals, their design, regime theory Kennedys and Lacey's theories.	1	lecture	assignment	Book
Design of irrigation canal using Kennedy's and Lacey's theory.	2	practice	assignment	Book
Lined canals-Water logging - causes and control. Soil Conservation Practices in brief.		lecture	assignment	Book
Design of lined canal.	2	field visit	field study	
Regulators - Functions of cross regulators, head regulators, canal falls,	2	field visit	field visit	Book

aqueducts, metering flumes and canal outlets.

Quality Control and Risk Management in Construction

Course Title	Code	Type of course	Credits	Prerequisite
Quality Control and Risk Management in Construction	CECC0414	theory+ Practice	2-1-0	Nil

Objective

- To make the student realize the necessity of quality control and quality assurance in construction industry.
- To impart the procedures involved in maintaining quality in construction industry and various standards and practices prescribed therefor.
- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check lists.
- To make the student to take up laboratory and field tests for quality assurance for civil engineering structures.

Course Outcome

- Generate quality control schedule for different projects in construction industry.
- Prepare quality control inspection check lists for selected civil engineering structures.

Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Theory	20	Written examination
	Internal Practice	30(20+10)	Lab work + Learning Record
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

Course outline

Module: I Principles of Quality Assessment & Quality Control (QA & QC) (Theory) (8 Hrs)

[Both Internal & External Assessment University Written Test and Sessional Tests.]

Introduction: Quality Control and Quality Assessment - Construction Quality - Purpose & Scope Definition & Evolution of Quality. Factors influencing Construction Quality QualityCircle.Establishing QC Requirements - Setting up a Quality Management System - Total Quality Management - Deming's PDSA Quality Cycle, Juran's Quality Triangle & Triple Role models.Concept of Quality ISO Standards.QualityAudit.Construction Quality Assurance System (CONQUAS).Principles of Quality Control and Quality Assessment. Quality Management System, Quality Control Inspection Process. Quality Assurance & Control: Objective, Regularity Agent - Owner, Contract and Construction Oriented Objectives & Methods. Techniques and Needs of QA / QC.

Module: II Method Statement and Quality Inspection Schedule (Theory & Class Room Practice) [Internal & External Assessment.] (8 Hrs)

Method Statement - Importance and Purpose - Contents of Method Statement.

Practice Session on preparation of Method Statement for given Structure (Buildings, Irrigation Structures and Highway Projects).

Quality Inspection Schedule and importance - General Phases of Inspection Schedule for different Construction Projects - Conventional Residential Building, Multi- storied Buildings, Highway Projects - Concrete Roads, Bituminous Pavements, Elevated and, Ground and Underground Water Tanks, Practice Session on developing Quality Inspection Schedule for given Structure (Buildings, Irrigation Structures and Highway Projects).

Module:III Quality Assessment (QA) Inspection Check Lists (Theory & Class Room Practice) [Internal & External Assessment.] (8 Hrs)

Study of Quality Inspection Check Lists for various construction activities and their importance - Contents to be included - Some Standard Check Lists. Check list for Design Standards and design processes.

Module:IV(12Hrs)

Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.

Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.

Module: V Post Construction QA (Field Practice) [Internal & External Practice Assessment. No written university examination.](8 Hrs)

Study of field tests for Quality Assurance.Study of QC standards for various construction equipment including Concrete batch mixing / Bitumen batch mixing equipment.

Practice Session on Rebound Hammer Test, Ultrasonic Pulse Velocity Test and Core Sampling.

Module: VI Risk Involved in Construction Industry (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination.] (8 Hrs)

Introduction - Definition and Importance of Risk Management studies - Uncertainty Matrix - Importance of Risk Management - Risk Classification and Risk Management Process - Risk causation theories - Risk Identification Process - Preliminary Check List, Risk Events Consequences Scenario - Risk Mapping and Risk Classification - Risk Analysis.

Module: VII Safety Procedures in Construction Industry (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination.](8 Hrs)

Evaluation of Safety Project - Accident causation Theories, Foundations of a Major Injury - Unsafe Conditions and Unsafe Acts. Health and Safety Act and Regulations - Building & Other Construction Workers - Regulation of Employment and Condition of Services Act, 1996, Central Rules 1998.

Safety & Health Management System: Appraisal of construction safety management guidelines in Construction Sector - Safety Policy & Organization. Fire Prevention for different types of buildings Safety precautions in Construction activities, Construction equipment usage.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, Assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Introduction: Quality Control and Quality Assessment - Construction Quality - Purpose & Scope Definition & Evolution of Quality. Factors influencing Construction Quality Circle.	2	lecture	1.1	Handouts

Establishing QC Requirements - Setting up a Quality Management System - Total Quality Management - Deming's PDSA Quality Cycle, Juran's Quality Triangle & Triple Role models. Concept of Quality ISO Standards. Quality Audit.	2	lecture	1.2	Handouts
Quality Audit. Construction Quality Assurance System (CONQUAS). Principles of Quality Control and Quality Assessment. Quality Management System, Quality Control Inspection Process.	2	lecture	1.3	Handouts
Quality Assurance & Control: Objective, Regularity Agent - Owner, Contract and Construction Oriented Objectives & Methods. Techniques and Needs of QA / QC.	2	lecture	1.4	Handouts
Sub-total (hrs)	08			
Module II				
Practice Session 1 on Quality Control Testing Procedure & Quality Control Schedule preparation	2	practice	2.1	Handouts

Practice Session 2 on Generation of sample Quality Control inspection Check list for Design Standards and design processes	2	practice	2.2	Handouts
Practice Session 3 on Generation of sample Quality Control Inspection schedule Check list for formwork for a Building / Irrigation Structure.	2	practice	2.3	Handouts
Practice Session 4 on Generation of sample Quality Control Inspection schedule Check list for concreting in a Residential building / Irrigation Structure/ Highway Projects.	2	practice	2.4	Handouts
Sub-total (hrs)	08			

Module III				
Study of Quality Inspection Check Lists for various construction activities and their importance - Contents to be included - Some Standard Check Lists. Check list for Design Standards and design processes.	2	practice	3.1	Handouts
Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, irrigation Structures and Highway Projects) as per identified Schedule.	3	practice, field studies	field study	Handouts
Practice Session on selection of Quality Inspection check lists for given Structure (Buildings, Irrigation Structures and Highway Projects) as per identified Schedule.	3	practice, field studies	field study	Handouts
Sub-total (hrs)	08			
Module IV				
Importance of Quality Assessment for Materials used in construction Industry and their procurement.	1	lecture	4.1	Handouts
Study of laboratory tests for Quality Assurance. Quality Assessment Testing Procedure (Laboratory Tests) - IS Codes for Testing of Materials and Concrete.	4	practice	4.2	Handouts& IS Codes
Quality Assessment Schedule preparation for Laboratory Tests. Check Lists for Quality Control Testing Procedure & Practice.	2	practice	4.3	Handouts& IS Codes
Practice Session on Material Testing and Testing of Concrete for Quality Assessment.	5	practice	4.4	Handouts& IS Codes
Sub-total (hrs)	12			

Module V				
Study of field tests for Quality Assurance. Study of QC standards for various construction equipment including Concrete batch mixing / Bitumen batch mixing equipment Practice Sessions on laboratory tests, field tests and Field Visits	4	practice, field studies	field study	Handouts& IS Codes
Practice Session on Rebound Hammer Test, Ultrasonic Pulse Velocity Test and Core Sampling.	4	practice, field studies	field study	Handouts& IS Codes
Sub-total (hrs)	08			
Module VI				
Introduction - Definition and Importance of Risk Management studies - Uncertainty Matrix - Importance of Risk Management -	4	lecture	6.1	Handouts& IS Codes
Risk Classification and Risk Management Process - Risk causation theories - Risk Identification Process - Preliminary Check List, Risk Events Consequences Scenario - Risk Mapping and Risk Classification - Risk Analysis.	4	lecture	6.2	Handouts& IS Codes
Sub-total (hrs)	08			

Module VII

Evaluation of Safety Project - Accident causation Theories, Foundations of a Major Injury - Unsafe Conditions and Unsafe Acts. Health and Safety Act and Regulations - Building & Other Construction Workers - Regulation of Employment and Condition of Services Act, 1996, Central Rules 1998.	2	lecture	7.1	Handouts& IS Codes
--	---	---------	-----	--------------------

<p>Safety & Health Management System: Appraisal of construction safety management guidelines in Construction Sector - Safety Policy & Organization. Fire Prevention for different types of buildings</p> <p>Safety precautions in Construction activities, Construction equipment usage.</p> <p>Safety Practices for material handling, Safety Practices for Equipment Operation - Material safety Data Sheets</p>	2	practice, field studies	field study	Handouts & IS Codes
<p>Study of Safety Provisions for selected organizations - National Power Corporation of India Limited, Atomic Energy Regulation Board, NTPC, Godrej & Boyce.</p> <p>Visit to a project site visit for observing and noting the safety provisions adopted.</p>	2	practice, field studies	field study	Handouts & IS Codes
Sub-total (hrs)	08			
Total (hrs)	60			

Computer Aided Design of Steel Structure

Computer aided design of Steel structures	CECC0407	Theory + Practice	2-1-0(3)	Nil
--	----------	-------------------	----------	-----

1. Objective

<ul style="list-style-type: none"> To become familiar with professional and contemporary issues in the design and fabrication of Steel structures
--

2. Course outcome

<ul style="list-style-type: none"> To gain the knowledge of Steel design calculation with relevant Indian Standards To acquire skill of converting clients requirement to structural drawing and BOM by using STADD.PRO.
--

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination
External Examination	Assignment		Report and Presentation
	Internal Practice	30	Report and Viva
	Total	50	
External Examination	End Sem. test	30	Written examination
	External Practice	20	Viva-Voice
Total		100	

4. Course Outline

Module-I (5Hrs): Plastic Analysis

Plastic Analysis: Plastic section modulus, Load factor, shape factor, plastic moment of resistance, upper bound and lower bound theorem

Module-II (10Hrs) Failure Mechanism of beams and Portal Frames

Plastic analysis of fixed beam, continuous beam and simple rectangular portals

Practice Sessions:

1. Failure mechanism of simply supported beams with concentrated loads or udl
2. Failure mechanism of cantilever and fixed beams with concentrated loads or udl
3. Failure mechanism of portal frames with concentrated loads or udl
4. Failure mechanism of simple truss with concentrated loads at the joints

Module-III (10Hrs): Analysis & Design of Braced and Unbraced Industrial Building Using STADD.PRO

Practice Sessions:

5. Design of beam- column by welded and bolted joints
6. Design of column-slab by welded and bolted joints
7. Design of tension members, design of roof truss purlins, rafter, main tie, longitudinal tie, side purlin

Module-IV (9Hrs) Analysis & Design of Column Design of Columns, design of laced and battened column, column bases, slab base and gusseted base

Practice Sessions:

8. Design of gable end column
9. Eve girder

10. Column and gable end braces

Module-V (10Hrs) Column and base Plates and Gantry girders

Practice Sessions:

11. Column base plates and anchor bolts
12. Design of foundation
13. Design of gantry girder

Module-VI (8Hrs) Analysis & Design of Communication Tower using STADD.PRO

Practice Sessions:

15. Design of bracings
16. Design of cross arm

Module-VII (8Hrs) Analysis & Design of Transmission Tower using STADD.PRO

Practice Sessions:

17. Design of body part
18. Design of foundation

Module VI				
Design of bracings	2+2=4	Lecture+ practice	assignment	Text Book
Design of cross arm	2+2=4	Lecture+ practice	assignment	Text Book
Sub-Total (hrs)	08			
Module VII				
Design of body part	2+2=4	Lecture+ practice	assignment	Text Book

Design of foundation	2+2=4	Lecture+ practice	assignment	Text Book
Sub-Total (hrs)	08			
Total (hrs)	60			

Computer Aided Design of Concrete Structure

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Computer Aided Design of Concrete Structures	CECC0408	Theory+ Practice	2-1-0(3)	Nil

1. Objective

- To become familiar with professional and contemporary issues in the design and fabrication of reinforced concrete members.

2. Course outcome

- To gain the knowledge of RCC design calculation with relevant Indian Standards
- To acquire skill of converting clients requirement to structural drawing and BOM by using STADD.Pro.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination
	Assignment		Report and Presentation
	Experiments	30	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination	End Sem. test	30	Written examination
	External Practice	20	
Total		100	

4. Course Outline

Module-I (15Hrs): Analysis Design Detailing of Multi-Storied Building Using STAAD.Pro

Practice Sessions:

- Design detailing of rectangular beam, 'T' and 'L' beam, Design of lintel and sunshades
- Design detailing of Slabs: Design and detailing of one way and two way slabs, circular slab
- Design detailing of Doglegged and cantilever staircase

Module-II (10Hrs) Analysis and Design of column

Practice Sessions:

- Design detailing of Columns: Short and long columns, axial and eccentrically loaded columns
- Design detailing of short columns uniaxial-bending
- Design for torsion, bond and Shear.

Module-III (5Hrs) : Matrix Methods for structural analysis of Trusses and Beams

Basic concepts of Matrix methods of structural analysis: Flexibility and Stiffness method application to simple trusses and beams

Module-IV (6Hrs) Influence Line Diagram of determinate and indeterminate beams

ILD for simply supported, cantilever and overhanging beams; max BM and SF due to moving loads, Graphical representation of

Practice Sessions:

- ILD for simply supported beams
- ILD For cantilever beam
- ILD for continuous beam
- ILD for three hinged arch

Module-V (4Hrs) Three hinged arch and Stiffening girder

Three- hinged arch; analysis for static loads; BM diagrams: influence line diagrams. Suspension bridges with three hinged and two hinged stiffening girders.

Module-VI (10Hrs): Analysis Design Detailing of Water Tank Using STAAD. Pro

Practice Sessions:

11. Design of underground water tank
12. Design of elevated circular and Intze tank

Module-VII (10hrs): Analysis Design Detailing of and Retaining Walls Using STAAD. Pro

Practice Sessions:

13. Design of Retaining Cantilever wall
14. Counter fort Retaining wall

Text Books:

- 1) Reinforced Design by DevdasMenon
- 2) Structural Analysis By R.C Hibbeler
1. Reinforced Concrete design-S. N. Sihna. Tata McGraw-Hill, New Delhi
2. Structural analysis vol-1:S.S.Bhavikatti; Vikas Publication house

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I: Analysis Design Detailing of Multi-Storied Building Using STAAD.pro				
Design detailing of rectangular beam	1	lecture	assignment	Text Book
Design detailing of T' and 'L' beam	2	lecture	assignment	Text Book
Design of lintel and sunshades	2	lecture	assignment	Text Book , Video
Design detailing of rectangular beam, 'T' and 'L' beam	2	practice	assignment	Video
Design and detailing of one way and two way slabs	2	Lecture+ practice	assignment	Text Book
Design and detailing of circular slab	1+1=2	Lecture+ practice	assignment	Text Book

Design detailing of Doglegged	1+1=2	Lecture+practice	assignment	Text Book , Video
Design detailing cantilever staircase	1+1=2	Lecture+practice	assignment	Text Book , Video
Sub-Total (hrs)	9+6=15			
Module II: Analysis and Design of column				
Design detailing of Short and long columns axial and eccentrically loaded columns	1+2=3	Lecture+practice	assignment	Text Book
Design detailing axial and eccentrically loaded columns	2+1=3	Lecture+practice	assignment	Text Book
Design detailing of short columns uniaxial-bending	1+1=2	Lecture+practice	assignment	Text Book
Design for torsion, bond and Shear	1+1=2	Lecture+practice	assignment	Text Book
Sub-Total (hrs)	5+5=10			
Module III: Matrix Methods for structural analysis of Trusses and Beams				
Basic concepts of Matrix methods of structural analysis	1	Lecture	assignment	Text Book
Flexibility and Stiffness method	1	Lecture	assignment	Text Book
Flexibility and Stiffness method application to simple beams	2	Lecture	assignment	Text Book
Flexibility and Stiffness method application to simple trusses	1	Lecture	assignment	Text Book
Sub-Total (hrs)	5			
Module IV: Influence Line Diagram of determinate and indeterminate beams				

ILD for simply supported, cantilever and overhanging beams	1	Lecture	assignment	Text Book
ILD for simply supported beams	1	Practice	assignment	Text Book
ILD For cantilever beam	1	Practice	assignment	Text Book
ILD for continuous beam	1	Practice	assignment	Text Book
ILD for three hinged arch	1	Practice	assignment	Text Book
ILD for simply supported beams	1	Practice	assignment	Text Book
Sub-Total (hrs)	1+5=6		assignment	Text Book
Module V: Three hinged arch and Stiffening girder				
Max BM and SF due to moving loads	1+1=2	Lecture+ Practice	assignment	Text Book
Suspension Bridges with Three- hinged arch; analysis for static loads; BM diagrams: influence line diagrams	1+1=2	Lecture+ Practice	assignment	Text Book
Sub-Total (hrs)	2+2=4			
Module VI: Analysis Design Detailing of Water Tank Using STADD.PRO				
Design of underground water tank	1+2=3	Lecture+ practice	assignment	Text Book, Online source
Design of elevated circular tank	1+2=3	Lecture+ practice	assignment	Text Book, Online source
Design of elevated Intze tank	2+2=4	Lecture+ practice	assignment	Text Book, Online source
Sub-Total (hrs)	4+6=10hrs			
Module VII: Analysis Design Detailing of and Retaining Walls Using STADD.PRO				
Design of Cantilever Retaining wall	2+3=5	Lecture+ practice	assignment	Text Book, Online source
Design of Counter fort Retaining wall	2+3=5	Lecture+ practice	assignment	Text Book, Online source
Sub-Total (hrs)	4+6=10			
Total (hrs)	60hrs			

GIS and Digital Cartography

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
GIS and Digital Cartography	CECC0410	Theory + Practice	2-1-0(3)	Nil

1. Objective

- To become proficient in the construction of geodatabases (GDB) as the fundamental data storage format within all GIS Science.

2 Course outcome

At the end of this course the students will be able to:

- To understand the structure of spatial data including file associations, attribute tables, Metadata, coordinate systems, and projections.
- To develop software skills in programs used for map production in the modern cartographic workflow.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination
	Assignment		Report and Presentation
	Internal Practice	30	Report and Viva
	Total	50	
External Examination	End Sem. Test	30	Written examination
	External Practice	20	Viva-Voice
Total		100	

4. Course outline

Module-I (9Hrs) Introduction to GIS, Components of GIS, Functions and Advantages of GIS, limitations of GIS.

Practice Sessions:

- Introduction to ArcGIS (Overview, Features, About the software, Main user interface, Main menu- Project menu; Layer menu; View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects, Removing data from the map, Projections).
- Building a catalog of geographic data (ArcCatalog, folder connection, inside the catalog, folder location, create a working copy of the data, connect directly to your copy of the data, remove folders that you don't need)

Module-II (11Hrs)

Data Type and Data Structure in GIS. Map Projections: Types of Map Projections.

Practice Sessions:

- Exploring data and adding it to a map (The Contents tab, Explore the contents of the Yellowstone folder, The Preview tab, Yellowstone data in Geography view, Explore the contents of a table, The Metadata tab, add a layer to a map, import metadata, Search for items, map compose)
- Managing a dataset (Define a shapefile's coordinate system, modify attributes in database tables, calculate attribute values in ArcMap, Update the table's metadata, create a layer using the related attributes, Add the vegetation type layer to the map)

5. ArcGIS Graphics language (generalization, symbology, and colour effect, change symbology and use transparency in creative ways)

Module-III (11Hrs)

Data Input: Nature and Source of data, Method of spatial data capture - Primary and Secondary, digitization and scanning method, Techniques and procedure for digitizing

Practice Sessions:

6. Projection (Understanding of projection and coordinate system, projecting a dataset, adding projected dataset into the map, define a projection to the layer)
7. Georeferencing (Basic of georeferencing, Georeferencing a Scanned Image, Assign Projection to the Referenced Image)
8. Topology (Concept of topology, topology in different GIS format, Coverage, shapefile, DXF-Drawing Exchange File, Geodatabase, Topology principle, Topological Error and Correction process, creating personal Geodatabase, creating a features dataset)

Module-IV (9Hrs)

Errors of Digitization, Error in Elimination. Spatial and Attribute Data Model and Management: Spatial, Thematic, and Temporal dimensions of Geographic Data, Conceptual, object-oriented and logical data model.

Practice Sessions:

9. Feature Dataset and Domain (Creating Feature Classes within the Feature Dataset, Creating Domain for the Feature Datasets, Digitizing the Feature Classes, Creating Topology in Arc Catalog, Viewing and Editing the Topology)
10. Google Earth (Introduction to Google Earth, Convert Shape file to KML Format, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, Convert KML File to shape file, overlaying an image into google earth)

Module-V (7Hrs)

Raster and Vector Data Model, Raster versus Vector, advantages and limitation.

Practice Sessions:

11. Buffering and Editing tools (Buffering in ArcGIS, add the data layer, create the buffer, conflation, extend the line, Erase point, Flip line, Snap, trim line, Densify, create a polygon, Create point, Create polygon)
12. Data Conversion Tools (from Excel to Table and table to Excel, GPS-from GPX to

Features, from KML to layer, from PDF to TIFF, from Raster to ASCII/Float/Point/Polygon/Polyline/Video, metadata importer/exporter/translator, Export to CAD features class to coverage, table to the database, CAD to a geodatabase, DEM to raster, LAS dataset to raster, Point/line/polygon to raster, feature class to shape file)

Module-VI (8Hrs)

Attribute data management and Meta Data concept. The concept of Digital Cartography,

Practice Sessions:

13. Open Source Software-QGIS (Overview, Features, About the software, Main user interface, Main menu-Project menu; Layer menu; View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects, Removing data from the map, Projections)

14. Open Source Data-Earth Explorer USGS(Introduction to Earth Explorer web portal, Types of Data available on Earth Explorer, create an account on USGS, Download the Data, Introduction to GloVis, types of data available with GloVis, Download data from GloVis)

Module-VII (5Hrs)

Advantages and Limitations of Digital Cartography, Concept of Map Scales.

Practice Sessions:

15. Open Source Data-Bhuvan(Introduction to Bhuvan web portal, types of data available with Bhuvan, create an account on Bhuvan, Download data.)

6. Reference

Strength of Materials

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Strength of Materials	MECC0411	Theory + Practice	2-1-0(3)	Engineering Mechanics

1. Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on using ANSYS for analysis of various mechanical structures and load transmitting elements.

2. Course Outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy ANSYS to develop mechanical design solutions.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR) + 20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module-I (07 Hrs): Analysis of beams

Shear and Bending Moment in Beams: Types of Beams and Loads, Concept of Shear force, Bending moment and Sign Conventions, Relation Between Load, Shear force and Bending moment, Procedure for Drawing Shear force and Bending moment Diagrams, Point of Contra Flexure.

- Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment
- Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment

Module-II (04 Hrs)

Stresses in Beams: Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination Bending Stresses, Shear Stress Distribution for Different Sections.

- Simulation (Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam

<https://www.youtube.com/watch?v=ekKQvGna0ig>

Module-III (05 Hrs)

Deflection of Beams: Equation of Elastic Curve, Direct Integration Method, Strain Energy Method, Castigliano's Theorem

- Stress & Deflection Analysis of Mechanical Component (Using ANSYS)
- Double Shear Test and Deflection Test Using UTM

Module-IV (06 Hrs): Analysis of Column and Shaft

Column Analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.

6. Simulation(Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam

Module-V (08 Hrs)

Torsion: Torsion Formula, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

7. Simulation(Using ANSYS): Static and Dynamic Analysis of Shaft

8. Simulation(Using ANSYS): Spring Structural Analysis

<https://www.youtube.com/watch?v=rJ2e4DximL0>

9. Simulation(Using ANSYS): Stress Analysis of Suspension System

https://www.youtube.com/watch?v=xI-NqAKZ_60

10. Stiffness Test of a Helical Spring

Module-VI (06 Hrs)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

11. Simulation: Spur Gear Fatigue Analysis in Ansys

<https://www.youtube.com/watch?v=2SGqcLZISQ0>

12. Simulation: Chair Structural Analysis in ANSYS

<https://www.youtube.com/watch?v=DIII8bI-ea8>

13. Simulation(Using ANSYS): Bicycle Frame Structural Analysis

https://www.youtube.com/watch?v=p-CUK_pEfr4

Module-VII (14 Hrs)

Fatigue: Failure under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

14. Fatigue Failure Analysis(Using ANSYS)

<https://www.youtube.com/watch?v=ywDsB3umK2Y>

15. Fatigue Analysis of a Plate With Hole(Using ANSYS)

<https://www.youtube.com/watch?v=c3yM5fT5Ztc>

16. Fatigue Analysis(Using ANSYS) of Crankshaft of Two Wheeler

17. <https://www.youtube.com/watch?v=D0g3dpd-uYM>

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Energy Release Rate, Elastic Stress at the Tip of a Sharp Crack, Crack Growth and Stress Intensity Factor, Critical SIF, Fracture Toughness Testing.

18. Basic Fracture Mechanics

<https://www.youtube.com/watch?v=jJMSvgcZaGA>

19. Fracture Testing

<https://www.youtube.com/watch?v=ESj-162I74E>

20. Fracture Mechanisms - Failure

<https://www.youtube.com/watch?v=hETp6TDi7-k>

21. Tensile Test, Compression Test

Software requirement: ANSYS

Text Books:

1. Strength of materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced mechanics of materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

Module-IV				
Column analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.	4			1.Strength of materials by S.S. Rattan, Tata Mc-Graw Hill Publication

Simulation(Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam	2	Lab practice		
Sub-total (hrs)	06			
Module-V				
Torsion: Torsion Formula, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.	4			1.Strength of materials by S.S. Rattan, Tata Mc-Graw Hill Publication 2. https://www.youtube.com/watch?v=rJ2e4DximL0 3. https://www.youtube.com/watch?v=xI-NqAKZ_60
Simulation(Using ANSYS): Spring Structural Analysis. Stiffness Test of a Helical Spring.	4	Lab practice		
Sub-total (hrs)	08			
Module-VI				
Theories of failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing	2			1.Strength of materials by S.S. Rattan, Tata Mc-Graw Hill Publication 2. https://www.youtube.com/watch?v=2SGqcLZISQ0 3. https://www.youtube.com/watch?v=p-CUK_pEfR4 4. https://www.youtube.com/watch?v=hETp6TDi7-k

Stage.				
Simulation: Spur Gear Fatigue Analysis in Ansys. Simulation(Using ANSYS): Bicycle Frame Structural Analysis	4	Lab practice		
Sub-total (hrs)	06			
Module-VII				
Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.	3			1.Strength of materials by S.S. Rattan, Tata Mc-Graw Hill Publication 2. Advanced mechanics of materials by A.P. Boresi and R.J. Schmidt, Willey India
Fatigue Analysis of a Plate With Hole(Using ANSYS). Fatigue Analysis(Using ANSYS) of Crankshaft of Two Wheeler	4	Lab practice		
Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Energy Release Rate, Elastic Stress at the Tip of a Sharp Crack, Crack Growth and Stress Intensity Factor, Critical SIF, Fracture Toughness Testing.	3			1.Advanced mechanics of materials by A.P. Boresi and R.J. Schmidt, Willey India 2. https://www.youtube.com/watch?v=jJMSvgcZaGA 3. https://www.youtube.com/watch?v=ESj-162174E
Tensile Test, Compression Test	4	Lab practice		
Sub-total (hrs)	14			
Total (hrs)	50			

CCCE 0102 HYDRAULICS AND HYDRAULIC MACHINE

Pre - requisites	Course Type	Credits
FCCE0404 Basic Fluid Mechanics	Theory	3

Course Objectives:

- To introduce concepts of Boundary layers and their significance in day to day applications.
- To apprise the significance of separation and wake formation, its impact in fluid flow systems and the methods of control of separation.
- To impart the phenomenon of lift and Drag of bodies immersed in fluid flow
- Introduction of Air foil theory.
- Introduce the principles of flow in open channels under uniform and critical conditions
- Make the student understand the concept of best economic section and determination of the section of such channels.
- To introduce the principles of conservation of energy and momentum as applied to open channel flows.
- To enable the students towards applying the concepts of Specific energy and Specific force for solving canal transition problems and hydraulic jump analysis.
- To introduce the basis of Gradually Varied Flow profiles and their computation.
- To introduce the principles of turbo machinery and the working of different types of pumps and turbines.
- To enable the student to understand the process of pump selection and installation.

Outcomes: At the end of the course the student will be able to

- Analyse the boundary layer flows and methods of controlling the separation of Boundary layer.
- Determine the lift and drag forces on bodies
- Design channels of best economic section and channels flowing at uniform depth.
- Solve the canal transition problems and the hydraulic jump computations.
- Understand the working principles of centrifugal pumps, reciprocating pumps and turbines (impulse and reaction).
- Determine the dimensions of the Pelton wheel bucket and those of Francis turbine.
- Apply the concept of model studies for determine the size or the power of turbines and different working conditions.

MODULE- I: Boundary Layers, Drag and Lift (13 Hrs)

A. Basic Concepts of Boundary Layer

Development of Boundary Layers on a flat plate - Laminar & Turbulent Boundary Layers, Velocity Distribution with in Boundary Layer - Thickness of Boundary Layer - Viscous Drag - Displacement Thickness, Momentum Thickness and Energy Thickness. Integral Momentum Equation - Drag Coefficients for different velocity distributions in Laminar and Turbulent Boundary Layers. Boundary Layer Separation - Effect of Adverse Pressure Gradient - Control of Boundary Layer Separation

B. Flow Past Immersed Bodies - Drag

Flow past immersed bodies - Pressure distribution around bodies - Circular Disc, Plate held normal

to flow, Cylinder and Sphere. Drag and Lift on bodies - Various types of Drag - Drag Coefficient - Variation of drag with Reynolds number for flow around cylinder, sphere, disc and plate held normal to flow.

C. **Flow Past Bodies - Lift & Air foil Theory**

Circulation - Circulation around an inclined Plate and Aerofoil - Flow around a Cylinder without Circulation - Lift and Drag on Cylinder without Circulation - Flow about a Rotating Cylinder - Magnus Effect- Stagnation Points - Lift and Drag on Rotating Cylinder. Karman Vortex Trail, Introduction to Aerofoil theory.

MODULE- II: OPEN CHANNEL FLOW (11 Hrs)

D. **Introduction & Classification of Open Channel Flows**

Classification of Open Channel Flows - Definition of terms - Wetted Perimeter -Hydraulic Mean Depth - Hydraulic Radius - Prismatic Channel - Velocity and Pressure Distribution in Open Channels- Basic Equations - Chezy's - Manning'sEquation-Manning'sEquationent forCoefficientdifferentBedRoughness. Uniform Flow -Normal Depth - Concept of Most Efficient Sections - Most Efficient Triangular, Rectangular and Trapezoidal Sections.

E. **Energy and Momentum Principles (All discussions w.r.t. to Rectangular channels only)**

Continuity and Energy equations in Open Channel Flows - Specific Energy - Specific Energy Diagram - Alternate Depths - Critical Flow - Froude Number - Critical Depth - Subcritical and Supercritical Flows - Canal Transitions - change in Bed width and Bed level - Minimum Specific Energy - Relationship between Critical Depth and Minimum Specific Energy.

Momentum Principle in Open Channels - Specific Force - Conjugate Depths - Hydraulic Jump - Ratio of Post

- to Pre- jump Depths for Rectangular Channels - Energy Lost in Jump.

F. **Gradually Varied Flow in Open Channels (All discussions w.r.t. to Rectangular channels only)**

Introduction to Varied Flow - Gradually Varied Flow and rapidly Varied Flow - Governing Equation for GVF

- Classification of GVF Profiles - Critical, Mild and Steep Slopes - M1, M2, M3, S1, S2 and S3

Profiles (C1, C3, A2, A3, H2 and H3 Profiles need not be discussed). Computation of GVF Profile - Direct Step Method

MODULE- III: Hydraulic Machines (18 Hrs)

G. **Introduction to Turbomachinery**

Force acting on stationery and moving vanes - series of vanes mounted on a wheel - work done on a rotating wheel. Functions and general working principles of Pumps & Turbines.

Types of pumps - Centrifugal and Reciprocating pumps - Relative Advantages. Selection of type of pump. Classification of Turbines - Impulse and Reaction Turbines - Selection of type of turbine.

H. **Centrifugal Pumps**

Component Parts of a Centrifugal Pump Working Principles - Priming. Work done by impeller - Classification of centrifugal pumps - Minimum starting speed of centrifugal Pumps - Multi stage

pumps. Specific Speed of Centrifugal Pumps - Pump Characteristic Curves. Net Positive Suction Head and Pump installation - Dos and Don'ts of Pump Installation and operation.

I. Reciprocating Pumps

Component parts and working of reciprocating pumps - Different types. Theoretical Discharge - Coefficient of Discharge and Slip. Work done and power required. Indicator diagram - effect of acceleration and friction on work done. Air vessels - Power saved by fitting air vessel. Cavitation and maximum speed at which pump can run without separation.

J. Turbines (Numerical problems on velocity triangles, computations of work done and efficiencies of turbines not to be included in the university examination)

Working principle of Impulse turbines - Pelton wheel - component parts, Work done by Pelton wheel - Definitions of heads and efficiencies - Gross head & Net head - Mechanical, Volumetric & Overall efficiencies. Design aspects of Pelton wheel. Governing mechanism for Pelton wheel.

Reaction turbines - Working principles of reaction turbines - Francis turbine - Component parts - Inward and outward flow turbines - Work done by Francis runner. Efficiency of Francis runner - Mechanical, hydraulic and overall efficiency. Working proportions of Francis runner. Types of Draft tubes - Cavitation in draft tubes. Governing Mechanism for Francis turbines. Working principles of Kaplan, Propeller turbines. (Numerical problems on Kaplan & Propeller turbines not to be part of external examination).

Turbine characteristic curve - Specific Speed, Unit quantities and Model relationships for turbines.

DECP0411 Quality Control in Construction Industry

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0411	Quality Control in Construction Industry	Theory + Practice	4	FCEN0406 Building Materials & Construction	2-3-0

Course Objectives:

- To make the student realize the necessity of quality control and quality assurance in construction industry.
- To impart the procedures involved in maintaining quality in construction industry and various standards and practices prescribed therefor.
- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check lists.
- To make the student to take up laboratory and field tests for quality assurance for civil engineering structures.

Course Outcomes:

After successful completion of the course the students will be able to

- Generate quality control schedule for different projects in construction industry.
- Prepare quality control inspection check lists for selected civil engineering structures.
- Carryout the field and laboratory tests for quality assessment in construction industry.

Module I (Theory) [Both Internal & External Assessment]

Introduction: Quality Control and Quality Assessment - Construction Quality - Purpose & Scope Definition & Evolution of Quality. Factors influencing Construction Quality Quality Circle. Establishing QC Requirements - Setting up a Quality Management System - Total Quality Management - Deming's PDSA Quality Cycle, Juran's Quality Triangle & Triple Role models. Concept of Quality ISO Standards. Quality Audit. Construction Quality Assurance System (CONQUAS). Principles of Quality Control and Quality Assessment. Quality Management System, Quality Control Inspection Process.

Quality Assurance & Control: Objective, Regularity Agent - Owner, Contract and Construction Oriented Objectives & Methods. Techniques and needs of QA / QC.

Module II (Class Room Practice) [Internal & External Practice Assessment. No written university examination]

Practice Session on Quality Control Testing Procedure & Quality Control Schedule preparation Practice Session on Generation of sample Quality Control inspection Check list for Design Standards and design processes. Practice Session on Generation of sample Quality Control Inspection schedule Check list for form work for a Building / Irrigation Structure.

Practice Session on Generation of sample Quality Control Inspection schedule Check list for concreting in a Residential building / Irrigation Structure

Practice Session on Generation of sample Quality Control Inspection schedule Check list for various works connected with a Highway project.

Module III (Laboratory & Field Practice) [Internal & External Practice Assessment. No written university examination]

Study of laboratory and field tests for Quality Assurance. Study of QC standards for various construction equipment including Concrete batch mixing / Bitumen batch mixing equipment. Practice Sessions on laboratory tests, field tests and Field Visits

Resources List

1. Quality Control in Construction Industry
2. SDGC Contractor QC Plan Template
3. Common Mistakes in Construction Phase
4. Quality Control Process
5. Concrete Distress
6. Construction QC Inspection Report
7. Durability & Deterioration of Concrete
8. Health Assessment of RC Structures
9. Quality Inspection & Control
10. irc.gov.in.sp.011.1984
11. QA & QC Manual Dept of WS & Sanitation - Punjab

DECP0412 Geotechnical Investigations

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0412	Geotechnical Investigations	Theory + Practice	5	CCCE0101 Geotechnical Engineering - II	2-3-0

Course Objectives:

- To make the student realize the importance of geotechnical investigations in construction industry.
- To enlighten the student with the subsurface geotechnical exploration methods and the processes.
- To appraise various impart the procedures of geotechnical investigations for varying soils.
- To give hands on practice to the students in carrying laboratory and field tests during the geotechnical investigation process.
- To involve the student in the boring, drilling, trial pitting and preparation of geotechnical investigation reports.

Course Outcomes:

After successful completion of the course the students will be able to

- Plan geotechnical investigations before constructing a structure.
- Conduct the laboratory and field tests as a part of geotechnical investigations.
- Analyze the geotechnical investigation test data and prepare a report for selected categories of structures.

Module I (Theory) [Both Internal & External Assessment]

Introduction: Importance of Geotechnical Investigations - Approaches to Site Investigation and Sequence of Geotechnical Investigations

Planning of Geotechnical Investigations: Planning Trial Pitting, boring and drilling.

Subsurface Exploration Necessity & Objectives and Types of Subsurface Explorations.

Suitability of different investigation procedures for Shallow & Deep Investigations, Soft Marine Clays & Expansive Soils and Liquefiable soils & Lateritic deposits

Module II (Class Room & Laboratory Practice) [Internal & External Practice Assessment. No written university examination]

Sampling and Sample Analysis: Study of Testing methods (laboratory tests) - Sample Sizes, equipment / apparatus for different tests and Soil Disturbance during Sampling & its effect.

Undisturbed Sampling Techniques: Study of Standards available, relevant codes and Sampling, laboratory testing, and in situ testing requirements.

Reporting Geotechnical Investigation Data: Preparation of Geotechnical Investigation Reports for Major Projects - Dams, Hydroelectric Projects and Railway Projects.

Module III (Laboratory & Field Practice) [Internal & External Practice Assessment. No written university examination]

Field Visit for observing Boring, Drilling, Probing and Trial Pitting, Field Visit for Undisturbed Sampling and Analysis of field test data.

Resources List

1. IGS-TC04-GI-Manual 2016
2. IS SP7 (NBC- 2005)
3. Site Investigation (Clayton, Matthews and Simons)
4. Writing Geotech Investigation Report

DECP0413 Safety & Risk Management in Construction Industry

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0413	Safety & Risk Management in Construction Industry	Theory + Practice	4	FCEN0406 Building Materials & Construction	1-3-0

Course Objectives:

To appraise the student with the causes of risks involved in construction industry and the safety provisions as per IS codes.

To enlighten the student with Safety measures to be undertaken in construction industry.

To appraise the need of various insurance schemes that are being operated in an industry.

Course Outcomes:

After successful completion of the course the students will be able to

Plan a set of constructional activities eliminating risk in execution of a constructional activity.

Carry out the constructional activities in civil engineering works following prescribed safety measures.

Realize the necessity and significance of insurance in construction industry.

Module I (Theory) [Both Internal & External Assessment]

Introduction – Definition and Importance of Risk Management studies - Uncertainty Matrix - Importance of Risk Management - Risk Classification and Risk Management Process - Risk causation theories - Risk Identification Process - Preliminary Check List, Risk Events Consequences Scenario - Risk Mapping and Risk Classification - Risk Analysis.

Evaluation of Safety Project - Accident causation Theories, Foundations of a Major Injury - Unsafe Conditions and Unsafe Acts. Health and Safety Act and Regulations - Building & Other Construction Workers - Regulation of Employment and Condition of Services Act, 1996, Central Rules 1998.

Module II (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination]

Safety & Health Management System: Appraisal of construction safety management guidelines in Construction Sector - Safety Policy & Organization - Safety Budget - Education & Training - Safety Plan, Safety Manual - Safety Committee - Incentive Programmes - Accident Reporting, Investigation & Record Keeping. Safety Inspection and Safety Audit - Workers' Health & First Aid & Facilities.

Preparation of reports for safety code provisions for some construction activities as per IS Codes.

Fire Prevention for different types of buildings

Safety precautions in Construction activities, Construction equipment usage. Managing electrical systems on site housing for staff, site office etc

Safety Practices for material handling, Safety Practices for Equipment Operation - Material safety Data Sheets

Study on Occupational Safety and Health Administration

Study of Safety Provisions for selected organizations - National Power Corporation of India Limited, Atomic Energy Regulation Board, NTPC, Godrej & Boyce.

Visit to a project site visit for observing and noting the safety provisions adopted.

Module III (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination]

Insurance in Construction Industry - Fundamental Principles of Insurance - Insurance Policies for Typical Construction Organization - Project Insurance - Fire Policy, Plant & Machinery Insurance, Liquidity Damages Insurance.

Code of Practice for Contractors on General Safety Requirements, IS Code Provisions for Construction Safety Practices - SP 70 (2002), IS Safety Codes for: Excavation (3696 Parts 1 & 2, 3764-1992), Demolition of Buildings (4130-1991), Construction involving Hot Bituminous (5916 -1970), Working with Construction Machinery (7293 -1974), Erection of Structural Steel Work (7205-1974), Piling & Deep Foundations (5121-1969) Erection of Concrete Structures (8989-1978), Construction, Operation and Maintenance of River Valley Projects (10386 Parts 4, 7 and 10)

Resources List

1. P.M. Book
2. Project Risk Management - An Overview
3. Risk Management - Washington State DOT
4. Risk Management
5. Risk Management in Construction Project Networks - Finland
6. Case Studies
7. ABC of Construction Safety - Oregon
8. Handbook on Building Fire Codes
9. Health & Safety in Construction - UK
10. IS Codes for Safety Requirements
11. NTPC Safety Rules
12. Safety, Health & Environmental Issues - US
13. Insurance

DECP0414 Construction Equipment Management

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0414	Construction Equipment Management	Theory + Practice	4	FCEN0406 Building Materials & Construction	1-3-0

Course Objectives:

To enlighten the student with various equipment used in construction industry including selection criterion and economics of the same.

To appraise the student with the aspects related to functioning, operation and maintenance of various construction equipment.

Course Outcomes:

After successful completion of the course the students will be able to

Identify the particular equipment to be used in the construction project they will undertake.

Prepare plans for economic management of the equipment in the projects they undertake.

Module I (Theory) [Both Internal & External Assessment]

Introduction: Planning & Selection of Equipment - Equipment classification - Selection criteria & Source of Information

Economics of Equipment: - Down Time Cost & Obsolescence Cost - Equipment Value, Depreciation, Owning & Operation Cost.

Time Factors & Equipment Life: Equipment Time - Down Time & Cycle Time. Equipment Life - Economic

Life, Useful Life, Operating Life and Working Life

Equipment Management & Procurement: Equipment Management Check List - Equipment Order and Invoice - Equipment Maintenance sheets and Log Book.

Module II (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination]

Practice based study on the functions, operational process, specifications for different constructional equipment

- ✓ Road Making Equipment, Material Handling Equipment and Grading Equipment
- ✓ Batching Plant, Concreting Equipment & Slip form Equipment
- ✓ Hauling, Tunneling and other Equipment
- ✓ Excavation & Embankment Making Equipment and Grading Equipment
- ✓ Batching & Mixing Equipment, Concreting Equipment & Slip form Equipment and Asphaltic Equipment
- ✓ Material Handling Equipment and Hauling & Hoisting Equipment
- ✓ Pile Driving Equipment and De-watering Equipment

Module III (Class Room & Field Practice) [Internal & External Practice Assessment. No written university examination]

Practice based study & discussion on Materials Management

- ✓ Basics of Materials Management
- ✓ Inventory Management
- ✓ MRP

Resources List

1. Construction Equipment-James E.Russel, Prentice Hall
2. Construction Planning and project management-Neeraj K.Jha

DECP0211 Pre-Fabricated Structures

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0211	Pre-Fabricated Structures	Practice	4	Nil	0-4-0

Course Objectives:

To enlighten the student with emerging technology of prefabrication in construction industry including various processes involved there upon.

To give hands on experience in planning some prefab elements in a simple units like that of a compound wall construction.

Course Outcomes:

After successful completion of the course the students will

Become knowledgeable regarding the processes of planning, production, storage, transportation and site installation of various prefabricated units pertaining to a civil engineering construction project.

Topics / Practice Sessions

Introduction: Need & Materials used in prefabrication. Advantages of Prefabrication Classification of Precast methods based on Construction type, Character of elements and Structural Scheme.

- Prefab Components, Standardization of components.

Practice Session 1: Study and report generation on Formwork for prefabrication Requirements of good formwork and Types of formwork.

Practice Session 2: Study and report generation on Prefabrication of RCC structures

- ∨ Stages of manufacturing / Components / Curing,
- ∨ Demolding & lifting / Storage & Transportation.

Practice Session 3: Study and report generation on Methods of RC Building erection

- ∨ Box - Type Blocks / Large Block Building, Multi - story Frame Buildings,
- ∨ Different Erection methods of Roofs, Columns and Foundation slab.

Practice Session 4: Study and report generation on Steel fabrication

- ∨ Workshop layout / Template & Marking and
- ∨ Pressing & Forming.

Practice Session 5: Study and report generation on Erection of Steel Structures

- ∨ Elements of erection / Types of erection and
- ∨ Longitudinal & Unit methods of assembly.

Practice Session 6: Field Practice on Production of Prefab Units for Compound Wall Construction.

Practice Session 7: Field Visit to any prefab unit and prepare a report on various aspects of prefabrication process followed.

Practice Session 8: Case study on low cost housing units.

Practice Session 9: Study and report generation on Modular Construction

Practice Session 10: Field Visit to Prefab unit of Hume Pipe Production

DECP0611 Repairs, Renovation, Rehabilitation of Buildings

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0611	Repairs, Renovation, Rehabilitation of Buildings	Practice + Project	5	Nil	0-2-3

Course Objectives:

To enlighten the student with emerging technology of prefabrication in construction industry including various processes involved there upon.

To give hands on experience in planning some prefab elements in a simple units like that of a compound wall construction.

Course Outcomes:

After successful completion of the course the students will

Become knowledgeable regarding the processes of planning, production, storage, transportation and site installation of various prefabricated units pertaining to a civil engineering construction project.

Topics / Practice / Project Sessions

Introduction: Understanding the concepts of durability and degradation of concrete structures - Defect identification / Action of chemical attack. Different types of damages to the concrete structures in normal and marine environment.

Corrosion control methods: Material Selection, Improvements in material - Design procedure, Alteration of environment, Cathodic & Anodic protection and Coatings

Strengthening concrete: Surface impregnation by vacuum methods / Slurry injection, Plate bonding, RCC Jacketing / Propping and supporting, Fiber wrap technique and Chemical and electro- chemical methods of repair.

Conservation of Heritage Buildings: Brief History of Conservation - Criteria for listing of Heritage Building - Grading of Heritage Buildings. Case Studies

Practice Session 1: Study session on Crack Diagnosis and its appraisal - Reasons for crack development / Crack prevention, Monitoring & Measuring Crack propagation and preparing a report on crack repairing techniques.

Practice Session 2 (Practice cum Project): Study session on Natural hazards & Renovation - Natural Hazards, Housing Vulnerability and Risk of Damage to House Types, Seismic Upgradation of Buildings, Damage Control & Building Performance Levels and Structural & Non- structural Performance Levels

Practice Session 3 (Practice cum Project): Study session on Rehabilitation & Retrofitting and their necessity - Leakage arrest & Water proofing and Termite treatment

Practice Session 4: Study and report preparation on strengthening of different structural elements - Columns, Beams, Slabs and Foundation treatment.

Practice Session 5 (Practice cum Project): Visits to different buildings in JITM campus (or outside) and identify the repairs needed and to prepare a report repair schedule.

Practice Session 6: Study and Report preparation Repair methods using Cement Mortars / Polymer Modified Cement Mortars, Chemical & Electro-chemical Methods.

Practice Session 7 (Project): Special consideration in toilets, plumbing fittings, electrical drawings, choosing interiors, aesthetics, false ceiling, partitions etc.

Practice Session 8: Discussion on Manual on Condition Assessment of Buildings for Repair & Upgrading.

Practice Session 9: Statutes and acts - Model Building Bye-laws, Ancient Monuments & Archeological Sites & Remains Act 2010, Permissions in Prohibited and Regulated Areas

Practice Session 10: Study & Report preparation on Renovation Methodology for different elements of a Building

DECP0311 Design Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DECP0311	Design Project	Project	4	Not before Semester 4	1-3-3

Course objective:

- To enable the student understand the basic principles of Project Management
- Make the student familiarize with the activities involved in a civil engineering construction project
- To mold the student for taking up a major project through applying the M.S. Project 7 (or higher version) software.

Course Outcomes:

- After successful completion of the course the students will be able to
- Identify various activities of a construction project and the critical path for executing the same.
- Carry out a major project and prepare a document that contains all aspects of a construction project.

Students shall take any one of the following projects for practice

- Simple Residential Building with GF + FF
- Auditorium with Gallery and Indoor Sports Building
- Box Culvert / Pipe Culvert
- Water Tank
- Two lane highway.

Each of the projects are to be carried out using M. S. Project 7 software (or higher version) covering the below listed tasks. One report on each of the listed activities to be submitted. However, in case of Highway Project the appropriate Work Breakdown Structure is to be carried out.

Activities to be covered during the project

- i. Work Breakdown Structure
 - a. Site Clearance, Foundations
 - b. Form work, Concreting
 - c. Superstructure construction
 - d. Plumbing and others
- ii. Activities and Events Identification
 - a. Predecessor and Successor
 - b. Various Time Durations of Activities and Gant Chart
- iii. Network Development & Critical Path Search
 - a. Network Diagram
 - b. Slack Times, Critical Events and Critical Path
- iv. Resource Identification
 - a. Equipment and Human Resources

Note: The students take up other activities also related to Construction Project during their Major Project.

DEET0300 Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0300	Project	Project	6	Not before Semester 4	0-0-6

Students take up group projects and deal the following activities during the course of their project. The project Report should contain the reports of the activities and the explanation of the activity, how the same is taken up and the outcome of the activity.

- i. Functional Planning of the project,
- ii. Preparation of documents and notices required for obtaining Environmental clearance,
- iii. Preparing working drawings using Auto CAD, Revit & STAADPRO (for Reinforcement Drawing),
- iv. Listing of Specifications, Rate Analysis and Estimating using Estimator Software,
- v. Resource Scheduling & Levelling,
- vi. Preparing Quality Control checks and Quality Inspection sample reports specific to the project,
- vii. Identifying the possible Risks involved (specific to the project) and listing the Safety Measures,
- viii. Preparing sample M - book and Muster Role (Form 21),
- ix. Tendering Process, and Development of Contract Agreement during their Major Project and
- x. Project Closure.

DEET0800 Internship

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0800	Internship	Practice	4	Not before Semester 4	- -

Students to select a construction firm and obtain training (for about 8 to 10 months) on the works that are being carried out there. They are required to prepare set of different reports on the activities in which they received training. The activities should invariably involve the aspects related to planning and design apart from the topics covered in various subjects of the domain. One report on each of the activities is to be submitted individually even if a group of students work in the same site. The reports should be certified by the authorized technical personnel of the organization.

Domain D17 - Planning, Design & Drawing

S. No.	Course Code	Course Title	Course Nature	Credits	Prerequisite
1	DEPD0231	Computer Graphics	Practice	6	FCEN0406 Building Materials & Construction
2	DEPD0232	Architectural Design	Practice	6	FCEN0406 Building Materials & Construction
3	DEPD0431	Computer Aided Design of Advanced Concrete Structures	Theory + Practice	5	CCCE0405 Analysis & Design of RCC Structures
4	DEPD0433	Computer Aided Design of Advanced Steel Structures	Theory + Practice	5	CCCE0406 Analysis & Design of Steel Structures
5	DEPD0132	Design of Earthquake Resistant Structures	Theory	4	CCCE0405 Analysis & Design of RCC Structures & CCCE0406 Analysis & Design of Steel Structures
6	DEPD0331	Design Project	Project	4	Not before Semester 4
6	DEET0300	Project	Project	6	Not before Semester 4
7	DEET0800	Internship	Practice	4	Not before Semester 4
			Total	40	

DEPD0231 Computer Graphics

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0231	Computer Graphics	Practice	6	FCEN0406 Building Materials & Construction	0-6-0

Course Outcome:

The students benefit by learning software which helps them to draw complicated drawings and also helps in producing detail drawings in proper scale.

The students benefit by learning software which helps them to better visualize complicated forms and also helps in producing photo realistic images of those 3D forms.

Module I: Introduction to computer aided 2D drafting Understanding the use of drawing tools, object editing, drawing objects, filling and setting drawing units, scales, limits that size and dimensioning, texting. Setting up of drawings of various simple architectural objects with complete text and dimensioning.

Module II: Advance computer aided 2D Drafting Advance command programming – transparent overlays hatching utilities, assigned colour and line type, use of multiline, style, block, symbol Library manipulation for accurate drawings, incorporating the above said utilities. Exercise to identify and visualize a building using softwares like AutoCAD

Module -III (Introduction to 3d modeling)

Create 3D sculpture using 3D primitives (cubes, spheres etc.) Tools: Slide facilities script attributes, V-port, editing session. Introduction to 3D-modelling technique and construction planes, drawing objects, 3D surfaces setting up elevation thickness and use of dynamic projections. Solid modeling with primitive command and Boolean operation.

Module –IV (3d rendering and setting)

Visualize a building. Explore the potential of lights and camera and use the same in the model created for the final submission. Tools: Rendering and scene setting to create a photo realistic picture, understanding material mapping, environment setting and image filling. Exercise to identify and visualize a building using the above said utilities. 3D modeling software’s like sketch up, Autocad, revit, etc

Sessional work: Assignments and drawing on the above topics.

DEPD0232 Architectural Design

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0232	Architectural Design	Practice	6	FCEN0406 Building Materials & Construction	0-6-0

Course Objective:

Civil Engineering students are being introduced Architectural planning part for developing better understanding and execution of a Project. In the initial phase, planning concept, need based design and overall exposure to anthropometric data will be given.

Course Outcome:

Students will be able to do the design of any building by not only considering the plan but also the climate of the area.

The ideas / concepts learned in Basic Design and other related subjects have to be carried forward into the architectural design now envisaged. The exercises may be taken up as mentioned herein.

1. Small projects such as small house, canteen, clinic, study centre, Guest house, etc. may be given to the students as a design project. The requirements and their areas are to be stipulated by the design teacher. The students accompanied by the design teacher should visit at least two existing buildings as case studies. Notes should be made on these in reference to its flow of operation. Climatic angles should be observed, particularly in case of a house design. Materials used must also be observed.
2. A one week workshop on the design of a Bus stand, pavilion in a park or similar size small project should be done under the supervision of an outside teacher.
3. A two day design examination should be conducted at the end of the semester.

DEPD0431 Computer Aided Design of Advanced Concrete Structures

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0431	Computer Aided Design of Advanced Concrete Structures	Theory+ Practice	5	CCCE0405 Analysis & Design of RCC Structures	2-3-0

Module-1 (22hrs)

Retaining Walls: Design of cantilever and counterfort retaining walls.

Water Tanks: Underground rectangular tanks – Overhead circular and rectangular tanks,

Intze tanks – Design of staging and foundations

Module-II (16hrs)

Piles and Pile caps: Design of bored cast in situ piles (bearing and friction types), under reamed piles.

Pile Cap design.

Building frames: Introduction, member stiffness, loads, analysis for vertical and lateral loads,

Torsion in buildings

Ductility of beams, design and detailing for ductility, design examples.

Module-III (12hrs)

Flexural strength of pre-stressed concrete section: Types of flexural failure, Strain compatibility method, Flexural strength using IS code Design of pre-tensioned and post tensioned flexural members

Resources List

1. S. R. Karve and V. L. Shah, Illustrated Design of Reinforced Concrete Buildings, Structures Publishers
2. .N. Krishnaraju, Prestressed concrete, Tata McGraw-Hill, New Delhi-2004.
3. S. Unnikrishna Pillai and Devdas Menon, Reinforced Concrete Design, Tata McGraw Hill

DEPD0432 Computer Aided Design of Advanced Steel Structures

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0432	Computer Aided Design of Advanced Concrete Structures	Theory+ Practice	5	CCCE0406 Analysis & Design of Steel Structures	2-3-0

Module I

Design of gantry girder considering lateral buckling as per IS: 800. Design of Plate girders: Design of webs & flanges, Concepts of curtailment of flanges – Riveted & welded web stiffeners, web flange splices - Riveted, welded& bolted. Design of crane girder

Module II

Complete design of an industrial and office steel buildings including Column bracket, Mills buildings, Mill bent with constant moment of inertia, Lateral and longitudinal bracing for column bent Roof and side coverings Design of purlin and elements of truss, end bearing

Module III

Design of elevated water tanks, Design of staging and foundation. Tee covers Plates Stays, Longitudinal and transverse beams, Design of staging Base plates Foundation and anchor bolts, Design of transmission and communication towers

DEPD0132 Design of Earthquake Resistant Structures

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0132	Design of earthquake Resistant Structures	Theory	4	CCCE0105 ANALYSIS & DESIGN OF RCC STRUCTURES, AND CCE0400 ANALYSIS & Design of Steel Structures	4-0-0

Module-I (18hrs)

Concept of inertia and damping Types of Damping: Difference between static forces and dynamic excitation Degrees of freedom SDOF idealization – Equations of motion of SDOF system for mass as well as base excitation Free vibration of SDOF system Response to harmonic excitation Impulse and response to unit impulse Duhamel integral

Two degree of freedom system Normal modes of vibration Natural frequencies Mode shapes Introduction to MDOF systems decoupling of equations of motion Concept of mode superposition (No derivations).

Module-II (20hrs)

Elements of Seismology: Causes of Earthquake Geological faults Tectonic plate theory Elastic rebound Epicenter Hypocentre Primary, shear and Raleigh waves Seismogram Magnitude and intensity of earthquakes Magnitude and Intensity scales Spectral Acceleration Information on some disastrous earthquakes.

Design earthquake concept: Response and design spectra, peak acceleration Site specific response spectrum Effect of soil

Properties and damping Liquefaction of soils Importance of ductility Methods of introducing ductility into RC structures.

Module-III (12hrs)

Design Methodology: IS 1893, IS 13920 and IS 4326 Codal provisions Design as per the codes Base isolation techniques Vibration control measures Important points in mitigating effects of earthquake on structures.

DEPD0331 Design Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEPD0331	Design Project	Practice + Project	4	Not before Semester 4	1-3-3

(Any one of the following) (4 Credits) - Project Course - Class Room, Field Data Collection & Computer Lab.

- a. Bridge / Culvert Project (Topics to be covered in Project)
- b. Hydroelectric Project
- c. Commercial / Hospital / Educational Complex Project
- d. Industrial steel structure building/ steel structure office buildings

- a. Bridge / Culvert Project (Topics to be covered in Project)
 - i. Functional Planning
 - ∗ Traffic Studies
 - ∗ Hydro- technical Studies
 - ∗ Geotechnical Studies
 - ∗ Environmental Considerations
 - ii. Alternatives for Bridge Type
 - iii. Bridge Selection and Detailed Design
 - ∗ Bridge Slab Design - RCC Slab
 - ∗ Steel Beam Design
 - ∗ Column and Foundation Design
- b. Hydroelectric Project (Topics to be covered in Project)
 - i. Functional Planning
 - ∗ Hydrological Studies
 - ∗ Site Selection
 - ∗ Geotechnical Investigations to be carried out
 - ∗ Environmental Considerations
 - ii. Cost - Benefit Studies
 - iii. Selection of type of Dam and Detailed Design
 - ∗ Hydraulic Design of Dam & Stability Analysis
 - ∗ Spillway Design
 - ∗ Powerhouse Layout
 - ∗ Ancillary Structures (Surge Tank, Anchor Blocks etc)
- c. Commercial / Hospital / Educational Complex Project (Topics to be covered in Project)
 - i. Functional Planning
 - ∗ Facilities Planning
 - ∗ Site and Layout Planning
 - ∗ Geotechnical Studies
 - ∗ Services Planning
 - ii. Structural Design
 - iii. Marketing Strategies
- d. Industrial steel structure building/ steel structure office buildings
 - i. Functional Planning
 - ∗ Planning of building as per bye laws
 - ∗ Materials for construction
 - ∗ Structural Design for foundation
 - ∗ Structural Design for superstructures

DEET0300 Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0300	Project	Project	6	Not before Semester 4	0-0-6

DEET0800 Internship

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0800	Internship	Practice	4	Not before Semester 4	- -

Students to select an architecture firm and obtain training (for about 8 to 10 months) on the works that are being carried out there. They are required to prepare set of different reports on the activities in which they received training. The activities should invariably involve the aspects related to planning and design apart from the topics covered in various subjects of the domain. One report on each of the activities is to be submitted individually even if a group of students work in the same site. The reports should be certified by the authorized technical personnel of the organization.

Domain D20 - Smart City Planning

S. No.	Course Code	Course Title	Course Nature	Credits	Pre-requisite
1	DESP0921	Remote Sensing and Image Processing	Theory + Practice + Project	6	Nil
2	DESP0922	Surveying for Civil Projects		6	CCCE0407 Advanced Surveying
3	DESP0923	GIS & Digital Cartography		6	CCCE0407 Advanced Surveying
4	DESP0221	LIDAR Application	Practice	3	CCCE0407 Advanced Surveying
5	DESP0621	Smart City Planning	Practice + Project	5	DESP0923 GIS & Digital Cartography
6	DESP0321	Design Project (RS & GIS based Natural Disaster management project)	Project	4	Not before Semester 4
7.	DEET0300	Project	Project	6	Not before Semester 4
8.	DEET0800	Internship	Practice	4	Not before Semester 4
			Total	40	

DESP0921 Remote Sensing and Image Processing

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0921	Remote Sensing And Image Processing	Theory + Practice + Project	6	Nil	1-3-3

Theory:

Introduction, Basic concepts of remote sensing, Airborne and space born sensors, Passive and active remote sensing, EMR Spectrum, Energy sources and radiation principles, Energy interactions in the atmosphere and earth surface, Spectral reflectance curves, Polar orbiting satellites, Spectral, radiometric and spatial resolutions, Multispectral, thermal and hyperspectral sensing.

Practice

Digital Image Processing - Image restoration, Image enhancement and Information extraction, Image processing software, Digital Elevation Modelling.

DESP0922 Surveying for Civil Projects

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0922	Surveying For Civil Projects	Theory + Practice + Project	6	CCCE0407 Advanced Surveying	1-3-3

Course Objective: Students are enabling to get exposure to do live projected Related to Dams, Railways, Highways, Water resources using GIS.

Course Outcome: Graduates will demonstrate an ability to identify, formulate and solve civil engineering problems.

Theory:

Reconnaissance (To determine the feasibility and rough cost of the scheme), Preliminary Survey (For collecting more precise data), Location Survey (For setting out the work on the ground). Site survey and orientation for different civil projects (Railway, Highway, Airport Planning, dam, watershed planning, Railway Bridge, Highway Bridge and commercial buildings).

Practical: Site Investigation/Supervision (field visit exposure)

DESP0923 GIS & Digital Cartography

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0923	GIS & Digital Cartography	Theory + Practice + Project	6	CCCE0407 Advanced Surveying	1-3-3

Course Objectives:

This course offers an introduction to methods of managing and processing geographic information. Emphasis will be placed on the nature of geographic information, data models and structures for geographic information, geographic data input, data manipulation and data storage, spatial analytic and modeling techniques, and error analysis.

To make students in depth knowledge in GIS and its application.

To make students familiarize with advance tools and techniques for analysis in GIS.

Course Outcome:

To solve practical problems using GIS and its extension

After completion of the course student will be able to do several digitization related projects and will be able to create maps in GIS softwares.

Theory:

GIS, Components of GIS, Variables - points, lines, polygon, Functionality of GIS, Areas of GIS application, Advantage and Limitation of GIS, GIS Data: Spatial and Attribute Data, Information Organization and Data Structures - Raster and Vector data structures, Data file and database, GIS Data Input: Nature and Source of data, Method of spatial data capture - Primary and Secondary, digitization and scanning method, Techniques and procedure for digitizing, Errors of Digitization, Error in Elimination, Attribute data capture. Concept of Digital Cartography, Advantages and Disadvantages of Digital Cartography, Concept of Map Scales: Defining Map, Projection Systems, Categories of maps, Map Scales.

Practical:

Creating GIS Database: GIS Software's, file organization and formats, Geo-database, Rectification, Digitization and Map Composition, Data Editing: Detecting and correcting errors, Re-projection, Transformation and Generalization, Edge matching and Rubber sheeting, Topology, Conversion from Other Digital Sources. Define map scale and projection system, Map composition, Visualization of geospatial data- 2D and 3D visualization

DESP0221 LIDAR Application

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0221	LIDAR Application	Practice	3	CCCE0407 Advanced Surveying	0-3-0

Course Objectives:

Application of LIDAR technique for linear and elevation measurement also for multiple use geospatial management and planning plans.

Application of LIDAR technique to get 3D map and terrain information.

To enable students to know about 3D Experience Platform and Catia.

Course Outcomes:

Students will be able to know about LIDAR and its application

Students will be more skilled in CATIA Civil module

Practical:

LIDAR, LIDAR Data Formats, LIDAR Data Collection, Alternatives to Aerial, Atmospheric LIDAR, LIDAR Data Fusion, LIDAR Accuracy, GRASS LIDAR Tools, FUSION LIDAR Tools. Introduction

to Dassault Systems software application, its uses, CATIA (Modelling and Meshing). LIDAR data processing using different software, contour preparation using LIDAR, terrain preparation and modelling.

DESP0621 Smart City Planning

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0621	Smart City Planning	Practice + Project	5	DESP0923 GIS & Digital Cartography	0-3-3

Course Objectives:

- To enable students learning with Autodesk Infracore and work with Open Street Map.
- To design different types of buildings in the project area.
- To understand the concept of terrain and slope for designing of drainage, road and railway.
- Students will be designing the city features including park, garden etc.

Course Outcomes:

After completion of this course students will be able to design and plan a twin city model of an area.

Students will get more knowledge on designing of building, road, drainage etc. through Autodesk Infracore.

Practical:

Open Street Map data creating for city, Autodesk Infracore: building space planning, highway and railway planning, bridge planning, city beautification, hydrology planning, drainage design for city, Urban storm water management, city transportation network management, Rendering and presentation.

DESP0321 RS & GIS for Natural Disaster Management – Design Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DESP0321	Design Project	Practice + Project	4	Not before Semester 4	1-3-3

Course objectives:

- To enable the student understand the application of Remote sensing and GIS
- Make the student familiarize with the activities involved in GIS and Remotely sensed data.
- To mold the student for taking up a major project through applying the GIS and image processing software.
- Students shall take any one of the following projects for practice
 - a) River Flood Management
 - b) Storm Surge Management
 - c) Earth Quake Mitigation
 - d) Land Slide Mitigation
 - e) Soil erosion

Each of the projects are to be carried out using software covering the below listed tasks. One report on each of the listed activities is to be submitted.

Activities to be covered during the project

Work Breakdown

Structure

1. Site selection or Identification of problem
2. Data collection (Both primary and Secondary)
3. Methodology generation
4. Image rectification
5. Map generation
6. GIS analysis
7. Filed verification

8. Results and Final map generation

DEET0300 Project

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0300	Project	Project	6	Not before Semester 4	0-0-6

Students take up group projects and deal the following activities during the course of their project. The project Report should contain the reports of the activities and the explanation of the activity, how the same is taken up and the outcome of the activity.

1. Functional Planning of the project
2. Preparation of documents
3. Literature Review
4. Preparation of layers using MAP ARC GIS/ERDAS/Infrawork
5. Layer creation and GIS analysis
6. Identifying the possible Risks involved (specific to the project)
7. Cost estimation of the project
8. Project Closure.

DEET0800 Internship - Industry based learning Activity (4 Credits)

Code	Course Title	Course Type	Credits	Pre-requisites	T-P-Pr (hrs)
DEET0800	Internship	Practice	4	Not before Semester 4	- -

Students to select a GIS company and obtain training (for about 8 to 10 months) on the works that are being carried out there. They are required to prepare set of different reports on the activities in which they received training. The activities should invariably involve the aspects related to GIS analysis apart from the topics covered in various subjects of the domain. One report on each of the activities is to be submitted individually even if a group of students work in the same site. The reports should be certified by the authorized technical personnel of the organization

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

SYLLABUS

FCBS0401 APPLIED ANALYTICAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.

The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

1. Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
2. Determination of Turbidity by nephelometer, pH, Conductivity.
3. Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell

Practice:

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Course outcome

Explain fundamental principles for environmental analytical methods (titration, electro-chemistry, instrumentation and basic parameters of water, soil, fuel etc)

Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

*Point out suitable techniques for sampling and handling of environmental samples
 Apply quality control on chemical analysis and laboratory work and explain its importance
 Plan and carry out laboratory experiments, including data analysis and conclusions
 Describe simple approaches for troubleshooting*

FCBS0402 INDUSTRIAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cement as well as dyes, oils, soaps

Introduce the students to industrial processing principles as applicable to chemical and allied industries.

Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.

Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

Preparation of soap by saponification

Determination of the properties different type of soap

1. pH test

2. Foam test

Hard water test

Determination of iodine number of oil

Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline

Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores.

Practice:

Estimation of Cu in copper ore

Determination of Fe as ferrous iron in an ore sample

Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

Estimation of calcium in Portland cement
 Cement hydration and pH evaluation during curing
 To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Course outcome

Appreciate better their future roles as chemists in Industrial establishments

Be able to explain the origin of raw materials used in the chemical and allied industries

Have a good understanding of how chemical raw materials are processed into finished products.

Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.

FCBS0403 APPLIED ENGINEERING MATERIALS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

To understand the importance of the chemical approach to nanomaterials

To study the preparation, analysis and applications of metal nanoparticles

To develop an understanding of conjugated polymers and their applications

To understand how polymer composition and architecture imparts unique properties and behavior

To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

Synthesis of Ag, Au nano particles by wet chemical methods.

Synthesis of ZnO Nanoparticles by Precipitation Method

Synthesis of Cu nano particles Sonochemical method.

Synthesis of Fe nano particles Co-precipitation method.

Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

Synthesis of Thiokol Rubber

Synthesis of a Rubber Ball from Rubber Latex

Synthesis of Polystyrene (PS)

Synthesis of Polymethyl Methacrylate (PMMA)

Synthesis of Nylon-6:6.

Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites“ refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

Synthesis of bio composite materials by using jute fibres and wood fibres

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials
- Know the application of Nanotechnology and nanomaterials

FCBS0404 ELECTRICITY AND MAGNETISM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

- To understand electric circuit components and their use.
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices.
- Understanding magnetic properties of matter and performing experiments to realize magnetism.

Practice I

Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection, Kirchhoff's laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.
2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Foster's Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.

- To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis.

Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

- To study the induced e.m.f. as a function of the velocity of the magnet.
- Measurement of field strength B and its variation in a solenoid.
- Determination of ratio.

Course outcome

Realizing the importance and use of electrical components in a circuit.

Learning how to do different connections and their purpose.

Understanding magnetism of matter and its applications

Text Book:

- Electricity and Magnetism By K. K. Tiwari, S. Chand Publishing

References:

- Electricity and Magnetism, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan
- Introduction to Electrodynamics, by David J. Griffiths Prentice-Hall; 3 edition (2011)
- Electricity and Magnetism by - D. C. Tayal, Himalaya Publishing, 2009.

FCBS0405 BASIC MECHANICS AND PROPERTIES OF MATTER

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To give the students overall idea about material properties and also hands on experience to measure them.

To make them realize the applications of material properties.

To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.

Encouraging them to build simple models to explain the mechanical properties.

Theory:

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder, bending of beams, Vibration of loaded cantilever.

Lab:

- Young's modulus by single/double cantilever
- Young's modulus by Searle's method
- Rigidity modulus using Barton's apparatus
- Poisson's ratio

Practice II

Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseulle's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface.

Lab:

1. Viscosity by Stokes method
2. Viscosity by Poiseulle's method
3. Metacentric height of floating body
4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Course outcome

To understand material properties and perform experiments on them.

To understand the applications of material properties in real life.

To be able to make small models for explain few mechanical properties.

Text Book:

1. *Elements of Properties of Matter, Dec 2010 by D.S. Mathur, S.Chand (G/L) & Company Ltd*

Reference Books:

1. *A Text Book of Fluid Mechanics by R.K. Bansal, Laxmi Publishers, 2005*
2. *Engineering Mechanics Statics and Dynamics by A. K. Tayal, Umesh Publications.*

FCBS0406 OPTICS AND OPTICAL FIBRE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To understand optical phenomena.

To understand different light sources and their use

Understand designing of microscope and artificial light sources

Understanding optical fiber and its applications

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Practice II

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

Practice-III

Theory: Optical properties—scattering, refraction, reflection, transmission & absorption. Introduction, principle of Laser, stimulated and spontaneous emission, Coherence (temporal and spatial) Ruby Laser, Application of Lasers.

Optical Fibres: Introduction, numerical aperture, step index and graded index fibres, attenuation & dispersion mechanism in optical fibers (Qualitative only), application of optical fibres, optical communication (block diagram only)

Lab:

1. Measurement of attenuation and bending losses of an optical fibre.
2. Measurement of numerical aperture of an optical fibre
3. Study of spatial and temporal coherence of LASER
4. Making of a light guide

Course outcome

Students should understand optical phenomena.

Students should learn about different light sources and their use

Students should be able to understand optical fiber principle, operations and its applications.

Text Book:

1. *A Text Book of Optics* by M.N. Avadhanulu, Brij Lal, N. Subrahmanyam, S Chand; 23rd Rev. Edn.

References:

2. *Optics* by Ajoy Ghatak, McGraw Hill Education; 5 edition
3. *Physics-I for engineering degree students* by B.B. Swain and P.K.Jena.
4. *Concepts in Engineering Physics* by I Md. N. Khan.

FCBS0101 ENVIRONMENTAL SCIENCE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

1. *To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.*
2. *Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.*
3. *One must be environmentally educated.*

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Course Outcome:

1. Understand the natural environment and its relationships with human activities.
2. Characterize and analyze human impacts on the environment.
3. Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
4. Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Text Book: Anubhav Kaushik & C.P. Kaushik : Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph : Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha : Text book of Environmental Studies for Under graduate courses– Universities Press. (Book prepared by UGC Committee.

FCBS0102 DIFFERENTIAL EQUATIONS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

- 1) To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- 2) To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- 3) To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- 2) Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- 3) Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Non-homogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Text Book:

1) *Higher Engineering Mathematics* by B.V. Raman Publisher: TMH
Chapters: 8 (8.1 to 8.10); 9 (9.1 to 9.7), 18 (18.1 to 18.8)

Reference Book:

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson

FCBS0103 LINEAR ALGEBRA & VECTOR CALCULUS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
2. To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
3. To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
2. Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
3. Determine the important quantities associated with scalar and vector fields.

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11)

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson
- 2) *Mathematical Methods* by Potter & Goldberg ; Publisher : PHI

FCBS0103 INTEGRAL TRANSFORM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

1. To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
2. To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
2. Solve differential & integral equations with initial conditions using Laplace transform.
3. Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
4. Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac's Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig
Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 5 (5.1 to 5.6); 10 (10.1 to 10.4, 10.8, 10.9)

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V.O'Neil .Publisher: Thomson
- 2) *Higher Engineering Mathematics* by B.V.Raman .Publisher: TMH

FCBS0105 COMPLEX ANALYSIS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	3

Course Objectives:

- 1) *To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.*
- 2) *To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.*

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) *To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.*
- 2) *Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.*
- 3) *Illustrate the applications of the calculus of residues in the evaluation of real integrals.*

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation , Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 12 (12.1 to 12.4 ,12.9) ; 13, 14 (14.2,14.4) & 15.

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson
- 2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

FCBS0106 Discrete Mathematics

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.
2. To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.
3. To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Evaluate elementary mathematical arguments and identify fallacious reasoning.
2. Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
3. Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus.
4. Model and solve real-world problems using graphs, both quantitatively and qualitatively.

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal & Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring,

Text Books:

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition Chapters:1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4)

Reference Books:

- Discrete and Combinatorial Mathematics* by R.P.Grimaldi Publisher: Pearson
Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier

SYLLABUS

FCHU1201 FOUNDATIONS OF ENGLISH COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

To develop vocabulary and grammar knowledge

To develop reading comprehension skills

COURSE OUTCOMES

Development of academic and sub-technical vocabulary

Enhancement of basic language skills, i.e., listening, speaking, reading and writing

Development of grammatical competence

Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of Course communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

Animal Farm

Alice in Wonderland

Guide

Malgudi Days

Harry Potter

Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

FCHU1202 COMMUNICATIVE PRACTICE LABORATORY –I

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

To expose the students to a variety of self- instructional, learner- friendly modes of language learning.

To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

Ability to communicate fluently in different business situation

Effective oral and written communication

Appropriate word usage with correct pronunciation

Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade

Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.

Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

Elimination of common errors

Editing passages

Word power A-Z: Easy and quick techniques

Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

Pronunciation Guidelines: Consonants and Vowels

Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences

Speaking Techniques: Using correct stress patterns, developing voice quality

Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHUI203 BUSINESS COMMUNICATION

Pre - requisites	Course Type	Credits
Nil	Workshop	2

COURSE OBJECTIVES

The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.

This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

- Understand the differences between general communication and business communication
- Development of basic language skills, i.e., listening, speaking, reading and writing
- Effective participation in group discussion and job interviews

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

General Communication and Business Communication

Communication in Organizational Settings: Patterns of Communication in the Business World

– Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal

Introduction to Cross Cultural Communication

Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

Importance of Developing Reading Skills

Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making

Importance of Writing Skills and Principles of Effective Writing

Writing Process: Pre-writing, Drafting and Re-Writing

Paragraph Writing

Summaries and Abstracts

Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
 Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies

Common forms of Oral Communication in the Business World:

Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes

Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality

Making an Oral Presentation: Planning, Preparing and Delivery

Facing an Interview: Preparation, Types of Interview, Do's and Don'ts

Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204 COMMUNICATIVE PRACTICE LABORATORY –II

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

To master Study Skills

To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies

To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.

Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.

Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

Situational Dialogues / Role Play: Organization Communication

Oral Presentations- Prepared and Extempore

'Just a minute' Sessions (JAM)

Debates

Mock Meetings

Cracking Job Interviews: Mock Sessions

Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

Review Presentation (Movie/ Article/ Book)

Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

Short Paragraphs on current general and technical topics

Creative Writing: Idea Generation

Business Letters, Email Messages, Project Writing

Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205 CORPORATE READINESS LABORATORY

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

- Understand the process of communication*
- View communication from the perspective of each stakeholder*
- Plan and manage communication difficulties*
- Learn exactly how, when and what of communication*

COURSE OUTCOMES

- Understanding the convention of project report*
- Understanding the process of data collection and documentation*
- Preparation and presentation of project report*
- Preparation for various academic and professional needs*

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes

(E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206 IT ENABLED COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- *Speak confidently and fluently, in both formal and informal contexts.*
- *Write clearly, correctly and cogently*
- *Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence*
- *Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.*

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

Pre-Course Assessment

Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...

Do you know?

Introduction to IT Enabled Communication

Communication in the New Age Context and Demand for Communication Interventions
(*This module includes pre-course assessments and presentations*)

MODULE II: BLOG DESIGNING & POSTING

Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing

Photoshop for Image, Editing and graphic design

(*This module will be driven through methods like self-learning, learning by doing, and workshop*)

MODULE III: TECHNOLOGY AND COMMUNICATION

Tools for Business Correspondence and web-based exercises

Creating and delivering high impact presentations with Slides and other Visuals

Video Documentaries

Video Conferencing Sites, Skype, Team Viewer

(*This module will be facilitated through presentations, use of tools and technology*)

TEXT BOOKS

Shirley Taylor, Model Business Letters (MBL) and Other Business Documents, 5th Edition. Krizen. Merrier.Logan. Williams, Business Communication, and Thomson (BC: Krizen).

FCHU1207 CAREER COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

OBJECTIVES

- Prepare the graduates to acquire their dream jobs.*
- Build their mindset with right attitude, self-awareness, pro-activeness.*
- Build confidence, and enhance their communication skills to handle all situations.*

OUTCOMES

- Build the confidence of students*
- Trigger the thinking and analyzing ability of the learners to solve problems.*
- Readiness to work on their dream jobs.*

List of Experiments

LAB 1: Introduction to Career Communication

LAB 2: Presentation on Corporate House

Create an awareness and exposure on corporate life and culture.

Learners get exposure to corporate life and culture.

LAB 3: Corporate Quiz

LAB 4: Telephonic Conversation

Learners are equipped with basic knowledge and skill practice for improved telephonic communication.

LAB 5: Email Writing

Learn the characteristics of successful e- mail messages.

Create an effective e-mail message.

LAB 6: Mini Test on Email Writing

LAB 7: Learning Etiquette

Understand what etiquette is & why it's important.

Provide practical techniques and generally-accepted professional and ethical conduct or behaviour that will help create a favourable impression in social and professional life.

Practice proper manners like greeting, saying 'please', 'thank you'.

Appear professional and well groomed.

LAB 8 :Identifying Traits for Professional and Interpersonal Success

Understand the importance of effective interpersonal communication and traits for professional success.

Explore the significance of Active Listening, Problem Solving, Respect, Decision Making, Empathy, Co-operation and Non-verbal communication for professional success.

LAB 9: Job-Application -Cover Letter

Develop the career writing skills of the learners with special emphasis on their interest in specific job positions, their strengths and what values they will bring to the organisation.

LAB 10: Job-Applications – CV

Produce a polished and impressive CV that can be tailored to each specific job application.

Develop the career writing skills of the learners with special emphasis on Statement of Purpose.

Provide with tools to showcase Unique Selling Points for the specified job description.

LAB 11: Participating in Group Discussion (GD)

Mock Interview on basic questions

LAB 12: Facing an Interview

6	Team Building and Teamwork	Activity Based Learning	Coin Logo Time Required: 5-10 minutes Begin by asking all participants to empty their pockets, purses, and wallets of any coins they may have and place them on the table in front of them. If someone doesn't have any coins or only has very few, others in the room can share their coins with them. Instruct each person to create their own personal logo using the coins in front of them in just one minute. Other materials they may have on them, such as pens, notebooks, wallets, etc. can also be used in creation of the logo. If there is a particularly large group, people can be broken up into teams of 3-6 people and instructed to create a logo that represents them as a team or the whole room can gather to use the coins to create a logo for the organization/group/department/etc. Each	0	1	1	0

			solitary participant can explain their logo to the group or if the room was split into groups, the leader can have each group discuss what led to the team logo and what it says about them. Not only does this activity promote self and mutual awareness, but it also enables participants to get to know each other on a more personal level. http://www.livestrong.com/article/219775-team-building-exercises-for-small-groups/

12	Time Management	Group Activity	<p>How long is a minute?</p> <p>At the beginning of session ask people to close their eyes for 30 seconds and after that to open it. Nobody can watch the clock and don't measure the time. Ask of participants to open their eyes after what they believe has been 30 seconds. Of course, they all open them at different times. Afterwards, we talk about our understanding of time. Even though everyone has an equal (24 hours a day or 30 seconds for exercise), in fact, we experience it and use it in different ways. Some of us experienced it as a short period, other as a long. This always works as a good opener.</p> <p>2) Cover all the clocks in the room, then ask participants to remove their wrist watches and stand up. Instruct them to sit down when they think 1 minute has elapsed after you shout "Start" to begin the countdown. You will be surprised with the results. Just enjoy the fun that follows this activity</p>	0	1	0	0

FCHU1209 SEMINAR AND TECHNICAL WRITING

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

Seminar allows students the opportunity to put all of information together. The students are required to prepare technical reports including oral presentations supported by written technical papers. Seminar is designed to assist students in preparing for their career.

COURSE OBJECTIVES

Understand the requirements and ethics of technical writing in the 21st Century workplace.

Work professionally, individually and in a team to produce effective technical documents incorporating verbal, visual, and multimedia materials as necessary.

Communicate effectively by analyzing audience, organizing documents, writing clearly and precisely with no grammar errors and presenting the document with skillful design.

Locate, evaluate, and incorporate pertinent information.

Write clear, intelligent technical reports

Make seminar presentations

COURSE OUTCOMES

Understand how technical communication is used in the workplace.

Understand and use the principles of design in business and technical communication.

Apply useful descriptive language to your technical documents.

Students will gain experience in preparing a technical report including an oral presentation supported by a written technical paper.

MODULE-I: TECHNICAL COMMUNICATION ESSENTIALS

COURSE OUTCOMES

Describe the writing process most useful in today's technical writing environment.

Analyze an audience and consider appropriate writing situations to meet the audience's needs.

Understand the ethics of the workplace and apply those ethics to their technical and business writing.

OUTLINE: Communicating in the Workplace, Technical Writing Process Today, Readers and Contexts of Use, Ethics in the Technical Workplace

MODULE- II: DOCUMENT DESIGN

COURSE OUTCOMES

Create and use graphics that complement your business and technical communication.

OUTLINE: Designing Documents and Interfaces, Creating and Using Graphics

MODULE-III: TECHNICAL COMMUNICATION STRATEGIES AND RESEARCHED REPORT WRITING

COURSE OUTCOMES

Define terms clearly in technical documents.

Explain instructions and processes clearly.

Write clear proposals for business and technical situations.

Research and manage information.

Write an analytical report.

OUTLINE: Researching and Managing Information, Organizing and Drafting, Technical Definitions, Technical Descriptions, Instructions and Documentation, Proposals, Analytical Reports

MODULE-IV: SEMINAR PRESENTATION

COURSE OUTCOME

Students will not only learn from the experience gained in preparing and presenting their seminar, but will have the opportunity to observe and participate in the seminar given by their classmates.

OUTLINE: Technical Report, Seminar Presentation

(Planning, Preparing, Organizing and Seminar Presentation are the 4 stages of this module)

FCHU1211 CREATIVE WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The aim of the course is to prepare students for careers in a workplace that is information-rich and that increasingly values communication skills and the ability to think creatively and critically. The class time will be devoted to writing workshop, innovation exercises, and the critical appreciation of write-ups. The Creative Writing course will focus on

Reading
Writing Creatively
Presentations

Thus the main objective is to breed a culture of learning where students learn a variety of approaches to creative writing in a cooperative learning environment.

COURSE OBJECTIVES

Develop thinking skills
Acquire basic skills and techniques to develop a suitable practice of creative writing in context
Use a constructive approach to critique his/her own work, as well as work by his/her peers
Organize, prepare and present spoken presentations clearly and expressively

COURSE OUTCOMES

Upon the Completion of the course, a student will
Create Blog/ Online Presence
Submit works for publication
Compose a variety of written responses for different purposes and audiences
Collaborate by sharing ideas, examples and insights, productively and respectfully in informal conversations and discussions.
Students will put into practice the learning into the personal, professional and technical sphere.

FCHU1212 ENGLISH FOR COMPETITION (GRE/GMAT/TOEFL/IELTS)

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE

Familiarize the learners with the pattern of the TOEFL/GMAT/IELTS/GRE examination and improve overall English skills to face the competitive exams confidently.

COURSE OUTCOME

Learners understand the pattern of the TOEFL, IELTS and GRE examination and apply test-taking strategies in exams.

A student is required to take up five laboratory tests of 100 marks.

LIST OF EXPERIMENTS

1: TOEFL Listening

Developing Listening Comprehension by taking notes after the short recorded conversations.

2: TOEFL Speaking

Developing test taking strategies to face speaking test of TOEFL exam through role play and Mock Interview.

3: TOEFL Reading

Practicing and improving student's confidence in completing the various sections of reading test in TOEFL examination.

4: TOEFL Writing

Learning and enhancing writing skills required for TOEFL writing test.

5: IELTS Listening

Practicing the listening comprehension of the students and handling questions while listening the recorded conversations.

6: IELTS Speaking

Developing test taking strategies to face speaking test of IELTS examination through role plays and mock interviews.

7: IELTS Writing

Summarizing or explaining information presented in a graph, chart, table or diagram.

8: IELTS Reading

Understanding and interpreting the text in its particular use of language, ideas and style.

9: GRE Reading Comprehension

Taking GRE Reading Comprehension examination with confidence utilizing the methods and strategies.

10: GRE SENTENCE COMPLETION

Developing sentence completion strategies through logical thinking.

11: GRE SENTENCE EQUIVALENCE

Learning and developing strategies to deal with sentence equivalence questions.

12: GRE VOCABULARY

Understanding and using appropriate choice of vocabulary in GRE vocabulary section.

13. GRE Vocabulary & Verbal-Sentence Corrections

14. GMAT Verbal-Critical Reasoning

15. GMAT Verbal- Reading Comprehension

(The entire lab will be facilitated through online quizzes, and practice sets available in language lab)

FCMG0101 ECONOMICS

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

In today's dynamic economic environment, effective managerial decision making requires timely and efficient use of information. The basic purpose of this course is to provide students with a basic understanding of the economic principles, methodologies and analytical tools that can be used in business decision making problems. It provides an understanding of the economic environment and its impact on strategy formulation. The course also focuses on the impact of economic policies on managerial decision-making by providing an understanding of fiscal policy, and national and global economic issues affecting business.

