Module VI : Delmia Additive Part Preparation Essentials

Preparing Infrastructure, Preparing Parts, Managing Rules, Generating the Slicing Path,

Practice : 6 Prepare a part for 3D Printing

Module VII: Master Project

2 (hrs)

Reverse Engineering of the Car Fender and 3D Printing

Text Books:

1. DassaultSystemes Companion Learning Space : Catia Reverse Engineering Essentials

Reference Books:

Product Life Cycle Management

Code	Course Title	Credit	T-P-PJ
CUTM1078	Product Life Cycle Management	2	0-1-1

Objective

- Use ENOVIA Engineering BOM Management
- Create parts and specifications
- Create Change Orders

Course outcomes

- Manage the engineering change process
- Raise Change Requests for the parts and specifications
- Generate various types of reports.

Course content

Module I: Introduction

3 (hrs)

Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of PLM, Widespread Impact of PLM, Focus and Application

Module II: ENOVIA

2(hrs)

Getting Started, Working with Parts, Creating & Attaching Specifications

Module III: EBOM

2 (hrs)

Creating Engineering Bill of Materials

Module IV: ECM

2 (hrs)

Releasing parts using Enterprise Change Management, Reports

Module V: Collaborative Life Cycle Management

4 (hrs)

Getting Started, Creating a Product Structure, Managing the Structure

Module VI: 3D Tolerancing & Annotation 3 (hrs)

Dimensions & Tolerances, Assembly Specifications, Validate Annotations, Generate Drawings, Review through 3D Play.

Module VII: Master Project

3(hrs)

Master Project on ENOVIA EBOM Management

Text Books:

1. DassaultSystemes Companion Learning Space- ENOVIA EBOM Management
2. DassaultSystemes Companion Learning Space- Collaborative Lifecycle Management
3. DassaultSystemes Companion Learning Space- 3D Tolerancing& Annotation

Manufacturing Process-Process Planning and Heat Treatment

Code	Course Title	Credit	T-P-PJ
CUTM1079	Manufacturing Process-Process Planning and Heat Treatment	3	2-1-0

Objective

- To Understand the Importance of Materials, Manufacturing Processes, Process Planning & Design in Product Manufacturing

Course outcomes

- Select Engineering Material for a Required Purpose
- Identify Various Manufacturing Processes
- Implement Modern Approaches to Process Planning, Product Design & Development

Course content

Module I: Classification of Materials(5hrs)

Common Engineering Materials; Crystal Geometry (Crystal Types, Crystal Structures, Crystal Defects, Recrystallization, Crystal Growth, Methods of Determining Crystal Structure, Scanning Electron Microscope); **Mechanical Properties, Mechanical Tests and Deformation of Materials** (Mechanism of Strengthening in Metals. Grain Size and its relation to Mechanical Properties, Review and Brief Discussion on Stress Strain Diagram of Steel and the Parameters for Ductility, Percentage of Elongation, Toughness, Strain Hardening, and Tensile Strength, etc., Fracture Toughness and Crack Growth Measurement, Failure Analysis), Fatigue and Creep Testing, Testing for Residual Stresses.

Module II: Tool Materials (4hrs)

Engineering Alloys (Selection and Specification of Carbon and Alloy Steels for General Engineering Purpose, Specification of Materials as per Various Standards- IS, BS, AISI, APS etc.); **Steels** (Case Hardening Steels, Cold Work Tool Steels, Hot Work Tool Steels, High Speed Tool Steels; **Modern Cutting Tool Materials** (Carbide, Coated carbides, Ceramics, CBN, Diamond, SiALON, Impregnated tools); **Introduction to Plastics** (Properties of Plastics, Thermo Plastics-Thermo Setting Plastics, Methods of Processing of Plastics); **Cast Iron** (Grey

Iron Casting IS: 210 SG Cast Iron IS: 865, Malleable Iron Castings IS: 2108 and IS: 2640); **Non-Ferrous Alloys** (Zn & Al Alloys); **Powder Metallurgy** (Methods for Production of Powders, Powder Metallurgy Steps).

Module III: Heat Treatment (4hrs)

Heat Treatment of Steel (Hardenability Concepts and its Role in Steel Specification, Hardening and Annealing of Tool Steels, Case Hardening and Local Hardening, Isothermal Transformation Diagrams, Austempering, Martempering and Isothermal Annealing for Tool Steels,. Major Defects in Metals or Alloys due to Faulty Heat Treatment, ION Nitrating, Vacuum Carburizing, Chemical Vapour Depositing); **Heat Treatment of Non-ferrous Materials** (Classification of Heat Treatment Processes for Aluminium Alloys, Heat Treatment of Wrought & Cast Aluminium Alloys).