The language of science (and all analytical thinking) is mathematics. Since economics is a social science, use of some mathematical tools, basically the constrained and un-constrained optimization

techniques will help in measuring and solving the basic economic problems and thus improves decision-making. It becomes difficult and totally un-practicable to solve business (economic) problems logically and systematically without use of mathematics. The basic objective is to solve problems mathematically and interpret the results economically.

Module-1: Micro Economics

Introduction to economics: Scarcity, Choice and Efficiency, Fundamental issues of what, how and for whom to produce to make the best use of economics. Demand for a commodity: Law of demand, Demand schedule and demand curve, Individual and market demand, Change in demand, Consumer behavior: Analysing law of demand through Marshallian utility analysis, Indifference curve technique and Consumer Surplus.

Elasticity of demand: Price Elasticity of demand: Estimation, Types, Elasticity and revenue, Factors affecting price elasticity of demand. Income elasticity, Cross elasticity, Uses of different concepts of elasticity in business decisions.

Analysis of Supply: Law of Supply, Supply schedule and supply curve, Change in supply, Price elasticity of supply, Equilibrium of demand and supply: Equilibrium with demand and supply curves, Effect of a shift of demand and supply curves.

Production Function: Production function with one variable input, Production function with two variable inputs, optimal combination of inputs, Returns to scale

Cost Theory: Types of costs, Production and cost, Short-run cost functions, Long-run cost functions, Economies of scale and scope, Cost-Volume-profit Analysis

Market: Meaning, types and characteristics of different market structure (Perfect competition, Monopoly, Monopolistic competition and Oligopoly)

Module: 2: Macro Economics

National Income Accounting: Circular flow of Income, National Income Concept, Eight variants of national product aggregates, Measurement (Income, Value Added and Expenditure), Real and Nominal GNP, Difficulties in measuring the national income, Uses of National income statistics, Money and Inflation: Demand for and supply of money. Causes and consequences of Inflation. Commercial and central banking: Role and functions of commercial banks and R.B.I., Monetary Policy and Fiscal policy: Objectives and Instruments, Balance of Payment (BoP): Meaning, BoP Account, Disequilibrium in BoP, Measures to correct disequilibrium in BoP, Foreign Exchange: Floating Exchange Rate and Fixed Exchange Rates

FCMG0102 ACCOUNTING AND FINANCE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
-------------------------	--------------------	----------------

<i>Nil</i>	<i>Theory</i>	<i>2</i>
------------	---------------	----------

Course Objective:

- a) To familiarise the students with basic terms of accounting, accounting principles, concepts and convention.
- b) To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- c) To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis: Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity
Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. *Accounting for Management—Ashok Sehgal, Taxxman*
2. *Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI*
3. *Khan & Jain – Management Accounting, TMH.*
4. *Horngren ,Datar, Foster- Cost Accounting, Pearson.*
5. *Financial Accounting, Jain/Narang/Agrawal, Kalyani.*
6. *Basic Financial Accounting for Management, Shah, Oxford.*
7. *Financial Management by I. M. Pandey*
8. *Financial Management – Theory and Practice by Chandra*
9. *Financial Management – Text and Problems by Khan & Jain*

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content

Unit: I

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

Unit: II

Individual System: Learning, Perception, Personality and Motivation,

Unit: III

Social System: Group Dynamics and Leadership.

Books Recommended:

1. Robins & Sanghii; Organizational Behavior, Pearson
2. Luthans ,F; Organizational Behavior-TMH
3. Udai Pareek ; Understanding Organizational Behavior, Oxford
4. Prasad,L.M; Organization behavior, S.Chand.
5. K. Aswathappa; Organization behaviour
6. Prasad.L.M ; Principles of Management,

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- ✓ Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- ✓ The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- ✓ They can use specialized knowledge in Operations Management to solve business processes.
- ✓ They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - "Operations Management", TMH
- 2) Krajewski, Ritzman, Kansal, - "Operations Management", Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - "Production and Operations Management", PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - "Operations Management", Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - "Production and Operations Management", HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- ✓ The students will understand the various marketing approach in today's competitive scenario.
- ✓ The students will learn the application of various marketing tools for solving business problems

The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL),Porter’s five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP);What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning , Effective positioning strategies, Positioning of brands and repositioning ,introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. *Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication*
2. *Marketing Mangement: Fourth edition- RajanSaxena*
3. *Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA*

FCMG0108 INTRODUCTION TO RESEARCH

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

1. *To introduce the students about research, methods and techniques.*
2. *To understand the process and apply in other areas.*

Course outcome:

1. *Students will be able to understand the process of doing a research.*
2. *Students will be able to write a research report.*

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, *Sampling:* Census and sample survey, different types of sample design, *Measurement:* Measurement and scaling techniques, *Methods of Data Collections:* Experimentation,

observation, interview, Survey, case study; *Data Analysis and Interpretation*: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

1. Ranjit Kumar, 2011, *Research Methodology: A Step by Step Guide*, Sage South Asia Publication.

FCMG0113 INDIAN SOCIETY AND CULTURE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswati and Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. *Indian Society and Culture: Continuity and Change* – by N. Hasnain
2. *Social and Cultural History of India* – O.M. Prakash
3. *Makers of Modern India* – RamachandraGuha

SYLLABUS

Introduction to Aerospace Engineering

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Introduction to Aerospace Engineering	ENFC0105	Theory	3-0-0(3)	Nil

1. Objective

- ✓ To familiarize with the Basic Concepts of Flying, Aircraft Structures, Systems, Instruments and Power Plants used in Airplanes.

2. Course Outcome

- ✓ To Identify the Component of Flight and Suitable Materials for Aircraft Structure.
- ✓ To Perform Basic Calculation on Mechanics using Newton Law for Lift, Drag and Moment.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	30	Written examination
	Assignment	5	Submission of assignment
	Learning record	5	Report and presentation
External Examination		60	Written examination
Total		100	

4. Course Outline

Module I (08 Hrs)

History of Flight: Early flying vehicles by Wright brothers, hot air balloons, Classification of flight vehicles, biplanes and monoplanes, developments in aerodynamics airplanes and Helicopters, Components of an airplane and their functions.

Module II (06 Hrs)

Basics of Aeronautics: Physical properties and structure of the atmosphere, temperature, pressure and altitude relationships.

Module III(08 Hrs)

Newton's law of motions applied to aeronautics - evolution of lift, drag and moment. aerofoils, mach number, subsonic, transonic, supersonic, hypersonic flows.

Module IV(06 Hrs)

Airplane Structures and Materials: General types of construction, monocoque and semi-monocoque constructions, typical wing and fuselage structure.

Module V (06 Hrs)

Airplane Structures and Materials: Materials used in aircraft metallic and non-metallic materials, use of aluminium alloy, titanium, stainless steel and composite materials.

Module VI (06 Hrs)

Systems and Instruments: Conventional control, Powered controls, Basic instruments for flying, typical systems for control actuation.

Module VII(08 Hrs)

Power Plants: Basic ideas about piston, turboprop and jet engines - use of propeller and jets for thrust production - comparative merits, principles of operation of rocket, types of rockets and typical applications, exploration into space.

Material Sciences

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Material Sciences	ENFC0102	Theory	3-0-0(3)	Nil

1. Objective

- To study classification and properties of materials used in day to day life
- To understand the material application and it's need.

2. Course Outcome

- Students will able to identify materials for engineering use.
- Students will able to select best materials for a specific design and production.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm/Class Test	30	Written Examination
	Assignment-2	05	Report and Presentation
	Learning Record	05	Report
External Examination		60	Written Examination
Total		100	

4. Course Outline

Module I (8 Hrs)

Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminium & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys , Magnesium Alloys, Titanium Alloys, Super Alloys.

Module II (7 Hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geosynthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, C64, Bucky Ball Structures, Graphene.

Module III (5 Hrs)

Prefabricated Materials:Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module IV (8 Hrs)

Electrical & Magnetic Materials: Classifications, Properties, Advantages & Applications, Photo Voltaic Material, Dielectric Materials.

Module V (6 Hrs)

Solar Cell and Super Conductivity, Ferro Electricity, Electro-active Polymers, Piezoelectric Material , Magneto Electric Materials, Electrorheological Fluids.

Module VI (6 Hrs)

Fiber Optic Sensors, Photoconductivity; Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses.

Module VII (8Hrs)

Smart Material, Shape Memory Alloys, Piezoelectric Ceramics, Biomaterials, Bioactive Glass & Ceramic, Polymer & Composite, UHTC, Soft Materials, Energy Materials.

FCEN0101CHEMICAL PROCESS CALCULATIONS

<i>Pre – requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>FCBS0402 Industrial Chemistry</i>	3+1 + 0	3

OBJECTIVE:

To teach concept of degree of freedom and its application to solution of mass and energy balance equations for single and network of units and introduce to process simulators.

OUTCOME:

This course gives an idea to the students, an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances, energy balances and to present an overview of industrial chemical processes.

Module I

BASIC CHEMICAL CALCULATIONS

Units and Dimensions - Basic and derived units –Use of model units in calculations – Methods of expression –Compositions of mixture and solutions. Gas Calculations Ideal and real gas laws –Gas constant –Calculations of pressure, volume and temperature using ideal gas law –Use of partial pressure and pure component volume in gas calculations –Applications of real gas relationship in gas calculation.

MATERIAL BALANCE

Stoichiometric principles –Application of material balance to unit operations like distillation – Evaporation, crystallisation, drying etc., –Material balance with chemical reaction –Limiting and excess reactants –Recycle –Bypass and purging –Unsteady state material balances.

Module II

HUMIDITY AND SATURATION

Properties of atmospheric air –Humidity of air –Calculation of absolute humidity, molal humidity, relative

humidity and percentage humidity –Use of humidity in condensation and drying –Psychrometric

chart, dew point –Wet and dry bulb thermometry. FUELS AND

COMBUSTION

Determination of composition by Orsat analysis of products of combustion of solid, liquid and gas fuels –Calculation of excess air from Orsat technique, problems on sulphur and sulphur burning compounds –Theoretical flame temperature.

Module III

ENERGY BALANCE

Thermo Physics Heat capacity of solids, liquids, gases and solutions –Use of mean heat capacity in heat calculations –Problems involving sensible heat and latent heats –Evaluation of enthalpy. Thermo Chemistry Standard heat of reaction, heats of formation, combustion, solution, mixing etc.,

–Calculation of standard heat of reaction –Effect of pressure and temperature on heat of reaction –Energy balance for systems with and without chemical reaction –Unsteady state energy balances.

FCEN0102 BASIC ELECTRONICS

<i>Pre - requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>Nil</i>	<i>3+1 + 0</i>	<i>3</i>

Course Objectives: The objectives of this subject are to
Learn Fundamentals of electronic devices.
Design and Applications of electronic circuits.

Course Outcomes:

Upon successful completion of this subject, students should be able to:
Identify the applications and functions of electronics in Engineering.
Recognize basic electronic components and devices used for different electronic functions.
Use basic techniques for analyzing analogue and digital electronic circuits.
Design analogue and digital electronic circuits at block level.
Manage the tools in a basic electronics laboratory and use electronic simulation.

Module-1 (15 Hours) Semiconductor Physics and Junction Diode

Characteristics:

Various properties of Conductor, Semiconductor & Insulator, n and p –type semiconductors, Mass Action Law, Continuity Equation, Hall Effect, Comparison of Si & Ge Semiconductor, Fermi level in intrinsic and extrinsic semiconductors, Open-circuited, forward bias & reverse bias of p-n junction diode, Energy band diagram of PN diode, Drift & Diffusion Current, Mobility & Conductivity, Diode equation, Volt-ampere characteristics of p-n diode, Temperature dependence of VI characteristic, Transition and Diffusion capacitances, Breakdown Mechanisms in Semiconductor (Avalanche and Zener breakdown), Zener diode characteristics, Characteristics of Tunnel Diode with the help of energy band diagrams, Varactor Diode, LED And photo diode, **(topics will be delivered through Class room teaching + Hands on Practice based experiments)**

Module- II (12 Hours) Rectifiers, Filters and Regulators:

Half wave rectifier, ripple factor, full wave rectifier, Application of p-n diode as clipper, clamper. Types of filter, Inductor filter, Capacitor filter, L- section filter, PI- section filter, Multiple L- section and Multiple PI-section filter. Simple circuit of a regulator using Zener diode, Series and Shunt voltage regulators. **topics will be delivered through Class room teaching + Hands on Practice based experiments)**

Module- III (15 Hours) BJT and FET Characteristics:

Bipolar Junction Transistor, Types, Construction & study of currents in a Transistor, Input and Output characteristics of transistor in Common Base(CB), Common Emitter(CE), and Common collector(CC) configurations, comparison of CE, CB, CC transistor configuration, Relation between Alpha, Beta & Gamma, JFET characteristics (Qualitative and Quantitative discussion), , MOSFET characteristics (Enhancement and depletion mode), Symbols of MOSFET, Introduction to SCR and UJT, Thermal run away, Thermal stability, (**topics will be delivered through Class room teaching + Hands on Practice based experiments)**)

FCEN0103 SIGNALS AND SYSTEMS

<i>Pre – requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>Nil</i>	3+ 0 + 0	3

Course Objectives:

The objectives of this subject are to

To introduce the student to the idea of signals, system analysis and its characterization.
To provide a foundation to numerous other courses that deal with signal and system concepts directly or indirectly: viz: communication, control, instrumentation etc.

Course Outcomes:

Upon successful completion of this subject, students should be able to:

Understand about various types of signals, classify them, analyze them, and perform various operations on them.

Understand about various types of systems, classify them, analyze them and understand their response behavior.

Appreciate use of transforms in analysis of signals and system. Carry simulation on signals and systems for observing effects of applying various properties and operations.

Create strong foundation of communication and signal processing to be studied in the subsequent semester.

Module –I (14+4 hours) Continuous-Time and Discrete-Time Signals and Systems:

Continuous and discrete time signals: Some Elementary Continuous-time and Discrete-Time signals. Classification of Signals –Periodic and a periodic even –odd –energy and power signals –Deterministic and random signals –Causal and non causal signals and anti causal signals -- complex exponential and sinusoidal signals ---Simple Manipulations of Continuous and discrete time signals. **(Topics will be covered through CRT & Practice)**

Continuous-Time Systems: Mathematical equation governing LTI Continuous-Time systems, Block diagram and signal flow graph representation, response of LTI Continuous-Time system in time domain, classification of Continuous-Time systems, convolution of Continuous-Time signals. **(Topics will be covered through CRT & Tutorial)**

Discrete-Time Systems: Input-Output Description, Block Diagram Representation, Classification, Interconnection; Analysis of Discrete-Time LTI Systems: Techniques, Response of LTI Systems, Properties of Convolution, Causal LTI Systems, Stability of LTI Systems; Discrete-Time Systems Described by Difference Equations; Implementation of Discrete-Time Systems; Correlation of Discrete-Time Signals: Cross correlation and Autocorrelation Sequences, Properties. **(Topics will be covered through CRT & Tutorial)**

Module –II (09 Hours) The Continuous-Time Fourier Series:

Basic Concepts and Development of the Fourier Series, Calculation of the Fourier Series, Properties of the Fourier Series. **(Topics will be covered through CRT & Tutorial)** The Continuous-Time Fourier Transform:

Basic Concepts and Development of the Fourier Transform, Properties of the Continuous-Time Fourier Transform. **(Topics will be covered through CRT & Tutorial)**

Discrete time Fourier transform(DTFT) :The discrete time Fourier transform of Aperiodic signal, Convergence of Fourier transform, the Fourier transform of signal with poles on unit circle, frequency domain and time domain signal properties,properties of DTFT **(Topics will be covered through CRT & Tutorial)**

Module- III

(15 Hours)

The Laplace transforms and its application to system analysis:

The Laplace Transform: Region of convergence, properties of Laplace transform, poles and zeros of rational

functions of s, Inverse Laplace transform by partial fraction method and convolution method, Analysis of LTI Continuous-Time system, stability in s-domain, **(Topics will be covered through CRT & Practice)**

The ZTransform and Its Application to the Analysis of LTI Systems:

The Z-Transform: The Direct Z-Transform, The Inverse Z-Transform; Properties of the Z-Transform; Rational Z-Transforms: Poles and Zeros, Pole Location and Time-Domain Behavior for Causal Signals, The System Function of a Linear Time-Invariant System; Inversion of the Z-Transforms: The Inversion of the Z-Transform by Power Series Expansion, The Inversion of the Z-Transform by Partial-Fraction Expansion; The One-sided ZTransform: Definition and Properties, Solution of Difference Equations. **(Topics will be covered through CRT& Practice)**

Text Books:

1. *Digital Signal Processing –Principles, Algorithms and Applications* by J. G. Proakis and D. GManolakis, 4th Edition, Pearson.
Chapter 1 (1.2),Chapter 2 (2.1, 2.2, 2.3, 2.4, 2.5, 2.6.1, 2.6.2) ,Chapter 3 (3.1, 3.2, 3.3, 3.4.2, 3.4.3, 3.6.1, 3.6.2) ,Chapter 4 (4.1, 4.2.3, 4.2.4, 4.2.5, 4.2.8, 4.3, 4.4)
2. *Fundamentals of Signals and Systems - M. J. Roberts,* TMH Chapter 8 (8.3, 8.4, 8.7) , Chapter 10 (10.3, 10.6)
3. *Signals and Systems –A NagoorKani,* TMH
Chapter 1 [1.1, 1.2, 1.3, 1.4, 1.5 (for Module-1)], Chapter 2 [2.1,2.2,2.3,2.4,2.5,2.6,2.7,2.8,2.9, 2.10(for module-1)], Chapter 3 [3.1, 3.2, 3.3, 3.4, 3.5,3.6,3.7(for module-3)], Chapter 4 [4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.9, 4.10, 4.11, 4.12

(for Module-2)],Chapter 6 [6.1 to 6.6, 6.8 to 6.9, 6.12, 6.13 (for Module-1); 6.7 (for module-3)],Chapter 7 [7.1 to 7.6 (for module-3)], Chapter 8 [8.1 to 8.4 (for module-2)] **Reference**

FCEC0104 DIGITAL ELECTRONICS CIRCUITS

<i>Pre - requisites</i>	<i>L+T+P</i>	<i>Credits</i>
<i>Nil</i>	3+ 0 + 0	3

Course Objectives:

The objectives of this subject are to
 Learn basic concepts on various digital designs
 Implementation and simulation of various digital circuits through Hardware description languages.

Course Outcomes:

Upon successful completion of this subject, students should be able to:
 Minimize the circuit complexity.
 Design and implement different combinational and sequential circuit
 Develop new digital design. Design high speed memories.

MODULE - I: (14 hours) Number System and Codes

Binary Number base Conversations, Octal and Hexadecimal numbers, Complements, Signed Binary Numbers, Binary Codes- BCD Codes, Gray Code, ASCII Character Code, Codes for serial data transmission and storage.

(topics will be delivered through Class room teaching)

Boolean Algebra and Logic Gates

Axiomatic definition of Boolean algebra. Basic theorems and properties of Boolean algebra, Boolean functions; Canonical and Standard forms; min-terms and max-terms standard forms; min-terms and max-terms, standard forms , Digital Logic Gates, multiple inputs. **(topics will be delivered through Class room teaching+**

Handson Practice based experiments) Gate Level Minimization:-

The Map Method, K Maps, input five variables, Produ and NOR implementation. AND –OR invent, OR-AND invent implementation, Ex-OR function, Parity generation and checking. **(topics will be delivered through Class room teaching+ Hands on Practice based experiments)**

MODULE - II: (14 hours) Combinational Logic

Combinational Circuits, Analysis and Design Procedure; Binary Adder-Sub tractor, Decimal Adder, Binary Multiplier, Magnitude Comparator, Decoders, Encoders, Multipliers, HDL for Combinational Circuits. **(topicswill be delivered through Class room teaching + Hands on Practice based experiments)****SynchronousSequential Logic**

Sequential Circuit, Latches, Flip-flop, Analysis of Clocked sequential Circuits, HDL for Sequential Circuits,

State Reduction and Assignment. Design Procedure. **(topics will be delivered through Class room teaching+ Handson Practice based experiments)**

MODULE - III: (14 hours) Registers and Counters

Shift Register, Ripple Counters, Synchronous Counters Asynchronous Counter, Ring Counters, and Modulo-N Counters. **(topics will be delivered through Class room teaching+ Hands on Practice based experiments)****Hardware**

Description Language

Introduction to HDL, Structure of HDL coding, Analysing basic gates using HDL, HDL for various Boolean circuits and techniques (Boolean algebra, gate level minimization, comparators, code converters), HDL for various Synchronous, Sequential Circuits and Applications. **(topics will be delivered through Simulation usingsoftware tool)**

Memory and Programmable Logic

Random Access Memory (RAM), Memory Decoding, Error detection and Correction, Read only Memory, Programmable Array Logic, Sequential Programmable Devices. **(topics will be delivered through Class roomteaching)**

Text Book

3. *Digital Electronics, Principles and Integrated Circuit, Anil K. Jain, Wiley India Edition* **4. Digital Design – Principle & Practice, 3rd Edition by John F. Wokerly, Pub. Pearson Education.**

Module I

S. No.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
	Introduction & Overview of Digital Electronics, Binary number, base conversations, Octal & Hexadecimal numbers						

1	Key topics: - Introduction to binary, octal & hexadecimal numbers, binary to decimal, octal & hexadecimal conversion, Decimal to binary, octal & hexadecimal conversion. Reference:-MM –1.2 to 1.4, JFW-2.1 to 2.4	CRT		2	0	0	0
2	Complements, signed binary numbers. Key topics:-1's complement, 2' complement, 10's compl binary numbers and related problems. Reference: - MM –1.5 to 1.6, JFW- 2.5 to 2.9	CRT		2	0	0	0

Module I (Contd...)

S. No.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
3	Binary codes –BCD codes, Gray code, ASCII character code, code for serial data transmission and storage. Key topics:-Weighted & non –weighted codes, Binary to BCD & gray code conversion, and related problems. Reference: - MM –1.7 to1.8, JFW-2.10 to 2.11	CRT		1	0	0	0

No.							
15	Binary adder , subtractor, Key topics: - Introduction to combinational circuits, Logic diagram, designing procedures, Half adder & subtractor , Full adder & subtractor, BCD adders. Reference : - MM-4.1 to 4.5, JFW-4.2 , JFW- 5.10.1 to 5.10.4	CRT + Practice	Component Level Design	2	3	0	0
16	Binary multiplier Key topics :- Implementation of 2-bit & 4-bit Multiplication using Adders/ IC- 74283(Binary adders) Block diagram, Reference: - MM-4.6, 4.7 JFW-5.11	CRT		2		0	0
17	Magnitude comparator. Key topics :- Mathematical modeling of 4-bit Magnitude comparator. Reference :- MM-4.6,4.7 JFW- 5.11	CRT + Practice	Component Level Design	2	2	0	0
18	Decoders, encoder Key topics: - Introduction to 3 to 8, 2 to 4 line decoder, Parity encoder, Boolean function implementation using Decoders, encoder, Reference : - MM-4.8 to 4.10, JFW- 5.4.1 to 5.7.4	CRT		2	0	0	0
19	Multiplexer	CRT + Practice	Component Level Design	1	3	0	0
	Key topics: - n to 1 line multiplexer , Boolean function implementation using multiplexer, DeMux Reference :- MM-4.8 to 4.10, JFW- 5.4.1 to 5.7.4						
20	Sequential circuits: Latches. Key topics : -Introduction sequential circuits, S-R latch, , D latch: Truth table, Logic diagram, Excitation Table.	CRT + Practice	Component Level Design	1	2	0	0
21	Sequential circuits: Flip flop Key topics : - J-K Flip-flop, T flip-Flop, D Flipflop: Truth table, Logic diagram, Excitation Table. Reference : - MM-5.1 to 5.2, JFW- 7.2 to 7.2.5	CRT + Practice	Component Level Design	1	2	0	0
22	Analysis of clocked sequential circuits: State reduction and assignment, Key topics: - State equation, state table, state Diagram Reference: - MM-5.4-5.6, JFW- 7.4.1 to 7.4.6,7.9	CRT		3	0	0	0
				14	16

				Theory	Practice	video	Project
23	Shift register. Key topics :-Introduction to registers, Shift register: Serial in, parallel in, serial out, parallel out, shift right, shift left, Universal shift resistors . Reference : - MM–6.1 to 6.2, JFW- 8.5 to 8.5.2	CRT		2	0	0	0
24	Ripple counters. Key topics :- Introduction to binary ripple counter , state diagram, timing diagram Reference : - MM–6.3, JFW - 8.5.5	CRT		2	0	0	0
25	Synchronous counter Key topics :-Binary counter, Up-down binary counter, BCD counter with parallel load. Reference : - MM–6.4	CRT		2	0	0	0

Module III (Contd...)

S. no.	Topic	Pedagogy	Details	Instructional Hrs			
				Theory	Practice	video	Project
26	Ring counters. Key topics :- Ring counter & Johnson counter : Timing Diagram Reference : - MM –6.5, JFW- 8.5.6 to 8.5.7	CRT		1	0	0	0
27	Module –N counters. Key topics :- designing of mod counters. Reference : - MM 6.4	CRT		1	0	0	0
28	Introduction to HDL, HDL for various Boolean circuits and techniques (gate level minimization, comparators, code converters)	Practice	VERILOG Programming (Software: Xilinx)	0	3	0	0
29	HDL for combinational circuits. Key topics :- Gate level modeling , Data flow modeling , behavioral modeling . Reference : - MM –4.11	Practice		0		0	0
30	HDL description of Design, examples. Key topics : Structural description of Multiplier and Multiplexers Reference : - MM –8.5	Practice		0	3	0	0
31	HDL for registers & counter. Key topics :- HDL for synchronous counter & ripple counter . Reference : - MM –6.6, JFW- 8.5.10	Practice		0		0	0
32	Random Access Memory Reference : - MM –7.1,, JFW- 10.1 to 10.2	CRT		1	0	0	0
33	Memory decoding. Key topics :- coincident decoding , address multiplication. Reference : - MM –7.2, 7.3, JFW- 10.3 to 10.4	CRT		1	0	0	0
34	Error detection & correction. Key topics :- Hamming code, single error correction, double error detection. Reference : - MM –7.4	CRT		1	0	0	0
35	Read only memory Key topics :-Internal logic of RAM, combinational circuit implementation, types of ROMs, Reference : - MM –7.5 to 7.6, JFW- 10.1.1 to 10.1.6	CRT		1	0	0	0
36	programmable array logic. Key topics :- conditional PLD, PAL with 4 inputs & 4 outputs. Reference : - MM –7.5 to 7.6, JFW- 10.1.1 to 10.1.6	CRT		1	0	0	0
37	Sequential programmable devices. Key topics :-Sequential programmable logic device (SPLD), complex programmable logic device (CPLD), field programmable gate array(FPGA). Reference : - MM –7.8, JFW- 10.5	CRT		1	0	0	0
				14	6	0	0

FCEN0105 Basic Electrical Engineering

<i>Pre - requisites</i>	<i>L+T+P</i>	<i>Credits</i>
Nil	3+ 0 + 0	3

Course Objectives:

- *Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.*
- *Provide working knowledge for the analysis of basic D.C. and A.C. circuits used in electrical and electronic devices.*
- *Develop selection skill to identify the type of generators or motors required for particular application.*
- *Highlight the importance of transformers in transmission and distribution of electric power.*
- *Emphasize the effects of electric shock and precautionary measures.*
- *Improve the ability to function on multi-disciplinary teams.*

Course Outcomes:

After studying this course, students will be able to:

- **Understand electrical circuit concepts**
- **Understand electromagnetic and electromagnetic induction**
- **Understand DC Machines**
- **Understand single and three phase A.C circuits, and Understand AC machines and measuring instruments**

Module-1 (16 Hours)

Introduction to Electrical Engineering : Essence of electricity, Electric field; electric current, potential and potential difference, Emf, electric power, ohm's law

Sources, Source Conversion, Induced EMF, Energy Stored in Inductor & Capacitor.(PPT & Animated videos) DC Networks: Laws and Theorems applicable to DC networks (KCL & KVL, Node voltage & Mesh current

analysis, Delta-Star & Star-Delta conversion, Superposition principle in R-L and R-C circuits with DC excitation, Simple problems. (e-content& simulations using PSICE)

Magnetic Circuits: Introduction to Electromagnetism, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. (Class room teaching)

D.C. Machines: Construction, Classification and Principle of operation of DC machines, EMF equation of DC generator, Speed Equation of DC Motor. (Class room teaching & videos)

Module-2 (16 Hours)

Single-Phase AC Circuits: Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor. (Class room teaching & videos)

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits. (Class room teaching)

Single-Phase Transformers: Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers. (Class room teaching)

Module-3 (13 Hours)

Induction Motors: Introduction to Three-phase and Single-phase Induction Motors, Concept of Slip, Slip-Torque characteristics (no derivations). (Class room teaching e-content)

Measuring Instruments: Introduction, PMMC Ammeters and Voltmeters with extension of range, Moving-Iron Ammeters and Voltmeters, Dynamometer type Wattmeter, Energy meter. (Class room teaching & e-content)

Text Books:

1. D. C. Kulshreshtha, "Basic Electrical Reference Engineering" ,

Books:

1. Hughes, "Electronical & Technology", Ninth Edition (Revised Edition),.
2. D.C. Kulshreshtha, "Basic Electrical Engineering", Tata
3. Rajendra Prasad, "Fundamentals-Hall of India, EModulelectrical Engineeri

FCEN0106 Electrical Machines- I

Pre - requisites	L+T+P	Credits
Nil	3+ 0 + 0	3

Course Objectives:

- To introduce the students about the principles of electromagnetism applicable to dc and ac machines.
- To familiarize the students about fundamentals laws that governs the operation of generator and its application. -To introduce the students about construction and associated with starting of dc motor.
- To analyse the behaviour and performance of dc machine under different operating conditions. -To make student understand about various three phase transformer connections.

Course Outcomes:

On successful completion of this course, students will be able to:

- Distinguish the constructional similarity and dissimilarity between various dc and ac machine.
- Demonstrate appropriate behaviours and knowledge of electrical machines when working with the classroom teaching and lab experience.
- Students will be able to prepare professional quality graphical presentations of laboratory data and computational results.
- Students will demonstrate an understanding of the fundamental control practices associated with AC

and DC machines.

-In the lab, at least for 50% experiments, students will write a software programme for logic (mathematical equation).

Module-I (14 Hrs): DC Generator

Dc Generators: Armature winding- Lap and wave, Simplex and duplex(Autocad), Method of excitation, Classification, Derivation of emf,, Process of commutation, Armature reaction, Interpoles, Compensating winding and equalizer rings(**class room teaching**)

Dc Generator Characteristics: Characteristics for Separately Excited DC Generator (No-Load and Load), Conditions for Self Excitation, Critical Resistance and Critical Speed, Characteristics for Self Excited DC Shunt Generator (No-Load and Load), Process of building up of voltage, Causes of failure of voltage build-up and remedies, Voltage Regulation, Parallel Operation of DC Shunt Generators and DC Series Generators. (**class room teaching+ Practice in electrical machine lab**)

Module-II (15 Hrs) : DC Motor

Dc Motor Characteristics: Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC

Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors and their Application. (Lecture & practice)

Dc Motor Starting And Performance Characteristics: Starting of DC Shunt, Series and Compound Motors, Condition for maximum power, Speed Control of DC Shunt and Series

Motors, Classification of Losses, Efficiency Evaluation from Direct and Indirect Methods (i) Brake Test

(Direct method), (ii) Swinburne's Test (Indirect method).(**class room teaching+ practice in electrical machine lab.**)

MODULE-III (13 Hrs): Transformer

Single phase transformer: Phasor Diagrams at No-Load and Load Conditions, Equivalent Circuit, Determination of Parameters From Tests (Open Circuit Test and Short Circuit Test, Back to Back test), Per unit calculation, Polarity test, Voltage regulation, all day efficiency. (**class room teaching+ practice in electrical machine lab.**)

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, T-Connection (Scott Connection) of Two Single-Phase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply. Delta-delta, Star-delta, Delta-star, Zig-zag connections. Scott connection, Open delta connection. (**class room teaching+ practice in electrical machine lab**) Auto Transformers (**class room teaching**)

Text Book:

16	Efficiency Evaluation from Direct and Indirect Methods (i) Brake Test (Direct method), (ii) Swinburne's Test (i) Regenerative/Hopkinson	CRT + PRACTICE	e-Content & Practice in electrical machine lab.(all tests)	1	2	0	0
<u>Module III</u>							
TRANSFORMER							

17	Single Phase Transformer: Phasor Diagrams at NoLoad and Load Conditions,	CRT	e-content	1	0	0	0
18	Equivalent circuit of transformer	CRT	e-content	1	0	0	0

19	Determination of Parameters From Tests (Open Circuit Test and Short Circuit Test, Back to Back test), Per unit calculation, Polarity test, Voltage regulation, all day efficiency.	CRT + practice	e-Content & Practice in electrical machine lab. (all tests)	1	2	0	0
20	Three Phase Transformers: Three-phase transformer connections- Star-star, Two SinglePhase Transformers connected in Open Delta (VConnection) and their rating, TConnection (Scott Connection) of Two SinglePhase Transformers to convert Three-Phase balanced supply to Two-Phase balanced supply	CRT	e-content	3	0	0	0
21	Delta-delta, Star-delta, Delta-star, Zig-zag connections. Scott connection, Open delta connection,	CRT	e-content	2	0	0	0
22	Auto Transformers	CRT	e-content	1	0	0	0

FCEN 0107 Analog and Digital Electronics

Pre –requisites	L+T+P	Credits
Nil	3+ 0 + 0	3

Course Objectives:

- To make the students understand the various electronics circuit by using semiconductor devices. -To train the students to analysis different amplifier (small signal & large signal).
- To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

On successful completion of this course, students will be able to: -Construct small analog and digital electronics circuit.

- Design circuit parameter, so that it will give better performance in complicated electronics circuit.

MODULE –I (10 Hours)

1. Diode Circuits: Zener Diode as Voltage Regulator, Diode Circuits with Time-Varying Sources, Switching Characteristics of a Diode, Special Purpose Diodes. **(class room teaching+ Lab practice) (Multisim)**
2. Small Signal Amplifier: BJT, FET small signal models, AC Gain, Input and Output Impedances, Some Special Circuits, Darlington Pairs and Feedback Pairs, Frequency Response of Single Stage RC Coupled Amplifiers and Multistage Transistor Amplifiers. **(class room teaching)**

MODULE –II (20 Hours)

3. Large Signal Amplifiers: Classification, Class-A and Class-B Power Amplifiers Complimentary and Symmetry Amplifiers, Class-C Amplifiers. **(class room teaching + Lab practice) (Multisim)**
4. Feed Back Amplifiers and Oscillators: Feedback Concepts, Types of Feedback Circuits, Effects of Negative Feedback Circuits, Unijunction Oscillator and PLL. **(class room teaching)**
5. Operational Amplifier: Basic Operational Amplifier, Differential Amplifier, Basic Operational Amplifier Circuits, Application of OPAMPs, Linear Application of OPAMPs, OPAMP Filters. **(classroomteaching + Lab practice) (Multisim)**
6. Combinational Circuits: Introduction to Digital Electronics Circuits, K-maps and their Simplification, Adder, Subtractors, Digital Comparator Circuits, Parity Checkers/Generators, Multiplexers and Decoders, Demultiplexers/Decoders, Programmable Logic Arrays. **(class room teaching + Practiceusing software)(LogiSim)**
7. Sequential Circuits and Systems: Introduction, Memory Cells and Flip-Flops, Registers, Counters, Asynchronous Counters, State Diagrams**(class room teaching)Text Books:**
 1. *Electronics: Analog and Digital, I.J. Nagrath, PHI Learning Pvt. Ltd., New Delhi.*
 2. *Digital Design Principle& Practice, 3rd Edition by John F. Wokerly, Pub. Pearson Education*

Reference Books:

1. *Millman's Electronic Devices and Circuits, 2ndEdition Education Pvt. Ltd., New Delhi.*
2. *Electronic Devices and Circuit Theory, 9th/10thEdition R.L. Boylestad and L. Nashelsky, Pearson Education, New Delhi.*
3. *Digital Fundamentals, 5thEdition, T.L. Floyd and R.P. Jain, Pearson Education, New Delhi.*
4. *Fundamentals of Digital Circuits, 2ndEdition, A. Anand Kumar, PHI Learning Pvt. Ltd., New Delhi.*

FCEN0108 WORKSHOP TECHNOLOGY

Pre –requisites	Course type	Credits
NIL	Theory	3

Course Objectives:

1. To learn about basic manufacturing processes such as casting, forming, joining

Course Outcomes:

On successful completion of this course, students will be able to:

1. Can suggest suitable manufacturing technique for given component.

Module-I (24 Hrs): Introduction to Work Holding Devices and Manufacturing Tools

Work holding, Tool Holding Devices, measuring and cutting tools for Carpentry, Fitting, Plumbing
 Work holding, Tool Holding Devices, measuring and cutting tools for Blacksmith & Welding.
 Carpentry: Making simple joints: a) Half-lap b) Mortise joints. Carpentry: Job using Wood Turning
 Lathe –Stepped Pulley, cot leg Fittings: Making of simple mating profiles a) VEE b) Dovetail c) Half
 round joints. Basic Pipe Fittings

, Sanitary Fittings, Water Meter Installation. (Most of the topics will be through learn by doing and laboratory mode)

Module-II (20 Hrs): Introduction to Casting and Welding

Casting Terminology- Sand Moulding Practice, Moulding Materials Patterns- Types, Allowances
 Melting Practice (Cupola, electrical furnace) Introduction to Welding, Brazing & Soldering Oxy
 Acetylene Gas Welding-Process, Techniques Arc Welding- Process, Techniques, Defects. Lap
 Joint, Butt Joint, T-Joint, V joint MIG, TIG and spot welding. (Most of the topics will be through learn
 by doing and laboratory mode)

MODULE-III (14 Hrs): Introduction To Forming

Cold & Hot Working of Metals- Black Smithy, Forging and forging tools Black-smithy:
 Converting round rod into Square Ring, Converting round rod into square S-Hook Cold & Hot
 Working of Metals- Extrusion, Drawing Cold & Hot Working of Metals- Sheet metal Operations,
 tools, Preparation of Square Tray. (Most of the topics will be through learn by doing and
 laboratory mode)

TEXT BOOKS:

1. Workshop Technology Vol. I & II, S.K. Hazra Chaudhary, A.K. Hazra Chaudhary, Asian Book Comp., New Delhi.
2. Production Engineering - P.C. Sharma, S. Chand
3. Workshop Practice : R.K. Rajput, Laxmi Publication

REFERENCE BOOKS:

1. Workshop Technology, Vol. 1, 2 & 3 –W.A.J. Chapman, WAJ, Edward Arnold.
2. Workshop Technology (Vol. 1 and 2) –B. S. Raghuvanshi, Dhanpath Rai and Sons, New Delhi.

FCEN0109 ENGINEERING MECHANICS

Pre –requisites	Course type	Credits
NIL	Theory	3

Course objectives:-

1. This course teaches students about the effect of forces during static and dynamic Conditions.
2. It gives insight about friction, virtual work and forces in the trusses
3. To determine axial forces, shear forces, and bending moments.
4. To study the bending phenomenon in beams and stress developed in them.

Course Outcomes:-

1. To provide the student with a thorough understanding of concept, drawing and free body diagrams.
2. Able to draw SF and BM diagram of a loaded beam

- Identify the stress developed in beams due to bending.

Module-I (20 Hrs):

Concurrent and non-concurrent forces on a plane: Principle of statics, composition and resolution of forces, free body diagram, equilibrium of concurrent coplanar forces, Lami's theorem, moment and principle of moment, types of supports and support reactions, equilibrium of general case of forces in a plane.

(The topic will be through class room teaching)

Center of gravity- General case of parallel forces in a plane, centre of parallel forces in a plane, centroid and centre of gravity, centroid of composite plane figures and curves, distributed forces in a plane. **(The topic will be through class room teaching)**

Friction: Types of friction, laws of friction, angle of friction, coefficient of friction, angle of repose, equilibrium of bodies on rough inclined planes, equilibrium of ladder. **(The topic will be through class room teaching)**

Module-II (17 Hrs):

Moment of Inertia: Rectangular and polar moment of inertia, radius of gyration, parallel axis theorem and perpendicular axis theorem, moment of inertia of plane composite figures and material bodies.

(The topic will be through class room teaching and experiments)

Plane trusses: Classification of truss, assumptions, method of joints and method of sections. **(The topic will be through class room teaching and ANSYS software)**

Principle of virtual work: Equilibrium of ideal systems, application to practical problems. **(The topic will be through class room teaching)** **MODULE-III (15 Hrs):**

Shear Force and Bending Moment: Types of beams—Concept of shear force and bending moment—S.F and B.M diagrams for cantilever, simply supported and overhanging beams subjected to point loads, U.D.L., uniformly varying loads and combination of these loads, point of contra flexure, relation between S.F., B.M and rate of loading at a section of a beam. **(The topics will be through class room teaching and ANSYS software)** **Flexural Stresses in beams:** Theory of simple bending, assumptions, flexure formula, determination bending stresses, section modulus for various beam sections, neutral axis. **(The topics will be through class room teaching and ANSYS software)**

Shear stresses in beams: Shear stress at a section, shear stress distribution for different sections. **(The topics will be through class room teaching)**

Text books:

- Engineering Mechanics by S Timoshenko, D.H Young and J.V.Rao, Revised 4th edition (Special Indian Edition), McGraw Hill.
- Engineering Mechanics, S.S. Bhavikatti, New Age International Publisher
- Strength of Materials, R. K. Bansal, Laxmi Publications

Reference books:

FCEN0110 THERMAL ENGINEERING

<i>Pre –requisites</i>	<i>Course type</i>	<i>Credits</i>
NIL	Theory	3

COURSE OBJECTIVES:

To make the student understand

1. *To be able to state various laws of thermodynamics and to define heat, work, thermal efficiency and the difference between various forms of energy*
2. *To be able to identify and describe energy exchange processes (in terms of various forms of energy, heat and work)*
3. *To be able to apply the steady-flow energy equation or the First Law of Thermodynamics to a system of thermodynamic components (heaters, coolers, pumps, turbines, pistons, etc.) to estimate required balances of heat, work and energy flow.*
4. *The importance of reversibility in the maximization of the efficiency of an engine*

COURSE OUTCOMES:

1. *Students will be able to prepare energy balance sheet*
2. *Will be able to understand various processes of thermodynamic cycles*
3. *Will be familiar with the steam table which will further help them in advanced thermodynamics for understanding power cycles*
4. *Capability to determine thermodynamic efficiency of various energy related processes*

MODULE-I (18 Hours)

Basic concepts and definition: Scope of Thermodynamics, Macroscopic and Microscopic approaches; Types of Systems, Properties, State and its representation on a property diagram, Process and its representation, point and path function; Reversible and Irreversible processes; Thermodynamic equilibrium and quasi-static processes, Zeroth Law of Thermodynamics and temperature, Measurement of temperature and calibration of thermometers, the ideal gas temperature scale. **(The topic is taught through PPT presentation and practice)**

Energy Transfer: Work Transfer (definition and calculation), Different modes of work, Displacement Work for various processes, Free expansion; Heat Transfer. **(The topic is taught through class room teaching)** **First Law of Thermodynamics:** Formal statement (using cyclic processes), First law for processes of fixed masses (closed systems) and introduction of internal energy as a thermodynamics property, Introduction of enthalpy as a thermodynamic property; Definition of specific heats and their use in calculation of internal energy and enthalpy with emphasis on ideal gases. Application of First Law to control volumes; Nozzle, Diffuser, Compressor, Turbine, Throttling device, Heat Exchanger (only steady flow need be considered). **(Application of First Law to control volumes will be through video presentation)**

MODULE-II (18 Hours)

Second Law of Thermodynamics: Limitations of First law, Kelvin-Planck and Clausius statements of Second Law, corollaries, Heat engine, Refrigerator and heat Pump, Clausius inequality.

Entropy: Definition, Principles of increase of entropy, Change of entropy of perfect gas in various

processes.

Properties of pure substances: p-v, p-T, T-S, h-S diagram for steam, different types of steam, Introduction to steam tables with respect to specific volume, pressure, temperature, enthalpy and entropy. **(Properties of pure substances will be through class room teaching & video presentation)**

MODULE-III (18 Hours)

IC engines: Introduction, Working of IC engines. Classification of IC engines, 2-Stroke and 4-Stroke engines, petrol and diesel engines, engine nomenclature. **(Topics related to IC engines will be through Practice & video presentation)**

Gas Power Cycles: Carnot Cycle, Air standard cycles-Otto, Diesel, Dual Combustion.

Vapour Power Cycles: Introduction Power cycles, The Carnot vapour cycle and its limitations, The Rankine cycle, Means of increasing the Rankine cycle efficiency, The reheat cycle, The regenerative feed heating cycle.

(Topics related to Gas & Vapour power cycles will be through class room teaching & video presentation)

Introduction to Gas Turbine Cycles- Open & Closed Cycle. **(Topics related to gas turbine will be through video presentation)**

TEXT BOOKS:

1. *Engineering Thermodynamics, P.K. Nag, Tata McGraw Hill Companies*
2. *Thermodynamics: An Engineering Approach, Y.A Cengel, M. A Boles, Tata McGraw Hill Companies.*

REFERENCE BOOKS:

1. *Fundamentals of Thermodynamics*, C. Borgnakke, R. E. Sonntag, WILEY Publication.

FCEN0111 EARTH SYSTEM SCIENCE Credits 3[3 0 0] Pre-requisites : Nil

Credit 3

Space Science: Solar System, Age of the Earth, Origin of Solar system. Meteors and Meteorites.

Earth Dynamics: Interior of the Earth, Composition of the Earth, Seismic waves, Seismograph, Plate Tectonics, Basics of Earthquake Engineering, Landslides, Volcanoes.

Geological Oceanography: Sea waves, Tides, Ocean currents, Geological work of seas and oceans, Tsunami and its causes, Warning system and mitigation.

Hydrogeology: Water table, Aquifer, Groundwater fluctuations and groundwater composition, Hydrologic cycle.

Glaciology: Glacier types, Different type of glaciers, Landforms formed by glacier.

Geological bodies and their structures: Rock, mineral, batholiths, dyke, sill, fold, fault, joint, unconformity.

Earth's Atmosphere: Structure and composition of atmosphere, Atmospheric circulation, Geological work of wind, Greenhouse effect and global warming, Carbon dioxide sequestration. Steps to maintain clean and pollution free atmosphere with governing laws, precautionary measures against disasters.

Biosphere: Origin of life, Evolution of life through ages, Geological time scale, biodiversity and its conservation.

Natural Resources: Renewable and non-renewable resources, Mineral and fossil fuel resources and their geological setting, mining of minerals and conservation, effect of mining on surface environment.

Recommended Books:

1. Earth's Dynamic – W. Kenneth Systems and Eric H. Christiansen
2. Exploring Earth: An introduction to Physical Geology – John P. Davidson
3. Holmes Principles of Physical Geology – A. Holmes (Revised Ed. Doris L. Holmes)
4. A Textbook of

Geology
–P K Mukherjee

5. Earth System Science from biogeochemical cycles to global changes –M. Jacobson, R.J. Charlson, H. Rodhe and G.H. Orians (2002)
6. Fundamentals of Geophysics –W. Lowrie.

FCEN0112 INTRODUCTION TO MINING [3 0 0]

Pre-requisites: Nil

Credit 3 Mining-

Definition and economic importance; Mine –definition, different types and classification; Mine life cycle; Mineral deposit –different types and their classification; Mineral resources of India; Modes of entry to a mine –shaft, incline, decline, adit and box-cut.

Overview of surface mining:

Types of surface mines, unit operations, basic bench geometry, applicability & limitations and advantages & disadvantage **Overview of underground mining:**

Different coal mining methods and their applicability & limitations; Different metal mining methods and their applicability & limitations; Basic concepts of transportation, ventilation, illumination and support in underground mines.

FCEN0113 MINE DEVELOPMENT [3 0 0]

Pre-requisites : Nil

Credit 3

Opening-up of Deposits: Choice of mode of entry- adit, shaft, decline and combined mode, their applicability, number and disposition.

Vertical and Inclined Shafts: Location, shape, size, and organization of shaft sinking, construction of shaft collar, shaft fittings.

Shaft Sinking Operations: Ground breaking and muck disposal- tools and equipment, lining; ventilation, lighting and dewatering; sinking in difficult and water-bearing ground.

Insets: Design, excavation and lining.

Mechanized Sinking: Simultaneous sinking and lining; slip - form method of lining; high speed sinking.

Shaft Boring: Methods and equipment.

Special Attributes: Widening and deepening of inclined and vertical shafts; staple shafts, raised shafts.

Main Haulage Drifts and Tunnels: Purpose, shape, size and location; excavation ground breaking, muck disposal, ventilation and supporting.

High Speed Drifting/Tunneling: Application of mechanized methods; road headers and tunnel boring machines.

Recent Developments in shaft sinking and drifting/tunneling.

Layouts of pit-top and pit-bottom, Coal Handling Plant, Bunkers and Railway Sidings

FCEN0114 MINE SURVEYING - I [3 0 0]

Pre-requisites : Nil

Credit 3

Surveying: Definition, objective, classification and principles of surveying.

Linear Measurement: Instruments for measuring distances; ranging and taping survey lines; Chain surveying – principle, field work, off-sets, booking and plotting, obstacles in taping.

Angular Measurement: Bearing of lines; Rectangular coordinate system; Essentials of the micro-optic theodolite; Measurement of horizontal and vertical angles; Temporary and permanent adjustments; Theodolite traversing; Computation of co-ordinates; Adjustment of traverse; Temporary and permanent adjustments.

Leveling: Definition & terminology; Leveling instruments types - tilting, auto set and digital levels; Leveling staves; Different types of leveling - differential, profile, cross-sectional and reciprocal leveling; Booking and reduction methods; Underground leveling; Temporary and permanent adjustments of levels.

Total Station: Principle of electronic measurement of distance and angles; construction and working with Total Station; Errors; Application and recent developments in Total Station.

Plane Table Surveying: Methods **Contours:** Concepts; Characteristics of contour; Contour Interval; Methods of contouring and uses of contours.

FCEN0115 INTRODUCTION TO BIOTECHNOLOGY (3 0 0 3)

Pre-requisites : Nil Credit 3

OBJECTIVES

■ To introduce students basic knowledge about biotechnology

MODULE I: Biochemistry 15

Component of the cell, structure and biochemical functions, Biomolecules-Carbohydrates, lipids, proteins,

Nucleic acids, Structure and classification of enzymes

MODULE II Cell Biology 15

Eukaryotic, Prokaryotic cells, Cell cycle –Mitosis and Meiosis, Cell fractionation and flow cytometry.

Molecular Biology

Introduction to nucleic acids: Nucleic acids as genetic material, Structure and physicochemical properties of

elements in DNA and RNA, Biological significance of differences in DNA and RNA.

MODULE III 15

Immunology :Cells of immune system, Development, maturation, activation and differentiation of T cells and B cells, Phagocytosis process

Biotechnology Applications: Industrial production, Drug discovery and development

TOTAL: 45 PERIODS

The students will be able to understand fields of Biotechnology and their specialized functions.

· They will acquire precise knowledge of various aspects of a living cell, its

structure, genetics and gene interactions and immune system.

· Also the students will get knowledge about Biotechnology application in industry and health care field.

TEXT BOOKS

1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. CBS publishers and distributors.

FCEN0116 INTRODUCTION TO BIOPHYSICS (3 0 0 3)

Credits 3

Prerequisite: Nil

OBJECTIVES

1. Learn the structures of biological molecules
2. To understand the concept of structural analysis
3. Learn the techniques for analysis and determination of structure of biomolecules

MODULE 1: Structures of Biological macromolecules 17

Levels of structures in proteins, nucleic acids and polysaccharides - primary, secondary, tertiary and quaternary structures

Conformational analysis of proteins

Polypeptide chain geometries, internal rotation angles, Ramachandran plot, potential energy calculations, forces that determine protein structure –hydrogen bonding, hydrophobic interactions, ionic interactions, disulphide bonds –prediction of protein structure.

MODULE 2 : Conformational analysis of Nucleic acid 12

General characteristics of nucleic acid structure –geometric –Glycosidic bond –

rotational isomers, ribose puckering–backbone rotation angles and steric hindrances
–forces stabilizing ordered forms –base pairing and base stacking

MODULE 3: Technoques for the study of Biological structures 16

Electron Microscopy, Ultracentrifuge, Viscometry, Molecular –sieve chromatography, electrophoresis, NMR and EPR. X-Ray crystallography, X-ray fiber diffraction, light scattering, Neutron scattering **Total hours: 45**

TEXT BOOK:

Biophysical Chemistry, Cantor and Schimmel, part I and II, W.H. Freeman and co

FCEN0117 BIOSAFETY, BIOETHICS, IPR & PATENTS (2 0 0 2) Credits 2 Prerequisite Nil OBJECTIVES

1. To introduce the biosafety regulations and ethical concepts in biotechnology
2. To emphasize on IPR issues and need for knowledge in patents in biotechnology

MODULE I: Bioethics and Biosafety 12

Bioethics –Necessity of Bioethics, different paradigms of Bioethics –National & International. Ethical issues against the molecular technologies.

Biosafety–Introduction to biosafety and health hazards concerning biotechnology. Introduction to the concept of containment level and Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP).

MODULE 2: Patent and Patent Laws 10

Objectives of the patent system - Basic principles and general requirements of patent law biotechnological inventions. Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions. Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

MODULE 3: Intellectual Property Rights 8

Intellectual property rights-TRIP- GATT-International conventions patents and methods of application of patents-Legal implications-Biodiversity and farmer rights.

TOTAL 30

FCEN 0118 Computer Fundamental and Organization

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN 0118	Computer Fundamental and Organization	Theory	3	Nil	3-0-0

Learning Objectives:

The basic knowledge of how a computer works is very important for any fresh networking or operating system professional. The functional knowledge of a computers working and its main building parts are paramount. The computers of today may come with variety of features but the basic working principles remain the same. Students will explore the fundamentals of organization of a computer and the principles and building units of a computer (its hardware). Also, they will be introduced to the basics of networking and MS Office.

Course Outcomes:

Student will able to know about Basic knowledge about computers. Fundamental hardware components that make up

a computer's hardware and Word the processing role and electronic of each spreadsheet of. An overview these of MSWORD, MSEXCEL and MSPOWER POINT. Attain the knowledge about basics of Networking

Syllabus

Unit I: General Features of a Computer(12hrs)

General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super

computers. Computer applications –data processing, information processing, commercial, office automation, industry and

engineering, healthcare, education, graphics and multimedia.

Unit II: Computer Organization (6hrs)

Computer organization, central processing unit, computer memory –primary memory and secondary memory. Secondary storage devices –Magnetic and optical media. Input and output units. OMR, OCR, MICR, scanner, mouse, modem.

Unit III: Computer Hardware and Software (11hrs)

Computer hardware and software. Machine language and high level language. Application software, computer program,

operating system. Computer virus, antivirus and computer security. Elements of MS DOS and Windows OS. Computer

arithmetic, Binary, octal and hexadecimal number systems. Algorithm and flowcharts, illustrations, elements of a database

and its applications

Basic Gates (Demorgans theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions

UNIT IV: MS Office (4hrs)

Word processing and electronic spread sheet. An overview of MSWORD, MSEXCEL and MSPOWER POINT

UNIT V: Introduction to Networking (6hrs)

Network of computers.Types of networks, LAN, Intranet and Internet.Internet applications. World Wide Web, E-mail, browsing and searching, search engines, multimedia applications.

FCEN0119 Operating System Building Blocks (Theory) Credit 3 T-P-Pr (3-0-0)

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0119	Operating System Building Blocks	Theory	3	Nil	3-0-0

Learning Objectives:

The operating system is the most important program that runs on a computer. Every general-purpose computer must have an operating system to run other programs. Operating systems perform basic tasks, such as recognizing input from the keyboard, sending output to the display screen, keeping track of files and directories on the disk, and controlling peripheral devices such as disk drives and printers. This course covers the concept of operating system and its applications.

Course Outcome:

After learning the fundamental concepts in Operating system including how OS has evolved over the years and different components of OS, students will continue to more significant functions of OS like Process management, storage and memory management etc. This will provide the necessary information for students to extract maximum benefits out of the OS while developing programs, working with applications and etc.

Syllabus

Unit I: Introduction to Operating System (6 Hrs.)

Objectives and Functions of OS, Evolution of OS, OS Structures, OS Components, OS Services, System calls, System

programs, Virtual Machines.

Unit II: Process Management –Processes and Threads (8 Hrs.)

Processes: Process concept, Process scheduling, Co-operating processes, Operations on processes, Inter process

communication, Communication in client-server systems. Threads: Introduction to Threads, Single and Multi-threaded

processes and its benefits, User and Kernel threads, Multithreading models, Threading issues. CPU Scheduling: Basic

concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling, Algorithm

Evaluation, Process Scheduling Models.

Unit III: Process Management –Synchronization and Deadlocks (8 Hrs.)

Process Synchronization: Mutual Exclusion, Critical –section problem, Synchronization hardware, Semaphores, Classic

problems of synchronization, Critical Regions, Monitors, OS Synchronization, Atomic Transactions. Deadlocks: System

Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock

Detection, Recovery from Deadlock.

Unit IV: Storage Management (10 Hrs.)

Memory Management: Logical and physical Address Space, Swapping, Contiguous Memory Allocation, Paging, Segmentation with Paging. Virtual Management: Demand paging, Process creation, Page Replacement Algorithms,

Allocation of Frames, Thrashing, Operating System Examples, Page size and other considerations, Demand segmentation.

File-System Interface: File concept, Access Methods, Directory structure, File- system Mounting, File sharing, Protection and consistency semantics. File-System Implementation: File-System structure, File-System Implementations, Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery. Disk Management: Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation

Unit V: Protection and Security (7hrs)

Protection: Goals of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Revocation of Access Rights, Capability- Based Systems, Language –Based Protection. Security: Security Problem, User Authentication, One –Time Password, Program Threats, System Threats, Cryptography, Computer –Security Classifications

Introduction to Robotics

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Introduction to Robotics	ENFC0203	Practice	0-2-0(2)	Geometric Drawing

1. Objectives

- To Provide An Overview To Students On Various Types of Industrial Robots and Their Configurations.
- To Educate The Students on Use Of DELMIA To Carryout Simulation Exercises of Various Types of Robotic Arms Suiting to Specific Applications.

2. Course Outcome

- Students Will Have Knowledge and Skill To Program Industrial Robots For Performing Various Tasks.
- Students Will Be Able To Undertake Simulation Exercises Of Various Types Of Robotic Arms As A Pre-Requisite Leading To A Safe, Cost Effective, Reliable And Optimum Design.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test		
	Assignment		
	IPR	50	Lab work, report
	Project		
	Quiz		
External Examination	EPR	50	Lab work & Report
Total		100	

4. List of Experiments (45 Hours)

1. DELMIA: Simulated Models of Various Types Industrial Robots & Its Architecture.
2. DELMIA: Simulation of Activities Like: Pick and Place, Coordinated Movement, Spot Welding and Arc Welding.
3. DELMIA: Designing Own Robotic Arm with Insight to Robot Kinematics.
 - i) A Prismatic Robotic Arm.
 - ii) A Revolute Joint Robotic Arm.
 - iii) Articulated Robotic Arm
 - iv) Spherical Robotic Arm

4. Robot Programming: Use of Brabofor Pick and Place Actions.
5. An Understanding of Different Sensors, Their Operation and Application. Demonstration of Use of Sensors for At Least 3 Applications of Robot.
6. Commanding A Robot To Achieve Tasks On The Basis Of Sensor Information, A Description Of Motors, And How Their Velocity Is Set, And Other Robotic Actuators.

5. Reference

Text Books:

1. M.P. Groover, Industrial Robotics, Second Edition, TMH Publishers.

FCEN0201 INTRODUCTION TO INTERNET TECHNOLOGY

Course Nature: Practice

Credit: 5

Course Objectives:

1. To introduce the concepts of Internet and Impact of Internet in human life.
2. To introduce the basic concepts of web designing.
3. To make the students understand the web designing languages like HTML, CSS and Java Script.
4. To train the students on the methods of designing the responsive sites.
5. To make the students understand various concepts related web design. Course Outcomes:

On successful completion of this course, students will be able to: 1. Design a complete responsive, attractive, static website.

Module-I (12 Hrs): INTERNET AND HTML BASICS

(A) **Internet Technology:** Basic Concepts of Internet, How it Works ?, Browser Types, Server Types, Site Advantages, Skills Required, Tools Required, Domain Names, Site Construction, Hosting

Concepts, Ecommerce Hosting, Site Backup, Site Statistics, Site Popularity, Free Graphics. **(Most**

of the topics will be through presentation and live demonstration)

(B) **HTTP:** Home, Overview, Parameters, Messages, Requests, Responses, Methods, Status Codes, Header Fields, Caching, URL Encoding, Security, Message Examples, HTTPs. **(Most of the topics will be through presentation and live demonstration)**

(C) **HTML:** Overview, Basic Tags, Elements, Attributes, Formatting, Phrase Tags, Meta Tags, Comments, Images, Tables, Lists, Text Links, Image Links, Email Links, Frames, Iframes,

Blocks, Backgrounds, Colors, Fonts, Forms, Embed Multimedia, Marquees, Header, Style Sheet, Javascript, Layouts. **(Most of the topics will be through presentation and live demonstration)**

Module-II (20 Hrs) : HTML5 & CSS3

(A) **HTML5:** Overview, Syntax, Attributes, Events, Web Forms 2.0, SVG, MathML, Web Storage, WebSQL, Server-Sent Events, Web Socket, Canvas, Audio & Video, Geolocation, Microdata, Drag & drop, Web Workers, IndexedDB, Web Messaging, Web CORS, Web RTC. . **(Most of the topics will be through presentation and live demonstration)**

(B) **CSS:** Introduction, Syntax, Selectors, Backgrounds, Text, Fonts, Links, Lists, Tables, Box Model, Border, Outline, Margin, Padding, Dimension, Display, Position, Float, Align, Combinators, Pseudo-class, Pseudo-element, Navigation Bar, Image Gallery, Image Opacity, Image Sprites, Media Types, Attr Selectors, Rounded Corners, Border Images, Backgrounds, Colors, Gradients, Shadows, Text, Fonts, 2D Transforms, 3D Transforms, Transitions, Animations, Multiple Columns, User Interface, Box Sizing. Viewport, Grid View, Media Queries,

(C) Images, Videos,

Frameworks. **(Most of the topics will be through presentation and live demonstration)**

MODULE-III (20 Hrs) : JAVASCRIPT & BOOTSTRAP

(A) **JavaScript:** Overview, Syntax, Enabling, Placement, Variables, Operators, If...Else, Switch Case, While Loop, For Loop, For...in, Loop Control, Functions, Events, Cookies, Page Redirect, Dialog Boxes, Void Keyword, Page Printing, Objects, Number, Boolean, Strings, Arrays, Date, Math, RegExp, HTML DOM, Error Handling, Validations, Animation, Multimedia, Debugging, Image Map, Browsers. . **(Most of the topics will be through presentation and live demonstration)**

(B) **Bootstrap:** Introduction, Environment Setup, Grid System, CSS Overview, Typography, Code, Tables, Forms, Buttons, Images, Helper Classes, Responsive utilities, Glyphicons, Drop downs, Button Groups, Button Drop downs, Input Groups, Navigation Elements, Navbar, Breadcrumb,

Pagination, Labels, Badges, Jumbotron, Page Header, Thumbnails, Alerts, Progress Bars, Media Object, List Group, Panels, Wells, Bootstrap Plugins. . **(Most of the topics will be through presentation and live demonstration)**

TEXT BOOKS:

1. *Web Warrior Guide to Web Design Technologies*, Don Gosselin, Joel Sklar & others, Cengage Learning
2. *Teach yourself web technology*, Ivan Bayross, BPB Publication
3. *Web Programming: Building Internet Applications*, Chris Bates, Wiley Dreamtech
4. *Web Technologies*, Uttam K Roy, Oxford
5. *Web Technology: A developer perspective*, Gopalan & Akilandeswari, PHI

FCEN0202 BASIC ELECTRONICS LABORATORY

PRACTICE **Credits: 02** **Hours: [36]**

Course Objectives:

The objectives of this Laboratory are to

- 1. Identify schematic symbols and verifying the characteristics of electronic devices e.g. Diode, Zener Diode, LED, BJT, JFET and MOSFET etc.*
- 2. Design, analysis and verification of electronic circuits e.g. Rectifiers, Clipper, Clamper, Filters, Amplifiers and Operational Amplifiers etc.*

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

- 1. Get the exposure of electronics engineering which allows training students with good scientific and engineering breadth so as to comprehend, analyze, design, and create novel products and solutions for the real life problems.*
- 2. Apply this knowledge under supervision to solve engineering problem with core field.*
- 3. Get the knowledge of foundation course for further study.*

List of Experiments

1. Identification of basic electronic components & familiarization with bread board and measuring instruments
2. Study and use of Function generator & Oscilloscope to generate & view waveforms and also measure its amplitude and frequency.
3. Verification of the V-I characteristics of forward & reverse biased PN-junction diode.
4. Verification of the V-I characteristics of forward & reverse biased of Zener diode.
5. Implementation of Half wave and full wave rectifier without and with capacitor filter. Tracing of waveforms, Measurement of DC load voltage, AC load voltage & ripple factor values.
6. Implementation of clipper circuits using PN-junction diode. Tracing of waveforms at the clipper circuits output.
7. Plot and verify the input and output characteristics of BJT in Common Emitter Configuration.
8. Plot and verify the input and output characteristics of BJT in Common Base Configuration.
9. Implementation of DC biasing circuit of BJT and measurement of DC voltages and currents
10. Verification of the drain characteristics of JFET
11. Plot and verify the transfer characteristics of F.E.T and calculate various J.F.E.T parameters
12. RC based low pass filter and high pass filter design

FCEN0203 SIGNALS & SYSTEMS LABORATORY

PRACTICE

Credits:02

Hours [36]

Course Objectives:

The objectives of this Laboratory are to

- 1. Introduce the concepts and techniques associated with the understanding of signals and systems.*
- 2. Familiarize with techniques suitable for analyzing and synthesizing both continuous-time and discrete time systems and provide with an appreciation of applications for the techniques and mathematics used in this course.*

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

- 1. Determine the response of an LTI system using convolution and classical methods. Analyze system properties based on impulse response.*
- 2. Determine and analyze the responses of LTI system to periodic signals using Fourier series. **List***

of Experiments

1. Introduction to MATLAB/SCILAB programming
2. A) Generation of various types of waveforms (sine, cosine, square, triangular etc.)
B) Plot unit step, unit ramp, unit impulse
C) Study and analysis of different types of systems.
3. Computation of Energy and power of a given signal
4. A) Linear convolution of sequences
B) Computation of autocorrelation of a sequence, cross correlation of two sequences
5. Computation of the power spectral density of a sequence using SCILAB/MATLAB 6. Analysis of Fourier series and Transforms of different waveforms using SCILAB/MATLAB
7. Computation of Laplace Transform of different types of signal.
8. Computation of Z-transform of given signals.
9. Computation of DTFT of different types of signals.
10. Finding of stability of a LTI system

Tools to be used: MATLAB / SCILAB

Reference Books:

- 1. Digital Signal Processing: A MATLAB-Based Approach –Vinay K. Ingle and John G. Proakis, Cengage Learning.*
- 2. Fundamentals of Digital Signal Processing using MATLAB –Robert J. Schilling and Sandra L. Harris, Cengage Learning.*

FCEN0204 DIGITAL ELECTRONIC CIRCUITS LABORATORY

PRACTICE

Credits: 02

Hours: [36]

Course Objectives:

The objectives of this Laboratory are to:

1. Provide basic concepts on various digital designs through hands on practice.
2. Simulation platform for various digital circuits through Hardware description languages.

Course Outcomes:

Upon successful completion of this laboratory, students should be able to:

1. Develop new digital design
2. Design high speed memories through HDL programming.

List of Experiments

1. Verification of truth table of different digital logic gates: AND, OR, NAND, NOR, EX-OR, EX-NOR, NOT.
2. Design and implementation of Half Adder, Full Adder, Half Subtractor and Full subtractor using various logic gates.
3. Design, implement and test a given combinational circuit design example with (i) NAND Gates only (ii) NOR Gates only and (iii) using minimum number of Gates.
4. Gate-level minimization: Two level and multi level implementation of Boolean functions.
5. Combinational Circuits: design, assemble and test: code converters, a. gray code to binary and 7 segment display.
6. Implementation of combinational logic circuits with multiplexers and de-multiplexers.
7. Flip-Flop: implementation and verification of SR, D & J-K flip-flops.
8. Shift Registers: Design and investigate the operation of all types of shift registers with a. parallel load.
9. Counters: Design, assemble and test various ripple and synchronous counters - decimal a. counter, Binary counter with parallel load.
10. Clock-pulse generator: design, implement and test using 555 timer.
11. Mini Project: Binary Multiplier: design and implement.

Using VHDL:-

12. Verilog/VHDL simulation and implementation of Experiments 1, 2, 3, 6 & 7.

FCEN0205 ELECTRONICS WORKSHOP-I

PRACTICE

Credits: 02

Hours: [42]

Course Objectives:

The objectives of this Laboratory are to:

1. Understand and conceptually visualize the theoretical concepts of different components covered in the basic electronics.
2. Understand the use and application of surface mount technology in the manufacture of an electronic circuit and its hands on practice.

Course Outcomes:-

Upon successful completion of this laboratory, students should be able to:

1. Identify different tools and electronic components
2. Use and solder the electronic components on a Varo board with proper polarity to design simple circuits

List of Experiments

1. Identify the various tools & write down their uses.
Material required: various tools -Wire Cutter.Wire Stripper -Various types of Pliers-Vice.-Crimping Tools (RJ-11/RJ-45) -Screw-Drivers -Testers
2. Identify the various type of connector used in various Gadgets & Instruments/Equipments
Material Required :1. USB connector and cable, 2. Audio Cables and Connectors (3.5mm headphone jack, Digital Optical Audio), 3. Video Cables (VGA cable, DVI to VGA, S-Video cables, VGA to S-Video cables), 4. Audio and Video Cables (RCA Connector Cables, HDMI Cables, Display Port), 5.Data Cables (Fire wire IEEE 1394, eSATA Cables), 6. Networking Related Cables (Phone RJ11 Cable, Ethernet Cable)
3. Solder the joint connection of wires and check it. De-solder it and Re-solder.
Materials required: soldering iron. Solder wire, Flux, Desoldering Pump
4. Study of basic electronics components - Resistors and Capacitors (Find out the values from color bands/written values and compare it with measured values using multimeter)
Material required: Varioustypes of resistors, Capacitors and multimeter.
5. Study of basic electronics components - Identify the terminals of a Diode and its Polarity, Identify the terminals of a Transistor and its Type (n-p-n or p-n-p)
Material Required: Diode, Transistor, Multimeter, connecting wire
6. Study of Electrical wiring.
Material Required: Switch Board, Switches, Plugs, Electric Bulb, Fuse, Regulator, Two way switch, Wires
7. Design of rectifier circuit with filter, variable resistor, voltage regulator.
Material Required: Transformer (230-18), diodes, capacitor, variable resistor, voltage regulator for 5 volt and 12 volt.
8. Study of BJT as switch.
Material Required: Transistor, Resistors, Diode, Relay, LED
Study and use of Relay (design a simple relay circuit).
Material Required: Transistor, Resistors, Diode, Relay, LED
10. Check the continuity of a printed line on a PCB using Multi-meter. Study of different types of boards for electronics circuit design.
Material Required: PCB (single layer, double layer and multi layer) and Varo Board
11. Survey of optoelectronics devices (LED, Photo diode, photo transistor, LDR, Opto-isolator).
Materialrequired: different types of optoelectronics devices, data sheets.
12. Study of CRO, function generator & Measurement of voltage, frequency and Phase Angle.
13. Study of different types of transformer with different power supply (step down in particular if Step up transformer is not possible)

ECEN0206 Basic Electrical Engineering Laboratory

Credits: 02

Total Hours: 42

Course Objectives:

- Provide working knowledge for the analysis of basic D.C. and A.C. circuits used in electrical and electronic devices.

Course Outcomes:

- Understand DC Machines
- Understand single and three phase A.C circuits.
- Understand AC machines and measuring instruments.

List of Experiments

1. Connection & Measurement of power consumption of a fluorescent lamp.
2. Measurement of armature & field resistances of a D.C Compound Machine.
3. Connection & Testing of 1- \emptyset Energy Meter.
4. Calculation of No-Load losses of a 1- \emptyset Transformer.
5. Study of 1- \emptyset induction motor or fan motor.
6. Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
7. Starting of 3- \emptyset induction motor by star-delta- Δ) (Ystarter or DOL starte
8. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply.
9. Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.
10. V-I Characteristics of Incandescent lamp.
11. Verification of Thevenin's theorem.
12. Study of DC motor using three point starter.

FCEE0207 Electrical Workshop Practice

Credits: 02

Total Hours: 42

Course Objective:

- To develop special skills required for repairing small electrical domestic appliances, making joints and carrying out work and detecting faults etc. in electrical equipments and circuits.

Course Outcomes:

After successful completion of the course, student will be able to

- *identify and understand importance of various electrical and electronics components*
- *understand basic construction and operation of various laboratory equipments*
- *develop basic relay contactor logic and operation of electric control panel*
- *perform basic maintenance and troubleshooting of house hold equipments, energy saving etc.*

List of Experiments1. To study safety precautions for electrical

engineering, draw the electrical symbol and general electrical house wiring.

2. To study the various types of accessories and tools.

3. Working of fuse and circuit breaker.
4. To setup a series, parallel and staircase wiring using the given lamps.
5. To study Earth-wire connection and Earth-wire measurement in electrical wiring.
6. To set-up residential house wiring using switches, socket, fuse, junction box, energy meter etc.
7. Fault analysis of residential house wiring.
8. Study of multimeter, voltmeter, ammeter, wattmeter (both AC&DC)
9. Connection & fault analysis in Domestic appliances (Fan, electric iron, fluorescent tube).
10. Study of Industrial wiring in the workshop and study of bimetallic relay.
11. Study of a 11 0.4 KV transformer substation
12. PCB design

FCEN0208 Basic Electrical simulation Lab

Credits: 02
42

Total Hours:

Course Objectives:

- To make the students understand the various electrical circuit in software approach.
- To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

On successful completion of this course, students will be able to:

- Construct and analyse a practical circuit without having practical knowledge.
- Design circuit parameter, so that it will give better performance in complicated electrical network.

List of experiments:

1. Simulation of DC & AC Circuits
2. DC & AC Transient response of R-L Series network
3. DC & AC Transient response of R-C Series network
4. DC & AC Transient response of R-L-C Series network
5. Mesh Analysis
6. Nodal Analysis
7. Simulation of Norton and Superposition theorem
8. Star Delta Transformation
9. Clipper designing and finding out the i/p and o/p waveforms.
10. Clamper designing and finding out the i/p and o/p waveforms

11. Half wave and full wave rectifier designing and finding out the i/p and o/p waveforms.

12. Transformer

FCEN0209 Electrical Machines-I Lab

Credits: Total Hours: 42

Course Objectives:

- To introduce about construction and associated parts of different machines.
- To analyse the behaviour and performance of dc machine under different operating conditions.
- To make student understand about various three phase transformer connections.

Course Outcomes:

On successful completion of this course, students will be able to:

- Distinguish the constructional similarity and dissimilarity between various dc and ac machine.
- Demonstrate appropriate behaviours and knowledge of electrical machines when working with the class room teaching and lab experience.
- In the lab, at least for 50% experiments, students will write a software programme. for logic(mathematical equation).

List of Experiments

1. Determination of critical resistance & critical speed from no load test of a DC Shunt generator.
2. Plotting of external and internal characteristics of a DC shunt generator.
3. Determination of efficiency of DC machine by direct loading.
4. Determination of efficiency of DC machine by
5. Determination of Efficiency and Voltage Regulation by Open Circuit and Short Circuit test on single phase transformer.
6. Speed control of DC Motor by Ward-Leonard Method.
7. Study of current, voltage & frequency of a 1-ph transformer & to calculate voltage and current of the transformer using CRO.
8. Polarity test and Parallel operation of two single phase transformers.
9. Back to back test of a single phase transformer.
10. Load characteristics of DC (i) self (ii) separately excited DC generator.
11. Calculation of earth resistivity of industrial earthing.
12. Separation of core losses of a DC machine.

FCEN0210 Analog & Digital Electronics Lab

Credits: 02 Total Hours: 42

Course Objectives:

-To make the students understand the various electronics circuit by using semiconductor devices in practical mode.

-To train the students to analysis different amplifier (small signal & large signal) in practical mode. -To train the students such a way that, it will help them to realise the practical circuit in easy manner.

Course Outcomes:

On successful completion of this course, students will be able to: -Construct analog and digital electronics circuit.

-Design circuit parameter, so that it will give better performance in complicated electronics circuit.

List of experiments:

1. Switching characteristics of Diode
2. Switching characteristics of transistor
3. Switching characteristics of thyristor
4. Design & fabrication of Analog DC power supply
5. Verifications of Boolean function using logic gate
6. Use of NAND gate as universal gate
7. Use of NOR gate as universal gate
8. Verifications of multiplexer and de-multiplexer using ICs
9. Study of FLIP-FLOP
10. Design of 4 bit CPU, which can perform different operations

FCEN0211 Automation Lab (PLC)

Credits: 02
42

Total Hours:

Course Objective

Experimenting the theory by

-Prepare the students competency in the area of Automation.

-Prepare students having good balance between analytical skills and hands-on Skills

- Prepare students with multi-disciplinary

*competency **Course Outcomes:** On successful*

completion of this course, students will be able to:

-Use a number of PLC programming languages to develop control solutions. - Describe the input output interface circuits and their role in the PLC's reliability.

LIST OF EXPERIMENTS

1. Study hardware and software used in PLC

2. Implementation of Logic gates
3. Develop a ladder program for DOL starter
4. Develop an application using On-Delay timer.
5. Develop an application using OFF Delay Timer
6. Develop an application using UP/DOWN counter
7. Implementation of PLC Arithmetic instructions
8. Study of PID controller instruction for a pilot plant
9. Study of open loop control system using PLC
10. Study of closed loop control system using PLC

Reference Book(s):

FCEN0212 GEOMETRICAL DRAWING LAB

<i>Pre –requisites</i>	<i>Course type</i>	<i>Credits</i>
<i>NIL</i>	<i>Practice</i>	<i>2</i>

Course Objectives:

At the end of Session, participants are able to learn:

1. Advanced solutions for conceptual design, 3D modelling, and documentation.
2. To do product design, industrial design and styling 3D Surface Model,
3. To perform Assembly design & template based design ,
4. To Create Kinematics with visual analysis and validation which will give you high quality performance insights for product decisions.
5. To perform Manufacturing and generating of different views from a 3D model.

Course Outcomes:

On successful completion of this course, students will be able to:

1. At the end of Session, participants are able to create :
2. 3D Solid Model,
3. 3D Surface Model,
4. Assembly of parts,
5. Creating Kinematics,
6. Manufacturing and generating of different views from a 3D model.

Module-I (12 Hrs): Part Modelling

Creation of simple solids, Parametric modelling, Booleans and Functional Modelling, Rendering **(All of the topics will be through learn by doing and laboratory mode)**

MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Module-II (12Hrs) : Assembly Modelling

Simple Assembly, Constraints, Digital Mockup

(All of the topics will be through learn by doing and laboratory mode) MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

MODULE-III (14 Hrs) : Drafting

Creation of layout, Part Drawing, Detailed drawing

(All of the topics will be through learn by doing and laboratory mode) MECHANICAL/CIVIL/ ELECTRICAL BRANCH STUDENTS ARE REQUIRED TO DO PROJECTS RELATED TO THEIR OWN BRANCH

Note: Platform is Solid works / Catia /Pro-E

FCEN 0213 WORKSHOP TECHNOLOGY PRACTICE

Pre –requisites	Course type	Credits
NIL	Practice	2

Learning Objectives: To know various tool, work loading devices in carpentry, fitting, joining, sheet metal forming and plumbing.

Course Outcomes: Can manufacture simple components.

(Two jobs from each trade are to be done)

Module I

Carpentry:

1. Handling of carpentry tools: Practice in marking, sawing, planing and chiseling to size
2. Making simple joints: a) Half-lap b) Mortise joints.
3. Job using Wood Turning Lathe –Stepped Pulley.

Fitting:

1. Use of fitting tools: practice in marking, fitting to size
2. making of simple mating profiles
 - a) VEE b) Dovetail c) Half round joints.

Module II Welding:

1. Introduction to Tools & Welding Equipment
 - a) Edge Preparation for Various Joints: Lap Joint, Butt Joint, T-Joint
2. Brazing & Soldering (Demonstration)

House Wiring:

1. Parallel or series connection of two bulbs
2. To control two lamps by two independent switches located at two different places
3. To prepare a House wiring circuit with PVC conduit wiring system including 5Amps , 15Amps socket , fluorescent lab, MCB and Energy meter.

Module III Plumbing:

1. Introduction to Plumbing Tools

2. Basic Pipe Fittings
3. Sanitary Fittings
4. Water Meter Installation **Black-smithy:**
 1. Introduction to Forging & Forging Tools- Use (Demonstration)
 2. Converting round rod into Square Ring
 3. Converting round rod into square S-Hook

FCEN0214 Mining SURVEYING LAB [0 0 2]

Study and sketch the linear measuring instruments & carrying out Chain Surveying; Prismatic Compass and carrying out Compass Traversing; Vernier theodolite & angle measurement by Repetition Method; Angle measurement by Reiteration Method using Micro-optic theodolite; Study and sketch of a Tilting level & carrying out Fly Leveling; Study and sketch of Auto level & carrying out Profile Leveling; Study and sketch of 1" Theodolite and angle measurement; Plane Table Surveying by Radiation Method and Contouring; Study and sketch of Total Station and measurement of angles, distance and determination of coordinates and RL using Total Station; Preparation of grid and plotting the field data.

Mobile App Development for Android

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Mobile App Development for Android	ENFC0207	Practice	0-2-0(2)	Programming for Problem Solving – Java

1. Objective

Learn to develop Android mobile Apps

2. Course Outcome

Develop Android mobile Apps using Kotlin

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	NIL	Written examination
	Assignment	NIL	Report and Presentation
	Experiments (Internal)	50	Practice work, report and viva voce
	Project	NIL	Report and presentation
	Quiz	NIL	Surprise/preannounced ones
External Examination	Semester	NIL	Written examination
	Practice	50	Practice test with viva-voce

Total		100

✓ **Android App projects to work on along with practice (Non-exhaustive list)**

1. Quiz Android App
 - a) Without online database connectivity
 - b) With online database connectivity
2. Course Recommendation Android App
3. Smart Messaging Android App
4. Dictionary Android App
5. Online Shopping Android App
6. Voting System Android App
7. Reminder Application Android App
8. Sentence Framer Android App
9. PC Control over the Internet Android App
10. Password Based Remote Door Open System Android App
11. Wi-Fi Library Book Locator Android App
12. Pick and Place Robotic Arm Android App
13. **Course outline**

Module – I (6 hrs.)

Introduction to Android OS, Development environment (Android Studio, Kotlin)

Module – II (10 hrs.)

Android application basics (Activity, Service, Content provider, Broadcast receiver, Intents)

Module – III (8 hrs.)

User Interface – Layouts, Widgets, Event handling, Notifications

Module – IV (8 hrs.)

Data Storage – Shared preference, Internal storage, External storage

Module –V (8 hrs.)

Data Storage – SQLite, Content provider

Module – VI (12 hrs.)

Networking – Android network overview and management, Socket and HTTP, Wi-Fi and Bluetooth, GPS; Handler, AsyncTask

Module – VII (8 hrs.)

Multimedia – Voice recording, Image capturing, Drawing & animatio

4. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module – I (6 hrs.)				
Introduction to Android OS, Development environment (Android Studio)	2	Lab practice	Experiment	Book, Online source: www.codeproject.com/Articles/803424/Article-Introduction-to-Android-OS
Introduction to Kotlin	4	Lab practice	Experiment	Book, Online source: https://kotlinlang.org/docs/tutorials/kotlin-android.html
Module – II (12 hrs.)				
Android application basics (Activity, Service)	4	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Android application basics (Content provider, Broadcast receiver)	4	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Android application basics (Intents)	2	Lab practice	Experiment, Assignment	Book, Online source: in.udacity.com/interview-skill-certification/android-basics-user-interface--ud834
Module – III (8 hrs.)				
User Interface– Layouts	2	Lab practice	Experiment	Book, Online source: developer.android.com/guide/topics/ui
Widgets, Event handling, Notifications	6	Lab practice	Experiment, Assignment	Online source
Module – IV (8 hrs.)				
Data Storage – shared preference	4	Lab practice	Experiment	Online source: developer.android.com/guide/topics/data/data-storage
Internal storage, External storage, SQLite, Content	4	Lab practice	Experiment, Assignment	Book, Online source

<i>provider</i>				
Module – V (8 hrs.)				
SQLite	4	Lab practice	Experiment , Assignment	Book, Online source: developer.android.com/guide/topics/data/data-storage
Content provider	4	Lab practice	Experiment , Assignment	Book, Online source: developer.android.com/guide/topics/data/data-storage
Module – VI (12 hrs.)				
Networking – Android network overview and management	2	Lab practice	Assignment	Book, Online source: www.vogella.com/tutorials/AndroidNetworking/article.html
Socket and HTTP, Wi-Fi and Bluetooth, GPS.	4	Lab practice	Experiment	Book, Online source
Handlers, AsyncTask	6		Experiment	Book, Online source
Module – VII (8 hrs.)				
Multimedia – Voice recording, image capturing, basic drawing & animation	4	Lab practice	Experiment , Assignment	Online source: https://www.javatpoint.com/playing-audio-in-android-example
Basic drawing & animation	4	Lab practice	Experiment , Assignment	Book, Online source
Total (hrs.)	60			

FCEN0304 Electrical Load Survey

Credits: 02 Total Hours: 42

1. Conceptual development about load forecast as a tool for planning capacity addition by various utilities and stakeholders and to serve as a guideline to plan growth of industries & infrastructural development
 2. Area Load Survey : For project report choose a semi-urban area i.e, an area with mixed load. Based on the field study design an electrical installation considering the existing as well as expected load growth during the next 5 years.

Data to be collected for all consumer categories in the project area:

Domestic & Commercial (Number of Consumers, Electrical Energy Consumption per consumer), Public Lighting, Public Water Works (Estimated connected electric load (kW) and the average electricity consumption per Kilo-watt of connected load (kWh / kW) i.e. Hours of operation), Irrigation

(Numbers of Pump Set / Tube wells, Capacity of pump sets, Hours of operation, Electrical Energy Consumption), Lift Irrigation Scheme(Major), Industrial (L.T Industries, H.T. Industries with a demand less than 1 MW, H.T, Industries with a demand of 1 MW and above), Railway Traction, Bulk Non-Industrial HT Supply,

Total Electrical Energy Consumption at Consumer

Electrical Energy Requirement at Generating End, Annual Electric Load Factor, Maximum Demand Factor category wise, Draw a load curve considering(variation during different hours of the day, Daily maximum and minimum value of the load, Seasonal Variation, peak of the load during a year, Draw an average load curve), Decide additional capacity requirement of lines and substations, Choose appropriate location mark it in the map, Prepare an estimate for investment, Prepare the cost benefit analysis including loss reduction and revenue inflow, Submit this report to a competent authority as a consulting engineer.

3. Methodology for forecasting adopted in India currently for 17th EPS: partial end use methodology for forecasting electricity demand for short and medium term i.e. time series analysis and end use method, extrapolation technique based on growth rates for long term electricity demand forecasting, forecast demand of electricity using econometric model, considering demand influencing factors for which econometric indicators were available and also taking into account the projected growth rates of different sectors of the economy.

4. Annual electricity demand forecast in terms of electrical energy requirement in MU and peak electric load in MW at Power Station Bus bars of electricity utilities for each State, Union Territory, Region and All India

Engineering Metrology and Measurements

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Engineering Metrology and Measurements	ENFC0401	Theory + Practice	1-2(3)	Nil

1. Course Objective

- ✓ To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- ✓ Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- ✓ Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- ✓ Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- ✓ Analyze Measurement Requirement.
- ✓ Can Choose Transducer & Sensors for Products.

2. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	ITR/Cass Test	20	Best of 2 (Written Test)
	IPR	30	Lab Work & Report
External Examination	ETR	30	Written Examination
	EPR	20	Lab Work & Report
Total		100	

3. Course Outline

Module I: (6 Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice: (Laboratory Mode- Learn by Doing)

Calibration of Measuring Instruments Using Slip Gauge Blocks.

Module II: (9 Hours)

Limit System; Limits Fits & Tolerances; Allowances; Hole Basis & Shaft Basis Systems; Interchangeability; Gauge Design. (Class room Teaching and videos)

Practice: (Laboratory Mode- Learn by Doing)

1. Introduction to Metrology Laboratory (Steel Rule, Tape, Right Angle, Protractor, Surface Plate).
2. Gauges- Filler, Radius, Thread, Wire, Snap & GO-NOGO.

Module III: (9 Hours)

Standards of Measurement; Dial Indicators; Vernier Apparatus; Micrometers; Comparators (Mechanical, Electrical, Pneumatic).

Practice: (Laboratory Mode- learn by Doing)

3. Vernier Caliper- Inside, Outside, Depth Measurement & Height Gauge.
4. Micrometers, Outside, Inside Micrometer & Depth Micrometer.
5. Three Points Bore Micrometer

Module IV: (10 Hours)

Measurement of Angles & Tapers using Bevel Protractor; Angle Gauges; Sine Bars; Flatness Spirit Level & Surface Plate.

Practice: (Laboratory Mode- learn by Doing)

6. Sine Bar/Bevel Protractor-Measurement of Angles.
7. Flatness Test Using Sprit Level.
8. Use of Dial Indicators-in-lathe.

Module V: (9 Hours)

Gear Tooth Metrology; Inspection & Alignment Tests. Transducers; Variable Resistance Transducer; LVDT; Comparative Transducer; Piezoelectric Transducer; Photo Voltaic Cells; Devices for Pressure Measurement- Dead Weight Tester; Bourdon Tube Pressure Gauge; Diaphragm and Bellow Gauges. (Topics will be covered by explaining and followed by practice mode)

Practice: (Laboratory Mode- Learn by Doing)

9. Gear Tooth Metrology, Inspection & Alignment Tests.

Module VI: (10 Hours)

Low Pressure Measurements; Force Measuring Using Proving Rings; Torque Measuring Using Dynamometers; Strain Measurements; Profile Projector; Tool Maker's Microscope; Optical Flats; Laser Interferometers; Autocollimators.

Practice: (Laboratory Mode- Learn by Doing)

10. Optical Flat Use & Surface Plate Test Using Spirit Level & Dial Gauge.

11. Measurement of Template Using Profile Projector.

Module VII: (12 Hours)

Assessment of Surface Roughness; Machining Symbols for Surface Finish; Measuring Instruments; Tally-Surf; Screw Thread Measurement- Terminology; Precision Instruments Based on Laser Principles- Laser Interferometer Application; Coordinate Measuring Machine (CMM).

Practice: (Laboratory Mode- Learn by Doing)

12. Surface Finish by Taylor's Apparatus –LVDT.

13. Measurement of Tool angle in Tool Maker’s Microscope.

14. Repeat Laboratory-1 or Test.

(50% of the topics will be covered by “Learn by Doing” principle and few video presentations)

FCEN0401 BASIC FLUID MECHANICS

[5 0 0]

Module-I: FLUID KINEMATICS AND FLUID DYNAMICS (16 Hrs):

Recapitulation of Fluid Properties and Hydrostatics (Not for external examination)

- (A) Principle of conservation of mass - Continuity equation in differential form for three dimensional flow in Cartesian co-ordinates. Rotational & Irrotational flows - Irrotationality condition. Continuity equation for one dimensional flow. **(Most of the topics will be through video presentation)**
- (B) **Fluid Dynamics:** Euler's equation of motion flow-Principle along of conservation a stream l of energy through integration-Bernoulli's of E-Practical Principle equation a applications of- Kinematics Bernoulli's of free jets. **(Topics Principle on practical applications will be through practice and field demonstration)**
- (C) **Flow Measurement in pipes and channels:** Pitot tube, Prandtl tube, Flow meters and Weirs. Flow through orifices and mouthpieces **(All the topics will be through practice and field measurement)**
- (D) **Principle of Conservation of momentum:** Impulse momentum equation. Application of momentum principle for forces on pipe bends and reducers. (Simple problems on pipe bends and reducers in x-y plane) **(Most of the topics will be through class room teaching with a project on pipe bends.)**

Module-II: STEADY FLOW THROUGH PIPES (14 Hrs)

- (E) **Laminar Flow:** Laminar and turbulent flow characteristics, Reynolds experiment, Reynolds number -Laws of laminar and turbulent friction. Laminar flow through circular pipes - Hagen Poiseuille equation for loss of head. **(Topics related to laminar flow & turbulent flow and Reynolds experiment will be through Multimedia presentation)**
- (F) **Turbulent flow through pipes:** Darcy - Weisbach equation for loss of head. Hydro-dynamically Smooth and rough boundaries (Velocity distributions for smooth & rough boundaries to be appraised and not to be included in external examination), Relative roughness - Laminar sub-layer. Variation of friction factor with Reynolds number and relative roughness **(Topics related. Moody' to pipe friction and determination of friction factor will be through practice mode. Pipe design problems will be through Project mode using pipe analysis software.)**
- (G) **Practical problems in pipe flows:** Minor losses in pipes, Pipes in series and parallel - Equivalent pipe. Branched pipes - HGL and TEL. Simple Pipe. Reservoir problems and Syphon. Network Problems. Power transmission through a pipe and power transmission through a nozzle. **(Most of the topics will be through project mode)**

MODULE-III: DIMENSIONAL ANALYSIS AND MODEL TESTING (12 Hrs)

- (H) **Fundamental Concepts of Dimensional Analysis:** Importance of Dimensional Analysis & Model Study- Units and Dimensional Formulae for Various Engineering Quantities- Dimensional Homogeneity. Non-dimensional Parameters- Raleigh's-Buckingham's Method- Omitted π and Theorem Superfluous variables. Capillary Rise, Drag on Cylinder, Resistance of a Ship, Discharge over a Sharp Crested Weir, Fall Velocity of a Sphere, Head Characteristics of a Pump, Thrust on a Propeller.

- (I) **Similarity Laws:** Concepts of Similarity- Geometric, Kinematic and Dynamic Similarities- Important Dimensionless Numbers- Reynolds Number, Froude Number, Mach Number, Euler Number, Weber Number - Similarity Laws- Reynolds law and Froudes law - Modelling Criteria- Distorted Models and River models. Practical applications of modelling and similarity.

Text Books:

2. *Fluid mechanics:* A.K.JAIN, Khanna publishers
3. *Fluid Mechanics* <http://www.eolss.net/eolsssamplechapters/c07/e2-15-01-01/E2-15-01-01-TXT-03.aspx> 4. <http://www.msubbu.in/ln/fm/>

PEDAGOGY

Note:

- 1) **Project hrs shown are not part of class room teaching. Students to carry out the assigned project and submit for evaluation.**
- 2) **Evaluation - External 50 Marks Internal 50 Marks.**
- 3) **Internal evaluation of Practical work - Will be based on the day to day work at practice sessions and project works submitted.**
- 4) **External evaluation of Practical work - Will be by an external examiner.**
- 5) **Internal evaluation of work carried through projects - Will be part of the regular evaluation. No separate external evaluation for topics under project mode.**

MODULE - I

S. No.	Topic	Pedagogy	Video links / Software	Instructional Hrs			
				Th	Video	Proj.	Pract
<i>Fluid Kinematics & Fluid Dynamics: (Theory - 18 Hrs Practice - 12 Hrs)</i>							
(A)	Fluid Kinematics: Lagrangian and Eulerian description of fluid flow- Different types of fluid flow - One, two and three dimensional flows, Uniform & non-uniform flows, Steady & unsteady flows, Compressible & incompressible flows and Laminar & turbulent flows.	CRT + Video	See List Below for Video Links	1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Description of flow pattern - Stream line, Streak line, Path line. Stream surface and stream tube.	CRT + Video		1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Principle of conservation of mass - Continuity equation in differential form for three dimensional flow in Cartesian co-ordinates.	CRT		2	0	0	0
	<i>Fluid Kinematics (Continued):</i> Continuity equation in differential form for three dimensional flow in Cartesian coordinates. Rotational & Irrotational flows - Irrotationality condition.	CRT		1	1	0	0
	<i>Fluid Kinematics (Continued):</i> Continuity equation for one dimensional flow.	CRT		1	0	0	0
(B)	Fluid Dynamics: Euler's equationline for ideal flow -	CRT		2	0	0	0
	<i>Fluid Dynamics (Continued):</i> Principle of conservation of energy through integration line - Bernoulli's Principle	CRT		2	0	0	0
	<i>Fluid Dynamics (Continued):</i> Practical applications of Bernoulli's Principle.	CRT		0	0	2	2

	<i>Fluid Dynamics (Continued): Kinematics of free jets</i>		1	0	2	1	
(C)	Flow Measurement in pipes and channels: Pitot tube, Prandtl tube, Flow meters and Weirs.	CRT + Proj, + Pract.	1	0	1	9	
(D)	Principle of Conservation of momentum: Impulse momentum equation. Application of momentum principle for forces on pipe bends and reducers.	CRT + Video + Proj.	1	1	1	0

FCEN0402 INTRODUCTION TO PROGRAMMING IN C

<i>Pre – requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Pracice</i>	<i>5</i>

Course Objectives:

1. To provide basic knowledge of programming tools and techniques.
2. To familiarize the programming environment and syntax of C programming.
3. To understand the working of basic programming constructs.
4. To learn different powerful concepts that can be applied in project development.

Course Outcomes:

1. The students will be able to apply programming skills to problem solving.
2. The student will able to write 150 to 200 line programs without any error. 3. At the end of the session the students can come out with a mini project applying their programming skills.

Module I:

(23Hours)

- (A) Problem solving techniques: Algorithm, flow chart; Structure of C program, Character set, Identifiers, Keywords, Data Types, Constants and Variables, Input-output statements, relational and logical operators, increment and decrement operators, conditional operator, bit-wise operators, assignment operators, expressions, type conversions, conditional expressions, precedence and order of evaluation, statements and blocks, if and switch statements, loops:-while, do-while and for statements, break, continue, goto. *(Most of the topics will be*

Module II:

(30 Hours)

(B) Arrays-concepts, declaration, definition, accessing elements, two-dimensional and multi-dimensional arrays, applications of arrays. Designing structured programs:-Functions, parameter passing, user defined functions, recursive functions, storage classes-extern, auto, register, static, scope rules. pointers-

S. No.	Topic	Pedagogy	Details	Instructional Hrs				
				Theory	Practice	video	Project	
1	Problem solving techniques: Algorithm	CRT & Learn by example	Class Assignment on algorithm writing	1	0	0	0	
2	Problem solving techniques: flow chart		Class Assignment on flow chart writing	1	0	0	0

FCEN0403 OBJECT ORIENTED PROGRAMMING USING C++

Pre - requisites	Course Type	Credits
Nil	Theory + Pracice	5

Course Objective As a result of successful completion of this course, the students will:

1. Get a clear understanding of object-oriented concepts.
2. Understand object oriented programming through C++.
3. Understand the concept of classes and objects, inheritance, polymorphism.

Course Outcome Upon successful completion of this course, students should be able to:

1. Students will able to write 150 to 200 lines programs without any error.
2. The student will understand the advantage of object oriented program over structured oriented program.

Module-I (25 hours)

(A) Introduction to object oriented programming: object oriented concepts (Class, object, encapsulation, aggregation, inheritance and polymorphism). How to write a C++ program. Data types, expressions, operators, control structures. Functions: definition, parameter passing, inline function, function overloading. Classes: data members, function members, static data members, constant members function, and friend function. **Most of the topics will be through power point presentation and practice mode)**

Module-II (30 hours) (A) More about classes: Constructors, destructors, friend classes, nested classes, local classes, this pointer, namespaces. Overloading: Operator overloading (binary, unary, String Concatenation, increment, decrement), operator overloading using friend function (Stream operators). Type conversion (Using constructor, Operator function). Inheritance: Derived classes, member accessibility, forms of inheritance, virtual base classes. Polymorphism: Pointers to objects, virtual functions, Abstract class, virtual destructors. **Most of the topics will be through power point presentation and practice mode)**

Module - III (20 hours)

(A) Streams & Files: streams, hierarchy of stream classes. Unformatted I/O operators, formatted i/operations manipulators, user defined manipulators, exception handling. Templates, Standard template Library. **Most of the topics will be through power point presentation and practice mode)**

Text Books:

1. E. Balguruswamy, "Object Oriented Programming with

FCEN0404 DATABASE MANAGEMENT SYSTEM

Pre – requisites	Course Type	Credits
Nil	Theory + Pracice	5

Course Objectives:

1. To introduce the fundamental concepts of database systems and their importance in practical life.
2. To introduce the basic concepts necessary for designing, using, and implementing database systems and applications.
3. To make the students understand the principles behind relational database management systems including the database environment, the relational model, relational languages (SQL).
4. To make students able to develop simple SQL queries. Course Outcomes:

On successful completion of this course, students will be able to:

1. Understand, appreciate and effectively explain the underlying concepts of database technologies
2. Solve simple database problems related to manipulating data present in the database by writing SQL Queries.
3. Design and implement a relational model for a given problem-domain.

Module-I (14 Hrs): INTRODUCTION TO DATABASES

- (A) **Introduction to Database Systems and File Based Systems:** Database Systems, Common uses of Database Systems, File Based Approach, Limitations of File Based Approach, File-oriented Systems vs. Database Systems (Most of the topics will be through power point presentation: Demonstration of Fileoriented System and Database System)
- (B) **Database Approach:** Database, Database Management System (DBMS), Database Application Programs, Components of DBMS Environment, Advantages and Disadvantages of DBMS. (Most of the topics will be through power point presentation)
- (C) **Roles in Database Environment:** Data and Database Administrators (DBA), Database Designers, Application Developers, End-Users. (Most of the topics will be through power point presentation)

models, Network and Object Oriented Data models, Mapping E-R model to Relational model. **(Most of the topics will be through practice mode)**

(G) **Normalization:** Normal forms: 1NF, 2NF, 3NF **(Most of the topics will be through practice mode)**

MODULE-III (30 Hrs): RELATIONAL MODEL AND SQL

(H) **Terminologies of Relational Model:** Relational Data Structure, Mathematical Relations, Database Relations, Properties of Relations, Relational Keys, Representing Relational Database Schema.

(I) **Integrity Constraints and Views:** Nulls, Entity Integrity, Referential Integrity, General Constraints, Views, Purpose of Views.

(J) **SQL: Introduction:** Objectives of SQL, Writing SQL Command.

(K) **SQL: Data Definition:** Data Definition, Creating a Database, Table Operations (Create, Alter, and Drop), Creating an Index, Removing an Index.

(L) **SQL: Data Manipulation:** Simple Queries, Sorting Results (Order By), Aggregate Functions, Join, Grouping Results (Group By)

(M) **Query-By-Example:** Introduction to QBE, Building Select queries using QBE.

TEXT BOOKS:

FCEN0405 MECHANICAL UNIT OPERATIONS

Pre –requisites	L+T+P	Credits
NA	3+2 + 0	5

OBJECTIVE:

The students will learn characterization of solids, size reduction, techniques of solid fluid separation and mixing.

OUTCOME:

1. The students would understand about solids, their characterization, handling and various Processes involving solids.
2. The students will have knowledge on basic theory, calculations and Machinery involved in various solid handling operations.

MODULE - I

General characteristics of solids, different techniques of size analysis, shape factor, surface area determination, estimation of particle size. Screening methods and equipment, screen efficiency, ideal and actual screens.

Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipments, crushers, grinders, disintegrators for coarse, intermediate and fine grinding, power requirement, work index; size enlargement - principle of granulation, briquetting, pelletisation, and flocculation. **(Topics related to size reduction experiment (Ball mill, Jaw crusher, smooth roll crusher will be through laboratory)**

MODULE - II

Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removing equipment, cyclones and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging

Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, Compressible and incompressible filter cakes, filtration equipments - selection, operation and Design of filters and optimum cycle of operation, filter aids. **(Topics related to filtration , sedimentation cyclone separator experiment will be through practice mode)**

MODULE - III

II Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of Suitable mixers, power requirement for mixing. Storage and Conveying of solids - Bunkers, Silos, bins and hoppers, transportation of solids in bulk, conveyer selection, different types of Conveyers and their

performance characteristics. **(Topics related to transportation and storage tanks will be through practice mode)**

TEXT BOOKS:

FCCE0406 BUILDING MATERIALS and CONSTRUCTION

Pre-requisites	Course type	Credits
Nil	Theory +Practice	4

Course Objectives: The objectives of this course is to

- Provide knowledge about development, production, standardisation of cost-effective innovative building materials and construction technologies in housing and building sector. Show the role of materials in construction.
- Demonstrate the different bonding of bricks
- Impart the knowledge on various methods of construction for conventional civil engineering structures. Provide the knowledge about maintenance of buildings.

Course Outcomes: At the end of this course the students will be able to

- Select proper constructional materials specific to the structure to be built.
- Decide on the type of foundation required for a specific structure.
- Select the proper type of brick bonds for a wall.
- Know about the construction of brick masonry and stone masonry and their causes of failure
Know about the grade and strength of concrete.
- Supervise the construction works using - brick, stone, concrete, tile, mosaic, terrazzo, asphalt
- Know about the methods of plastering and the materials used
- Know about different types of stairs and their essential requirements

Module I (26 Hrs)

Bricks: Brick as a construction material and its importance, materials suitable for manufacture of bricks, methods of brick manufacture, types of bricks, qualities of a good brick, testing of Bricks, uses of bricks.

Stone: Introduction, classification, composition and characteristics, useful Indian stone, method of quarrying and dressing

Cement: Classification, chemical composition, Manufacturing of cement, hydration, tests for cement, uses of cement, types of cement, Mortar: Definition, composition and uses of mortar.

Concrete: Quality of mixing water, Workability, Factors affecting workability, Measurement of workability, Segregation, Bleeding, Uniformity of mixing, Mixing time, vibration of concrete, concrete mix design, admixtures, Grade and strength of Concrete.

Module II (16 Hrs)

Foundation: Types of foundation, spread foundations, pile foundations, pier foundations, excavation of foundation
Brick Masonry: Terminology used, Materials used, Causes of failure of brick masonry, Types of bonds, Brick laying, Joints in brick work, Reinforced brickwork, Joint between old and new masonry, Maintenance of brick work.

Stone Masonry: Terminology used, Materials used, Cutting and dressing of stones, Types of stone masonry, Rubble and Ashlar, General principles of construction, Joints of stone, Stone lining, maintenance of stone work, Artificial stones. Cavity walls: Purpose and method of construction.

Module III (11 Hrs)

Damp Proofing: Causes and effects, materials used for damp proofing, methods of preventing Dampness, Damp Proof Course.

Stairs: Terms used types of stairs, essential requirements, wooden stairs, concrete stairs, and metal stairs.

Flooring: Types of flooring and their construction- brick, stone, concrete, tile, mosaic, terrazzo, asphalt Plastering: Definition. Materials used for plastering, types of plastering, methods of plastering, defects and remedial measures in plastering.

Maintenance of Buildings: Causes and prevention of cracks in building, special repair of buildings, annual maintenance.

Text Books:

1. "Engineering Materials" by S. C. Rangwala et al., Charot
2. "Engineering Materials . and C. Rangwalabuildingetal., Charotar Publishingconstruction"House by S
3. "Material of Construction ", D.N.Ghose, TMH Publishing C

Reference Books:

1. "Properties of concrete" by A M Neville, Low Price Editi
2. "Building Construction" by S P Arora.
3. "Building Materials" by S.K.Duggal, TMH Publication
4. A text book of Building Construction by S K Sharma and B.K Kaul, S Chand & Company Limited
5. Building Construction", Sushil Kumar, Standard Publisher

FCEN0407 BASIC SURVEYING

Pre - requisites	Course Type	Credits
Nil	Theory + Pracice	4

Course objectives:

1. To make students able to apply knowledge of mathematics, science, and engineering to understand the measurement techniques and equipment used in land surveying.
2. To make students able to measure horizontal distances across clear landscape or across obstacles using surveying instruments like chain, tape etc.
3. To make students able to measure different elevation points
4. To enable students to sketch contour maps of the given topography using dumpy levelling instruments.

Course Outcomes:

On successful completion of course students will be able to

1. Apply math, science, and technology in surveying activities.
2. Measure horizontal distances across clear landscape and across obstacles.
3. Measure horizontal angles between geographical entities.
4. Plot given geographical area on drawing sheet.
5. Preparation of contour maps using Theodolite and Total station
6. Measure altitude of points at different elevation.
7. Function effectively as team members (or team leaders)

Module I (22hr)

Introduction to Surveying

Introduction to surveying: Classification, Basic Principle, List of Instruments used in surveying.

Linear measurement and chain survey: Use of various types of chains and tapes, measurement of correct length of lines, direct and indirect ranging, chaining along sloping ground. Obstacle in chaining, errors and their elimination. Compass surveying.

Module II (16hrs)

Levelling: Use of dumpy level and levelling staff. Temporary and Permanent adjustment of dumpy level, Reduction of levels by height of instrument and rise and fall method. Curvature and refraction error, sensitiveness of level tube, reciprocal levelling, levelling difficulties and common errors

Module III (17hrs)

Contouring: Characteristics, methods and types of contouring (topographical map study) Preparation of contours using auto level/Dumpy level through Surfer software

Text Books:

1. "A Text Book-I", of Surveying. K. Duggal, TMH Publisher chapters 2,3,6,
 2. Surveying- Vol-1, B.C. Punmia Chapters 4,5,6,9,11
- Reference Books:**
3. Surveying and Levelling Vol-1, T. P. Kanetkar and S. V. Kulkarni
 4. Surveying Vol-1 by R Agor

Prerequisite: Nil

OBJECTIVES

develop understanding and provide scientific basics of the life processes at the molecular level and explain the structure, function and inter-relationships of biomolecules and their deviation from normal and their consequences for interpreting and solving clinical problems.

Module I: Biochemical Organization And Bioenergetics 13

Scope of clinical biochemistry, component of the cell, structure and biochemical functions, membrane structure and functions, transport through biological cell membrane, the concept of free energy, determination of change in free energy from equilibrium constant and reduction potential, bioenergetics and biological oxidation – general concept of oxidation and reduction, electron transport chain, oxidative phosphorylation, uncouplers and theories of biological oxidation and oxidative phosphorylation.

Module II: Biomolecules 17

Carbohydrates: classification, properties. starch, glycogen, dextrin, inulin, cellulose, metabolism of carbohydrates, gluconeogenesis, glycogenolysis, glycolysis. citric acid cycle and its biological significance, role of sugar in nucleotide biosynthesis and pentose phosphate pathway.

Lipids: Classification, properties. sterols, essential fatty acids, eicosanoids, phospholipids, sphingolipids, metabolism of lipids, - oxidation and biosynthesis of ketone fatty bodies, cholesterol, acids, α, β porphyrin biosynthesis, metabolism of bile pigments.

Amino acids and nucleic acids: Classification, properties, biosynthesis of amino acids and proteins, essential amino acids, metabolism of amino acids and proteins, Nitrogen balance.

Nucleic acids: genetic code, nucleic acids, and structure of DNA and RNA, purine biosynthesis and pyrimidine biosynthesis.

Module III Macromolecules, Vitamins, Hormones, Enzymes 15

Physical and chemical properties, structure of haemoglobin, immunoglobulins and nucleoprotein, classification and their properties, occurrence, functions, requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties, hormones, Nomenclature, enzyme kinetics, Michelles-Menten equation, classification and their properties, mechanism of action, enzyme inhibition, coenzyme significance and enzymes of clinical importance.

TEXTBOOKS:

1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. CBS publishers and distributors
2. Murray R.K., Granner D.K., Mayes P.A. and Rodwell V.W. Harpers Biochemistry. Appleton and Lange, Stanford, Conneticut.
3. Thomas M. Devlin. Textbook of Biochemistry with clinical correlations. Wiley Liss Publishers

REFERENCES:

2. Lubert Stryer W.H. Biochemistry. Freeman and company, New york.
3. Donald Voet & Judith G. Voet. Biochemistry. John Wiley and Sons, Inc.

FCEN0409 CELL BIOLOGY Credits 5 Prerequisite: Nil

OBJECTIVES

1. To study cell structure and functions of organelle functions
2. Exposure on transportations through cell membrane
3. To focus on different receptors and model of signaling
4. To introduce the concept of cell signaling

MODULE 1: Cell Structure and function 15

Origin and evolution of cells, molecular composition of cells, central role of enzymes, metabolic energy, biosynthesis of cell constituents, cell membrane, Nucleus, Endoplasmic reticulum, Golgi apparatus and Lysosomes, Bioenergetics and Metabolism –Mitochondria, chloroplasts, Peroxisomes.

MODULE II: Cell Division 15

Cell cycle –Mitosis, Meiosis, Molecules controlling cell cycle, Extra cellular matrix, role of matrix in cell enthore : Gap junctions, Tight junctions, Plasmodesmata.

Trnport across cell membrane

Passive and Active Transport, Permeases, Ion channels, ATP pumps. Na^+ / K^+ / Ca^{2+} pumps uniport, symport antiporter system. Ligand gated / voltage gated channels, Agonists and Antagonists.

MODULE III Signal Trnaduction 15

Receptors –extracellular signaling, Cell surface / cytosolic receptors and examples, Different classes of receptors antocrine / paracrine / endocrine models, Secondary messengers molecules.

The Development and causes of cancer, tumour viruses, oncogenes, prevention and treatment.

Total Hours: 45

TEXT BOOK:

The Cell: A molecular approach by Geoffrey M.Cooper.ASM Press, Pages:673

REFERENCE BOOKS:

Peter Lewis, Julian, Garland
2. *Molecular Cell Biology*, Lodish, Harvey Krieger, Monty Kaiser, Chris A. Berk, Arnold, W H

**FCEN0410 Introduction to Web Technology (Theory +Pract)
Credit 4**

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0410	Introduction to Web Technology	Theory+ Practice	4	Nil	3-1-0

Learning Objective

This course is intended to teach the basics involved in publishing content on the World Wide Web. the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web publishing.

The student will be able to Analyze a web page and identify its elements and attributes.Create web pages using XHTML and Cascading Style Sheets.Build dynamic web pages using JavaScript (Client side programming).Create XML documents and Schemas.Build interactive web applications using AJAX.

Syllabus

Unit 1: Introduction to Web (8hrs)

What is Web?, What is WWW, Web site - Static and Dynamic web site, Web application - Client-server, Web development

Technologies- Html, CSS, Js , XML, Servlet & JSP, PHP and Ajax.

Unit 2: HTML (7hrs)

Introduction to Html, Html structure, Html Editors, Html element/tag & attributes, Designing simple page - Html tag, Head

tag, Body tag; More Html tags - Anchor tag, Image tag, Table tag, List tag, Frame tag, Div tag ; Html forms - Input type,

Text area, Select , Button.

Unit 3: CSS (6hrs)

Introduction to CSS, Syntax, Selectors ,Embedding CSS to Html, Formatting fonts, Text & background colour, Borders &

boxing.

Unit 4: JavaScript (9hrs)

Introduction to JS, Embedding JS into Html, Variables, Data types, Operators, Conditional statements, Looping statements,

Strings, Arrays, Math Object, Date Object, Functions, Objects, Event Handling.

Unit 5: XML (9hrs)

Introduction to XML, Difference b/w Html & XML, XML editors, XML Elements & Attributes XML DTD, XML Schema,

XML DOM.

Reference Books:

HTML, XHTML & CSS Bible, Brian Pfaffenberger, Steven M.Schafer, Charles White, Bill Karow- Wiley Publishing Inc, 2010

HTML Black Book by Steven Holzner

Web Design with HTML, CSS, JavaScript and jQuery Set by Jon Duckett

Beginning Java Script with DOM scripting and Ajax By Christian Heilmann- Apress Publisher, 2010

Learning PHP & My SQL, Michele Davis, Jon Philips- O'Reilly Publisher, 2009

PHP Cook book By: David Sklar, Adam Trachtenberg- O'Reilly Publisher, 2008

Introduction to Web Technology Lab

List of Programs:

1. Create a simple web page using HTML
2. Create and HTML page with a table and a set of ordered and unordered list.
3. Use CSS in the above web page
4. Design a web page for a company XYZ
5. Develop a static web page that shows basic animation
6. Develop a web page for an audio company
7. Develop a dynamic web page
8. Develop a dynamic web page using DHTML and CSS
9. Consider a company ABC which is into selling movie CDs. Develop a web page for the company.
10. Create a web site in which you can navigate from one page to another
11. Create a dynamic web page for a college
12. Organize a set of data using XML

FCEN0411 Data Structures and algorithms (Theory+ Practice) Credit 4 L-T-P (3-0-1)

Unit I: Introduction to Data structures

Definition,

Classification of data structures: primitive and non primitive, Elementary data organization, Time and space complexity of an algorithm (Examples), String processing. Dynamic memory allocation and pointers: Definition of dynamic memory allocation, Accessing the address of a variable, Declaring and initializing pointers, Accessing a variable through its pointer, Meaning of static and dynamic memory allocation, Memory allocation functions: malloc(), calloc(), free() and realloc(). Recursion: Definition, Recursion in C (advantages), Writing Recursive programs –Binomial coefficient, Fibonacci, GCD.

Unit II: Searching and Sorting

Basic Search Techniques: Sequential search: Iterative and Recursive methods, Binary search: Iterative and Recursive methods, Comparison between sequential and binary search. Sort: General background and definition, Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort

Unit III: Stack and Queue

Stack Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations, Conversion of an arithmetic expression from Infix to postfix, Applications of stacks. Queue: Definition, Array representation of queue, Types of queue: Simple queue, Circular queue, Double ended queue (deque) , Priority queue , Operations on all types of Queues

Unit IV: Linked List

Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list: Singly linked list, doubly linked list, Circular linked list, Operations on singly linked list: creation, insertion, deletion, search and display.

Unit V: Tree Graphs and their Applications:

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology: Root, Node, Degree of a node and tree, Terminal nodes, Non-terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree: Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and postorder. Graphs, Application of Graphs, Depth

First search, Breadth First search.

Books for References:

9. Hanumanthappa M., *Practical approach to Data Structures, Laxmi Publications, Fire Wall media 2006*
10. Langsam, Ausenstein Maoshe & M. Tanenbaum Aaron *Data Structures using C and C++ Pearson Education*

List of Programs

Part A

1. Use a recursive function to find GCD of two numbers.
2. Use a recursive function to find the Fibonacci series.
3. Use pointers to find the length of a string and to concatenate two strings.
4. Use pointers to copy a string and to extract a substring from a given a string.
5. Use a recursive function for the towers of Hanoi with three discs.
6. Insert an integer into a given position in an array.
7. Deleting an integer from an array.
8. Write a program to create a linked list and to display it.
9. Write a program to sort N numbers using insertion sort.
10. Write a program to sort N numbers using selection sort.

Part B

1. Inserting a node into a singly linked list.
2. Deleting a node from a singly linked list.
3. Pointer implementation of stacks.
4. Pointer implementation of queues.
5. Creating a binary search tree and traversing it using in order, preorder and post order.
6. Sort N numbers using merge sort.

FCEN0412 Designing Enterprise Network (Theory+ Practice) Credit 5 L-T-P (3-1-1)

Unit I: Networking Fundamentals

The TCP/IP and OSI Networking Models, Fundamentals of Ethernet LANs, Fundamentals of WANs, Fundamentals of IPv4 Addressing and Routing, Fundamentals of TCP/IP Transport and Applications

Unit II: Ethernet LANs and Switches

Building Ethernet LANs with Switches, Cisco LAN Switches, Configuring Ethernet Switching.

Unit III: IP Version 4 Addressing and Subnetting

Perspectives on IPv4 Subnetting, Analyzing Classfull IPv4 Networks, Analyzing Subnet Masks, Analyzing Existing Subnets, Implementing IP Version 4: Operating Cisco Routers, Configuring IPv4 Addresses and Routes, Implementing Ethernet

Virtual LANs, Troubleshooting Ethernet LANs, Spanning Tree Protocol Concepts, Troubleshooting LAN Switching

Unit IV: LAN Routing

Configure IPv4 Routing, Configure and Verify Host Connectivity, Advanced IPv4 Addressing Concepts, Describe the boot process of Cisco IOS routers; Operation status of a serial interface; Manage Cisco IOS files; Routing and Routing Protocols; OSPF (multi-area); EIGRP (single AS); Passive Interface

Unit V: IPv4 Services and IP Version 6

Basic IPv4 Access Control Lists, Advanced IPv4 ACLs and Device Security, Network Address Translation, Recognize high availability (FHRP); Describe SNMP v2 and v3, IPV6 addressing **Reference**

Books:

1. CCNA Cisco Certified Network Associate: Study Guide (With CD) 7th Edition (Paperback), Wiley India, 2011 **Text Books:**
2. CCENT/CCNA ICND1 640-822 Official Cert Guide 3 Edition (Paperback), Pearson, 2013

3. Routing Protocols and Concepts CCNA Exploration Companion Guide (With CD) (Paperback), Pearson, 2008
4. CCNA Exploration Course Booklet : Routing Protocols and Concepts, Version 4.0 (Paperback), Pearson, 2010

DESIGNING ENTERPRISE NETWORKS –Lab

1. Switch Configuration - Basic Commands
2. Switch Configuration - Switch Port Security
3. Router - Configuration
4. Configuration of IP Address for a Router
5. Setting up of Passwords
6. PPP Encapsulation, PPP PAP Authentication, PPP CHAP Authentication
7. Configuration of Static and Dynamic Routing
8. Configuration of Default Route
9. Implementation of EIGRP
10. Implementation of OSPF
11. VLAN Configuration
12. Switch Troubleshooting
13. Configuration of Access-lists - Standard & Extended ACLs
14. Cisco Discovery Protocol
15. DHCP, DHCP Relay & DHCP Exclusions
16. Configuring Logging to a Remote Syslog Server

FCEN0413 Installation and configuration of Linux Desktop

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr
FCEN0413	Installation and configuration of Linux Desktop	Theory+ Practice	4	Basic computer knowledge	3-1-0

Learning Objectives:

The course provides an overview of the Linux Operating System, geared toward new users as an exploration tour and getting started guide. This unit provides examples to help the learners get a better understanding of the Linux system. The unit also provides the guidelines for the learners to take up vendor certifications. The unit explores the basics of Linux, the underlying management of the Linux operating system and its network configuration. The complete system services of Linux is explained along with the troubleshooting.

Course Outcome:

To enable the students to have a hands on practical exposure to the Linux Red Hat Enterprise and make them prepared for the RHCE Certification.

Syllabus

Unit I: Linux Introduction (9hrs)

Introduction to

Multi user System, History of UNIX, Features & Benefits, Versions of UNIX, Features of UNIX File System,, Commonly Used Commands like who, pwd, cd, mkdir, rm, rmdir, ls, mv, ln, chmod, cp, grep, sed, awk ,tr, yacc etc. getting Started (Login/Logout) . Creating and viewing files using cat, file comparisons, View files, disk related commands, checking disk free spaces.

Exploring Linux Flavors

Introduction

to various

Linux flavors. , Debian and rpm packages, Vendors providing DEBIAN & RPM distribution & Features. Ubuntu.History, Versions, Installation, Features, Ubuntu one. Fedora: History, Versions, Installation, Features.

Unit II: The Unix File System (7hrs)

Inodes - Structure of a regular file –Directories - Conversion of a path name to an inode -Super block - Inode assignment to a new file - Allocation of disk blocks. System calls for the file System: Open –Read - Write - Lseek –Close - File creation - Creation of special files - Changing directory and root - changing owner and mode –stat and fstat - pipes - Dup - Mounting and Un mounting file systems - Link and Un link.

Unit III: Unix Process Management(6hrs) The Structure of Processes: Process States and Transitions - Layout of system memory - Context of a process. Process Control: Process Creation –Signals –Process Termination –Invoking other programs –PID & PPID –Shell on a Shell.

Unit IV: (7hrs)

VI editor

Vi Editor: Introduction to Text Processing, Command & edit Mode, Invoking vi, deleting & inserting Line, Deleting & Replacing Character, Searching for Strings, Yanking, Running Shell Command Macros, Set Window, Set Auto Indent, Set No. Communicating with Other Users: who, mail, wall, send, mesg, ftp.

Unit V: (10hrs)

System Administration

Common administrative tasks, identifying administrative files configuration and log files, Role of system administrator, Managing user accounts-adding & deleting users, changing permissions and ownerships, Creating and managing groups, modifying group attributes, Temporary disabling of monitoring system performance - file security & Permissions, becoming super user using su.

Getting system information with uname, host name, disk partitions & sizes, users, kernel, installing and removing packages with rpm command

Books for Reference

1. The Design of Unix Operating System, Maurice J. Bach, Pearson Education, 2010
2. Advance UNIX, a Programmer's Guide, S. Prata, BPB
3. Unix Concepts and Applications, Sumitabh Das, 2010
4. The UNIX Programming Environment, B.W. Kernighan & R. Pike, Prentice Hall of India. 2009
5. Guide to UNIX Using LINUX, Jack Dent Tony Gaddis, Vikas/ Thomson Pub. House Pvt. Ltd. 2010

List of Programs

1. Execute 25 basic commands of UNIX.
2. Basics of functionality and modes of VI Editor.
3. WAP that accepts user name and reports if user is logged in.
4. WAP which displays the following menu and executes the option selected by user:
1. ls 2. Pwd 3.ls -l 4. ps -fe
5. WAP to print 10 9 8 7 6 5 4 3 2 1 .
6. WAP that replaces all "*.txt" file names with "*".
7. WAP that echoes itself to stdout, but backwards.
8. WAP that takes a filename as input and checks if it is executable, if not make it executable.
9. WAP to take string as command line argument and reverse it.
10. Create a data file called employee in the format given below:

- a. EmpCode Character
- b. EmpName Character
- c. Grade Character
- d. Years of experience Numeric
- e. Basic Pay Numeric

\$vi employee

A001	ARJUN	E1	01	12000.00
A006	Anand	E1	01	12450.00
A010	Rajesh	E2	03	14500.00
A002	Mohan	E2	02	13000.00
A005	John	E2	01	14500.00
A009	Denial Smith	E2	04	17500.00
A004	Williams	E1	01	12000.00

Perform the following functions on the file:

- a. Sort the file on EmpCode.
- b. Sort the file on
 - (i) Decreasing order of basic pay
 - (ii) Increasing order of years of experience.
- c. Display the number of employees whose details are included in the file.
- d. Display all records with 'smith' a part of employ
- e. Display all records with EmpName starting with 'B
- f. Display the records on Employees whose grade is E2 and have work experience of 2 to 5

years.

g. Store in 'file 1' the names of all employees whos

h. Display records of all employees who are not in grade E2.

Pedagogy

S I . N o	Topic	Teaching Method	Refere nce/To OI	Instructional Hours	
	Installation and configuration of Linux Desktop			Theo ry	Pract ical

.					
1	Introduction to Multi user System, History of UNIX, Features & Benefits, Versions of UNIX, Features of UNIX File System,	Class Room Teaching + PPT		2	0
2	Commonly Used Commands like who, pwd, cd, mkdir, rm, rmdir, ls, mv, ln, chmod, cp, grep, sed, awk ,tr, yacc etc	Class Room Teaching + Lab Practice		2	3
3	getting Started (Login/Logout) . Creating and viewing files using cat, file comparisons, View files, disk related commands, checking disk free spaces.			2	3
4	Introduction to various Linux flavors. , Debian andrpm packages, Vendors providing DEBIAN & RPM distribution & Features. Ubuntu. History, Versions, Installation, Features, Ubuntu one. Fedora: History, Versions, Installation, Features. _	Class Room Teaching + ppt Lab Practice		3	3
5	Inodes - Structure of a regular file –Directories - Conversion of a path name to an inode -Super block - Inode assignment to a new file - Allocation of disk blocks. System calls for the file System: Open –Read - Write - Lseek – Close - File creation - Creation of special files -				4
6	Changing directory and root - changing owner and mode –stat and fstat - pipes- Dup - Mounting and Un mounting file systems - Link and Un link	Class Room Teaching + Lab Practice		3	3
7	The Structure of Processes: Process States and Transitions - Layout of system memory - Context of a process. _____	Class Room Teaching + PPT		2	0
8	Process Control: Process Creation –Signals – Process Termination			2	0

**FCEN 0414 Information Security-I (Theory+ Practice)
Credit 4**

T-P-Pr (3-1-0)

Code	Course Title	Course Type	Credits	Pre-requisite	T- P- Pr
FCEN 0414	Information Security-I	Theory+ Practice	4	Nil	3-1-0

Learning Objectives : The course primarily covers the Types of Threats, Vulnerabilities, Risks and various terminologies in Information Security. It explains the formation of Security policy at various levels inside the Organization and provides the definition Procedures, Standard and Guidelines. The units emphasize the need of Performing Asset Classification and Declassification, Retention and Disposal of Information Asset also it identifies the various levels of Authorization for access Viz., Owner, Custodian and User. The course covers the different types of Access Controls and Physical security measures to safeguard the Assets and conclusively, it deals with the Digital Rights Management also covering the concepts of Common Authentication protocols and Real world Protocols. This course enables the students to understand the concepts of IT security, Threats, Vulnerabilities, Impact and control measures. And also to get familiarized with Asset management along with the objective to create awareness in Digital Rights management.

Course Outcome:

To enable the students to have a hands on practical exposure towards Configuration and Security of Windows7, Password Cracking Techniques, Windows Registry, Firewall, Kelogger, Monitoring security.

Syllabus

Unit I: (6hrs)

Introduction:

Security Definition, Why Security, Security and its need, Current Trends and Statistics, Basic Terminology, The C I A of Security the Relation: Security functionality and Ease of Use Triangle.

Unit II : (11hrs)

USER IDENTITY AND ACCESS MANAGEMENT

User identity and Access Management: Authentication, Account Authorization, Validation, Access Control and Privilege management. Hashing and Cryptography- Encryption and Decryption

Unit III: (11hrs)

SYSTEM AND SERVER SECURITY

System Security, Desktop & Server Security, Firewalls, Password cracking Techniques, Key-logger, viruses and worms, Malwares & Spy wares, Windows Registry

Unit IV: INTERNET SECURITY (6hrs)

Internet Security: LAN Security, Email Security, Hacking attacks, preventive measures.

Unit V: RISK ASSESSMENT AND CYBER LAWS(6hrs)

Vulnerability Assessment, Penetration Testing, Cyber Laws

TEXT BOOK:

1. Information Systems Security: Security Management, Metrics, Frameworks And Best Practices - Nina Godbole, ISC2 Press, 2010

REFERENCE BOOK:

1. Information Security Management Handbook, Volume 4 - Micki Krause, ISC2 Press, 2007

List of Programs

1. System Security Configuration in Windows 7 I
2. System Security Configuration in Windows 7 II
3. Password based Authentication process
4. Hashes and message digests calculation using has calculators
5. Service Management of Windows 7 for prevention of attacks
6. Password cracking tool usage
7. Event logger analysis
8. Windows Registry analysis
9. Securing LAN using firewall
10. DOS attacks and its prevention
11. Install a key logger , capture useful information and analyze.
12. Usage of vulnerability assessment tool (nmap / wireshark) and analyze the results.

Python Programming

Subject Name	Code	Type of course	T-P-P (Credit)	Prerequisite
Python Programming	ENFC0411	Theory + Practice	1-2-0 (3)	Nil

1. Objective

- ✓ Learn problem solving using object-oriented concepts
- ✓ Implement object oriented programming using Python

2. Course Outcome

- ✓ Use object oriented concept to solve problems
- ✓ To quickly and easily draw plot or visualize the information through visualization Technique
- ✓ Write an error free program of minimum 200 lines of code

3. Evaluation Systems

Internal	Component	% of Marks	Method of Assessment
----------	-----------	------------	----------------------

Examination	Midterm Test	20	Written examination
	Assignment		Report and Presentation
	Experiments	30	Practice work, report
	Project		Report and presentation
	Quiz		Surprise/ preannounced ones
External Examination		30	Written examination
	Practice	20	Practice test with viva-voce
Total		100	

Projects

1. To create a text editor application
2. To create a Graphics Equalizers for Audio system
3. To a GUI based Calculator
4. Moving Ball Game
5. Students Phone Book
6. Result Analysis by GUI interface
7. Students Admission Analysis by GUI Interface

4. Course outline

Module-I (8 Hrs):

Familiarization of Python: Features and Installation, Setting up Path, Working with Python Basic Syntax, Variable and Data types, Basic operators, Numbers, Array, Tuples, Dictionary, Date and Time

Module-II (12 Hrs):

String Manipulation: Accessing Strings, Basic Operations, String slices

List: Accessing lists, Operations, Working with lists List (Functions)

Decision Making Statement: Boolean Expressions, if-else Statement, Nested if Else Statement, elif Statement, Switch Statement

Module-III (10 Hrs):

Iteration Statement: The while Statement, for Statement, Nested Loops, Break and Continue statement

Functions Operation: Types of Function, Function Arguments, Pass by reference vs value, Recursion Function

Module-IV (9 Hrs):

Object Oriented Concept: OOP Terminologies, Defining Classes, Creating Objects, Regular expressions, Constructors, Inheritance and Overloading

Module-V (8 Hrs):

Files Operation: Create Text & Binary Files, Different modes of opening a file, Reading and Writing into Files, File Positions

Module-VI (14 Hrs):

GUI Programming: Example GUI Program, Environment Variables, Label, Message Widget, Text Area, Button, Radio Button, CheckBox, Listbox/ DropDown Box, Frames, Menu Widget, Menu Button Widget, Scrollbar, Forms: GET method and POST method, Sliders (Tkinter), Uploading files, Database access, Sending email

Module-VII (14 Hrs):

Data Visualization: Visualization Libraries, Data frame: Data types, Attributes, methods (mean(), median(), std(), var(), cor(), min()/ max(), describe()), groupby method, Selecting Column, Filtering, Selecting row and column, Missing values, Data read from excel, CSV and txt file

Plotting: Basic plot(), Histogram, Bar Plot, Box Plots, Area Plot, Scatter Plot, Pie Chart

Sensors and IOT

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Sensors and IOT	ENFC0417	Theory & Practice	2-1-0(3)	NIL

1. Objective:

The objective of this subject is:

- ✓ To learn what “Internet of Things”, is.
- ✓ To introduce the implementation of web-based services on IOT devices.

2. Course Outcome:

Upon successful completion of this subject students should be able to:

- ✓ Write codes for the various interfacing of sensors, and how to access them through web.
- ✓ They will be able to make the smart controlling even smarter.
- ✓ They can float the data from sensors into the web or Google drive and can access the anywhere in a relatively secured manner.

3. Evaluation Systems:

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20	Written examination

	Assignment		Report and Presentation
	Attendance		
	Experiments	30	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
		20	Lab Examination
Total		100	

4. Course Outline:

Module I (15 Hours)

[3 hrs. Theory + 12 hrs. Practice]

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR, PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11), Stress Sensors, Load Sensors, Force Sensors, Wi-Fi modules.

Introduction to IOT: Background, what is IOT, what device makes it to IOT, IOT platforms, what IOT means for the developer, challenges of IOT.

Practice

1. Interfacing and testing the Ultrasonic Module, Relay and Infra-Red Module.
2. Interfacing and testing PIR, Laser LED, and Accelerometer.
3. Interface the LPG sensor, Monoxide sensor, Temperature and Humidity sensor.
4. Interfacing and testing stress sensor, load sensor, force sensor, Wi-Fi modules.

Module II (12 Hours)

[2 hrs.Theory + 10 hrs. Practice]

Connecting an Arduino to the Web: Introduction, setting up the Arduino development environment, Options for Internet connectivity with Arduino, interacting with basic sensors, interacting with basic actuators, configuring your Arduino board for the IoT.

Practice

5. Installing the Arduino IDE.
6. Learning the steps to interface the Controller board to the system through the interface.
7. Connecting the Arduino to the Internet.
8. Interacting of various sensors to the internet through the controller board.
9. Interfacing actuators to the Controller board and control through the internet.

Module III (5 Hours)

[1 hrs.Theory + 4 hrs. Practice] **Data extraction from**

Web: Grabbing the content from a web page, Sending data to the web, troubleshooting basic Arduino issues

Practice

10. Extracting data from a web page.
11. Sending data to a web page

Module IV (10 Hours)

[2 hrs.Theory + 10 hrs. Practice]

Internet Data Monitoring: Introduction, Internet of Things platforms for Arduino, Posting the sensor data online, Retrieving your online data, Securing your online data, Monitoring sensor data from a web based dashboard, Monitoring several Arduino boards at once, Troubleshooting issues with web data monitoring.

Practice

12. Posting the data to the internet through internet on-line.
13. Monitor the sensor output from a remote computer through Internet.
14. Parallel monitoring multiple controller boards connected to the internet.

Module V (7 Hours)

[3 hrs.Theory + 4 hrs. Practice]

Interacting with Web Services: Introduction, Discovering the Temboo platform, Tweeting from an Arduino board, Posting updates on Facebook, Automation with IFTTT, Sending push notifications

Practice

15. Posting an update to Facebook
16. Sending a Push notification through the controller by Internet

Module VI (15 Hrs.)

[1 hrs.Theory + 14 hrs. Practice]

Interacting with Web Services: Sending text message notifications, Storing data on Google Drive, Troubleshooting issues with web services.

Practice

17. Sending a text notification through Internet.
18. Control Light and Fan via Internet. (prototyped as LEDs)
19. Operate a DC motor to simulate the opening and closing of door using servo motor.

Module VII (11 Hours)

[3 hrs.Theory + 8 hrs. Practice]

Machine-to-Machine Interactions: Introduction, Types of IoT interaction, Basic local M2M interactions, Cloud M2M with IFTTT, M2M alarm system, Automated light controller, Automated sprinkler controller, Troubleshooting basic M2M issues.

Practice

20. Operate the smoke detector from internet.
21. Extract the reading of Temperature, Humidity and Monitoring through internet.
22. Automating the control of Light, Sprinkler.
23. Operate the robot through internet which has facility of communication to and fro through web and the sensor data.

5. Reference

Text Books:

1. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

6. Session Plan:

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (Lecture, tutorial, lab practice, field studies/field -trip, Workshop etc.)</i>	<i>Assignment (Projects, assignment, field study, seminar, etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Module I [3 hrs. Lecture + 12 hrs. Practice]				
What is Sensor? Types of sensors.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
URM 37 Sensor (Ultrasonic Sensor), Electro-Mechanical Switches, IR.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing the URM 37, Relay, IR Module.	4	Practice		
PIR, Laser, Accelerometers, MQ2, MQ3, Temperature and Humidity Sensors (DHT-11).	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing PIR, Laser, Accelerometer, MQ2, MQ3, DHT-11	4	Practice		
Stress Sensors, Load Sensors, Force Sensors, Wi-Fi Modules.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Interfacing and testing stress sensor, load sensor, force sensor, Wi-Fi modules.	4	Practice		
Background, What is IOT, What device makes it to IOT, IOT platforms, what IOT means for the developer.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Module II [2 hrs. Lecture + 10 hrs. Practice]				
Introduction, Setting up the Arduino development environment.	2	Practice		
Interacting of various sensors to the internet through the controller board.	4	Practice		
Interacting with basic actuators, Configuring your Arduino board for the IoT.	4	Practice		
Module-III [1 hrs. Lecture + 4 hrs. Practice]				

Grabbing the content from a web page, sending data to the Web, Troubleshooting basic Arduino issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Extracting data from a web page.	2	Practice		
Sending data to a web page.	2	Practice		
Module IV [2 hrs. Lecture + 8 hrs. Practice]				
Introduction, Internet of Things platforms for Arduino	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting the sensor data online, retrieving your online data, and Securing your online data, Monitoring sensor data from a web-based dashboard.	4	Practice		
Monitoring several Arduino boards at once, Troubleshooting issues with web data monitoring.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Parallel monitoring multiple controller boards connected to the internet.	4	Practice		
Module V [3 hrs. Lecture + 4 hrs. Practice]				
Introduction, Discovering the Temboo platform, Tweeting from an Arduino board. Tweeting from an Arduino board	2	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting updates on Facebook, Automation with IFTTT, Sending push notifications.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Posting updates on Facebook, Sending push notifications	4	Practice		
Module-VI [1 hrs. Lecture +14 hrs. Practice]				
Sending text message notifications, Storing data on Google Drive.	2	Practice		
Troubleshooting issues with web services.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Control Light & Fan from the internet.	4	Practice		
Remote controlled door (opening & closing) using servo Motor.	4	Practice		
Smoke detector and Remote control room temperature from internet.	2	Practice		
Extract the reading of Temperature, Humidity and Monitoring through internet.	2	Practice		

Module VII [3 hrs. Lecture + 8 hrs. Practice]				
Introduction, Types of IoT interaction, Basic local M2M interactions.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Cloud M2M with IFTTT, M2M alarm system, Troubleshooting basic M2M issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Automated light controller, Automated sprinkler controller,	4	Practice		
Introduction, choosing a robotic platform, Building a mobile robot, Configuring your mobile robot, Basic robot control, Using distance sensors, Controlling your robot from anywhere, Troubleshooting basic robotic issues.	1	Lecture	Assignment	Text Book-1, Reference Book-1,2
Operate the robot through internet which has facility of communication to and fro through web and the sensor data.	4	Practice		
Total (hrs.)	75	15 hrs. Lecture	+ 60 hrs. Practice	

Programming for Problem solving- Java

Subject Name	Code	Type of course	T-P-P	Prerequisite
Programming for Problem solving- Java	ENFC0412	Theory + Practice	1-2-0(3)	Nil

1. Objective

- ✓ Learn problem solving using object-oriented concepts
- ✓ Implement object oriented programming using Java
- ✓ Analyze several alternative solutions to determine the best approach

2. Course Outcome

- ✓ Able to use object oriented concept to solve problems

· Write an error free program of minimum 200 lines of code

3. Evaluation System

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test	20	Written examination
	Assignment	NIL	Report and Presentation
	Experiments	30	Practice work, report
	Project	NIL	Report and presentation
	Quiz	NIL	Surprise/preannounced ones
<i>External Examination</i>		30	Written examination
		20	Practice Exam with viva voce
<i>Total</i>		100	

Projects:

1. Simple Currency Converter
2. Designing a Calculator
3. Generating the mark sheet of a student
4. Create a phone directory and search a number
5. Create a tic tac toe game
6. Developing a library maintenance system
7. Desktop applications
8. Exam System (Without Database)
9. Create Country MAP and Different banners

Course outline

Module-I (10Hrs):

Problem Solving Techniques: Ask Questions, Look for things that are familiar, solve by analogy, Means-Ends Analysis, Divide and Conquer, The building block approach, Merging solutions, Mental Block: The Fear of Starting, Object Oriented Problem Solving, and Case Study.

Programming: Programming Language, Skeleton, Compilation, Interpretation, and Execution of Program.

Object-Oriented Programming: Object Oriented Concepts, Java Programming Environment, Feature of Java, Elements of Java Program: Identifier, Naming Conventions, Build-in Type, Variable, Operators, Control Statements, Loops, Typecasting, Arrays,

Module-II(15 Hrs):

Classes: Concept of Objects and Classes, Using Methods, Local Variables, Instance Variables, Constructor, Overloading Constructor, Overloading Methods, Garbage Collection, The Finalize Method, Static, Final and this Keyword.

Inheritance and Polymorphism: Basics, Access Modifier, The super Keyword, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Inner Classes.

Module-III (10 Hrs):

Packages: Packages, Access Protection, Importing Package

Interfaces: Interface, Implementing Interfaces.

Module-IV (10 Hrs):

StringHandling: String, String Buffer, String Builder.

Excepting Handling: Fundamentals, Checked and Unchecked Exceptions, Using Try, Catch, MultipleCatches, Throw, Throws, Finally, Java's Built-In Exceptions, User-Defined Exception.

Module-V (10 Hrs):

Multi-Threading: Java Thread Lifecycle Model, Thread Priorities, Synchronization, Creating Threads, Using Different Thread Methods, Wrapper Classes, Clone (java.lang), Collection API, Vectors (java.util).

Module-VI (10 Hrs):

Java.IO: I/O Streams, Serialization

AWT: AWT Classes, Window Fundamental, Component, Container, Panel, Window, Frame, Canvas, Control Fundamentals, Layout Managers.

Module-VII (10 Hrs):

Event Handling: Delegation Event Model, Event Classes, Event Listener Interfaces, and Adapter Classes, Handling Events by Extending AWT Components.

FCEN0603 Electrical Circuit Drawing (AutoCAD)

Credits: 02
42

Total Hours:

Course Objective

-To make student analyze the electrical system through computer simulation using software packages (AutoCAD)

Course Outcomes:

-Students should able to create an electrical wiring diagram by using AutoCAD software.

List of Experiments

1. Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires
2. Symbol creation
3. General lay out of a power system network.
4. Simple house wiring (1-phase): light, fan
5. Simple house wiring (3-phase): light, fan, AC, geezer, 3-phase motor
6. Agricultural pump-set wiring (star-delta) with panel wiring.
7. Workshop panel wiring for machine lab

8. Four wheeler electrical wiring
9. Forklift wiring harness
10. Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)
11. CIT new substation layout (schneider) or JITM Substation
12. Differential protection of transformer
13. Layout drawing of a power plant

				<i>Theor y</i>	<i>Practic e</i>	<i>Video</i>	<i>Project</i>
1	Introduction to AutoCAD Electrical, Drawing Files, Electrical Components and Wires	PRAC	AutoCAD	1	2	0	0
2	Symbol creation	PRAC	AutoCAD	1	2	0	0
3	General lay out of a power system network.	PRAC	AutoCAD	1	2	0	0
4	Simple house wiring (1-phase): light, Fan	PRAC	AutoCAD	1	2	0	0
5	Simple house wiring (3-phase): light, fan, AC, geezer, 3-phase motor	PRAC	AutoCAD	1	2	0	0
6	Agricultural pump-set wiring (stardelta) with panel wiring.	PRAC	AutoCAD	1	2	0	0
7	Workshop panel wiring for machine lab	PRAC	AutoCAD	1	2	0	0
8	Four wheeler electrical wiring	PRAC	AutoCAD	1	2	0	0
9	Forklift wiring harness	PRAC	AutoCAD	1	2	0	0
10	Substation lay out drawing with 4 incomer and 4 outgoing (Khordha Substation or nearby substation)	PRAC	AutoCAD	1	2	0	0

Product Development

Subject Name	Code	Type of course	T-P-P	Prerequisite
Product Development	ENFC0601	Practice + Project	0-2-1(3)	Nil

1. Objectives

- To educate the students on various stages of development of design of a product beginning from intent-to-actual design.
- Educate the students on usage of design software like ENOVIA, SIMULIA.

2. Course Outcome

- Students will have knowledge and skills to undertake design projects through making design decisions and evolve design of a product using the theoretical knowledge and hands-on-experience provided on design software.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test		
	Assignment		
	Experiments		
	I PRO	40+10	Lab work & Report
	Quiz		
External Examination	EPRO	50	Project & Report
Total		100	

4. Course Outline

Module I (08 Hours)

Intent, Impact, Import & Use of Core Mechanical Principles for Concept Design, Engineering Design, Problems Engineering can Solve, How to Identify Opportunities for Design, Needs Assessment & Problem Definition.

Module II (10 Hours)

Defining Requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing Possible Design Solutions, Making Design Decisions.

Module III (08 Hours)

Introduction to CAD Process through 3D Experience Free Modeling, Modeling & Managing Subassemblies in the Robot

Module IV (09 Hours)

Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps Involved in Controlling the Product Updates in ENOVIA.

Module V (20 Hours)

Introduction to FEA in Industry, Pre-Processing Using SIMULIA.

Module VI (15 Hours)

Understanding the Mathematical Modeling for Product in Physical Behavior

Module VII (15 Hours)

Introduction to Design of Experiments, How to Use SIMULIA to Make an Incremental Design Decision. Type of Engineering Analysis.

E-content: Peer Learning Experience by Dassault Systemes.

Text Books:

1. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India.
2. Ulrich, K T, Eppinger, S D, Product Design & Development, 2016, 5th edition, Tata McGraw-Hill Companies, Inc.

Reference Books:

- Kumar, P, Product Design - Creativity, Concepts & Usability, 2011, 2nd Edition, PHI publication, India.

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hours.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I				
Intent, Impact, Import, Use of core Mechanical Principles for concept Design, What is Engineering Design, Problems Engineering can solve, How to identify opportunities for design, Needs Assessment & Problem Definition,	08	Tutorial	Project	
Module-II				
Defining requirements & Problem Definition, Analytical Process Hierarchical Analysis, Developing a possible design Solutions, Making Design Decisions.	10	Tutorial	Project	

Module-III				
Introduction to CAD Process through 3D Experience free modeling, Modeling & managing subassemblies in the Robot,	08	Tutorial , Practice	Project	
Module-IV				
Modeling a Lathe Machine. Introduction to PLM through ENOVIA, Steps involved in controlling the product updates in ENOVIA. Module-V	09	Tutorial , Practice	Project	
Introduction to FEA in Industry, Pre-processing using SIMULIA, Understanding the Mathematical modeling for Product in physical behavior, Introduction to design of experiments, How to use SIMULIA to make a incremental design decision. Type of Engineering analysis. Projects such as Disc Brake analysis by DOE, Door trim Substrate by DOE, MBD of Suspension by DOE.	20	Practice, tutorial	Project	
Module-VI				
Consumer Sentimental Analysis, Behavior Loyalty Metric, Emotional Loyalty Metric, Understanding decision making dashboards in NetVibes,	15	Lecture, Practice	Project	
Interpreting the Real time social data, Creation of different metric for business condition in Net Vibes, Automate Business logic to respond.	15	Lecture, Practice	Project	
Total (hours)	85			

Programming Internet of Things

Subject Name	Code	Type of course	T-P-P(Credit)	Prerequisite
Programming Internet of Things	ENFC1401	Workshop	0-2-0(2)	

1. Objective

- ✓ To familiarize the students with IoT (Internet of Things) and their applications
- ✓ To make students learn devices, programming and technology for IOT

2. Course Outcome

- ✓ Interface different sensors with Raspberry Pi and perform experiments
- ✓ Students will work together in teams
- ✓ Develop an IoT project which can be showcased at the end of the course

3. Evaluation Systems

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test	<i>NIL</i>	Written examination
	Assignment	<i>NIL</i>	Report and Presentation
	Experiments (Internal)	<i>50</i>	Practice work, report and viva-voce
	Project	<i>50</i>	Report and presentation
	Quiz	<i>NIL</i>	Surprise/preannounced ones
<i>External Examination</i>	Semester	<i>NIL</i>	Written examination
	Practice	<i>NIL</i>	Practice test with viva-voce
Total		<i>100</i>	

Course outline

All the students shall be distributed in teams for project development. They will choose the project at the beginning of the course. A team shall not consist more than 4 members.

Module I: (20 Hours)
 Internet of Things: Definition and Characteristics of IoT, Physical Design of IoT – IoT Protocols, IoT communication models, IoT Communication APIs, IT enabled Technologies, Communication protocols
 Domain Specific IoTs: Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Lifestyle.

Embedded Systems: Introduction, Sensors and Actuators, Different types of Sensors
Module II: (20 Hours)
 Raspberry Pi: Configuration of OS on to Raspberry Pi, Commands used in Raspberry Pi coding (Linux), Raspberry Pi pin descriptions.

Experiments like the following will be performed:
 Simple LED Blink Example, Simple Pattern of LED, Complex Pattern of LED, Simple Automated Light System using LDR, Simple project on Temperature Sensor using LCD display, LED action via Bluetooth.

Module III: (20 Hours)
 Experiments like the following will be performed:
 Ultra Sonic Sensor of Distance Finder, Data Logger with Temperature Sensor and LDR, Cloud Access and Storage of Sensor Data, IR Module Interfacing, PIR Module Interfacing, Relay Module Interfacing. Network setup WIFI/LAN, LED blinking using Pi, Web Monitoring of Sensor outputs through API keys, Sensor based automated E-Mail Sending through Pi.

Richardson Matt & Wallace Shawn, Getting Started with Raspberry Pi, O'Reilly (SPD), 2014.

Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I (Practice-28 hours)				

<i>Introduction to Internet of Things – Definition and Characteristics of IoT, Physical Design of IoT – IoT Protocols</i>	<i>4</i>	<i>practice</i>	<i>Assignment</i>	<i>RB-1, RB-2, RB-3</i>
<i>IoT communication models, IoT Communication APIs, IoT enabled Technologies, Communication protocols</i>	<i>4</i>	<i>practice</i>	<i>Assignment</i>	<i>RB-1, RB-2, RB-3</i>
<i>Domain Specific IoTs – Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Embedded Systems – Introduction, the basics of sensors and actuators</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Different types of sensors</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>

Module-II (Practice- 28 hours)				
<i>Introduction to Raspberry Pi, Configuration of OS on to Raspberry Pi</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Commands used in Raspberry Pi coding (Linux), Raspberry Pi pin descriptions</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Simple LED Blink Example, Simple Pattern of LED</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Complex Pattern of LED, Simple Automated Light System using LDR</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Simple project on Temperature Sensor using LCD display, LED action via Bluetooth</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
Module-III (Practice- 34 hours)				
<i>Ultra Sonic Sensor of Distance Finder, Data Logger with Temperature Sensor</i>	4	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>

<i>and LDR</i>				
<i>Cloud Access and Storage of Sensor Data, IR Module Interfacing</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>PIR Module Interfacing, Relay Module Interfacing</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Network setup WIFI/LAN, LED blinking using Pi</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
<i>Web Monitoring of Sensor outputs through API keys, Sensor based automated E-Mail Sending through Pi</i>	<i>4</i>	<i>practice</i>	<i>Assignment + Experiments</i>	<i>RB-1, RB-2, RB-3</i>
Total (hrs)	60	Practice 60		

Build Your Computer

Subject Name	Code	Type of course	T-P-P	Prerequisite
Build Your Computer	ENFC1402	Workshop	0-2-0(2)	Nil

1. Objective

- ✓ Develop ability to understand the internals of Computer and peripherals
- ✓ To have an overall idea about networking concepts and devices
- ✓ To have an overall idea about secure computing

2. Course Outcome

- ✓ Build your computing device
- ✓ Troubleshoot various faults in a computer system and network
- ✓ Construct small LAN for resource sharing

3. Evaluation Systems

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test		Written examination
	Assignment		Report and Presentation
	Experiments	50	Assessment based on Individual Lab sessions, Lab report
	Project	50	Report and presentation
	Quiz		Surprise/ preannounced ones
<i>External Examination</i>	<i>Practice</i>		Practice Test
Total		100	

Projects

1. *Developing your own computing device*
2. *Setup a camp to provide free servicing of laptops and desktops*
3. *Setup and configure a small secured LAN for file sharing*

4. Course outline

- I. **Build Computing Device:** Building computing device using Raspberry-Pi Board
- II. **Inside The PC:** Opening a Desktop/Laptop and Identification of Various Components, Study of

Different Blocks of PC

- III. **Assembling and Disassembling of PC:** Assembling and Disassembling of Different Components like Motherboard, Processor, RAM, Hard Disc and Other Components
- IV. **SMPS and Peripherals:** Identification of Various Power Supply Units and Peripherals along with Pin Configuration
- V. **BIOS:** Study of Basic Input Output System, Morden BIOS (UEFI), Security Features
- VI. **Installation of OS and Application Software:** Installation of GNU/Linux, Ubuntu LTS (Latest), Application Software
- VII. **Usage of Libreoffice:** Writer (Document), Calc (Spreadsheet), Impress (Presentation)
- VIII. **Basic Commands:** Working With Linux Commands, Vi Editor, Shell Scripting
- IX. **Basic Networking:** Wired LAN, Wireless LAN, Wireless Security and Troubleshooting
- X. **Introduction to Various Networking Devices:** Routers, Switches, Modems, Hubs, Firewall and Wireless devices
- XI. **Network Configuration:** Setting IP Addresses, Sharing Files and Folders, Network Troubleshooting, PING Test, ifconfig etc.
- XII. **Introduction To Servers and Network Security:** Files Servers, Email Servers, Proxy Servers; Essential Security Measures: Encrypt Critical Data, Secure Systems With Passwords, Back Up and Isolate Information

Session Plan

<i>Topic coverage and Internal Test</i>	<i>No. of Sessions (in hrs.)</i>	<i>Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)</i>	<i>Assignment (project, assignment, field study, seminar, etc.)</i>	<i>Suggested Reading (Book, Video, Online source, etc.)</i>
Build Your Own Device: Building Your First PC Using Raspberry Pi Board.	8	Workshop	project	https://howtoraspberrypi.com/build-pc-for-less-than-200-raspberry-pi/
Inside The PC: Opening a Desktop/Laptop and Identification of Various Components,	4	Demonstration and practice	Practice and Report writing.	https://web.stanford.edu/class/cs101/hardware-1.html

Study of Different Blocks of PC.				
Assembling and Disassembling of PC: Assembling and Disassembling of Different Components like Motherboard, Processor, Ram, Hard Disc and Other Components.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://www.youtube.com/watch?v=nBZovA_kMWA
SMPS and Peripherals: Identification of Various Power Supply Units and Peripherals along with Pin Structure.	4	<i>Demonstration and practice</i>	Practice and Report writing.	
BIOS: Study of Basic Input Output System, Modern BIOS (UEFI), Security Features.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://whatis.techtarget.com/definition/BIOS-basic-input-output-system

Installation of OS and Application Software: Installation of Ubuntu LTS (Latest), Application Software.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://tutorials.ubuntu.com/tutorial/tutorial-install-ubuntu-desktop#0
Usage of Libreoffice: Writer (Document), Calc (Spreadsheet), Impress (Presentation).	6	<i>Demonstration and practice</i>	Practice and Report writing.	
Basic Commands: Working With Linux Commands, Vi Editor, Shell Scripting.	6	<i>Demonstration and practice</i>	Practice and Report writing.	https://maker.pro/linux/tutorial/basic-linux-commands-for-beginners
Basic Networking: Wired LAN, Wireless LAN, Wireless	4	<i>Demonstration and practice</i>	Practice and Report writing.	

Security and Troubleshooting.				
Introduction to Various Networking Devices: Routers, Switches, Modems, Hubs, Firewall, wireless devices.	4	<i>Demonstration and practice</i>	Practice and Report writing.	https://www.geeksforgeeks.org/network-devices-hub-repeater-bridge-switch-router-gateways/
Network Configuration: Setting IP Addresses, Sharing Files and Folders, Network Troubleshooting, PING Test, ifconfig Etc.	4	<i>Demonstration and practice</i>	Practice and Report writing.	
Introduction To Servers and Network Security: Files Servers, Email Servers, Proxy	8	<i>Demonstration and practice</i>	Practice and Report writing.	https://w4university.wordpress.com/2013/07/01/http-dhcp-dns-ftp-smtp-proxy-and-client-server-architecture/

Servers; Essential Security Measures: Encrypt Critical Data, Secure Systems With Passwords, Back Up and Isolate Information.				
<i>Total (hrs)</i>	60hrs			

Cloud Computing Application

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Cloud Computing Application	ENFC1403	Workshop	0-2-0(2)	

1. Objective

Key points: Briefly explain what the course covers. Indicate why the course is to be studied. Specify who should study the course and requirement of prior knowledge and skill, if any.

- | |
|---|
| <ul style="list-style-type: none"> · Learn fundamentals of cloud computing · Learn to build distributed applications and microservices with AWS Step Functions · Learn step-by-step to setup up AWS platform |
|---|

2. Course Outcome

Key points: State clearly what knowledge and skill a student is expected to learn at the end of the course.

- | |
|---|
| <ul style="list-style-type: none"> · Setup AWS Account and AWS infrastructure · Deploying serverless microservices · Implementing scalability and implementing high availability |
|---|

3. Evaluation Systems

Key points: State clearly the components, weights and methods of evaluation system.

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Midterm Test		Written examination
	Assignment		Report and Presentation
	Experiments	50	Lab work, report
	Project	50	Report and presentation
	Quiz		Surprise/preannounced ones
<i>External Examination</i>	<i>Practice Examination</i>		Written examination
Total		100	

Course outline

Module I (8 Hrs)

UNDERSTANDING CLOUD BASICS

Defining cloud computing, Introducing public, private, and hybrid clouds, Introducing cloud service models – IaaS, PaaS, and SaaS, Introducing multi-tenancy models, Compare cloud value proposition with conventional models. Understand Global Infrastructure – Region, Availability Zones, Edge Locations; Setting up AWS account, Getting Familiarity with AWS Management Console; Understanding cloud-based workloads

Module II (10 Hrs)

DESIGNING CLOUD APPLICATIONS

Introducing cloud-based multitier architecture, Designing for multi-tenancy, Understanding cloud applications design principles, Understanding emerging cloud-based application architectures, Estimating your cloud computing costs, A typical e-commerce web application

Module III (8 Hrs)

INTRODUCING AWS COMPONENTS

AWS components, Managing costs on AWS cloud, Application development environments
Setting up the AWS infrastructure

Module IV (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SCALABILITY

Defining scalability objectives, Designing scalable application architectures, Leveraging AWS infrastructure services for scalability, Evolving architecture against increasing loads, Event handling at scale, Setting up Auto Scaling

Module V (8 Hrs)

DESIGNING FOR AND IMPLEMENTING HIGH AVAILABILITY

Defining availability objectives, Nature of failures, Setting up high availability

Module VI (8 Hrs)

DESIGNING FOR AND IMPLEMENTING SECURITY

Defining security objectives, Understanding the security responsibilities, Best practices in implementing AWS security, Setting up security

Module VII (10 Hrs)

DEPLOYING TO PRODUCTION AND GOING LIVE

Managing infrastructure, deployments, and support at scale, Creating and managing AWS environments using CloudFormation, Using CloudWatch for monitoring, Using AWS solutions for backup and archiving, Planning for production go-live activities, Setting up for production

<i>Total</i>		<i>100</i>	

Course outline

- All the students shall be distributed in groups for project development. They will choose the project from the list of projects (not exhaustive) to be given at the beginning of the session, which they need to develop along with the coverage of the course. A group shall not consist more than 4 members

- Some of the sample projects are:

School Management

E-Learning Web Portal

Reservation System (Railway, Airlines, etc.)

Accounting System

Voting System

Logistics Management

Contact Management

Module-I (8 Hrs.)

Integrated Development Environment, Version Control (Git), Documentation

Module-II (16 Hrs.)

Software Development Models: Principles of Life Cycle Models, Waterfall Software Development, Agile Software Development, Lean Software Development, DevOps

Module-III (12 Hrs.)

DevOps Processes and Continuous Delivery:

Requirements (Functional and Non-functional) and Specifications, Developers, Revision Control System, Build Server,

Module-IV (12 Hrs.)

Artifact Repository, Package Managers, Test Environments, Staging/Production, Release Management

Module-V (9 Hrs.)

DevOps – Architecture & Design:

DevOps Architecture, Separation of Concerns, DevOps Design (Modularity, Coupling, Cohesion)

Module-VI (9 Hrs.)

Three-tier Systems, Presentation Tier, Logic Tier, Data Tier, Handling Database Migrations

Module-VII (9 Hrs.)

Testing (Unit Testing, Integration Testing), Implementation, Deployment (Rollback, Cutover Strategies)

Text Books:

- Joakim Verona, *Practical DevOps*, Packt Publishing, 2nd Edition, 2018.

**SYLLABUS
CCEE0101 NETWORK THEORY**

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

To develop problem solving skills and understanding of circuit theory through the application of techniques and principles of electrical circuit analysis to common circuit problems.

Course Outcomes: (through simulation & Matlab programming) On successful completion of this course, students will be able to:

-Able to use network techniques, like node analysis and loop analysis, to write equations for large linear circuits.

-Able to apply Thevenin and Norton theorems to analyze and design for maximum power transfer.

-Able to analyze the transient behaviour of first and second order circuits -

Able to analyze the simple two port network.

-Able to apply the Laplace transform to linear circuits and systems -

Able to analyze the filter configuration.

Module-I (16 Hrs): NETWORK TOPOLOGY, NETWORK THEOREMS & COUPLED CIRCUITS NETWORK TOPOLOGY:

Graph of a network, Concept of tree, Incidence matrix, Tie-set matrix, Cut-set matrix, Formulation and solution of network equilibrium equations on loop and node basis (Most of the topics will be through Lectures, e-content)

NETWORK THEOREMS:

Substitution theorem, Reciprocity theorem, Maximum power transfer theorem, (Most of the topics will be through Lectures, e-content & laboratory) (All theorems will be through PSPICE, and Simulink)

COUPLED CIRCUITS:

Coupled Circuits, Dot Convention for representing coupled circuits, Coefficient of coupling, Series and parallel resonant circuits: Band Width and Q-factor (Most of the topics will be through Lectures, e-content & laboratory through PSPICE, and Simulink)

Module-II (14 Hrs): LAPLACE TRANSFORM & ITS APPLICATION, TWO PORT NETWORK LAPLACE

TRANSFORM & ITS APPLICATION:

Application of Laplace transform: Circuit Analysis (Steady State and Transient). (PSPICE, and Orcad), (Most of the topics will be through e-content & practice)

TWO PORT NETWORK FUNCTIONS & RESPONSES:

Z, Y, ABCD and h-parameters, Reciprocity and Symmetry, Interrelation of two-port parameters, Interconnection of two-port networks. (Most of the topics will be through Lectures, e-content & laboratory)

MODULE-III (12 Hrs): FOURIER SERIES & ITS APPLICATION, FILTERS

FOURIER SERIES & ITS APPLICATION: Fourier series, Fourier analysis and evaluation of coefficients, Steady state response of network to periodic signals, Fourier transform and convergence,

Fourier transform of some functions. (Most of the topics will be through Lectures, e-content)

FILTERS: Brief idea about network filters (Low pass, High pass, Band pass and Band elimination) and their frequency response. (Most of the topics will be through Lectures, e-content, videos & Projects) (Matlab programming)

TEXT BOOKS:

1. *Network Theory* –A K Chakraborty –DhanpatRai Publication. (2007 Edition Chapter-4,6,9,11,12,13,15,16,18,19)

CCEE0102 ELECTRICAL MACHINES -II

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

- To introduce the students about principles of electromagnetism applied to alternating machines.
- To familiarize the students about the fundamental laws that governs the operation of AC machines and to extend its application to synchronous generator and motors.
- To introduce the students about the constraints associated with starting of Induction motors.
- To analyse the behaviour and the performance of the machine under different operating conditions and their remedial measures. **Course Outcomes:**

On completing this course, students will be able to:

- Distinguish the constructional similarity and dissimilarity between various alternators. -
- Perform different tests on a synchronous generator.
- Calculate voltage regulation of the machines by different methods
- Understand about direct axis and quadrature axis reactance which is essential for higher studies. -
- Run two or more alternators in parallel.
- Determine the power developed in a synchronous motor
- In the lab, 50% of the experiments will be verified by writing a software programme on the logic relating to the Mathematical equation.

Module-I (15 Hrs):

THREE PHASE SYNCHRONOUS GENERATORS

Synchronous Generator Construction (both Cylindrical Rotor and Salient Pole type), The Speed of Rotation of a Synchronous Generator, Induced voltage in A.C. Machines, The Effect of Coil Pitch on A.C. Machines, Distributed Windings in A.C. Machines, The Equivalent Circuit of a Synchronous Generator (Armature Reaction Reactance, Synchronous Reactance and Impedance).(Class room teaching)

CYLINDRICAL ROTOR TYPE THREE PHASE SYNCHRONOUS GENERATORS

The Phasor Diagram of a Synchronous Generator, Power and Torque in Synchronous Generators (Power Angle Equation and Power Angle Characteristic), Two reaction theory, Phasor diagram, Power angle characteristic of synchronous generators, Measuring Synchronous Generator Model Parameters (Open Circuit and Short Circuit Tests and Determination of Synchronous Impedance and Reactance), Voltage Regulation by Synchronous Impedance Method, Zero Power Factor = ZPF Method, Zero Power Factor characteristic, Potier Reactance.(Class room teaching+ Lab practice)

SALIENT POLE TYPE THREE PHASE SYNCHRONOUS GENERATORS

Two Reaction Concept, Development of the Equivalent Circuit of a Salient Pole type Three Phase Synchronous Generator (Direct axis and Quadrature axis Reactance, Phasor Diagram for various load power factors, Torque and Power Equations of Salient Pole Synchronous Generator (Power Angle Equation and Power Angle Characteristic with stator resistance neglected). Synchronous condenser, Hunting.(Class room teaching+ Lab practice) **Module-II (13Hrs):**

PARALLEL OPERATION OF THREE PHASE A.C. SYNCHRONOUS GENERATORS

The Conditions Required for Paralleling, The General Procedure for Paralleling Generators, Operation of Generators in Parallel with Infinite bus bar, Effect of excitation, effect of unequal voltage and steam power supply. Load Sharing between two generators. (Class room teaching+ Lab practice)

THREE PHASE SYNCHRONOUS MOTORS

Basic Principles of Motor operation, Construction, Starting Synchronous Motors, Equivalent circuit & phasor diagram. Effect of excitation on varying load, power developed in a synchronous motor, induction motor and Synchronous Motors, Synchronous Motor Ratings, Applications of synchronous motors(Class room teaching)

MODULE-III (14 Hrs):

THREE PHASE INDUCTION MACHINES

Constructional Features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors, Principle of Operation, Slip Speed, Equivalent Circuit and Phasor Diagram, No-Load and Blocked Rotor tests, Determination of Parameters, Slip-Torque Characteristics Losses and Efficiency. Starting of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of Induction Motors, Speed Control of Induction Motors, Circle Diagram, Effect of rotor resistance, Starting and speed control methods, Cogging, Crawling and Electrical Braking of Induction Motors.(Class room teaching+ Lab practice)

SINGLE PHASE INDUCTION MOTORS :Starting of Single Phase Induction Motors, Speed Control of Single Phase Induction Motors, Circuit Model. Other types of Motors: Reluctance Motors.(Class room teaching)

CCEE0103 ELECTRICAL MEASUREMENT & INSTRUMENTATION

Pre –requisites	Course Type	Credits
Nil	Theory	3

Course Objectives:

- To introduce the concepts & purpose of various electrical Instrumentation.
- To train the students to operate different types of electrical Instrument and how to measure different parameters & variables.

-To make the students understand various concepts related to construction and working of various parameter measuring devices.

Course Outcomes: On successful completion of this course, students will be able to:

-Students will be able to prepare professional quality graphical presentations of laboratory data and Computational results, incorporating accepted data analysis and synthesis methods.

-Students will work in teams to conduct experiments, analyze results, and develop technically sound reports of outcomes.

-Students can develop application oriented projects by using this instruments & devices & able to repair instrument

-Analyzing a problem and ability to propose solution.

-Able to demonstrate the use of machinery in different areas of application.

MODULE- I (15 Hours)

Basics of Measurements: Accuracy, Precision, resolution, reliability, repeatability, validity, Errors and their analysis. (Class room teaching)

GALVANOMETER: Construction, Theory and Principle of opera

Magnet & Moving Coil types), and Ballistic Galvanometer, Influence of Resistance on Damping, Logarithmic decrement, Calibration of Galvanometers, Galvanometer Constants, Measurement of Flux and Magnetic Field by using Galvanometers. (Class room teaching+ Lab Practice)

Bridge Measurement: DC bridges –Wheatstone bridge, AC bridges –Kelvin, Hay, Maxwell, Schering and Wien bridges .(class room teaching+ Lab Practice)

MODULE- II (12 Hours)

POTENTIOMETER: Construction, Theory and Principle of operation of DC Potentiometers

(Crompton, Vernier, Constant Resistance, & Deflection Potentiometer), and AC Potentiometers

(Drysdale-Tinsley & Gall-Tinsley Potentiometer).(class room teaching+ Lab Practice)

PMMC, moving iron, dynamometer and induction type instruments. (class room teaching+ Lab Practice) Measurement of Voltage, Current, Power (Single Phase & Three Phase) &Energy (class room teaching+ Lab Practice)

MODULE- III (13 Hours)

Instrument transformers: Current Transformer, Potential Transformer (class room teaching+ Lab Practice)

Frequency Meters: Vibration reed type, electrical resonance type (class room teaching+ Lab Practice) Oscilloscopes: Cathode Ray Tube, Vertical and Horizontal Deflection System, Delay lines, Probes and

Transducers, Specification of Oscilloscope, Oscilloscope Techniques. Lissajous Pattern.(class room teaching+ Lab Practice)

Measurement of earth resistance: Earth Megger. (class room teaching+ Lab and field Practice) Text

CCEE0104 Control System

Pre –requisites	Course Type	Credits
Nil	Theory	3

Course Objectives:

-To teach the fundamental concepts of Control systems and mathematical modelling of the system. - To teach students the characteristics of closed-loop control systems, including steady-state and transient response, parametric sensitivity, disturbances, error, and stability.

-To teach the basics of stability analysis of the system

-To study the concept of time response and frequency response of the systems and methods - Introduce students to the basic concepts of proportional, integral, and derivative (PID) control.

Course Outcomes:

On successful completion of this course, students will be able to: -Represent the mathematical model of a system.

-Determine the response of different order systems for various step inputs.

-Analyse the stability of the system.

MODULE-I: (12 Hours)

Introduction to Control Systems: Basic Concepts of Control Systems, Open loop and closed loop systems, Mathematical Models of Physical Systems: Differential Equations of Physical Systems: Mechanical Translational Systems, Rotational systems, Electrical Systems, Analogy between Mechanical and electrical quantises, Derivation of Transfer functions, Block Diagram Algebra, Signal flow Graphs, Mason’s Gain Formula. Control Components: D.C. S Synchros, Stepper Motors. (Class room teaching & practice based)(Matlab/Simulink)

MODULE-II: (14 Hours)

Time response Analysis: Standard Test Signals, Time response of first order systems to unit step and unit ramp inputs. Time Response of Second order systems to unit step input, Time Response specifications, Steady State Errors and Static Error Constants of different types of systems. Stability and Algebraic Criteria, concept of stability, Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion, Application of the Routh stability criterion to linear feedback system, Relative stability by shifting the origin in s-plane. Root locus Technique: Root locus concepts, Rules of Construction of Root locus, Determination of Roots from Root locus for a specified open loop gain. (Class room teaching & practice using Matlab Programming)

MODULE-III: (14 Hours)

Frequency Response Analysis: Frequency domain specifications, correlation between Time and Frequency Response with respect to second order system, Polar plots, Bode plot, Determination of Gain Margin & Phase Margin from Bode plot.

Stability in frequency domain: Principle of argument, Nyquist stability criterion, Application of Nyquist stability criterion for linear feedback system.

Controllers: Concept of Proportional, Derivative and Integral Control actions, P, PD, PI, PID controllers. (Class room teaching & practice based using Matlab Programming)

Text Book:

CCEE0105 TRANSMISSION & DISTRIBUTION

Pre-requisites	Course Type	Credits
Nil	Theory	3

Course Objectives:

-To know the power system operation: transmission and distribution.

-Students are instructed in the principles of calculating the electrical parameters required in the design of an electrical installation.

-To calculate the operating conditions of electrical installations as well as its design and protection, taking into account not only technical criteria based on the boundaries of the different components, but also energy efficiency criteria.

Course Outcomes:

-Students will come to know about smooth operation of basically undisturbed or smooth availability of power to consumer.

-The expected fault/ disturbance of transmission line.

-On successful completion of this course, students will be able to understand transmission line/cable and their parameters.

MODULE-I (16 hours)

Series impedance of transmission line: Types of conductors, Resistance, Tabulated Resistance value, Inductance of a conductor due to Internal Flux, Flux linkages between two points External to an Isolated Conductor, Inductance of a Single-phase Two-wire Line, Flux Linkages of One Conductor in a group, Inductance of composite conductor lines, The use of tables, Inductance of Three-phase Lines with Equilateral Spacing, Inductance of Three-phase Lines with Unsymmetrical Spacing, Inductance calculations for Bundled Conductor.

Capacitance of Transmission Lines: Electric field of a long, straight conductor, The potential Difference between Two Points Due to a Charge, Capacitance of a Two wire Line, , Capacitance of Three-phase Lines with Equilateral Spacing, Capacitance of Three-phase Lines with Unsymmetrical Spacing, Effect of Earth on the Capacitance of Three-phase Transmission line, capacitance calculation for bundled conductors, Parallel-circuit Three-phase Lines. (Most of the topics will be through power point presentation. 'C' programming and matlab)

MODULE-II (13 hours)

Current and Voltage Relations on a Transmission Line: Representation of Lines, Short Transmission Line, Medium Length Line, Long Transmission Line, Equivalent Circuit of a long Transmission Line, Power flow through a Transmission Line, Reactive compensation of Transmission Line, Transmission Line Transients, Travelling waves, Reflections, Direct current Transmission (Most of the topics will be through power point presentation) (C programming and matlab)

Skin and Proximity effects, Ferranti effect, Overhead Line Insulators: Types of Insulators, String efficiency and Methods for improvement (Most of the topics will be through power point presentation and field visit)

MODULE-III(11 hours)

Mechanical Design of Overhead Transmission Lines: Sag and Tension Calculations, with equal and unequal heights of towers, Effect of Wind and Ice on weight of Conductor, Numerical Problems (Most of the topics will be through power point presentation and field visit)

Corona: Description of the phenomenon, factors affecting corona, critical voltages and power loss, Radio Interference (Most of the topics will be through power point presentation)

Distribution: Comparison of various Distribution Systems, AC three-phase four-wire Distribution System, Types of Primary Distribution Systems, Types of Secondary Distribution Systems, Voltage Drop in DC & AC Distributors, Kelvin's Law (Most of the topics will be through power point presentation and field visit)

CCEE0106 POWER ELECTRONICS

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

-To understand and acquire knowledge about various power semiconductor devices. -To prepare the students to analyse and design different power converter circuits..

Course Outcomes:

On successful completion of this course, students will be able to:

-Acquire knowledge about fundamental concepts and techniques used in power electronics.

-Analysis of various single phase and three phase power converter circuits and understand their applications.

-Ability to identify basic requirements for power electronics based design application. -To develop skills to build, and troubleshoot power electronics circuits.

-Ability to understand the use of power converters in commercial and industrial applications. - Introduce the concept of switching losses.