Module IV: Manufacturing Processes(7 hrs)

Forming Processes (Cold & Hot Working, Rolling, Forging, Drawing, Bending & Extrusion); **Joining Processes** (Arc Welding, Gas Welding, Resistance Welding, Thermit Welding, TIG & MIG Welding, LBW, EBW, Adhesive Bonding, Soldering & Brazing,); **Casting Process**(Sand Casting, Die Casting, Investment Casting, Centrifugal Casting, Vacuum Casting, Plaster Mould Casting, Lost Foam Method, Continuous Casting); **Machining Processes** (Traditional-Turning, Milling, Drilling, Shaping, Grinding & Finishing, Non-Traditional- EDM. AJM, LBM etc.)

Practice:

1. Pattern & Mold Making in Sand Casting.
2. Butt Joint by using Oxy Acetylene Gas Welding.
3. Joining of Metal Sheets using Spot Welding.
4. Soldering & Brazing Practice.
5. TIG Welding of Stainless Steel
6. MIG Welding Technique and Applications
7. EDM working Principle and Process Parameters

Module V: Process Planning (5 hrs)

Process Planning (Concept, Manufacturing Planning, Process Design, Process Planning Activities, Process Sheet, Process Selection Parameters, Steps in Process Planning, Computer Aided Process Planning)

Practice

8. Process Planning & Simulation in DELMIA

Module VI: Computer Aided Production Management(7 hrs)

Role of Computer in Product Design and Management(Computer in Manufacturing & Design Process, Creation of Manufacturing Data Base, Computer Integrated Manufacturing, Communication Network, Production Flow Analysis, Group Technology); **Process & Product Design** (Degree of Accuracy, Finish and Tolerance, Capability Studies, Basic Product Design Rules for Casting, Forging, Machining, Sheet Metal and Welding.Physical Properties of Engineering Materials and their Importance on Products, Selection of Plastics, Rubber, Composites and Ceramics for Product Design)

9. Casting Design & Analysis using CATIA

10. Forging Design & Analysis using CATIA

Module VII: Industrial Ergonomics (3 hrs)

Man/Machine Considerations, Ease of Maintenance.Ergonomic Considerations in Product Design, Anthropometry, Design of Controls& Displays, Man/Machine Information Exchange, Process Sheet Detail and Their Importance, Advanced Techniques for Higher Productivity, Just-in-Time and Kanban System, **Modern Approaches to Product Design**(Concurrent Design, Quality Function Development, Rapid Prototyping)

Text Books:

1. Balasubramaniam R.,”Callister's Materials Science and Engineering”, 2nd Edition, Wiley.
2. Rao P.N., “Manufacturing Technology”, Volume 1, Mc-Graw Hill.
3. Chitale A.K.,Gupta R.C.”Product Design & Manufacturing”, 6th Edition, PHI Learning.

Reference Books:

1. Campbell F., “Elements of Metallurgy and Engineering Alloys”, ASM International.

2. Kesavan R., Elanchezhian C., Vijaya Ramnath B., “Process Planning & Cost Estimation”, New Age International.

Material in Product Design and Development

Code	Course Title	Credit	T-P-PJ
CUTM1080	Material in Product Design and Development	2	1-1-0

Objective

- Identify and select suitable material for product design.
- Understanding various material selection for manufacturing processes
- Application of smart materials, shape memory metals, Nano materials.
- Understand the concept of bio materials.
- Understand concept of smart and hybrid materials.

Course outcomes

- Understand the concept of elastic and plastic deformation.
- Identify and select suitable material for product design.
- Understand manufacturing characteristics of materials
- Understanding various manufacturing process.
- Understanding Application of smart materials, shape memory metal, Nano material.
- Understood the concept of smart and hybrid materials.

Course content

Module I: Classification of materials

(2 hrs)

Introduction to material classification, Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminum & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys , Magnesium Alloys, Titanium Alloys, Super Alloys.

Module II : Material behavior

(10 hrs)

Elastic and Plastic deformation- Mechanism of Plastic deformation-yield stress and shear strength-Perfect and Real crystals- Effect of strain rate and temperature on plastic behavior- Super plasticity- Deformation of non crystalline materials

Expt-1 - To study Creep transient for different materials using virtual lab.

Expt-2: To study the effect of obstacle distance on the creep transient behavior of materials using virtual lab.

Expt-3: To evaluate modulus of elasticity of materials using nano indentation using virtual lab.

Expt-4: To find indent depth on materials using nano indentation.

Expt- 5-To find out plastic work done during nano indentation.

Module III: Material Selection for Process modeling and product design (4 hrs)

Material selection- Cost and service requirement- Recycling- Selection of material for mechanical properties- Strength, toughness and fatigue- Material selection for durability and surface wear and Corrosion resistance- Functional relation between materials and processing- Manufacturing characteristics of metals- Material selection using Ashby charts and other aids material selection for aero, auto and nuclear application- Case studies in material selection.

Expt-6- Practice on material selection using Ashby charts

Expt-7- Case study on material selection for bicycle frame using material chart.