MODULE –I (16 Hours)

Power semiconductor devices, control characteristics of power devices, characteristics and specifications of switches, types of power electronic circuit, design of power electronics equipment Diode characteristics, power diode types, freewheeling diode

Diode rectifier: introduction, single phase half wave rectifiers, single phase full-wave rectifiers, single phase full wave rectifier with RL Load, three phase bridge rectifier Comparisons of transistor (Above topics through Lecture & Simulink)

MODULE –II (12 Hours)

Phase controlled Converters: Introduction, control techniques, single phase half wave controlled rectifier, single phase full wave controlled rectifier, single phase half controlled bridge rectifier, three phase

controlled converters, three pulse converter(M₃ Connection), six pulse converters(M₆

Connection), three phase fully controlled bridge converter(with R and RL load), three phase half controlled bridge converter (with R load only)

Chopper: Introduction, basic chopper classification, basic chopper operation, control strategies, class A,B,C,D,E(principle of operation only)

Thyristor chopper circuit: Voltage commutated chopper, current commutated chopper, load commutated chopper (Above topics through Lecture & Simulink)

MODULE –III (12 Hours)

Inverter: classification of inverter, single phase half bridge voltage source inverters, single phase full bridge inverter, three phase inverter (180⁰ and 120⁰ conduction mode) with R Load, basic series inverter (circuit analysis, design aspect), modified series inverter, parallel inverter, single phase SCR bridge inverter(half bridge and full bridge) (Above topics through Lecture & Simulink)

Text Books:

CCEE0108 POWER SYSTEM OPERATION & CONTROL

Pre –requisites	Course Type	Credits
Nil	Theory	3

Course Objectives:

- To introduce the concepts of optimization techniques used in power systems. -To introduce the basic governing systems for automatic generation and control.
- To provide a solid foundation in mathematical and engineering fundamentals required to control the governing system in turbine models.
- To provide the knowledge of power system stability.
- To provide the knowledge of reactive power flow control.

Course Outcomes:

On successful completion of this course, students will be able to:

-Make Economic operation of power system and importance of LFC.

-Solve problems (numerical problems at present) by using different problem models related to Economic load despatch, reactive power control.

-Discuss about thermal and hydro power plant operation in meeting the load demand optimally. -Discuss about single area load frequency control and two area load frequency control.

-Apply their knowledge in PSOC for competitive exams like GATE, IES and PSUs etc.

MODULE-I(10 Hours)

Load Flow Studies:

\Network model formulation, Y bus formation (**MATLAB**) and singular matrix transformation, Load flow problem, Gauss Seidel (GS) method, Newton-Raphson method (NR) (Polar, Rectangular form), Decoupled, Fast Decoupled load flow and comparison(***Chalk duster class room teaching***). Concept of DC loads flow, (**Topics on Gauss Seidel (GS) method, Newton-Raphson method (NR) and Y bus formation will be through classroom teaching and MATLAB & Power world simulator**)

MODULE-II(20 Hours)

Economic System Operation:

Generator operating cost:- input-output, Heat rate and IFC curve, Constraints in operation, Coordinate equation, Exact coordinate equation, Bmn coefficients, transmission loss formula(***Chalk duster class room teaching***), Economic operation with limited fuel supply and shared generators, Economic exchange of power between the areas (***media presentation***). Optimal unit commitment (**MATLAB**) and reliability considerations (***Chalk duster class room teaching***) Automatic Generation and control:

Load frequency control problem, Thermal Governing system and transfer function(***media presentation***), Steam Turbine and Power system transfer function, Isolated power system:- static and dynamic response , PI control and implementation. (***Simulink***)

Two area load frequency control, static and dynamic response, Frequency biased Tie line Bias control implementation and effect, Implementation of AGC (***media presentation***), AGC in restructured power system(***media presentation***), under frequency load shedding, GRC, Dead band and its effect. (**Most of the topics will be through video presentation**)

MODULE-III (10 Hours)

Power System Stability:

Types of Stability Study, Dynamics of synchronous machine (***media presentation***), Power angle equation, Node elimination technique(***Chalk duster class room teaching***), Simple Systems, Steady state stability(***media presentation***), Transient stability(***media presentation***), Equal area criteria and its

applications, Numerical solution(***Most of the swing topics will be equation through video presentation and MATLAB programming***)

CCEE0109 MICRO PROCESSORS & MICRO CONTROLLERS

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	3

Course Objectives:

-To become familiar with the architecture and the instruction set of an Intel microprocessor 8085. -To learn and understand architecture and programming of 8051 microcontroller.

-To learn and understand generation of time delay, serial communication and interrupts.solving practical problems.

-To make the students understand assembly language programming technique and design of hardware interfacing circuit.

-To develop an in-depth understanding of the operation of microprocessor and microcontrollers, language programming and interfacing.

-To learn and understand the development of microprocessor and microcontroller based system

Course Outcomes:

On successful completion of this course, students will be able to:

-Understand the architecture of 8085 and 8051.

-Apply the programming techniques in designing simple assembly language programs for solving simple problems by using instruction sets of microprocessor and microcontroller.

-The students will learn the design of microprocessors/microcontrollers based systems.. -Analyze and design hardware and software for small digital systems involving microprocessors.

Module-I (10 Hrs): 8085/8086 Microprocessor Architecture And Instruction set

Microprocessor Architecture: Intel 8085, instruction cycle, Timing Diagram (**Most of the topics will be through classroom teaching**)

Instruction set of Intel 8085: Introduction, Instruction and data format, addressing modes, status flags, symbols and abbreviations, Intel 8085 instruction (**Topics will be through practical**)

Module-II (16 Hrs) : ASSEMBLY LANGUAGE PROGRAMMING AND PERIPHERAL INTERFACING

Examples of Assembly language programs: Introduction, simple examples, addition of two 8-bit numbers, 8-bit subtraction, Addition of two 16-bit numbers, 2's complement 1's-bit & 16-bit numbers, shift 8-bit & 16-bit number left by 1 bit and 2 bits, Mask off Least & Most significant 4 bits of an 8-bit number, to find larger & smaller of two numbers, to find largest & smallest number in a data series, Arrange a series of number in descending and ascending order,

sum of a series of 8-bit numbers, 8 bit multiplication and division, multibyte addition and

subtraction, to find square and square root of a number, move a block of data from one section of memory to another, signed arithmetic operation, 8-bit unsigned subtraction to consider positive as well as negative results. **(Topics will be through practical mode using hardware and simulation)**

Peripheral device and their interfacing: introduction, address space partitioning, memory and I/O interfacing, data transfer schemes, interrupts of Intel 8085, interfacing devices and I/O devices, I/O ports, programmable counter/interval timer. **(Topics will be through practical mode using hardware)**

MODULE-III (12 Hrs) : 8051 MICROCONTROLLER

Microprocessors and micro controllers: introduction, Microprocessor and micro controllers, the 280 and the 8051, a micro-controller survey **(Topics will be through classroom teaching)**

The 8051 architecture: introduction, 8051 microcontroller hardware, input output pins, ports, circuits **(Topics will be through classroom teaching)**

Moving data: introduction, addressing modes, external data moves, code memory read-only data move, PUSH & POP Opcodes, data exchange, example programme. **(Topics will be through practical mode using hardware)**

Logical Operations: introduction, byte level & bit level logical operations, rotate & swap operations, example programme **(Topics will be through practical mode using hardware and simulation)**

Arithmetic Operations: introduction, flags, incrementing & decrementing, addition, subtraction, multiplication & division

Jump & Call Opcodes: introduction, the jump & call programme range, jumps, calls & subroutines, interrupts and returns, examples programme **TEXT BOOKS:**

CCEE0110 LINEAR INTEGRATED CIRCUIT & APPLICATION

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

To make the students understand how to design a circuit using different ICs(Opamp, 555 Timer, PLL etc)

Course Outcomes:

On successful completion of this course, students will be able to: Understand how to

Design a linear circuit for different application

MODULE-I(12 Hours)

Operational Amplifier: Introduction, basic information of Op-Amp, The ideal operational amplifier.(**Crt+ Equipment Demonstration**)(MULTISIM)

Operational amplifier characteristics: introduction, DC characteristics, AC characteristics, analysis of datasheet of an Op-amp. (**Crt+ Equipment Demonstration**)(MULTISIM)

MODULE-II(12 Hours)

Operational Amplifier applications: Introduction, basic op-amp applications, instrumentation amplifier, AC amplifier, V to I & I to V converter, sample and hold circuits, log and anti-log amplifier, multiplier and divider, differentiator, integrator, electronic analog computation. (**Crt+ Equipment**

Demonstration)(PSPICE and Orcad)

Comparators and waveform generator: introduction, comparator, regenerative comparator, square wave generator, mono stable multivibrator, triangular wave generator, sine wave generator. (**Crt+ Equipment**

Demonstration)

MODULE-III(12 Hours)

Voltage regulator: introduction, series op-amp regulator, IC voltage regulators, 723 general purpose regulators.Active filter: Introduction, RC active filter. 555 Timer: Introduction, description of functional diagram, monostable operation, astable operation(**Crt+ Equipment Demonstration**)

Phase locked Loop: Introduction, basic principle, phase detector/comparator, VCO, LPF, monolithic PLL. D-A & A-D converter: Introduction, Basic DAC Techniques, A-D converter. (**Crt+ Equipment**

Demonstration) Text Books:

Distributed Generation & Micro Grid

Subject Name	Code	Type of course	T-P-Pr (Credits)	Prerequisite
Distributed Generation & Micro Grid	ELCC0103	Theory	2	Nil

1. Objective

<ul style="list-style-type: none"> To make students understand the integration between renewable sources with Micro-Grid

2. Course Outcome

<p><i>On successful completion of this course, students will be able to:</i></p> <ul style="list-style-type: none"> Understand the concepts behind distributed generation Understand the integration technique in micro grid
--

3. Evaluation Systems

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Class Test	40	Written examination
	Experiments	NIL	
<i>External Examination</i>	End-Semester University Exam	60	Written examination
	Lab External Exam	NIL	
<i>Total</i>		100	

4. Course outline

Module I

Introduction: Conventional power generation: advantages and disadvantages, Non-conventional energy (NCE)

resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

Module II

Concept of distributed generations, Why integration of distributed generation? Active distribution network. Distributed generation, technology, value of distributed generation, application & issues, distributed resources, distributed capacity, factors of DG growth, general structure

Module III

Supply demand in Electric power grid: Understanding the grid, reliability concept, electric power dynamic demand, need of spinning reserve, local load control

Module IV

Basics of A Micro-Grid: Concept and definition of micro grid, classification, need & application of micro-grid, formation of micro grid, typical structure and configuration of a micro grid, AC and DC micro grids, Power Electronics interfaces in DC and AC micro grids.

Module V

DC micro grids: PV sources control, storage control, grid connection control, DC load control, Power balancing principle

Module VI

Control & operation of micro grid: Modes of operation and control of micro grid: grid connected and islanded mode, Active and reactive power control, protection issues

Module VII

Storage Technologies: classification of electrical energy storage, mechanical storage system, batteries, flywheels,

super conducting magnetic energy storage, super capacitors.

Text Books:

2. *Control and Optimization of Distributed Generation Systems* By Magdi S. Mahmoud, Fouad M. AL-Sunni

3. *Distributed Generation Systems: Design, Operation and Grid Integration* by Gevork B. Gharehpetian, S. Mohammad Mousavi Aga

4. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity	Assignment	Suggested Reading
		(lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	(project, assignment, field study, seminar, etc.)	(Book, Video, Online source, etc.)
Module – I				
Introduction: Conventional power generation: advantages and disadvantages, Non-conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.	6	Lecture	Assignment	Book 2 Ch-1,4,5
Module – II				
Concept of distributed generations,	5	Lecture	Assignment	Book 1
Why integration of distributed generation? Active distribution network. Distributed generation, technology, value of distributed generation, application & issues, distributed resources, distributed capacity, factors of DG growth, general structure				Ch-1.1
Module – III				
Supply demand in Electric power grid:	5	Lecture	Assignment	Book 1
Understanding the grid, reliability concept, electric power dynamic demand, need of spinning reserve, local load control				Ch-1.2
Module – IV				
Basics of A Micro-Grid: Concept and definition of micro grid, classification ,need & application of micro-grid, formation of micro grid, typical structure and configuration of a micro grid, AC and DC micro grids, Power Electronics interfaces in DC and AC micro grids.	7	Lecture	Assignment	Book 1 Ch-1.3 Ch-3
Module – V				
DC micro grids: PV sources control, storage control, grid connection control, DC load control, Power balancing principle	4	Lecture	Assignment	Book 1 Ch-5
Module – VI				
Control & operation of micro grid: Modes of operation and control of micro grid: grid connected and islanded mode, Active and reactive power control, protection issues.	4	Lecture	Assignment	Book 1 Ch-6
Module – VII				

Storage Technologies: classification of electrical energy storage, mechanical storage system, batteries, flywheels, super conducting magnetic energy storage, super capacitors	4	Lecture	Assignment	Book 2 Ch-7

CCEE0201 NETWORK THEORY LAB

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>CCEE0101 Network Theory (Co-requisite)</i>	<i>Practice</i>	<i>2</i>

Course Objective

Experimenting the theory by

1. Provide hands-on experience to the students so that they are able to put theoretical concepts to practice.
2. Understand the concept of circuit laws
3. Solve the electrical network using mesh and nodal analysis by applying network theorems
4. Understand the concept of resonance in series and parallel circuits.
5. Analyze the transient response of series and parallel A.C. circuits and to solve problems in time domain using Laplace Transform.

Course Outcomes:

On successful completion of this course, students will be able to:

1. Use basic laboratory equipment and techniques to measure electrical quantities using Laboratory test equipment such as multimeters, power supplies, signal generators, and
2. Explain the concept of circuit laws and network theorems and apply them to

LIST OF EXPERIMENTS

1. Verification of Super Position theorem & Norton Theorems
2. Verification of Maximum Power Transfer Theorem
3. Verification of Reciprocity Theorem.
4. Verification of compensation theorem
5. Study of DC Transients for RL, RC, RLC series Circuits.
6. Study of AC Transients for RL, RC, RLC series Circuits
7. Transient response of RLC Parallel circuit.
8. Determination of Impedance (Z) and Admittance(Y) parameters of two port network
9. Determination of circuit parameters: Hybrid & Transmission Parameters.
10. To plot frequency response of a series resonant circuit.
11. To plot frequency response of a Parallel resonant circuit
12. Determination of Self-inductance, mutual inductance and coupling coefficient of 1- \emptyset transformer representing coupled circuit.

Text Book/Required Material:

1. Lab manual Reference

Book(s):

1. A.Sudhakar & Shyanmugam S.Palli “Circuits & Hill,Network A 2010.
2. Joseph Edminster, “Electric Circuits” Schaum’s Outlin

CCEE0202 ELECTRICAL MACHINES –II LABORATORY

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
CCEE0102 Electrical Machines –II (Co-requisite)	Practice	2

Course Objective

-To get the students acquainted with the principles of operation of machine with self-operation.

-To analyze the relation of input and outputs obtained in each experiment and thereby get an understanding of the performance of the machine.

-To perform and get acquainted with various tests on the machine. Course

Outcomes:

On completion of the lab the students will be

-Able to determine the voltage regulation of alternators by different methods. -Able to determine the efficiency and characteristics of induction machine. -Able to synchronize two or more alternators.

-Able to determine the d-axis and q-axis reactance of a synchronous machine.

LIST OF EXPERIMENTS

1. Determination of the voltage regulation of an alternator by zero power factor (zpf) method
2. Speed Control of a 3 phase induction motor by rheostatic, cascading and pole changing methods.
3. Determination of Efficiency, Plotting of Torque-Slip Characteristics of Three Phase Induction motor by Brake Test.
4. Determination of parameters of synchronous machine
 - (a) Negative sequence reactance
 - (b) Zero sequence reactance
5. Determination of voltage regulation of alternator by direct loading method.
6. Determination of parameter of a single phase induction motor and study of
 - (a) Capacitor start induction motor
 - (b) Capacitor start and capacitor run induction motor
7. Determination of parameter of a single phase induction motor and study of

(a) Universal motor

CCEE0203 MEASUREMENT & INSTRUMENTATION LAB

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>CCEE0103 Electrical Measurement & Instrumentation (Co-requisite)</i>	<i>Practice</i>	<i>2</i>

Course Objective *Experimenting the theory by*

*Getting acquainted with the process and principles of operation of different instruments & devices
Analysis of input-output relation by experiments.*

Understanding and using procedures and analysis technique to perform and describe electromagnetic and electromechanical test.

Course Outcomes: *On successful completion of this course, students will be able to:*

Students will be able to prepare professional quality graphical presentations of laboratory data and computational results, incorporating accepted data analysis and synthesis methods.

Students will work in teams to conduct experiments, analyze results, and develop technically sound reports of outcomes.

Students can develop application oriented projects by using this instruments & devices.

LIST OF EXPERIMENTS

1. Measurement of Low Resistance by Kelvin's Double Method.
2. Measurement of unknown capacitance using WIEN BRIDGE 3.
Measurement of capacitance using SCHERING BRIDGE.
4. Calibration of the 1 Φ energy meter.
5. Measurement of Iron Loss from B-H Curve by using CRO.
6. Measurement of power and power factor in a 3- Φ AC circuit by two wattmeter.
7. Measurement of R, L, and C using Q-meter.
8. Measurement of power in a single phase circuit by using CTs and PTs.
9. Strain Gauge Application and Measurement of Unknown Load.

10. Measurement of inductance using MAXWELL BRIDGE.
11. Measurement of inductance using ANDERSON'S BRI
12. Study of CRO and lissajous pattern.

Text Books:

1. *Modern Electronics Instrumentation & Measurement Techniques* , by Albert D. Helstrick and William D. Cooper. Pearson Education.
2. *Electronic Instrumentation*, H.S. Kalsi, Tata McGraw-Hill Publishing Company Limited, New Delhi.
3. *Electrical Measurements and Measuring Instruments –Golding &Widdis –5th Edition*, Reem Publication

Reference Book(s):

1. *Electronics Instruments and Instrumentation Technology* –by Anand , PHI
2. *Elements of Electronics Instrumentation and Measurement –3rd Edition* by Joshph J. Carr. Pearson Education
3. *A Course in Electrical and Electronic Measurements and Instrumentation* –A K Sawhney – DhanpatRai& Co

CCEE0204 CONTROL SYSTEM LABORATORY

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Practice</i>	<i>2</i>

Objective:

- Design different controllers for different control systems.
- Mathematical modeling of different physical systems.

Outcomes:

- Students will demonstrate the ability to apply Laplace transform, transfer functions, modeling RLC circuit, block diagrams for simulation and control.
- Students will demonstrate the ability to design and de by combining both theoretical and applied analysis that they have acquired in their control courses and in this lab.

List of Experiments

1. Study of a dc motor driven position control system.
2. Obtain the frequency response of a lag and lead compensator
3. To study and validate the controllers for a temperature control system
4. Study of Relay control system.
5. Study of process control simulator
6. Obtain the speed-torque characteristics of DC servo motor.
7. Study of LVDT
8. Study of Thermistor
9. Stability analysis of linear systems.
10. Design of P, PI, PID Controller.
11. Study of Synchros.
12. Study the unit step response of a given transfer functions and find peak over overshoot, peak time.

Project based control system Lab (Using MATLAB):

1. Modelling and simulation of Inverted Pendulam.
2. Design of controllers for CSTR Model.
3. Modelling and control of Suspension System.
4. Design of fuzzy controllers for different dynamic systems

CCEE 0205 POWER ELECTRONICS LAB

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Practice</i>	<i>2</i>

Course Objective

- Introduce basic topologies of power switching circuits.
- Study and implementation of Pulse-Width-Modulation for power electronic converters -Investigate integration of power electronic converters with electric machines
- Power electronics modelling, simulation and experimental verification

Course Outcomes:

-Ability to simulate characteristics of SCR, MOSFET, IGBT. -To simulate and design various gate firing circuits.

-To familiarize the students by introducing P-Sim and MultiSim and help them to simulate and –analyze different Converters

-To enable the student to study and simulate various Chopper Circuits using Matlab -Ability to simulate Cyclo-Converter and calculate harmonics

LIST OF EXPERIMENTS

1. Study of V_I characteristics of silicon controlled rectifier.
2. Study of different methods of triggering of SCR (a) RC-Triggering method
(b) UJT-Triggering method.
3. Study of single phase fully controlled converter using R & L load.
4. Study of single phase semi converter using R - L- E load.
5. Study of 3-phase full wave semi converter with R, R-L and D.C motor load with/ without freewheeling diodes.
6. Study of class-A, class-B, class-C, class-D, class-D, class-E commutation circuits.
7. Study of parallel inverter.
8. Study of series inverter.
9. Study of Jones chopper.
10. Study of Fly back converter using PWM technique.
11. Study of Step-up & step-down chopper with PWM technique.
12. Study of forward converter using PWM technique.
13. Study of AC voltage regulator using PWM technique.
14. Study of IGBT based 3-ph voltage source inverter.

CCEE0208 MICRO PROCESSOR & MICRO CONTROLLER LAB

<i>Pre –requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Practice</i>	<i>2</i>

Course Objectives:

Developing of assembly level programs and providing the basics of the processors.

To learn assembly language programming using 8051 microcontroller To study the PLC TYPE OPERATION Course

Outcomes:

On successful completion of this course, students will be able to: Analyze and apply working of 8085

Compare the various interface techniques. Analyze and apply the working of 8255

List of Experiments

1. Getting started with 8085 microprocessor kit & verification of all 256 instruction (4 lab class)
2. Interfacing of 8255 I/O device
3. Interfacing of 8253 Timer
4. Interfacing of ADC-0809 & DAC-0800
5. Development of programme for process control & realization of PLC type operation
6. Development of programme for using hardware and software interrupt.
7. Use 8085 as a measuring instrument

Text Book

1. B. Ram, "Fundamentals of Microprocessor & Microcon
2. Kenneth. J. Ayala, " The 8051 Microcontroller"

S. No.	Topic	Pedagogy	Details	Instructional Hrs

Power System Protection

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Power System Protection	ELCC0408	Theory & Practice	3	Nil

1. Objective

- To cover the basic protection schemes in the power system like over-current, differential, distance protection employed in power system
- To make the student understand static and microprocessor based relay, which are new generation protection employed in the power system.

2. Course Outcome

Student will be able:

- To learn conventional and new age power system protection employed practically.
- To get knowledge to fill the void between legacy protection courses based on electromechanical and solid state relays and advanced courses based primarily on numerical relaying.
- To get the logic of a protection scheme.

3. Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Class Test	20	Written examination
	Experiments	30	Lab work, report and viva
External Examination	End-Semester		University Exam

Module I

Introduction: Need for protective scheme, nature and cause of faults, types of faults, effect of faults, zones of protection, primary and back-up protection, classification of protective relays, classification of protective schemes, CT & PT for protection, basic relays terminology(T1: 1-34)

Module-II

Operating principles and relay construction: Technique to produce time delays, Thermal relays(T1: 36-53)

Practice:

- Study of CT & PT

Module III

Over current Relays: Introduction, instantaneous over current relays, time current relays, application of different types of time-current characteristics, basic principles of time over current relays, practical circuit for time over current relays (T2: 116-123)

Module-IV

Differential relays: Introduction, operating characteristics, restraining characteristics, types of differential relays, Analysis of electromagnetic and static differential relays, static relay scheme(T2 : 150-157)

Practice:

- To perform differential protection of an equipment
- To operate an electro-mechanical type relay and draw its time current characteristics
- To perform over current protection of an equipment

Module V

Directional relays: Introduction, phase comparator directional units, amplitude comparator directional units, inputs to static directional relays for maximum output.(T2: 108-113)

Distance relays: Introduction, standard three zone protection, distance protection requirement, relay characteristics, types of distance relay (T2: 171-176)

Module VI

Comparators and signal mixing: Introduction, replica impedance, mixing transformer or circuits, phase and amplitude comparators-classification, general equation for comparator(T2 : 44-55)

Practice: (Lab mode teaching)

- Microprocessor Based Protective Relays (Numerical Relays): Introduction, Circuit interface and program algorithm of over current relays, Impedance, Mho relay relays (T1: 260-278)

Module VII

Circuit Breaker: Arc voltage, arc interruption, re-striking and recovery voltage, current chopping, interruption of capacitive current, classification of circuit breaker-oil CB, Air blast CB, SF6 CB, Vacuum CB, DC Circuit Breakers.(T1: 346-375)

Practice:

- Perform an overcurrent protection using microprocessor based relay
- Study the construction and operation of Circuit Breakers (OCB, ACB, SF6)

5. Reference

Text Books:

1. Power System Protection and Switchgear by Badri Ram & D. N. Vishwakarma, Tata-McGraw-Hill

Power System

2. Protection: Static Relays with microprocessor application by T. S. MadhavaRao, Tata-McGraw-Hill

3 Lecture
Assignment Text Book 2

4 Practice

• <i>To perform over current protection of an equipment</i>				
Module – V				
Directional relays-introduction, phase comparator directional units, amplitude comparator directional units, inputs to static directional relays for maximum output.	2	Lecture		Text Book 2
Distance relays-introduction, standard three zone protection, distance protection requirement, relay characteristics, types of distance relay	4+2	Lecture+ Practice	Assignment	Text Book 2
Module – VI				
Comparators and signal mixing: Introduction, replica impedance, mixing transformer or circuits, phase and amplitude comparators- classification, general equation for comparator	3	Lecture	Assignment	Text Book 2
Microprocessor Based Protective Relays (Numerical Relays): Introduction, Circuit interface and program algorithm of over current relays, Impedance, Mho relay relays	6	Practice	Assignment	Text Book 1
Module – VII				
Circuit Breaker: Arc voltage, arc interruption, re-striking and recovery voltage, current chopping, interruption of capacitive current, classification of circuit breaker-oil CB, Air blast CB, SF6 CB, Vacuum CB, DC Circuit Breakers	2+6	Lecture+ Practice	Assignment	Text Book 1
• <i>Perform an overcurrent protection using microprocessor based relay</i> • <i>Study the construction and operation of Circuit Breakers (OCB, ACB, SF6)</i>	8	Practice	<i>Result of Experiments and Viva</i>	Text Book 1
Total (hrs)= 61 (Theory- 31 hours + Practice-30 hours)				

Domain D11 - Industrial Automation

Sl. No	Course Code	Course Title	Course Nature	Credits	Pre-requisite

9	DEET0300	Project	Project	6	
10	DEET0800	Internship	Practice	4	
			Total	38	

Course Objective:

Recognizing the need to cultivate an industry and institution interaction, value addition and perpetual need to keep abreast with latest development in the field of Automation Technology.

Course Outcomes:

Students will be updated on the latest happenings on the industrial automation sector which include

- Popular hardware and software worldwide
- The technical advancement
- Automation solution providers in India
- Job prospects for the students

Students will be able to identify and implement industry level projects.

DEIA0111General PLC

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
General PLC	DEIA0111	Theory	Nil	2	2-0-0

Contents

What is PLC: History, Definition of PLC Brief description about Compact and modular, chassis etc. , how to choose a PLC.

PLC types:Block Diagram, Brief description of each components; Power Supply, Input & Output Modules and their role, Memory and types of them, CPU & its role, components.

PLC operation:Wiring, signal flow, internal structure.

PLC brands:Leading brands of plc Programming

Device:Importance of programming device

Communication:Brief discussion on serial & parallel, description about protocol, standard, baud rate with example.

Programming language: Programming standards by IEC, programming software examples.
 Number systems: Brief discussion on number systems and their conversions.

Pedagogy

Sl. No.	Topic	Teaching Method	Th	Pra

DEIA0211 Basic Electrical (Automation Based) and Panel Designing

Subject	Code	Type of course	Prerequisite	credits	T-P-Pr (hrs)
Basic Electrical (Automation Based) and Panel Designing	DEIA0211	Practice	Nil	2	0-2-0

Contents

Introduction: Fundamental electrical quantities, voltage, current, Ohm's Law
 Basic Electronic: Active Components (Diode, Transistor, MOSFETS, TRIAC, IGBT),
 Components: Passive Components (Resistor, Capacitor, Inductor)
 Power Supply: Supply Systems, Conversion of 230 Vac to 24 V dc and vice-versa with circuit description.
Basic Industrial Switches: Pushbuttons, toggle switches, Limit switch etc
Relay: Types of Relay, Practical description of relay, Latching using relay, How to switch a 230Vac load using 24Vdc
Contactors: Basic description of contactors and auxiliary contacts, Holding (latching) circuit & interlocking with Aux contacts practical
Panel Designing: Introduction to Control & Power Circuit, Working Principle of contactor and relay
DOL Starter: Control Wiring with PLC Hands-on practical DOL starter & Connecting PLC output to contactor
Control Wiring with PLC: Connecting PLC output to contactor
Fwd Rev circuit: Wiring

Pedagogy
All sessions through Practice

Sl No	Topic	Pra
1	INTRODUCTION Fundamental electrical quantities, voltage, current, Ohm's Law	3

DEIA0413 Allen Bradley SLC 500

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Allen Bradley SLC 500	DEIA0413	Theory + Practice	Nil	5	3-3-0

Content:

Introduction: Controller Family

Architecture: Rack, slot, channel, etc. full structure description and max expansion

SLC 500 features: Details about CPUs, Memory Organisation, Program files and Data files

Addressing: Physical I/O addressing (both Digital & Analog), Memory Instructions Addressing like
Timer, Counters, Binary, Integers etc.

Hardware linking: Using RSLinx, details about protocols AB_DF1-1, TCP-1, EMU-500

Programming Basics: Using RSLogix 500, Basics of Ladder Programming(rung, rail, rules etc.)

NO-NC concept, Logic Gates Implementation using Ladder diag.

User section: New rung, Rung branch, IC, XIO, OTE, OTL, OUT

Bit Logic: OSR

Timers: Timer basics, Detail programming of TON, TOF, RTO, RES with applications

Counters: Basics of Counter, Detail Programming of CTU, CTD, RES with applications

Comparators: Implementation of LIM, MEQ, EQU, NEQ, LES, GRT, LEQ, GEQ in ladder diag

Compute: Implementation of CPT for linear equation solving in ladder diag

DEIA0414 Siemens S7-300

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Siemens S7-300	DEIA0414	Theory + Practice	Nil	5	3-2-0

Content:

Introduction: Siemens Family controllers, S7-200, s7-300, S7-400 etc.

PLC Components: PLC components like Power Supply, CPU, rail, IM, SM, CP etc.

Architecture: S7-300 architecture, multi rail configuration.

Addressing: Physical I/O addressing, byte assignment for digital &analog SMs

Config: Memory Mapping, Communication & Hardware configuration, Linking with PG using MPI and simulation

Programming: with SIMATIC MANAGER, basics about the editor, networks, etc.

Bitlogic: NO, NC, NOT, MIDLINE OP, SET & RESET COIL, POSITIVE & NEGATIVE COIL, RS & SR FLIPFLOPS, POS & NEG BLOCKS

Timers: Implementation of Block type (S_PULSE, S_PEXT, S_ODT, S_ODTS, S_OFFDT) & Coil type TIMERS, application

Counters: Implementation of Block type (S_CTU, S_CTD, S_CTUD) & Coil type COUNTERS, application

Comparators(_I, _DI & _R) types: EQ, NE, GT, LT, GE, LE for all types of data(Integer, Double Integer, Real), Use of Variable Tables for Value modification

Integer Functions: ADD, SUB, MUL, DIV, MOD for both integer & double integer types of data

Floating-point functions: ADD, SUB, MUL, DIV, ABS, LOG, LN, SIN, COS, TAN, ASIN, ACOS, ATAN, EXP for real types of data

Move: Implementation of MOVE instruction in ladder

Jumps: JMP, JMPN, LBL

Program control: MCR, CALL, RET

Converters: BCD_I, I_BCD, BCD_DI, DI_BCD, INV_I, INV_DI, NEG_I, NEG_DI, NEG_R, ROUND, TRUNC, CEIL, FLOOR

Word Logic: AND, OR, XOR (for both word and double word data types)

Shift/Rotate: SHR, SHL, ROL, ROR (for integer, double integer and real data types)

Function block & Data block: develop an application using these two blocks

DB call: Open

LIFO & FIFO operations: TI-S7 converting blocks- FC84, FC85, FC87

Scale & Unscale: use of FC105 & FC106

Device connectivity: Linking with In Touch SCADA

DEIA0415 SCADA - Schneider-Wonder ware In Touch

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
SCADA -Schneider-Wonder ware In Touch	DEIA0415	Theory + Practice	Nil	5	3-2-0

Content:

Introduction and SCADA Basics: General SCADA theory, Importance of SCADA in Industrial Automation, Benefit of SCADA, DATA ACQUISITION, Features of SCADA, SCADA Cost Analysis - Tag & Tag types & Packages of SCADA, Leading SCADA Vendors, Architecture of SCADA (Open & Proprietary)

Introduction to In-Touch: Basic operations related to InTouch Editor, types of windows, How to Open window, windows property,

General toolbar: New window, Open window, close window, save window, save all, duplicate selection, cut to clipboard, copy, paste, undo and redo.

Wizard ActiveX toolbar: Alarm display, Buttons, clock, lights, meter, runtime tools(for alarm monitor), slider, switches, SYMBOL FACTORY, Text Display, Trend, Value Display Fonts, Bold/Italic/Underline, Enlarge/ reduce font, Left/Center/Right

Format toolbar: Justification, Line colour /fill colour / text colour / window colour

Draw object toolbar: Select mode, rectangle, rounded rectangle, ellipse, line, H/V line, poly line, polygon, text, bitmap, real-time trend/ hist trend, button

View toolbar: classic view, project view, hide/restore all, full screen, snap to grid, ruler

Arrange toolbar: Align left/centre/right/top/middle/button, align CenterPoint, send to back, bring to front, space horizontal/ vertical, Make/break symbol, Make/break cell rotate clockwise/counter clockwise, flip horizontal/vertical

Pan & Zoom: Zoom in/out, zoom normal, hand tool

Status bar: XY co-ordinate, height/width

SCADA Features

Dynamic representation: Discrete properties-User Inputs, Line Colour, fill Colour, touch push button, user defined object, system defined objects, blink property with different types of conditions, Key equivalent, value display, text Colour, discrete alarm(for alarm), examples: Analog properties- User Inputs, Line Colour, fill Colour, text Colour, Percentage fill (vertical/ horizontal), Location (vertical/ horizontal), Object size(height/ width), Slider(vertical/horizontal), Misc. (blink, orientation, value display, user defined/ predefined object, analog alarm, example: String properties- User Inputs, value display, tooltip Additional properties- Action, show window, hide window, visibility, disable Develop some applications

Alarm: Alarm Basics, types, Priorities, alarm generation, alarm printing

Trends: Trend Basics, types, formula for time setting, Real time & Historical trend, historical scooter, trend zoom/control panel , 16 - pen trend

Scripts: Basics, types, conditions, Details about Window, Application, Key, Condition, Data change & Quick Function scripts with examples

Recipe: Basics, Template definition, recipe definition, unit definition and some application with procedures

Data connectivity: with MS excel by using Memory & IO tag

Device Connectivity: SCADA to PLC Communication with applications

Networking: SCADA to SCADA 2 pc application

Security Report: Basics of security, access level, application development using InTouch security

Generation: in Excel

Sr No.	Topic	Pedagogy	Th	Pra

DEIA0416 Schneider MODICON TSX-Micro, GE Versamax – MicroPlus

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Schneider MODICON TSX-Micro, GE Versamax – Micro Plus	DEIA0416	Theory + Practice	Nil	5	3-2-0

Content

Schneider MODICON TSX-Micro

Introduction: History and basics

Family: Details about all the controllers from MODICON family

Architecture: Details about controller TSX micro series, wiring

Addressing: Both Physical and Memory I/O addressing

Programming, Bit Logic: Hardware linking with X-way driver Manager, Programming with PL7 Pro v3.4 and gets familiar with the editor, Mouse selection mode, Normally Open Contact, Normally Closed contact,

Instructions: Rising Edge, Falling Edge, Horizontal Connection, Vertical connection, Horizontal connections, Direct/Transition condition coil, Negated coil, Set coil, Reset coil

Timers: Introduction, Software configuration for total no of timers & assigning timers, Use of application browser & predefined function block, Details on Timer (TM), Monostable (MN), Series7 (T) and their usage.

Counters: Basics of counter, Operation of UPDOWN counter

Comparator: Use of both Horizontal & Vertical comparators with syntaxes, use of <, >, <>, =, >=, <=

Math operations: Use of Operate block with its syntax, +, -, *, /, :=, SQRT & trigonometry, functions, move

Converters, Bit movement operation, Program control: BCD_TO_INT, INT_TO_BCD, SHL, SHR, ROL, ROR, Jump & Label, creation & Call of subroutine

Registers, Sequencer: Basics and Use for LIFO & FIFO operation, Use of DRUM controller and Runtime Screen(PL7 Visualisation) for sequencer out and Implementation of seven segment display with it

GE Versamax– MicroPlus

Introduction: History and basics

Family: Details about all the controllers from GE family

Architecture: Details about controller GE Versamax - MicroPlus, wiring

Addressing: Both Physical and Memory I/O addressing

Programming: Hardware linking with driver, Programming

Bit Logic: Selection mode, Normally Open Contact, Normally Closed contact, Rising

Instructions: Edge, Falling Edge, Horizontal Connection, Vertical connection, Horizontal connections,

Direct/Transition condition coil, Negated coil, Set coil, Reset coil

Timers: Introduction, Software configuration for total no of timers & assigning timers, Use of application browser & predefined function block, Details on Timer, Programming with timers.

Counters: Basics of counter, Operation of UPDOWN counter

Comparator: Horizontal & Vertical comparators with syntaxes, use of <, >, <>, =, >=, <=

Math operations: Use of Operate block with its syntax, +, -, *, /, :=, SQRT & trigonometry functions, move

Converters, Bit movement, operation, Program control: BCD_TO_INT, INT_TO_BCD, SHL, SHR, ROL, ROR, Jump & Label, creation & Call of subroutine

Registers : Basics and Use for LIFO & FIFO operation

Course Objective:

To create technically trained manpower readily available for recruitment to the power companies in the area of Transmission & Distribution of electrical power

Course

Outcome:

- After completion of the course the students will acquire extensive basic and advanced knowledge of
- Operation & Maintenance of Transmission and Distribution accessories
- Necessary safety aspects required in T&D
- Details of associated equipments
- T&D project management Process flow

DEOM0131 Fundamentals and Overview of Transmission System

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Overview of Transmission System	DEOM0131	Theory	Nil	2	2-0-0

Module-1

GENERAL INTRODUCTION Generation, Transmission & Distribution Scenario of India

POWER GENERATION Types of generation: Conventional and Non-conventional, Thermal Power Plant, Hydro Power Plant, Gas Power Plant, Nuclear Power Plant, Co-generation Various sources Non-conventional Energy Sources.

POWER TRANSMISSION (A) SWITCHYARD/SUBSTATION I. Types: Generation sub-station, Grid sub-station, Gas Insulated s/s etc. Indoor/outdoor, general comparison.

Module-2

SUB-STATION/TRANSMISSION EQUIPMENTS Switchgears - Circuit breaker: Types (MOCB, ABCB, VCB, SF6), constructional details, specifications, interlocks (a) Isolator: Types earth switch, Bus bar (b) CT/CVT. Lighting Arrestors/Lighting Mask (c) Fibre optics :- Principle, purpose, types of coupling (d) Relays: Types, functions, constructional details, (e) Protection System: Philosophy, types, protection of transformer/reactor, motor, line/feeder generator, bus etc.

Grounding:- Types of grounding, earth testing & treatment, earthmat design, step potential, Neutral grounding reactor Auxiliary facilities: DG Set Station Battery System etc. V. Cables-Types, Control cables, power cables, cable termination & jointing.

Module-3

Sub-station operation: Grid operation, communication with RLDC/SLDC etc.

Sub-Station Maintenance:

(a) Types-Routine, preventive, planned, predictive, break-down, emergency maintenance, online maintenance of different equipments,

(b) Transformer/ Reactor Maintenance-Factors affecting the life of transformer/Reactor. Inspection/preliminary testing of various components-oil sampling and testing, oil filtration, Dissolved Gas Analysis (DGA), maintenance schedule

(c) Switchgear & protection Maintenance:- Maintenance of CB, Isolator, Earthswitch, Support Insulators, CT/CVT,LA,LM, Protective relay maintenance testing

Erection and commissioning pre-commissioning checks/Tests of sub-station;

DEOM0132 Overview of Distribution System

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Overview of Distribution System	DEOM0132	Theory	Nil	3	3-0-0

MODULE-1

General : Introduction to Distribution systems, an overview of the role of computers in distribution system planning- Load modelling and characteristics: definition of basic terms like demand factor, utilization factor, load factor, plant factor, diversity factor, coincidence factor, contribution factor and loss factor-Relationship between the load factor and loss factor - Classification of loads (Residential, Commercial, Agricultural and Industrial) and their characteristics. Distribution Feeders and Substations: Design consideration of Distribution feeders: Radial and loop types of primary feeders, voltage levels, and feeder-loading.

MODULE-2

Design practice of the secondary distribution system. Location of Substations: Rating of a Distribution Substation, service area with primary feeders. Benefits derived through optimal location of substations. System analysis: Voltage drop and power loss calculations, Derivation for volt-drop and power loss in lines, manual methods of solution for radial networks, three-phase balanced primary lines, non-three-phase primary lines. Protective devices and coordination: Objectives of distribution system protection, types of common faults and procedure for fault calculation.

MODULE-3

Protective Devices: Principle of operation of fuses, circuit reclosers, line sectionalizer and circuit breakers. Coordination of protective devices: General coordination procedure. Capacitive compensation for power factor control: Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and switched) power factor correction, capacitor location. Economic justification. Procedure to determine the best capacitor location. Voltage control : Equipment for voltage control, effect of series capacitors, effect of AVB/AVR, line drop compensation.

HT & LT Metering CT Meters and Advanced Metering Technologies, Latest Techniques in Metering, Billing & Collection through IT applications, Methods to prevent Pilferages of Electricity

DEOM0431 Power and Distribution Transformer Operation and Testing

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Power and Distribution Transformer Operation and Testing	DEOM0431	Theory+ Practice	Nil	5	2-3-0

Notes:

Transformer: Basic principles of transformer, magnetization and hysteresis, electromagnets. Flux density Ampere-turn Ratio – Equation for transformation Two/ three winding & Auto Transformer – Grounding transformers – silent features of core & shell type, transformer constructional details.

Module-

Transformer fixtures – buchholz relay, breather, conservators, bushing of different types, thermometers, indicators, alarms. Cooling of Transformer, Importance of Oil Filtration & drying out of transformer. Working principles of OLTC & its" O/M.

Modules-

Transformer Test - Failures and causes, maintenance & repairs.

Power Transformers Testing and commissioning - Significance & importance of tests protection of transformers - Insulation resistance measurement, winding resistance measurement, magnetic current test, magnetic balance test, vector group confirmation short circuit test and differential stability test, etc., Conditions leading to faults, protective relays, differential protection, overcurrent protection , ground fault protection and monitors for protection – Factory testing of power transformers

Transformer Oil.- Specifications & Characteristics.. Sources, manufacturing and Handling.Methodsof Sampling and testing.Maintenance of Transformer Oil. Filter Machine O&M,DGA.

Maintenance.ofTransformer,Parallel Operation

DEOM0432 System Protection and Auxiliaries

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
System Protection and Auxiliaries	DEOM0432	Theory + Practice	Nil	5	3-2-0

Syllabus

Module-1

CT & PTs: Types of CT & PTs – their working principles, ratings and accuracy. Functions of CT & PTs – Failures of CT & PTs – their causes. Metering Schemes. Protection of Transmission Line with Schemes. Protection of Transformer with different Schemes. Local & Back-up Protection. New Generation Relays..

Module-2

Breakers- Function of breakers. Different types of indoor and outdoor breakers e.g. Bulk oil, MOCB, Air blast, SF6 and Vacuum Breaker - principle and their application. Operating Mechanism – springs, hydraulic, pneumatic, Current ratings, rupturing capacity, clearance time, Commissioning procedures. Breaker Maintenance, failures and their causes. CB Control Circuit description and fault finding procedures

Lightening Arrestors/Surge Arrestors- Simple description of lightening phenomena and surges. Constn. of S.As – and principles of their working. Different types of Surge Arrestor and ratings. Earthing and Location of S.A. Testing & Maint. of S.As –

Module-3

Isolators : Tilting and rotating isolators with & without arcing horns – earth blades – current ratings. Breaking of circuits by isolators. Interlocking with circuit Breaker. Maintenance of isolators.

Insulators : Types - their electrical & mechanical characteristics.

Auxiliary facilities: DG Set Station Battery System etc. V. Cables-Types, Control cables, power cables, cable termination & jointing. Auxiliary D.C. Supply. Battery:- Current & Ampere Hours Ratings. Battery Charging Equipment – Checking of Specific Gravity of Electrolyte – Maintenance of batteries – Trouble Shootings. Condition monitoring and hotline maintenance

DEOM0433 Construction of HT and LT lines, Cables and its Testing

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Construction of HT and LT lines, Cables and its Testing	DEOM0433	Theory + Practice	Nil	5	3-2-0

Module 1

TRANSMISSION LINES EHV Transmission system in India, Tower types, Conductors, Earth wire, Insulators, IE rules and Acts, Statutory clearances, Surveying, Route Alignment Maintenance of transmission line, Thermo vision scanning

Module 2

Modern trends in Underground Cabling Basic Concepts, Selection, Types and Design of Underground including Standards of Cables Primary & Detailed Survey, Laying of Cable, Jointing, Testing and Commissioning Fault Location of Cables Maintenance & Trouble Shooting & Earthing of Underground Cables Problems encountered during conversion of overhead lines to underground cables.

Module 3

THEORY, DESIGN OF HT and LT CABLE

Materials Used in Cables, Conductors; Voltage Drop; Conductor Ampacity calculation; Conductor resistance; Conductor Inductance and capacitance calculation

Testing: Ampacity, Calculation of losses, AC resistance of conductor, Dielectric losses, Loss factor, Thermal resistance Test

Buried cables where drying-out of the soil does not occur, Buried cables where partial drying-out of the soil occurs

Ampacity in two cases

Padagody

DEOM0434 Power system market, economics and energy audit

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Power system market, economics and energy audit	DEOM0434	Theory + Practice	Nil	4	2-2-0

Course Objective

To make students gain functional knowledge about Electricity Market & about energy audit

Course Outcome

On completing this course, students will be able to:

Describe how mathematical optimization techniques can be applied to the economic operation of power systems

Discuss how security considerations affect the operation of a power system

Explain the techniques used to balance supply and demand in a power system over different time scales

Explain the objectives/principles of market-based operation of power systems

Explain the foundations of locational marginal pricing and its use in transmission congestion management

To carry out energy audits for optimal use of energy.

An ability to understand billing process for various industrial applications and selection of the factors for better utilization of energy.

Carry out performance analysis of electrical appliances and related case studies for improvement.

Contents

Module I (5 Hours)

Overview, Types of Markets: Spot market, Forward contracts and forward , Future contracts and futures markets, Options, Contracts for difference, MARKETS FOR ELECTRICAL ENERGY: Difference Between a Megawatt-Hour and a Barrel of Oil, The Need for a Managed Spot Market, Operation of the managed spot market, Open Electrical Energy Markets, Bilateral trading, Electricity pools, Comparison of pool and bilateral trading , The Settlement Process.

Module II (7 Hours)

PARTICIPATING IN MARKETS FOR ELECTRICAL ENERGY: The Consumer's Perspective, Retailers of electrical energy, The Producer's Perspective, Perfect competition, The production versus purchase decision, Imperfect competition.

SYSTEM SECURITY AND ANCILLARY SERVICES: Describing the Needs, Balancing issues, Network issues, System restoration, Obtaining Ancillary Services, Compulsory provision of ancillary services, Market for ancillary services, Demand-side provision of ancillary services, Selling Ancillary

Module III Courses

Energy conservation, Energy Audit Basic, Energy Accounting & Analysis, Understanding the utility bill: energy charge, Demand charge, fuel cost arrangement, power factor charge. Electricity rate structure: state example, Energy Economics: LCC, IRR, Energy & taxation: tax consideration & analysis. General Procedure of detail energy audit. Common Energy conservation measures. Case analysis.

Energy costing: Block pricing rate, seasonal pricing rate, innovative rate, Real time pricing rate, Electric lighting

system, energy efficient lighting, lighting control & illumination engineering, energy efficient electrical appliances.

Text Book:

1. Moncef Krarti, "Energy Audit of Building Systems: An Engineering Approach", Second Edition, CRC Press.
2. James Momoh, Lamine Mili, "Economic Market Design and Planning for Electric Power Systems", Wiley & IEEE

DETD0121 Design of Transformer Core

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Design of Transformer Core	DETD0121	Theory	FCEN0106: Electrical Machine-I	3	3-0-0

Course Objective:

Students will acquire the skill of designing of transformer core

Course Outcome:

Students will be able to:

Perform different tests for Transformer Testing and Maintenance.

To design an efficient transformer.

To get the idea on name plate and specification details.

Content

Comparing Transformer with different physical size of different Capacity

Phase Current, Line Current and Voltage in a Delta System

Phase Voltage, Line Voltage and Current in a Wye System

Area Product and Core Geometry for Three-Phase Transformers

Output Power Versus Apparent Power and Capability

Conductor Cross-Section Calculation

Calculation of Volts per Turn and Thickness of Core Leg

Design Specification for a Three-phase Transformer with Core Geometry Method

Recommended Books:

1. Transformer Engineering: Design and Practice by S.V. Kulkarni, S.A. Khaparde, Marcel & Dekker Inc.
2. Operation Manuals of Devices, system and utilities
3. Transformer Design, Third Edition, Revised and Expanded by WM. T. MCLYMAN Kg Magnetics, Inc. Idyllwild, California, U.S.A

DETD0122Design of Transformer Winding

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Design of transformer winding	DETD0122	Theory	FCEN0106: Electrical Machine-I	3	3-0-0

Course Objective:

Describe how a transformer is constructed and how it works

Design specification for a three-phase transformer, with core geometry method

Course Outcome:

Students will be able to:

Know the different tests and their requirements in transformer.

How to design an efficient transformer.

Can recognize variety of transformer core and type of windings

Content

- Introduction on transformer related to winding design
- Winding Types, Cooling of Winding
- Layer Insulation of LV/HV Winding
- Calculation of Winding and Core Dimension
- Calculation of Core Weight and No-Load Loss
- Calculation of Inductive Part of Impedance Voltage
- Calculation of Load Loss
- Calculation of Impedance Voltage
- Calculation of Coil Length
- Calculation of Winding Gradient and Oil Gradient

Recommended Books:

DETD0421 Testing and Commissioning

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Testing and Commissioning	DETD0421	Theory+Practice	FCEN0106: Electrical Machine-I	5	3-2-0

Course Objective:

- Describe how a transformer is constructed and how it works
- Explain how a step-up transformer designed
- Explain how a step-down transformer designed
- Comparing Transformer with different physical Size
- Phase Current, Line Current, and Voltage in a Delta System
- Phase Voltage, Line Voltage, and Current in a Wye System
- Area Product, A_p , and Core Geometry, Kg, for Three-Phase Transformers
- Output Power Versus Apparent Power, Capability
- Conductor Cross-Section Calculation Variables
- Calculation of Volts per Turn and Thickness of Core Leg
- Design specification for a three-phase transformer, with core geometry method

Course Outcome:

Students will be able to

- Know the different tests and their requirements in transformer.
- How to design an efficient transformer.
- Idea on name plate and specification details.
- Can recognize variety of transformer core and type of windings

Content

- Introduction to transformer testing and commissioning
- Capacitance Test
- Transformer turns ratio Test
- Magnetizing current Test
- Magnetic balance Test
- Verification of vector group and polarity Test
- Short circuit impedance test

Measurement of winding resistance test
 Winding Insulation Resistance measurement
 Core Insulation Resistance measurement
 Oil characteristic test

Recommended Books:

1. Transformer Engineering: Design and Practice by S.V. Kulkarni, S.A. Khaparde, Marcel & Dekker Inc.
2. Operation Manuals of Devices, system and utilities
3. Transformer Design, Third Edition, Revised and Expanded by WM. T. MCLYMANKg Magnetics, Inc. Idyllwild, California, U.S.A

DETD0422Safety and Protection

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Safety and protection	DETD0422	Theory+Practice	Electrical Machine-I	5	3-2-0

Course Objective:

Describe how a transformer is constructed and how it works
 Explain how a step-up transformer designed
 Explain how a step-down transformer designed
 Comparing Transformer with different physical Size
 Phase Current, Line Current, and Voltage in a Delta System
 Phase Voltage, Line Voltage, and Current in a Wye System
 Area Product, A_p , and Core Geometry, K_g , for Three-Phase Transformers
 Output Power Versus Apparent Power, Capability
 Conductor Cross-Section Calculation Variables
 Calculation of Volts per Turn and Thickness of Core Leg
 Design specification for a three-phase transformer, with core geometry method

Course Outcome:

Students will be able to:

- Know the different tests and their requirements in transformer.
- How to design an efficient transformer.
- Idea on name plate and specification details.
- Can recognize variety of transformer core and type of windings.

Content

- Introduction to transformer safety and protection
- Condition's leading to faults
- Fault current
- Protective Relay & Schemes
- Monitors & Alarms
- Failure Statistics

Recommended Books:

1. Transformer Engineering: Design and Practice by S.V. Kulkarni, S.A. Khaparde, Marcel & Dekker Inc.
2. Operation Manuals of Devices, system and utilities
3. Transformer Design, Third Edition, Revised and Expanded by WM. T. MCLYMANKg Magnetics, Inc. Idyllwild, California, U.S.A

DETD0423 Transformer Repair and Maintenance

Subject	Code	Type of course	Prerequisite	Credits	T-P-Pr (hrs)
Transformer Repair & Maintenance	DETD0423	Theory+Practice	Electrical Machine-I	5	2-3-0

Course Objective

- Describe how a transformer is constructed and how it works
- Explain how a step-up transformer designed
- Explain how a step-down transformer designed
- Comparing Transformer with different physical Size
- Phase Current, Line Current, and Voltage in a Delta System
- Phase Voltage, Line Voltage, and Current in a Wye System
- Area Product, Ap, and Core Geometry, Kg, for Three-Phase Transformers
- Output Power Versus Apparent Power, Capability
- Conductor Cross-Section Calculation Variables
- Calculation of Volts per Turn and Thickness of Core Leg
- Design specification for a three-phase transformer, with core geometry method

Course Outcome

On completing this course, students will be able to:

- Know the different tests and their requirements in transformer.
- How to design an efficient transformer.
- Idea on name plate and specification details.
- Can recognize variety of transformer core and type of windings

Introduction

Energy growth is directly linked to well-being and prosperity across the globe. Meeting the growing demand for energy in a safe and environmentally responsible manner is a key challenge. To support economic and social progress and build a better quality of life, in particular in developing countries energy plays vital role. For developed nations such as Canada, reliable and affordable energy enables the products and services that enrich and extend life. Energy is being powering computers, transportation, communications, cutting edge medical equipment and much more.

For developing nations, the need for reliable and affordable energy is more fundamental. It can improve and even save lives. In these countries, reliable energy supports expanded industry, modern agriculture, increased trade and improved transportation. These are the building blocks that help people escape poverty and create better lives.

Today most of the energy the world consumes comes from hydrocarbons, with crude oil being the dominant source of transportation fuels. Even with significant strides in improved energy efficiency, global energy demand is expected to rise by about 25 percent from 2014 to 2040.

Renewable energies are sources of clean, inexhaustible and increasingly competitive energy. They differ from fossil fuels principally in their diversity, abundance and potential for use anywhere on the planet, but above all in that they produce neither greenhouse gases – which cause climate change – nor polluting emissions. Their costs are also falling and at a sustainable rate, whereas the general cost trend for fossil fuels is in the opposite direction in spite of their present volatility.

DERE0161 RENEWABLE ENERGY SOURCES AND TECHNOLOGY

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0161	Renewable Energy Sources And Technology	Theory	3	NIL	3-0-0

Course Objectives:

The objectives of this subject are:

- 1.To understand the importance of renewable energy both I national and international scenario.
- 2.To explain basics of renewable energy resources.
- 3.To understand different government policies for renewable energy application.

Course Outcomes:

Upon successful completion of this subject, students should be able to:

- 1.To understand the importance of energy both I national and international scenario.
- 2.To explain basics of renewable energy resources.
3. To understand different government policies for renewable energy application.

Energy Scenario: Classification of Energy Sources, Energy resources (Conventional and nonconventional, Energy needs of India, and energy consumption patterns. Worldwide Potentials of these sources. Energy efficiency and energy security. Energy and its environmental impacts. Solar Energy Regulations and Policy Programme: Jawaharlal Nehru National Solar Mission (JNNSM), JNNSM Regulations regarding grid interconnected solar energy systems Solar Energy policy, 2012, Policies implementation by MNRE.

Solar Energy: Solar radiation at the earth's surface solar radiation measurements estimation of average solar radiation solar thermal flat plate collectors concentrating collector's solar thermal applications heating, cooling, desalination, drying, cooking, and solar thermal electric power plant. Principle of photovoltaic conversion of solar energy, types of solar cells Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping etc. Solar PV power plant Net metering Concept.

Wind Energy: Nature of wind, Wind speed and power relation, power extracted from wind, wind distribution and wind speed predictions. Wind power systems: system components, Types of Turbine, Turbine rating. Choice of generators, turbine rating, electrical load matching, Variable speed operation, maximum power operation, control systems, system design features, stand alone and grid connected operation. Small Hydro Systems.

Bio-Energy: Biomass resources and their classification Biomass conversion processes - Thermo chemical conversion direct combustion biomass gasification pyrolysis and liquefaction biochemical conversion anaerobic digestion types of biogas Plants applications alcohol production from biomass bio diesel production Urban waste to energy conversion Biomass energy programme in India.

Other Types of Energy: Ocean energy resources principle of ocean thermal energy conversion (OTEC) - ocean thermal power plants ocean wave energy conversion tidal energy conversion small hydro geothermal energy geothermal power plants hydrogen production and storage Fuel cell principle of working - various types construction and applications.

Text Books:

1. Non-conventional energy sources by G.D. Rai, Khanna Publishers.
2. Biomass Gasification and Pyrolysis: Practical Design and Theory, Prabir Basu, Academic Press.
3. Johnson GL. Wind Energy Systems, (Electronic Edition), Prentice Hall Inc, 2006
4. Mathew S. Wind Energy: Fundamentals, Resource Analysis and Economics. Springer, 2006

DERE0162 SOLAR PHOTOVOLTAIC TECHNOLOGY

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0162	Solar Photovoltaic Technology	Theory	3	NIL	3-0-0

Course Objectives:

The objectives of this subject are to:

1. To explain basics of solar photovoltaic systems.
2. To know in depth of its types and design of various PV-interconnected systems.

Course Outcomes:

Upon successful completion of this subject, students should be able :

1. To explain basics of solar photovoltaic systems.
2. To know in depth of its types and design of various PV-interconnected systems.

Syllabus

Basic of Photovoltaic: fundamentals of semiconductor and basic electrical quantities Structure and working of Solar Cells Types, Electrical properties and Behavior of Solar Cells Cell properties and design PV Cell Interconnection and Module Fabrication - PV Modules and arrays –Basics of Load Estimation.

Stand Alone PV systems: Schematics, Components, Batteries, and Charge Conditioners Balance of system components for DC and/or AC Applications Typical applications for lighting, Design of Typical Stand Alone PV System. (10) Water pumping.

Grid Connected PV systems: Schematics, Components, Charge Conditioners and Interface Components – Balance of system Components Design of grid interacting systems –PV System in Buildings.

Hybrid Systems: Solar, Biomass, Wind, Diesel Hybrid systems Comparison and selection criteria for a given application.

Design of PV systems: Radiation and load data –Design of System Components for different PV Applications Sizing and Reliability –Simple Case Studies.

Text Books:

1. CS Solanki: Solar Photovoltaic – Fundamentals, Technologies and Applications, PHI Learning Pvt. Ltd.,

2011.

2. Martin A. Green, Solar Cells Operating Principles, Technology, and System Applications Prentice- Hall, 2008.

DERE0163 Solar Thermal Technology

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0163	Solar Thermal Technology	Theory	3	NIL	3-0-0

Course Objectives:

The objectives of this subject are to:

1. To clarify impression of various solar thermal energy collectors.
2. To delineate the other applications and the devices used to collect solar energy.
3. To summarize the basic economics of solar energy collection system.

Course Outcomes:

Upon successful completion of this subject, students should be able to:

1. Understand The impression of various solar thermal energy collectors
2. Understand other applications and the devices used to collect solar energy
3. Know basic economics of solar energy collection system

Solar Collector: Fundamentals of solar collectors as devices to convert solar energy to heat. Non-concentrating low temperature flat-plate and evacuated tube collectors. Design and structures of collectors for heating liquids and air. Flat plate – Evacuated tube (Concentrated) Pool and Air collectors Construction Function -Suitability – Comparison - Storage Tank –Solar Fluids.

Solar Water Heating System: Integral Collector Storage System Thermo syphon System - Open Loop, Drain Down, Drain Back, Antifreeze Systems Refrigerant Solar Water Heaters –Solar Heated Pools Solar Heated Hot Tubs and Spas.

Solar Space Conditioning Systems: Liquid Type Solar Heating System With / Without Storage Heat Storage Configurations Heat Delivery Methods - Air-Type Solar Heating Systems Solar Refrigeration and Air Conditioning. Other Solar Applications: Solar Cooking Distillation Desalination Solar Ponds Solar Passive Architecture –

Solar Drying Solar Chimney.

Solar Economics : Application Of Economic Methods To Analyze The Feasibility Of Solar Systems To Decide Project Policy Alternatives Net Energy Analysis - And Cost Requirements For Active And Passive Heating And Cooling - For Electric Power Generation And For Industrial Process-Heating.

DERE0464 Solar Systems for Buildings

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0464	Solar Systems For Buildings	Theory + Practice	5	NIL	2-2-0

Course Objectives:

The objectives of this subject are to:

1. To explain the concept of solar thermal and electrical applications of buildings.
2. To summarize basic economics of solar buildings.

Course Outcomes:

Upon successful completion of this subject, students should be able to:

1. Explain the concept of solar thermal and electrical applications of buildings and
2. Sort out the basic economics of solar buildings and its components

Syllabus

Introduction: Elements of Buildings Traditional, Modern and Alternative Buildings Concepts and Elements of Thermal Comfort → Materials and Methods of Construction Thermal Properties of Building Elements.

Solar Heat Gain in Buildings: Building orientations Geometric Shapes / Factors –Building Thermal Resistance Computation of R and U Values for Building Elements and their comparison –Calculation of Solar Heat incident on various building surfaces –Diurnal and Seasonal Variation –Solar Space Conditioning.

Solar Thermal Systems for Buildings: Intuitive and responsive building design –Solar Collectors, Cookers, Thermal Energy Storage Systems and their Integration with Buildings – Advantages and Limitations → Sizing, Area and Performance Calculations.

Solar PV Systems for Buildings: Solar PV Systems for standalone and Grid Interconnected Applications – Integration of SPV components with buildings. Sizing,) Area and Performance Calculations.

Economic Analysis: Economic analysis for alternative selection of materials Life Cycle Analysis for Thermal and Electrical Solar Systems.

Payback period calculations: energy tariff calculations for grid electricity and designed renewable energy system. Different aspects of payback period calculations

Text Books:

1. Jan F. Kreider, The solar heating design process: active and passive systems, McGraw- Hill, 2007.
2. David A. Bainbridge, Ken Haggard, Kenneth L. Haggard, Passive Solar Architecture: Heating, Cooling, Ventilation, Day lighting, and More Using Natural Flows, Chelsea Green Publishing, 2011.

DERE0466 Decentralized and Smart Power Grids

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0466	Decentralized And Smart Power Grids	Theory + Practice	5	NIL	3-2-0

Course Objectives:

The objectives of this subject are:

1. To explain the importance of decentralized power grid.
2. To explain technology and protocols for smart grid.

Course Outcomes:

Upon successful completion of this subject, students should be able:

1. To explain the importance of decentralized power grid.
2. To explain technology and protocols for smart grid.

Syllabus

Introduction: Decentralized generation technologies; Costs and choice of technology, Demand and benefits forecasting and program development, Principles of cost-benefit calculations, Economic and financial analysis of stand-alone electrification projects, Decentralized versus central station generation, Traditional power systems, Load curves and load curve analysis

Different distributed generators: Basic gas turbine generator concepts; Utility system turbine generators; Mini and micro gas turbine generators; Solar thermal power generation, utility scale photovoltaic (USPV) generation; Wind-powered generation; Biomass based generation; DG Evaluation: Cost from past, present, and future, basic DG cost analysis, cost Evaluation and schedule of demand, Grid interconnection options. The power grid; DG- Grid interconnection issues; Case Study.

Smart grid: Driving the move towards Smart Grids globally and in India Smart Grid. Distribution Management Systems (DMS) and Meter Data Management (MDM) are improving energy efficiency and security of supply in Distribution Systems Overview of Power Electronics in Electrical T&D Systems, Power Electronics in emerging Smart Grids, (6)Transmission (DC Super Grids) , Distribution (PE facilitating the integration of, (Distributed Generation, Renewables, Micro grids, Virtual Power Plants (VPP), Storage, Fault Current Limitation, Power Electronics, Super Conducting and Magnetic types)

Developing technology and systems that will enable grids to work smarter in the future: Storage: Organic and Inorganic Salts & Synthetic Heat Storage, Developing technology and systems that will enable grids to work smarter in the future (Smart Meters, Recording consumption, Advanced payback options for load-management, Communication between the utility and customer's home (for home automation)), Challenges faced by the Transmission System Developing technology and systems that will enable smarter transmission of bulk energy (Metering, Trading mechanisms, AC – FACTS (Statcom) Challenges faced by the Distribution Networks:(How to be more energy efficient, stable, reliable and environmentally friendly, Reducing losses, Integration of renewables Connecting/disconnecting micro-grids and virtual power plants, manage bi-directional energy flows), Developing technology and systems that will enable smarter distribution networks (DC – MVDC, Fault Current Limiters, Others (AC/DC TXs etc))

DERE0267 Solar Photovoltaic Laboratory

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0267	Solar Photovoltaic Laboratory	Practice	2	NIL	0-2-0

Course Objectives:

The objectives of this subject are :

1. To construct a practical knowledge on various devices of solar PV systems and trying with an assortment of parameters
2. To re-iterate and analyze the numerical results from trial and error.
3. Generate perception on practice usages of solar PV gadgets/ industrial utilities

Course Outcomes:

Upon successful completion of this subject, students should be able to understand:

1. The various characteristics of the solar cell under local climatic working conditions.
2. The performance of the Solar PV cell under various specified operating temperature ranges and will be able to relate it with nominal values.
3. The various radiation measuring instruments related to solar photovoltaic.

Syllabus

Experiments:

1. Power Output Vs Exposed Area.
2. Power Output Vs Azimuthal and Tilt Angle
3. Testing of SPV Standalone Systems
4. Spectral Response of a PV Cell.
5. Testing on Solar Home Systems
6. To Study the Effect of Temperature on Module Output.
7. Optimization of SPV Systems with Load Resizing
8. Testing of Simple Hybrid Systems
9. Testing of Solar PV Water Pumps
10. Studies on Charging and Discharging Cycles of the batteries.
11. Study of watt lumen characteristics of LED and CFL.

Pedagogy (All sessions through Practice)

Sl. No.	Topic	Pra hrs
01	Power Output Vs Exposed Area	3
02	Power Output Vs Azimuthal and Tilt Angle	3
03	Testing of SPV Standalone Systems	3
04	Spectral Response of a PV Cell	3
05	Testing on Solar Home Systems	6
06	To Study the Effect of Temperature on Module Output.	3
07	Optimization of SPV Systems with Load Resizing	6
08	Testing of Simple Hybrid Systems	3
09	Testing of Solar PV Water Pumps	6
10	Studies on Charging and Discharging Cycles of the batteries.	3
11	Study of watt lumen characteristics of LED and CFL	3
	Total	42

DERE0268 Solar Thermal Laboratory

Code	Course Title	Course Type	Credits	Pre-requisite	T-P-Pr (hrs)
DERE0268	Solar Thermal Laboratory	Practice	2	NIL	0-2-0

Course Objectives:

The objectives of this subject are:

1. To produce an ultimate practical knowledge on various gadgets of solar systems and trying with assorted parameters
2. To analyze of analyzing the numerical results from experimentation
3. To generate consciousness on routine usages of solar energy gadgets/ industrial utilities

Course Outcomes:

Upon successful completion of this subject, students should be able to understand:

1. The working principle behind the existing collector systems practically.
2. The domestic and industrial purposes and usages of solar gadgets available.
3. The various radiation measuring instruments and storages related to solar thermal studies.

Experiments:

1. Solar Radiation Measurements
2. Determination of Thermal Efficiency of Flat Plate Collector.
3. To Determine the Heat Loon Factor and Heat Removal Factor of a Flat Plate Solar Collector.
4. Flat Plate Solar Water Heater
5. Flat Plate Solar Air Heater
6. Flat Plate Collector with Reflector
7. Parabolic Trough Collector
8. Evacuated Tube Collector
9. Drying Performance of a Solar Dryer.
10. Solar Cookers
11. Thermal Storage Systems

Pedagogy (All sessions through Practice)

Sl. No.	Topic	Pra hrs
01	Solar Radiation Measurements	3
02	Determination of Thermal Efficiency of Flat Plate Collector	3
03	To Determine the Heat Loon Factor and Heat Removal Factor of a Flat Plate Solar Collector.	3

SYLLABUS

FCBS0401 APPLIED ANALYTICAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.

The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

1. Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
2. Determination of Turbidity by nephelometer, pH, Conductivity.
3. Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell

Practice:

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Course outcome

Explain fundamental principles for environmental analytical methods (titration, electro-chemistry, instrumentation and basic parameters of water, soil, fuel etc)

Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

*Point out suitable techniques for sampling and handling of environmental samples
 Apply quality control on chemical analysis and laboratory work and explain its importance
 Plan and carry out laboratory experiments, including data analysis and conclusions
 Describe simple approaches for troubleshooting*

FCBS0402 INDUSTRIAL CHEMISTRY

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cement as well as dyes, oils, soaps

Introduce the students to industrial processing principles as applicable to chemical and allied industries.

Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.

Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

Preparation of soap by saponification

Determination of the properties different type of soap

1. pH test

2. Foam test

Hard water test

Determination of iodine number of oil

Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline

Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores.

Practice:

Estimation of Cu in copper ore

Determination of Fe as ferrous iron in an ore sample

Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

Estimation of calcium in Portland cement
 Cement hydration and pH evaluation during curing
 To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Course outcome

Appreciate better their future roles as chemists in Industrial establishments
 Be able to explain the origin of raw materials used in the chemical and allied industries
 Have a good understanding of how chemical raw materials are processed into finished products.
 Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.

FCBS0403 APPLIED ENGINEERING MATERIALS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>3</i>

Course Objective

To understand the importance of the chemical approach to nanomaterials
 To study the preparation, analysis and applications of metal nanoparticles
 To develop an understanding of conjugated polymers and their applications
 To understand how polymer composition and architecture imparts unique properties and behavior
 To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

Synthesis of Ag, Au nano particles by wet chemical methods.
 Synthesis of ZnO Nanoparticles by Precipitation Method
 Synthesis of Cu nano particles Sonochemical method.
 Synthesis of Fe nano particles Co-precipitation method.
 Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

Synthesis of Thiokol Rubber
 Synthesis of a Rubber Ball from Rubber Latex
 Synthesis of Polystyrene (PS)
 Synthesis of Polymethyl Methacrylate (PMMA)
 Synthesis of Nylon-6:6.
 Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites“ refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

Synthesis of bio composite materials by using jute fibres and wood fibres

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials
- Know the application of Nanotechnology and nanomaterials

FCBS0404 ELECTRICITY AND MAGNETISM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

- To understand electric circuit components and their use.*
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices.*
- Understanding magnetic properties of matter and performing experiments to realize magnetism.*

Practice I

Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection, Kirchhoff's laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.
2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Foster's Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.

- To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis.

Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

- To study the induced e.m.f. as a function of the velocity of the magnet.
- Measurement of field strength B and its variation in a solenoid.
- Determination of ratio.

Course outcome

Realizing the importance and use of electrical components in a circuit.

Learning how to do different connections and their purpose.

Understanding magnetism of matter and its applications

Text Book:

- Electricity and Magnetism By K. K. Tiwari, S. Chand Publishing

References:

- Electricity and Magnetism, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan
- Introduction to Electrodynamics, by David J. Griffiths Prentice-Hall; 3 edition (2011)
- Electricity and Magnetism by - D. C. Tayal, Himalaya Publishing, 2009.

FCBS0405 BASIC MECHANICS AND PROPERTIES OF MATTER

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To give the students overall idea about material properties and also hands on experience to measure them.

To make them realize the applications of material properties.

To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.

Encouraging them to build simple models to explain the mechanical properties.

Theory:

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder, bending of beams, Vibration of loaded cantilever.

Lab:

- Young's modulus by single/double cantilever
- Young's modulus by Searle's method
- Rigidity modulus using Barton's apparatus
- Poisson's ratio

Practice II

Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseulle's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface.

Lab:

1. Viscosity by Stokes method
2. Viscosity by Poiseulle's method
3. Metacentric height of floating body
4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Course outcome

To understand material properties and perform experiments on them.

To understand the applications of material properties in real life.

To be able to make small models for explain few mechanical properties.

Text Book:

1. *Elements of Properties of Matter, Dec 2010 by D.S. Mathur, S.Chand (G/L) & Company Ltd*

Reference Books:

1. *A Text Book of Fluid Mechanics by R.K. Bansal, Laxmi Publishers, 2005*
2. *Engineering Mechanics Statics and Dynamics by A. K. Tayal, Umesh Publications.*

FCBS0406 OPTICS AND OPTICAL FIBRE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory + Practice</i>	<i>4</i>

Course Objective

To understand optical phenomena.

To understand different light sources and their use

Understand designing of microscope and artificial light sources

Understanding optical fiber and its applications

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Practice II

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

Practice-III

Theory: Optical properties—scattering, refraction, reflection, transmission & absorption. Introduction, principle of Laser, stimulated and spontaneous emission, Coherence (temporal and spatial) Ruby Laser, Application of Lasers.

Optical Fibres: Introduction, numerical aperture, step index and graded index fibres, attenuation & dispersion mechanism in optical fibers (Qualitative only), application of optical fibres, optical communication (block diagram only)

Lab:

1. Measurement of attenuation and bending losses of an optical fibre.
2. Measurement of numerical aperture of an optical fibre
3. Study of spatial and temporal coherence of LASER
4. Making of a light guide

Course outcome

Students should understand optical phenomena.

Students should learn about different light sources and their use

Students should be able to understand optical fiber principle, operations and its applications.

Text Book:

1. *A Text Book of Optics* by M.N. Avadhanulu, Brij Lal, N. Subrahmanyam, S Chand; 23rd Rev. Edn.

References:

2. *Optics* by Ajoy Ghatak, McGraw Hill Education; 5 edition
3. *Physics-I for engineering degree students* by B.B. Swain and P.K.Jena.
4. *Concepts in Engineering Physics* by I Md. N. Khan.

FCBS0101 ENVIRONMENTAL SCIENCE

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

1. *To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.*
2. *Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.*
3. *One must be environmentally educated.*

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Course Outcome:

1. Understand the natural environment and its relationships with human activities.
2. Characterize and analyze human impacts on the environment.
3. Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
4. Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Text Book: Anubhav Kaushik & C.P. Kaushik : Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph : Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha : Text book of Environmental Studies for Under graduate courses– Universities Press. (Book prepared by UGC Committee.

FCBS0102 DIFFERENTIAL EQUATIONS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

- 1) To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- 2) To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- 3) To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- 2) Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- 3) Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Non-homogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Text Book:

1) *Higher Engineering Mathematics* by B.V. Raman Publisher: TMH
Chapters: 8 (8.1 to 8.10); 9 (9.1 to 9.7), 18 (18.1 to 18.8)

Reference Book:

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson

FCBS0103 LINEAR ALGEBRA & VECTOR CALCULUS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
2. To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
3. To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
2. Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
3. Determine the important quantities associated with scalar and vector fields.

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11)

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson
- 2) *Mathematical Methods* by Potter & Goldberg ; Publisher : PHI

FCBS0103 INTEGRAL TRANSFORM

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

1. To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
2. To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
2. Solve differential & integral equations with initial conditions using Laplace transform.
3. Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
4. Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac's Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig
Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 5 (5.1 to 5.6); 10 (10.1 to 10.4, 10.8, 10.9)

Reference Books:

- 2) *Higher Engineering Mathematics* by B.V.Raman .Publisher: TMH

FCBS0105 COMPLEX ANALYSIS

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	3

Course Objectives:

- 1) *To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.*
- 2) *To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.*

Course Outcomes: Upon successful completion of this course, the student will be able to:

- 1) *To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.*
- 2) *Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.*
- 3) *Illustrate the applications of the calculus of residues in the evaluation of real integrals.*

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation , Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition
Chapters: 12 (12.1 to 12.4 ,12.9) ; 13, 14 (14.2,14.4) & 15.

Reference Books:

- 1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson
- 2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

FCBS0106 Discrete Mathematics

<i>Pre-requisite</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>3</i>

Course Objectives:

1. To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.
2. To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.
3. To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes: Upon successful completion of this course, the student will be able to:

1. Evaluate elementary mathematical arguments and identify fallacious reasoning.
2. Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
3. Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus.
4. Model and solve real-world problems using graphs, both quantitatively and qualitatively.

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal & Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring,

Text Books:

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition Chapters:1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4)

Reference Books:

SYLLABUS

FCHU1201 FOUNDATIONS OF ENGLISH COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

To develop vocabulary and grammar knowledge

To develop reading comprehension skills

COURSE OUTCOMES

Development of academic and sub-technical vocabulary

Enhancement of basic language skills, i.e., listening, speaking, reading and writing

Development of grammatical competence

Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of Course communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

Animal Farm

Alice in Wonderland

Guide

Malgudi Days

Harry Potter

Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

FCHU1202 COMMUNICATIVE PRACTICE LABORATORY –I

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

To expose the students to a variety of self- instructional, learner- friendly modes of language learning.

To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

Ability to communicate fluently in different business situation

Effective oral and written communication

Appropriate word usage with correct pronunciation

Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade

Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.

Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

Elimination of common errors

Editing passages

Word power A-Z: Easy and quick techniques

Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

Pronunciation Guidelines: Consonants and Vowels

Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences

Speaking Techniques: Using correct stress patterns, developing voice quality

Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHUI203 BUSINESS COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.

This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

- Understand the differences between general communication and business communication*
- Development of basic language skills, i.e., listening, speaking, reading and writing*
- Effective participation in group discussion and job interviews*

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

General Communication and Business Communication

Communication in Organizational Settings: Patterns of Communication in the Business World

– Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal

Introduction to Cross Cultural Communication

Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

Importance of Developing Reading Skills

Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making

Importance of Writing Skills and Principles of Effective Writing

Writing Process: Pre-writing, Drafting and Re-Writing

Paragraph Writing

Summaries and Abstracts

Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
 Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies

Common forms of Oral Communication in the Business World:

Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes

Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality

Making an Oral Presentation: Planning, Preparing and Delivery

Facing an Interview: Preparation, Types of Interview, Do's and Don'ts

Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204 COMMUNICATIVE PRACTICE LABORATORY –II

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

To master Study Skills

To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies

To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.

Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.

Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

Situational Dialogues / Role Play: Organization Communication

Oral Presentations- Prepared and Extempore

'Just a minute' Sessions (JAM)

Debates

Mock Meetings

Cracking Job Interviews: Mock Sessions

Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

Review Presentation (Movie/ Article/ Book)

Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

Short Paragraphs on current general and technical topics

Creative Writing: Idea Generation

Business Letters, Email Messages, Project Writing

Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205 CORPORATE READINESS LABORATORY

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

- Understand the process of communication*
- View communication from the perspective of each stakeholder*
- Plan and manage communication difficulties*
- Learn exactly how, when and what of communication*

COURSE OUTCOMES

- Understanding the convention of project report*
- Understanding the process of data collection and documentation*
- Preparation and presentation of project report*
- Preparation for various academic and professional needs*

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes

(E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206 IT ENABLED COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- *Speak confidently and fluently, in both formal and informal contexts.*
- *Write clearly, correctly and cogently*
- *Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence*
- *Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.*

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

Pre-Course Assessment

Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...

Do you know?

Introduction to IT Enabled Communication

Communication in the New Age Context and Demand for Communication Interventions
(*This module includes pre-course assessments and presentations*)

MODULE II: BLOG DESIGNING & POSTING

Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing

Photoshop for Image, Editing and graphic design

(*This module will be driven through methods like self-learning, learning by doing, and workshop*)

MODULE III: TECHNOLOGY AND COMMUNICATION

Tools for Business Correspondence and web-based exercises

Creating and delivering high impact presentations with Slides and other Visuals

Video Documentaries

Video Conferencing Sites, Skype, Team Viewer

(*This module will be facilitated through presentations, use of tools and technology*)

FCHU1207 CAREER COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

OBJECTIVES

- Prepare the graduates to acquire their dream jobs.*
- Build their mindset with right attitude, self-awareness, pro-activeness.*
- Build confidence, and enhance their communication skills to handle all situations.*

OUTCOMES

- Build the confidence of students*
- Trigger the thinking and analyzing ability of the learners to solve problems.*
- Readiness to work on their dream jobs.*

List of Experiments

LAB 1: Introduction to Career Communication

LAB 2: Presentation on Corporate House

Create an awareness and exposure on corporate life and culture.

Learners get exposure to corporate life and culture.

LAB 3: Corporate Quiz

LAB 4: Telephonic Conversation

Learners are equipped with basic knowledge and skill practice for improved telephonic communication.

LAB 5: Email Writing

Learn the characteristics of successful e- mail messages.

Create an effective e-mail message.

LAB 6: Mini Test on Email Writing

LAB 7: Learning Etiquette

Understand what etiquette is & why it's important.

Provide practical techniques and generally-accepted professional and ethical conduct or behaviour that will help create a favourable impression in social and professional life.

Practice proper manners like greeting, saying 'please', 'thank you'.

Appear professional and well groomed.

6	Team Building and Teamwork	Activity Based Learning	Coin Logo Time Required: 5-10 minutes Begin by asking all participants to empty their pockets, purses, and wallets of any coins they may have and place them on the table in front of them. If someone doesn't have any coins or only has very few, others in the room can share their coins with them. Instruct each person to create their own personal logo using the coins in front of them in just one minute. Other materials they may have on them, such as pens, notebooks, wallets, etc. can also be used in creation of the logo. If there is a particularly large group, people can be broken up into teams of 3-6 people and instructed to create a logo that represents them as a team or the whole room can gather to use the coins to create a logo for the organization/group/department/etc. Each	0	1	1	0

			solitary participant can explain their logo to the group or if the room was split into groups, the leader can have each group discuss what led to the team logo and what it says about them. Not only does this activity promote self and mutual awareness, but it also enables participants to get to know each other on a more personal level. http://www.livestrong.com/article/219775-team-building-exercises-for-small-groups/

12	Time Management	Group Activity	<p>How long is a minute?</p> <p>At the beginning of session ask people to close their eyes for 30 seconds and after that to open it. Nobody can watch the clock and don't measure the time. Ask of participants to open their eyes after what they believe has been 30 seconds. Of course, they all open them at different times. Afterwards, we talk about our understanding of time. Even though everyone has an equal (24 hours a day or 30 seconds for exercise), in fact, we experience it and use it in different ways. Some of us experienced it as a short period, other as a long. This always works as a good opener.</p> <p>2) Cover all the clocks in the room, then ask participants to remove their wrist watches and stand up. Instruct them to sit down when they think 1 minute has elapsed after you shout "Start" to begin the countdown. You will be surprised with the results. Just enjoy the fun that follows this activity</p>	0	1	0	0

FCHU1209 SEMINAR AND TECHNICAL WRITING

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

Seminar allows students the opportunity to put all of information together. The students are required to prepare technical reports including oral presentations supported by written technical papers. Seminar is designed to assist students in preparing for their career.

COURSE OBJECTIVES

Understand the requirements and ethics of technical writing in the 21st Century workplace.

Work professionally, individually and in a team to produce effective technical documents incorporating verbal, visual, and multimedia materials as necessary.

Communicate effectively by analyzing audience, organizing documents, writing clearly and precisely with no grammar errors and presenting the document with skillful design.

Locate, evaluate, and incorporate pertinent information.

Write clear, intelligent technical reports

Make seminar presentations

COURSE OUTCOMES

Understand how technical communication is used in the workplace.

Understand and use the principles of design in business and technical communication.

Apply useful descriptive language to your technical documents.

Students will gain experience in preparing a technical report including an oral presentation supported by a written technical paper.

MODULE-I: TECHNICAL COMMUNICATION ESSENTIALS

COURSE OUTCOMES

Describe the writing process most useful in today's technical writing environment.

Analyze an audience and consider appropriate writing situations to meet the audience's needs.

Understand the ethics of the workplace and apply those ethics to their technical and business writing.

OUTLINE: Communicating in the Workplace, Technical Writing Process Today, Readers and Contexts of Use, Ethics in the Technical Workplace

MODULE- II: DOCUMENT DESIGN

COURSE OUTCOMES

Create and use graphics that complement your business and technical communication.

OUTLINE: Designing Documents and Interfaces, Creating and Using Graphics

MODULE-III: TECHNICAL COMMUNICATION STRATEGIES AND RESEARCHED REPORT WRITING

COURSE OUTCOMES

Define terms clearly in technical documents.

Explain instructions and processes clearly.

Write clear proposals for business and technical situations.

Research and manage information.

Write an analytical report.

OUTLINE: Researching and Managing Information, Organizing and Drafting, Technical Definitions, Technical Descriptions, Instructions and Documentation, Proposals, Analytical Reports

MODULE-IV: SEMINAR PRESENTATION

COURSE OUTCOME

Students will not only learn from the experience gained in preparing and presenting their seminar, but will have the opportunity to observe and participate in the seminar given by their classmates.

OUTLINE: Technical Report, Seminar Presentation

(Planning, Preparing, Organizing and Seminar Presentation are the 4 stages of this module)

FCHU1211 CREATIVE WRITING

Pre - requisites	Course Type	Credits
Nil	Workshop	2

The aim of the course is to prepare students for careers in a workplace that is information-rich and that increasingly values communication skills and the ability to think creatively and critically. The class time will be devoted to writing workshop, innovation exercises, and the critical appreciation of write-ups. The Creative Writing course will focus on

Reading
Writing Creatively
Presentations

Thus the main objective is to breed a culture of learning where students learn a variety of approaches to creative writing in a cooperative learning environment.

COURSE OBJECTIVES

Develop thinking skills
Acquire basic skills and techniques to develop a suitable practice of creative writing in context
Use a constructive approach to critique his/her own work, as well as work by his/her peers
Organize, prepare and present spoken presentations clearly and expressively

COURSE OUTCOMES

Upon the Completion of the course, a student will
Create Blog/ Online Presence
Submit works for publication
Compose a variety of written responses for different purposes and audiences
Collaborate by sharing ideas, examples and insights, productively and respectfully in informal conversations and discussions.
Students will put into practice the learning into the personal, professional and technical sphere.

MODULE -I: WRITING CREATIVELY (12hrs)

Foundational activities

Introduction to Class Standards
(Workshops, peer conferencing, blogging, reading outside the classroom)
Collaborative Creation of Classroom Philosophy
Basics of Creative Writing

Different forms of expression

Memoirs/Writing the Personal Narratives
Situational Writing/ Writing for the Target Audience
Dialogues, Essay, Poetry Slam
Script Writing
Writing for Blogs
Cooking Up Interview Stories

Writing from visuals

Pictures, Graphs, Images, Diagrams and Designs, Cartoons
Brochures and Newsletters

(This module will be facilitated through creative writing and speaking activities)

MODULE-II: READING AND CRITICAL APPRECIATION (8hrs)

Book

(Independent Study: Two Master Piece)

Article

Movie

(Student Work: Free Choice, Discussion and Oral/ Written Critiquing, Editing/ Revision
Publication/ Sharing, Short Report on Two Authors)

(This module will be facilitated through reading activities and critical appreciation)

MODULE-III: POWER OF LATERAL THINKING TO CREATE NEW IDEAS (7hrs)

General Concepts: Creativity and Lateral Thinking
Using the Technique of Lateral Thinking in Writing
Idea Generation Games and Activities
Six Thinking Hats

(This module will be facilitated through idea generation activities and presentation)

FCHU1212 ENGLISH FOR COMPETITION (GRE/GMAT/TOEFL/IELTS)

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE

Familiarize the learners with the pattern of the TOEFL/GMAT/IELTS/GRE examination and improve overall English skills to face the competitive exams confidently.

COURSE OUTCOME

Learners understand the pattern of the TOEFL, IELTS and GRE examination and apply test-taking strategies in exams.

A student is required to take up five laboratory tests of 100 marks.

LIST OF EXPERIMENTS

1: TOEFL Listening

Developing Listening Comprehension by taking notes after the short recorded conversations.

2: TOEFL Speaking

Developing test taking strategies to face speaking test of TOEFL exam through role play and Mock Interview.

3: TOEFL Reading

Practicing and improving student's confidence in completing the various sections of reading test in TOEFL examination.

4: TOEFL Writing

Learning and enhancing writing skills required for TOEFL writing test.

5: IELTS Listening

Practicing the listening comprehension of the students and handling questions while listening the recorded conversations.

6: IELTS Speaking

Developing test taking strategies to face speaking test of IELTS examination through role plays and mock interviews.

7: IELTS Writing

Summarizing or explaining information presented in a graph, chart, table or diagram.

8: IELTS Reading

Understanding and interpreting the text in its particular use of language, ideas and style.

9: GRE Reading Comprehension

Taking GRE Reading Comprehension examination with confidence utilizing the methods and strategies.

10: GRE SENTENCE COMPLETION

Developing sentence completion strategies through logical thinking.

11: GRE SENTENCE EQUIVALENCE

Learning and developing strategies to deal with sentence equivalence questions.

12: GRE VOCABULARY

Understanding and using appropriate choice of vocabulary in GRE vocabulary section.

13. GRE Vocabulary & Verbal-Sentence Corrections

14. GMAT Verbal-Critical Reasoning

15. GMAT Verbal- Reading Comprehension

(The entire lab will be facilitated through online quizzes, and practice sets available in language lab)

FCMG0101 ECONOMICS

Pre - requisites	Course Type	Credits
Nil	Theory	2

Course Objective:

In today's dynamic economic environment, effective managerial decision making requires timely and efficient use of information. The basic purpose of this course is to provide students with a basic understanding of the economic principles, methodologies and analytical tools that can be used in business decision making problems. It provides an understanding of the economic environment and its impact on strategy formulation. The course also focuses on the impact of economic policies on managerial decision-making by providing an understanding of fiscal policy, and national and global economic issues affecting business.

The language of science (and all analytical thinking) is mathematics. Since economics is a social science, use of some mathematical tools, basically the constrained and un-constrained optimization

techniques will help in measuring and solving the basic economic problems and thus improves decision-making. It becomes difficult and totally un-practicable to solve business (economic) problems logically and systematically without use of mathematics. The basic objective is to solve problems mathematically and interpret the results economically.

Module-1: Micro Economics

Introduction to economics: Scarcity, Choice and Efficiency, Fundamental issues of what, how and for whom to produce to make the best use of economics. Demand for a commodity: Law of demand, Demand schedule and demand curve, Individual and market demand, Change in demand, Consumer behavior: Analysing law of demand through Marshallian utility analysis, Indifference curve technique and Consumer Surplus.

Elasticity of demand: Price Elasticity of demand: Estimation, Types, Elasticity and revenue, Factors affecting price elasticity of demand. Income elasticity, Cross elasticity, Uses of different concepts of elasticity in business decisions.

Analysis of Supply: Law of Supply, Supply schedule and supply curve, Change in supply, Price elasticity of supply, Equilibrium of demand and supply: Equilibrium with demand and supply curves, Effect of a shift of demand and supply curves.

Production Function: Production function with one variable input, Production function with two variable inputs, optimal combination of inputs, Returns to scale

Cost Theory: Types of costs, Production and cost, Short-run cost functions, Long-run cost functions, Economies of scale and scope, Cost-Volume-profit Analysis

Market: Meaning, types and characteristics of different market structure (Perfect competition, Monopoly, Monopolistic competition and Oligopoly)

Module: 2: Macro Economics

National Income Accounting: Circular flow of Income, National Income Concept, Eight variants of national product aggregates, Measurement (Income, Value Added and Expenditure), Real and Nominal GNP, Difficulties in measuring the national income, Uses of National income statistics, Money and Inflation: Demand for and supply of money. Causes and consequences of Inflation. Commercial and central banking: Role and functions of commercial banks and R.B.I., Monetary Policy and Fiscal policy: Objectives and Instruments, Balance of Payment (BoP): Meaning, BoP Account, Disequilibrium in BoP, Measures to correct disequilibrium in BoP, Foreign Exchange: Floating Exchange Rate and Fixed Exchange Rates

FCMG0102 ACCOUNTING AND FINANCE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
-------------------------	--------------------	----------------

<i>Nil</i>	<i>Theory</i>	<i>2</i>
------------	---------------	----------

Course Objective:

- a) To familiarise the students with basic terms of accounting, accounting principles, concepts and convention.
- b) To equip the students with various concepts, tools and techniques of Cost accounting as well as Management accounting essential for managerial decision making process.
- c) To aware students overview of Time Value of Money, Working Capital and Stock Market

Course outcomes:

On the successful completion of this paper the students should be able composed the information about:

- Develop a basic understanding of accounting and financial ratio analysis.
- Students will be able to create, balance and deliver a budget and use budget information for planning and decision purposes.
- Undertake various costing techniques and information for planning and decision-making
- Demonstrate time management by understand various financial funding options for project planning and working capital management of an organizations.
- Know how financial markets as well as the global economy are impacting their organization today and how they will impact their organization into the future.

Module 1:

Basic Accounting Concepts and Conventions, Basic Accounting Equation, Accounting Mechanism: Journals, Ledgers, Trial Balance, Basic Financial Statements: Analysis of Items found in Balance Sheet and Income Statement, Ratio Analysis

Module 2:

Cost Concepts and Cost Terms: Financial Accounting vrs. Cost Accounting, Direct and Indirect Costs, Fixed, Variable and Semi-variable Costs, Standard, Budgeted and Actual Costs, Controllable and Non-controllable costs, Preparation of Cost Sheet, Cost-Volume-Profit Analysis: Concept of Marginal Cost and Contribution, Concept of Break Even Analysis, Applications of Marginal Costing

Module 3:

Time Value of Money: Concept, Simple and Compound Interest, Present Value of a Single Amount, Present Value of an Uneven Series, Future Value of an Annuity, Present Value of an Annuity
Working Capital Management: Meaning and Components of Working Capital, Determinants of Working Capital, Profitability-Risk Trade-off, Types of Working Capital, Importance of Working Capital, Operating Cycle: Concept and Estimation
Stock Market: Types of Capital Issues: Initial Public Offer, Follow-on Public Offer, Rights Issues, Preferential Issues, Red-herring Prospectus, Free Pricing of Issues, Greenshoe Option, Lock-in Period, Safety Net, Listing of Securities on Stock Exchanges

Books Recommended:

1. *Accounting for Management—Ashok Sehgal, Taxxman*
2. *Financial Accounting -- A managerial Perspective, R. Narayanswamy, PHI*
3. *Khan & Jain – Management Accounting, TMH.*
4. *Horngren ,Datar, Foster- Cost Accounting, Pearson.*
5. *Financial Accounting, Jain/Narang/Agrawal, Kalyani.*
6. *Basic Financial Accounting for Management, Shah, Oxford.*
7. *Financial Management by I. M. Pandey*
8. *Financial Management – Theory and Practice by Chandra*
9. *Financial Management – Text and Problems by Khan & Jain*

FCMG0103 MANAGEMENT PROCESSES AND ORGANIZATIONAL BEHAVIOR

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Introduction

Management as a subject of study has brought a new paradigm in managing organizations. The young professionals has to learn and reflect the basic principles of management. Along with it the knowledge of Individual and group behaviour and its impact at the workplace is vital. Organizational Behavior (OB) is a field of study that investigates the impact that individuals, groups, and structure have on behavior within an organization. Then it applies that knowledge to make organizations work more effectively. This course will expose students to gain knowledge on the basic principles of management and organization behavior.

Course Content

Unit: I

Emergence of Management as a discipline, Principles of management, (Planning, organizing, staffing and controlling) Contributions to management by Luther Gullick , Henri Fayol and Peter F. Drucker and Introduction: Concept and models of OB, Approaches to OB (Systems, Human resource and Contingency)

Unit: II

Individual System: Learning, Perception, Personality and Motivation,

Unit: III

Social System: Group Dynamics and Leadership.

Books Recommended:

1. Robins & Sanghii; Organizational Behavior, Pearson
2. Luthans ,F; Organizational Behavior-TMH
3. Udai Pareek ; Understanding Organizational Behavior, Oxford
4. Prasad,L.M; Organization behavior, S.Chand.
5. K. Aswathappa; Organization behaviour

FCMG0104 PRODUCTION AND OPERATION MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

The course is designed to acquaint the students with decision making in production and operation function of an organization.

Course Outcomes :

- ✓ Acquire a working understanding of the roles/functions of production management in the context of business enterprise.
- ✓ The learner will have a deep knowledge of the fundamental theory and mathematical principles involved in Production and Operation Management.
- ✓ They can use specialized knowledge in Operations Management to solve business processes.
- ✓ They will be capable of applying these principles to solve relevant production or service system problems.

Module 1:

Operations Management- An Introduction : Primary topics in Operations Management, Operations Function and Transformation process . Manufacturing Strategy and Mass customization, Product Development and Service Design , New Product design, Product life cycle, Process design, Process life cycle

Module 2:

Project scheduling Models: Project Network, Critical path Method (CPM), Programme Evaluation Review Technique (PERT).

Scheduling: Objective of Scheduling, Sequencing, Sequencing model: "n" jobs 1 machine, "n" jobs 2 machines.

Module 3:

Inventory Management: Concept of inventory with independent demand: Inventory cost structure, Deterministic inventory model - EOQ models, instantaneous receipt, Inventory model with discounts.

Module 4:

Quality Management: Concept of quality; Quality of design, Conformance & performance; Cost of poor process performance and quality. Statistical Quality Control - Process Control (X-bar, R & P chart, np chart).

Concept of TQM, Just in Time and Lean Production Basic element in JIT, Pull system, Push system

Books Recommended:

- 1) Chase, Jacobs, Aquilano, Agarwal, - "Operations Management", TMH
- 2) Krajewski, Ritzman, Kansal, - "Operations Management", Pearson
- 3) Everette. Adam Jr., Ronald J. Ebert, - "Production and Operations Management", PHI
- 4) Roberta S. Russell & Bernard W. Taylor III, - "Operations Management", Pearson/ PHI
- 5) Aswathappa & Sridhar Bhat, - "Production and Operations Management", HPH
- 6) Gaither, Frazier- Operations Management

FCMG0105 MARKETING MANAGEMENT

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objective:

- a) To familiarize the students with the concepts and theories and strategies of marketing.
- b) To focus on the application of these concepts to various marketing contexts
- c) To focus on the emerging areas of marketing

Course outcomes :

- ✓ The students will understand the various marketing approach in today's competitive scenario.
- ✓ The students will learn the application of various marketing tools for solving business problems

The students will acquire and develop the marketing skills to be a successful marketing person

Module 1:

Introduction to marketing; What is marketing?, Importance of marketing function, Process of marketing, Concepts like need, want, value, satisfaction etc, Elementary idea of marketing mix. Understanding Marketing Environment; Factors affecting marketing environment (PESTEL),Porter’s five forces model, Introduction to market research

Module 2:

Segmentation, Targeting & positioning (STP);What is market segmentation?, Criteria for effective segmentation, Targeting selected markets, Targeting strategies, Positioning , Effective positioning strategies, Positioning of brands and repositioning ,introduction to consumer behavior.

Module 3:

Product Management; Classification of products, Product life cycle (PLC), Brand and branding. Pricing; Meaning & objective, steps in setting the price, pricing policies. Promotion; What is promotion, types of promotion, advertising, sales promotion, integrated marketing communication Place; Marketing channels, Channel conflict management, Distribution system. Introduction to services marketing, Emerging concepts like green marketing, e-marketing & social marketing.

Books Recommended:

1. *Marketing Management: A South Asian Perspective- Phillip Kotler, Kevin Lane Keller, Abraham Koshy and MithileshwarJha, 13th Edition Pearson, Education Publication*
2. *Marketing Mangement: Fourth edition- RajanSaxena*
3. *Positioning: The Battle for Your Mind- Al Ries& Jack Trout, Warner Books USA*

FCMG0108 INTRODUCTION TO RESEARCH

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

1. *To introduce the students about research, methods and techniques.*
2. *To understand the process and apply in other areas.*

Course outcome:

1. *Students will be able to understand the process of doing a research.*
2. *Students will be able to write a research report.*

Course Contents:

Module: I Science and Social Science as Knowledge

Common sense view of Science, Seeing is believing?, Visual Experiences, Relevant Facts, Facts precede theory, Observation, Experiment as an adequate basis of Science, Deductive and inductive logic, falsification-A logical view,

Module: II Process of doing Research

Overview: Problem Definition, hypothesis and its function, Types of Research, Literature Review, Research Design, *Sampling:* Census and sample survey, different types of sample design, *Measurement:* Measurement and scaling techniques, *Methods of Data Collections:* Experimentation,

observation, interview, Survey, case study; *Data Analysis and Interpretation*: Qualitative and quantitative data, data presentation, central tendency and dispersion, association, test of significance.

Module: III Report Writing and Presentation

Significance of report writing, different steps in report writing, layout of research report & Types of Report, Presentation, Ethics in Report Writing.

Books Recommended

FCMG0113 INDIAN SOCIETY AND CULTURE

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Theory</i>	<i>2</i>

Course Objectives:

- a) Develop an understanding social environment
- b) Develop an understanding of cultural environment
- c) Understanding the linkages among social, cultural and business environment

Course outcomes :

- Students would develop an idea about the socio-cultural environment in which they would be working as scientists, researchers and entrepreneurs.
- More specifically, they would get an appreciation of how societal and cultural issues interface with technology and science in the context of overall development of the country.
- Attempt is also made to familiarise students with the science and technology policies that would benefit modern India.

Course Contents:

Module 1: Introduction to Indian Society

Indian Society - Roots of Indian Society , Social Structure – Rural and Urban Contexts, Social Institutions in Indian Society, Caste, Tribe, Dalits and Other Excluded Groups, Power and Conflicts

Module 2: Introduction to Culture in Indian Society

Culture in Ancient, Medieval and Modern India, Languages and Literature in India, Culture Change and its Impact on Indian Society

Module 3: Social Movements

Reformers and Radicals – Rammohan Roy, Syed Ahmed Khan, JotiroPhule, Gopal Krishna Gokhale, BalGangadharTilak, TarabaiShinde, DayanandaSaraswati and Vivekananda Nurturing a Nation – M. K. Gandhi, RabindraNath Tagore, B R Ambedkar, Mohammad Ali Jinnah, EV Ramaswami, Jawaharlal Nehru, RammanoharLohia, Jayaprakash Narayan, Verrier Elwin Peasant, Tribal, Women and Environment movement

Module 4: Social Issues in Modern India

Poverty, Gender Inequality, Disparity and Social Exclusion: SC, ST, Women, Child, Challenged

Module 5: Science, Technology and Society

Science, Technology and Development Linkage, Appropriate Technology, Science and Technology Policy

Books Recommended:

1. *Indian Society and Culture: Continuity and Change* – by N. Hasnain
2. *Social and Cultural History of India* – O.M. Prakash
3. *Makers of Modern India* – RamachandraGuha

Syllabus

CCME0405 THEORY OF MACHINES

Pre-requisites	Course type	Credits
NIL	Theory+Practice	5

Course Objectives: The overall objective of this course is to learn how to analyze the motion of mechanisms, design mechanisms
Course Outcomes:

1. Distinguish kinematic and kinetic motion.
2. Identify the basic relations between distance, time, velocity, and acceleration.
3. Use graphical and analytic methods to study the motion of various mechanisms.
4. Design basic cam systems

MODULE –I(21Hours)

Mechanisms: Kinematic concept of link, kinematic pair, kinematic chain, Mechanism, binary, ternary and quaternary joints, degree of freedom of planar mechanism, inversions of four bar mechanism, single slider crank mechanism and double slider crank mechanism. (Most of the topics will be through PPT presentation and demonstration)

Motion Analysis: Types of motion, velocity diagram, Instantaneous centre method, Kennedy theorem, relative velocity method, velocities in four bar and slider crank mechanism, Klein's construction. Acceleration diagram of planar mechanism, Coriolis component of acceleration. (The topic is taught through practice)

MODULE –II(21Hours)

Gears: Classification and basic terminology, Fundamental law of gearing, involute tooth profile, Spur gears, other types of gears, standards in tooth forms, length of path of contact and arc of contact, contact ratio, interference in involute gears. (The topics are taught through PPT presentation and demonstration)

Gear trains: Simple, compound, reverted and epi-cyclic gear trains. (The topics are taught through PPT presentation and demonstration)

Steering gear mechanism: Law of correct steering, Davis and Ackermann steering gear mechanism, universal or Hooke's joint.

MODULE –III(25Hours)

Frictional devices: Plate & cone clutches, Brakes and dynamometers, analysis of shoe brake and band brake, study of absorption and transmission dynamometer, Belt and rope drive, slip and creep of belt, maximum power transmitted by belt, introduction to rope and chain drives. (The topic is taught through PPT presentation and demonstration)

CAMS: Various types of cams and followers, nomenclature of cam profile, Displacement, velocity and acceleration of followers. Draw cam profile for various

types of follower motion. (The topic will be through practice mode)

Text Book:

1. Theory of Machines, S.S. Rattan, Tata McGraw Hill.
2. A Textbook of Theory of Machines by R. K. Bansal, Laxmi Publication

Reference Books:

1. Theory of Machines and Mechanisms by Ghosh and Malik
2. Mechanism and Machine Theory by J.S. Rao and R.V. Dukkipati

Manufacturing Technology I

SubjectName	Code	Type ofcourse	Credit	Prerequisite
Manufacturing Technology I	MECC0401	Theory+ Practice	2+1(3)	Workshop Practice

1. Objective

<ul style="list-style-type: none"> •To Educate the Students on Principles, Usage and Application of Various Non-chip Forming Manufacturing Technologies. •To Impart Knowledge on Practical Applications of These Technologies Through Actual Experiments and Making of Sample Products.

2. Course Outcomes

<ul style="list-style-type: none"> •Students will have Knowledge and Skills to Understand Actual Manufacturing Processes used in Industry and will be Able to Correlate a Specific Process with the Part/Component being Produced. •Students will be Able to Select the Most Optimum Manufacturing Process for a Specific Product Design and Application.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work & Report
	Project		Report & Presentation
	Quiz		Surprise/Preannounced ones
External Examination		30 (ETH)	Written Examination
Total		100	

Module I (9 Hours)

(Casting Process)

Introduction, Basic Factors Involved in Casting, Patterns (Classifications, Allowances and Considerations), Technology of Mould Making, Principles of Gating Design, Principles of Risers, Core Making Process, Chills and Chaplets, Solidification of Castings, Inspection and Defects in Castings, Post Casting Processing (Cleaning, Finishing & Heat Treatment of Castings).

Module II (11 Hours) (Special Casting)

Special Casting Processes (Permanent Mould Casting, Die Casting, Slush Casting, Centrifugal Casting, Investment Casting, Carbon Dioxide Casting, Stir Casting, Continuous Casting, Shell and Plaster Molding Process, Full Mould Process, Vacuum Sealed Molding Process, Graphite & Ceramic Mould Casting, Semi-solid Metal Casting).

Practice:

1. To Prepare a Green Sand Mould with a Standard Pattern and Study the Tools Used.
2. Furnace Operation & Aluminum Melting to Pour a Casting.

3. Casting Simulation Using Pro CAST.

Module III (5Hours) (Welding Technology)

Physics of Welding, Welding Classification, Applications of Various Welding Processes, Gas Cutting & Brazing Gas Flames, Flux and Filler, Arc Welding: SMAW Principle and Power Source, Types of Electrodes, Functions of Flux Coatings and AWS Classification and Coding.

Module IV (6Hours)

GTAW, GMAW, SAW & Flux-cored Arc Welding, Resistance Welding - Spot and Seam Welding, Flash Butt Welding, Thermit Welding, Friction Welding, Welding Methods like Plasma Arc, Laser Beam, Electron Beam, Ultrasonic, Explosive Welding, Diffusion Bonding, Cladding, Brazing and Soldering.

Module V (9Hours)

Welding Positions, Edge Preparation in Butt & Fillet Welding, Destructive and Non-Destructive Testing of welding, Welding Defects

Practice:

4. Safety Practice and PPE for Welding.
5. Brazing of 20mm MS Pipe Joint.
6. Bead on Plate Varying Current & Voltage for SMAW using E6013.
7. GTAW Torch Assembly and Bead on Aluminum Plate without & with Filler.

Module VI (7Hours) (Metal Forming)

Plastic Deformation and Yield Criteria, Relation between Tensile and Shear stress, Cold and Hot Working, Rolling: Principle and mechanism, Defects, Types of Rolling Mills, Forging: Classification, Open-Die Forging, Impression-Die and Closed-Die Forging, Drop and Press Forging, Forging defects.

Practice:

8. Making a Square Section from 20mm Round MS Bar.

Module VII (9Hours)

Drawing: Methods and Variables, Wire Drawing, Extrusions: Advantages and Disadvantages, Direct, Indirect, Impact and Hydrostatic Extrusion and their Applications, Extrusion of Tubes, Extrusion Defects.

Sheet Metal Work: Bending, Forming and Deep drawing, Shearing, Punching and Blanking - Method and Application.

Practice:

9. Shearing of 2mm MS Sheet and Use of a Progressive Die to Manufacturing a Washer.

4. Course Outline

Module I (8 Hours) (Conventional Machining)

Mechanics of Metal cutting; Cutting Tool Materials (Principal Tool Materials, Advanced Tool Materials, Indexable Inserts, Tool Coatings); Cutting Fluids and Lubricants (Characteristics, Types, Selection Criteria, Dry and Near-Dry Machining, MQL);

Practice:

1. Measurement of Cutting Tool Temperature using Thermocouple.

Module II (8 Hours)

Theory of Machinability (Tool Life, Cutting Forces, Power Consumption, Surface Roughness, Thermal Aspects).

Mechanism of Cutting on a Lathe, Milling Machine, Shaper, Planer and Slotter;

Practice:

2. Measurement of Cutting Forces using Dynamometer.

Module III (10 Hours)

Drilling (Deep Hole Drilling & Micro Drilling); Boring and Reaming Operations; Principles of Jigs and Fixtures

Practice:

3. Measurement of Surface Roughness using Talysurf.
4. Process Optimization using Minitab and Matlab.

Module IV (10 Hours) (Non-Conventional Machining & Additive Manufacturing)

Non-Conventional Machining Process, Principle and Equipment (Electro-Chemical Machining; Electric Discharge Machining, Laser Beam Machining; Electron Beam Machining; Hot Machining)

Practice:

5. Study of EDM working Principle and Process Parameters.

Module V (9 Hours)

Additive Manufacturing (3D Printing, Rapid Prototyping); Developments in Additive Manufacturing; Classifications of Additive Manufacturing systems

Practice:

6. Component Manufacturing Using 3D Printer.

Module VI (6 Hours) (Computer Aided Manufacturing)

GD&T Concepts (Machining Accuracy; Fundamentals of Measurements; Principles of Tolerancing; Maximum and Minimum Material Requirement)

Module VII (25 Hours)

CAM-Introduction, Types-NC, CNC, DNC, Machining Centers, Adaptive Control, Part Programming G-Codes, M-Codes, Programming & Machining for Simple Components

Practice:

7. Manual Programming Related to Facing, Turning, Drilling, Boring & Pocketing in CNC Machines.
8. Simple Contouring Operation using CNC Milling Machine.

9. 3D Modeling & Product Design with CATIA and SolidWorks (3D Experience)
10. Generation of NC Program and Product Manufacturing by Using MasterCAM Software.
11. Process Planning, Programming, Simulation and Optimization of Machining Processes Using DELMIA.

Design for Manufacturing

SubjectName	Code	Type ofcourse	T-P-Pr (Credit)	Prerequisite
Design for Manufacturing	MECC0403	Theory+ Practice	2+2(4)	Workshop Practice

1. Objective

- To provide the students detailed understanding of primary manufacturing processes and product design from concept-to-mass production.
- To impart knowledge on use and application of software to solve design engineering problems in metal casting, forging and sheet metal forming processes.

2. Course outcomes

- Students will be able to select appropriate manufacturing technology and process to produce a product effectively with quality and optimized production cost.
- Students will have skills and knowledge to use software like CATIA, Novaflow and SolidCV, ProCAST, Flow-3D Cast, DEFORM-3D and PAM-STAMP2G.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Class Test	20	Written Examination
	Internal Practice	20+10	Written Examination+ Learning Record
External Examination	External Theory+ EPR	30+20	Written Examination + Lab. Work & Record
Total		100	

4. Course Outline

Module I(8 Hrs)

Introduction to Design: Problem and Solutions, What is Good Design? Design as Model-making, Design, Creativity, Innovation and Invention. The History of DFM/A, Why Companies Are using DFM/A, The

Boothroyd Dewhurst Design for Manual Assembly Method, Product Complexity, Product Variants, Reusable/Modularity/Standard Design, Product Costs, Quality, Regulatory & Safety Requirements, Aesthetic and Ergonomic Considerations in Design, Design for Maintenance.

Module II (8Hrs)

Design for Manufacture: Assembly, Shipping, Maintenance, Design Efficiency, Materials Selection, Manufacturing Considerations in Design: Role of Processing in Design, Types of Manufacturing Processes, Design for Manufacturability, Design for Castings, Forgings, Sheet Metal Forming, Design for Machining, Powder Metallurgy, Welding, Heat Treatment, Assembly, Corrosion Resistance, Designing with Plastic Processing.

Module III (6Hrs)

Economics of Manufacturing, Product Target Cost Evaluation: Categories of Costs, Methods of Developing Cost Estimates, Cost Indexes, Cost Capacity Factors, Estimating Plant Cost, Design to Cost, Manufacturing Costs, Value Analysis in Costing.

Module IV (8Hrs)

Metal Casting Design: Design for Castability; Introduction to Casting, Types of Casting, Mathematical Modelling of Liquefying the Material, Viscosity and Fluidity Parameter included as Flow Equation, Casting Microstructure and Defects, Casting Design Process; Sprue, Gate, Runner Design according to Flow Equations, Analysis Prediction for Metal Casting, Liquid Phase Fraction, Shrinkage Prediction, Calculating Feeder, Secondary Dendrite Arm Spacing (SDAS).

Module V (15Hrs)

Simulation of Casting Process; STL Part Design Generation from CAD Package, Simulation of Solidification, Calculation of Riser, Design of Gating and Simulation of Mold Filling, Simulation of Riser and Gating System. Components: Die Casting Design and Simulation of Casting of Engine Block using Aluminum Alloy Specifically Al-Si-Cu-Mg-Fe Alloy. Simulation of Casting for Shell Housing.

Practice:

1. Casting Design & Analysis using CATIA, Novaflow and Solid CV, ProCAST, Flow-3D Cast.

Module VI (15 Hrs)

Forging Design: Design Aspect of Forging and their Significance. Procedure of Working out of Forging Drawing and Technology for Open and Close Die Forgings. Developing the Forging Drawing of Some Jobs. Factors Affecting the Metal Flow in Closed Dies. Forgeability, Friction and Lubrication, Die Temperature, Size and Shape Factor, Flash and Gutter. Designing Performing, Finisher, Trimming and Punching Dies; Selection of Forging Equipments; Die Wear, Die Materials, Forging Defects, Heat Treatments of Dies and Forgings.

Practice:

2. Forging Design & Flow Simulation using CATIA and DEFORM-3D.

Module VII (15Hrs) (Sheet Metal Forming)

Sheet Metal: Design for Formability; Formability of Sheet Metal, Press for Sheet Metal Process, Die & Punch, High Energy Rate Forming Process, Extrusion Process and Bulk Deformation Process. Blank Holder Force Estimation, Incremental Forming Analysis Residual Stress Vs Blanking Force Analysis and Optimization, Hot Stamping Process.

Analysis Prediction: Differential heating and Differential Cooling in Hot Forming Process, Map of Meso Patch on the component, Force Required for Product Shape. Components: B-pillar Trim, Bonnet, Suspension Rocker Arms, Roof Liner, Body Side Outer.

Practice:

3. SheetMetalToolDesign inCAD.
4. UseofCATIAand PAM-STAMP2G

Finite Element Analysis

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Finite Element Analysis	MECC0404	Theory+Practice	2+2(4)	Nil

1. Course Objective

<ul style="list-style-type: none"> To Educate the Students on Fundamental Principles of Finite Element Analysis. To Impart Knowledge on Use and Application of Software for Analysis, Interpretation of Results through Hands-on Practices/Exercises.

2. Course Outcome

<ul style="list-style-type: none"> Students will be Able to Deploy Practical and Industrial Approach using FEA towards Solving Engineering Problems.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	ITH/Cass Test	20	Best of two Written Exam
	IPR	30	Lab Work & Report
External Examination	EPR	20	Lab Work & Report
	ETH	30	External Exam
Total		100	

4. Course Outline

Module I (5 Hours)

Overview to Finite Element Analysis: History of FEA; Introduction to types of FEA Analysis, Role of Computer, General Procedure of Finite Element Method, Advantages and Applications of FEA, Principle of Convergence, Review of Matrix Algebra and Gaussian Elimination.

Module II (9 Hours)

One Dimensional Analysis: Coordinates Systems, Field Variable, Shape Functions, Element Stiffness Matrix and Load Vector, Assembly, Global Equations, Imposition of Boundary Conditions.

Overview to Pre-Processing (About Meshing, Types of Meshing: 1-D, 2-D, 3-D, Special Elements, Meshing Quality Criteria, Material Properties, and Boundary Conditions)

Module III (12 Hours)

Pre-Processing: CAD Geometry Preparation; Meshing and Quality Check; Material Assignment & Boundary Conditions.

Analysis of Bar, Spring, Truss and Beam Elements.

Module IV (15 Hours)

Introduction Types of Analysis & Detail: Linear Static Analysis; Non-Linear Analysis; Dynamic Analysis

Module V (7 Hours)

Thermal Analysis; Computational Fluid Dynamics; Fatigue Analysis; Crash Analysis; NVH Analysis.

Module VI (12 Hours)

Structural Analysis of a Pressure Vessel; Thermal Analysis of a Pressure Vessel; Dynamic Analysis of a Scooter Frame.

Module VII (15 Hours)

Post Processing, Result Interpretation and Testing & Field Data Acquisition.

Solving: Post-Processing, Result Interpretation.

Digital Manufacturing

SubjectName	Code	Type ofcourse	T-P-Pr (Credit)	Prerequisite
DigitalManufacturing	MECC0405	Theory+ Practice	2+1(3)	Nil

1. Objective

- Toeducatethestudents onentirestagesofproductlifecycle beginningfromconceptstage, design, testing, validation, manufacturing, servicingetc.
- Toeducatethestudents on Industry4.0 standards.

2. Course Outcomes

- StudentswillbeabletousemodernsoftwarelikeDELMIA-Quest(DassaultSystem)and Camtesia to conceptualiseand create3Dfactorylayouts andoptimise resourceplanning.
- Students willbeable todosimulation ofmanufacturingprocessesusingsoftwaretools.

3. Evaluation Systems

InternalExamination	Component	%ofMarks	Method ofAssessment
	InternalTheory	20	Written Examination
	InternalPractice	20+10	Reportand Presentation
External Examination	ExternalTheory	30	Written Examination
	ExternalPractice	20	Reportand Presentation
Total		100	

4. CourseOutline

Module 1 (3hours)

Introduction toProductDevelopment: ProductDesign concept – System&Sub-systems, Design Validation,Prototyping,Facility&ProcessPlanning,ToolingDevelopment,Manufacturing,Quality, Serviceability.

New Product Introduction (NPI): Concept, Simultaneous Engineering, Cost Engineering – Value AnalysisValue Engineering(VAVE),TearDown &BenchMarking.

Module 2 (6hours)

Digital Manufacturing: Overview, Industry challenges, End to End solution for various industry, Benefits,IndustryCasestudies,IntroductionofIndustry4.0,Convention&EmergingTechnological Solution.

Product Life Cycle (PLM): Overview, Life Cycle Stages, BOM & CAD Management, Change Management, Technological Solution.

Module 3 (6 hours)

Industry 4.0: 4th Industrial Revolution & its Pillars, Overview of Digitization & Simulation, The Industrial Internet of Things, Augmented Reality, 3D-Printing-Additive Manufacturing, Autonomous Robots, Cyber Security, Big Data Analysis, Cloud Server & Data, Horizontal & Vertical systems Integration, C-Flex, Flexible Manufacturing System (FMS)

Module 4 (15 Hours)

Process Planning: Overview, Capacity Planning, Process/Operations, Process Planning, Assembly & Job shop planning, Cycle Time, Standard Man Hour (SMH), Time Analysis–MOST Maynard Operation Sequence Technique (MOST) Technique, Balancing, Shop floor Process and Quality Documentation (PFD, PFMEA, CP)

Digital Twin: Introduction of Facility/Layout Planning, Digital Factory with Plant Facilities & resources, Assembly/Di-assembly, Tool, Process Manufacturability Simulation, Ergonomics Analysis, Visibility & Reachability Simulation, Robotics Simulation, Virtual Commissioning, E-Learning / 3D Work Instruction,

Module 5 (11 Hours)

Material/Factory Flow Simulation: Lab Session using DELMIA-Quest (Dassault Systeme) & Camtasia, Discrete Event Simulation, Factory Layout and Alternate Material Handling Systems, Factory Flow & Logistics Simulation, Virtual Factories in 3D Environment and Analyses, Bottleneck Identification and Corrective Actions, Labor Requirements or Resource Requirements, Throughput of the Production System, Productivity and Utilizations.

Lean Manufacturing: Introduction: Overview of a pre-built Model, Modeling Methodology, Running a Model, Creating Reports and Charts.

Module 6 (11 Hours)

Material Handling Systems: Modeling Labor, Modeling Conveyor Systems, Creating Pallets, Modeling AGV, Modeling Power and Free Systems, Getting Started: Setting the Startup Options, Creating the Library, Creating Basic Simulation Mode.

Animation & Kinematics: Building Basic CAD, Positioning Way Points, Building Kinematics Device, Assigning Resource Kinematics, Creating & Playing a Script, Adding a Grab and Release.

Module 7 (10 Hours)

Shifts and Schedules: Creating Shifts, Setting Schedules, Handling Interrupts, Handling Failures, Preview of Advanced Usage: Creating CRANES, Creating Reports, Debugging, Data Interface Methodology (in or out excel), Using Simulation Control Language (SCL), Using Batch Control Language (BCL), Report & Video Creation.

Note: Use of Approved Statistical Table Permitted in the Examination.

7. Session Plan

Sl. No	Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-I					
1	Introduction to Product Development: Product Design concept – System & Sub systems, Design Validation, Prototyping, Facility & Process Planning, Tooling Development, Manufacturing, Quality, Serviceability.	2	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=G3s4aPgcniw Chitale, A.K., Gupta, R.C., Product Design & Manufacturing, 6 th Edition, 2013, PHI Learning Private Limited.
2	New Product Introduction (NPI): Concept, Simultaneous Engineering, Cost Engineering – Value Analysis Value Engineering (VAVE), Tear Down & Bench Marking.	1	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=G3s4aPgcniw https://www.youtube.com/watch?v=TT6tVH6cDMM https://www.youtube.com/watch?v=ia7sQuiHVY Chitale, A.K., Gupta, R.C., Product Design & Manufacturing, 6 th Edition, 2013, PHI Learning Private Limited.
Module-II					
3	Digital Manufacturing: Overview, Industry challenges, End to End solution for various industry, Benefits, Industry Case studies, Introduction of Industry 4.0, Convention & Emerging Technological Solution.	3	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=HPRURtORnis Zhou, Z., Fundamentals of Digital Manufacturing Science, 2011, Springer Series in Advanced Manufacturing.
4	Product Life Cycle (PLM): Overview, Life Cycle	3	Lecture & Lab	Project	https://www.youtube.com/watch?v=_26E6QR_hmU

	Stages, BOM & CAD Management, Change Management, Technological Solution.		practice		https://www.youtube.com/watch?v=kVereJE1ZI
Module-III					
6	Industry 4.0: 4th Industrial Revolution & its Pillars, Overview of Digitization & Simulation, The Industrial Internet of Things, Augmented Reality , 3D-Printing-Additive Manufacturing, Autonomous Robots, Cyber Security, Big Data Analysis, Cloud Server & Data, Horizontal & Vertical systems Integration, C-Flex, Flexible Manufacturing System (FMS)	6	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=h9t06cyC7Es https://www.youtube.com/watch?v=pj8ApxsymB4 https://www.youtube.com/watch?v=G0EJmBoLq-g https://www.youtube.com/watch?v=r9wrgtz7Qx4 https://www.youtube.com/watch?v=WYnOGAvQEgk https://www.youtube.com/watch?v=6IRvZcRgEbs
Module-IV					
7	Process Planning: Overview, Capacity Planning, Process/Operations, Process Planning, Assembly & Job shop planning, Cycle Time, Standard Man Hour (SMH), Time Analysis – MOST Maynard Operation Sequence Technique (MOST) Technique, Balancing, Shop floor Process and Quality Documentation (PFD, PFMEA, CP)	7	Lab Practice	Project	https://www.youtube.com/watch?v=8MeHL0j-oKE https://www.youtube.com/watch?v=TPkxWAJvPw https://www.youtube.com/watch?v=m-ni_0no-JE https://www.youtube.com/watch?v=SiJXVdfCCiA
8	Digital Twin: Introduction of Facility/Layout Planning, Digital Factory with Plant Facilities & resources, Assembly/Di-assembly, Tool, Process Manufacturability Simulation, Ergonomics Analysis, Visibility & Reachability Simulation, Robotics Simulation, Virtual Commissioning, E-Learning / 3D Work Instruction.	8	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=r2GRLxAsEs https://www.youtube.com/watch?v=SK9fxHw-Nxk https://www.youtube.com/watch?v=UZs-cCsMqaI https://www.youtube.com/watch?v=l_ePLMV7NnA https://www.youtube.com/watch?v=11ttgmRJFOk
Module-V					

9	Material/Factory Flow Simulation: Lab Session using DELMIA-Quest (Dassault Systeme) & Camtesia, Discrete Event Simulation, Factory Layout and Alternate Material Handling Systems, Factory Flow & Logistics Simulation, Virtual Factories in 3D Environment and Analyses, Bottleneck Identification and Corrective Actions, Labor Requirements or Resource Requirements, Throughput of the Production System, Productivity and Utilizations.	6	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=zGQP6sURiLQ https://www.youtube.com/watch?v=kBby1Cdc44M https://www.youtube.com/watch?v=wfxlzV2mlc
10	Lean Manufacturing: Introduction: Overview of a pre-built Model, Modeling Methodology, Running a Model, Creating Reports and Charts.	5	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=iFydS5Hq1SY
Module-VI					
11	Material Handling Systems: Modeling Labor, Modeling Conveyor Systems, Creating Pallets, Modeling AGV, Modeling Power and Free Systems, Getting Started: Setting the Startup Options, Creating the Library, Creating Basic Simulation Mode.	5	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=PusvVnC_4Uc https://www.youtube.com/watch?v=nFu4FFgbMY4 https://www.youtube.com/watch?v=1RGlRH3FDoU
12	Animation & Kinematics: Building Basic CAD, Positioning Way Points, Building Kinematics Device, Assigning Resource Kinematics, Creating & Playing a Script, Adding a Grab and Release.	6	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=ysjqH3iKv4k
Module-VII					
13	Shifts and Schedules: Creating Shifts, Setting Schedules, Handling Interrupts, Handling Failures, Preview of Advanced Usage: Creating	10	Lecture & Lab practice	Project	https://www.youtube.com/watch?v=wVICveldyyM https://www.youtube.com/watch?v=6WIF7m9vD4U https://www.youtube.com/watch?v=V1TJ6b6_EjM

	CRANES, Creating Reports, Debugging, Data Interface Methodology (in or out excel), Using Simulation Control Language (SCL), Using Batch Control Language (BCL), Report & Video Creation.				
	Total Hours	62			

Internal Combustion Engines

Subject Name	Code	Type of Course	Credit	Prerequisite
Internal Combustion Engines	MECC0406	Theory+Practices	1+1(2)	Thermodynamics

1. Objective

- ✓ To educate the students on operating principles, technology behind internal combustion engines.
- ✓ To educate the students on construction and various sub-systems of internal combustion engines.

2. Course Outcomes

- ✓ Students will be able to test internal combustion engines for various performance parameters using engine test rigs.
- ✓ Students will be able to carry out emission tests using various types of fuels commonly used in internal combustion engines.

3. Evaluation Systems

Examination	Theory	Marks	Method of Assessment
	Internal	20	Written examination
Practice	External	30	Written examination+L.R+Assignment
	Practice	Marks	Method of Assessment
Internal	30	Experiment+L.R+VIVA	
External	20	Experiment+L.R+VIVA	
Total		100	

4. Course outline

Module I (16 Hours)

Performance Parameters and Characteristics: Introduction, Engine Power, Engine Efficiency, Engine Performance Characteristics, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.

Practice:

1. Study of Two/Four Stroke Petrol/Diesel Engine.
2. Port and Valve Timing Diagram of Two and Four-Stroke Petrol/Diesel Engines.

3. Load Test on Petrol Engine.
4. Load Test on Diesel Engine
5. Morse Test on Multi-Cylinder Petrol/Diesel Engine
6. Heat Balance Study of Petrol/Diesel Engine

Module II (8 Hours)

Fuel: Fuels of SI and CI Engine, Properties, Potential and Advantages of Alternative Liquid and Gaseous Fuels for SI and CI Engines.

Practice:

7. Preparation of Alternate Liquid Fuel.
8. Determination of Octane Number and Cetane Number of Fuel
9. Determination of Kinematic Viscosity, Density of Bio-Diesel and Bio-Ethanol

Module III (5 Hours)

Mechanical Injection Systems: Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Injection Pump, Governor, Fuel Injector, Nozzle.

Practice

10. Study of Mechanical Injection System

Module IV (3 Hours)

Electronic Injection Systems: Multi-Point Fuel Injection (MPFI) System, ECU, Injection Timing, Group Gasoline Injection System.

Practice:

11. Study of Electronic Injection System

Module V (3 Hours)

Ignition: Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.

Practice:

12. Study of Battery Ignition System of IC Engine

Module VI (4 Hours)

Combustion: Stages of Combustion in SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock in SI & CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI & CI Engine Combustion Chambers.

Module VII (08 Hours)

Cooling & Lubricating Systems: Air Cooling & Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System.

Engine Emission and Control: Mechanism of Pollutant Formation and its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.

Practice:

13. Comparative Study of Emissions from Engines using Fossil Fuel and Alternative Fuel.

14. Measuring Exhaust Emissions of an Engine by using Gas Analyzer.

6. Reference

Text Books:

1. Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition
2. A Textbook of Internal Combustion Engine, R.K. Rajput, LP, 2nd Edition

Reference Books:

1. A Course in IC Engines, V.M. Domkundwar, Dhanpat Rai and Sons

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I Introduction, Engine Power, Engine Efficiency, Engine Performance Characteristics, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.	16 (theo-4, practice-12)	lecturer+ lab Practice	Assignment with problem solving	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=PgvD9mx9Doo
Module II Fuel of SI and CI Engine, Properties, Potential and Advantages of Alternative Liquid and Gaseous Fuels for SI and CI Engines.	8 (theo-2, practice-6)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition
Module III Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Injection Pump, Governor, Fuel Injector, Nozzle.	5 (theo-3, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=P5-yxENaLDU&t=49s
Module IV Multi-Point Fuel Injection (MPFI) System, ECU, Injection Timing, Group	3 (theory-1, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K.

Gasoline Injection System.				Rajput, LP, 2 nd Edition
Module V Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.	3(theory-1, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition
Module VI Stages of Combustion In SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock In SI & CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI & CI Engine Combustion Chambers.	4(theory-4 hour)	lecturer	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=ZxkLgv8c3OE
Module 7 Air Cooling & Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System	2(theory-2 hour)	lecture	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition
Mechanism of Pollutant Formation and Its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.	6(theory-2, practice-4)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition

Design of Thermal Energy Systems

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Design of Thermal Energy Systems	MECC0407	Theory+ Practice	2+1(3)	Thermodynamics

1. Objective

- To educate the students on principles, technology and applications of various thermal energy systems as used in industry.
- To impart technical knowledge and skills on design of various thermal energy systems

2. Course Outcomes

- Students will be able to identify and select, design and implement appropriate thermal energy system corresponding to specific need.
- Students will be able to take up testing, maintenance of thermal energy systems with minimum

additionalinput.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course outline

Module I (12 Hours)

Heat Exchangers: Classification and Thermal Design of Heat Exchangers, Overall Heat Transfer Coefficient, Fouling Factor or Dirt Factor, Temperature Profiles in Heat Exchangers, LMTD Correction Factor, Pressure Drop in Heat Exchanger, Correlation for Tube Side Pressure Drop, Correlation for Shell Side Pressure Drop, Heat Transfer Effectiveness and Number of Transfer Units, Calculation and Designing of the Heat Exchanger, Double-Pipe Heat Exchanger.

Practice:

1. Determination of Overall Heat Transfer Coefficient of Concentric Tube Heat Exchanger
2. Determination of Effectiveness and Efficiency of Cross Flow Heat Exchanger
3. Determination of Overall Heat Transfer Coefficient of Shell and Tube Heat Exchanger

Module II (6 Hours)

Vapor Power Cycles: Introduction, Power Cycles, Carnot Vapor Cycle and its Limitations, Rankine Cycle, Means of Increasing Rankine Cycle Efficiency, Reheat Cycle, Regenerative Feed Heating Cycle, Binary Vapor Cycle, Gas-Vapor Coupled Cycles, Cogeneration.

Module III (6 Hours)

Air Refrigeration System: Introduction, Unit of Refrigeration, Coefficient of Performance, Refrigerants, Characteristics of Different Refrigerants, Ozone Depletion Potentials, Green House Potential Refrigerants, Use of Non-Polluting Refrigerants, Reversed Carnot Cycle, Bell Coleman Air Refrigerator

Module IV (12 Hours)

Vapor Compression System: Analysis of Theoretical Vapor Compression Cycle, Representation of Cycle on T-S and P-H Diagram, Simple Saturation Cycle, Sub-Cooled Cycle and Super-Heated Cycle, Effect of Suction and Discharge Pressure on Performance.

Practice:

4. Determination of C.O.P of Vapor Compression Refrigeration System
5. Determination of C.O.P and Capacity of an Ice Plant
6. Leak Detection and Charging of Refrigerants in a Domestic Refrigerator
7. Handson Practice on Soldering and Brazing

Module V (4 Hours)

Vapor Absorption System: Simple Ammonia Absorption System, Improved Absorption System, Electrolux Refrigerator, Lithium-Bromide Absorption Refrigeration System.

Module VI (10 Hours)

Air Conditioning: Factors Affecting the Air Quality, Dry Bulb Temperature, Wet Bulb Temperature, Relative Humidity, Dew Point Temperature, Specific Humidity, Absolute Humidity, Specific Enthalpy, Pressure, Ventilation, Study on Psychrometric Chart,

Practice:

8. Calculation of C.O.P. Of Air Conditioning System
9. Performance Test of Window Type Air Conditioner
10. To Carry Out Cooling Process of Fresh Air and Find Out Relevant Parameter of Air
11. To Carry Out Heating Process of Fresh Air and Find Out Relevant Parameter of Air

Module VII (10 Hours)

Heating and Cooling Load Calculation: Building Heat and Cooling Load Calculation, Air Distribution System, Calculation for Duct Size, Water and Air Cooled Chillers, Cooling Towers.

Practice:

12. Determination of Efficiency of Cooling Tower
13. Calculation of Cooling Load of a Confined Space

6. Reference**Text Books:**

1. J P Holman and Souvik Bhattacharyya, Heat Transfer, McGraw-Hill Education (India) Private Limited; 10th Edition; 2011.

Renewable Energy Systems

SubjectName	Code	Type ofcourse	Credit	Prerequisite
Renewable EnergySystems	MECC0408	Theory&Practice	2+1(3)	Nil

1. Objective

1. To expose the students about energy demand and supply situation in India.
2. To expose students about Renewable energy systems in use.

2. Course outcomes

- To have a knowledge of energy scene in India.
- To acquire the skill of analyzing and designing renewable energy systems.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
External Examination		50	Written examination
Total		100	

4. Course outline

Module I (8 Hrs)

Energy Demand and Supply Situation in India: Sectorial energy demands in India, Different Energy sources in India, Systems view of energy, Institutions and policies affecting energy systems.

Solar Energy: Basic Principle of solar energy and its conversion to thermal and electrical energy.

Module II (10 Hrs)

Photovoltaic system: Principle of Photovoltaic effect, Types and Application: Domestic and Industrial, Photovoltaic system and its Components, PV system and its Design, PV system Installation and Testing.

Practice:

1. Photo-Voltaic Power Output Vs Tilt Angle, Ambient Temperature and Shade.
2. Solar PV System Installation and Performance test.

Module III (9 Hrs)

Solar Thermal System: Types of Collector and its Application, Design of different types of Collectors, Testing and Installation of Solar Thermal System.

Practice:

3. Thermal Analysis of Solar Flat Plate Collector Using ANSYS.
4. Performance Test of a Solar Dryer.

Module IV (4 Hrs)

Wind Energy: Basic Principle of Wind Energy Conversion, Wind Data and Energy Estimation, Wind Energy Sources and Potential, Wind Power Systems: System components, Types of Turbine, Turbine Rating, Choice of Generators,

Module V (8Hrs)

Variable speed operation, maximum power operation, control systems, Application of Wind energy in different sectors, system design features, testing and installation of Wind systems.

Practice:

5. Simulation for Wind Turbine Generator with DC Motor in Solar/Wind Energy Mobile Workstation.

Module VI (8Hrs)

Bio Energy: Basic Principle of Biomass Generation and Conversion, Sources and Potential of Bio-Gas, Application of Bio-Gas in different Sectors.

Practice:

6. Performance Testing of Bio gas Plant.

Module VII (9Hrs)

Types of Conversion: Thermal, Thermochemical Process, and Fermentation: Aerobic and Anaerobic digestion, Design and Construction details of Main Digester, Testing and installation of Bio-Gas Plant.

Practice:

7. Energy Analysis of Different Biomass Products.

6. References

Text Books:

PVsysteminstallation and testing	4(Theory -1 hour, Practice-2 hours)	Lecturer+ Lab Practice	Field study	2 Solar Photovoltaic – Fundamentals, Technologies and Applications by CS Solanki, 3rdEdition2015. https://www.youtube.com/watch?v=Q5X6sMScwvM https://www.youtube.com/watch?v=ffm_sR_xdRkY
Module-III(9 Hrs)				
Solarthermalsystem: TypesofCollectorand itsapplication	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Design ofdifferent typesofcollectors	4(Theory -1 hour, Practice 2 hours)	Lecturer+ Lab Practice	Assignment	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=wwl0QAQCJyc
Testingand installation ofsolar thermalsystem	4(Theory -1hour, Practice-3 hours)	Lecturer+ Lab Practice	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Module-IV(4Hrs)				
Wind Energy: Basic Principleof Wind Energy Conversion, Wind DataandEnergy Estimation, wind energy sourcesand potential	2	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Windpowersystems: systemcomponents, TypesofTurbine, Turbine rating. Choice ofgenerators	2	Lecturer		1. Non-conventionalEnergy sourcesbyRaiG.D, 2nd edition(1999)Khanna Publishers, New Delhi. https://www.youtube.com/wat

				ch?v=LNXtm7aHvWc https://www.youtube.com/watch?v=DILJwsFl3w
Module-V(8Hrs)				
Variables speed operation, maximum power operation, maximum power operation, control systems, Application of Wind energy in different sectors	2	Lecturer	Assignment	1 Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
System design features, testing and installation of Wind systems.	6 (Theory - 2 hour, Practice - 4 hours)	(Lecturer + Lab Practice)	Assignment	1 Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Module-VI(8hrs)				
Bio Energy Basic Principle of Biomass Generation and Conversion	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Sources and potential of Bio-Gas	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Application of Bio-Gas in different sectors	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Testing and installation of Bio-Gas Plant	5 (Theory - 1 hour, Practice - 4 hour)	Lecturer + Lab Practice	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=PmBx5Zo8KZo
Module-VII(9 hrs)				
Types of Conversion: Thermal, Thermochemical Process	1	Lecturer	Assignment	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Fermentation: Aerobic and Anaerobic digestion	2	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Design and Construction details of Main Digester	6 (Theory - 2 hour, Practice - 4 hour)	(Lecturer + lab Practice)	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=PmBx5Zo8KZo

Fluid Power

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Fluid Power	MECC0409	Theory+ Practice	2+1(3)	NIL

1. Objective

- To impart knowledge to students on principles and technology behind use of fluid power.
- To educate the students on application of fluid power in various industrial applications and devices.

2. Course Outcomes

- Students will be able to identify various elements used in fluid power systems and will be able to deliver fluid power circuit diagrams.
- Students will be able to design and test various control circuits using Fluidsim software.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR) + 20(EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (5 Hours)

Hydraulic Turbines: Force of Jet on Stationary and Moving Plates (Flat and Curved), Expressions for Torque and Work Done. Classification, Definitions of Heads and Efficiencies.

Pelton Wheel - Construction and Working Principle, Work Done and Hydraulic Efficiency, Design Aspects.

Module II (10 Hours)

Reaction Turbines: Components, Working Principle, Work Done and Efficiency, Draft Tube, Specific Speed, Cavitation, Governing Mechanism, Selection of Turbines.

Practice:

1. Impact of Jets on Vanes
2. Performance Test on Pelton Wheel
3. Performance Test on Francis Turbine

4. Performance Test on Kaplan Turbine

Module III (12 Hours)

Reciprocating Compressors: Construction and Working, Multistage Conditions for Minimum Work, Intercooling, Efficiency and Control of Air Compressors

Rotary Compressors: Introduction, Classification, Roots Blower, Vane Type, Screw Compressor, Scroll Compressor

Axial Flow Compressors: Construction of an Axial Flow Compressor, Aerofoil Blading, Lift and Drag, Performance Characteristics

Practice:

5. Determination of volumetric Efficiency of Reciprocating Air Compressor.
6. To Determine the Efficiency of Rotary Air Compressor.
7. To Determine the Efficiency of Centrifugal Air Compressor.

Module IV (5 Hours)

Basic Hydraulic and Pneumatic: Types, Construction, Working and Applications of (i) Pressure Control Valves, (ii) Directional Control Valves, (iii) Flow Control Valves, (iv) Proportional Control Valve (Proportional Pressure Relief Valve, Proportional Pressure Reducing Valve, Proportional Direction Valve).

Module V (15 Hours)

Hydraulic Pumps: General Assembly Sketch, Main Parts, Working Principle, Applications and Comparison of Following Pumps: External, Internal Gear Pumps & Ge-Rotor (Generator Rotor), Lobe, Screw, Vane Piston, Centrifugal Pump, Reciprocating Pump.

Actuators: Classification, Construction, Working and Applications.

Practice:

8. To Design Different Circuit by Using Different Valves & Actuators with Different Conditions.
9. Performance Test on Single Stage Centrifugal Pump
10. Performance Test on Reciprocating Pump
11. Testing Different Circuits on Fluid-Sim Software.
12. Testing Different Circuit on Pneumatic Kit.

Module VI (5 Hours)

Sensors and Relay: Measuring Devices and Dynamic Characteristics, Active and Passive Sensors and Transducers, Relay, Classifications and Working Principle.

Motion Sensors: Resistive Strain Gauge, LVDT, RVDT, Capacitive, Piezo, Seismic Pickups, Vibrometers and Accelerometers.

Module VII (8 Hours)

Optical Sensors: Lasers, Photo-Detectors and Optical Fiber As Sensors

Electro Pneumatic and Hydraulics: Servo Control Valves: Mechanical Hydraulic Servo Valve, Electro Hydraulic Servo Valve, Single Stage, Two Stage Flapper Type, Jet Pipe Type.

Practice:

13. Design Different Circuit by Using Different Valves & Actuators with Different Conditions.
14. Testing Different Circuits on Fluid-Sim Software.

6. Reference

Text Book:

1. Oil Hydraulic Systems by S.R. Majumdar, Tata McGraw-Hill Publication
2. Fluid Mechanics and Hydraulic Machines, R.K. Bansal, Laxmi Publications

Reference Book:

1. Hydraulic and Pneumatics, A Technician's & Engineer's Guide by Andrew Parr Jaico Publishing House.
2. Festo Manuals

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Force of Jet on Stationary and Moving Plates (Flat and Curved), Expressions for Torque and Work Done. Classification, Definitions of Heads and Efficiencies. Pelton Wheel-Construction and Working Principle, Work Done and Hydraulic Efficiency, Design Aspects.	5	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice				
1. Impact of Jets on Vanes 2. Performance Test on Pelton Wheel	4			
Module II				

Reaction Turbines: Components, Working Principle, Work Done and Efficiency, Draft Tube, Specific Speed, Cavitation, Governing Mechanism, Selection of Turbines.	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice				
3. Performance Test on Francis Turbine	4			
4. Performance Test on Kaplan Turbine				
Module III				
Reciprocating Compressors: Construction and Working, Multistage Conditions for Minimum Work, Intercooling, Efficiency and Control of Air Compressors	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Rotary Compressors: Introduction, Classification, Roots Blower, Vane Type, Screw Compressor, Scroll Compressor	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Axial Flow Compressors: Construction of an Axial Flow Compressor, Aerofoil Blading, Lift and Drag, Performance Characteristics	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice:				
5. Determination of volumetric Efficiency of Reciprocating Air Compressor.	6			
6. To Determine the Efficiency of Rotary Air Compressor.				
7. To Determine the Efficiency of Centrifugal Air Compressor.				
Module IV				
Basic Hydraulic and Pneumatic: Types, Construction, Working and Applications of (i) Pressure	5	lecture + lab practice	Assignment with problem solving	Oil Hydraulic Systems by S.R. Majumdar, Tata Mcgraw-Hill Publication

Control Valves. (ii) Directional Control Valves, (iii) Flow Control Valves. (iv) Proportional Control Valve(Proportional Pressure Relief Valve, Proportional Pressure Reducing Valve, Proportional Direction Valve).				
Module V				
Hydraulic Pumps: General Assembly Sketch, Main Parts, Working Principle, Applications and Comparison of Following Pumps: External, Internal Gear Pumps & Ge-Rotor (Generator Rotor). Lobe, Screw, Vane Piston, Centrifugal Pump, Reciprocating Pump. Actuators -Classification, Construction, Working and Applications.	9	lecture + lab practice	Assignment with problem solving	Oil Hydraulic Systems by S.R. Majumdar, Tata Mcgraw-Hill Publication Festo manuals
Practice				
8. To Design Different Circuit by Using Different Valves & Actuators with Different Conditions. 9. Performance Test on Single Stage Centrifugal Pump 10. Performance Test on Reciprocating Pump 11. Testing Different Circuits on Fluid-Sim Software. 12. Testing Different Circuit on Pneumatic Kit.	6			
Module VI				
Sensors and Relay: Measuring Devices and Dynamic Characteristics, Active and Passive Sensors and Transducers, Relay, Classifications and Working	5	lecture + lab practice	Assignment with problem solving	1. Oil Hydraulic Systems by S.R. Majumdar, Tata Mcgraw-Hill Publication 2. Festo manuals

Principle. Motion Sensors: Resistive Strain Gauge, LVDT, RVDT, Capacitive, Piezo, Seismic Pickups, Vibrometers and Accelerometers.				
Module VII				
Optical Sensors: Lasers. Photo-Detectors and Optical Fiber As Sensors Electro pneumatic and Hydraulics: Servo Control Valves: - Mechanical Hydraulic Servo Valve, Electro Hydraulic Servo Valve, Single Stage, Two Stage Flapper Type, Jet Pipe Type.	4	lecture + lab practice	Assignment with problem solving	1. Oil Hydraulic Systems by S.R. Majumdar, Tata Mcgraw-Hill Publication 2. Festo manuals
Practice				
13. Design Different Circuit by Using Different Valves & Actuators with Different Conditions. 14. Testing Different Circuits on Fluid-Sim Software.	4			
TOTAL	60			

Mechanics of Machines

Subject Name	Code	Type of course	Credit	Prerequisite
Mechanics of Machines	MECC0410	Theory+ Practice	2+1(3)	Nil

1. Objective

- ✓ To educate the student on basic theories, concepts and methods used for study and analysis of commonly used mechanisms in various applications.
- ✓ To educate the students on some of the widely used mechanical power transmission elements.

2. Course Outcomes

- Students will have knowledge and skills to analyse, design and develop mechanisms suited to specific applications.
- Students will have knowledge and skills to study and understand working of complex mechanisms and machines enabling them to safely operate and maintain such installations.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (09 Hours)

Planar Mechanisms: Kinematic Link, Pair, Chain and Mechanism; Types of Links and Joints, Degree of Freedom; Grashof's Law for four bar Mechanism, Inversions of four bar Mechanism, Single Slider Crank Mechanism and Double Slider Crank Mechanism.

Practice :

- Position Analysis of Grashof and non-Grashof four bar Mechanism
- Position Analysis of Slider Crank Mechanism, Scotch Yoke Mechanism and Elliptical Trammel

Module II (14 Hours)

Motion Analysis: Instantaneous Centre of Rotation, Number and Types of Instantaneous Centres, Kennedy Theorem, Relative Velocity Method, Velocities in Four Bar and Slider Crank Mechanism, Crank and Slotted Lever Mechanism, Angular Velocity Ratio Theorem, Acceleration Diagram of Single Slider-Crank Mechanism, Coriolis Component of Acceleration.

Practice:

- Instantaneous Center Method to Find Velocity of Various Mechanisms
- Klein's Construction for Determination of Velocity and Acceleration of Reciprocating Parts
- Velocity Analysis of Grashof and Non-Grashof Four Bar Mechanism
- Velocity Analysis of Slider Crank Mechanism and Scotch Yoke Mechanism
- Acceleration Analysis of Slider Crank Mechanism

Module III (09 Hours)

Gears: Classification and Basic Terminology, Fundamental Law of Gearing, Standard forms of Tooth, Length of Path of Contact and Arc of Contact, Contact Ratio, Interference in Involute Gears.

Gear trains: Simple, Compound, Reverted and Epi-Cyclic Gear Trains.

Practice:

- Study of Operations of Various Gear Trains in Automobiles

Module IV (07 Hours)

CAM: Various Types of Cams and Followers; Displacement, Velocity and Acceleration Diagrams for Different Follower Motions; Nomenclature of Cam Profile.

Practice:

9. Construction of Cam Profile for Various Follower Motions

Module V (05 Hours)

Inertia forces in reciprocating parts: Velocity and Acceleration of a Piston, Angular Velocity and Angular Acceleration of Connecting Rod, Engine Force Analysis, Dynamically Equivalent System.

Module VI (08 Hours)

Gyroscope: Gyroscopic Couple, Gyroscopic Effect on Naval Ships and Aeroplanes, Stability of Two-wheeler Vehicles.

Practice :

10. Determine Gyroscopic Couple on Motorized Gyroscope

Balancing: Static and Dynamic Balancing, Balancing of Several Masses Revolving in the Same Plane and Different Planes, Balancing of Reciprocating Mass, Partial Primary Balancing, Partial Balancing of Locomotives.

Practice:

11. Balancing of Several Masses Revolving in the Same and Different Planes

Module VII (08 Hours)

Vibration: Basic Concepts and Types of Vibration, Methods of Vibration Analysis, Free Undamped Longitudinal, Transverse and Torsional Vibrations, Damped Free Vibrations, Logarithmic Decrement, Forced Vibration with Harmonic Excitation, Vibration Isolation and Transmissibility.

Practice:

12. Determination of Critical or Whirling Speed of Shaft
13. Simple and Compound Pendulum

Text Book:

1. Theory of Machines, S.S. Rattan, Tata McGraw-Hill.
2. Theory of Machines, R.K. Bansal, Laxmi Publication

Reference Books:

1. Theory of Machines, Sadhu Singh, Khanna Publishers
2. Design of Machinery, Robert L. Norton, McGraw-Hill

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE -I				

Kinematic link, pair, chain and mechanism; types of links and joints, degree of freedom; Grashof's law for four bar mechanism	3	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
Inversions of four bar mechanism	2	Lecture	Assignment	
Single slider crank mechanism and double slider crank mechanism.	4	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
MODULE II				
Instantaneous centre of rotation, number and types of instantaneous centres, Kennedy theorem, relative velocity method	3	Lecture	Assignment	
Velocities in four bar, slider crank mechanism, crank and slotted lever mechanism	2+2	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html# http://mm-nitk.vlabs.ac.in/index.html#
Angular velocity ratio theorem	1	Lecture	Assignment	
Acceleration diagram of single slider-crank mechanism	2+2	Lecture + Practice	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
Coriolis component of acceleration.	2	Lecture	Assignment	
MODULE - III				
Classification and basic terminology, fundamental law of gearing	2	Lecture	Assignment	https://www.youtube.com/watch?v=Z1f29M4o3jI
Standard forms of tooth, length of path of contact and arc of contact, contact ratio, interference in involute gears.	3	Lecture	Assignment	
Simple, compound, reverted and epi-cyclic gear trains.	2+2	Lecture + Practice	assignment	
MODULE IV				
CAM: Various types of cams and followers	1	Lecture	Assignment	https://www.youtube.com/watch?v=YbjmphKVVpA
Displacement, velocity and acceleration diagrams for different follower motions; nomenclature of cam profile	2+2+2	Lecture + Practice	assignment	
MODULE - V				
Velocity and acceleration of a piston, angular velocity and	3	Lecture	Assignment	

angular acceleration of connecting rod				
Engine force analysis, dynamically equivalent system	2	Lecture	Assignment	
MODULE- VI				
Gyroscope: Gyroscopic couple, gyroscopic effect on naval ships	1+2	Lecture + Practice	Assignment	
Gyroscopic effect on aeroplanes, stability of two-wheeler vehicles.	1	Lecture	Assignment	https://www.youtube.com/watch?v=ZsaVIW1BFUQ
Balancing: Static and dynamic balancing, balancing of several masses revolving in the same plane	1+1	Lecture + Practice	Assignment	
Balancing of several masses revolving in different planes	1	Lecture	Assignment	https://www.youtube.com/watch?v=_CwACU8Zfug
Balancing of reciprocating mass, partial primary balancing	1	Lecture	Assignment	https://www.youtube.com/watch?v=Eg9AwoxvwlQ
MODULE -VII				
Vibration: Basic concepts and types of vibration, methods of vibration analysis, free undamped longitudinal, transverse and torsional vibrations	2+2	Lecture + Practice	Assignment	https://www.youtube.com/watch?v=qV65LJ6LpI4
Damped free vibrations, logarithmic decrement	2	Lecture	Assignment	https://www.youtube.com/watch?v=Zp9g0Xbv7G4
Forced vibration with harmonic excitation, vibration isolation and transmissibility	2	Lecture	Assignment	https://www.youtube.com/watch?v=cGFjNhGwUY
Total(hrs)	60			

Strength of Material

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Strength of Material	MECC0411	Theory+ Practice	2+1(3)	Engineering Mechanics

1. Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on using ANSYS for analysis of various mechanical structures and load transmitting elements.

2. Course Outcomes

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy ANSYS to develop mechanical design solutions.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab Work, Report
	Project		Report and Presentation
	Quiz		Surprise/Preannounced Ones
External Examination		30	Written Examination
Total		100	

4. Course Outline

Module I (10 Hrs): Analysis of Beams

Shear and Bending Moment in Beams: Types of Beams and Loads, Concept of Shear Force, Bending Moment and Sign Conventions, Relation Between Load, Shear Force and Bending Moment, Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

- Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment
- Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment

MODULE II (08 Hrs):

Stresses in Beams: Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination Bending Stresses, Shear Stress Distribution for Different Sections.

- Simulation (Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam

MODULE III (07 Hrs):

Deflection of Beams: Equation of Elastic Curve, Direct Integration Method, Strain Energy Method, Castigliano's Theorem

- Stress & Deflection Analysis of Mechanical Component (Using ANSYS)
- Double Shear Test and Deflection Test Using UTM

Module IV: (08 Hrs) Analysis of Column and Shaft

Column Analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.

- Simulation (Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam

Module V: Torsion (08 Hrs): Torsion Formula, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

- Simulation (Using ANSYS): Static and Dynamic Analysis of Shaft

8. Simulation (Using ANSYS): Spring Structural Analysis
9. Simulation (Using ANSYS): Stress Analysis of Suspension System
10. Stiffness Test of a Helical Spring

Module VI (08 Hrs.)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

11. Simulation: Spur Gear Fatigue Analysis in ANSYS
12. Simulation: Chair Structural Analysis in ANSYS
13. Simulation (Using ANSYS): Bicycle Frame Structural Analysis

Module VII (11 Hrs.)

Fatigue: Failure Under Cyclic Loading, Endurance Limit, S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

14. Fatigue Failure Analysis (Using ANSYS)
15. Fatigue Analysis of a Plate with Hole (Using ANSYS)
16. Fatigue Analysis (Using ANSYS) of Crankshaft of Two Wheeler

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture, Griffith's Analysis, Energy Release Rate, Elastic Stress at the Tip of a Sharp Crack, Crack Growth and Stress Intensity Factor, Critical SIF, Fracture Toughness Testing.

Software Requirement: ANSYS

5. Reference

Text Books:

Design of Transmission Systems

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Design of Transmission Systems	MECC0412	Theory+ Practice	2+1(3)	Mechanics of Solids

1. Objective

- To familiarize the various mechanical power transmission elements and systems as used in industry.
- To enable the students to design basic transmission elements using prior theoretical knowledge.

2. Course outcomes

- To convert basic input data into engineering design and drawing using CATIA and ANSYS.

3. Evaluation Systems

Internal Examination	Component	%ofMarks	MethodofAssessment
	MidtermTest	20 (ITH)	Written examination
	Assignment		Reportand Presentation
	Experiments	30(IPR)+20 (EPR)	Lab work, report
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Courseoutline

Module I(20 hrs) (BasicPowerTransmission Elements)

DesignofShaftCoupling: KeysandSplines; StrengthofaSunkKey; RigidandFlexibleCoupling, Hooke’sJointand ConstantVelocityJoint.

Practice:

- 1.Design ofFlange CouplingusingCATIA
- 2.Design ofHooke’sJointusingCATIA

DesignofBelt,Ropeand ChainDrives: Flat,V-BeltandRopeBelts; Slip andCreepofBelt; Velocity RatioofBeltDrives;CentrifugalandInitialTension;Maximum PowerTransmission ThroughaBelt Drive, PowerTransmittingChains.

Practice:

3. Design ofFlatbeltpulleyusingCATIA
4. Design ofV-beltpulleyusingCATIA

DesignofGears: SelectionofMaterials;ForceAnalysis,BeamStrengthofGearTooth,GearTooth Failure.

Practice:

5. Computeraided spurgear design and analysis usingCATIAand ANSYS
6. Computeraided helicalgear design and analysis usingCATIAand ANSYS

Module II(14Hrs) Power Transmission Mechanisms

Clutch: Friction, Centrifugal, Vacuumand Free WheelClutch, Construction andWorkingPrinciple

Fluid Couplingand Torque Converter: Basic Concepts, Construction and WorkingPrinciple

Brakes: SingleandDoubleShoeBrake, InternalExpandingBrake, BandBrake, ElectromagneticBrakes, ConceptofRegenerative Braking.

Module III (18Hrs) Applications, MechanicalPower MeasurementandControl

Applications:

- ✓ GearBox Used in Automobiles, MachineTool, etc
- ✓ Conveyorwith the Application ofBeltDrives
- ✓ UseofTorque ConverterinAutomaticTransmission
- ✓ Electric Overhead Cranes and Goods/PassengerLiftsUsingRope Drives
- ✓ BallScrewMechanisms Used in CNCMachines
- ✓ UseofRigid and FlexibleCouplings in Pumps and Compressors
- ✓ Disc type and Drum types Brakes used in Automobiles
- ✓ PowerTransmission using Cardan Shaft in Rolling Mills and Conveyors

MechanicalPowerMeasurementand Control:

Basic MechanicalControlSystems: TypesofControlSystems, Openand Closed Loop, Feedback, Need andBasicWorkingPrinciple ofGovernorand Flywheel, Variable FrequencyDrive (VFD).

Dynamometers: Power Measuring Instruments Such as Rope Brake, Hydraulic and Eddy Current Dynamometers.

Practice:

7. Measurement of Torque and Power Using Rope Brake Dynamometer

6. Reference

Text Book:

1. Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill
2. Mechanical Power Transmission by William J. Patton, Prentice Hall

Reference Books:

1. Shigley's Mechanical Engineering Design by Richard G. Budynas and J.K. Nisbett, McGraw-Hill
2. Design Data Handbook by S. Md. Jalaludeen, Anuradha Publications

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Keys and Splines: Strength of a Sunk Key;	1	Lecturer+ Video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=S8Qmy4fGnnE
Rigid and Flexible Coupling	1	Lecture + video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=CwiaS075YzQ https://www.youtube.com/watch?v=9jdc0CzMjCo
Hooke's Joint and Constant Velocity Joint.	1	Lecture + video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=EJL9qHhQing https://www.youtube.com/watch?v=LCMZz6YhbOQ
Design of Flange Coupling using CATIA	2	Lab Practice		Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/wat

				ch?v=bshE5AavL7U
Design of Hooke's Joint Using CATIA	2	Lab Practice		https://www.youtube.com/watch?v=0PPGOJ2u-IQ

Basic Mechanical Control Systems: Types of Control Systems, Open and Closed Loop, Feedback, Need and Basic Working Principle of Governor and Flywheel, Variable Frequency Drive (VFD).	2	Lecture		Mechanical Power Transmission by William J. Patton, Prentice Hall
Dynamometers: Power Measuring Instruments such as Rope Brake, Hydraulic and Eddy Current Dynamometers	1	Lecturer+ Video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=Kq81cwrogio https://www.youtube.com/watch?v=uwZGtFRtGoU https://www.youtube.com/watch?v=te6dm20B-zA
Measurement of Torque and Power Using Rope Brake Dynamometer	1	Lab Practice		https://www.youtube.com/watch?v=iamxq4Jsimo
Total(hrs)	52			

Introduction to Hybrid and Electric Vehicles

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Introduction to Hybrid and Electric Vehicles	MECC0413	Theory+ Practice	1+1(2)	Nil

1. Objective

<ul style="list-style-type: none"> ✓ To educate the students on principles, technology, usage and application of fully electric and hybrid vehicles. ✓ To educate the students on energy source, power flow and drive train technologies used in electrical

and hybrid vehicles as on date.

2. Course Outcomes

- Students will be able to identify and understand the electrical circuits and will be able to test the performance of these vehicles.
- Students will be able to carry out maintenance activities of these vehicles.

3. Evaluation Systems

Internal Examination	Component	% of marks	Methods of assessment
	Internal Test	10	Written examination
	Assignment	5	Report
	Learning Record	5	Report
	Experiments	30	Lab work
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

4. Course outline

Module I (4 Hours)

Introduction to Hybrid Vehicles: History of Hybrid Vehicles, Social and Environmental Importance, Working Principle of Hybrid Vehicles.

Module II (8 Hours)

Hybrid Drive-Trains: Basic Concept of Hybrid Traction, Types of Drive Train in Hybrid Vehicles, Power Flow Control in Hybrid Drive-Train Topologies, Fuel Analysis ((Density, Viscosity, Calorific Value, Flash & Fire Point), Fuel Efficiency

Practice:

- Determination of Calorific Value of a Fuel by using Bomb Calorimeter
- Determination of Flash Point and Fire Point of a Given Fuel
- Determination of Viscosity of a Given Fuel

Module III (8 Hours)

Introduction to Electric Vehicles: Reasons for Electric Vehicle Development, Advantages and Disadvantages of Electric Vehicle, Main Components of Electric Vehicles (Battery, Motor, Controller, DC to DC Converter), Working of Main Components.

Practice:

- Practice in Controller Connection Used in Electric Vehicle
- Practice Wiring and Harnessing in Battery Electric Vehicle

Module IV (7 Hours)

Energy Storage:

Energy Storage Requirements in Electric Vehicles, Battery Monitoring and Charging Control, Combination of Batteries, Sizing of Battery Cell, Principles of Operation of Fuel Cell, Regenerative Braking System.

Practice:

6. Maintenance of Lead Acid Batteries

7. Sizing of Battery Cell

Module V (5Hours)

Electric Drive-Trains: Basic Concept of Electric Traction, Introduction to Various Electric Drive-Train Topologies, Power Flow Control in Electric Drive-Train Topologies.

Module VI (6Hours)

Electric Propulsion Unit: Introduction to Electric Components Used in Hybrid and Electric Vehicles, DCMotor, Control of DCMotor Drives, BLDC (Brushless DC) Motor

Practice:

8. Performance Characteristics of a Shunt and Series DCMotor

9. Disassemble Different Parts of BLDC Motor

Module VII (7Hours)

Types of Motors and Drives: Induction Motor and Drives, Permanent Magnet Synchronous Motor Drives, Switched Reluctance Motor Drives.

Practice:

10. Load Test on Three Phase Induction Motor

11. Speed Control of DC Shunt Motor by Armature and Field Control

12. Permanent Magnet Motor Drives, Their Control

6. Reference

Text Books:

1. Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003.

2. Modern Electric Vehicle Technology, C.C. Chan and K.T. Chau, Oxford Science Publications.

Reference Books:

1. Internal Combustion Engines, V. Ganesan, Tata McGraw Hill.

2. Principles of Electrical Machines, V.K. Mehta and Rohit Mehta, S. Chand.

Online Source: <http://nptel.iitm.ac.in>

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I (4 Hours)				
Introduction to	4 (Th-4)	Lecture	Assignment,	Electric and Hybrid Vehicles:

Hybrid Vehicles: History of hybrid vehicles, Social and environmental importance, Working principle of hybrid vehicles.			Seminar	Design Fundamentals, Iqbal Hussein, CRC Press, 2003 https://www.youtube.com/watch?v=pMTPUjfiQQw http://nptel.iitm.ac.in
Module II(8Hours)				
Hybrid Drive-Trains: Basic concept of hybridtraction,Types of drive train in hybrid vehicles, Powerflowcontrolin hybrid drive-train topologies, Fuel analysis ((Density, Viscosity, Calorific Value, Flash &Fire point), Fuefficiency	8(Th-4, Pr-4)	Lecture + Lab Practice	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 V. Ganesan, Internal Combustion Engines, Tata McGraw Hill https://www.youtube.com/watch?v=axzTZZKm3mc http://nptel.iitm.ac.in
Module III (8Hours)				
Introduction to Electric Vehicles: Reasons for electric vehicle development, Advantages and disadvantages of electricvehicle,Main components of electric vehicles (Battery, Motor, Controller,DCtoDC converter), Working ofmain components	8(Th-4,Pr-4)	Lecture + Lab Practice	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 Modern Electric Vehicle Technology, C.C. Chan and K.T. Chau, Oxford Science Publications https://www.youtube.com/watch?v=ytVyj10p0BI http://nptel.iitm.ac.in
Module IV(7Hours)				
EnergyStorage: Energy storage requirements in electric vehicles, Battery monitoring and charging control, Combination of batteries. Sizing of batterycell,Principles of operation of Fuel cell, Regenerative brakingsystem	7(Th-3, Pr-4)	Lecture + Lab Practice	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 Modern Electric Vehicle Technology, C.C. Chan and K.T. Chau, Oxford Science Publications https://www.youtube.com/watch?v=N10IPLUxNWM https://www.youtube.com/watch?v=uLrCFStQQUU https://www.youtube.com/watch?v=2SQ2SYhVaaE http://nptel.iitm.ac.in
Module V (5Hours)				

Electric Drive-Trains: Basic concept of electric traction, Introduction to various electric drive-train topologies, Powerflow control in electric drive-train topologies.	5(Th-5)	Lecture	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 https://www.youtube.com/watch?v=0DqPmACIeKA https://www.youtube.com/watch?v=gK6UUY3nTko http://nptel.iitm.ac.in
Module VI (6Hours)				
Electric Propulsion Unit: Introduction to electric components used in hybrid and electric vehicles, DC Motor, Control of DC Motor drives, BLDC (Brushless DC) Motor	6 (Th-3, Pr-3)	Lecture + Lab Practice	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 V.K. Mehta and Rohit Mehta, Principles of Electrical Machines, S. Chand https://www.youtube.com/watch?v=jAGTEAtPEzY https://www.youtube.com/watch?v=bCEiOnuODa https://www.youtube.com/watch?v=LtJoJBUSE28 https://www.youtube.com/watch?v=VkJDXxZlHs&list=PLMH080Gkmb0ZNVz4hVSolj7JrUf56wPN https://www.youtube.com/watch?v=dAW8e3N9xDE http://nptel.iitm.ac.in
Module VII (7Hours)				
Types of Motors and Drives: Induction motor and drives, Permanent magnet synchronous motor drives, Switched reluctance motor drives	7 (Th-3, Pr-4)	Lab Practice	Assignment	V.K. Mehta and Rohit Mehta, Principles of Electrical Machines, S. Chand
Total (hrs)	45			

Fluid Mechanics and Heat Transfer

Subject Name	Code	Type of Course	Credit	Prerequisite
Fluid Mechanics and Heat Transfer	MECC0414	Theory + Practice	2+1(3)	Basic Fluid Mechanics

1. Objective

- ✓ To Educate the Students on Basic Theories behind Fluid Mechanics and Heat Transfer as Used in Engineering Practices.
- ✓ To Educate the Students on use of Experimental methods to Determine Various Engineering Parameters used in Fluid Mechanics and Heat Transfer Applications.

2. Course Outcomes

- ✓ Students will be able to Analyze and Design various Equipment used in Industry using Principles of Fluid Mechanics and Heat Transfer.

3. Evaluation Systems

Internal Examination	Component	% of marks	Method of assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR) + 20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (8 Hrs)

Forces on Submerged Bodies: Causes for Drag and Lift, Drag and Lift Coefficients, Drag on a Sphere and a Cylinder, Terminal velocity of a Body, Stoke's Law, Development of Lift and Drag on a Stationary and Rotating Cylinder, Magnus Effect, Stagnation Points, Introduction to Airfoil Theory.

Practice:

1. Determination of Viscosity of a Liquid by using Stoke's Law.

Module II (8 Hrs)

Incompressible flow: Navier-stokes equation (without derivation), Exact solutions of Navier-stokes equation, Poiseuille flow, Couette flow, Movement of Piston in a Dashpot.

Practice:

2. To Determine Velocity of a Point Within a Flow through the Pipe Line by Close Circuit Prandtl Tube Apparatus.
3. To Demonstrate Laminar and Turbulent Flow through Closed Conduit and to Find Out Reynolds Number by Reynolds Apparatus.
4. To Determine the Frictional Losses in the Pipe by Pipe Friction Apparatus.

Module III (5 Hours)

Compressible flow: Basic equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation, Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow, Mach Number, Wave Propagation in a Compressible Fluid, Stagnation Properties.

Module IV (13 Hours)

Conduction: Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, Composite Cylinders and Composite Spheres with Convective Atmosphere, Electrical Analogy, Conduction with Heat Generation, Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.

Practice:

5. Determination of Overall Heat Transfer Coefficient of Composite Slab.
6. Determination of Thermal Conductivity of Liquid.
7. Experiment on Transient Heat Conduction Apparatus.
8. Efficiency and Effectiveness of Pin Fins.

Module V (10 Hours)

Convection: Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow Over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces.

Practice:

9. Determination of Heat Transfer Coefficient in Forced Convection.
10. Determination of Heat Transfer Coefficient in Natural Convection.

Module VI (5 Hours)

Heat Transfer with Phase Change: Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.

Practice:

11. Determination of Critical Heat Flux during Boiling Heat Transfer.
12. Determination of Heat Transfer in Drop and Film Wise Condensation.

Module VII (7 Hours)

Radiation: Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black and Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.

Practice:

13. Determination of Surface Emissivity.
14. Verification of Stefan Boltzmann's Law.

6. Reference

Text Books:

1. Fundamentals of Heat and Mass Transfer by R.C. Sachdeva, 2nd Edition.

2. FluidMechanicsbyR.K.Bansaland Hydraulic Machines, LaxmiPublications.

ReferenceBooks:

1. HeatTransferby R.K. Rajput, LaxmiPublication.
2. Hydraulics &FluidMechanicsbyP.N. Modiand S.N.Seth, Rajsons Publications.
3. *OnlineSource:* www.nptel.ac.in, You tube video.

7. SessionPlan

Topiccoverage andInternal Test	No. of Sessions(in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignme nt (project, assignme nt, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-1 (8 Hrs)				
Forceson SubmergedBodies: CausesforDragand Lift,Drag andLiftCoefficients,Dragon a Sphereand aCylinder	2	Lecturer	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=5ltjFEei3AI
Terminalvelocity ofaBody, Stroke’s Law,Development of Lift and Drag on a Stationary and RotatingCylinder	2+2	Lecturer + Lab Practice	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=hUP5igTjvuc https://www.youtube.com/watch?v=AcsrBCEJz-Y https://www.youtube.com/watch?v=mQwlmXtRu5k
Magnus Effect, Stagnation Points,Introduction toAirfoil Theory.	2	Lecturer	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=AJl8EvLp1G0
Module II(8 Hrs)				

Incompressible flow: Navier-stokes equation (without derivation)	1+2	Lecturer + Lab Practice	Assignment with problem solving	2. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth Rajsons Publications., https://www.youtube.com/watch?v=JH3I-NliCkM
Exact solutions of Navier-stokes equation	1	Lecturer + Lab Practice	Assignment with problem solving	2. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth, Rajsons Publications.
Poiseuille flow	2	Lab Practice	Assignment with problem solving	3. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth Rajsons Publications. https://www.youtube.com/watch?v=A8f0YfkXwds https://www.youtube.com/watch?v=fTEGOMWIKZ0
Couette flow, Movement of Piston in a Dashpot.	2	Lab Practice	Assignment with problem solving	3. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth, Rajsons Publications. https://www.youtube.com/watch?v=PQTRdX6-4kQ
Module III (5 Hrs)				
Compressible flow: Basic equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation	2	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=4EADzHBJtE
Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow	2	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications.
Mach Number, Wave Propagation in a Compressible Fluid, Stagnation Properties.	1	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications.

Module IV(13 Hrs)				
Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation)	1	Lecturer	Assignment with problem solving	<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p> <p>https://www.youtube.com/watch?v=gcY6832h_Nw</p> <p>https://www.youtube.com/watch?v=bA3EzToAWOE</p> <p>https://www.youtube.com/watch?v=pRnURDgfByE</p> <p>https://www.youtube.com/watch?v=Atnjo7dD_bA</p> <p>http://nptel.ac.in/courses/112108149/pdf/M1/Student_Slides_M1.pdf</p> <p>https://www.youtube.com/watch?v=VO_3WW6ZcWw</p> <p>https://www.youtube.com/watch?v=zFkJy_VocCk</p>

Syllabus

CCME0405 THEORY OF MACHINES

Pre-requisites	Course type	Credits
NIL	Theory+Practice	5

Course Objectives: The overall objective of this course is to learn how to analyze the motion of mechanisms, design mechanisms
Course Outcomes:

1. Distinguish kinematic and kinetic motion.
2. Identify the basic relations between distance, time, velocity, and acceleration.
3. Use graphical and analytic methods to study the motion of various mechanisms.
4. Design basic cam systems

MODULE –I(21Hours)

Mechanisms: Kinematic concept of link, kinematic pair, kinematic chain, Mechanism, binary, ternary and quaternary joints, degree of freedom of planar mechanism, inversions of four bar mechanism, single slider crank mechanism and double slider crank mechanism. (Most of the topics will be through PPT presentation and demonstration)

Motion Analysis: Types of motion, velocity diagram, Instantaneous centre method, Kennedy theorem, relative velocity method, velocities in four bar and slider crank mechanism, Klein's construction. Acceleration diagram of planar mechanism, Coriolis component of acceleration. (The topic is taught through practice)

MODULE –II(21Hours)

Gears: Classification and basic terminology, Fundamental law of gearing, involute tooth profile, Spur gears, other types of gears, standards in tooth forms, length of path of contact and arc of contact, contact ratio, interference in involute gears. (The topics are taught through PPT presentation and demonstration)

Gear trains: Simple, compound, reverted and epicyclic gear trains. (The topics are taught through PPT presentation and demonstration)

Steering gear mechanism: Law of correct steering, Davis and Ackermann steering gear mechanism, universal or Hooke's joint.

MODULE –III(25Hours)

Frictional devices: Plate & cone clutches, Brakes and dynamometers, analysis of shoe brake and band brake, study of absorption and transmission dynamometer, Belt and rope drive, slip and creep of belt, maximum power transmitted by belt, introduction to rope and chain drives. (The topic is taught through PPT presentation and demonstration)

CAMS: Various types of cams and followers, nomenclature of cam profile, Displacement, velocity and acceleration of followers. Draw cam profile for various

types of follower motion. (The topic will be through practice mode)

Text Book:

1. Theory of Machines, S.S. Rattan, Tata McGraw Hill.
2. A Textbook of Theory of Machines by R. K. Bansal, Laxmi Publication

Reference Books:

1. Theory of Machines and Mechanisms by Ghosh and Malik
2. Mechanism and Machine Theory by J.S. Rao and R.V. Dukkipati

Manufacturing Technology I

SubjectName	Code	Type ofcourse	Credit	Prerequisite
Manufacturing Technology I	MECC0401	Theory+ Practice	2+1(3)	Workshop Practice

1. Objective

<ul style="list-style-type: none"> •To Educate the Students on Principles, Usage and Application of Various Non-chip Forming Manufacturing Technologies. •To Impart Knowledge on Practical Applications of These Technologies Through Actual Experiments and Making of Sample Products.

2. Course Outcomes

<ul style="list-style-type: none"> •Students will have Knowledge and Skills to Understand Actual Manufacturing Processes used in Industry and will be Able to Correlate a Specific Process with the Part/Component being Produced. •Students will be Able to Select the Most Optimum Manufacturing Process for a Specific Product Design and Application.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work & Report
	Project		Report & Presentation
	Quiz		Surprise/Preannounced ones
External Examination		30 (ETH)	Written Examination
Total		100	

Module I (9 Hours)

(Casting Process)

Introduction, Basic Factors Involved in Casting, Patterns (Classifications, Allowances and Considerations), Technology of Mould Making, Principles of Gating Design, Principles of Risers, Core Making Process, Chills and Chaplets, Solidification of Castings, Inspection and Defects in Castings, Post Casting Processing (Cleaning, Finishing & Heat Treatment of Castings).

Module II (11 Hours) (Special Casting)

Special Casting Processes (Permanent Mould Casting, Die Casting, Slush Casting, Centrifugal Casting, Investment Casting, Carbon Dioxide Casting, Stir Casting, Continuous Casting, Shell and Plaster Molding Process, Full Mould Process, Vacuum Sealed Molding Process, Graphite & Ceramic Mould Casting, Semi-solid Metal Casting).

Practice:

1. To Prepare a Green Sand Mould with a Standard Pattern and Study the Tools Used.
2. Furnace Operation & Aluminum Melting to Pour a Casting.

3. Casting Simulation Using Pro CAST.

Module III (5Hours) (Welding Technology)

Physics of Welding, Welding Classification, Applications of Various Welding Processes, Gas Cutting & Brazing Gas Flames, Flux and Filler, Arc Welding: SMAW Principle and Power Source, Types of Electrodes, Functions of Flux Coatings and AWS Classification and Coding.

Module IV (6Hours)

GTAW, GMAW, SAW & Flux-cored Arc Welding, Resistance Welding - Spot and Seam Welding, Flash Butt Welding, Thermit Welding, Friction Welding, Welding Methods like Plasma Arc, Laser Beam, Electron Beam, Ultrasonic, Explosive Welding, Diffusion Bonding, Cladding, Brazing and Soldering.

Module V (9Hours)

Welding Positions, Edge Preparation in Butt & Fillet Welding, Destructive and Non-Destructive Testing of welding, Welding Defects

Practice:

4. Safety Practice and PPE for Welding.
5. Brazing of 20mm MS Pipe Joint.
6. Bead on Plate Varying Current & Voltage for SMAW using E6013.
7. GTAW Torch Assembly and Bead on Aluminum Plate without & with Filler.

Module VI (7Hours) (Metal Forming)

Plastic Deformation and Yield Criteria, Relation between Tensile and Shear stress, Cold and Hot Working, Rolling: Principle and mechanism, Defects, Types of Rolling Mills, Forging: Classification, Open-Die Forging, Impression-Die and Closed-Die Forging, Drop and Press Forging, Forging defects.

Practice:

8. Making a Square Section from 20mm Round MS Bar.

Module VII (9Hours)

Drawing: Methods and Variables, Wire Drawing, Extrusions: Advantages and Disadvantages, Direct, Indirect, Impact and Hydrostatic Extrusion and their Applications, Extrusion of Tubes, Extrusion Defects.

Sheet Metal Work: Bending, Forming and Deep drawing, Shearing, Punching and Blanking - Method and Application.

Practice:

9. Shearing of 2mm MS Sheet and Use of a Progressive Die to Manufacturing a Washer.

Manufacturing Technology II

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Manufacturing Technology II	MECC0402	Theory+ Practice	2+2(3)	Nil

1. Objective

<ul style="list-style-type: none"> • To Educate the Students on Principles, Usage and Application of Various Chip Forming Manufacturing Technologies. • To Impart Knowledge on CNC Machining and Programming.

2. Course Outcomes

<ul style="list-style-type: none"> • Students will be Able to Do Process Planning, Develop CNC Part Programs. • Students will have Knowledge and Skills to Operate CNC Machines.
--

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	ITH	30	Written Examination (Best of 2)
	IPR	20	Lab Work & Report
External Examination	ETH	20	Written Examination
	EPR	30	Lab Work
Total		100	

4. Course Outline

Module I (8 Hours) (Conventional Machining)

Mechanics of Metal cutting; Cutting Tool Materials (Principal Tool Materials, Advanced Tool Materials, Indexable Inserts, Tool Coatings); Cutting Fluids and Lubricants (Characteristics, Types, Selection Criteria, Dry and Near-Dry Machining, MQL);

Practice:

1. Measurement of Cutting Tool Temperature using Thermocouple.

Module II (8 Hours)

Theory of Machinability (Tool Life, Cutting Forces, Power Consumption, Surface Roughness, Thermal Aspects).

Mechanism of Cutting on a Lathe, Milling Machine, Shaper, Planer and Slotter;

Practice:

2. Measurement of Cutting Forces using Dynamometer.

Module III (10 Hours)

Drilling (Deep Hole Drilling & Micro Drilling); Boring and Reaming Operations; Principles of Jigs and Fixtures

Practice:

3. Measurement of Surface Roughness using Talysurf.
4. Process Optimization using Minitab and Matlab.

Module IV (10 Hours) (Non-Conventional Machining & Additive Manufacturing)

Non-Conventional Machining Process, Principle and Equipment (Electro-Chemical Machining; Electric Discharge Machining, Laser Beam Machining; Electron Beam Machining; Hot Machining)

Practice:

5. Study of EDM working Principle and Process Parameters.

Module V (9 Hours)

Additive Manufacturing (3D Printing, Rapid Prototyping); Developments in Additive Manufacturing; Classifications of Additive Manufacturing systems

Practice:

6. Component Manufacturing Using 3D Printer.

Module VI (6 Hours) (Computer Aided Manufacturing)

GD&T Concepts (Machining Accuracy; Fundamentals of Measurements; Principles of Tolerancing; Maximum and Minimum Material Requirement)

Module VII (25 Hours)

CAM-Introduction, Types-NC, CNC, DNC, Machining Centers, Adaptive Control, Part Programming G-Codes, M-Codes, Programming & Machining for Simple Components

Practice:

7. Manual Programming Related to Facing, Turning, Drilling, Boring & Pocketing in CNC Machines.
8. Simple Contouring Operation using CNC Milling Machine.

9. 3D Modeling & Product Design with CATIA and SolidWorks (3D Experience)
10. Generation of NC Program and Product Manufacturing by Using MasterCAM Software.
11. Process Planning, Programming, Simulation and Optimization of Machining Processes Using DELMIA.

Design for Manufacturing

SubjectName	Code	Type ofcourse	T-P-Pr (Credit)	Prerequisite
Design for Manufacturing	MECC0403	Theory+ Practice	2+2(4)	Workshop Practice

1. Objective

- To provide the students detailed understanding of primary manufacturing processes and product design from concept-to-mass production.
- To impart knowledge on use and application of software to solve design engineering problems in metal casting, forging and sheet metal forming processes.

2. Course outcomes

- Students will be able to select appropriate manufacturing technology and process to produce a product effectively with quality and optimized production cost.
- Students will have skills and knowledge to use software like CATIA, Novaflow and SolidCV, ProCAST, Flow-3D Cast, DEFORM-3D and PAM-STAMP2G.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Internal Class Test	20	Written Examination
	Internal Practice	20+10	Written Examination+ Learning Record
External Examination	External Theory+ EPR	30+20	Written Examination + Lab. Work & Record
Total		100	

4. Course Outline

Module I(8 Hrs)

Introduction to Design: Problem and Solutions, What is Good Design? Design as Model-making, Design, Creativity, Innovation and Invention. The History of DFM/A, Why Companies Are using DFM/A, The

Boothroyd Dewhurst Design for Manual Assembly Method, Product Complexity, Product Variants, Reusable/Modularity/Standard Design, Product Costs, Quality, Regulatory & Safety Requirements, Aesthetic and Ergonomic Considerations in Design, Design for Maintenance.

Module II (8Hrs)

Design for Manufacture: Assembly, Shipping, Maintenance, Design Efficiency, Materials Selection, Manufacturing Considerations in Design: Role of Processing in Design, Types of Manufacturing Processes, Design for Manufacturability, Design for Castings, Forgings, Sheet Metal Forming, Design for Machining, Powder Metallurgy, Welding, Heat Treatment, Assembly, Corrosion Resistance, Designing with Plastic Processing.

Module III (6Hrs)

Economics of Manufacturing, Product Target Cost Evaluation: Categories of Costs, Methods of Developing Cost Estimates, Cost Indexes, Cost Capacity Factors, Estimating Plant Cost, Design to Cost, Manufacturing Costs, Value Analysis in Costing.

Module IV (8Hrs)

Metal Casting Design: Design for Castability; Introduction to Casting, Types of Casting, Mathematical Modelling of Liquefying the Material, Viscosity and Fluidity Parameter included as Flow Equation, Casting Microstructure and Defects, Casting Design Process; Sprue, Gate, Runner Design according to Flow Equations, Analysis Prediction for Metal Casting, Liquid Phase Fraction, Shrinkage Prediction, Calculating Feeder, Secondary Dendrite Arm Spacing (SDAS).

Module V (15Hrs)

Simulation of Casting Process; STL Part Design Generation from CAD Package, Simulation of Solidification, Calculation of Riser, Design of Gating and Simulation of Mold Filling, Simulation of Riser and Gating System. Components: Die Casting Design and Simulation of Casting of Engine Block using Aluminum Alloy Specifically Al-Si-Cu-Mg-Fe Alloy. Simulation of Casting for Shell Housing.

Practice:

1. Casting Design & Analysis using CATIA, Novaflow and Solid CV, ProCAST, Flow-3D Cast.

Module VI (15 Hrs)

Forging Design: Design Aspect of Forging and their Significance. Procedure of Working out of Forging Drawing and Technology for Open and Close Die Forgings. Developing the Forging Drawing of Some Jobs. Factors Affecting the Metal Flow in Closed Dies. Forgeability, Friction and Lubrication, Die Temperature, Size and Shape Factor, Flash and Gutter. Designing Performing, Finisher, Trimming and Punching Dies; Selection of Forging Equipments; Die Wear, Die Materials, Forging Defects, Heat Treatments of Dies and Forgings.

Practice:

2. Forging Design & Flow Simulation using CATIA and DEFORM-3D.

Module VII (15Hrs) (Sheet Metal Forming) -

Sheet Metal: Design for Formability; Formability of Sheet Metal, Press for Sheet Metal Process, Die & Punch, High Energy Rate Forming Process, Extrusion Process and Bulk Deformation Process. Blank Holder Force Estimation, Incremental Forming Analysis Residual Stress Vs Blanking Force Analysis and Optimization, Hot Stamping Process.

Analysis Prediction: Differential heating and Differential Cooling in Hot Forming Process, Map of Meso Patch on the component, Force Required for Product Shape. Components: B-pillar Trim, Bonnet, Suspension Rocker Arms, Roof Liner, Body Side Outer.

Practice:

3. SheetMetalToolDesign inCAD.
4. UseofCATIAand PAM-STAMP2G

Components: B-pillar Trim, Bonnet, Suspension Rocker Arms, Roof Liner, BodySideOuter.	01	Lecture		
SheetMetalTool Design in CAD	03	Practice		

Use of CATIA and PAM-STAMP 2G	03	Practice		
Total	75hrs			

Finite Element Analysis

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Finite Element Analysis	MECC0404	Theory+Practice	2+2(4)	Nil

1. Course Objective

<ul style="list-style-type: none"> To Educate the Students on Fundamental Principles of Finite Element Analysis. To Impart Knowledge on Use and Application of Software for Analysis, Interpretation of Results through Hands-on Practices/Exercises.

2. Course Outcome

<ul style="list-style-type: none"> Students will be Able to Deploy Practical and Industrial Approach using FEA towards Solving Engineering Problems.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	ITH/Cass Test	20	Best of two Written Exam
	IPR	30	Lab Work & Report
External Examination	EPR	20	Lab Work & Report
	ETH	30	External Exam
Total		100	

4. Course Outline

Module I (5 Hours)

Overview to Finite Element Analysis: History of FEA; Introduction to types of FEA Analysis, Role of Computer, General Procedure of Finite Element Method, Advantages and Applications of FEA, Principle of Convergence, Review of Matrix Algebra and Gaussian Elimination.

Module II (9 Hours)

One Dimensional Analysis: Coordinates Systems, Field Variable, Shape Functions, Element Stiffness Matrix and Load Vector, Assembly, Global Equations, Imposition of Boundary Conditions.

Overview to Pre-Processing (About Meshing, Types of Meshing: 1-D, 2-D, 3-D, Special Elements, Meshing Quality Criteria, Material Properties, and Boundary Conditions)

Module III (12 Hours)

Pre-Processing: CAD Geometry Preparation; Meshing and Quality Check; Material Assignment & Boundary Conditions.

Analysis of Bar, Spring, Truss and Beam Elements.

Module IV (15 Hours)

Introduction Types of Analysis & Detail: Linear Static Analysis; Non-Linear Analysis; Dynamic Analysis

Module V (7 Hours)

Thermal Analysis; Computational Fluid Dynamics; Fatigue Analysis; Crash Analysis; NVH Analysis.

Module VI (12 Hours)

Structural Analysis of a Pressure Vessel; Thermal Analysis of a Pressure Vessel; Dynamic Analysis of a Scooter Frame.

Module VII (15 Hours)

Post Processing, Result Interpretation and Testing & Field Data Acquisition.

Solving: Post-Processing, Result Interpretation.

5. Reference

Text Books:

1. Practical Finite Element Analysis, Nitin S. Ghokhale, Published by Finito Infinite, Pune.

Digital Manufacturing

SubjectName	Code	Type ofcourse	T-P-Pr (Credit)	Prerequisite
DigitalManufacturing	MECC0405	Theory+ Practice	2+1(3)	Nil

1. Objective

- Toeducatethestudents onentirestagesofproductlifecycle beginningfromconceptstage, design, testing, validation, manufacturing, servicingetc.
- Toeducatethestudents on Industry4.0 standards.

2. Course Outcomes

- StudentswillbeabletousemodernsoftwarelikeDELMIA-Quest(DassaultSystem)and Camtesia to conceptualiseand create3Dfactorylayouts andoptimise resourceplanning.
- Students willbeable todosimulation ofmanufacturingprocessesusingsoftwaretools.

3. Evaluation Systems

InternalExamination	Component	%ofMarks	Method ofAssessment
	InternalTheory	20	Written Examination
	InternalPractice	20+10	Reportand Presentation
External Examination	ExternalTheory	30	Written Examination
	ExternalPractice	20	Reportand Presentation
Total		100	

4. CourseOutline

Module 1 (3hours)

Introduction toProductDevelopment: ProductDesign concept – System&Sub-systems, Design Validation,Prototyping,Facility&ProcessPlanning,ToolingDevelopment,Manufacturing,Quality, Serviceability.

New Product Introduction (NPI): Concept, Simultaneous Engineering, Cost Engineering – Value AnalysisValue Engineering(VAVE),TearDown &BenchMarking.

Module 2 (6hours)

Digital Manufacturing: Overview, Industry challenges, End to End solution for various industry, Benefits,IndustryCasestudies,IntroductionofIndustry4.0,Convention&EmergingTechnological Solution.

Product Life Cycle (PLM): Overview, Life Cycle Stages, BOM & CAD Management, Change Management, Technological Solution.

Module 3 (6 hours)

Industry 4.0: 4th Industrial Revolution & its Pillars, Overview of Digitization & Simulation, The Industrial Internet of Things, Augmented Reality, 3D-Printing-Additive Manufacturing, Autonomous Robots, Cyber Security, Big Data Analysis, Cloud Server & Data, Horizontal & Vertical systems Integration, C-Flex, Flexible Manufacturing System (FMS)

Module 4 (15 Hours)

Process Planning: Overview, Capacity Planning, Process/Operations, Process Planning, Assembly & Job shop planning, Cycle Time, Standard Man Hour (SMH), Time Analysis–MOST Maynard Operation Sequence Technique (MOST) Technique, Balancing, Shop floor Process and Quality Documentation (PFD, PFMEA, CP)

Digital Twin: Introduction of Facility/Layout Planning, Digital Factory with Plant Facilities & resources, Assembly/Di-assembly, Tool, Process Manufacturability Simulation, Ergonomics Analysis, Visibility & Reachability Simulation, Robotics Simulation, Virtual Commissioning, E-Learning / 3D Work Instruction,

Module 5 (11 Hours)

Material/Factory Flow Simulation: Lab Session using DELMIA-Quest (Dassault Systeme) & Camtasia, Discrete Event Simulation, Factory Layout and Alternate Material Handling Systems, Factory Flow & Logistics Simulation, Virtual Factories in 3D Environment and Analyses, Bottleneck Identification and Corrective Actions, Labor Requirements or Resource Requirements, Throughput of the Production System, Productivity and Utilizations.

Lean Manufacturing: Introduction: Overview of a pre-built Model, Modeling Methodology, Running a Model, Creating Reports and Charts.

Module 6 (11 Hours)

Material Handling Systems: Modeling Labor, Modeling Conveyor Systems, Creating Pallets, Modeling AGV, Modeling Power and Free Systems, Getting Started: Setting the Startup Options, Creating the Library, Creating Basic Simulation Mode.

Animation & Kinematics: Building Basic CAD, Positioning Way Points, Building Kinematics Device, Assigning Resource Kinematics, Creating & Playing a Script, Adding a Grab and Release.

Module 7 (10 Hours)

Shifts and Schedules: Creating Shifts, Setting Schedules, Handling Interrupts, Handling Failures, Preview of Advanced Usage: Creating CRANES, Creating Reports, Debugging, Data Interface Methodology (in or out excel), Using Simulation Control Language (SCL), Using Batch Control Language (BCL), Report & Video Creation.

Internal Combustion Engines

Subject Name	Code	Type of Course	Credit	Prerequisite
Internal Combustion Engines	MECC0406	Theory+Practices	1+1(2)	Thermodynamics

1. Objective

- ✓ To educate the students on operating principles, technology behind internal combustion engines.
- ✓ To educate the students on construction and various sub-systems of internal combustion engines.

2. Course Outcomes

- ✓ Students will be able to test internal combustion engines for various performance parameters using engine test rigs.
- ✓ Students will be able to carry out emission tests using various types of fuels commonly used in internal combustion engines.

3. Evaluation Systems

Examination	Theory	Marks	Method of Assessment
	Internal	20	Written examination
External	30	Written examination+L.R+Assignment	
Practice	Internal	Marks	Method of Assessment
	Internal	30	Experiment+L.R+VIVA
External	20	Experiment+L.R+VIVA	
Total		100	

4. Course outline

Module I (16 Hours)

Performance Parameters and Characteristics: Introduction, Engine Power, Engine Efficiency, Engine Performance Characteristics, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.

Practice:

1. Study of Two/Four Stroke Petrol/Diesel Engine.
2. Port and Valve Timing Diagram of Two and Four-Stroke Petrol/Diesel Engines.

3. Load Test on Petrol Engine.
4. Load Test on Diesel Engine
5. Morse Test on Multi-Cylinder Petrol/Diesel Engine
6. Heat Balance Study of Petrol/Diesel Engine

Module II (8 Hours)

Fuel: Fuels of SI and CI Engine, Properties, Potential and Advantages of Alternative Liquid and Gaseous Fuels for SI and CI Engines.

Practice:

7. Preparation of Alternate Liquid Fuel.
8. Determination of Octane Number and Cetane Number of Fuel
9. Determination of Kinematic Viscosity, Density of Bio-Diesel and Bio-Ethanol

Module III (5 Hours)

Mechanical Injection Systems: Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Injection Pump, Governor, Fuel Injector, Nozzle.

Practice

10. Study of Mechanical Injection System

Module IV (3 Hours)

Electronic Injection Systems: Multi-Point Fuel Injection (MPFI) System, ECU, Injection Timing, Group Gasoline Injection System.

Practice:

11. Study of Electronic Injection System

Module V (3 Hours)

Ignition: Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.

Practice:

12. Study of Battery Ignition System of IC Engine

Module VI (4 Hours)

Combustion: Stages of Combustion in SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock in SI & CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI & CI Engine Combustion Chambers.

Module VII (08 Hours)

Cooling & Lubricating Systems: Air Cooling & Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System.

Engine Emission and Control: Mechanism of Pollutant Formation and its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.

Practice:

13. Comparative Study of Emissions from Engines using Fossil Fuel and Alternative Fuel.

14. Measuring Exhaust Emissions of an Engine by using Gas Analyzer.

6. Reference

Text Books:

1. Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition
2. A Textbook of Internal Combustion Engine, R.K. Rajput, LP, 2nd Edition

Reference Books:

1. A Course in IC Engines, V.M. Domkundwar, Dhanpat Rai and Sons

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I Introduction, Engine Power, Engine Efficiency, Engine Performance Characteristics, Variables Affecting Performance Characteristics, Methods of Improving Engine Performance, Heat Balance.	16 (theo-4, practice-12)	lecturer+ lab Practice	Assignment with problem solving	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=PgvD9mx9Doo
Module II Fuel of SI and CI Engine, Properties, Potential and Advantages of Alternative Liquid and Gaseous Fuels for SI and CI Engines.	8 (theo-2, practice-6)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition
Module III Functional Requirements of an Injection System, Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Injection Pump, Governor, Fuel Injector, Nozzle.	5 (theo-3, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=P5-yxENaLDU&t=49s
Module IV Multi-Point Fuel Injection (MPFI) System, ECU, Injection Timing, Group	3 (theory-1, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3 rd Edition A Textbook of Internal Combustion Engine, R. K.

Gasoline Injection System.				Rajput, LP, 2 nd Edition
Module V Energy Requirement for Ignition, Battery Ignition Systems, Modern Ignition Systems, Firing Order.	3(theory-1, practice-2)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition
Module VI Stages of Combustion In SI and CI Engines, Flame Propagation and Ignition Delay, Abnormal Combustion, Phenomena of Knock In SI & CI Engines, Detonation, Diesel Knock & Methods to Control Diesel Knock. SI & CI Engine Combustion Chambers.	4(theory-4 hour)	lecturer	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition https://www.youtube.com/watch?v=ZxkLgv8c3OE
Module 7 Air Cooling & Water Cooling Systems, Properties of Lubricants and Different Types of Lubricating System	2(theory-2 hour)	lecture	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition
Mechanism of Pollutant Formation and Its Harmful Effects. Methods of Measuring Pollutants and Control of Engine Emission.	6(theory-2, practice-4)	lecturer+ lab Practice	Assignment	Internal Combustion Engines, V. Ganeshan, TMH, 3rd Edition A Textbook of Internal Combustion Engine, R. K. Rajput, LP, 2 nd Edition

Design of Thermal Energy Systems

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Design of Thermal Energy Systems	MECC0407	Theory+ Practice	2+1(3)	Thermodynamics

1. Objective

- To educate the students on principles, technology and applications of various thermal energy systems as used in industry.
- To impart technical knowledge and skills on design of various thermal energy systems

2. Course Outcomes

- Students will be able to identify and select, design and implement appropriate thermal energy system corresponding to specific need.
- Students will be able to take up testing, maintenance of thermal energy systems with minimum

additional input.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course outline

Module I (12 Hours)

Heat Exchangers: Classification and Thermal Design of Heat Exchangers, Overall Heat Transfer Coefficient, Fouling Factor or Dirt Factor, Temperature Profiles in Heat Exchangers, LMTD Correction Factor, Pressure Drop in Heat Exchanger, Correlation for Tube Side Pressure Drop, Correlation for Shell Side Pressure Drop, Heat Transfer Effectiveness and Number of Transfer Units, Calculation and Designing of the Heat Exchanger, Double-Pipe Heat Exchanger.

Practice:

1. Determination of Overall Heat Transfer Coefficient of Concentric Tube Heat Exchanger
2. Determination of Effectiveness and Efficiency of Cross Flow Heat Exchanger
3. Determination of Overall Heat Transfer Coefficient of Shell and Tube Heat Exchanger

Module II (6 Hours)

Vapor Power Cycles: Introduction, Power Cycles, Carnot Vapor Cycle and its Limitations, Rankine Cycle, Means of Increasing Rankine Cycle Efficiency, Reheat Cycle, Regenerative Feed Heating Cycle, Binary Vapor Cycle, Gas-Vapor Coupled Cycles, Cogeneration.

Module III (6 Hours)

Air Refrigeration System: Introduction, Unit of Refrigeration, Coefficient of Performance, Refrigerants, Characteristics of Different Refrigerants, Ozone Depletion Potentials, Green House Potential Refrigerants, Use of Non-Polluting Refrigerants, Reversed Carnot Cycle, Bell Coleman Air Refrigerator

Module IV (12 Hours)

Vapor Compression System: Analysis of Theoretical Vapor Compression Cycle, Representation of Cycle on T-S and P-H Diagram, Simple Saturation Cycle, Sub-Cooled Cycle and Super-Heated Cycle, Effect of Suction and Discharge Pressure on Performance.

Practice:

4. Determination of C.O. P of Vapor Compression Refrigeration System
5. Determination of C.O. P and Capacity of an Ice Plant
6. Leak Detection and Charging of Refrigerants in a Domestic Refrigerator
7. Handson Practice on Soldering and Brazing

Module V (4 Hours)

Vapor Absorption System: Simple Ammonia Absorption System, Improved Absorption System, Electrolux Refrigerator, Lithium-Bromide Absorption Refrigeration System.

Module VI (10 Hours)

Air Conditioning: Factors Affecting the Air Quality, Dry Bulb Temperature, Wet Bulb Temperature, Relative Humidity, Dew Point Temperature, Specific Humidity, Absolute Humidity, Specific Enthalpy, Pressure, Ventilation, Study on Psychrometric Chart,

Practice:

8. Calculation of C.O.P. Of Air Conditioning System
9. Performance Test of Window Type Air Conditioner
10. To Carry Out Cooling Process of Fresh Air and Find Out Relevant Parameter of Air
11. To Carry Out Heating Process of Fresh Air and Find Out Relevant Parameter of Air

Module VII(10Hours)

Heating and Cooling Load Calculation: Building Heat and Cooling Load Calculation, Air Distribution System, Calculation for Duct Size, Water and Air Cooled Chillers, Cooling Towers.

Practice:

12. Determination of Efficiency of Cooling Tower
13. Calculation of Cooling Load of a Confined Space

6. Reference**Text Books:**

1. J P Holman and Souvik Bhattacharyya, Heat Transfer, McGraw-Hill Education (India) Private Limited; 10th Edition; 2011.

Renewable Energy Systems

SubjectName	Code	Type ofcourse	Credit	Prerequisite
Renewable EnergySystems	MECC0408	Theory&Practice	2+1(3)	Nil

1. Objective

1. To expose the students about energy demand and supply situation in India.
2. To expose students about Renewable energy systems in use.

2. Course outcomes

- To have a knowledge of energy scene in India.
- To acquire the skill of analyzing and designing renewable energy systems.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
External Examination		50	Written examination
Total		100	

4. Course outline

Module I (8 Hrs)

Energy Demand and Supply Situation in India: Sectorial energy demands in India, Different Energy sources in India, Systems view of energy, Institutions and policies affecting energy systems.

Solar Energy: Basic Principle of solar energy and its conversion to thermal and electrical energy.

Module II (10 Hrs)

Photovoltaic system: Principle of Photovoltaic effect, Types and Application: Domestic and Industrial, Photovoltaic system and its Components, PV system and its Design, PV system Installation and Testing.

Practice:

1. Photo-Voltaic Power Output Vs Tilt Angle, Ambient Temperature and Shade.
2. Solar PV System Installation and Performance test.

Module III (9 Hrs)

Solar Thermal System: Types of Collector and its Application, Design of different types of Collectors, Testing and Installation of Solar Thermal System.

Practice:

3. Thermal Analysis of Solar Flat Plate Collector Using ANSYS.
4. Performance Test of a Solar Dryer.

Module IV (4 Hrs)

Wind Energy: Basic Principle of Wind Energy Conversion, Wind Data and Energy Estimation, Wind Energy Sources and Potential, Wind Power Systems: System components, Types of Turbine, Turbine Rating, Choice of Generators,

Module V (8Hrs)

Variable speed operation, maximum power operation, control systems, Application of Wind energy in different sectors, system design features, testing and installation of Wind systems.

Practice:

5. Simulation for Wind Turbine Generator with DC Motor in Solar/Wind Energy Mobile Workstation.

Module VI (8Hrs)

Bio Energy: Basic Principle of Biomass Generation and Conversion, Sources and Potential of Bio-Gas, Application of Bio-Gas in different Sectors.

Practice:

6. Performance Testing of Bio gas Plant.

Module VII (9Hrs)

Types of Conversion: Thermal, Thermochemical Process, and Fermentation: Aerobic and Anaerobic digestion, Design and Construction details of Main Digester, Testing and installation of Bio-Gas Plant.

Practice:

7. Energy Analysis of Different Biomass Products.

6. References

Text Books:

1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
2. Renewable Energy Sources and Emerging Technologies by Kothari, D.P., Singal, K.C. and Ranjan, Prentice hall, New Delhi, 2nd Edition, 2008.

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (Project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I(8Hrs)				
Energy Demand and Supply Situation in India energy demands in India	2	Lecturer		1. Renewable Energy Sources and Emerging Technologies by Kothari, D.P., Singal, K.C. and Ranjan, Prentice hall, New Delhi, 2nd edition, 2008.
Energy sources in India	1	Lecturer		1. Renewable Energy Sources and Emerging Technologies by Kothari, D.P., Singal, K.C. and Ranjan, Prentice hall, New Delhi, 2nd Edition, 2008.
Systems view of energy.	2	Lecturer		1. Renewable Energy Sources and Emerging Technologies by Kothari, D.P., Singal, K.C. and Ranjan, Prentice hall, New Delhi, 2 nd Edition, 2008.
Institutions and policies affecting energy systems	1	Lecturer	Assignment	1. Renewable Energy Sources and Emerging Technologies by Kothari, D.P., Singal, K.C. and Ranjan, Prentice hall, New Delhi, 2nd Edition, 2008.
Solar Energy Basic Principle of solar energy and its conversion to thermal and electrical energy.	2	Lecturer		2. Solar Photovoltaic – Fundamentals, Technologies and Applications by CS Solanki, 3rd Edition 2015.
Module II(10Hrs)				
Photovoltaic system: Principle of Photovoltaic effect, Types and application: domestic and industrial	1	Lecturer		2. Solar Photovoltaic – Fundamentals, Technologies and Applications by CS Solanki, 3rd Edition 2015. https://www.youtube.com/watch?v=Rq5Nzv_6v98
Photovoltaic system	1	Lecturer	Field study	2. Solar Photovoltaic –

and its components				Fundamentals, Technologies and Applications by CS Solanki, 3rdEdition2015. https://www.youtube.com/watch?v=f1QSPBTJs5I
PVsystemand itdesign	4(Theory -1hour, Practice-3 hours)	Lecturer+ Lab Practice	Assignment	2 Solar Photovoltaic – Fundamentals, Technologies and Applications by CS Solanki, 3rdEdition2015. https://www.youtube.com/watch?v=q7hW9XQLf6g
PVsysteminstallation and testing	4(Theory -1 hour, Practice-2 hours)	Lecturer+ Lab Practice	Field study	2 Solar Photovoltaic – Fundamentals, Technologies and Applications by CS Solanki, 3rdEdition2015. https://www.youtube.com/watch?v=Q5X6sMScwvM https://www.youtube.com/watch?v=ffm_sR_xdRkY
Module-III(9 Hrs)				
Solarthermalsystem: TypesofCollectorand itsapplication	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Design ofdifferent typesofcollectors	4(Theory -1 hour, Practice 2 hours)	Lecturer+ Lab Practice	Assignment	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=wwl0QAQCJyc
Testingand installation ofsolar thermalsystem	4(Theory -1hour, Practice-3 hours)	Lecturer+ Lab Practice	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Module-IV(4Hrs)				
Wind Energy: Basic Principleof Wind Energy Conversion, Wind DataandEnergy Estimation, wind energy sourcesand potential	2	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Windpowersystems: systemcomponents, TypesofTurbine, Turbine rating. Choice ofgenerators	2	Lecturer		1. Non-conventionalEnergy sourcesbyRaiG.D, 2nd edition(1999)Khanna Publishers, New Delhi. https://www.youtube.com/wat

				ch?v=LNXtm7aHvWc https://www.youtube.com/watch?v=DILJwsFl3w
Module-V(8Hrs)				
Variables speed operation, maximum power operation, maximum power operation, control systems, Application of Wind energy in different sectors	2	Lecturer	Assignment	1 Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
System design features, testing and installation of Wind systems.	6 (Theory - 2 hour, Practice - 4 hours)	(Lecturer + Lab Practice)	Assignment	1 Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Module-VI(8hrs)				
Bio Energy Basic Principle of Biomass Generation and Conversion	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Sources and potential of Bio-Gas	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Application of Bio-Gas in different sectors	1	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Testing and installation of Bio-Gas Plant	5 (Theory - 1 hour, Practice - 4 hour)	Lecturer + Lab Practice	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=PmBx5Zo8KZo
Module-VII(9 hrs)				
Types of Conversion: Thermal, Thermochemical Process	1	Lecturer	Assignment	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Fermentation: Aerobic and Anaerobic digestion	2	Lecturer		1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi.
Design and Construction details of Main Digester	6 (Theory - 2 hour, Practice - 4 hour)	(Lecturer + lab Practice)	Field study	1. Non-conventional Energy sources by Rai G.D, 2nd edition (1999) Khanna Publishers, New Delhi. https://www.youtube.com/watch?v=PmBx5Zo8KZo

Fluid Power

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Fluid Power	MECC0409	Theory+ Practice	2+1(3)	NIL

1. Objective

- To impart knowledge to students on principles and technology behind use of fluid power.
- To educate the students on application of fluid power in various industrial applications and devices.

2. Course Outcomes

- Students will be able to identify various elements used in fluid power systems and will be able to deliver fluid power circuit diagrams.
- Students will be able to design and test various control circuits using Fluidsim software.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR) + 20(EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (5 Hours)

Hydraulic Turbines: Force of Jet on Stationary and Moving Plates (Flat and Curved), Expressions for Torque and Work Done. Classification, Definitions of Heads and Efficiencies.

Pelton Wheel - Construction and Working Principle, Work Done and Hydraulic Efficiency, Design Aspects.

Module II (10 Hours)

Reaction Turbines: Components, Working Principle, Work Done and Efficiency, Draft Tube, Specific Speed, Cavitation, Governing Mechanism, Selection of Turbines.

Practice:

1. Impact of Jets on Vanes
2. Performance Test on Pelton Wheel
3. Performance Test on Francis Turbine

4. Performance Test on Kaplan Turbine

Module III (12 Hours)

Reciprocating Compressors: Construction and Working, Multistage Conditions for Minimum Work, Intercooling, Efficiency and Control of Air Compressors

Rotary Compressors: Introduction, Classification, Roots Blower, Vane Type, Screw Compressor, Scroll Compressor

Axial Flow Compressors: Construction of an Axial Flow Compressor, Aerofoil Blading, Lift and Drag, Performance Characteristics

Practice:

5. Determination of volumetric Efficiency of Reciprocating Air Compressor.
6. To Determine the Efficiency of Rotary Air Compressor.
7. To Determine the Efficiency of Centrifugal Air Compressor.

Module IV (5 Hours)

Basic Hydraulic and Pneumatic: Types, Construction, Working and Applications of (i) Pressure Control Valves, (ii) Directional Control Valves, (iii) Flow Control Valves, (iv) Proportional Control Valve (Proportional Pressure Relief Valve, Proportional Pressure Reducing Valve, Proportional Direction Valve).

Module V (15 Hours)

Hydraulic Pumps: General Assembly Sketch, Main Parts, Working Principle, Applications and Comparison of Following Pumps: External, Internal Gear Pumps & Ge-Rotor (Generator Rotor), Lobe, Screw, Vane Piston, Centrifugal Pump, Reciprocating Pump.

Actuators-Classification, Construction, Working and Applications.

Practice:

8. To Design Different Circuit by Using Different Valves & Actuators with Different Conditions.
9. Performance Test on Single Stage Centrifugal Pump
10. Performance Test on Reciprocating Pump
11. Testing Different Circuits on Fluid-Sim Software.
12. Testing Different Circuit on Pneumatic Kit.

Module VI (5 Hours)

Sensors and Relay: Measuring Devices and Dynamic Characteristics, Active and Passive Sensors and Transducers, Relay, Classifications and Working Principle.

Motion Sensors: Resistive Strain Gauge, LVDT, RVDT, Capacitive, Piezo, Seismic Pickups, Vibrometers and Accelerometers.

Module VII (8 Hours)

Optical Sensors: Lasers, Photo-Detectors and Optical Fiber As Sensors

Electro Pneumatic and Hydraulics: Servo Control Valves: Mechanical Hydraulic Servo Valve, Electro Hydraulic Servo Valve, Single Stage, Two Stage Flapper Type, Jet Pipe Type.

Practice:

13. Design Different Circuit by Using Different Valves & Actuators with Different Conditions.
14. Testing Different Circuits on Fluid-Sim Software.

6. Reference

Text Book:

1. Oil Hydraulic Systems by S.R. Majumdar, Tata McGraw-Hill Publication
2. Fluid Mechanics and Hydraulic Machines, R.K. Bansal, Laxmi Publications

Reference Book:

1. Hydraulic and Pneumatics, A Technician's & Engineer's Guide by Andrew Parr Jaico Publishing House.
2. Festo Manuals

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module I				
Force of Jet on Stationary and Moving Plates (Flat and Curved), Expressions for Torque and Work Done. Classification, Definitions of Heads and Efficiencies. Pelton Wheel-Construction and Working Principle, Work Done and Hydraulic Efficiency, Design Aspects.	5	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice				
1. Impact of Jets on Vanes 2. Performance Test on Pelton Wheel	4			
Module II				

Reaction Turbines: Components, Working Principle, Work Done and Efficiency, Draft Tube, Specific Speed, Cavitation, Governing Mechanism, Selection of Turbines.	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice				
3. Performance Test on Francis Turbine	4			
4. Performance Test on Kaplan Turbine				
Module III				
Reciprocating Compressors: Construction and Working, Multistage Conditions for Minimum Work, Intercooling, Efficiency and Control of Air Compressors	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Rotary Compressors: Introduction, Classification, Roots Blower, Vane Type, Screw Compressor, Scroll Compressor	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Axial Flow Compressors: Construction of an Axial Flow Compressor, Aerofoil Blading, Lift and Drag, Performance Characteristics	2	lecture + lab practice	Assignment with problem solving	R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications
Practice:				
5. Determination of volumetric Efficiency of Reciprocating Air Compressor.	6			
6. To Determine the Efficiency of Rotary Air Compressor.				
7. To Determine the Efficiency of Centrifugal Air Compressor.				
Module IV				
Basic Hydraulic and Pneumatic: Types, Construction, Working and Applications of (i) Pressure	5	lecture + lab practice	Assignment with problem solving	Oil Hydraulic Systems by S.R. Majumdar, Tata Mcgraw-Hill Publication

Control Valves. (ii) Directional Control Valves, (iii) Flow Control Valves. (iv) Proportional Control Valve(Proportional Pressure Relief Valve, Proportional Pressure Reducing Valve, Proportional Direction Valve).				
Module V				
Hydraulic Pumps: General Assembly Sketch, Main Parts, Working Principle, Applications and Comparison of Following Pumps: External, Internal Gear Pumps & Ge-Rotor (Generator Rotor). Lobe, Screw, Vane Piston, Centrifugal Pump, Reciprocating Pump. Actuators -Classification, Construction, Working and Applications.	9	lecture + lab practice	Assignment with problem solving	Oil Hydraulic Systems by S.R. Mechanics of Machines

Subject Name	Code	Type of course	Credit	Prerequisite
Mechanics of Machines	MECC0410	Theory+ Practice	2+1(3)	Nil

1. Objective

<ul style="list-style-type: none"> ✓ To educate the student on basic theories, concepts and methods used for study and analysis of commonly used mechanisms in various applications. ✓ To educate the students on some of the widely used mechanical power transmission elements.

2. Course Outcomes

- Students will have knowledge and skills to analyse, design and develop mechanisms suited to specific applications.
- Students will have knowledge and skills to study and understand working of complex mechanisms and machines enabling them to safely operate and maintain such installations.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (09 Hours)

Planar Mechanisms: Kinematic Link, Pair, Chain and Mechanism; Types of Links and Joints, Degree of Freedom; Grashof's Law for four bar Mechanism, Inversions of four bar Mechanism, Single Slider Crank Mechanism and Double Slider Crank Mechanism.

Practice :

- Position Analysis of Grashof and non-Grashof four bar Mechanism
- Position Analysis of Slider Crank Mechanism, Scotch Yoke Mechanism and Elliptical Trammel

Module II (14 Hours)

Motion Analysis: Instantaneous Centre of Rotation, Number and Types of Instantaneous Centres, Kennedy Theorem, Relative Velocity Method, Velocities in Four Bar and Slider Crank Mechanism, Crank and Slotted Lever Mechanism, Angular Velocity Ratio Theorem, Acceleration Diagram of Single Slider-Crank Mechanism, Coriolis Component of Acceleration.

Practice:

- Instantaneous Center Method to Find Velocity of Various Mechanisms
- Klein's Construction for Determination of Velocity and Acceleration of Reciprocating Parts
- Velocity Analysis of Grashof and Non-Grashof Four Bar Mechanism
- Velocity Analysis of Slider Crank Mechanism and Scotch Yoke Mechanism
- Acceleration Analysis of Slider Crank Mechanism

Module III (09 Hours)

Gears: Classification and Basic Terminology, Fundamental Law of Gearing, Standard forms of Tooth, Length of Path of Contact and Arc of Contact, Contact Ratio, Interference in Involute Gears.

Gear trains: Simple, Compound, Reverted and Epi-Cyclic Gear Trains.

Practice:

- Study of Operations of Various Gear Trains in Automobiles

Module IV (07 Hours)

CAM: Various Types of Cams and Followers; Displacement, Velocity and Acceleration Diagrams for Different Follower Motions; Nomenclature of Cam Profile.

Practice:

9. Construction of Cam Profile for Various Follower Motions

Module V (05 Hours)

Inertia forces in reciprocating parts: Velocity and Acceleration of a Piston, Angular Velocity and Angular Acceleration of Connecting Rod, Engine Force Analysis, Dynamically Equivalent System.

Module VI (08 Hours)

Gyroscope: Gyroscopic Couple, Gyroscopic Effect on Naval Ships and Aeroplanes, Stability of Two-wheeler Vehicles.

Practice :

10. Determine Gyroscopic Couple on Motorized Gyroscope

Balancing: Static and Dynamic Balancing, Balancing of Several Masses Revolving in the Same Plane and Different Planes, Balancing of Reciprocating Mass, Partial Primary Balancing, Partial Balancing of Locomotives.

Practice:

11. Balancing of Several Masses Revolving in the Same and Different Planes

Module VII (08 Hours)

Vibration: Basic Concepts and Types of Vibration, Methods of Vibration Analysis, Free Undamped Longitudinal, Transverse and Torsional Vibrations, Damped Free Vibrations, Logarithmic Decrement, Forced Vibration with Harmonic Excitation, Vibration Isolation and Transmissibility.

Practice:

12. Determination of Critical or Whirling Speed of Shaft
13. Simple and Compound Pendulum

Text Book:

1. Theory of Machines, S.S. Rattan, Tata McGraw-Hill.
2. Theory of Machines, R.K. Bansal, Laxmi Publication

Reference Books:

1. Theory of Machines, Sadhu Singh, Khanna Publishers
2. Design of Machinery, Robert L. Norton, McGraw-Hill

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
MODULE -I				

Kinematic link, pair, chain and mechanism; types of links and joints, degree of freedom; Grashof's law for four bar mechanism	3	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
Inversions of four bar mechanism	2	Lecture	Assignment	
Single slider crank mechanism and double slider crank mechanism.	4	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
MODULE II				
Instantaneous centre of rotation, number and types of instantaneous centres, Kennedy theorem, relative velocity method	3	Lecture	Assignment	
Velocities in four bar, slider crank mechanism, crank and slotted lever mechanism	2+2	Lecture	Assignment	http://mm-nitk.vlabs.ac.in/index.html# http://mm-nitk.vlabs.ac.in/index.html#
Angular velocity ratio theorem	1	Lecture	Assignment	
Acceleration diagram of single slider-crank mechanism	2+2	Lecture + Practice	Assignment	http://mm-nitk.vlabs.ac.in/index.html#
Coriolis component of acceleration.	2	Lecture	Assignment	
MODULE - III				
Classification and basic terminology, fundamental law of gearing	2	Lecture	Assignment	https://www.youtube.com/watch?v=Z1f29M4o3jI
Standard forms of tooth, length of path of contact and arc of contact, contact ratio, interference in involute gears.	3	Lecture	Assignment	
Simple, compound, reverted and epi-cyclic gear trains.	2+2	Lecture + Practice	assignment	
MODULE IV				
CAM: Various types of cams and followers	1	Lecture	Assignment	https://www.youtube.com/watch?v=YbjmphKVVpA
Displacement, velocity and acceleration diagrams for different follower motions; nomenclature of cam profile	2+2+2	Lecture + Practice	assignment	
MODULE - V				
Velocity and acceleration of a piston, angular velocity and	3	Lecture	Assignment	

angular acceleration of connecting rod				
Engine force analysis, dynamically equivalent system	2	Lecture	Assignment	
MODULE- VI				
Gyroscope: Gyroscopic couple, gyroscopic effect on naval ships	1+2	Lecture + Practice	Assignment	
Gyroscopic effect on aeroplanes, stability of two-wheeler vehicles.	1	Lecture	Assignment	https://www.youtube.com/watch?v=ZsaVIW1BFUQ
Balancing: Static and dynamic balancing, balancing of several masses revolving in the same plane	1+1	Lecture + Practice	Assignment	
Balancing of several masses revolving in different planes	1	Lecture	Assignment	https://www.youtube.com/watch?v=_CwACU8Zfug
Balancing of reciprocating mass, partial primary balancing	1	Lecture	Assignment	https://www.youtube.com/watch?v=Eg9AwoxvwlQ
MODULE -VII				
Vibration: Basic concepts and types of vibration, methods of vibration analysis, free undamped longitudinal, transverse and torsional vibrations	2+2	Lecture + Practice	Assignment	https://www.youtube.com/watch?v=qV65LJ6LpI4
Damped free vibrations, logarithmic decrement	2	Lecture	Assignment	https://www.youtube.com/watch?v=Zp9g0Xbv7G4
Forced vibration with harmonic excitation, vibration isolation and transmissibility	2	Lecture	Assignment	https://www.youtube.com/watch?v=cGFjNhGwUY
Total(hrs)	60			

Strength of Material

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Strength of Material	MECC0411	Theory+ Practice	2+1(3)	Engineering Mechanics

1. Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on using ANSYS for analysis of various mechanical structures and load transmitting elements.

2. Course Outcomes

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy ANSYS to develop mechanical design solutions.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab Work, Report
	Project		Report and Presentation
	Quiz		Surprise/Preannounced Ones
External Examination		30	Written Examination
Total		100	

4. Course Outline

Module I (10 Hrs): Analysis of Beams

Shear and Bending Moment in Beams: Types of Beams and Loads, Concept of Shear Force, Bending Moment and Sign Conventions, Relation Between Load, Shear Force and Bending Moment, Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

- Simulation (Using ANSYS): Evaluate Shear Force and Bending Moment
- Simulation (Using ANSYS): Beam Analysis with Point Load, UDL, UVL and Moment

MODULE II (08 Hrs):

Stresses in Beams: Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination Bending Stresses, Shear Stress Distribution for Different Sections.

- Simulation (Using ANSYS): To Analyze The Bending Stress of a Cantilevered and Simply Supported Beam

MODULE III (07 Hrs):

Deflection of Beams: Equation of Elastic Curve, Direct Integration Method, Strain Energy Method, Castigliano's Theorem

- Stress & Deflection Analysis of Mechanical Component (Using ANSYS)
- Double Shear Test and Deflection Test Using UTM

Module IV: (08 Hrs) Analysis of Column and Shaft

Column Analysis: Failure of a Column, End Conditions, Euler's Critical Load for Long Columns, Rankine's Empirical Formula, Effective Length and Slenderness Ratio, Eccentric Loading and Secant Formula.

- Simulation (Using ANSYS): Buckling Analysis of a Square Column, I-Beam and RCC Beam

Module V: Torsion (08 Hrs): Torsion Formula, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

- Simulation (Using ANSYS): Static and Dynamic Analysis of Shaft

8. Simulation (Using ANSYS): Spring Structural Analysis
9. Simulation (Using ANSYS): Stress Analysis of Suspension System
10. Stiffness Test of a Helical Spring

Module VI (08 Hrs.)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

11. Simulation: Spur Gear Fatigue Analysis in ANSYS
12. Simulation: Chair Structural Analysis in ANSYS
13. Simulation (Using ANSYS): Bicycle Frame Structural Analysis

Module VII (11 Hrs.)

Fatigue: Failure Under Cyclic Loading, Endurance Limit, S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

14. Fatigue Failure Analysis (Using ANSYS)
15. Fatigue Analysis of a Plate with Hole (Using ANSYS)
16. Fatigue Analysis (Using ANSYS) of Crankshaft of Two Wheeler

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture, Griffith's Analysis, Energy Release Rate, Elastic Stress at the Tip of a Sharp Crack, Crack Growth and Stress Intensity Factor, Critical SIF, Fracture Toughness Testing.

Software Requirement: ANSYS

5. Reference

Text Books:

Design of Transmission Systems

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Design of Transmission Systems	MECC0412	Theory+ Practice	2+1(3)	Mechanics of Solids

1. Objective

- To familiarize the various mechanical power transmission elements and systems as used in industry.
- To enable the students to design basic transmission elements using prior theoretical knowledge.

2. Course outcomes

- To convert basic input data into engineering design and drawing using CATIA and ANSYS.

3. Evaluation Systems

Internal Examination	Component	% of Marks	Method of Assessment
	Midterm Test	20 (ITH)	Written examination
	Assignment		Report and Presentation
	Experiments	30 (IPR)+20 (EPR)	Lab work, report
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course outline

Module I (20 hrs) (Basic Power Transmission Elements)

Design of Shaft Coupling: Keys and Splines; Strength of a Sunk Key; Rigid and Flexible Coupling, Hooke's Joint and Constant Velocity Joint.

Practice:

1. Design of Flange Coupling using CATIA
2. Design of Hooke's Joint using CATIA

Design of Belt, Rope and Chain Drives: Flat, V-Belt and Rope Belts; Slip and Creep of Belt; Velocity Ratio of Belt Drives; Centrifugal and Initial Tension; Maximum Power Transmission Through a Belt Drive, Power Transmitting Chains.

Practice:

3. Design of Flat belt pulley using CATIA
4. Design of V-belt pulley using CATIA

Design of Gears: Selection of Materials; Force Analysis, Beam Strength of Gear Tooth, Gear Tooth Failure.

Practice:

5. Computer aided spur gear design and analysis using CATIA and ANSYS
6. Computer aided helical gear design and analysis using CATIA and ANSYS

Module II (14 Hrs) Power Transmission Mechanisms

Clutch: Friction, Centrifugal, Vacuum and Free Wheel Clutch, Construction and Working Principle

Fluid Coupling and Torque Converter: Basic Concepts, Construction and Working Principle

Brakes: Single and Double Shoe Brake, Internal Expanding Brake, Band Brake, Electromagnetic Brakes, Concept of Regenerative Braking.

Module III (18 Hrs) Applications, Mechanical Power Measurement and Control

Applications:

- ✓ Gear Box Used in Automobiles, Machine Tool, etc
- ✓ Conveyor with the Application of Belt Drives
- ✓ Use of Torque Converter in Automatic Transmission
- ✓ Electric Overhead Cranes and Goods/Passenger Lifts Using Rope Drives
- ✓ Ball Screw Mechanisms Used in CNC Machines
- ✓ Use of Rigid and Flexible Couplings in Pumps and Compressors
- ✓ Disc type and Drum type Brakes used in Automobiles
- ✓ Power Transmission using Cardan Shaft in Rolling Mills and Conveyors

Mechanical Power Measurement and Control:

Basic Mechanical Control Systems: Types of Control Systems, Open and Closed Loop, Feedback, Need and Basic Working Principle of Governor and Flywheel, Variable Frequency Drive (VFD).

Dynamometers: Power Measuring Instruments Such as Rope Brake, Hydraulic and Eddy Current Dynamometers.

Practice:

7. Measurement of Torque and Power Using Rope Brake Dynamometer

6. Reference

Text Book:

1. Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill
2. Mechanical Power Transmission by William J. Patton, Prentice Hall

Reference Books:

1. Shigley's Mechanical Engineering Design by Richard G. Budynas and J.K. Nisbett, McGraw-Hill
2. Design Data Handbook by S. Md. Jalaludeen, Anuradha Publications

7. Session Plan

Topic coverage and Internal Test	No. of Sessions (in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignment (project, assignment, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Keys and Splines: Strength of a Sunk Key;	1	Lecturer+ Video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=S8Qmy4fGnnE
Rigid and Flexible Coupling	1	Lecture + video	Assignment	Design of Machine Elements by V.B. Bhandari, Tata McGraw-Hill https://www.youtube.com/watch?v=CwiaS075YzQ https://www.youtube.com/watch?v=9jdc0CzMjCo

Introduction to Hybrid and Electric Vehicles

Subject Name	Code	Type of Course	T-P-Pr (Credit)	Prerequisite
Introduction to Hybrid and Electric Vehicles	MECC0413	Theory+ Practice	1+1(2)	Nil

1. Objective

<ul style="list-style-type: none"> ✓ To educate the students on principles, technology, usage and application of fully electric and hybrid vehicles. ✓ To educate the students on energy source, power flow and drive train technologies used in electrical

and hybrid vehicles as on date.

2. Course Outcomes

- Students will be able to identify and understand the electrical circuits and will be able to test the performance of these vehicles.
- Students will be able to carry out maintenance activities of these vehicles.

3. Evaluation Systems

Internal Examination	Component	% of marks	Methods of assessment
	Internal Test	10	Written examination
	Assignment	5	Report
	Learning Record	5	Report
	Experiments	30	Lab work
External Examination	External Theory	30	Written examination
	External Practice	20	Lab work
Total		100	

4. Course outline

Module I (4 Hours)

Introduction to Hybrid Vehicles: History of Hybrid Vehicles, Social and Environmental Importance, Working Principle of Hybrid Vehicles.

Module II (8 Hours)

Hybrid Drive-Trains: Basic Concept of Hybrid Traction, Types of Drive Train in Hybrid Vehicles, Power Flow Control in Hybrid Drive-Train Topologies, Fuel Analysis ((Density, Viscosity, Calorific Value, Flash & Fire Point), Fuel Efficiency

Practice:

1. Determination of Calorific Value of a Fuel by using Bomb Calorimeter
2. Determination of Flash Point and Fire Point of a Given Fuel
3. Determination of Viscosity of a Given Fuel

Module III (8 Hours)

Introduction to Electric Vehicles: Reasons for Electric Vehicle Development, Advantages and Disadvantages of Electric Vehicle, Main Components of Electric Vehicles (Battery, Motor, Controller, DC to DC Converter), Working of Main Components.

Practice:

4. Practice in Controller Connection Used in Electric Vehicle
5. Practice Wiring and Harnessing in Battery Electric Vehicle

Module IV (7 Hours)

Energy Storage:

Energy Storage Requirements in Electric Vehicles, Battery Monitoring and Charging Control, Combination of Batteries, Sizing of Battery Cell, Principles of Operation of Fuel Cell, Regenerative Braking System.

Practice:

6. Maintenance of Lead Acid Batteries

7. Sizing of Battery Cell

Module V (5Hours)

Electric Drive-Trains: Basic Concept of Electric Traction, Introduction to Various Electric Drive-Train Topologies, Power Flow Control in Electric Drive-Train Topologies.

Module VI (6Hours)

Electric Propulsion Unit: Introduction to Electric Components Used in Hybrid and Electric Vehicles, DCMotor, Control of DCMotor Drives, BLDC (Brushless DC) Motor

Practice:

8. Performance Characteristics of a Shunt and Series DCMotor

9. Disassemble Different Parts of BLDC Motor

Module VII (7Hours)

Types of Motors and Drives: Induction Motor and Drives, Permanent Magnet Synchronous Motor Drives, Switched Reluctance Motor Drives.

Practice:

10. Load Test on Three Phase Induction Motor

11. Speed Control of DC Shunt Motor by Armature and Field Control

12. Permanent Magnet Motor Drives, Their Control

6. Reference

Text Books:

1. Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003.

2. Modern Electric Vehicle Technology, C.C. Chan and K.T. Chau, Oxford Science Publications.

Electric Drive-Trains: Basic concept of electric traction, Introduction to various electric drive-train topologies, Powerflow control in electric drive-train topologies.	5(Th-5)	Lecture	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 https://www.youtube.com/watch?v=0DqPmACIeKA https://www.youtube.com/watch?v=gK6UUY3nTko http://nptel.iitm.ac.in
Module VI (6Hours)				
Electric Propulsion Unit: Introduction to electric components used in hybrid and electric vehicles, DC Motor, Control of DC Motor drives, BLDC (Brushless DC) Motor	6 (Th-3, Pr-3)	Lecture + Lab Practice	Assignment	Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussein, CRC Press, 2003 V.K. Mehta and Rohit Mehta, Principles of Electrical Machines, S. Chand https://www.youtube.com/watch?v=jAGTEAtPEzY https://www.youtube.com/watch?v=bCEiOnuODa https://www.youtube.com/watch?v=LtJoJBUSE28 https://www.youtube.com/watch?v=Vk2jDXxZlhs&list=PLMH0_80Gkb0ZNVz4hVsolj7JrUf56wPN https://www.youtube.com/watch?v=dAW8e3N9xDE http://nptel.iitm.ac.in
Module VII (7Hours)				
Types of Motors and Drives: Induction motor and drives, Permanent magnet synchronous motor drives, Switched reluctance motor drives	7 (Th-3, Pr-4)	Lab Practice	Assignment	V.K. Mehta and Rohit Mehta, Principles of Electrical Machines, S. Chand
Total (hrs)	45			

Fluid Mechanics and Heat Transfer

Subject Name	Code	Type of Course	Credit	Prerequisite
Fluid Mechanics and Heat Transfer	MECC0414	Theory+ Practice	2+1(3)	Basic Fluid Mechanics

1. Objective

- ✓ To Educate the Students on Basic Theories behind Fluid Mechanics and Heat Transfer as Used in Engineering Practices.
- ✓ To Educate the Students on use of Experimental methods to Determine Various Engineering Parameters used in Fluid Mechanics and Heat Transfer Applications.

2. Course Outcomes

- ✓ Students will be able to Analyze and Design various Equipment used in Industry using Principles of Fluid Mechanics and Heat Transfer.

3. Evaluation Systems

Internal Examination	Component	% of marks	Method of assessment
	Midterm Test	20 (ITH)	Written Examination
	Assignment		Report and Presentation
	Experiments	30 (IPR) + 20 (EPR)	Lab work, report
	Project		Report and presentation
	Quiz		Surprise/preannounced ones
External Examination		30	Written examination
Total		100	

4. Course Outline

Module I (8 Hrs)

Forces on Submerged Bodies: Causes for Drag and Lift, Drag and Lift Coefficients, Drag on a Sphere and a Cylinder, Terminal velocity of a Body, Stoke's Law, Development of Lift and Drag on a Stationary and Rotating Cylinder, Magnus Effect, Stagnation Points, Introduction to Airfoil Theory.

Practice:

1. Determination of Viscosity of a Liquid by using Stoke's Law.

Module II (8 Hrs)

Incompressible flow: Navier-stokes equation (without derivation), Exact solutions of Navier-stokes equation, Poiseuille flow, Couette flow, Movement of Piston in a Dashpot.

Practice:

2. To Determine Velocity of a Point Within a Flow through the Pipe Line by Close Circuit Prandtl Tube Apparatus.
3. To Demonstrate Laminar and Turbulent Flow through Closed Conduit and to Find Out Reynolds Number by Reynolds Apparatus.
4. To Determine the Frictional Losses in the Pipe by Pipe Friction Apparatus.

Module III (5 Hours)

Compressible flow: Basic equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation, Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow, Mach Number, Wave Propagation in a Compressible Fluid, Stagnation Properties.

Module IV (13 Hours)

Conduction: Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, Composite Cylinders and Composite Spheres with Convective Atmosphere, Electrical Analogy, Conduction with Heat Generation, Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.

Practice:

5. Determination of Overall Heat Transfer Coefficient of Composite Slab.
6. Determination of Thermal Conductivity of Liquid.
7. Experiment on Transient Heat Conduction Apparatus.
8. Efficiency and Effectiveness of Pin Fins.

Module V (10 Hours)

Convection: Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow Over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces.

Practice:

9. Determination of Heat Transfer Coefficient in Forced Convection.
10. Determination of Heat Transfer Coefficient in Natural Convection.

Module VI (5 Hours)

Heat Transfer with Phase Change: Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.

Practice:

11. Determination of Critical Heat Flux during Boiling Heat Transfer.
12. Determination of Heat Transfer in Drop and Film Wise Condensation.

Module VII (7 Hours)

Radiation: Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black and Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.

Practice:

13. Determination of Surface Emissivity.
14. Verification of Stefan Boltzmann's Law.

6. Reference

Text Books:

1. Fundamentals of Heat and Mass Transfer by R.C. Sachdeva, 2nd Edition.

2. FluidMechanicsbyR.K.Bansaland Hydraulic Machines, LaxmiPublications.

ReferenceBooks:

1. HeatTransferby R.K. Rajput, LaxmiPublication.
2. Hydraulics &FluidMechanicsbyP.N. Modiand S.N.Seth, Rajsons Publications.
3. *OnlineSource:* www.nptel.ac.in, You tube video.

7. SessionPlan

Topiccoverage andInternal Test	No. of Sessions(in hrs.)	Activity (lecture, tutorial, lab practice, field studies/field-trip, Workshop etc.)	Assignme nt (project, assignme nt, field study, seminar, etc.)	Suggested Reading (Book, Video, Online source, etc.)
Module-1 (8 Hrs)				
Forceson SubmergedBodies: CausesforDragand Lift,Drag andLiftCoefficients,Dragon a Sphereand aCylinder	2	Lecturer	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=5ltjFEei3AI
Terminalvelocity ofaBody, Stroke’s Law,Development of Lift and Drag on a Stationary and RotatingCylinder	2+2	Lecturer + Lab Practice	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=hUP5igTjvuc https://www.youtube.com/watch?v=AcsrBCEJz-Y https://www.youtube.com/watch?v=mQwlmXtRu5k
Magnus Effect, Stagnation Points,Introduction toAirfoil Theory.	2	Lecturer	Assignme ntwith problem solving	1.FluidMechanicsbyR.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=AJl8EvLp1G0
Module II(8 Hrs)				

Incompressible flow: Navier-stokes equation (without derivation)	1+2	Lecturer + Lab Practice	Assignment with problem solving	2. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth Rajsons Publications., https://www.youtube.com/watch?v=JH3I-NliCkM
Exact solutions of Navier-stokes equation	1	Lecturer + Lab Practice	Assignment with problem solving	2. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth, Rajsons Publications.
Poiseuille flow	2	Lab Practice	Assignment with problem solving	3. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth Rajsons Publications. https://www.youtube.com/watch?v=A8f0YfkXwds https://www.youtube.com/watch?v=fTEGOMWIKZ0
Couette flow, Movement of Piston in a Dashpot.	2	Lab Practice	Assignment with problem solving	3. Hydraulics & Fluid Mechanics by P.N. Modi and S.N. Seth, Rajsons Publications. https://www.youtube.com/watch?v=PQTRdX6-4kQ
Module III (5 Hrs)				
Compressible flow: Basic equations of Compressible Fluid Flow: Continuity Equation and General Energy Equation	2	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications. https://www.youtube.com/watch?v=4EADzHBJtE
Velocity of Pressure Wave in a Fluid, Subsonic, Sonic and Supersonic Flow	2	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications.
Mach Number, Wave Propagation in a Compressible Fluid, Stagnation Properties.	1	Lecturer	Assignment with problem solving	1. Fluid Mechanics by R.K. Bansal and Hydraulic Machines, Laxmi Publications.

Module IV(13 Hrs)				
Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation)	1	Lecturer	Assignment with problem solving	<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p> <p>https://www.youtube.com/watch?v=gcY6832h_Nw</p> <p>https://www.youtube.com/watch?v=bA3EzToAWOE</p> <p>https://www.youtube.com/watch?v=pRnURDgfByE</p> <p>https://www.youtube.com/watch?v=Atnjo7dD_bA</p> <p>http://nptel.ac.in/courses/112108149/pdf/M1/Student_Slides_M1.pdf</p> <p>https://www.youtube.com/watch?v=VO_3WW6ZcWw</p> <p>https://www.youtube.com/watch?v=zFkJy_VocCk</p>
One Dimensional Steady State Conduction in Plane Wall	1	Lecturer	Assignment with problem solving	<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p> <p>http://nptel.ac.in/courses/112108149/pdf/M2/Student_Slides_M2.pdf</p> <p>https://www.youtube.com/watch?v=HbzUeBCmjNQ</p> <p>https://www.youtube.com/watch?v=mhWPR3xNPRE</p> <p>https://www.youtube.com/watch?v=zM86XDUsMmA</p> <p>https://www.youtube.com/watch?v=40A4p0HrWik</p>
Composite wall, Composite Cylinders and Composite Spheres with Convective Atmosphere	1	Lecturer	Assignment with problem solving	<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat</p>

				and Mass Transfer, by R.C. Sachdeva, 2nd Edition. http://nptel.ac.in/courses/112108149/pdf/M2/Student_Slides_M2.pdf
Electrical Analogy, Conduction with Heat Generation	1	Lecturer	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Overall Heat Transfer Coefficients,	2	Lab Practice	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Critical Thickness of Insulation,	1	Lecturer	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Heat transfer from Extended Surfaces,	1	Lecturer	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition. https://www.youtube.com/watch?v=rKcTidz-1P4 https://www.youtube.com/watch?v=DTXpnhTOI20http://nptel.ac.in/courses/112108149/pdf/M3/Student_Slides_M3.pdf
Effectiveness and Efficiency	2	Lab Practice	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Unsteady State Heat Conduction	2	Lab Practice	Assignment with	1. Heat and Mass Transfer, R.K. Rajput, Laxmi

			problem solving	Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition. https://www.youtube.com/watch?v=Di8G5iPDPEQ https://www.youtube.com/watch?v=seNR8waoBgE
Lumped heat Capacity System and Lumped Capacitance Method.	1	Lecturer	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Module V (10 Hrs)				
Convection: Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations	2	Lecturer	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition. http://nptel.ac.in/courses/112108149/pdf/M6/Student_Slides_M6.pdf
Forced Convection: External flow over a Flat plate, Cylinder, Sphere and non-circular Ducts, use of Empirical Relations	2+2	Lecturer+ Lab Practice	Assignment with problem solving	1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Internal flow through pipe, Annular spaces and non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces	2+2	Lecturer+ Lab Practice		1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.
Module VI (5 Hrs)				
Heat transfer with phase change: - Film Wise and Drop Wise Condensation	1+2	Lecturer+ Lab Practice		1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications. 2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.

Boiling Heat transfer, Regimes of Boiling.	2	Lab Practice		<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>http://nptel.ac.in/courses/112108149/pdf/M8/Student_Slides_M8.pdf</p> <p>https://www.youtube.com/watch?v=NaSMTsscEao</p> <p>https://www.youtube.com/watch?v=N1yZwRcQSZw</p>
Module VII (7 Hrs)				
Radiation: Electromagnetic spectrum, blackbody emission, emissive power, laws of radiation, nature of black and grey bodies, concepts	1+2	Lecturer+ Lab Practice		<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p> <p>https://www.youtube.com/watch?v=5GoZZKcNZiQ</p> <p>https://www.youtube.com/watch?v=tZiZyoYT80</p> <p>http://nptel.ac.in/courses/112108149/pdf/M9/Student_Slides_M9.pdf</p>
Radiation Shape Factor, Thermal Resistance and Electrical Analogy	1+2	Lecturer+ Lab Practice		<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p> <p>https://www.youtube.com/watch?v=TiOpUAI_9mk</p> <p>https://www.youtube.com/watch?v=szEOmHKjzhs</p>
Radiation Heat Transfer between two Surfaces, reradiating Surface, Radiation Shield	1	Lecturer		<p>1. Heat and Mass Transfer, R.K. Rajput, Laxmi Publications.</p> <p>2. Fundamentals of Heat and Mass Transfer, by R.C. Sachdeva, 2nd Edition.</p>

**CENTURION UNIVERSITY OF TECHNOLOGY AND
MANAGEMENT, ODISHA**

SCHOOL OF PARAMEDICS & ALLIED HEALTH SCIENCES

Centurion
UNIVERSITY

**BACHELORE OF SCIENCE IN
CLINICAL MICROBIOLOGY**

2017

SYLLABUS

Preface: Clinical Microbiology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as Collection of samples like body fluid, tissue, and blood and diagnoses them. It also covers micro-organism screening, sterilization of laboratorial environment and equipments, Antibiotic sensitivity tests.

Clinical Microbiologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Microbiological Laboratory.

With adequate knowledge and experience, Clinical Microbiologist having +2 Sc with biology qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B.Sc. in Clinical Microbiology.

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre equipped with modern microbiology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in atypewritten and bound form.

Degree: On successful completion of three year programme, the candidate will be awarded with “**Bachelor of Science in Clinical Microbiology (B.Sc.-CMB)**” from Centurion University.

Bachelor of Science in Clinical Microbiology Course Structure

SEMESTER-I

SI NO	CODE	SUBJECT	SUBJECT TYPE Lecture+ Tutorial+ Practice (L+T+P)	CREDITS
1	BSCM1101	Introductory Cell Biology	3+1+0	4
2	BSCM1102	Human Anatomy & Physiology	4+0+0	4
3	BSCM1103	Basic Haematology	3+1+0	4
4	BSCM1104	Instrumentation & Techniques	3+1+0	4
5	BSCM1105	Human Anatomy, Physiology & Haematology Practical	0+0+6	4
	Total			20

SEMESTER-II

SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1	FCBS0101	Environmental Science	3+1+0	4
2	FCHU1201	Foundations of English Communication	0+0+3	2
3	BSCM1201	General Microbiology	3+1+0	4
4	BSCM1202	Clinical Biochemistry	3+1+0	4
5	BSCM1203	Clinical Pathology & Diagnosis	3+1+0	4
6	BSCM1204	Clinical Pathology, Biochemistry & Microbiology Practical	0+0+6	4
	Total			22

SEMESTER-III

SL NO	CODE	SUBJECT	SUBJECT TYPE L+T+P	CREDIT
1	BSCM2301	Immunology	3+1+0	4

2	BSCM2302	Systemic Bacteriology	3+1+0	4
3	BSCM2303	Molecular Biology	3+1+0	4
4	BSCM2304	Systemic Virology & Mycology	3+1+0	4

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in a 6 months)

Syllabus
1st semester B. Sc Clinical Microbiology

BSCM1101- Introductory Cell Biology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Introductory Cell Biology	BSCM1101	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- Determine the parts of the cell membrane and the cell wall
- Distinguish the types and mechanism of mutation
- Compare and contrast the events of cell cycle and its regulation
- Understand the dynamic character of cellular organelles

Course Outcome

- Describe the fundamental principals cellular biology
- Develop a deeper understanding of cell structure and how it relates to cell functions.
- Understand how cells grow, divide, and die and how these important processes are regulated.
- Understand cell signaling and how it regulates cellular functions. Also how its dis-regulation leads to cancer and other diseases.

Unit-1

Biology & Its Branches; Scientific methods in Biology; Scope of biology and career options in Medical Laboratory Sciences; Characters of living organisms (elementary idea of metabolism, transfer of energy at molecular level, open and closed systems, homoeostasis, growth and reproduction, adaptation, survival, death). Origin and Evolution of life - Theories of Evolution; Evidence of Evolution; Sources of Variations (mutation, recombination, genetic drift, migration, natural selection); Concept of species; Specification and Isolation (geographical and reproductive); Origin of species.

Unit-2

Cell organelles and their functions- nucleus, mitochondria, plastids, endoplasmic reticulum, Golgi complex, lysosomes, microtubules, centriole, vacuole, cytoskeleton, cilia and flagella, ribosomes. Molecules of cell ; inorganic and organic materials - water, salt, mineral ions, carbohydrates, lipids, amino acids, proteins, vitamins, hormones and steroids.

Unit-3

Cell as a basic unit of life - discovery of cell, cell theory, cell as a self - contained unit; prokaryotic and eukaryotic cell; unicellular and multicellular organisms; Ultrastructure of

prokaryotic and eukaryotic cell - cell wall, cell membrane - unit membrane concept (Fluid-Mosaic model); membrane transport; cellular movement (exocytosis, endocytosis)

Unit-4

Cell respiration: Metabolism, carbohydrate metabolism, cell respiration-: stage I- Glycolysis, stage II- Pyruvic acid oxidation, stage III- Krebs citric acid cycle, stage IV- oxidation phosphorylation.

Components of respiratory chain, energy relationships during cell respirations during cell respiration, types of respiration. Pathways in intermediary metabolism of carbohydrates.

Suggested Readings

1. Molecular biology of the cell by Alberts Bruce, publisher Garland Science
2. Molecular Biology by Friefelder David, Publisher Narosa
3. Introduction to Cell biology by John K Young, World Scientific publishing company
4. Introduction to biology ,3rd tropic edition by D G Maackean
5. A Term wise Text book on biology by VIDYA

BSCM1102-Human Anatomy and Physiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Human Anatomy and Physiology	BSCM1102	Lecture	4-0-0	Fundamental Science

Course Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Describe about the elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue. Cell division, meiosis and mitosis

Skeletal System: Structure and function of different human Bones, Skelton & Joints. Classification of joints and their function. Joint disorders.

Practice: Demonstration of individual bone from skeleton..

Identification of different organs and system from chart.

Unit-2

Blood, Composition, Structure, classifications, Rh factor, Grouping, Normal and Abnormal Structure of different blood cells, synthesis of blood cells, mechanism of blood clot, blood circulation in body. Cardiovascular System: Structure and functions and Position of Heart. Various parts of the heart. Blood supply in Artery and veins. Conducting system of the Heart. Cardiac output. Blood pressure and Pulses and its normal recording. Brief information about cardiovascular disorders.

Respiratory system: Various parts of respiratory system and their functions, physiology of respiration. Other respiratory organs, their structure and fuctions. Mechanism of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation . Patho-physiology of renal diseases and edema.

Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Identification of different organs and system from chart.

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber& Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
3. Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb & Hoehn.
6. Anatomy and Physiology by N Murgesh, Publisher satya.

BSCM1103- Basic Haematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Haematology	BSCM1103	Lecture+Tutorial	3-1-0	Basic Medical science

Course Objective

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.
- To learn about tests carried out for hematological investigations.
- To be able to carry out blood sampling.

Unit-1

Introduction to Haematology, definition, importance, important equipment and chemicals, various test performed in Haematology laboratory. Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in haematology- Microscope, Blood Cell counter, Shari's. Apparatuses.

Unit -2

Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis

Anticoagulants, definition, Uses, Different types, mode of action, their merits and demerits, Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart. Demonstration the normal and abnormal morphology of different blood cells.

Unit-3

Collection and preservation of blood: Different methods of collection, preservation, changes in stored blood normal and absolute values in haematology, RBC count, WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, ESR, PCV.

Blood Film: different types, methods of preparations, staining, Different types of stains, Romanowsky stains: principle of staining, different stains, their composition and preparation, methods of staining.

Practice: Collection of blood by different methods. Preparation of DLC, TLC, TRBC etc Estimation of ESR, Hb and diagnosis procedure of different blood tests.

Unit-4

Haematological Disorders

- a. Classification of Anaemia: Morphological & etiological.
- b. Iron Deficiency Anaemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
- c. Megaloblastic Anaemia: Causes, Lab findings.
- d. Haemolytic Anaemia: Definition, causes, classification & lab findings.
- e. Bone Marrow : Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black
- f. Leukaemia : Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Estimation procedure of sickle cell, Identification of different abnormal morphology of blood. Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Suggested Reading

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvt limited

BSCM1104- Instrumentation & Techniques

Subject Name	Code	Type of course	L-T-P	Prerequisite
Instrumentation & Techniques	BSCM1104	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Principle of Spectroscopy

Course Outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.
- Each graduate will meet expected outcomes in communications, computation, and human relations, per the University General requirements.

Unit -1

Microscope: different type of microscope operation and care of binocular and monocular microscope in details Light, phase contrast, interference, fluorescence, polarization and electron microscopy (principle, parts and its application)

Photometry: Basic principal and operation.

Practice: Demonstration, operation, and Quality control of different types of microscopes.

Unit-2

UV-V is spectrometry and colorimetric instrumentation and its application.

Centrifuge: Basic principle, type analytical and preparative centrifuges, different density gradient centrifuge and its application. Blood analyzer: Principle, working and its application. Demonstration and Maintenance of Laminar Flow.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Unit-3

Microtome: Principle, working and its uses. Incubator, hot air oven and autoclave: Principle, working and its uses. Operation Techniques and Maintenance of different another microbiological instruments

Practice: Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Reading

1. A Textbook of Medical Laboratory Technology by P Godkar, Publisher Bhalani
2. Textbook of Clinical laboratory methods and diagnosis by Ales C.Sonnenwirth & Leonard Jarret.
3. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee, Publisher McGraw Hill education pvt limited
4. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, New York, Fischbach, 2005.

5. Medical laboratory science theory and practice by J Ochei and Kolhatkar, Publisher TBS

BSCM1105-Anatomy, Physiology & Haematology Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Anatomy, Physiology & Haematology Lab	BSCM1105	Practice	0-0-4	Basic Medical Science

Course Objective

- To identify the cell, different organelles and describe their functions.
- To identify the major organ systems of the human body and describe their functions.
- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.

Anatomy, Physiology & Haematology

Demonstrate the different body parts, their position, Structure from charts, models. Identification of different joints and bones.

Demonstration of various parts of centrifuge; its functioning and care , Demonstration of various parts of microscope its functioning and care ,Cleaning and drying of glass and plastic ware,

Preparation of various anticoagulants, Collection of venous and capillary blood, Cleaning of glass-syringes and its sterilization .Preparation of buffers, Preparation of the stains and other reagents , Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman - stain, Haemoglobin estimation (oxy Hb and cyanmethaemoglobin method)

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count.

Determination of ESR by wintrobes, Determination of ESR by Westergeren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.

Demonstration of various parts of body, tissues of body , parts of digestive system , parts of respiratory system ,parts of excretory system

Suggested Reading:-

1. A Textbook of Medical Laboratory Technology by P Godkar, publisher Bhalani
2. Hand book of Medical Lab Technology By V S talib, Publisher CBS
3. Practical Haematology(8th edition) by Sir John, Publisher Churchill Livingstone
4. Clinical Hematology by Christopher A. Ludlam
5. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee
Publisher McGraw Hill education pvt limited,

2nd semester B. Sc Clinical Microbiology

FCBS0101-Environmental Science

Subject Name	Code	Type of course	L-T-P	Prerequisite
Environmental Science	FCBS0101	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objectives

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course Outcome

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Unit-1

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources–forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

Unit-2

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management–Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

Unit-3

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

FCHU1201- Foundations of English Communication

Subject Name	Code	Type of course	L-T-P	Prerequisite
Foundations of English Communication	FCHU 1201	Practice	0-0-3	Fundamental Science

Course Objectives

- To develop vocabulary and grammar knowledge
- To develop reading comprehension skills

Course Outcome

- Development of academic and sub-technical vocabulary
- Enhancement of basic language skills, i.e., listening, speaking, reading and writing
- Development of grammatical competence
- Confidence level improvement

Unit-1

READING SKILLS (7hrs.)

Read one of the following books:

- Animal Farm

- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

Unit-2

WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

Unit-3

LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

Unit-4

SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

TEXT BOOKS:

Esteras, Santiago Remacha and Fabre, Elena Marco. (2007).

BSCM1201- General Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
General Microbiology	BSCM1201	Lecture+Tutorial	3-1-0	Medical Science

Course Objective

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.
- To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course Outcome

- Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.
- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- Develops laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Unit-1

Introduction to Microbiology ,Definition, history, relationship of micro-organisms to man, and safety guideline in a microbiology laboratory . Morphology of bacterial cell wall , Anatomy and chemical structure of a bacterial cell including spores, flagella, pili and capsules . Sporulation . Classification of bacteria according to cell wall and shape (arrangement).
Bacterial Growth and Nutrition of bacteria . Bacterial growth curve and bacterial nutrition.

Practice: Preparation of culture media, demonstrate aerobic and anaerobic culture.

Demonstration the different culture plate and bacterial growth, identification of bacteria.

Unit-2

Classification of micro-organisms with special reference to bacteria General – Biological
Sterilization ,Definition, sterilization by dry heat, moist heat (below, at and above 100o C), autoclave and hot air oven its structure and functioning, preventive measures, controls and sterilization indicators, sterilization by radiation and filtration, Antiseptics and Disinfectants
Definitions, types, properties, use of disinfectants and antiseptics, efficiency testing of disinfectants; use of laminar flow – principle and function.

Practice:- Demonstrate the different methods of sterilization with handling Hot air oven, Autoclave.

Handling Of compound microscope. Demonstration of Antiseptics, Spirit, Cetrimide & Povidone-iodine.

Demonstration the disinfectants and precaution while using disinfectants

Unit-3

Staining techniques

Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media).
Different Culture, media their preparation and uses in microbial growth.

Practice: Demonstration the different staining procedure like Gram stain, Zn stain, Albert's stain etc Demonstrate different microbial growth in different media. Identify the morphology.

Suggested Reading:-

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi

2. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
3. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
4. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
5. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
6. Text book of Medical Microbiology by Gruckshiank

BSCM1202- Clinical Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Biochemistry	BSCM1202	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- To understand the concept of metabolism of carbohydrates
- To understand the significance of amino acids, proteins
- Use of enzymes in enhancing metabolic reactions
- Role of lipids

Course Outcome

- After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.
- Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.
- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Unit-1

biomedical importance & properties. Brief outline of metabolism : Glycogenesis & glycogenolysis (in brief), Glycolysis, citric acid cycle & its significance, HMP shunt & Gluconeogenesis (in brief), regulation of blood glucose level.

Unit-2

Amino acids - Definition, classification, essential & non essential amino acids. Chemistry of Proteins & their related metabolism - Introduction, definition, classification, biomedical importance. Metabolism : Transformation, Decarboxylation, Ammonia formation & transport, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids especially Phenylalanine, Tyrosine & Tryptophan, Creatine, Creatinine , Proteinuria.

Practice:-Operation procedure of Centrifuge machine, colorimeter, spectrophotometer etc

Estimation of Liver function test, Kidney function test, Thyroid , Lipid profile . Estimation of bile pigment , bile salt, bilirubin etc.

Unit-3

Chemistry of Lipids & their related metabolism - Introduction, definition, classification, biomedical importance, essential fatty acids. Brief outline of metabolism : Beta oxidation of fatty acids, fatty liver, Ketosis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus - definition, types, features, gestation diabetes mellitus , glucose tolerance test, glycosurias, Hypoglycaemia & its causes.

Practice: - Demonstrate the estimation of Blood sugar by manual method and through Auto Analytic Technique. Demonstrate different biochemical test comes under the above unit.

Suggested Reading

1. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
2. Text book of Biochemistry, M. A. Siddique 8th Edn.1993 Vijay Bhagat Scientific Book Co., Patna.
3. Medical Biochemistry by AC Dey.
4. Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

BSCM1203-Clinical Pathology & Diagnosis

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Pathology & Diagnosis	BSCM1203	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease
- Analysis of pregnancy

Course Outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites
- Analysis of Infertility disorder

Unit-1

Composition, collection and preservation of urine for various tests, physical chemical and microscopic examination of urine, estimation of total albumin, Specific gravity, litmus paper, tests for albumin, sugar, blood, bile salts and pigments, urobilinogen, ketones bodies etc. Urine meter, Esbachl's Albuminometer, preparation of various reagents.

Practice: Collection procedures of urine, Important precursors for collecting samples.

Physical and Chemical and Microscopic examination of urine.

Unit-2

Stool- Sample collection, physical, chemical and microscopic examination. Sputum- Sample collection, stain and study of A.F.B. Cerebrospinal Fluid: Pandy's test, Cell count, cell type differential count and malignant cells. Cells stain; cell morphology and detection of malignant cells in peritoneal fluid, pleural fluid, pericardial fluid, and synovial fluid. Differences between transudates and exudates. Semen Sample collections microscopic examination for count and morphology.

Practice: Collection procedures and important precursors for collecting samples like STOOL, CSF, SEMEN and different body fluids.

Physical and Chemical and Microscopic examination of different samples.

Unit-3

ANATOMIC PATHOLOGY: 1. Reception, Registration, preservation and processing of specimens. Haematoxyline and eosine staining procedure, mounting of stained sections, Filing of paraffin blocks, and slides. Method of decalcification, Sharpening and honing Knives techniques, using of microtome.

2. Museum: Mounting of specimens, labeling, maintenance of specimens and catalogue etc.

Post mortem/ Autopsy: Maintenance of the records of the Dead Bodies and specimens received, Autopsy techniques, Autopsy instruments, cold storage plants, legal aspects etc.

Practice : Handling clinical laboratory equipment .

Preparation of some stains, and reagents for clinical diagnosis purpose.

Suggested Reading

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Manual Text book of lab and diagnostic tests by Lippincott Williams Wilkins, New York.
3. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

BSCM1204- Clinical pathology, Microbiology & Clinical Biochemistry lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
--------------	------	----------------	-------	--------------

Clinical pathology, Microbiology & Clinical Biochemistry lab	BSCM1204	Practical	0-0-4	Fundamental Science
--	----------	-----------	-------	------------------------

Course Objective

- Analyze body fluid for diagnosis of disease
- Understand Physiological disorder and infectious disease
- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Provides knowledge on growth of microorganism.
- Provides knowledge Culturing microorganism and Liver function test, Kidney function test, Lipid profile.

Clinical Pathology and Microbiology-

Urine analysis Physical, Chemical, Microscopic, Microbiological. Stool analysis Physical, Chemical, Microscopic, Microbiological. Sputum analysis Physical, Chemical, Microscopic, Microbiological. Semen analysis Physical, Chemical, Microscopic, Microbiological. Sterilization, Media Preparation, Bacteriological examination of pus. Bacteriological examination of trout swab.

Laboratory study of parasites in stool, blood. Giardia lamblia, Entamoeba

Clinical Biochemistry-

Demonstration the centrifuge machine. Demonstration of Colorimeter.

Estimation of Liver function test, Kidney function test, Lipid profile. Estimation of Glucose in urine and blood .

Estimation of Protein in urine and blood.

Suggested Reading

1. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, Fischbach, 2005 New York..
2. Clinical laboratory methods and diagnosis by Gradwohls, 2000, Publisher Mosby
3. Medical laboratory science theory and practice, J Ochei and Kolhatkar, 2002, publisher TBS

4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, publisher Tata McGraw Hill.

3rd semester B. Sc Clinical Microbiology

BSCM2301- Immunology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Immunology	BSCM2301	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.

Course Outcome

- Application of Immunology in disease diagnosis.
- Students will be able to understand and explain the basis of allergy and allergic diseases along with immunological tolerance and autoimmunity.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Unit-1

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. Antigens: Types of antigen, Antigenic Determinant or Epitome, Determinants of Antigenicity Tolerogens, Biological Classes of antigens , Superantigens. Antibodies-Immunoglobulins: Antibody structure, Immunoglobulin classes of Antigens, Antigenic Determinants on Immunoglobins.

Practice: Collection of blood sample by vein puncture, separation and preservation of serum. Raising haemolysin in Rabbit and performing its titration for Rose- Waaler test.

Unit-2

The Complement System: Principal pathways of Complement activation, Quantitation of Complement C. and its Components. Biosynthesis of complement , Complement Deficiencies.

Antigen-Antibody Reactions: Antigen-Antibody Interactions, General characteristics of Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests, Serological Reactions.

Practice: - Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsons buffer Buffers of different pH and molarity , tris buffer, Standardization of cell concentration by spectrophotometer

Unit-3

Immune Response: Types of Immune response, Humoral immunity, Fate of Antigen in tissues, Production of Antibodies, Cell-mediated Immune Responses, Cytokines, Immunological tolerance, Theories of immune Response .

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity -Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity, Shwartzman Reaction.

Practice:- Performance of Serological tests i.e. Widal, Brucella Tube Agglutination ,VDRL (including Antigen Preparation), ASO (Antistreptolysin 'O'),C-Reactive Protein (Latex agglutination), Rheumatoid factor (RF) Latex agglutination, Rose Waaletest

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan & Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupt, Publisher Jaypee brothers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and David Male
6. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2

BSCM2302- Systemic Bacteriology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Systemic Bacteriology	BSCM2302	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- To learn opportunities in the basic principles of medical microbiology and infectious disease.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit 1

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of:

a. Cocci (Gram Positive):

Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp.

Anaerobic: Peptococcus spp., Peptostreptococcus spp., Villanelle spp., Acidaminococcus spp., Megasphaera spp., Coprococcus spp., Ruminococcus spp. and others.

b. Cocci (Gram Negative): Aerobic: Neisseria spp., Anaerobic Gram negative bacteria .

Unit 2

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of:

a. Aerobic non-spore forming gram positive bacilli:

Bacillus spp., Corynebacterium spp., Actinomyces pyogenes, Nocardia spp., Mycobacterium spp.- pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and

Hansen's bacilli and others.

b. Anaerobic: Bifidobacterium spp., Eubacterium spp., Actinomyces spp., Propionibacterium, Arachnia spp., Clostridium spp and others.

Unit 3

Morphology, Metabolism, Pathogenesis, Laboratory Diagnosis, Prevention and Control of Gram Negative Bacilli

Aerobic: Enterobacteriaceae , Citrobacter spp , Edwardsiella spp ,Enterobacter spp , Escherichia coli , Ewingella , Hafnia spp., Klebsiella spp , Kluyvera ,Leclercia , Leminorella, Moellerella, Morganella spp , Pantoea ,Proteus spp. , Porvidencia spp. ,Rahnella Salmonella spp, Serratia spp ,Shigella spp ,Tatumella ,Yersinia spp and others.

BSCM2303- Molecular Biology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Molecular Biology	BSCM2303	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.
- Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that can be able to describe and explain processes

and their meaning for the characteristics of living organisms.

Course Outcome

- Conduct independent work in a laboratory.
- Read scientific articles and gain a critical understanding of their contents.
- Give a spoken and written presentation of scientific topics and research results.
- Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Unit 1

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell,

Evolution and Molecular structure of cell and its organelles,

Types of cells. Including different kinds of Prokaryotic and eukaryotic cells,

Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles, Cell cycle, Cell membrane and its structure (fluid-mosaic model)

Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Unit 2

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells:

Molecular biology of Genes , DNA: Molecular structure, types: Primary, secondary and tertiary ,The Double helix, types

RNA: Molecular structure, types. Evolution of DNA and RNA , Gene and genetic codes

Unit 3

General Concept on:

a. Regulation of the Gene Expression

b. Regulating the Metabolism:

The Lac- Operon system. , Catabolic repression, The Trp Operon system: regulating the biosynthesis of the tryptophan , Gene expression in Eukaryotic cells ,Plasmids: types, maintenance and functions

Unit 4

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication ,DNA Replication in prokaryotic Cells ,DNA Replication in Eukaryotic cell Enzymes involved in DNA Replication: DNA polymerases ,Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA ,Synthesis of RNA , RNA polymerase , Initiation and Termination of Transcription , Post transcription modification of the RNA Protein Biosynthesis: Translation of the genetic code ,Translation of m RNA ,Role of RNA in protein synthesis , Forming the polypeptides- elongation ,Termination of the protein biosynthesis .

Subject Name	Code	Type of course	L-T-P	Prerequisite
Systemic Virology & Mycology	BSCM2304	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- To learn opportunities in the basic principles of medical microbiology and infectious disease.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Know the methods used in studying viruses and fungi.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit 1

Introduction and Scope of Virology. General Properties of Viruses and Structure (Morphology) Classification of Medically Important Viruses . Genetic material , Organ system involved , Transmission

Unit 2

Replication of Viruses, Virus Host Interaction, Bacteriophage .Epidemiology, Pathogenesis, Treatment, Prevention and Control of Viral Diseases (DNA Viruses) *Adenoviridae, Poxviridae, Herpes viridae, Papoviridae, Parvoviridae, Hepadnaviridae* Epidemiology, Pathogenesis, Treatment, Prevention & Control of Viral Diseases (RNA Viruses): *Orthomyxoviridae, Paramyxoviridae, Picorna viridae, Corona viridae, Togaviridae, Rhabdoviridae, Retroviridae, Coronaviridae, Bunyaviridae, Arenaviridae, Filoviridae, Reoviridae and Calciviridae*

Unit 3

Mycology: Introduction: Scope and medical importance of fungi- Molds, Mushouroom, Yeast. Definition: Mycology, Medical Mycology, Mycetes, Mycosis, Thallus, Hypha, Mycelium, Coenocyte, Rhizoids and Club. Classification, Structure and Physiology of fungi: Cryptogam (Thallophyta: Fungi Algae), Phenerogam, Pseudomycets, Schizomycetes (Bacteria Actinomycetes, Actinomycetaliae, Nocardia, Yeasts) Myxomycetes (Slime, Molds), Eumycetes (True fungi), Ascomycetes (Histoplasma, Candida, Blastomycosis), Basidiomycetes (Cryptococcus, Rhizopus), Phycomycetes Mucor, Epidermophyton Fungi imperfecti: (Trichophyton).

Unit 4

Vegetative Structure (Morphology) of Fungi : Septate, aseptate, Plectenchyma, Prosenchyma, Pseudoparenchyma, Modification of Plectenchyma (Rhizomorph, Sclerotia, Stroma).

Mode of Nutrition of Fungi :Saprophytes ,Parasites (Obligate parasite, Facultative parasite, Ectoparasite, Endo-parasite) , Symbionts: Lichen Pathogenic Group of Fungi:Opportunistic pathogens ,True pathogens: *Blastomyces dermatitidis* ,*Cooccidioides immitis*, *Paracoccidioides brasiliensis* ,*Histoplasma capsulatum*.

A. Dermatophytes :*Mycrosporium* (Hair, skin) ,*Tricophyton* (Skin, hair, nail) ,*Epidermophyton* (Skin, nail) , *Aspergillus spp.*

B. Dermatomycosis (*Candida albicans*, *Cryptococcus neoformans*)

FCHU0202-Communicative Practice Laboratory-2

Subject Name	Code	Type of course	L-T-P	Prerequisite
Communicative Practice Laboratory-2	FCHU0202	Practice	0-0-2	Fundamental Science

Course Objectives

- To master Study Skills
- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

Course Outcomes

- The students will be able to Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.
- Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation. A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

Unit-1

FRIENDLY COMMUNICATION (9 HOURS)

- Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade

- Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.
- Conversation Practice in familiar and unfamiliar situations (This module will be practiced through conversation activities in pairs & groups)

Unit-2

GRAMMAR AND VOCABULARY (9 HOURS)

- The focus will be on the appropriate usage of language.
- Elimination of common errors
- Editing passages
- Word power A-Z: Easy and quick techniques
- Vocabulary building exercises (Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

Unit-3

PHONETICS AND SPOKEN ENGLISH (12 HOURS)

- Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.
- Pronunciation Guidelines: Consonants and Vowels
- Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences
- Speaking Techniques: Using correct stress patterns, developing voice quality
- Rhythm and Intonation (Reading aloud of dialogues, speeches etc. for practice in pronunciation) (In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

TEXT BOOKS: Dwyer, J. (2000).

The Business Communication Handbook. New Jersey: Prentice Hall.

BSCM2306- Bacteriology, Virology & Mycology Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Bacteriology, Virology & Mycology Lab	BSCM2306	Practice	0-0-4	Fundamental Science

Course Objective

- To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.
- To know various Culture media and their applications and also understand various physical and chemical means of sterilization and various staining techniques.

Course Outcome

- The course provides the conceptual basis and methods used in studying viruses and fungi.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Provides knowledge on growth of microorganism.
- Provides knowledge Culturing microorganism.

Bacteriology

Preparation and use of different stains in bacteriology laboratory Grams stain

ZN stain Albert stain Spore stain Capsule stain Flagella stain Motility test

Preparation and use of different media in bacteriology laboratory

Isolation & identification of different groups of bacteria in laboratory Antimicrobial susceptibility testing .

Virology

Demonstration of virus isolation techniques .

Demonstration of cell and tissue culture techniques used for virus isolation. Serological techniques used in diagnostic virology.

Mycology

Organization of laboratory – Mycology

Preparation of different media, chemical and stain for fungus study. Isolation and identification of different fungi of medical important .

4th semester BSc Clinical Microbiology

BSCM2401- Public Health Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Public Health Microbiology	BSCM2401	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.
- To understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – Water pollution and waterborne diseases, Air pollution and airborne infections.

Course Outcome

- Explain prognosis of diseases and become aware about the role of medical microbiology in public health
- Understanding the role of microbiologist in public health
- Study of Air borne & water borne infection

Unit 1

Introduction to Public Health:

Definition, scope, concept and importance of public health microbiology, Roles of microbiologist in public health, Concept of health and disease, Indicators of health, Microbial association of water, air and soil, Basic concept on pollution (air, water, noise, radiation and waste pollution) and public health hazard in the community.

Unit 2

Air Borne Infections: 1. Introduction: Air and its composition, Microbial air pollution, Sources of air pollution & control, Indicator of air pollution – WHO guide line (microbial pollution).
2. Air borne diseases: Transmission of pathogens, Respiratory infection (Viral, bacterial, fungal), Sources of infection, characters of organisms and controls of:
Bacterial pneumonia, Diphtheria, Tuberculosis, Influenza, Measles .
3. Method of measuring microorganisms in air.

Practice:- Selection, collection, preservation and transportation of samples from the community to the laboratory.

Unit 3

Water Borne Infections: 1. Introduction : Definition of wholesome and safe water, Nature, cycle, sources, importance and quality (WHO guide line) of water. Water pollution and sanitation,
2. Microorganisms in water: Transmission of pathogens, Water borne diseases (Viral, bacterial, protozoal), Sources of infection, characters of organisms and control of:
Hepatitis, Cholera, Typhoid, Amoebiasis, Giardiasis, Poliomyelitis
Water Pollution Control . Method of Measuring Microorganisms in Water . Water Treatment, Control of Water Borne Diseases.

Practice:- Isolation and Identification of microorganisms from air.

Isolation and Identification of microorganisms from water and evaluation of water quality

Suggested Reading

1. Text Book of Microbiology, by Ghimire P. & Parajuli K. Vidhyarthi Pustak Bhandar Publication, Kathmandu.
2. Text Book of Social and Preventive Medicine by Park JE and Park K
3. Evidence Based Public Health By Brownson, RC., Baker, EA., Leet. TL., Follespie. KN
4. ,Oxford University Press
5. The Quest for Health, Educational Enterprises, Kathmandu, by Dixit H.
6. Epidemiology for Public Health Practice, by Friis, RH., and Sellers, TA, 2nd Edition, Gaithersburg, MD: Aspen Publication,
7. Modern Food Microbiology, . by Jay, J, H 3rd Edition CBS Publication and Distributors Delhi 1987.
8. Introduction to Soil Microbiology, Martin Alecender, by Academic press, 1961.

BSCM2402- Pharmaceutical Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Pharmaceutical Microbiology	BSCM2402	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- Understanding of types & synthesis of antimicrobial agents
- Manufacture of antibiotics
- To understand the mechanism of action of antibiotics
- To study how microorganisms are known to develop resistance to antibiotics

Course Outcome

- With the completion of the course, the students will acquire detailed knowledge of antimicrobial agents, their mechanism of action and basis of resistance of microbes to these antimicrobials, formulations.
- They will develop an understanding of different types of disinfectants/antiseptics and their uses, evaluation of their bactericidal and bacteriostatic action.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Unit 1

Introduction to Pharmaceutical Microbiology: Scope ,Importance ,Chemical disinfectants, Antiseptic ,Antibiotics, Preservatives , Static and cidal activity (fungus, bacteria) ,Germicidal activities
Types of Antibiotics and Synthetic Antimicrobial Agents :
Antibiotics , Types and Classification of antibiotics , Synthetic antibiotics , Antiviral drug

Unit 2

Manufacture of Antibiotics : Production of penicillin , Production of streptomycin
Assessment of New Antibiotics : Parameters, determination of the usefulness of antibiotics (in vitro and in vivo) ,Pharmacokinetics and Pharmacodynamics of Antimicrobial agents
Antibiotic Assay : Microbiological method , Disc diffusion technique ,Dilution technique ,Rapid method

Unit 3

Mechanisms of Action of Antibiotics :Cell wall synthesis inhibitors , Inhibitors of protein biosynthesis , Inhibitors of tetrahydrofolate , Disorganize the cytoplasm membrane.
Mode of Action of Antibiotics and Bacterial Resistance to Antibiotics :
Mode of action of antibiotics (cell wall cytoplasmic membrane, cytoplasm and compounds) ,Biochemical mechanisms of resistance , Genetic basis of antibiotic resistance , Problems in antibiotic therapy due to resistance

Evaluation of Antibiotics and Non-antibiotics Agents: Preliminary evaluation, Evaluation of Static activity (fungus, bacteria), Evaluation of Germicidal activities (fungus, bacteria)
Microbial Spoilage and Preservation of Pharmaceutical Products.

Suggested Reading

1. W B Hugo and A D Russel, Pharmaceutical Microbiology, 2nd Edition
2. Ghimire P. Hand book of Practical Microbiology, 2003, Pravesh Publication, Kathmandu

BSCM2403-Industrial Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Industrial Microbiology	BSCM2403	Lecture+Tutorial	3-1-0	General Microbiology

Course Objective

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.
- To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course Outcomes

- Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.
- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- Developes laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Unit 1

Introduction to Industrial Microbiology: Introduction, History, Definition and scope. Industrial Equipment and Uses.

Fermentation Process: Primary and secondary screening, Detection and assay of fermentation products- Physical and chemical assays, Biological assay

Stock culture, Fermentation media , Inoculums preparation , Increasing products , Phage

Practice-: Observational visit to a beer/alcohol factory.

Observational visit to pharmaceutical, food and dairy industry.

Unit 2

Typical Fermentation Process:

Antibiotic drug fermentation - Penicillin , Streptomycin , Bacterial insecticide ,Other antibiotics- Acetone , Lactic acid , Brewing

Biological Waste Treatment / Bioremediation: Anaerobic fermentation

Production of: Vitamin , Vaccines , Milk & Milk Products, Food , Bakers yeast , Food and feed yeasts, Mushrooms , Vinegar

Enzymes: Amylase , Proteolytic enzyme , Pectinases , Invertase Other enzymes

Unit 3

Industrial effluent: Introduction, Industrial pollution, Microbiology of Domestic sewage Methods for the treatment of industrial effluent and sewage.

Practice- Detection of Fermentation , Biological waste treatment.

Suggested Reading

L. E. Casida, JR., *Industrial Microbiology*, 1991, Wiley Eastern Limited, New Delhi,

BSCM2404- Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Analytical Biochemistry	BSCM2404	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- Understanding the concept of Biochemical analyzing instruments both automated and semi automated.
- To learn about how to Care & Maintenance of Equipment & Chemicals.
- To learn normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

- Understanding of instrumentation technique & principle of spectrophotometry, colorimetry, photometry and electrolyte analyzer.
- To learn about Various tests carried out for biochemical analysis & Hormone investigations.

- To learn about safety precautions and handling the equipment in biochemical laboratory.

Unit-1

Spectrophotometry and colorimetry, Introduction, Theory of spectrophotometry and colorimetry, Lambert's law and Beer's law, Applications of colorimetry and spectrophotometry.

Practice:- Practice: Cleaning of the Laboratory glass ware, Preparation of distilled Water,

Principle, working and maintenance of pH meter, To prepare 0.1 N HCl solution, 0.2N HCl solution, 0.1 molar H₂SO₄, 0.2 Molar Sodium carbonate solution, Demonstration of Osmosis and dialysis.

Demonstration of the instrument Spectrophotometry according to Lambert's and Beer's law

Unit-2

Photometry, Introduction, General principles of flame photometry, Limitations of flame Photometry, Instrumentation, Applications of flame photometry, Atomic absorption Spectroscopy – Principle & applications

Practice:- Demonstration of Photometry, general principles, limitation of Photometry.

Unit-3

Automation in clinical Biochemistry,

Method of estimation and assessment for: a. Glucose tolerance test, b. Insulin tolerance test, c. Xylose excretion test.

Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Barbiturates, T₃, T₄ and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Suggested readings

- Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H. Carman. 2nd Edn. CMAI, New Delhi.
- Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
- Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book

BSCM2405- Basic Computer & Information Technique

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Computer & Information Technique	BSCM2405	Practice	0-0-4	Fundamentals of Computer

Course Objective

- Identify the function of computer hardware components.
- Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.
- Identify how to maintain computer equipment and solve common problems relating to computer hardware.
- Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded
- Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

- Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.
- Understand the difference between an operating system and an application program, and what each is used for in a computer.
- Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Unit-1

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.

Input output devices: input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).

Unit-2

Processor and memory: The Central Processing Unit (CPU), main memory.

Storage Devices: sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

Unit-3

Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.

Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs. Introduction of Operating System: introduction, operating system concepts, types of operating system. Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external).

Unit-4

Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.

Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in various fields: Medical, Education, Railway, Defense, Industry, Management, Sports, Commerce, Internet.

Suggested readings :

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

BSCM2406- Industrial, Public Health Microbiology & Biochemistry lab.

Subject Name	Code	Type of course	L-T-P	Prerequisite
Industrial, Public Health Microbiology & Biochemistry lab.	BSCM2406	Practice	0-0-4	General Microbiology

Course Objective

- Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.
- To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.
- To understand the significance of carbohydrates in energy generation and as storage food molecules for cells. To understand the significance of amino acids, proteins.

Course Outcomes

- Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.
- Understanding the role of microbiologist in public health

- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education and would have understood the principles of Liver function test, kidney function test, lipid profile etc.

Industrial Microbiology:

1. Observational visit to a beer/alcohol factory.
2. Observational visit to pharmaceutical, food and dairy industry.
3. Detection of Fermentation
4. Biological waste treatment.

Public Health Microbiology:

1. Isolation and identification of microorganism from different food products: meat, canned juice, milk, cheese and ice cream.
2. Isolation and identification of microorganism transmitted through vector, insect.
3. Isolation and identification of microorganism (STIs)
4. Isolation and Identification of microorganisms (hospital acquired infection)

Biochemistry:

1. Estimation of Glucose in Urine and in Blood .
2. Estimation of Protein in Urine and Blood .
3. Estimation of Urea in blood .
4. Estimation of uric acid in blood .
5. Estimation of serum bilirubin
6. Estimation of Total Cholesterol in blood .
7. Estimation of HDL Cholesterol.
8. Estimation of LDL Cholesterol .
9. Estimation of TG, Estimation of Creatinine in Blood
10. Estimation of serum calcium
11. To measure electrolytes Sodium , Potassium & Chloride.

5th semester B.Sc Medical Lab. Technology

BSCM3501 –Epidemiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Epidemiology	BSCM3501	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- Understand the basic epidemiological methods and study designs.
- Understand and discuss population based perspective to examine disease and health – related events.
- Discuss the ethical issues in epidemiological research.
- Explain the importance of epidemiology for informing scientific, ethical, economic and political discussion of health issues.
- Describe a public health problem in terms of person, place, and time.
- Evaluate the strengths and limitations of epidemiologic reports
- Apply concepts, methods, and tools of public health data collection, analysis and interpretation, and the evidence-based reasoning and informatics approaches that are essential to public health practice.

Course Outcome

- Distinguish between definitions of epidemiology and clinical epidemiology and public health research.
- Apply the terminology of the Epidemiologic Triad to an infectious disease.
- Describe the important historic events in the field of epidemiology.

Unit 1

Introduction to Principles of Epidemiology:

History, Definition, and scope of epidemiology, Achievements in epidemiology ,Terms &Terminologies used in epidemiology.

Measuring Health and Disease :Definitions of health and disease, Measures of disease frequency
Use of available information ,Comparing disease occurrence

Unit 2

Concept of Epidemiological Study: Basic concepts of epidemiology Descriptive / Analytical ,Applied/Experimental ,Field Epidemiology Concept of Prevention and Control of Diseases:
Causation in epidemiology :The concept of cause , Establishing the cause of a disease
Epidemiological markers , Phenotypic and genetic markers including molecular epidemiology.
Disease surveillance : Clinical , Laboratory

Unit 3: Applied Epidemiology:

Communicable disease epidemiology ,Clinical epidemiology ,Environmental & occupational epidemiology , Nutritional epidemiology ,Reproductive epidemiology , Social epidemiology
Food epidemiology.

Epidemiology, Health services and health Policy :

Health care planning, Monitoring & evaluation ,The planning cycle ,Epidemiology, public policy and health policy ,Healthy public policy in practice

Suggested Reading

1. Basic Epidemiology. By Beaglehole R., Bonita R., Kjellstrom , World Health Organization, Geneva,
2. Field Epidemiology, By B Gregg, 2nd Edition, Oxford University Press, 2002

3. Gordis L. *Epidemiology*, 2nd Edition, WB Saunders Company Aharcourt Health Sciences Company, Philadelphia.
4. *Epidemiology in Medicine*, by Lippincott Eilliams and Wilkins, and Walters Kluwer Company
5. *Epidemiology, Principle and Method*, McMahon B, Trichopoulos D, by 2nd Edition, Boston, Little, Brown.

BSCM3502 -Diagnostic Bacteriology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Diagnostic Bacteriology	BSCM3502	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- | |
|---|
| <ul style="list-style-type: none"> • To confirm the suspicion of infectious bacterial disease. • To identify the etiologic agent by isolating the causative bacterial pathogen. |
|---|

Course Outcome

- | |
|---|
| <ul style="list-style-type: none"> • Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections. • Study of control measures for nosocomial infection. • Student can safeguard himself & society and can work diagnostics and hospitals |
|---|

Unit 1

Aerobic Culture:

Scope and importance of aerobic culture, Factors affecting aerobic culture, Various media and techniques of aerobic culture.

Laboratory Diagnosis of Enteric Infections: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Enteric fever / Typhoid fever, Bacterial endocarditis, Bacteraemia, Septicemia, Pyrexia of unknown origin (PUO).

Unit 2

Laboratory Diagnosis of Respiratory Tract Infection (RTI):

(Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Lower RTI, Upper RTI .

Laboratory Diagnosis of Urinary Tract Infection: Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods)

Unit 3

Laboratory Diagnosis of Oral, Thourroat and Stomach Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Gingivitis and anaerobic infection of oral cavity .

Peptic ulcer (with emphasis in mechanism of peptic ulcer caused by *Helicobacter pylori*) .

Laboratory Diagnosis of Eye Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Corneal ulcer, Conjunctivitis .

Suggested Reading

1. Medical Laboratory Manual for Tropical Countries, by Cheesbrough M., Vol. I & II, Edition, ELBS.
2. *Clinical Microbiology*, by Stoker, Edward Arnold.
3. *Manual Clinical Microbiology*, by Lynnette, E. H., 8th Edition, American Society for Microbiology, Washington DC.
4. Basic Bacteriology Laboratory manual, WHO

BSCM3503- Diagnostic Virology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Diagnostic virology	BSCM3503	Lecture+ Tutorial	3-1-0	Basic virology

Course Objective

- Understanding laboratory diagnosis of virus by both conventional and molecular approach.
- To produce a cadre of specialized medical virologists who would help establish clinical diagnostic services in various hospitals/centres.

Course Outcome

- Organise sample collection, transportation, processing and storage in an appropriate manner.
- Plan, write and implement research projects in virology, analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Unit 1

Laboratory Organization: Room (space), Electricity, Water supply, Sterility Sampling in Diagnostic Virology: Selection, collection, storage, transportation and processing of samples. Electron Microscope: Principle, importance and use

Unit 2

Laboratory Diagnosis of Viral Infections : Virus isolation, Inoculation in laboratory animal, Egg inoculation ,Tissue culture, Recognition of viral growth-Cytopathic effec ,Haemadsorption (Hd) ,

Immunofluorescence or immunoperoxidase staining, Interference. Identification of virus-Neutralization (N), Haemagglutination – inhibition (HI), Immunofluorescence or immunoperoxidase staining, Electronic microscope (EM). Direct demonstration of virus or virus antigens - Serology - Immunofluorescence , Electronic Microscopy , Histological demonstration of inclusion bodies, Serological tests: Detection of viral antigen ,Detection of anti viral antibodies. (Rising titer in paired sera: 4–fold or more -Detection of IgM Complement fixation (CF), Haemagglutination inhibition (HAI), Neutralization (N), Immuno- fluorescence (IFA) , Enzyme immunoassay.

Unit-3

Laboratory Diagnosis of Important

a. DNA Viruses and b. RNA Viruses, Antiviral Drugs

Practice-: Practical sessions (Laboratory Practices) will be based in the Hospital Laboratory performing diagnostic tests available / requested, in Diagnostic Virology laboratory

BSCM3504- Diagnostic Mycology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Diagnostic Mycology	BSCM3504	Lecture+Tutorial	3-1-0	Fundamental Science

Course Objective

- To confirm the suspicion of fungal disease.
- To identify the etiologic agent by isolating the causative fungal pathogen.

Course Outcome

- This course provides learning opportunities in the basic principles of medical microbiology and infectious fungal diseases.
- The course provides the conceptual basis for understanding pathogenic fungi and the mechanisms by which they cause disease in the human body.
- Student can safeguard himself & society and can work diagnostics and hospitals

Unit 1

Introduction to Diagnostic Mycology: Medically important fungi , Opportunistic Fungi Fungal Diseases: Mycoses

1. Superficial mycoses:
2. Subcutaneous mycoses:
3. Cutaneous mycoses: Trichophytosis, Microsporiosis, Epidermophytosis.
4. Systemic mycoses: Histoplasmosis, Blastomycosis, Cryptococcosis, Coccidioidosis, Paracoccidioidosis .

Unit 2

Pathogenesis and Laboratory Diagnosis of Mycotic Infections :

Aspergillus spp, Candida albicans, Fusarium spp, Cryptococcus neoformans, Histoplasma capsulatum, Sporothrix spp, Philophora spp., Trichophyton microsporium, Epidermophyton spp. Blastomyces dermatitidis, Coccidioides immitens,

Unit 3

Isolation and Identification of Fungi (Laboratory Diagnosis):

A. Selection, collection and transportation of specimens 5 hours

Skin, Hair, Nail, Mucous membranes, Ear, eye, Corneal ulcer, Pus, Blood, Biopsy, Sputum, Urine, Vaginal and Cervical swab, Stool samples, Plural and peritoneal fluid, Superficial, sub-cutaneous and cutaneous samples.

B. Smear Preparation: 2 hours

KOH Preparation, 20% KOH with 20% Glycerol, KOH – DMSO (Dimethyl Sulphoxide) 100% Lactophenol Cotton Blue , India ink preparation.

Practice:-Antifungal Sensitivity Test: Antibiotics. Stock solution of drug Dilution technique , Sensitivity test by different method , Minimal inhibitory concentration (MIC) and Minimal fungicidal concentration (MFC)

Serological Test: Identification of Antigen, Antibody and Metabolites in Body Fluid&Serum.

BSCM3505- Diagnostic Parasitology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Diagnostic Parasitology	BSCM3505	Lecture+Tutorial	3-1-0	Basic Parasitology

Course Objective

- To explain the mechanisms of pathogenesis from a gross, microscopic and molecular perspective.
- Recognize the diagnostic stage of the infection under the microscope and to manage the infected patient.
- To examine parasites and parasitism, emphasizing the influence of parasites on the ecology and evolution of free-living species, and the role of parasites in global public health.

Course Outcome

- Organise sample collection, transportation, processing and storage in an appropriate manner.
- Plan, write and implement research projects in parasitology, analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding protozoan and helminth diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to protozoan diseases.

Unit 1

Laboratory Organization (Parasitology Lab) Selection, Collection, Perseveration and Transportation of Samples

Unit-2

Laboratory Diagnosis, of the Intestinal and Vaginal Parasites: 28 hours (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Protozoa: Entamoeba histolytica , Giardia lamblia, Trichomonas spp , Cyrptosporidium , Cyclospora cayantensis , Isospora Helminthes Ascaries lumbricoides , Hook worm: Anacylostoma and Necator, Enterobius vermicularis, Trichuris trichuira , Strongloides spp. ,Taenia spp., Echinococcus spp. , Hymonolepisnana, Tissue and Blood Parasites: Malaria sps , Kalaazar , Wacheria spp. Brugia, Loaia, , Oncocerca, Dracuhculus , Paragonimus westermani/hertmani

Unit 3

Laboratory Diagnosis of Various Parasites: 6 hours Direct method, Indirect method, Rapid methods, Molecular Technique Parasite Culture. Different Stains used in Diagnostic Parasitology.

Practice:- Practical sessions (Laboratory Practices) will be based in the Hospital Laboratory performing diagnostic tests available / requested, in Diagnostic Parasitology laboratory

BSCM3506 -Research Methodology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Research Methodology	BSCM3506	Lecture+ Tutorial	3-1-0	Fundamental Science

Course Objective

- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

- Students can understand the ethical and philosophical issues associated with research in education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Unit 1

Introduction to Research Methodology: 4 hours Meaning and Nature of Research-
Meaning, definition and characteristics of health research Importance of health research in nursing field .

Foundation of Scientific Research -

Scientific Thinking, Research Idea and the thought Process: Reasoning, Deduction, Induction, Combining Induction and Deduction, and Reflective thinking and the Scientific Method, Scientific Research. Identification and Analysis of Research Problem

Selection of a problem, Sources Criteria, Defining a problem, Characteristics of a problem, Criteria of good research questions, Steps in analyzing the research problem.

Unit 2

Proposal Development:

Basic steps involved in the health research proposal development

process Literature Review:

Importance and Sources, Strategies for gaining access to information, Library search, Computer search. Research Title and Objectives

Criteria for selecting a research title , Formulation of research objectives , Types of research objectives , Qualities of research objective

Research Hypothesis: Definition , Qualities of research hypothesis Importance and types of research hypothesis .

Unit 3

Variables :Definition, Importance, Qualitative and Quantitative variables Dependent and Independent variables

Confounding variables, Background variables, Operational definition (defining variables), Indicator. Research Design : Purpose of research design,

Types of study designs: Interventional study design - Exploratory, Descriptive (case study / case series, cross-sectional, longitudinal), Analytical (case control, cohort) study designs; Non Interventional study design - Pre experimental (pre test post test), Quasi experimental, True

experimental (Completely Randomized, Completely Randomized Block, Factorial, Time Series) study designs.

Unit 4

Sampling Design and Procedure :

Definition, Importance, Characteristics of a good sample

Qualities of sampling frame, Population concept and parameter, Types of sampling units,

Types of Sampling – Non probability sampling (purposive, quota, convenient, snowball etc.), Probability sampling (simple random, systematic, stratified, cluster, multistage, PPS etc.)

Techniques to choose appropriate sampling procedure, Sampling errors, Sample size, Testing reliability of sample

Qualitative and Quantitative Techniques used in Health Research Process. Data Collection Methods:

Pre-testing Data Collection Tools and Making Work Plan:Preparation of working schedule Gantt chart.

Data Processing and Analysis

Coding/decoding, Editing , Preparation of master tables ,Master field books, Dummy table preparation , Data processing and analysis plan – Selection of appropriate statistical techniques.

Research Ethics and Research Proposal Format.

Suggested Reading

1. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO-WIPRO.
2. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication .
3. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research Council.
4. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

BSCM3507- Epidemiology and Microbiology Practical

Subject Name	Code	Type of course	L-T-P	Prerequisite
Epidemiology and Microbiology Practical	BSCM3507	Practice	0-0-4	Fundamental Science

Course Objective

- Understand the basic epidemiological methods and study designs.
- Understand and discuss population based perspective to examine disease and health – related events.
- Discuss the ethical issues in epidemiological research.
- Explain the importance of epidemiology for informing scientific, ethical, economic and political discussion of health issues.
- To confirm the suspicion of infectious bacterial disease.
- To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

- Distinguish between definitions of epidemiology and clinical epidemiology and public health research.
- Apply the terminology of the Epidemiologic Triad to an infectious disease. Describe the important historic events in the field of epidemiology.
- Study of Lab diagnosis for pus, mycobacterium, venereal diseases, GI Tract, Meningitis and Encephalitis.
- Handling of Clinical Specimen for Microbial Study
- Student can safeguard himself & society and can work diagnostics and hospitals

Epidemiology

Filed investigation of an outbreak /disease prevalence study in a community.

Diagnosis Microbiology

Anaerobic Culture

Laboratory Diagnosis of Pus .

Laboratory Diagnosis of Mycobacterium Infection Laboratory Diagnosis of Venereal Diseases

Laboratory Diagnosis of GI Tract .

Laboratory Diagnosis of Meningitis and Encephalitis Laboratory Organization and Management

Handling of Clinical Specimen for Microbial Study Performance of different Tests Rapid

Diagnostic Tests 6 hours Molecular Tests 8 hours

Interpretation of Test Results 5 hours Test reporting

6th semester B.sc Clinical microbiology

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

- Search relevant scientific literature
- Develop a research proposal
- Employ appropriate data collection techniques and tools
- Manage collected data
- Analyze data with appropriate statistical techniques
- Write thesis
- Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title

2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

BSCM3601-Project

Subject Name	Code	Type of course	L-T-P	Prerequisite
Project	BSCM3601	Project		Basic Medical science

Project work:-

Suggested Project title

1. Antibacterial activity of sweet orange(citrus sinensis) on Staphylococcus aureus and Escherchia coli isolated from wound infected.
2. The incidence of Salmonella and Escherchia coli in livestock (Poultry) feeds
3. Microbial evaluation of milk from a diary farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus.

BSCM3602- Internship

Subject Name	Code	Type of course	L-T-P	Prerequisite
Internship	BSCM3602	Project		Basic Medical science

Internship

- Case record
- Lab management and ethics
- Evaluation -Guide(internal)
- Industries guide(external)
- University-project report/ Viva

**BACHELOR OF SCIENCE IN
MEDICAL LABORATORY TECHNOLOGY**

2017

SYLLABUS

Preface: Medical Laboratory Technology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as fluid, tissue, and blood. It also covers micro-organism screening, chemical analyses, and cell count.

Medical Technologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Biochemical Laboratories.

With adequate knowledge and experience, Medical Laboratory Technologists having B.Sc MLT qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B.Sc. in Medical Laboratory Technology

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre equipped with modern pathology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: On successful completion of three year programme, the candidate will be awarded with “**Bachelor of Science in Medical Laboratory Technology (B.Sc.-MLT)**” from Centurion University.

BACHELOR OF SCIENCE IN MEDICAL LABORATORY TECHNOLOGY

SEMESTER-I				
SL NO	CODE	SUBJECT	SUBJECT TYPE Lecture+ Tutorials + Practice (L+T+P)	CREDITS
1	BSMT1101	Introductory Biology	3+1+0	4
2	BSMT1102	Basic Anatomy and Physiology	4+0+0	4
3	BSMT1103	Basic Haematology	3+1+0	4
4	BSMT1104	Basic Medical Instrumentation and Technique	3+1+0	4
5	BSMT1105	Anatomy , Physiology & Hematology Lab	0+0+6	4

Total			20
-------	--	--	----

SEMESTER-II				
SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1.	FCBS0101	Environmental Science	3+1+0	4
2.	FCHU1201	Foundations of English Communication	0+0+3	2
3.	BSMT1201	Microbiology	3+1+0	4
4.	BSMT1202	Basic Biochemistry	3+1+0	4
5.	BSMT1203	Clinical Pathology	3+1+0	4
6.	BSMT1204	Clinical Pathology & Microbiology Lab	0+0+6	4
Total				22

SEMESTER-III				
SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1	BSMT2301	Immunology	3+1+0	4
2	BSMT2302	Applied Hematology	3+1+0	4
3	BSMT2303	Applied Biochemistry	3+1+0	4
4	BSMT2304	Basic Histology	3+1+0	4
5	FCHU0202	Communicative Practice Laboratory-2	0+0+3	2
6	BSMT2305	Immunology & Histology Lab	0+0+6	4
Total				22

SEMESTER-IV				
SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1.	BSMT2401	Parasitology	3+1+0	4
2.	BSMT2402	Advance Biochemistry	3+1+0	4
3.	BSMT2403	Advanced Hematology	3+1+0	4
4.	BSMT2404	Human Values & Professional Ethics	3+1+0	4

5.	BSMT2405	Basic Computers and Information Science	0+0+6	4
6.	BSMT2406	Biochemistry & Advanced Microbiology Lab	0+0+6	4
Total				24

SEMESTER-V				
SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1	BSMT3501	Transfusion Medicine	3+1+0	4
2	BSMT3502	Medical Laboratory Management	3+1+0	4
3	BSMT3503	Immunopathology	3+1+0	4

4	BSMT3504	Introduction To Quality and Patient Safety	3+1+0	4
5	BSMT3505	Medical Law and Ethics	3+1+0	4
6	BSMT3506	Mycology & Virology	3+1+0	4
7	BSMT3507	Mycology & Virology Lab	0+0+6	4
TOTAL				28

SEMESTER-VI				
SL NO	CODE	SUBJECT	SUBJECT TYPE (L+T+P)	CREDITS
1.	BSMT3601	Project	NA	12
2.	BSMTI3602	Internship	NA	12
		Total		24

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in a 6 months)

Syllabus

First semester B.sc Medical Lab. Technology BSMT1101-Introductory Biology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Introductory Biology	BSMT1101	Theory+ Practice	3-1-0	Fundamental Science

Objective:

- Determine the parts of the cell membrane and the cell wall
- Distinguish the types and mechanism of mutation
- Compare and contrast the events of cell cycle and its regulation
- Understand the dynamic character of cellular organelles

Course outcome

- Describe the fundamental principals cellular biology
- Develop a deeper understanding of cell structure and how it relates to cell functions.
- Understand how cells grow, divide, and die and how these important processes are regulated.
- Understand cell signaling and how it regulates cellular functions. Also how its dis-regulation leads to cancer and other diseases.

Subject: BSMT1101- Introductory Biology

(LTP: 3+1+0)(Credit: 4)

Unit-1

Biology & Its Branches; Scientific methods in Biology; Scope of biology and career options in Medical Laboratory Sciences; Characters of living organisms (elementary idea of metabolism, transfer of energy at molecular level, open and closed systems, homeostasis, growth and reproduction, adaptation, survival, death). Origin and Evolution of life - Theories of Evolution; Evidence of Evolution; Sources of Variations (mutation, recombination, genetic drift, migration, natural selection); Concept of species; Specification and Isolation (geographical and reproductive); Origin of species.

Unit-2

Diversity of living organisms, Systematic; Need, history and types of classification (artificial, natural, polygenetic); biosystematics; binomial nomenclature; Two kingdom system, Five kingdom System, their merits and demerits, status of bacteria and virus.

Unit-3

Cell as a basic unit of life - discovery of cell, cell theory, cell as a self - contained unit; prokaryotic and eukaryotic cell; unicellular and multicellular organisms; Ultrastructure of prokaryotic and eukaryotic cell - cell wall, cell membrane - unit membrane concept (Fluid-Mosaic model); membrane transport; cellular movement (exocytosis, endocytosis)

Unit-4

Cell organelles and their functions- nucleus, mitochondria, plastids, endoplasmic reticulum, Golgi complex, lysosomes, microtubules, centriole, vacuole, cytoskeleton, cilia and flagella, ribosomes. Molecules of cell; inorganic and organic materials - water, salt, mineral ions, carbohydrates, lipids, amino acids, proteins, vitamins, hormones and steroids.

Suggested Readings

1. Molecular biology of the cell by Alberts Bruce, publisher Garland Science
2. Molecular Biology by Friefelder David, Publisher Narosa
3. Introduction to Cell biology by John K Young, World Scientific publishing company
4. Introduction to biology ,3rd tropic edition by D G Maackean
5. A Term wise Text book on biology by VIDYA

BSMT1102-Human Anatomy & Physiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Human Anatomy and Physiology	BSMT1102	Theory	4-0-0	Fundamental Science

Objective:

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Subject: BSMT1102- Human Anatomy And Physiology

(LTP: 4+0+0)(Credit: 4)

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell , function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Structure and function of Skelton .Classification of joints and their function. Joint disorders.

Practice: *Demonstration of individual bone from skeleton..*

Identification of different organs and system from chart .

Unit-2

Cardiovascular System: Composition of blood, functions of blood elements. Blood group and coagulation of blood. Brief information regarding disorders of blood . Name and functions of lymph glands. Structure and functions of various parts of the heart. Blood pressure and its recording . Brief information about cardiovascular disorders .

Respiratory system: Various parts of respiratory system and their functions, physiology of respiration.

Practice: *Demonstration the morphology of different blood cells
Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.*

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema .Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption .

Endocrine System: Endocrine glands and Hormones. Reproductive system . Structure and function of sense organs .

Practice: *Identification of different organs and system from chart.*

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber& Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
3. Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb & Hoehn.
6. Anatomy and Physiology by N Murgesh, Publisher satya.

BSMT1103-Basic Haematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Hematology	BSMT1103	Theory+Practice	3-1-0	Basic Medical science

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components .

Course outcome

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood ,their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.

- Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.
- To learn about tests carried out for hematological investigations.
- To be able to carry out blood sampling.

Subject: BSMT1103- Basic Hematology

(LTP: 3+1+0)(Credit: 4)

Unit-1

Introduction to Hematology, definition, importance, important equipment and chemicals, various tests performed in Hematology laboratory.

Practice: *Demonstration of instruments used in hematology- Microscope, Blood Cell counter, Shari's Apparatuses.*

Unit -2

Composition and function of blood, Function of normal cellular components

Formation of blood, Erythropoiesis, leucopoiesis, thrombopoiesis

Anticoagulants, definition, Uses, Different types, mode of action, their merits and demerits.

Morphology of normal blood cells, abnormal morphology & diseases.

Practice: *Demonstration of different blood cell, their synthesis from slide presentation or chart. Demonstration the normal and abnormal morphology of different blood cells.*

Unit-3

Collection and preservation of blood: different methods of collection, preservation, changes in stored blood normal and absolute values in hematology, RBC count, WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, ESR, PCV.

Blood Film: different types, methods of preparations, staining, Different types of stains, Romanowsky stains: principle of staining, different stains, their composition and preparation, methods of staining.

Practice: *Preparation of DLC, TLC, TRBC etc. Estimation of ESR, Hb and values of MCH, MCV, MCHC, ESR, PCV.*

Unit-4

Hematological Disorders

- Classification of Anemia: Morphological & etiological.
- Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
- Megaloblastic Anemia: Causes, Lab findings.
- Hemolytic Anemia: Definition, causes, classification & lab findings.
- Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black
- Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: *Collection of blood by different methods. Different normal and abnormal morphology of RBCs, WBCs, Platelet.*

Suggested Reading

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani

3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvt limited

BSMT1104-Basic Medical Instrumentation & Techniques

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Medical Instrumentation and Techniques	BSMT1104	Theory+Practice	3-1-0	Fundamental Science

Objective:

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Principle of Spectroscopy

Course outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Subject: BSMT1104-Basic Medical Instrumentation & Techniques (LTP: 3+1+0)(Credit: 4)

Unit -1

Microscope: different type of microscope operation and care of binocular and monocular microscope in details Light, phase contrast, interference, fluorescence, polarization and electron microscopy (principle, parts and its application)

Photometry: Basic principle and operation.

Practice: Demonstration, operation, and Quality control of different types of microscopes.

Unit-2

UV-V is spectrometry and colorimetric instrumentation and its application.

Centrifuge: Basic principle, type analytical and preparative centrifuges, different density gradient centrifuge and its application. Blood analyzer: Principle, working and its application.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Unit-3

Microtome: Principle, working and its uses. Incubator, hot air oven and autoclave: Principle, working and its uses.

Practice: Working procedure of microtome, Incubator, Hot air oven, autoclave.

Suggested Reading

1. A Textbook of Medical Laboratory Technology by P Godkar, Publisher Bhalani

2. Textbook of Clinical laboratory methods and diagnosis by Ales C.Sonnenwirth & Leonard Jarret.
3. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee, Publisher McGraw Hill education pvt limited
4. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, New York, Fischbach, 2005.
5. Medical laboratory science theory and practice by J Ochei and Kolhatkar, Publisher TBS

BSMT1105-Anatomy, physiology & Haematology Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Anatomy, physiology & Haematology Lab	BSMT1105	Practice	0-0-4	Fundamental Science

Objective:

- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course outcome

- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells.It will also cover Bone marrow examination.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Subject: BSMT1105- Anatomy, physiology and hematology lab (LTP: 0+0+6)(Credit: 4)

1. Demonstration of various parts of centrifuge; its functioning and care , Demonstration of various parts of microscope its functioning and care ,Cleaning and drying of glass and plastic ware, Preparation of various anticoagulants, Collection of venous and capillary blood, Cleaning of glass-syringes and its sterilization .Preparation of buffers, Preparation of the stains and other reagents , Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman - stain, Haemoglobin estimation (oxy Hb and cyanmethaemoglobin method)
2. Complete Blood Counts, Determination of Hemoglobin, TRBC Count by Hemocytometers, TLC by Hemocytometer , Differential Leukocyte count, Determination of Platelet Count.
3. Determination of ESR by wintrobes, Determination of ESR by Westergren's method,
4. Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte
5. Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.
6. Demonstration of various parts of body ,tissues of body , parts of digestive system , parts of
7. respiratory system ,parts of excretory system

Suggested Reading:-

1. A Textbook of Medical Laboratory Technology by P Godkar, publisher Bhalani
2. Hand book of Medical Lab Technology By V S talib, Publisher CBS
3. Practical Haematology(8th edition) by Sir John, Publisher Churchill Livingstone
4. Clinical Hematology by Christopher A. Ludlam
5. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee Publisher McGraw Hill education pvt limited

2nd semester B. Sc Medical Lab. Technology

FCBS0101-Environmental Science

Subject Name	Code	Type of course	L-T-P	Prerequisite
Environmental Science	FCBS0101	Theory+ Practice	3-1-0	Fundamental Science

Objective:

- Students will investigate and understand and model the concepts of ecology.
- Students will investigate and understand the earth's atmosphere and how it affects living organisms.
- Identify the major concerns of the atmosphere and the impact on living organisms.
- To explain the reasons for global warming, the ozone hole and acid rain and the measures being taken for prevention.
- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.

- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course outcome

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Subject: FCBS0101-Environmental Science

(LTP: 3+1+0)(Credit: 4)

Course Objectives:

1. To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.

2. Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.

3. One must be environmentally educated.

Course outcome

1. Understand the natural environment and its relationships with human activities.
2. Characterize and analyze human impacts on the environment.
3. Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
4. Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Unit-1

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

Unit-2

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

Unit-3

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book:

1. Anubhav Kaushik & C.P. Kaushik: Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph: Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha: Text book of Environmental Studies for under graduate courses– Universities Press. (Book prepared by UGC Committee.

FCHU1201 Foundations of English Communication

Subject Name	Code	Type of course	L-T-P	Prerequisite
Foundations of English Communication	FCHU1201	Practice	0-0-3	General English

Objective:

- To develop vocabulary and grammar knowledge.
- To develop reading comprehension skills.

Course outcome

- Development of academic and sub-technical vocabulary.
- Enhancement of basic language skills i.e listening, speaking, reading and writing.
- Development of grammatical competence.
- Confidence level improvement.

Subject: FGHU1201 Foundations of English Communication (LTP: 0+0+3)(Credit: 2)

Unit-1

READING SKILLS (7hrs.)

Read one of the following books:

- Animal Farm
- Alice in Wonderland
- Guide
- Malgudi Days
- Harry Potter
- Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

Unit-2

WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

Unit-3

LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

Unit-4

SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

BSMT1201-Basic Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Microbiology	BSMT1201	Theory-Practice	3-1-0	General Biology

Objective:

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus .

- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.

Course outcome

- Understanding the details of microorganism morphology and metabolism.
- Broad idea regarding the different types of staining.
- Understanding the sterilization and its types.

Subject: BSMT1201- Basic Microbiology

(LTP: 3+1+0)(Credit: 4)

Unit-1

Introduction to Microbiology

Definition, history, relationship of micro-organisms to man, and safety guideline in a microbiology laboratory . Morphology of bacteria , Anatomy of a bacterial cell including spores, flagella and capsules
Bacterial Growth and Nutrition of bacteria . Bacterial growth curve and bacterial nutrition .

Practice: *Preparation of culture media, demonstrate aerobic and anaerobic culture.
Demonstration the different culture plate and bacterial growth, identification of bacteria .*

Unit-2

Classification of micro-organisms with special reference to bacteria General – Biological
Sterilization ,Definition, sterilization by dry heat, moist heat (below, at and above 100o C), autoclave and hot air oven its structure and functioning, preventive measures, controls and sterilization indicators, sterilization by radiation and filtration, Antiseptics and Disinfectants
Definitions, types, properties, use of disinfectants and antiseptics, efficiency testing of disinfectants ; use of laminar flow – principle and function.

Practice:- *Demonstrate the different methods of sterilization with handling Hot air oven, Autoclave.
Handling Of compound microscope . Demonstration of Antiseptics, Spirit, Cetrimide & Povidone-iodine .
Demonstration the disinfectants and precaution while using disinfectants*

Unit-3

Staining techniques

Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media)

Practice: *Demonstration the different staining procedure like Gram stain, Zn stain, Albert's stain etc*

Suggested Reading:-

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
3. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
4. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
5. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
6. Text book of Medical Microbiology by Gruckshiank

Subject Name	Code	Type of course	L-T-P	Prerequisite
Basic Biochemistry	BSMT1202	Theory-Practice	3-1-0	Basic Medical Science

Objective:

- Understanding the different bio molecule structure and metabolism and metabolic pathway.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course outcome

- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.
- To learn normal ranges and abnormal ranges of biochemical components and hormones.
- To study about diseases related to biochemical and hormone imbalance in human body.

Subject: BSMT1202- Basic Biochemistry

(LTP: 3+1+0)(Credit: 4)

Unit-1

Enzymes - Introduction, definition, classification, coenzymes, isoenzymes, properties, factors affecting enzyme action, enzyme inhibition, diagnostic value of serum enzymes - Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Unit-2

Chemistry of carbohydrates & their related metabolism - Introduction, definition, classification, biomedical importance & properties. Brief outline of metabolism : Glycogenesis & glycogenolysis (in brief), Glycolysis, citric acid cycle & its significance, HMP shunt & Gluconeogenesis (in brief), regulation of blood glucose level.

Unit-3

Amino acids - Definition, classification, essential & non essential amino acids . Chemistry of Proteins & their related metabolism – Introduction, definition, classification, biomedical importance. Metabolism : Transformation, Decarboxylation, Ammonia formation & transport, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids especially Phenylalanine, Tyrosine & Tryptophan, Creatine, Creatinine, Proteinuria.

Unit-4

Chemistry of Lipids & their related metabolism – Introduction, definition, classification, biomedical importance, essential fatty acids. Brief out line of metabolism : Beta oxidation of fatty acids, fatty liver, Ketosis, Cholesterol & it's clinical significance, Lipoproteins in the blood composition & their functions

in brief, Atherosclerosis.

Diabetes mellitus - definition, types, features, gestation diabetes mellitus , glucose tolerance test, glycosurias, Hypoglycemia & its causes.

Suggested Reading

1. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
2. Text book of Biochemistry, M. A. Siddique 8th Edn.1993 Vijay Bhagat Scientific Book Co., Patna.
3. Medical Biochemistry by AC Dey.
4. Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

BSMT1203-Clinical Pathology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Pathology	BSMT1203	Theory-Practice	3-1-0	Basic biology

Objective:

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease

Course outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites

Subject: BSMT1203-Clinical pathology

(LTP: 3+1+0)(Credit: 4)

Unit-1

URINE: Urine meter, Esbachl's Albuminometer, preparation of various reagents. Composition, collection and preservation of urine for various tests, physical chemical and microscopic examination of urine, estimation of total albumin, Specific gravity, litmus paper, tests for albumin, sugar, blood, bile salts and pigments, urobilinogen, ketones bodies etc.

Practice: Collection procedures of urine, Important precursors for collecting samples.
Physical and Chemical and Microscopic examination of urine .

Unit-2

STOOL: Sample collection, physical, chemical and microscopic examination.

SPUTAM : Sample collection, stain and study of A.F.B.

CEREBROSPINAL FLUID: Pandy's test, Cell count, cell type differential count and malignant cells.

BODIES FLUID: Cells stain; cell morphology and detection of malignant cells in peritoneal fluid, pleural fluid, pericardial fluid, and synovial fluid. Differences between transudates and exudates.

SEMEN: Sample collection, microscopic examination for count and morphology and morphology.

Practice: *Collection procedures and important precursors for collecting samples like STOOL, CSF, SEMEN and different body fluids.*

Physical and Chemical and Microscopic examination of different samples.

Unit-3

ANATOMIC PATHOLOGY: 1. Reception, Registration, preservation and processing of specimens. Haematoxyline and eosine staining procedure, mounting of stained sections, Filing of paraffin blocks, and slides. Method of decalcification, Sharpening and honing Knives techniques, using of microtome.

2. Museum: Mounting of specimens, labeling, maintenance of specimens and catalogue etc.

Post mortem/ Autopsy: Maintenance of the records of the Dead Bodies and specimens received, Autopsy techniques, Autopsy instruments, clod storage plants, legal aspects etc.

Practice : *Handling clinical laboratorial equipment.*

Preparation of some stains, and reagents for clinical diagnosis purpose.

Suggested Reading

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Manual Text book of lab and diagnostic tests by Lippincott Williams Wilkins, New York.
3. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS
4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGraw Hill.

BSMT1204-Clinical Pathology & microbiology lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Clinical Pathology & Microbiology lab	BSMT1204	Practice	0-0-4	Basic Pathology and microbiology

Objective:

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus.
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.

Course outcome

- Understanding the details of microorganism morphology and metabolism.
- Broad idea regarding the different types of staining.
- Understanding the sterilization and its types.
- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder

Subject: BSMT1204-Clinical pathology and microbiology lab

(LTP: 0+0+6)(Credit: 4)

(1) **Urine analysis** Physical, Chemical, Microscopic, Microbiological.

- (2) Stool analysis Physical, Chemical, Microscopic, Microbiological.
- (3) Sputum analysis Physical, Chemical, Microscopic, Microbiological.
- (4) Semen analysis Physical, Chemical, Microscopic, Microbiological.
- (5) Sterilization, Media Preparation, Bacteriological examination of pus.
- (6) Bacteriological examination of trout swab.
- (7) Laboratory study of parasites in stool, blood. Giardia lamblia, Entamoeba

Suggested Reading

1. Manual of lab and diagnostic tests by Lippincott Williams Wilkins, Fischbach, 2005 New York..
2. Clinical laboratory methods and diagnosis by Gradwohl's, 2000, Publisher Mosby
3. Medical laboratory science theory and practice, J Ochei and Kolhatkar, 2002, publisher TBS
4. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, publisher Tata McGraw Hill.

3rd semester B.sc Medical Lab. Technology

BSMT2301-Immunology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Immunology	BSMT2301	Theory-Practice	3-1-0	Fundamental Science

Objective:

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.

Course outcome

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and auto immune disease.

Subject: BSMT2301-Immunology

LTP: (3+1+0)(Credit:4)

Unit-1

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity.

Antigens: Types of antigen, Antigenic Determinant or Epitome, Determinants of Antigenicity

Tolerogens, Biological Classes of antigens, Superantigens.

Antibodies-Immunoglobulins: Antibody structure, Immunoglobulin classes of Antigens, Antigenic Determinants on Immunoglobulins.

Practice: Collection of blood sample by vein puncture, separation and preservation of

serum

Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test.

Unit-2

The Complement System: Principal pathways of Complement activation, Quantitation of Complement

(C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions: Antigen-Antibody Interactions, General characteristics of Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests, Serological Reactions.

Practice: - Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsons buffer Buffers of different pH and molarity, tris buffer, Standardization of cell concentration by spectrophotometer

Unit-3

Immune Response: Types of Immune response, Humoral immunity, Fate of Antigen in tissues, Production of Antibodies, Cell-mediated Immune Responses, Cytokines, Immunological tolerance, Theories of immune Response.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity -Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity, Shwartzman Reaction.

Practice: - Performance of Serological tests i.e. Widal, Brucella Tube Agglutination, VDRL (including Antigen Preparation), ASO (Antistreptolysin 'O'), C-Reactive Protein (Latex agglutination), Rheumatoid factor (RF) Latex agglutination, Rose Waaletest

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan & Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupt, Publisher Jaypee brotthers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, JonathanBrostoff and David Male
6. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2

BSMT2302-Applied Haematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Applied Hematology	BSMT2302	Theory-Practice	3-1-0	Basic science Medical

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course outcome

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Subject: BSMT2302- Applied Hematology

LTP:(3+1+0)(Credit:4)

Unit-1

Definition and classification of anemia .

Definition, classification and laboratory diagnosis of leukaemias

Definition and laboratory diagnosis of Leukamoid reactions

Cytochemical staining , procedure and their significance in various haemopoietic disorders.

Laboratory diagnosis of iron deficiency anaemia, Laboratory diagnosis of megaloblastic anaemia

Laboratory diagnosis of haemolytic anemia .

Practice: *Collection of blood from different body parts. Data and record Maintain , Handling hematological equipments.*

Unit-2

Chromosomal studies in various haematological disorders and their significance.

Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis .

Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Laboratory diagnosis of Haemophilia and von-willebrand disease . Laboratory diagnosis of

Idiopathic thrombocytopenic purpura (ITP), Platelet function tests and their interpretation .

Various radioactive isotopes used in hematology

Practice: - *To estimate serum iron and total iron binding capacity. To detect whether the given specimen is G6PD deficient or normal. To estimate Hb-F in a given blood sample . To estimate plasma and urine Haemoglobin in the given specimens. To demonstrate the presence of Hb-S by Sickling and solubility tests.*

Unit-3

L.E.cell phenomenon-

a. Definition of L.E.cell , **b.** Demonstration of L.E.cell by various methods **c.** Clinicals

Physiological variations in Hb, PCV, TLC and Platelets .

Investigations of a case suffering from bleeding disorders.

Quantitative assay of coagulation factors - **a.** Principle **b.** Procedure

Biomedical waste management in hematology laboratory (Other than Radioactive material)

Practice:- *Demonstration of functional aspect of blood cell counter*

Study the RBCs abnormal morphological form -a.Variation in size , shape and staining

Character , b. Red cell inclusion

Identify morphologically the-Immature Erythroid series of cells

Suggested readings

1. Text book of Medical Laboratory Technology by Paraful B. Godkar, Bhalani Publisher
2. Text book of Practical Hematology by JB Dacie
3. Hand book of Medical Laboratory Technology(2nd edition) by V.H. Talib, publisher CBS
4. Hematology (International edition) Emmanuel C. Besa Harwal Publisher
5. Practical Hematology(8th edition) by Sir John, Publisher Churchill livingstone
6. Clinical Hematology by Christopher A. Ludlam, Publisher Churchill livingstone
7. Clinical Diagnosis & Management by Laboratory methods(20th edition) by John Bernard Henry

BSMT2303-Applied Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Applied Biochemistry	BSMT2303	Theory-Practice	3-1-0	Basic Medical science

Objective:

- Understanding the concept of Biochemical analyzing instruments both automated and semi automated.
- Understanding about different biochemical test.

Course outcome

- Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.
- To learn about safety precautions and handling the equipment in a biochemical laboratory.
- Students will explain/describe the synthesis of proteins, lipids, nucleic acids, and carbohydrates and their role in metabolic pathways

Subject: BSMT2303-Applied Biochemistry

LTP

:(3+1+0)(Credit:4) Unit- 1

Automation in clinical Biochemistry,

Method of estimation and assessment for: a. Glucose tolerance test ,b. Insulin tolerance test, c. Xylose excretion test.

Practice:- Demonstration the centrifuge machine ,Demonstration of Colorimeter.

Unit-2

Clearance test for renal function . Gastric analysis, LFT , KFT, Lipid profile, Qualitative test for Urobilinogens ,Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice:- Estimation of Liver function test, Kidney function test, Lipid profile.

Unit-3

Qualitative analysis of renal calculi . Chemical examination of cerebrospinal fluid , Brief knowledge

about rapid techniques in clinical biochemistry.

Practice:- Estimation of Glucose in urine and blood .

Estimation of Protein in urine and blood .

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.
2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

BSMT2304- Basic Histology

Subject Name	Code	Type of course	L-T-P	Prerequisite
<i>Basic Histology</i>	BSMT2304	Theory-Practice	3-1-0	Basic Medical science

Objective:

- Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.
- perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.

Course Outcome

- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.
- Reception and labeling of histological specimens.
- Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.

Subject: BSMT2304 –Basic Histology

LTP:(3+1+0)(Credit:4)

Unit-1

Introduction to histotechnology, Care , maintenance and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues Collection and transportation of specimens for histological examination, fixation Various types of fixatives used in a routine histopathology laboratory- Simple fixatives ,Compound fixatives ,Special fixatives for demonstration of various tissue elements.

Practice: *Demonstration of instruments used for dissection.*

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory .

Unit-2

Decalcification Criteria of a good decalcification agent, Technique of decalcification

Followed with selection of tissue, fixation, decalcification, neutralization of acid an thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination ,Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors .

Practice: -Method of Decalcification, fixation, Embedding , manual or automatic tissue processing.

Unit-3

Section Cutting , Sharpening of Microtome Knives, Honing, Stropping, various types of microtome and their applications ,Freezing Microtome and various types of Cryostats, Staining, Impregnation and Mountains, Commonly used mountains in histotechnology lab. General Staining Procedures for Paraffin Infiltrated and Embedded tissue . Nuclear Stains and Cytoplasmic stain, Equipment and Procedure for manual Staining and Automatic Staining Technique . Mounting of Cover Slips, Labeling and Cataloguing the Slides .

Practice: - Procedure for manual Staining and Automatic Staining Technique.

Suggested readings

1. Color text book of histology by Gartner &Hiatt ,publisher Elsevier
2. Netter’s essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg , Indira Bahl, Mohini kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran , Publisher Elsevier

FCHU0202-Communicative Practice Laboratory-1

Subject Name	Code	Type of course	L-T-P-	Prerequisite
Communicative Practice Laboratory-1	FCHU0202	practice	0-0-2	General english

Objective:

- To expose the students to a variety of self- instructional, learner- friendly modes of language learning. To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm. To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

Course Outcome

- Ability to communicate fluently in different business situation
- Effective oral and written communication
- Appropriate word usage with correct pronunciation

- Clarity of word stress and intonation

Subject: FCHU0202 -Communicative Practice Laboratory-1

(LTP: 0+0+3)(Credit: 2)

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

Unit-1

FRIENDLY COMMUNICATION (9 HOURS)

- **Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade**
- **Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.**
- **Conversation Practice in familiar and unfamiliar situations (This module will be practiced through conversation activities in pairs & groups)**

Unit-2

GRAMMAR AND VOCABULARY (9 HOURS)

- **The focus will be on the appropriate usage of language.**
- **Elimination of common errors**
- **Editing passages**
- **Word power A-Z: Easy and quick techniques**
- **Vocabulary building exercises (Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)**

Unit-3

PHONETICS AND SPOKEN ENGLISH (12 HOURS)

- **Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.**
- **Pronunciation Guidelines: Consonants and Vowels**
- **Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences**
- **Speaking Techniques: Using correct stress patterns, developing voice quality**
- **Rhythm and Intonation (Reading aloud of dialogues, speeches etc. for practice in pronunciation) (In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)**

TEXT BOOKS: Dwyer, J. (2000).

The Business Communication Handbook . New Jersey: Prentice Hall.

REFERENCES:

Brown, G & Yule, G. (1983).Teaching the Spoken Language. Cambridge: Cambridge University Press. Brown, H. D. (1994). Teaching by Principles: An Interactive Approach to Language Pedagogy. New Jersey: Prentice Hall.

BSMT2305-Immunology and Histology lab (LTP: 0+0+4)(Credit:4)

Subject Name	Code	Type of course	L-T-P	Prerequisite
<i>Immunology and Histology lab</i>	BSMT2305	Practice	0-0-4	Basic immunology & Histology

Objective:

- perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.

Course Outcome

- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.
- The student will learn the application of Immunology in disease diagnosis.

Subject: BSMT2305-Immunology and Histology lab

(LTP: 0+0+6)(Credit:4)

Immunology

Collection of blood sample by vein puncture, separation and preservation of serum

Raising haemolysin in Rabbit and performing its titration for Rose-Waaler test

Preparation of Phosphate buffers, Vernol buffer, ASO buffer, Richardsons buffer,

Buffers of different pH and molarity, tris buffer, Standardization of cell concentration by spectrophotometer

Performance of Serological tests i.e.

- a. Widal,
- b. Brucella Tube Agglutination,
- c. VDRL (including Antigen Preparation),
- d. ASO (Antistreptolysin 'O')
- e. C-Reactive Protein (Latex agglutination)
- f. Rheumatoid factor (RF) Latex agglutination
- g. Rose Waaler test,

Demonstration of antigen / antibody determination by Immunofluorescence,

Immunodiffusion, precipitation in agarosegel(ouchterlony),CCIEP, ELISA, SDSPAGE and western blotting.

Histotechnology

Demonstration of instruments used for dissection

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory

Reception and labeling of histological specimens

Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid , Corney's fluid,

10% Neutral formalin, Formal saline , Formal acetic acid, Pereyn's fluid

To perform embedding and casting of block .

To process a bone for decalcification .
 To prepare 70% alcohol from absolute alcohol.
 Processing of tissue by manual and automated processor method
 To demonstrate various part and types of microtome .
 To learn sharpening of microtome knife (Honing and stropping technique)
 To perform section cutting , learn mounting of stained smears.
 To practice attachment of tissue sections to glass slides
 To learn using tissue floatation bath drying of sections in incubator (-560 C)
 To perform & practice the Haematoxylin and Eosin staining technique
 To perform & practice the Mallory's Phosphotungstic Acid Haematoxylin (PTAH)

4th semester B.Sc Medical Lab. Technology

BSMT2401-Parasitology

Subject Name	Code	Type of course	L-T-P-	Prerequisite
Parasitology	BSMT2401	Theory-Practice	3-1-0	Basic biology

Objective:

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites (Protozoa, metazoa and Helminth)
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites.

Course Outcome

- Identification of pathogenic parasite in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Subject: BSMT2401- Parasitology

(LTP:3+1+0)(Credit:4)

Unit-1

Introduction to Medical Parasitology , General characteristics of protozoa and helminthes
 Collection, Transport, processing and preservation of samples for routine parasitological investigations .

Practice:- Method of sample Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Unit-2

Morphology, life cycle and lab-diagnosis of Giardia and Entamoeba
 Morphology, life cycle and lab-diagnosis of Roundworms and Hookworms
 Morphology, life cycle and lab-diagnosis of T. solium and T. saginata
 Morphology, life cycle and lab-diagnosis of Malarial parasite with special refrence to P.vivax and P.falciparum .

Practice:- *Laboratory diagnosis of hydrated cyst and cysticercosis*
Concentration techniques for demonstration of Ova (Principles and applications)
Routine Stool examination for detection of intestinal parasites.
Identification of adult worms from model's or slide's.
Identification of different parasites their morphology from slide's

Suggested Reading

1. Text book of Parasitology by N C Dey, publisher New central book agency
2. Text book of Parasitology by Chaterjee, publisher CBS
3. Text book of microbiology by Ananthanereyan, Publisher universities press
4. Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, jaypee publisher
5. Short text book of medical microbiology by Satish gupt, Publisher Jaypee

BSMT2402-Advance Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Advance Biochemistry	BSMT2402	Theory- Practice	3-1-0	Basic medical sciences

Objective:

- To learn the principle, instrumentation & application of Microscopy.
- Principle, instrumentation & application of Centrifugation.
- Principle of Spectroscopy.

Course Outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.
- Students will explain/describe the synthesis of proteins, lipids, nucleic acids, and carbohydrates and their role in metabolic pathways

Subject: BSMT2402-Advance Biochemistry

(LTP:3+1+0)(Credit:4)

Unit-1

Spectrophotometry and colorimetry, Introduction, Theory of spectrophotometry and colorimetry , Lambert's law and Beer's law ,Applications of colorimetry and spectrophotometry.

Practice:- Practice: Cleaning of the Laboratory glass ware, Preparation of distilled Water, Principle, working and maintenance of pH meter, To prepare 0.1 N HCl solution, 0.2N HCl

solution.,0.1 molar H₂SO₄, 0.2 Molar Sodium carbonate solution, Demonstration of Osmosis and dialysis.

Demonstration of the instrument Spectrophotometry according to Lambert's and Beer's law

Unit-2

Photometry, Introduction, General principles of flame photometry, Limitations of flame Photometry, Instrumentation, Applications of flame photometry , Atomic absorption Spectroscopy – Principle & applications

Practice:- Demonstration of Photometry, general principles, limitation of Photometry.

Unit-3

Chromatography Introduction, definition, types of chromatograph, Paper Chromatography: Introduction, principle, types , details for qualitative and Quantitative analysis, application

Thin layer chromatography: Introduction, experimental techniques, application of TLC, Limitations,

High performance thin layer chromatography

Column chromatography: Introduction, principle column efficiency, application of

Column chromatography Gas chromatography: Introduction principle, instrumentation,

Application Ion exchange chromatography: Introduction, Definition and principle, cation and Anion exchangers , application.

Practice:- Demonstration of Chromatography, Demonstration of Gel Chromatography

Unit-4

Electrophoresis: Introduction, principle, Instrumentation, types of electrophoresis - paper and gel electrophoresis ,application.

Suggested readings

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H.Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book

BSMT2403-Advance Hematology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Advance Haematology	BSMT2403	Theory- Practice	3-1-0	Basic haematology

Objective:

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Demonstrate an understanding of the components of human blood and characteristics, functions, and abnormalities and disease states of each.
- Demonstrate proficiency in the skills necessary to perform blood cell counts, and evaluation of blood elements within stated limits of accuracy.

Course Outcome

- Differentiate various hematological procedures and the use of basic equipment essential to working in a Hematology Laboratory.
- Discuss differences between Quality control, Quality Assurance, and Continuing Quality Improvement principles as used in the Hematology Laboratory.
- Categorize various hematology analyses , operational principles of various hematology instruments, and troubleshooting of various instruments.
- Explain the principles and theories utilized in a variety of problem-solving situations.

Subject: BSMT2403-Advance Hematology

(LTP:3+1+0)(Credit:4)

Unit-1

Definition and classification of anemia's , Laboratory diagnosis of iron deficiency anemia.

Laboratory diagnosis of megaloblastic anemia , Laboratory diagnosis of hemolytic anemia.

Definition, classification and laboratory diagnosis of leukemia's

Definition and laboratory diagnosis of Leukamoid reactions Cytochemical staining, procedure and their significance in various haemopoietic disorders. Chromosomal studies in various hematological disorders and their significance. Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis .

Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Practice:- Demonstrate the different abnormal morphology of RBCs in Anemia cases.

Laboratory diagnosis of hemolytic anemia, leukemia's, Leukamoid reactions

Unit-2

Laboratory diagnosis of Hemophilia and von-will brand disease. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP) ,Platelet function tests and their interpretation.

Unit-3

Measurement of:

a. Blood volume, b. Determination of Red cell volume and Plasma volume, c. Red cell life span, d. Platelet life span .Estimate serum iron, total iron, Hb-F, Plasma and urine hemoglobin.

Demonstrate the presence of Hb-S by Sickling and solubility ,Perform various Platelet function test.

Practice:- Demonstration the sickle cells

Suggested readings

1. Text book of Medical Laboratory Technology by Paraful B. Godkar Practical Hematology Publisher JB Dacie, Bhalani publisher
2. Text book of Medical Laboratory Technology(2nd edition) by V.H. Talib, publisher CBS
3. Hematology (International edition) EmmanuelC.BesaHarwal Publisher
4. Practical Hematology (8th edition) by Sir John , publisher Churchill livingstone

BSMT2404-Human value & professional ethics

Subject Name	Code	Type of course	L-T-P	Prerequisite
Human value & professional ethics	BSMT2404	Theory Practical	3-1-0	NA

Objective:

- The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients.
- It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and

Subject: BSMT2404-Human value

(LTP: 3+1+0)(Credit:4)

& professional ethics

Unit-1.

Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

Understanding the need, basic guidelines, content and process for Value Education.

Self Exploration-what is it?- its content and process; 'Natural Acceptance' and Experiential

Validation- as the mechanism for self exploration.

Continuous Happiness and Prosperity- A look at basic Human Aspirations

Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of Aspirations of every human being with their correct priority

Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario

Method to fulfill the above human aspirations: understanding and living in harmony at various Levels

Unit- 2.

Understanding Harmony in the Human Being - Harmony in Myself!

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'

Understanding the needs of Self ('I') and 'Body' - Sukh and Suvidha

Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)

Understanding the characteristics and activities of 'I' and harmony in 'I'

Understanding the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail
 Programs to ensure Sanyam and Swasthya

Unit- 3

Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

Understanding harmony in the Family- the basic unit of human interaction

Understanding values in human-human relationship; meaning of Nyaya and program for its

Fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) as the foundational values of relationship

Understanding the meaning of Vishwas; Difference between intention and competence

Understanding the meaning of Samman, Difference between respect and differentiation; the other salient values in relationship

Understanding the harmony in the society (society being an extension of family): Samadhan,

Samridhi, Abhay, Sah-astitva as comprehensive Human Goals

Visualizing a universal harmonious order in society- Undivided Society (AkhandSamaj), Universal Order (SarvabhaumVyawastha)- from family to world family!

BSMT2405-Basic Computers & Information science

Subject Name	Code	Type of course	L-T-P	Prerequisite
<i>Basic Computers & Information science</i>	BSMT2405	Practice	0-0-4	Fundamentals of Computer

Objective:

- Identify the function of computer hardware components.
- Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.
- Identify how to maintain computer equipment and solve common problems relating to computer hardware.
- Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded
- Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited

Course Outcome

- Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.
- Understand the difference between an operating system and an application program, and what each is used for in a computer.
- Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Subject:BSMT2405-BasicComputers&Information science

(LTP:0+0+6)(Credit:4)

Unit-1

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.

Input output devices: input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).

Unit-2

Processor and memory: The Central Processing Unit (CPU), main memory.

Storage Devices: sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

Unit-3

Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.

Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs. Introduction of Operating System: introduction, operating system concepts, types of operating system. Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external).

Unit-4

Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.

Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in various fields: Medical, Education, Railway, Defense, Industry, Management, Sports, Commerce, Internet.

Suggested readings :

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

BSMT2406-Biochemistry &Advanced Microbiology Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Biochemistry&Advanced Microbiology Lab	BSMT2406	Practice	0-0-4	Basic microbiology

Objective:

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks.

Course Outcome

- This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.
- Understanding the details of microbial cell organelles.
- Provides knowledge on the growth of microorganism.

Subject:BSMT2406-Biochemistry&AdvancedMicrobiologyLab

(LTP:0+0+6)(Credit:4)

Practical-1

Estimation of Glucose in Urine and in Blood .

Estimation of Protein in Urine and Blood .

Estimation of Urea in blood .

Estimation of uric acid in blood .

Estimation of serum bilirubin

Estimation of Total Cholesterol in blood .

Estimation of HDL Cholesterol.

Estimation of LDL Cholesterol .

Estimation of TG, Estimation of Creatinine in Blood

Estimation of serum calcium

To measure electrolytes Sodium , Potassium & Chloride.

Practical-2

To demonstrate the instruments used to seed culture media

To learn techniques for Inoculation of bacteria on culture media

To isolate specific bacteria from a mixture of organisms .

To demonstrate simple staining (Methylene blue)

To prepare India ink preparation to demonstrate negative staining .

Bacterial identification: To demonstrate reagent preparation and procedure for

Gram stain, Albert stain, Neisser's staining, Z-N staining, Capsule staining , Demonstration of flagella by staining methods,Spore staining ,To demonstrate spirochetes by Fontana staining procedure

To prepare the reagent and demonstrate following biochemical tests with positive and negative control bacteria:

Catalase , Coagulase , Indole, Methyl Red (MR) ,VogesProskauer (VP),Urease , Citrate ,Oxidase , TSIA, Nitrate reduction ,Carbohydrate fermentation , Huger and leifson, Bile solubility , H₂S production Demonstration and motility , Decarboxylases, CAMP , Hippurate hydrolysis, Naglar's reaction

5th semester B.sc Medical Lab. Technology

BSMT3501-Transfusion Medicine

Subject Name	Code	Type of course	L-T-P	Prerequisite
Transfusion Medicine	BSMT3501	Theory-Tutorial	3-1-0	Basic biology

Objective:

- To provide an outstanding education in all aspects of blood banking and transfusion medicine and prepare fellows for a career in a blood center or in a hospital transfusion service, either in an academic center or in a community hospital.

Course Outcome

- Describe the principles of patient identification.
- Perform pre-transfusion testing, including ABO and/or Rh testing, red blood cell (RBC) antibody screen and antibody identification.
- Learn adverse reactions of transfusion techniques.

Subject: BSMT3501-Transfusion Medicine

(LTP:3+1+0)(Credit:4)

Unit-1

Introduction of transfusion medicine.

Blood products and transfusion procedures, summary information about blood products and hemostatic agents.

Basics of red cell immunology and compatibility testing, Pre transfusion and transfusion procedure.

Practice: Demonstrate the different method for blood collection.

Identify the different organs for transfusion medicine.

Demonstrate Pre transfusion and transfusion procedure.

Unit-2

Clinical transfusion: Surgery and critical illness, planned surgery.

Clinical transfusion in the medical setting , Immunoglobulin for the prevention of infection.

Practice: Demonstrate routine test on blood donation, ABO blood grouping.

Identify anemic disorders, renal disorders, congenital hemostatic disorders, Immunological Disorders etc.

Unit-3

Transfusion in antenatal obstetric and neonatal care.

Adverse effects of transfusion

Suggested Reading

1. Text book of Blood banking and transfusion medicine by Sally V. Rudmann Publisher Elsevier Health Sciences
2. Handbook of Transfusion Medicine, Editor D B L McClelland, United Kingdom Blood Services 4th Edition
3. Medical Laboratory Technology By K.L Mukherjee ,Publisher McGraw Hill education pvt limited

BSMT3502 –Medical Laboratory Management

Subject Name	Code	Type of course	L-T-P	Prerequisite
Medical Laboratory Management	BSMT3502	Theory-practice	3-1-0	Fundamental Science

Objective:

- Explain and apply principle of effective test utilization
- Interpret, implement and complying law, regulation, accrediting standards and guidelines of Govt. and NG organizations.
- Design, implement and evaluate resources in lab
- Communicate effectively with laboratory personnel and health care professional.
- Explain and apply the major principle and tactics of laboratory administration.

Course Outcome

- Become professional competent in medical laboratory
 - Exhibit a sense of commitment to the ethical and human aspect of patient care
 - Recognize the role of clinical laboratory scientist in the assurance of quality health care
- Application of safety and governmental regulation and standards as applied to medical laboratory practice.

Subject:BSMT3502 –Medical Laboratory Management (LTP:3+1+0)(Credit:4)

Unit-1

Ethical Principles and standards for a clinical laboratory professional-

Duty to the patient, Duty to colleagues and other professionals, Duty to the society

Good Laboratory Practice (GLP) Regulations and Accreditation-

Introduction to Basics of GLP and Accreditation, Aims of GLP and Accreditation

,Advantages of Accreditation

Brief knowledge about Nation and International Agencies for clinical laboratory accreditation

Awareness / Safety in a clinical laboratory-General safety precautions, HIV : pre- and Post-exposure guidelines, Hepatitis B & C : pre- and Post-exposure guidelines, Drug Resistant Tuberculosis

Unit-2

Patient management for clinical samples collection, collection of sample, transportation and

preservation, Sample accountability-Purpose of accountability, Methods of accountability

Sample analysis-Introduction, Factors affecting sample analysis

Reporting results-Basic format of a test report, Reported reference range, Clinical Alerts, Abnormal

results, Turnaround time, Results from referral laboratories, Release of examination results

Alteration in reports

Unit-3

Quality Management system-Introduction,

Ethical Principles and standards for a clinical laboratory professional-

Duty to the patient-Duty to colleagues and other professionals, Duty to the society

Good Laboratory Practice (GLP) Regulations and Accreditation-

Introduction to Basics of GLP and Accreditation, Aims of GLP and Accreditation,

Advantages of Accreditation, Brief knowledge about Nation and International Agencies for clinical laboratory accreditation

Awareness / Safety in a clinical laboratory

General safety precautions-HIV : pre- and Post-exposure guidelines, Hepatitis B & C : pre- and Post-exposure guidelines, Drug Resistant Tuberculosis.

Unit-4

Patient management for clinical samples collection, collection of sample, transportation and

preservation, Sample accountability-Purpose of accountability, Methods of accountability

Sample analysis-Introduction, Factors affecting sample analysis

Reporting results, Basic format of a test report, Reported reference range, Clinical Alerts,
Abnormal results, Turnaround time, Results from referral laboratories, Release of examination results

BSMT3503-Immunopathology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Immunopathology	BSMT3503	Theory- Practice	3- 1- 0	Fundamental Science

Objective:

- To understand how the immune system is working, about the components of the immune system, their functioning, the defense mechanisms against different pathogens (viruses, bacteria, and parasites), the pathogenesis of immune diseases (hypersensitivity, autoimmunity, immunodeficiencies), and on the mechanisms underlying the rejection of the transplants and the antitumor immune response.
- It also provides knowledge of the main immunological techniques used in research and diagnostics.

Course Outcome

- To know and describe the organization and functioning of the immune system, its cells and its molecules.
- To know the principles of diagnostic tests described on immunological techniques.
- To know the fundamental stages of the immune system and its changes over the course of life (intrauterine life, newborn, adult, elderly)
- *The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.*

Subject:BSMT3503-Immunopathology

(LTP:3+1+0)(Credit:4)

Unit-1

Basic Components of the Immune System

Immunological Techniques, Immune Regulation, Immunological Aspects of Infection

Immunological Aspects of Immunodeficiency Diseases

Unit-2

Autoimmunity, Chronic Lymphocytic Leukemia

Immunology of HIV Infections

Immunological Aspects of Allergy and Anaphylaxis

Immunological Aspects of Skin Diseases

Unit-3

Experimental Approaches to the Study of Autoimmune Rheumatic Diseases

Immunological Aspects of Cardiac Disease

Immunological Aspects of Chest Diseases: The Case of Tuberculosis

Immunological Aspects of Gastrointestinal and Liver Immunological

Aspects of Endocrine Disease

Immunological Aspects of Renal Disease Immunological Aspects of Transplantation.

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan & Paniker, Publisher Universities press
2. Short text book of Medical microbiology by Satish Gupt, Publisher Jaypee brotthers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough, publisher Butterworth Heinemann ltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and David Male.

BSMT3504-Introduction to Quality And Patient Safety

Subject Name	Code	Type of course	L-T-P	Prerequisite
Introduction To Quality And Patient Safety	BSMT3504	Theory-practice	3-1-0	Fundamental Science

Objective:

- Knowing patient safety
- Report Distribution system
- Laboratory infection control Policy
- Bio-Medical waste management
- Understanding Patient rights
- ISO Policy for medical laboratory

Course Outcome

- Know about rights and duties of patient
- Know about right and duties of lab technician
- Understand various policy to manage lab
- Understand infection control procedure

Subject: BSMT3504-IntroductionToQualityAndPatientSafety (LTP:3+1+0)(Credit:4)

Unit-1

Introduction – the science of safety Medical Error & Metacognition

Investigating an Error/ Root cause analysis Responding to Adverse events

Error reporting systems Disclosure

Health Literacy and Patient Safety Human Factors Engineering .

Unit-2

Teamwork and Communication Culture of Safety/ Leadership

Thinking about Quality 1 Thinking about Quality

Components of Measurement Measure development and evaluation

Regulation and accountability Case Mix Adjustment

Spring Break , Patient Satisfaction Using large datasets for quality evaluation
Quality Measure Presentations .

Unit-3

Introduction to Quality Improvement Innovation and Adoption
Knowledge Translation Evaluation of Implementation

Lean Methodology and Problem Solving Audit and Feedback; Process mapping; Trigger tool

Information Technology in Quality Improvement

Quality Improvement Project Presentations

BSMT3505-Medical law and Ethics

Subject Name	Code	Type of course	L-T-P	Prerequisite
Medical law and Ethics	BSMT3505	Theory-practice	3-1-0	Fundamental Science

Objective:

- The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients.
- It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and
- The role of policy in the formation of law as it relates to medicine.

Subject: BSMT3505-Medical law and Ethics

(LTP:3+1+0)(Credit:4)

Unit-1

Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

Understanding the need, basic guidelines , content and process for Value Education.

Self Exploration–what is it?- its content and process; ‘Natural Acceptance’ and

Experiential Validation- as the mechanism for self exploration . Continuous Happiness and Prosperity- A look at basic Human Aspirations.

Unit-2

Understanding Harmony in the Nature and Existence - Whole existence as Co-existence-

Understanding the harmony in the Nature

Interconnectedness and mutual fulfillment among the four orders of nature recyclability and

self-regulation in nature .

Understanding Existence as Co-existence (*Sah-astitva*) of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence .

Unit-3

Understanding Harmony in the Human Being - Harmony in Myself!

Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

. Implications of the above Holistic Understanding of Harmony on Professional Ethics .

Practice:-To visit the following places, meet people visiting/living/working in that environment, understand their life style, understand value of human life in each environment and share with them the aspects of their joys and sorrows: Charitable and Government Hospitals, Orphanages, Old age homes, Training Institute for handicapped , Drug De-Addiction centers ,Schools in rural areas, Industries Slums

BSMT3506-Myiology & Virology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Myiology & Virology	BSMT3506	Theory-Practice	3-1-0	Fundamental Science

Objective:

- To describe the characteristics and diseases caused by pathogenic viruses and fungi.
- To perform basic laboratory techniques in myiology, to isolate fungus from clinical samples.
- Understanding different methods of virus cultivation.
- Understanding collection, transportation and preservation methods of clinical specimen.

Course Outcome

- Broad idea about structure and basic characteristics of virus and fungus.
- Plan, write and implement research projects in virology and myiology analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral and fungal diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Sub:BSMT3506-Myiology & Virology

(LTP:3+1+0)(Credit:4)

Unit-1

Introduction to medical myiology, Basic concepts about superficial and deep Mycoses .

Taxonomy and classification and general characteristics of various medically important fungi .

Normal fungal flora .

Morphological, cultural characteristics of common fungal laboratory contaminants

Culture media used in myiology.

Practice:- To prepare culture media used routinely in myiology. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.

Unit-2

Direct microscopy in Medical myiology laboratory .

Processing of clinical samples for diagnosis of fungal infections i.e. Skin, nail, hair, pus, sputum, CSF and other body fluids.

Techniques used for isolation and identification of medically important fungi
Methods for identification of yeasts and moulds .

Practice-: To identify given yeast culture (By performing various identification techniques studied in theory. To identify given mould culture (By performing various identification techniques studied in theory. To demonstrate dimorphism in fungi

Unit-3

Introduction to medical virology, Classification of viruses . Introduction to medically important viruses . Collection, transportation and storage of sample for viral diagnosis
Staining techniques used in Virology. Processing of samples for viral diagnosis (Egg inoculation and tissue culture) .

Practice--: Demonstration of fertilized hen egg. Demonstration of various inoculation routes in fertilized hen egg. Inoculation of fertilized hen egg through various routes .

BSMT3507-Mycology & Virology lab.

Subject Name	Code	Type of course	L-T-P	Prerequisite
Mycology & Virology Lab	BSMT3507	Practice	0-0-4	Basic microbiology

Objective:

- To describe the characteristics and diseases caused by pathogenic viruses and fungi.
- To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.
- Understanding different methods of virus cultivation.
- Understanding collection, transportation and preservation methods of clinical specimen.

Course Outcome

- To describe the characteristics and diseases caused by pathogenic viruses and fungi.
- To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.
- Understanding different methods of virus cultivation.
- Understanding collection, transportation and preservation methods of clinical specimen.

Sub: BSMT3507-Mycology & Virology lab.

(LTP:3+1+0)(Credit:4)

1. To prepare culture media used routinely in mycology.
2. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.
3. To identify given yeast culture (By performing various identification techniques studied in theory).
4. To identify given mould culture (By performing various identification techniques studied in theory).
5. To demonstrate dimorphism in fungi
6. To process clinical samples for laboratory diagnosis of fungal infections i.e.
 - a) Skin
 - b) Nail
 - c) Hair
 - d) Body fluids and secretions
7. To use mice for lab diagnosis of any fungal infection
8. Demonstration of fertilized hen egg.
9. Demonstration of various inoculation routes in fertilized hen egg
10. Inoculation of fertilized hen egg through various routes.

6th semester B.sc Medical Lab. Technology

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

- Search relevant scientific literature
- Develop a research proposal
- Employ appropriate data collection techniques and tools
- Manage collected data
- Analyze data with appropriate statistical techniques
- Write thesis
- Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Subject: BSMT3601-Project

(Project) (Credit: 12)

BSMT3601-Project

Subject Name	Code	Type of course	L-T-P	Prerequisite
Project	BSMT3601	Project	0-0-12	Basic medical science

Project work:-

Suggested Project title

1. Serum electrolytes/urea/creatinine in pregnant women with Malaria Parasitamia.
2. Urinary tract infection in adult students in CUTM Campus.
3. Blood groups, Prothrombin time(PT), Activated partial thromboplastin time(APTT) among Undergraduate student.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.

BSMT3602- Internship

Subject Name	Code	Type of course	L-T-P	Prerequisite
Internship	BSMT3602	Internship	0-0-12	Basic medical science

Subject: **BSMT3602- Internship** (Practice) (Credit: 12)

Internship

- Case record
- Lab management and ethics
- Evaluation -Guide(internal)
 - Industries guide(external)
 - University-project report/ Viva

SYLLABUS

M.Sc in Applied and Clinical Microbiology

Preface: Medical microbiology is the branch of medical science concerned with the prevention, diagnosis and treatment of infectious diseases. In addition, this field of science studies various clinical applications of microbes for the improvement of health. There are four kinds of microorganisms that cause infectious disease: bacteria, fungi, parasites and viruses and one type of infectious protein called Prion.

A medical microbiologist studies the characteristics of pathogens, their modes of transmission, mechanism of infection and growth. Using this information, a treatment can be revised.

Medical microbiologist often serves as a consultant of physician, providing identification of pathogen and suggesting treatment option.

Scope: M.Sc in Applied and Clinical Microbiology gives opportunity for specialized study in the field of medical & clinical microbiology. Candidates who successfully complete M. Sc in Applied and Clinical Microbiology course may obtain jobs as

- Specialized technologist in Microbiology or supervisor of clinical laboratories in hospitals.
- Laboratory scientists in Biomedical and research institutes.
- Teachers in training institutes of Medical Laboratory Technology/graduate & postgraduate programme of microbiology & related areas.
- Utilize or apply the concepts, theories and principles of laboratory science.
- Demonstrate the ability to plan an effect the change in laboratory practice and health care delivery system.
- Establish collaborative relationship with members of other disciplines.
- Demonstrate interest in continued learning and research for personal and professional advancement.
- Be able to interpret or guide the development of medical diagnostics in need locally and cheaply
- Be able to manage and guide appropriately equipped and staffed clinical microbiology laboratories
- Be a highly skilled human resource for the emerging pharmaceutical/medical industry
- Be able to participate in supervised or team-research in universities, industry or government
- Demonstrate advanced knowledge in the fields of Clinical Microbiology and Immunology, with excellent skills to teach and communicate this knowledge
- Demonstrate independent critical and analytical thinking, both within their field of study, and beyond, for the use of their knowledge for service to others.
- Be able to guide patient care and the public on the pathology, pathogenesis and clinical manifestation, mode of transmission, prevention and current control methods for infections of public health importance
- Be a highly skilled human resource in the management of an increasing number of patients with tissue/Organ transplants, Cancers and immune deficiencies

- Be able to critique and evaluate the impact of the existing national disease control programmes on the epidemiology of infectious diseases and advise on improving them
- Have acquired critical and analytical skills required for further studies in specialized areas of microbiology or related studies
- Identify and suggest possible solutions to ethical dilemmas that occur in their work and field of study, and understand the importance of professional ethics in all aspects of scientific communication and laboratory work
- Demonstrate competence in the laboratory, including application of the scientific method and appropriate use of basic and state-of-the-art laboratory tools and techniques
- Demonstrate written and oral skills necessary for communication of research, knowledge, and ideas to scientists and non-scientists alike

Programme: M.Sc. in Applied and Clinical Microbiology

Duration: Two years (Four semesters) full-time programme with 6 months internship in the last semester.

Eligibility: Bachelor's degree in any branch of Life Science / Agriculture / Pharmacy / Veterinary / Medicine (MBBS/BDS).

Examination: Examination rules will be as per guideline of CUTM Examination handbook.

Internship : A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre /Research Institution equipped with modern laboratory facility, which fulfill the norms decided by the University. Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References/Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of M.Sc in Applied and Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than two academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three year programme, the candidate will be awarded with **“Master of Science in Applied and Clinical Microbiology (M.Sc.-CMB)”** from Centurion University.

MASTER OF SCIENCE IN APPLIED & CLINICAL MICROBIOLOGY

INTERNSHIP

Minimum 720 hours (calculated based on 8 hours per day, if 90 working days in 6 months)

Syllabus

1st semester M.Sc. in Applied and Clinical Microbiology

MSCM1101- General Microbiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
General Microbiology	MSCM1101	Lecture+Tutorial	3-1-0	Fundamental Science

Objective

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure culture bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely effectively

Course outcome

- This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.
- Understanding the details of microbial cell organelles.
- Provides knowledge on growth of microorganism.
- Provides knowledge culturing microorganism.

Unit-1

History and scope of Microbiology, Recent trends and developments in modern microbiology. Identification, characterization and classification of microorganisms. Distinguishing characteristics between prokaryotic and eukaryotic cells. Structure and function of Cell wall of bacteria, cell membranes, flagella, pili, capsule, gas vesicles, carboxysomes, magnetosomes and phycobolisolomes.

Unit-2

Methods of sterilization: Physical methods – Dry heat, moist heat, radiation methods, filtration methods, chemical methods and their application. Concept of containment facility, sterilization at industrial level. Different staining techniques used in bacteriology.

Practice: - Demonstration the different type of Sterilization technique and operation of the Instruments used in microbiological lab. Demonstration of various parts of microscope. Demonstrate the different staining techniques.

Unit-3

Bacterial nutrition – Nutritional requirement of bacteria. Cultivation of aerobes and anaerobes, Reproduction in bacteria and spore formation. Bacterial growth curve and bacterial nutrition

Media. Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media).

Practice: - Preparation and demonstration of different culture media, biochemical tests, growth of Bacteria.

Suggested Readings

1. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalani
2. Text book of Medical Microbiology by Gruckshiank
3. Medical Laboratory Technology by Kanai Lal Mukherjee, Publisher Tata McGrawHill
4. An Introduction to Medical Laboratory Technology by FJ Baker, Publisher Butterworth
5. Practical Book of Medical Microbiology by SatishGupt, Publisher JaypeeBrothers
6. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough

MSCM1102- Anatomy and Physiology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Human Anatomy and Physiology	MSCM	Lecture	4-0-0	Fundamental Sciences

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in the system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Unit-1

Scope of Anatomy and physiology. Definition of various terms used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Elementary tissues of the body, i.e. epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Structure and function of Skelton. Classification of joints and their function. Joint disorders.

Practice: Demonstration of individual bone from skeleton Identification of different organs and system from chart.

Unit-2

Cardiovascular System: Composition of blood, functions of blood elements. Blood group and coagulation of blood. Brief information regarding disorders of blood. Name and functions of lymph glands. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Various parts of respiratory system and their functions, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Unit-3

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: names of various parts of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system Structure and function of senseorgans.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive system, parts of respiratory system, parts of excretorysystem. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.
3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones &Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, Publishersatya.

MSCM1103-Biomolecules

Subject Name	Code	Type of course	L-T	Prerequisite
Biomolecules	MSCM1103	Lecture+Tutorial	3-1-0	Fundamental Science

Objective

To study the structure and function of biomolecules and the vital processes that occurs in l organisms.

Course Outcomes

- Provide students with learning experiences that help in still deep interests in learning biochemistry
- Develop broad and balanced knowledge and understanding of biomolecules, key biochemical concepts, principles and theories related to biochemistry
- Equip students with appropriate tools of analysis and with theoretical, technical and analytical skills to tackle issues and problems in the field of biochemistry.

Unit-1

Major Biomolecules: Carbohydrates – Classification, chemistry, properties, and function – mono, di, oligo and polysaccharides. bacterial cell wall polysaccharides. Conjugated polysaccharides– glycoproteins, muriensandlipopolysaccharides.

Lipids – classification, chemistry, properties and function – free fatty acids, triglycerides, phospholipids, glycolipids & waxes. Conjugated lipids – lipoproteins. Major steroids of biological importance – prostaglandins.

Unit -2

Amino acids and proteins – classification, structure and function. Essential amino acids & amphoteric nature of amino acids and reactions and functions of carboxyl and amino groups and side chains. Peptide structure. Ramachandran's plot. Methods for isolation and characterization of proteins. Structural levels of proteins – primary, secondary, tertiary and quaternary, denaturation of proteins. Hydrolysis of proteins. Protein sequencing using various methods.

Unit -3

Nucleic acids – structure, function and their properties. Structural polymorphism of DNA, RNA. Structural characteristics of RNA.

Sources, Chemistry and biochemical functions of water-soluble vitamins. Chemistry of Porphyrins – Heme, Cytochromes, Chlorophylls, xanthophylls, Bacteriochlorophylls & algal pigments, Carotenoids

Unit-4

Biological oxidation, Biological redox carriers, biological membranes, electron transport, oxidative phosphorylation and mechanism. Bacterial photosynthesis, photosynthetic electron transport

Mineral metabolism – phosphorus, potassium, calcium and Trace elements – molybdenum, zinc, manganese, cobalt and copper. Influence of minerals on the production of toxins. Role of trace elements on microbial enzymes.

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.
2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

MSCM1104-Analytical Techniques

Subject Name	Code	Type of course	L-T	Prerequisite
Analytical Techniques	MSCM1104	Lecture+Tutorial	3-1	Fundamental Science

Objective

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Chromatographic techniques
- Electrophoretic techniques
- Principle of Spectroscopy

Course outcome

- After completion of the course the student will be efficient in handling the microscopes.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automatic Biochemistry analyzer.
- They will gain knowledge on the principle behind and the application of NMR, X-ray diffraction, ESR.
- The conceptual understanding of the subject provides opportunities for skill enhancement scopes for higher education.

Unit-1

Microscopy– Microscopic techniques: Basic principles and applications of light, phase – contrast microscopy (phase annulus, phase plate, specimen preparations), fluorescent microscopy (filters, dark field condenser, complex optical system, sample preparations) and electron microscopy (Magnetic lenses, electron beams, condensers, types of electron microscopy – scanning and transmission, sample preparations - fixing of specimens, preparation of blocks, Microtomy – sectioning, microtomy and staining, negative staining techniques of biological samples), cytometry and flow cytometry

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Preparing specimens for observing under above microscopes.

Unit-2

Principles of Centrifugation – Centrifugation techniques-preparative and analytical methods, density gradient centrifugation.

General principles and applications of chromatography – Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gelfiltration, Gas, HPLC, FPLC.

Electrophoresis – moving boundary, zone (Paper Gel) electrophoresis, Immunoelectrophoresis. Immunoblotting Isoelectric focusing, 2-Delectrophoresis.

Practice: Demonstration the Centrifuge, Different Electrophoresis, Auto /Semi auto Analyzer, Microtome. Maintenance and Quality control of Medical Lab Equipment's.

Unit-3

Principles, Laws of absorption and radiation. Visible, ultraviolet, infrared and mass spectrophotometry. Absorption spectra, fluorescence flame photometry, Principles of colorimetry, Turbidometry, Viscometry. Determination of size, shape and molecular weight of macromolecules– osmotic pressure, flow birefringence, optical rotatory dispersion. light scattering, diffusion, sedimentation and X-ray diffraction, NMR, ESR.

Suggested Reading

2. Practical Biochemistry: Principles and techniques by WILSON &WALKER.
3. Physical Biochemistry: Application to Biochemistry and Molecular biology (2nd edition) by FREIFELDER.
4. Biochemical methods (2nd edition) by SADASIVAM &MANICKAM.
5. Biophysical Chemistry: Principles and techniques by UPADHYAY, UPADHYAY &NATH.
6. HAWK'S Physiological Chemistry by OSER.

MSCM1105- Basic microbiology lab

Subject Name	Code	Type of course	L-T	Prerequisite
General Microbiology	CUTM1711	Practice	0-0-	Fundamental Science

Objective

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure culture bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely effectively

Course outcome

- This study demonstrates the theory and practical skills in microscopy and their handling

techniques and staining procedures.

- Understanding the details of microbial cell organelles.
- Provides knowledge on growth of microorganism.
- Provides knowledge culturing microorganism.

1. Demonstration of various parts of centrifuge; its functioning and care, Demonstration of various parts of microscope its functioning and care, Cleaning and drying of glass and plastic ware , Preparation of various anticoagulants , Collection of venous and capillary blood ,Cleaning of glass ,syringes and its sterilization. Preparation of buffers , Preparation of the stains and other reagents , Preparation of peripheral blood film (PBF) ,To stain a peripheral blood Film by Leishman , stain ,Hemoglobin estimation (oxy Hb and cyanmethaemoglobin method)
2. Preparation of bacterial smear and staining – Gram’s ,Acid-fast, Staining of bacterial spores flagella, capsule, spirochaetes
3. Preparation of media, cultivation of bacteria, Biochemical tests for identification of bacteria, Preservation of stock cultures of bacteria.
4. Demonstration of various parts of body ,tissues of body, parts of digestive system, parts of respiratory system ,parts of excretory system

Suggested Reading

1. A Procedure Manual for Routine Diagnostic Tests Vol. I and II by KL Mukherjee; Tata McGraw Hill Publishers, New Delhi
2. A Textbook of Medical Laboratory Technology by P Godkar, Bhalani Publishing House, Mumbai

2nd semester M.Sc. in Applied and Clinical Microbiology

FCBS0101-Environmental Science

Subject Name	Code	Type of course	L-T	Prerequisite
---------------------	-------------	-----------------------	------------	---------------------

Environmental Science	FCBS010	Lecture+Tutorial	3-1-	Fundamental Science
------------------------------	---------	------------------	------	---------------------

Objectives

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course outcome

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

UNIT-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non-renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

UNIT -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

UNIT-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book:

1. AnubhavKaushik& C.P. Kaushik: Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph: Environmental Studies-Tata Mac GrawHill

2. E. Bharucha: Text book of Environmental Studies for under graduate courses– Universities Press. (Book prepared by UGCCCommittee.

FCHU0203-Business Communication

Subject Name	Code	Type of course	L-T	Prerequisite
Business Communication	FCHU0203	Practice	0-0-	Fundamental Science

Objectives

- The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.
- This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture-oriented approach of teaching with the task-based skill-oriented methodology of learning.

Course Outcomes

- Understand the differences between general communication and business communication
- Development of basic language skills, i.e., listening, speaking, reading and writing
- Effective participation in group discussion and job interviews.

Unit-1

UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

- The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.
- General Communication and Business Communication
- Communication in Organizational Settings: Patterns of Communication in the Business World – Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal
- Introduction to Cross Cultural Communication
- Strategies to Overcome Communication Barriers

Unit-2

READING AND WRITING (10 hrs.)

- This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.
- Importance of Developing Reading Skills
- Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making

- Importance of Writing Skills and Principles of Effective Writing ♣ Writing Process: Pre- writing, Drafting and Re-Writing
- Paragraph Writing
- Summaries and Abstracts Page |10
- Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals
- Career Communication: Writing Resume/ CV and Job Application Letter

Unit-3

LISTENING AND SPEAKING (9 HOURS)

- Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.
- Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies
- Common forms of Oral Communication in the Business World:
- Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes
- Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality
- Making an Oral Presentation: Planning, Preparing and Delivery
- Facing an Interview: Preparation, Types of Interview, Do's and Don'ts
- Group Discussions: Debate and GD, Types of GD, GD Etiquette (Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

TEXT BOOKS:

An Introduction to Professional English and soft skills by B.K Das et al., Cambridge University Press

MSCM1201-Systematic Bacteriology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Systemic Bacteriology	MSCM1201	Lecture+Tutorial	3-1-0	Fundamental Scien

Objective

- To learn opportunities in the basic principles of medical microbiology and infectious diseases.
- To study mechanisms of infectious disease transmission, principles of aseptic practice, and role of the human body's normal microflora.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course outcome

- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

Unit-1

Morphology, culture, identification, pathogenesis, clinical findings, laboratory diagnosis, epidemiology and pathogenesis of following bacterial infections

Staphylococcus, Streptococcus, Enterococcus, Micrococcus, Gram positive anaerobic cocci, Neisseria, Moraxella, Branhamella

Unit-2

Bacillus, Corynebacteria, Listeria, Erysipelothrix, Lactobacillus, Clostridium, Brucella, Propionibacterium, Prevotella, Eubacterium, Leptotrichia, Fusobacterium, Gardnerella, Actinobacils, Bordetella, Legionella, Calymato bacterium, Campylobacter, Helicobacter, Bacteriodes, Tropheryma.

Unit-3

Mycobacterium, Actinomyces, Nocardia, Mycoplasma, Ureaplasma, Rickettsiae, Chlamydia, Spirochaetes, Enterobacteriaceae- Escherichia coli, Shigella, Salmonella, Klebsiella, Proteus, Morganella, Providencia, Citrobacter, Enterobacter, Serratia, Yersinia, Pasteurella, Francisella. Vibrio, Aeromonas, Plesiomonas, Pseudomonas, Acinetobacter, Alcaligenes, Achromobacter. Normal bacterial flora of human beings.

Suggested Reading

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
3. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
4. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
5. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
6. Text book of Medical Microbiology by Gruckshiank

MSCM1202-Molecular Biology and Clinical Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Molecular Biology and Clinical Biochemistry	MSCM1202	Lecture+Tutorial	3-1-0	Fundamental Science

Objective

- Understanding the central dogma of life
- To understand the concept of gene regulation and its impact
- The use of several molecular diagnostic techniques for disease interpretation
- Understanding the concept of Biochemical analyzing instruments, chemicals and no ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course outcome

- After completion of the course the student will be gain knowledge of the significance of genes and proteins.
- They will understand the mechanism of gene expression and protein synthesis,
- The significance of gene expression regulation will become clear.
- The students will understand the use of several molecular techniques in disease diagnosis.
- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.

Unit-1

Chemistry of Nucleic acids: DNA Structure and function, RNA Types: Structure and function. Replication, Transcription, genetic code, Translation, Regulation of transcription and translation, Ageing, malignant transformation of cells and role of oncogenes. Apoptosis, cell regeneration.

Unit-2

Molecular diagnostics: Recombinant DNA Technology, Polymerase chain reaction, application of PCR in diagnosis of pathogens, Site directed mutagenesis, DNA finger printing, DNA Foot Printing, antisense RNA technology, chromosomal walking, inherited genetic disorders in man and gene therapy

Unit-3

Metabolic disorders and Diagnostic enzymology: Disorders of metabolism: carbohydrate, Lipids, Amino acids and Nucleic acids. Diagnostic enzymes: Role of Enzymes in Clinical Practice: Marker enzymes in myocardium, liver and pancreas. Tumour markers, Radio isotope techniques

Unit-4

Organ function tests: Liver function tests, Bile pigment metabolism, tests for liver function. Jaundice and its type, Functions of Kidney, Urine formation and renal function tests disease of kidney, Renal Calculi: Theory of formation and analysis, Gastric Analysis, Composition of gastric juice, concepts of free and bound acid, Fractional Test Meal.

*Practice: Operation procedure of Centrifuge machine, colorimeter, spectrophotometer etc Estimation of Liver function test, Kidney function test, Thyroid, Lipid profile.
Estimation of bile pigment, bile salt, bilirubin etc.*

Suggested Reading

1. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. 2003 Bhalani Publication.
2. Text book of Biochemistry, M. A. Siddique 8th Edn. 1993 Vijay Bhagat Scientific Book Co., Patna.
3. Medical Biochemistry by AC Dey.
4. Handbook of Christen Medical Association, India Medical Laboratory Technology- Robert H. Carman.

MSCM1203-Medical Parasitology & Mycology

Subject Name	Code	Type of course	T-P-P	Prerequisite
Medical Parasitology and Mycology	MSCM1203	Lecture+Tutorial	3-1-0	Fundamental Science

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites and fungi.
- Perform appropriate laboratory techniques used in the processing of specimens for identification of parasites and fungi.
- Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.
- Perform appropriate laboratory techniques used in the processing of specimens for identification of parasites and fungi.

Course outcome

- Identification of pathogenic parasite and fungus in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Unit-1

General Parasitology, Classification of medically important parasites, epidemiology of parasitic infections, immunology of human parasitic infections. Diagnostic parasitology- Systematic study of following parasites (Geographical distribution, habitat, morphology and life cycle, risk of infection, pathogenesis, laboratory diagnosis prophylaxis and serological diagnosis)

Unit-2

Protozoa – Intestinal amoeba, free living pathologic amoeba, giardia, trichomonas, balantidium, isospora, cryptosporidium, microspora, cyclospora Plasmodia, leishmania, trypanasoma, toxoplasma, babesia. Helminthes– Cestodes – Taenia, Echinococcus, Diphylobothrium, Hymenolepsis, Multiceps Trematodes- Schistosoma, Fasciola, Fasciolepis, Paragonimus, Clonorchis, Opisthorchis. Nematodes- Ascaris, Hookworm, Trichuris, Enterobius, Strongyloides, Filaria, Trichinella, Toxocara, Dracunculus Biological vectors.

Practice: Collection & transport of specimens. Examination of stool for parasites. Examination of blood & bone marrow for parasites. Demonstrate different staining technique

Unit-3

General Mycology – Fungus – Classification Fungal Structure & Morphology, Reproduction in fungi, Immunity to Fungal Infections. Culture Media in Mycology, Stains in Mycology. Normal fungal flora of human beings. Diagnostic Mycology - Epidemiology, Pathogenesis, Laboratory Diagnosis of Fungal Infections. Specimen collection, preservation, Transportation & Identification of Mycological Agent. Biochemical tests for fungal identification Anti-fungal agents, invitro tests. Serological tests for mycotic infections. Use of laboratory animals in Mycology. Typing of fungi Preparation of fungal antigens & their standardization.

Unit-4

Method of different sample collection and preservation for mycological examination.

Media & Stains preparation for Mycology, Diagnostic Methods in Mycotic Infections, Identification test in Mycology, Serological tests in Mycology Skin tests. Animal inoculation techniques.

Practice: Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Culture techniques for parasites. Serological diagnostic methods, skin tests.

Suggested Reading

1. Text book of Parasitology by N C Dey, publisher New central bookagency
2. Text book of Parasitology by Chaterjee, publisher CBS
3. Text book of microbiology by Ananthanereyan, Publisher universitiespress
4. Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, Jaypeepublisher
5. Short text book of medical microbiology by Satish Gupta, Publisher Jaypee

MSCM1204- Applied Microbiology

Subject Name	Code	Type of course	L-T	Prerequisite
Applied Microbiology	MSCM1204	Lecture+Tutorial	3-1	Fundamental Science

Objective

- To impart knowledge of the basic principles of bacteriology, virology, including nature of pathogenic microorganisms, pathogenesis, laboratory diagnosis, transmission, prevention and control of diseases common in the country

Course outcome

- To know the applications of microbiology in diagnostics, hospitals and community
- Learn principles underlying diagnostic tests and handle kits for diagnosis of diseases
- Explain prognosis of diseases and become aware about the role of medical microbiology in public health

Unit-1

The normal flora, collection and transport of clinical specimens Collection and preliminary processing of specimens.

Unit-2

Diagnostic microbiology- an approach to laboratory diagnosis Rapid and automation methods in diagnostic microbiology Molecular techniques in microbiology Serological and skin tests

Unit-3

Microbiology in the service of human being Community microbiology Emerging and re-emerging Microbial disease Nosocomial infections

Unit-4

Hospital and laboratory waste Diagnostic virology, Emergency microbiology Bacteriology of Milk, Air and Water

Suggested Reading

- Medical Parasitology by RL Ichhpujani and Rajesh Bhatia, Jaypee publisher
- Short text book of medical microbiology by Satishgupt, Publisher Jaypee

MSCM1205- Bacteriology, Parasitology & Mycology Lab

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Bacteriology, Parasitology & Mycology I	MSCM1205	Theory	0-3-0	Fundamental Science
--	----------	--------	-------	---------------------

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasitology, bacteria and fungi.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites, bacteria and fungi.
- Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites, bacteria and fungi.

Course outcome

- Identification of pathogenic parasite and fungus in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

1. Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Laboratory diagnosis of hydrated cyst and cysticercosis, Concentration techniques for demonstration of Ova (Principles and applications), Routine Stool examination for detection of intestinal parasites.
2. Identification of adult worms from model's or slide's. Identification of different parasites their morphology from slide's. Culture techniques for parasites. Serological diagnostic methods, skin tests.
3. Media & Stains preparation for Mycology, Diagnostic Methods in Mycotic Infections, Identification test in Mycology, Serological tests in Mycology Skin tests. Animal inoculation techniques.
4. To prepare culture media used routinely in mycology
5. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus. To identify given yeast culture (By performing various identification techniques studied in theory).

3rd semester M. Sc. Applied and Clinical Microbiology MSCM2301- Immunology & Virology

Subject Name	Code	Type of course	L-T-P	Prerequisite
--------------	------	----------------	-------	--------------

Immunology & Virology	MSCM23	Lecture+Tutorial	3-1-0	Fundamental Science
----------------------------------	--------	------------------	-------	---------------------

Objective

- Understanding the concept of Innate & adaptive immune system; complement system Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.
- To understand the properties of virus, diagnosis of important viruses and vaccination.

Course Outcome

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequences of undesirable expression of immune system such as, hypersensitivity and auto immune disease.
- They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.
- The conceptual understanding of the subject provides opportunities for employability scopes for higher education.

Unit - 1

Introduction to Immunology: Immunity, Type (Innate & adaptive immune response). Organs of Immune System: Primary and Secondary lymphoid organ. Ontogeny and phylogeny of Lymphocytes: T and B Lymphocytes, Null Antigen, Antibody. Cell of Immune System: Mononuclear cell and granulocytes, Antigen presenting cell. Antigen, Haptens: Factors effecting immunogenicity, epitopes (Properties of it) Antibodies: Structure, Types and function.

Unit - 2

Complement System: Role of complement system in immune response, complements and Components and Activation pathways. Monoclonal antibodies: Production characterization and applications in diagnosis, therapy and basic research. Antigen-Antibody interaction, avidity & affinity measurement. Hypersensitivity: Definition, factor causing hypersensitivity. Common hypersensitivity reaction, types, classification based on the time taken for reaction. Auto Immune disease. Serological Reactions.

Unit-3

Medical Virology General Properties of viruses, Detection of viruses and antigens in clinical specimens, Serological diagnosis of virus infections. Cultivation of viruses. Arthropod borne and rodent borne virus diseases, Picorna viruses and diseases. Hepatitis viruses: Rabies and other neuro viruses: Orthomyxoviruses and paramyxoviruses. Pox, Adeno, Herpes, Reo, Rota and HIV Viruses, Oncogenic viruses, Viral vaccines, their

Preparation and their immunization schedules. Viruses of importance to bacteria, Bacteriophages, their structure, types, Typing and application in bacterial genetics.

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Text book of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical laboratory Technology vol. I, II, III by Mukherjee
5. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough
6. Immunology by Ivan Roitt, Jonathan Brostoff and David Male
7. Immunology by Kuby

MSCM2302-Diagnostic Bacteriology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Diagnostic Bacteriology	MSCM2302	Lecture+Tutorial	3-1-0	Fundamental Science

Objective

- To confirm the suspicion of infectious bacterial disease.
- To identify the etiologic agent by isolating the causative bacterial pathogen

Course Outcome

- Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections.
- Study of control measures for nosocomial infection.
- Student can safeguard himself & society and can work diagnostics and hospitals

Unit-1

Laboratory strategy in the diagnosis of various Infective syndromes: Samples of choice, Collection, transportation and processing of samples for laboratory diagnosis of the following complications:

a) Septicemia and bacteraemia, b) Upper Respiratory tract infections, c) Lower Respiratory tract infections, d) Wound, skin, and deep sepsis, e) Urinary tract infections, f) Genital Tract infections, g) Meningitis, h) Gastro intestinal infections, i) Enteric fever, j) Tuberculosis (Pulmonary and Extra-pulmonary), k) Pyrexia of unknown origin

Practice: collection of different specimens from different organs. Record maintaining process. Preparation and use of different media in bacteriology laboratory. Isolation and identification of different groups of bacteria in laboratory.

Unit-2

Antibiotic susceptibility testing in bacteriology- a. Definition of antibiotics, b. Culture medium used for Antibiotic susceptibility testing, c. Preparation and standardization of inoculum, d. Control bacterial strains, e. Choice of antibiotics, f. MIC and MBC, g. Various methods of Antibiotic susceptibility testing with special reference to Stokes method and Kirby-Bauer method, h. Tests for production of β -lactamase

Practice: Antimicrobial susceptibility testing

Unit-3

Bacteriological examination of water, milk, food and air –

- a) Examination of water - Collection and transportation of water sample, Presumptive coliform count, Eijkman test, Introduction and importance of other bacteria considered as indicators of faecal contamination
- b) Examination of Milk and milk products - Basic Concepts regarding gradation of milk, Various tests for Bacteriological examination
- c) Examination of food articles -Basic Concepts regarding classification of food like frozen food, canned food, raw food, cooked food etc. Various tests for Bacteriological examination with special reference to food poisoning bacteria
- d) Examination of Air -Significance of air bacteriology in healthcare facilities, Collection processing and reporting of an air sample.

*Practice: Sterility testing of I/v fluids -a. Collection, transportation and processing of I/v fluids for bacterial contamination, b. Recording the result and interpretation
Nosocomial Infection, Epidemiological markers.*

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Text book of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical laboratory Technology vol. I, II, III by Mukherjee
5. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough

MSCM2303-Biochemistry

Subject Name	Code	Type of course	L-T-P	Prerequisite
Biochemistry	MSCM2303	Lecture+ Tutorial	3-1-0	Basic Medical science

Objective

- Understanding the concept of Biochemical analyzing instruments, chemicals and normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course Outcome

- To learn about tests carried out for biochemical investigations.
- Understanding of principle of biochemical Clinical biochemistry tests.
- To learn normal ranges and abnormal ranges of biochemical components and hormones
- To study about diseases related to biochemical and hormone imbalance in human body.

Unit -1

Carbohydrate: Introduction, Carbohydrate Metabolism: Glycolysis, Gluconeogenesis, HMP, and its regulations, Disorders of carbohydrates metabolism related to each cycle (inborn error of metabolism) Proteins: Different metabolic pathway of amino acid. Amino acids oxidation. Transamination, deamination and pathways leading to acetylco-A. Decarboxylation of Amino acids, formation of nitrogenous excretion products. Urea cycle and ammonia excretion. Lipid: Biosynthesis and oxidation of fatty acids, Ketone bodies formation and their oxidation. Regulation and inborn error of lipid metabolism

Unit -2

Biochemical aspects of Hormone: Hormone receptors and intracellular messengers, Adenylatecyclase, protein kinase and phosphodiesterase. Role of Insulin, glucagon's, epinephrine and their mechanism. Various endocrine and regulatory systems mediated by cyclic AMP. Vitamin: Fat and Water soluble and their deficiency. Mineral metabolism: Minor and Major (Cu, Fe, Ca, Mg & P). Inborn error of Nucleic acids metabolism

Unit- 3

LFT, KFT, Lipid profile, Estimation of Glucose / GOD – POD method. Draw a standard graph of GTT curve, Introduction of electrophoresis.

Practice- Demonstration the centrifuge machine, Demonstration of Colorimeter, Estimation of Glucose in urine and blood, Estimation of Protein in urine and blood, Estimation of Liver function test, Kidney function test, Lipid profile.

Suggested readings

1. Text book of Medical Laboratory Technology by P. B. Godker, Publisher Bhalani.
2. Text book of Medical Biochemistry by Chaterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee, Publisher
4. Principal of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

MSCM2304- Histology

Subject Name	Code	Type of course	L-T-P	Prerequisite
Histology	MSCM2304	Lecture+ Tutorial	3-1-0	Basic Medical Science

Objective

- Understanding the concept of histotechnology; Basic concepts about routine method examination of tissues Collection.
- Perform routine laboratory procedures encompassing all major areas of the histo laboratory.
- accurately and proficiently embed tissue and understand the principles of microtomy.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell grow anywhere in human body.
- The conceptual understanding of the subject provides opportunities for employability scopes for higher education.

Course Outcome

- In this section students will be made aware of terminology used in histotechnology, var instruments and their maintenance and also learn the processing of various samples histopathological investigations.
- Reception and labeling of histological specimens.
- Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.
- The students will learn about various staining procedures for demonstration of diff substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of var cytological specimens.

Unit-1

Introduction to histotechnology, Care, maintenance and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues Collection and transportation of specimens for histological examination, fixation Various types of fixatives used in a routine histopathology laboratory- Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Practice: Demonstration of instruments used for dissection.

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory.

Unit-2

Decalcification Criteria of a good decalcification agent

Technique of decalcification followed with selection of tissue, fixation, decalcification, neutralization of acid and thorough washing. Various types of decalcifying fluids

Processing of various tissues for histological examination, Embedding
 Schedule for manual or automatic tissue processing, Components & principles of various types of a tissue processors.

Practice: -Method of Decalcification, fixation, Embedding, manual or automatic tissue processing.

Unit-3

Section Cutting, Sharpening of Microtome Knives, Honing, Stropping, various types of microtome and their applications, Freezing Microtome and various types of Cryostats.

Staining, Impregnation and Mountants, Commonly used mountants in histotechnology lab. General Staining Procedures for Paraffin Infiltrated and Embedded tissue.

Nuclear Stains and Cytoplasmic stain, Equipment and Procedure for manual Staining and Automatic Staining Technique. Mounting of Cover Slips, Labeling and Cataloguing the Slides.

Practice: Demonstration of instruments used for dissection .Use of antiseptics, disinfectants and insecticides in tissue processing laboratory. Preparation of various fixatives- Hell's fluid, Zenker's fluid, Formal saline, Formal acetic acidetc.

Demonstration various parts and types of microtome.

Suggested Readings

1. Color text book of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohinikaul, publisher CBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran, Publisher Elsevier.

MSCM2305- Research Methodology

Subject Name	Code	Type of course	L-T	Prerequisite
Research Methodology	MSCM2305	Theory	3-1	Fundamental Science

Objective

- To equip students with a basic understanding of the underlying principles of quantitative qualitative research methods.
- Provide students with in-depth training on the conduct and management of research inception to completion using a wide range of techniques.

Course Outcome

- Students can understand the ethical and philosophical issues associated with research education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of

collection and analysis.

- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Unit-1

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process. Research Designs.

Practice: Related to above unit.

Unit-2

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales
Scale Construction Techniques, Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques Sample Size Decision.

Practice: Demonstrate the data collection technique, scaling and sampling.

Unit-3

Theory of Estimation and Testing of Hypothesis

Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire.

Interviewing.

Tabulation, Coding, Editing. Interpretation and Report Writing.

Suggested Readings

1. Research Methodology kindle edition by R. Panneerselvam publisher PHI Learning; 2 edition
2. Research Methodology: Methods and Techniques Paperback – Abridged, Audiobook, Box set by C R Kothari, publisher newage

FCHU0204- Communicative Practice Laboratory-II

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Communicative Practice Laboratory-II	FCHU0204	Practice	0-0-3	Fundamental Science

Objectives

- To master Study Skills
- To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies
- To acquire Business Performance Skills

Course Outcomes

- The students will be able to Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas they explore and develop their own. They will demonstrate an ability to revise for content

edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer.

- Become accomplished, active readers who appreciate ambiguity and complexity, and who articulate their own interpretations with an awareness and curiosity for other perspectives.
- Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating own ideas in relation to other voices and ideas. Students will be able to prepare, organize, deliver and engage in oral presentation. A student is required to take up five lab tests of marks- at least two tests in written mode and three tests in spoken mode.

Unit-1

LISTENING (6 HOURS) Exercises on Active Listening:

- The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

Unit-2

SPEAKING (8 HOURS)

- Situational Dialogues / Role Play: Organization Communication
- Oral Presentations- Prepared and Extempore
- 'Just a minute' Sessions (JAM)
- Debates
- Mock Meetings
- Cracking Job Interviews: Mock Sessions
- Group Discussions on current topics (This module will be practiced through speaking activities like role plays, presentations, and discussions)

Unit-3

READING (8 HOURS)

- Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.
- Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making
- Review Presentation (Movie/ Article/Book)
- Vocabulary Building Exercises (This module encourages extensive use of reading materials)

Unit-4

WRITING (8 HOURS)

- The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

- Short Paragraphs on current general and technical topics
- Creative Writing: Idea Generation
- Business Letters, Email Messages, Project Writing
- Writing Resumes and Cover Letters (* Students will be required to produce and submit by the end of second semester a 350- 500 words project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

TEXT BOOK:

An Introduction to Professional English and soft skills by B.K Das et al., Cambridge University Press

MSCM2306- Immunology, Histopathology & Biochemistry Lab

Subject Name	Code	Type of course	L-T-P	Prerequisite
Immunology Lab	MSCM2306	Practice	0-0-4	Fundamental Science

Objective

- Understanding the concept of Innate & adaptive immune system; complement system Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.
- To understand the concept of cells of immune system and organs of immune system.
- To understand the properties of virus, diagnosis of important viruses and vaccination.
- Distinguish normal tissues and organs by microscopic appearance when shown a microscopic image (light or electron microscopic photomicrograph) or glass slide.
- Analyze body fluid for diagnosis of disease
- Understand Physiological disorder and infectious disease.

Course Outcome

- The student will learn the application of Immunology in disease diagnosis.
- Complement system followed by the body on encountering an Antigen.
- Immune Response produced on encounter with foreign body.
- The students will learn the role of immunity in fighting disease, along with consequent undesirable expression of immune system such as, hypersensitivity and auto immune disease.
- They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.
- The conceptual understanding of the subject provides opportunities for employability scopes for higher education.
- After completion of the Practical student will be able to understand the use of instruments used in the lab.

dissection , embedding and casting of block and use of microtome.

- Able to detect Glucose ,Proteins, Urea, Uric acid, Creatinine, Bilirubin, Lipids.

Unit-1

Collection of blood sample by vein puncture, separation and preservation of serum

Performance of Serological tests i.e.-Widal, Brucella Tube Agglutination, VDRL (including Antigen Preparation), ASO (Antistreptolysin 'O') , (Latex agglutination) , Rheumatoid factor (RF) Latex agglutination, Rose Waaler test,

Demonstration of antigen / antibody determination by Immunofluorescence, Immunodiffusion, precipitation in agarose gel (Ouchterlony), CIEP, ELISA, SDS-PAGE and western blotting.

Unit-2

Hazards & safety measures in clinical Biochemistry laboratory .

Quality control and quality assurance in a clinical biochemistry laboratory .

Laboratory organization, management and maintenance of records

Principles of assay procedures, Normal range in blood, Serum, Plasma and Urine and reference values for : a. Glucose b. Proteins c. Urea d. Uric acid e. Creatinine f. Bilirubin g. Lipids Principles, procedures for estimation & assessment of the following including Errors involved and their corrections :

a. Sodium, Potassium and Chloride, Iodine. b. Calcium, Phosphorous and Phosphates

Unit-3

Demonstration of instruments used for dissection

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory

Reception and labeling of histological specimens.

To perform embedding and casting of block

To process a bone for decalcification

To prepare 70% alcohol from absolute alcohol

Processing of tissue by manual and automated processor method

To demonstrate various part and types of microtome

To learn sharpening of microtome knife (Honing and stropping technique) .

To perform section cutting.

To practice attachment of tissue sections to glass slides.

4th semester M. Sc. in Applied and Clinical Microbiology

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

- Search relevant scientific literature
- Develop a research proposal
- Employ appropriate data collection techniques and tools
- Manage collected data
- Analyze data with appropriate statistical techniques

- Writethesis
- Defend thefindings

Proposal Development:

At the ending of second year (fourth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (fourth Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials andMethods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

MSCM2401-PROJECT

Subject Name	Code	Type of course	Credit	Prerequisite
Project	MSCM2401	NA	12	Basic Medical science

Project work:

- **Microbiology:**

Suggested Project title

1. Hepatitis C viruses among pregnant women/people living withHIV/AIDS.

2. Antibacterial activity of honey on staphylococcus Aureus, escherichia coli and streptococcus Pyogen isolated from wound.
3. Susceptibilities of salmonella Typhi and other bacterial pathogens to antibiotics and hot aqueous extract of hibiscus sabdariffa.
4. Isolation and identification of bacteria from food vendors and some vegetable available.
5. Urinary tract infections in adult students of centurion university, BBSR campus
6. Air borne microbiological disorders (DOTS centre)

MSCM2402 - INTERNSHIP

Subject Name	Code	Type of course	Credits	Prerequisite
Internship	MSCM2402	NA	12	Basic Medical science

Internship

- Caserecord
- Lab management and ethics
- Evaluation-Guide(internal)
 - Industries guide(external)
 - University-project report/ Viva

School of Forensic Sciences

M.Sc. Forensic Science

Programme Outcome:

POs: Forensic Science postgraduate will be able to:

POs	Outcomes
PO1	Forensic knowledge: Apply knowledge of mathematics, various disciplines of science and basic principles of forensic in investigation.
PO2	Knowledge of psychology and law related to forensic science. Understanding of psychology of criminal mind and modus operandi of crime and statistical analysis in forensic science.
PO3	Knowledge and understanding of crime scene and their management, Visit crime scene and help the police officials in proper collection, preservation and handling of scientific evidences which will aid in maintaining the integrity of evidences.
PO4	Individual and team work: Function affectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings in the field of forensic Science.
PO5	Identification of individuals by knowledge and understanding of Fingerprints. Identify and analyse the questioned documents to aid the police officials and court of law.
PO6	Understanding of different instruments used for forensic analysis and perform experiments as well as to carry out problem analysis and data interpretation of instrumental analysis
PO7	Understanding of professional and ethical responsibility of forensic scientist.
PO8	Communication: Communicate and convey effectively on various activities of forensics with proper understanding of scientific and legal terminologies.
PO9	Understanding of drugs analysis, explosive materials, adulteration analysis as well as poison detection and analysis in forensic science.
PO10	Knowledge and understanding of biological aspects, serological analysis and DNA profiling as well as medico legal aspects in forensic science.

PO11	Understanding and knowledge of ballistics for the analysis of fire arms and projectiles in forensic science.
PO12	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of forensic science.
PO13	Project Management: Demonstrate knowledge & understanding of the forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in forensic science.
PO14	Use of modern techniques, skills, and instruments necessary for forensic expert or any person working in such field.
PO15	Make a robust report on the basis of scientific analysis to administer the court of law.

PSO (Program Specific Outcomes)

Sl No.	Program Specific Outcomes
PSO1	Post-graduate will be able to develop skill and knowledge which can be applied in the jobs of Forensic Science
PSO2	Post-graduate will be able to pursue higher studies and research
PSO3	Post-graduate will be able to use software and technologies that can be effectively used to solve various problems encountered during investigations.

Course Outcome (CO)

1st Semester

MSFS1101 Introduction to Forensics, Psychology, Law and Statistics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand criminal mind, their Modus Operandi.
CO-2	Understand the Law used in Forensic science.
CO-3	Get idea about statistical analysis and can use in forensic science.

MSFS1102 Instrumental Techniques

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the instrumentation and basic concept of the instruments.
CO-2	Understand the process for analysis of different evidences.

MSFS 1103 Crime Scene Management and Forensic Physics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Visit the crime scene, conduct the investigation, processed the evidence and sent to FSL.
CO-2	Understanding of different type of evidence, formulation of hypothesis, reconstruction of the crime scene.

MSFS 1104 Fingerprints and Questioned Documents

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the important of fingerprint, pattern and their characteristics. Knowledge of analysis of fingerprints and identification of individuals on the basis of fingerprint pattern.
CO-2	Knowledge of documents evidences and their examination process and techniques.
CO-3	Get knowledge on different techniques and recent technologies developed used in fingerprint and questioned documents.

FCHU1203 Business Communication

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the basic terminologies.
CO-2	Will be able to communicate with different officers and convey the important information of forensic aspects.

MSFS1105 Instrumental Techniques Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get knowledge on using different instruments, understanding the concept of the instruments.
CO-2	To know the different instruments required for respective evidences and prepare the results to administer the court of law.

MSFS1106 Crime Scene Management and Forensic Physics Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skills to investigate the crime scene, find out the evidence and forward the evidence to FSL for analysis.
CO2	Formulate the hypothesis of the crime and reconstruction of the crime scene.

MSFS1107 Finger prints and Questioned Documents Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skills to analyse the fingerprint. Compare the fingerprint to match and identify the individuals.
CO2	Skills to analyse the different documents and find out the contents and characteristics of the documents. Analyse the authenticity of the documents. Detect the forgery in the documents.

2ND SEMESTER**MSFS 1201 Quality Management, Narcotic Drugs, Explosives, and Forensic Chemistry**

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the concept of quality management and quality assurance.

CO-2	Knowledge of drugs, analysis of drugs and their forensic aspects.
CO3	Knowledge of explosive and the material used as explosive. Analysis of residue material and parts of the explosives. Detection of the cause of the explosion.

MSFS1202 Forensic Biology and Forensic Medicine

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the biological material used in forensic science. Understand the wild life forensic, entomology and odontology.
CO-2	Understand the autopsy used in forensic science. Determine the cause of death and time of death and understanding the medico legal aspects.

MSFS1203 Forensic Serology and DNA Profiling

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the body fluids analysis and serological techniques.
CO-2	Impart the knowledge of DNA and DNA analysis. Understand the basic concept of individualisation and uniqueness of DNA in identification of individuals.

MSFS1204 Forensic Toxicology and Pharmacology

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the knowledge of poison and their analysis. Detection of poison in the body or body fluids.
CO-2	Understanding of drug interaction with body and drug toxicity.

MSFS1205 Forensic Ballistics and Computer Forensics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the knowledge of different firearms and projectile. Understanding of bullet and cartridge cases and gunpowder.
CO-2	To understand the computer parts, digital platform, cyber-crime and cyber laws.

MSFS1206 Quality Management, Narcotic Drugs, Explosives, and Forensic Chemistry Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to identify the quality of the different product. Examination of different product as per BIS standards.
CO-2	Identification of NDPS drugs and detection of different drugs by different techniques.
CO-3	Identification of explosives materials and detection of explosives by different techniques.

MSFS1207 Forensic Biology and Forensic Medicine Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the biological material and detection of age, sex, race, height and species origin.
CO-2	Identification of injuries and various types of death by post-mortem examination.

MSFS1208 Forensic Serology and DNA Profiling Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the body fluids and different serological techniques for serological analysis.
CO-2	Identification of individuals by DNA profiling.

MSFS1209 Forensic Toxicology and Pharmacology Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the type of poison and detection of different type of poison in body.
CO-2	Analyse the drug interaction and bioavailability of the drug in the body and their metabolites.

MSFS12010 Forensic Ballistics and Computer Forensics Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the different firearms and projectiles. Identification and detection of gunshot residue, gunshot powder, range, marks and characters of projectiles.
CO-2	Analysis of storage media, deleted files and information from digital platform and tracking.

3RD SEMESTER

Specialisation in Forensic Chemistry and Toxicology

MSFS2101 Pharmacology and Pharmaceutical Drug Analysis

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand about the drug, factors, bioavailability, and responses of drugs.
CO-2	Understanding the different agents of drugs, designer drugs and NDPS substances.
CO-3	Analysis of drugs and agents.

MSFS2102 Concepts of Toxicology

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get knowledge on different toxic substances and their identification and detection.
CO-2	Understanding of analytical methods of toxicology and application of toxicology.

MSFS2103 Modern and Applied Analytical Forensic Chemistry

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Acquainted with proper knowledge chemistry of drugs and different laws related to drugs. Understanding the process of analysis involved to identify the drugs.

MSFS2104 Pharmacology and Pharmaceutical Drug Analysis Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Qualitative and quantitative analysis of various chemicals.
CO-2	Instrumental analysis of various chemicals.

MSFS2105 Concepts of Toxicology Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the drugs by various analytical techniques.
CO-2	Ability to detect the poison by various analytical techniques from biological and non-biological matrices.

MSFS2106 Modern and Applied Analytical Forensic Chemistry Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the different drug component. Identify and detect the cause of fire and explosion and analyse the residue materials.
CO-2	Skill to detect the food adulteration in food and identify the adulterated material in food.

Specialisation in Forensic Biology

MSFS2111 Molecular Biology and Genetics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand about the serological methods, enzymes and proteins for criminal investigation. Understanding of parameter and factors in forensic DNA typing.
CO-2	Understanding the different methods and techniques used for DNA analysis and development in technologies and methods for DNA analysis.
CO-3	Understanding of Bioinformatics, population structure and DNA databases.

MSFS 2112 Biotechnology in Pharmaceutical Sciences

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get knowledge on recombinant DNA technology and genetically modified organism. Understanding of Blotting techniques and molecular therapy.
CO-2	Understanding of quality control and assurances, regulatory affairs and intellectual property rights.

MSFS2113 Environmental Biotechnology

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Acquainted with proper knowledge of environmental forensic, analysis of the component of pollutants and materials.
CO-2	Acquainted with the knowledge of waste management and detection of waste material in the environments.

MSFS2114 Molecular Biology and Genetics Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Extraction and estimation of DNA from different sources. Genotyping of the DNA with different markers and interpretation of the result to aid the police officials and court of law.

CO-2	Extraction and estimation of proteins from different sources. Analysis of protein structure using RASMOL software.
------	--

MSFS2115 Biotechnology in Pharmaceutical Sciences Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skills to isolate DNA from different sources and GMO detection.
CO-2	Ability to handle blotting techniques and identification and detection of production of industrial products.

MSFS2116 Environmental Biotechnology Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the pollutants material in the environment and analysis of the pollutants.
CO-2	Skill to identify the adulterated material in food and examine the food quality.

Specialisation in Forensic Physics

MSFS2121 Advances in Physical Techniques

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the various techniques Such as Microscopes, etc.
CO-2	Skill to identify the examination of nanotechnology and Forensic Engineering

MSFS 2122 Concepts of Conventional and Modern Ballistics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identifications and Examination of Ammunitions Range of Fire.
CO-2	Analysis and Examination of GSR Material with various Standards

MSFS2123 Audio Recognition and Video Analysis

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identification and Examination of Voice samples using Gold wave Software, Automatic Speaker recognition.
CO-2	Examination of Audio and Video analysis using AMphed Five.

MSFS2124 Advances in Physical Techniques Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the various techniques Such as Microscopes, etc.
CO-2	Skill to identify the examination of nanotechnology and Forensic Engineering

MSFS2125 Concepts of Conventional and Modern Ballistics Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identifications and Examination of Ammunitions Range of Fire.
CO-2	Analysis and Examination of GSR Material with various Standards

MSFS2126 Audio Recognition and Video Analysis Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identification and Examination of Voice samples using Gold wave Software, Automatic Speaker recognition.
CO-2	Examination of Audio and Video analysis using AMphed Five.

Specialisation in Fingerprints and Questioned Documents

MSFS2131 Modern Trends in Fingerprint Sciences

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Fundamental and principle of fingerprints and their detection methods.
CO-2	Understanding of development and detection of fingerprints from various methods.

MSFS 2132 Questioned Document and Forensic Accounting

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understanding of writing forgery and documents forgery. Examination of questioned documents and writings.
CO-2	Understanding of frauds, money laundering and financial reports.

MSFS2133 Forensic Photography and Biometric Traits

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Principle and techniques of photography and understanding the crime scene photography with various light sources.
CO-2	Knowledge of different biometric techniques and biometrics analysis.

MSFS2134 Modern Trends in Fingerprint Sciences Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the fingerprint with microscopic techniques and comparison of male and female fingerprint with specific reference and with AFIS method..
CO-2	Development of fingerprint with various chemical and physical methods.

MSFS2135 Questioned Document and Forensic Accounting Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to examination of ink, paper age, currency notes and detection of forgery of the documents.
CO-2	Examination of passports, stamps, stamps impression.

MSFS2136 Forensic Photography and Biometric Traits Laboratory

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Do crime scene photography, evidences photography and videography. Development of photographic prints.
CO-2	Do photography with various light sources and with various filters. Analysis of various biometrics.

MSFS2107 : Assignment

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understanding of writing the proper content with professional language and with proper explanation.

MSFS2108: SEMINAR

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get familiar and skilled to deliver in seminar

MSFS2200: Dissertation/project

Course Outcome : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Have understanding of research methodology and lab work/field work.

2018-19

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Environmental Science

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Environmental Science	FCBS0101	Theory	3	Nil

Course Objective:

- To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.
- Students will develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
- One must be environmentally educated.

Course Outcome:

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

Environment and its multidisciplinary nature; Need for public awareness; Renewable and non renewable resources—forest, water, mineral, land, food and energy resources; Structure and function of ecosystems of forest, grass land, desert and aquatic types.

MODULE -II

Biodiversity and its conservation: Biodiversity at global, national and local levels; Threats to biodiversity - Habitat loss; wild life poaching and man - wildlife conflicts; Endangered and endemic species; conservation measures.

Causes, effects and control measures of pollution, air, water and noise pollution; Nuclear hazards; solid-waste management—Causes, effects and control measures; Management of disasters due to natural causes of floods, earthquakes, cyclones and landslides.

MODULE-III

Social issues and the environment; Sustainable environment, Water conservation measures; Rain water harvesting; Resettlement and rehabilitation of people; Climate change and global warming; Acid rain; Ozone layer depletion; water land reclamation; Consumerism and waste products; Features of Environment Protection Act, Air pollution and Control of Pollution Acts; Water Pollution and its Control Act. Effects of Pollution explosion on environment and public health; Need for value education to Protect environment and resources.

Text Book: Anubhav Kaushik & C.P. Kaushik : Environmental Studies-New age International Publishers.

Reference Books:

1. Benny Joseph : Environmental Studies-Tata Mac Graw Hill
2. E. Bharucha : Text book of Environmental Studies for Under graduate courses– Universities Press. (Book prepared by UGC Committee.

Differential Equations

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Differential Equations	FCBS 0102	Theory	3	Nil

Course Objectives:

- To understand most of the physical phenomena from Science and Engineering which are modeled by differential equations.
- To find and interpret the solutions of the ODE & PDE appearing in signal systems, dynamical systems, stability theory and a number of applications to scientific and engineering problems.
- To develop the ability to apply differential equations to significant applied and/or theoretical problems.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Learn fundamental concepts of ODE & PDE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs & PDEs using analytical solution methods to obtain their exact solutions.
- Recognize the major classification of ODEs & PDEs and the qualitative differences between the classes of equations.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (12 Hours)

First Order Differential Equations: Separable Equations, Homogeneous & Non-homogeneous Equations, Exact Differential Equations, Integrating Factor, Linear Differential Equations, Bernoulli Equation.

MODULE-II (15 Hours)

Second & Higher Order Linear Differential Equations: Linear Dependence and Independence of Solutions, Wronskian, Constant Coefficient Homogeneous Equations, Cauchy-Euler Equation, Nonhomogeneous Equations, Method of Variation of Parameter, Method of Inverse Operator, Legendre Equation.

MODULE-III (15Hrs)

Partial Differential Equation of First Order, Linear and Non-linear Partial Differential Equations, Charpit's Method, Homogeneous and Non-homogeneous Linear Partial Differential Equations with Constant Coefficients, Cauchy Type Differential Equation.

Text Book:

1) Higher Engineering Mathematics by B.V. Raman Publisher: TMH
Chapters: 8 (8.1 to 8.10); 9 (9.1 to 9.7), 18 (18.1 to 18.8) **Reference**

Book: 1) Advanced Engineering Mathematics by P.V.O'Neil Publisher: Thomson

Linear Algebra & Vector Calculus

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Linear Algebra & Vector Calculus	FCBS 0103	Theory	3	Nil

Course Objectives:

- To apply concepts of Linear Algebra & Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics, electrical circuits, networking, linear programming, graph theory, computer graphics, cryptography, thermodynamics, construction of curves and surfaces through specified points etc.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering, applied mechanics etc.
- To apply vectors in higher dimensional space in experimental data, storage and warehousing, electrical circuits, graphical images, mechanical systems and in physics.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- Use matrix operations to solve systems of linear equations and be able to determine the nature of the solutions.
- Compute with the characteristic polynomial, eigenvalues, eigenvectors and eigenspaces of a matrix as well as the geometric and the algebraic multiplicities of an eigenvalue and then to diagonalise that matrix.
- Determine the important quantities associated with scalar and vector fields.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (14 Hours)

Linear Algebra, Basic Concepts, Linear System of Equations, Solution by Gauss Elimination, Conditions of Existence and Uniqueness of Solutions, Rank of a Matrix, Determinants and Cramer's Rule, Linear Dependence and Independence.

MODULE-II (14 Hours)

Eigen Values and Eigen Vectors, Basis, Symmetric, Skew-Symmetric and Orthogonal Matrices, Complex Matrices, Similarity of Matrices, Diagonalization.

MODULE-III (14 Hours)

Vector Differential Calculus: Vector Algebra, Inner Product, Vector Product, Vector & Scalar Functions and Fields, Derivatives, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: Johnwiley & Sons Inc-8th Edition Chapters: 6 (6.1 to 6.6); 7 (7.1, 7.3 to 7.5), 8 (8.1 to 8.4, 8.9 to 8.11) **Reference Books:**

1) *Advanced Engineering Mathematics* by P.V.O' Neil Publisher: Thomson

Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Integral Transform

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Integral Transform	FCBS 0104	Theory	3	Nil

Course Objectives: To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as Signal & System, Digital Signal Processing, Image Processing, Theory of Control Systems, Differential Equations and many others.

- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.
- To get acquainted with the fact that the Laplace transform is related to the Fourier transform, but the Fourier transform expresses a function or signal as a series of modes of vibration (frequencies), whereas the Laplace transform resolves a function into its moments.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- Obtain Laplace transform of simple functions, functions expressed in graphical form, integrals and derivatives.
- Solve differential & integral equations with initial conditions using Laplace transform.
- Compute the Fourier series representation of a periodic function, in both exponential and sine-cosine forms.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (16 Hours)

Laplace Transforms, Transforms of Derivatives and Integrals, Derivatives and Integrals of Transforms, Shifting Properties, Unit Step Function, Dirac's Delta Function, Convolution, Inverse Transforms, Solution to Differential Equation, Integral Equation.

MODULE-II (12 Hours)

Periodic Functions, Trigonometric Series, Fourier Series, Fourier Expansion of Functions of any Period, Even and Odd Functions, Half Range Expansions,

MODULE-III (14Hrs)

Fourier Integrals: Fourier Sine Integral, Fourier cosine Integral. Fourier Transforms: Fourier Sine Transform, Fourier Cosine Transform.

Text Book:

Advanced Engineering Mathematics by E.Kreyszig

Complex Analysis

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Complex Analysis	FCBS 0105	Theory	3	Nil

Course Objectives:

- To understand the application of Complex Analysis to Two-Dimensional problems in Physics including Hydrodynamics and Thermodynamics and also in Engineering fields such as; Nuclear, Aerospace, Mechanical and Civil engineering, signal processing & communications.
- To acquire the skill of contour integration to evaluate complicated real integrals appearing in Engineering problems via residue calculus.

Course Outcomes: Upon successful completion of this course, the student will be able to:

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula and Residue theorem.
- Illustrate the applications of the calculus of residues in the evaluation of real integrals.

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (14 Hours)

Complex Analysis: Analytic Function, Cauchy-Riemann Equations, Laplace Equation, Harmonic Function, Linear Fractional Transformation.

MODULE-II (14 Hours)

Parametric representation, Line Integral in the Complex plane, Cauchy's Integral Theorem, Cauchy's Integral Formula, Derivatives of Analytic Function.

MODULE-III (14Hrs)

Power Series, Taylor's Series, Maclaurin Series, Laurent's Series, Singularities and Zeroes, Residue Theorem, Residue Integration Method, Evaluation of Real Integrals.

Text Book:

1) *Advanced Engineering Mathematics* by E. Kreyszig Publisher: John Wiley & Sons Inc-8th Edition Chapters: 12 (12.1 to 12.4, 12.9); 13, 14 (14.2, 14.4) & 15.

Reference Books:

1) *Advanced Engineering Mathematics* by P.V. O'Neil Publisher: Thomson

2) *Fundamentals of Complex Analysis (with Applications to Engineering and Science)* by E.B. Saff & A.D. Snider Publisher: Pearson

Discrete Mathematics

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Discrete Mathematics	FCBS 0106	Theory	3	Nil

Course Objectives:

<p><i>To learn a particular set of mathematical facts and to apply their applications in many subjects of Computer Science and Engineering such as Cryptography, Theory of Computation & Data Networking.</i></p> <p><i>To understand mathematical reasoning in order to read, comprehend and construct mathematical arguments as well as to solve problems, occurred in the development of programming languages.</i></p> <p><i>To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.</i></p>
--

Course Outcomes: Upon successful completion of this course, the student will be able to:

<ul style="list-style-type: none"> • Evaluate elementary mathematical arguments and identify fallacious reasoning. • Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments. • Reformulate statements from common language to formal logic. Apply truth tables and the rules of propositional and predicate calculus. • Model and solve real-world problems using graphs, both quantitatively and qualitatively.
--

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (12 Hours)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Recurrence Relations, Solving Linear Recurrence Relations.

MODULE-II (16 Hours)

Relations and its properties, Representation of Relations, Closure of Relations, Equivalence Relations and Partitions, Partial Ordering, POSet, Hasse Diagram, Maximal & Minimal elements of a Poset, Supremum & Infimum of a Poset, Lattice, Basic properties of Lattices.

MODULE-III (14Hrs)

Introduction to Graph Theory, Graph terminology, Representation of graphs, Graph Isomorphism, Connectivity, Euler and Hamiltonian Paths, Planar graph, Graph Coloring, **Text Books:**

- 1 *Discrete Mathematics and its Applications* by K.H.Rosen Publisher: TMH, Sixth Edition
Chapters: 1(1.1 to 1.5) ; 6 (6.1, 6.2) ; 7; 8(8.1 to 8.5, 8.7, 8.8)
- 2 *Elements of Discrete Mathematics* by C.L.liu & D.P. Mohapatra Publisher: TMH, Third Edition Chapter: 11 (11.1 to 11.4) **Reference Books:**
Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson
Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier
Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI

Calculus

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Calculus	FCBS0107	Theory	3	Nil

Objective

<ul style="list-style-type: none"> · To study how things change. It provides a framework for modeling systems in which there is change, and a way to deduce the predictions of such models. · To construct a relatively simple quantitative models of change, and to deduce their consequences. · The fundamental idea of calculus is to study change by studying “instantaneous” change, by which we mean change over tiny interval of time.
--

Course Outcome

<p>Upon successful completion of this course, students will be able to:</p> <ul style="list-style-type: none"> · Understand the importance of linear functions in mathematics. · Understand the major problems of differential and integral calculus. · Understand and recognize other important classes of functions (such as trigonometric and rational functions), and be able to use calculus with these functions.
--

MODULE-I (6 Hours)

Asymptotes

MODULE-II (6 Hours)

Curve Tracing

MODULE-III (6 Hours)

Curvature

MODULE-IV (6 Hours)

Reduction Formulae

MODULE-V (6 Hours)

Vector Integral Calculus: Line Integrals.

MODULE-VI (6 Hours)

Surface Integrals, Green's Theorem

MODULE-VII (6 Hours)

Volume Integrals, Gauss's Theorem, Stokes' Theorem (without proof).

Text Books:

- 1) A Text book of Calculus Part-III : Shantinakaran
Chapters: 1 (Art 1 & 3), 3(Art 7, 8, 9)
- 2) A Text book of Calculus Part – II : Shantinakaran
Chapter: 8 (Art. 24, 25, 26),
- 3) A Text book of Calculus Part – II : Shantinakaran
Chapter: 10 (Art.33, 34, 35, 36, 37)
- 4) A Textbook of Vector Calculus by Shanti Narayan & P. K. Mittal, S. Chand & Co. , 2003
Chapters: 7 (7.1 to 7.6, 7.8 & 7.11)

Probability & Statistics

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Probability & Statistics	FCBS0108	Theory	3	Nil

Objective

- To translate real-world problems into probability models.
- To motivate in students an intrinsic interest in statistical thinking.
- To recognize the role of and application of probability theory, descriptive and inferential statistics in many different fields of engineering.

Course Outcome

Upon successful completion of this course, students will be able to:

- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I

(6 Hours)

Probability: Sample space and Events, Principles of Counting, Classical definition of probability.

MODULE-II

(6 Hours)

Axioms of probability, Elementary theorems, Addition and Multiplication rules, Conditional probability.

MODULE-III

(6 Hours)

Probability Distributions: Discrete and Continuous Random Variables.

MODULE-IV

(6 Hours)

Probability Density and Distribution functions, Mean and Variance of Distributions. Binomial Distribution.

MODULE-V

(6 Hours)

Poisson Distribution, Normal Distributions, Poisson and Normal Distributions as Limiting forms of Binomial Distribution.

MODULE-VI

(6 Hours)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances.

MODULE-VII**(6 Hours)**

Point and Interval Estimations, Confidence Intervals, Fitting Straight Lines, Correlation and Regression.

Text Book:

- Advanced Engineering Mathematics by E. Kreyszig
 Publisher: John Willey & Sons Inc-8th Edition
 Chapters: 22(22.1 to 22.8), 23(23.1 to 23.3, 23.9, 23.10)

Reference Books:

- Statistical Methods By S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.
- Mathematical Statistics By S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Numerical Methods

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Numerical Methods	FCBS0109	Theory	3	FCBS0102 Differential Equations

Objective

<ul style="list-style-type: none"> To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems. Ability to decide and to derive appropriate numerical methods for approximating the solutions of various types of problems in engineering and science and analyze the error incumbent in any such numerical approximation. Ability to report analysis, solution and results in a standard engineering format.

Learning Outcome

<p>Upon successful completion of this course, students will be able to:</p> <ul style="list-style-type: none"> Perform error analysis to select an appropriate numerical model and to estimate errors in numerical solution of a given problem. Derive a variety of numerical algorithms/methods & compare the viability of different approaches to the numerical solutions of various mathematical problems arising in roots of linear and non-linear equations, interpolation and approximation, numerical differentiation and integration, system of linear algebraic equations and differential equations. Analyze and evaluate the accuracy of common numerical methods.
--

Evaluation Systems

	Component	% of Marks	Method of Assessment
Internal Examination	Midterm Test	30	Written examination
	Assignment	05	Report and Presentation
	Attendance	05	Attendance percentage
	Total	40	
External Examination		60	Written examination
Total		100	

MODULE-I (6 Hours)
Approximation and round of errors, Truncation error and Taylor's series, Roots of equation using Bisection Method.

MODULE-II (6 Hours)
Roots of equation using the false-position method, fixed point iteration, Newton-Raphson method, Secant method.

MODULE-III (6 Hours)
Solution of System of Linear algebraic equations: Gauss-Seidel method, Lagrange Interpolation.

MODULE-IV (6 Hours)
Newton divided difference interpolation, Inverse Interpolation, Lagrange Interpolation, Newton's forward and backward interpolation.

MODULE-V (6 Hours)
Numerical Differentiation, Numerical integration by the trapezoidal rule.

MODULE-VI (6 Hours)
Numerical integration by the Simpson's rules, Gauss quadrature rule.

MODULE-VII (6 Hours)
Solution of Ordinary Differential Equations: Euler's method, Improvement of Euler's method, Runge-Kutta methods.

Text Book:

Applied Analytical Chemistry

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Applied Analytical Chemistry	FCBS0401	Theory + Practice	3	Nil

Course Objective

- The aim of this course is to give students that are going to carry out an experimental work the necessary comprehension in analytical chemistry.
- The course will also provide the student with knowledge to be able to understand and critically evaluate experimental data produced by others.

Course outcome

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix
- Point out suitable techniques for sampling and handling of environmental samples
- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Describe simple approaches for troubleshooting

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Module-1

Water Analysis: Importance of water, different types of water, sources and uses of water, types of water pollutants and domestic and industrial significance of analysis of water. Removal of hardness by Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method. Desalination of brackish water by Reverse osmosis and electro dialysis process. Water disinfection by bleaching powder, liquid Cl₂, and chloramine.

Practice:

1. Determination of total hardness by EDTA method, total dissolved solids, total alkalinity
2. Determination of Turbidity by nepheloturbidity meter, pH, Conductivity.
3. Determinations of BOD, COD, DO.

NB: The above parameters can also be determined by using water kits and the results are to be compared with those obtained manually.

Module-2

Soil Analysis: Composition of rocks and minerals, soil profile and properties.

Practice:

1. Determination of texture of soil.
2. Determination of moisture content in a soil sample, pH, electrical conductivity,
3. Determination of water holding capacity of soil.
4. Measurement of Calcium and Magnesium Using EDTA methods.

Module-3

Chemistry of fuels: Classification of fuels, composition and properties of Petroleum, LPG, Water gas, producer gas, CNG. Knocking – Mechanism of knocking, harmful effects, Anti knocking agents – TEL, Catalytic converters – Principle & working, Unleaded petrol, Power alcohol & Biodiesel. Photovoltaic cells - construction & working of a PV cell **Practice:**

1. Proximate analysis of fuel (Coal, biomass etc.) Moisture, Volatile content, Ash, fixed carbon
2. Testing of fuel properties of the plastic oil and bio diesel: Specific gravity by picnometer, flash point and fire point by pesky-Marten flash point apparatus, viscosity by Redwood viscometer, calorific value by bomb calorimeter

Industrial Chemistry

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Industrial Chemistry	FCBS0402	Theory + Practice	3	Nil

Course Objective

Students may also explore in depth specialized areas of chemistry of materials, including ores, metals, cemenas well as dyes, oils, soaps

- Introduce the students to industrial processing principles as applicable to chemical and allied industries.
- Provide the students with the knowledge of how raw materials are sourced for various chemical industries and how these materials are processed.
- Provide students with advanced technical skills in Chemical Engineering that will enable them to (a) translate fundamental discoveries in materials and other high technology areas to commercial exploitation, and (b) adapt readily to the challenges presented in a diverse range of industrial sectors that can benefit from process engineering approaches.

Course outcome

- Appreciate better their future roles as chemists in Industrial establishments
- Be able to explain the origin of raw materials used in the chemical and allied industries
- Have a good understanding of how chemical raw materials are processed into finished products.
- Graduates find employment in, quality control, oil and petroleum industry, textile industry, dyes and paints industry, cement industry, just to name a few.

Evaluation System

<i>Internal Examination</i>	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Module 1: Preparation of soap, dyes and oil analysis :

Introduction: Types of soap (soft and hard soap), methods of preparation of soap, mechanism, difference between fats and oils, physical properties of fats and oil, general introduction to chemistry of dye, various example of dyes, types of dyes.

Practice:

- Preparation of soap by saponification
- Determination of the properties different type of soap
 1. pH test
 2. Foam test
- Hard water test
- Determination of iodine number of oil
- Preparation of dyes (azo dyes): 2- naphthol + 4 - nitro aniline: salicylic acid + 4- nitro aniline
- Preparation of Phenyle.

Applications: Effect of water hardness in cleansing action of soap. Application of dyes to cloth

Module 2: Metals estimation from ores

Introduction: General introduction on ores, types of ore, important ore minerals, application of ores.

Practice:

- Estimation of Cu in copper ore
- Determination of Fe as ferrous iron in an ore sample
- Determination of Zn in Zinc ore by EDTA complex metric method

Module 3: Analysis of cement

Introduction: what is cement? types of cement, composition of cement, preparation of cement, applications.

Practice:

- Estimation of calcium in Portland cement
- Cement hydration and pH evaluation during curing
- To check the quality of cement (colour, texture, smell test, float test, shape test and strength test)

Applied Engineering Materials

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Applied Engineering Materials	FCBS0403	Theory + Practice	3	Nil

Course Objective

- To understand the importance of the chemical approach to nanomaterials
- To study the preparation, analysis and applications of metal nanoparticles
- To develop an understanding of conjugated polymers and their applications
- To understand how polymer composition and architecture imparts unique properties and behavior
- To study organic-inorganic hybrid materials (COMPOSITES) and how the incorporation of metals in the polymer architecture leads to new properties and applications

Course outcome

- Know what it takes to have a career in nanotechnology
- Understand the need to increase Nanotechnology awareness
- Understand the definition of Nanotechnology
- Know the processing of Nanoparticles and Nanomaterials □ Know the application of Nanotechnology and nanomaterials

Evaluation System

Internal Examination	Component	% of Marks	Method of Assessment
	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Module 1: Nano Materials:

Introduction, nano scale, applications in various fields.

Practice:

- Synthesis of Ag, Au nano particles by wet chemical methods. □ Synthesis of ZnO Nanoparticles by Precipitation Method □ Synthesis of Cu nano particles Sonochemical method.
- Synthesis of Fe nano particles Co-precipitation method.
- Thickness measurement by sol-gel process of coating.

Module 2: Polymers

Introduction, types of polymers, Polymerisation mechanisms.

Practice:

- Synthesis of Thiokol Rubber
- Synthesis of a Rubber Ball from Rubber Latex
- Synthesis of Polystyrene (PS)
- Synthesis of Polymethyl Methacrylate (PMMA) □ Synthesis of Nylon-6:6.
- Determination of molecular weight of polymers by visometry method.

Module 3: Composites

Introduction :Biopolymers or synthetic polymers reinforced with natural or biofibers(termed as bio composites) as a viable alternative to glass fibre composites.Biocomposites“ refers to those composites that can be employed in bioengineering.Biocomposites are composite materials, that is, materials formed by a matrix (resin) and a reinforcement of natural fibers (usually derived from plants or cellulose). Bio composites are the combination of natural fibers (biofibers) such as wood fibers (hardwood and softwood) or non - wood fibers (e.g., wheat, kenaf, hemp, jute, sisal, and flax) with polymer matrices from both renewable and non-renewable resources.

Practice:

- Synthesis of bio composite materials by using jute fibres and wood fibres

Electricity and Magnetism

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Electricity and Magnetism	FCBS0404	Theory + Practice	4	Nil

Course Objective

- To understand electric circuit components and their use.
- To learn and verify the fundamental laws of electricity, learn how to use certain electrical devices. Understanding magnetic properties of matter and performing experiments to realize magnetism.

Course outcome

- Realizing the importance and use of electrical components in a circuit.
- Learning how to do different connections and their purpose.
- Understanding magnetism of matter and its applications

Evaluation Criteria

Internal Examination	Component	% of Marks	Method of Assessment
	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Practice I Theory:

Electric field, Potential, EMF, capacitance, resistance, series connection, parallel connection, Kirchhoff's laws, RC circuits, LC circuits.

Lab:

1. Use a Multi-meter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance and (e) Checking electrical fuses.
2. To determine an unknown Low Resistance using Potentiometer. 3. To determine an unknown Low Resistance using Carey Foster's Bridge.

Practice II

Theory: Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Lab:

1. To verify the Superposition, and Maximum power transfer theorems.
2. To determine self-inductance of a coil by Anderson's bridge.
3. To study response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
4. To study the response curve of a parallel LCR circuit and determine its (a) Anti- resonant frequency and (b) Quality factor Q.

PRACTICE III

Theory: Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis. Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field.

Lab:

2. To study the induced e.m.f. as a function of the velocity of the magnet.
3. Measurement of field strength B and its variation in a solenoid.
4. Determination of μ_r ratio.

Text Book:

1. *Electricity and Magnetism* By K. K. Tiwari, S. Chand Publishing References:
2. *Electricity and Magnetism*, By M. C. Saxena, Satya Prakash, V. P. Arora, Publisher: Pragati Prakashan
3. *Introduction to Electrodynamics*, by David J. Griffiths Prentice-Hall; 3 edition (2011) 4. *Electricity and Magnetism* by - D. C. Tayal, Himalaya Publishing, 2009.

Basic Mechanics and Properties of Matter

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Basic Mechanics and Properties of Matter	FCBS0405	Theory + Practice	4	Nil

Course Objective

- To give the students overall idea about material properties and also hands on experience to measure them.
- To make them realize the applications of material properties.
- To expose them to phenomena like hydrostatics, elasticity, viscosity, surface tension and their applications in various places.
- Encouraging them to build simple models to explain the mechanical properties. **Theory:**

Course outcome

- To understand material properties and perform experiments on them.
- To understand the applications of material properties in real life.
- To be able to make small models for explain few mechanical properties.

Evaluation System

	<i>Component</i>	<i>% of Marks</i>	<i>Method of Assessment</i>
<i>Internal Examination</i>	Internal	20	Written examination
	Assignment	30	Report and Presentation
<i>External Examination</i>			
	<i>End Sem</i>	30	Written examination
	<i>Practice</i>	20	Experiment followed by Viva
<i>Total</i>		100	

Elasticity: Elastic constants, Relation among elastic constants, torsion of right circular cylinder, bending of beams, Vibration of loaded cantilever.

Lab:

1. Young's modulus by single/double cantilever
2. Young's modulus by Searle's method
3. Rigidity modulus using Barton's apparatus
4. Poisson's ratio

Practice II Theory:

Hydrostatics: hydrostatic force on a body, buoyancy, metacentric height, hydrostatic pressure, pressure measurement: manometer

Viscosity: Viscosity of fluids, Stoke's law, terminal velocity, Poiseuille's equation, Searle's viscometer.

Surface tension & surface energy: Pressure difference across curved liquid surface. **Lab:**

1. Viscosity by Stokes method
2. Viscosity by Poiseuille's method
3. Metacentric height of floating body
4. Measurement of Pressure by manometer
5. Surface tension by capillary rise method
6. Determination of surface tension by Quincke's method

Practice III:

Basic Mechanics

Theory: Kinematics and Kinetics, Effort amplification using levers and pulleys, Friction, Laws of friction.

Rotational Motion: Moment of Inertia, Theorem of Parallel and Perpendicular axes. Moment of inertia of circular disc.

Lab:

1. Effort-output ratio using combination of pulleys
2. Verification of laws of static and dynamic friction
3. Moment of inertia of fly wheel

Optics and Optics Fibre

Subject Name	Code	Type of course	T-P-Pr (Credit)	Prerequisite
Optics and Optics Fibre	FCBS0406	Theory + Practice	4	Nil

Course Objective

To understand optical phenomena.

- *To understand different light sources and their use*
- *Understand designing of microscope and artificial light sources*
- *Understanding optical fiber and its applications*

Course outcome

- *Students should understand optical phenomena.*
- *Students should learn about different light sources and their use*
- *Students should be able to understand optical fiber principle, operations and its applications.*

Evaluation System

	Component	% of Marks	Method of Assessment
Internal Examination	Internal	20	Written examination
	Assignment	30	Report and Presentation
External Examination	End Sem	30	Written examination
	Practice	20	Experiment followed by Viva
Total		100	

Practice I

Theory: Reflection and refraction of light. Mirror formula, lens maker's formula. Refraction through a prism. Dispersion, light sources: Principle and operations of sodium lamp, mercury lamp and LASER.

Lab:

1. To determine refractive index of the Material of a prism using sodium source.
2. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3. To determine the refractive index of glass slab using travelling microscope.
4. Designing of a compound microscope.

Theory: Interference. Young's experiment, conditions for interference, Intensity distribution of fringes, Interference in thin films, Newton's rings.

Diffraction: types of diffraction, Fraunhofer diffraction at a single slit, diffraction at N-parallel slits and plane diffraction grating.

Polarization: Polariser and analyser, optical rotation and Polarimeter

Lab:

1. Determination of wavelength of light by Newton's ring method.
2. Determination of wavelength of LASER source by diffraction grating method
3. Thickness of thin paper by wedge-shaped films
4. Dispersive power and resolving power of a plane diffraction grating.
5. Polarimetry

SYLLABUS
FCHU1201 FOUNDATIONS OF ENGLISH COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

To develop vocabulary and grammar knowledge

To develop reading comprehension skills

COURSE OUTCOMES

Development of academic and sub-technical vocabulary

Enhancement of basic language skills, i.e., listening, speaking, reading and writing

Development of grammatical competence

Confidence level improvement

This course aims to build the vocabulary, comprehension, and writing skills for effective communication in English language. It will focus on reading, listening to, and writing passages, as a means of learning communications skills.

The essential elements of this course will include:

MODULE-I: READING SKILLS (7hrs.)

Read **one** of the following books:

Animal Farm

Alice in Wonderland

Guide

Malgudi Days

Harry Potter

Amar Chitra Katha

Comprehension Skills: Students will respond to comprehension lessons from the chosen book.

MODULE-II: WRITING SKILLS (7hr.)

Students learn grammar and usage by writing passages, and getting formal feedback on these.

MODULE-III: LISTENING SKILLS (6hrs.)

Students respond to questions based on listening to videos, audio, or speaking assignments of classmates.

MODULE-IV: SPEAKING SKILLS (7hrs.)

Speaking assignments based on chosen book or contemporary topics.

FCHU1202 COMMUNICATIVE PRACTICE LABORATORY –I

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The language laboratory acts as a platform for learning, practicing and producing language skills through interactive lessons and communicative mode of teaching.

COURSE OBJECTIVES

To expose the students to a variety of self- instructional, learner- friendly modes of language learning.

To enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

To maintain good linguistic - through accuracy in grammar, pronunciation and vocabulary.

COURSE OUTCOMES

Ability to communicate fluently in different business situation

Effective oral and written communication

Appropriate word usage with correct pronunciation

Clarity of word stress and intonation

A student is required to take up five lab tests of 100 marks- three tests in spoken mode and two tests in written mode.

MODULE-I: FRIENDLY COMMUNICATION (9 HOURS)

Doing Things with Words: To ask for information, help, permission; To instruct, command, request, accept, refuse, prohibit, persuade

Practice of Formulaic Expressions: Greetings, farewells, introductions, thanks, apologies, regrets, good wishes, congratulations, condolences, offers.

Conversation Practice in familiar and unfamiliar situations

(This module will be practiced through conversation activities in pairs & groups)

MODULE-II: GRAMMAR AND VOCABULARY (9 HOURS)

The focus will be on the appropriate usage of language.

Elimination of common errors

Editing passages

Word power A-Z: Easy and quick techniques

Vocabulary building exercises

(Open Source Language Laboratory will be used to take quizzes and practice grammar & vocabulary)

MODULE-III: PHONETICS AND SPOKEN ENGLISH (12 HOURS)

Students will be trained to find out the correct pronunciation of words with the help of a dictionary /software, to enable them to monitor and correct their own pronunciation.

Pronunciation Guidelines: Consonants and Vowels

Pronunciation practice (for accent neutralization), particularly of problem sounds, in isolated words as well as sentences

Speaking Techniques: Using correct stress patterns, developing voice quality

Rhythm and Intonation

(Reading aloud of dialogues, speeches etc. for practice in pronunciation)

(In this module, the learners will use video series from BBC & Sky Pronunciation Suite to improve spoken English)

FCHU1203 BUSINESS COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVES

The course on Business Communication focuses on the basic skills required to be an effective communicator. It aims at imparting the communication skills that are needed in the academic and professional pursuits.

This is directed towards helping the students gain skills in comprehension, group discussions, presentations, interviews, active listening, technical writing and the ability to manage cross-cultural interactions. The focus is on the difficulty experienced by individual students, and the effort to explore a useful strategy for self-improvement. This is achieved through an amalgamation of lecture oriented approach of teaching with the task based skill oriented methodology of learning.

COURSE OUTCOMES

Understand the differences between general communication and business communication

Development of basic language skills, i.e., listening, speaking, reading and writing

Effective participation in group discussion and job interviews

MODULE-I: UNDERSTANDING COMMUNICATION IN BUSINESS (8 hrs.)

The module is a guide to organization communication. It is directed towards enabling students to develop the skills necessary to manage the human resources of their organization.

General Communication and Business Communication

Communication in Organizational Settings: Patterns of Communication in the Business World

– Upward, Downward, Horizontal Grapevine etc, Channels of Communication- Internal and External, Formal and Informal

Introduction to Cross Cultural Communication

Strategies to Overcome Communication Barriers

MODULE-II: READING AND WRITING (10 hrs.)

This unit works on the competency in reading and writing skills through such tasks/activities as reading books, articles, magazines, novels, developing outlines, key expressions, situations, slogan writing and theme building exercises, dialogue writing, interpreting pictures, technical writing.

Importance of Developing Reading Skills

Sub-Skills of Reading: Predicting Content, Skimming & Scanning, Topic sentence and supporting details, Inferential Reading, Guessing the Meaning of Unfamiliar Words, Note Making

Importance of Writing Skills and Principles of Effective Writing

Writing Process: Pre-writing, Drafting and Re-Writing

Paragraph Writing

Summaries and Abstracts

Business Correspondence: Writing Business Letters, E-mail Messages, Memo, Notice, Circulars, Reports, Proposals

Career Communication: Writing Resume/ CV and Job Application Letter

MODULE-III: LISTENING AND SPEAKING (9 HOURS)

Listening is the mother of all speaking. This unit aims to achieve competence in speaking i.e., the ability to communicate orally in clear, coherent, and persuasive language appropriate to purpose, occasion, and audience. The module focuses on developing this competency which includes acquiring poise and developing control of the language through experience in making presentations to small groups, to large groups, and through the media.

Listening Skills: Listening Process, Hearing and Listening, Types and Barriers, Effective Listening Strategies

Common forms of Oral Communication in the Business World:

Meetings: Organize Meetings, Preparing an Agenda, Chairing a Meeting, Drafting Resolutions, Writing Minutes

Persuasive Speaking: Improving Fluency and Self-Expressions, Articulation, Good Pronunciation, Voice Quality

Making an Oral Presentation: Planning, Preparing and Delivery

Facing an Interview: Preparation, Types of Interview, Do's and Don'ts

Group Discussions: Debate and GD, Types of GD, GD Etiquette

(Treatment: Developing listening and speaking skills through various activities, such as role play activities, practicing short dialogues, JAM, group discussions, debates, speeches, listening to news bulletins, viewing and reviewing documentaries and short films etc.)

FCHU1204 COMMUNICATIVE PRACTICE LABORATORY –II

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

The suggestive assignments in the laboratory are intended as learning activities to facilitate the students in accomplishing the language skills which are needed to succeed in the business world.

COURSE OBJECTIVES

To master Study Skills

To acquire strategic competence to use both spoken & written language to use in a wide range of communication strategies

To acquire Business Performance Skills

COURSE OUTCOMES

The students will be able to

Write effectively for a variety of professional and social settings. They will practice writing as a process of motivated inquiry engaging others writers' ideas as they explore and develop their own. They will demonstrate an ability to revise for content and edit for grammatical and stylistic clarity. And they will develop an awareness and confidence in their own voice as a writer. Become accomplished, active readers who appreciate ambiguity and complexity, and who can articulate their own interpretations with an awareness and curiosity for other perspectives.

Demonstrate the skills needed to participate in a conversation that builds knowledge collaboratively; listening carefully and respectfully to others' view points; articulating their own ideas in relation to other voices and ideas. Students will be able to prepare, organize and deliver and engaging oral presentation.

A student is required to take up five lab tests of 100 marks- at least two tests in written mode and three tests in spoken mode.

MODULE-I: LISTENING (6 HOURS)

Exercises on Active Listening: The whole group listens to any speech/news broadcast in English and notes down the important points. They listen again to check their points and evaluate themselves. The group then compares points to see how well they have understood the broadcast.

MODULE- II: SPEAKING (8 HOURS)

Situational Dialogues / Role Play: Organization Communication

Oral Presentations- Prepared and Extempore

'Just a minute' Sessions (JAM)

Debates

Mock Meetings

Cracking Job Interviews: Mock Sessions

Group Discussions on current topics

(This module will be practiced through speaking activities like role plays, presentations, and discussions)

MODULE-III: READING (8 HOURS)

Students will be given practice in reading and comprehension 6-8 passages of 100-300 words each, on topics of General as well as professional interest. The texts will be supported by suitable exercises designed to foster comprehension skills and vocabulary enrichment. Students are encouraged to read newspapers, articles, books and novels.

Reading Comprehension Exercises Through Tests, Writing Summary and Presenting, Note Making

Review Presentation (Movie/ Article/ Book)

Vocabulary Building Exercises

(This module encourages extensive use of reading materials)

MODULE-IV: WRITING (8 HOURS)

The Writing Lab content is designed to acquaint the students not only with the techniques of effective writing but also give them an insight into planning and writing documents that produce results.

Short Paragraphs on current general and technical topics

Creative Writing: Idea Generation

Business Letters, Email Messages, Project Writing

Writing Resumes and Cover Letters

(* Students will be required to produce and submit by the end of second semester a 350-500 word project report on a topic of their choice. The project should involve data collection, analysis and reporting. Ten marks (out of 100 marks allocated for Lab Test) will be set apart for the project.)

FCHU1205CORPORATE READINESS LABORATORY

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

A real-time project approach in the laboratory is intended to provide a developmentally appropriate ambience, make the students proactive, encourage and motivate as well as develop skills to become a good listener, good communicator and responsible. A student will experience the challenging application process and at the same time prepare for the challenging world. The experience gained from working on projects can help one understand the appropriate and effective use of language skills. It also creates context in which learners engage in purposeful communication.

All communication activities are supported with the help of live projects on general techno-management or local themes which provide exposure to the students and help them to find a suitable job in the industry.

A student is required to take up five laboratory tests of 100 marks.

COURSE OBJECTIVES

Understand the process of communication

View communication from the perspective of each stakeholder

Plan and manage communication difficulties

Learn exactly how, when and what of communication

COURSE OUTCOMES

Understanding the convention of project report

Understanding the process of data collection and documentation

Preparation and presentation of project report

Preparation for various academic and professional needs

INSTRUCTION AND DELIVERY

Instruction- led facilitation highlights interactions between students and their facilitators, and emphasizes guidance from the facilitator who will track, assess and mentor them.

Students will make a team of four members who will take up real problems and run through the semester trying to solve the problems. The lab program will augment this learning with the right theory.

Participants will use PPTS, flash presentations or high impact presentations, flip charts, blogs, boards with graphical or pictorial representations, with captions and outlines, video display or any other best mode of presentation, post-it notes and group activities to document all processes and methodology.

OUTLINE

LAB1: Introduction to the Lab Program (Session will be driven by the Facilitators)

(Structure, Objective, Methodology, Objective of Choosing Project as a Vehicle to Learn the Course, Process of Carrying out the Project, Announcing the List of Projects)

LAB2: Discussion on Project Approach and Communication (Session will be driven by the Facilitators)

LAB3: Win Your Project: A Presentation by Groups (Session will be driven by the Students)

LAB4: Project Plan Presentation by Groups (Session will be driven by the Students)

LAB5: Review of Weekly Status Reports by the Guide, and Discussions (Session will be driven by the Students)

LAB6: Progress Presentation by Groups, and Feedback by Guide and Co-Guide (Session will be driven by the Students)

LAB7: Review of Documentation File/Dossier, and Feedback by Guide

LAB8: Progress Presentation and Submission of Dossier Containing Documentary Notes

(E.g., compilation of weekly status reports, minutes, photocopies of emails, feedbacks, testimonials, photographs)

LAB 9: Presentation on the Project, Feedback by the Guide and Co-guide

LAB 10: Final Presentation by Groups in front of a Panel and Submission of Project Work

FCHU1206IT ENABLED COMMUNICATION

<i>Pre - requisites</i>	<i>Course Type</i>	<i>Credits</i>
<i>Nil</i>	<i>Workshop</i>	<i>2</i>

COURSE OBJECTIVE AND OUTCOME

Upon completing the syllabus, students should be able to:

- Speak confidently and fluently, in both formal and informal contexts.
- Write clearly, correctly and cogently
- Design and have a Home Page/Blog Space, Facebook Page and post comments/reports for collaboration & online presence
- Evolve from the role of an 'information provider', through 'motivator' and 'catalyst of change', to 'Change Agent'.

COURSE OUTLINE

MODULE I: CONCEPTUAL FOUNDATIONS

Pre-Course Assessment

Tell me a bit about yourself: Your background, your major, your professional aspirations ... your likes ... and maybe your favorite movie, and what you like to do in your spare time...

Do you know?

Introduction to IT Enabled Communication

Communication in the New Age Context and Demand for Communication Interventions

(This module includes pre-course assessments and presentations)

MODULE II: BLOG DESIGNING & POSTING

Step-by- Step to Writing a Blog: Researching, Brainstorming and Structuring, Writing, Posting, Editing and Accessorizing

Photoshop for Image, Editing and graphic design

(This module will be driven through methods like self-learning, learning by doing, and workshop)

MODULE III: TECHNOLOGY AND COMMUNICATION

Tools for Business Correspondence and web-based exercises

Creating and delivering high impact presentations with Slides and other Visuals

Video Documentaries

Video Conferencing Sites, Skype, Team Viewer

(This module will be facilitated through presentations, use of tools and technology)