Expt-8- Case study on material selection for car brake using material chart.

Expt-9- Case study on material selection for Knee implant.

Module III: Shape memory Alloys and Nano materials (3 hrs)

Introduction to Smart materials and its applications, Shape memory metals and its applications, Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses. Introduction to bio materials.

Expt-10- To imagine the cytoskeleton of cells proliferation on bio materials Surface.

Module IV: Polymer Composite materials (3 hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geo synthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, Bucky Ball Structures, Grapheme.

Module V: Prefab materials (2 Hrs)

Prefabricated Materials: Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module VI: Developments in material processing (3 hrs)

Introduction to Microelectro mechanical Systems (MEMS) and its applications, Micro fabrication technologies- Tool for micro fabrication- Diamond and high speed machining- LIGA micro fabrication process- Multilayer X-ray lithography-

(3)

Module VII: Introduction to smart /intelligent and Hybrid materials hours)

Overview of Smart / Intelligent Materials, Primitive Functions of Intelligent materials, Intelligence Inherent in Materials, Actuator Materials, Sensing Technologies, Micro-sensors, Intelligent Systems, Hybrid Smart Materials, Passive Sensory Smart Structures, Reactive actuators based smart structures, Active Sensing and Reactive Smart Structures, Smart Skins

Practice :

1. Virtual lab by IIT kanpur.

Text Books:

1. Materials Science and Engineering, W D Callister, 2014, 2nd Edition, Wiley India Private Limited, India.

Reference Books:

1. Material Science and Engineering, V Raghavan, 2013, 5th Edition, PHI publication, India.
2. Material Science and Engineering, S Chawla, 2011, 1st Edition, Dhanpat Rai & co Private Ltd., India.

Computer Aided Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1081	Computer Aided Engineering	3	0-2-1

Objective

- This course will help student to use structural scenario, thermal scenario and to do Structural analysis and Thermal analysis of various problems.

Course outcomes

- Create complete finite element models
- Submit and monitor analysis jobs
- View and evaluate simulation results

Course content

Module I: Material and Selection Properties

(6 Hrs)

Property Module, Material Definitions, Linear Elasticity, Large Strain Elasticity, Metal Plasticity, Material Calibration, Material Databases, Section Properties

Practice:

1. Analysis of crack in pressure vessel
2. Cable stayed bridge simulation

Module II: Element Selection Criteria

(6 Hrs)

Solid Element Selection, Structural vs. Continuum Elements, Modeling Bending Using Continuum Elements, Stress Concentrations

Practice:

3. Stress analysis of rail road with wheel.
4. Bike frame structural analysis

Module III: Meshing

(8 Hrs)

Mesh Module, Mesh Elements Mesh Generation Workflow, Local Fine-tuning Quality Checks, Mesh Compatibility, Mesh Convergence, Dependent and Independent Part Instances

Practice:

5. Airplane bracket structural analysis
6. Structural analysis of wind turbine blade

Module IV: Boundary Condition

(6 Hrs)

Step Module, Analysis Steps and Procedures, Output Requests, Output Files

Load Module, Loads and Boundary Conditions, Initial Conditions

Practice:

7. Generative structural analysis applied for design optimization
8. Stress analysis on a backhoe

Module V: Contact

(6 Hrs)

Mechanical Contact Properties, Contact Domain, Contact Formulation and Controls, Handling

Initial Over closures, Contact Output

Practice:

9. Analysis of Economizer.
10. Analysis of Screw Jack

Module VI: Analysis Procedures

(6 Hrs)

Model and Analysis Steps, Analysis Procedures, The static, general analysis procedure, Finding a converged solution, The Static, Linear Perturbation procedure, Buckle procedure, Frequency Procedure, The dynamic, explicit analysis procedure, Stability Limit, Analysis Continuation Techniques

Practice:

11. Steady state analysis of a composite bar.

Module VII: Thermal Analysis

(8 Hrs)

Steady State Heat Transfer, Transient Heat Transfer, Thermal Interfaces, Thermal Stress Analysis

Practice:

12. Temperature distribution in radiators used in automobiles
13. Oven radiation simulation

14. Steady state thermal analysis of tungsten coil with internal heat generation
15. Thermal analysis of disc brake

Projects

1. Thermal Analysis of PV Solar Pannel
2. Structural and thermal analysis of Green House
3. Structural analysis of Quadcopter.
4. Structural analysis of landing gear.
5. Numerical study on different types of fins.
6. Overhead tank failure analysis.
7. Analysis of Rocket Nozzle
8. Analysis of BAJA SAE
9. Structural and Thermal Analysis of Downdraft Gasifier
10. Structural and Thermal Analysis of Stirling Engine
11. Structural Analysis of Hydraulic Press
12. Structural Analysis of Elevating Conveyor

Quality Assurance

Code	Course Title	Credit	T-P-PJ
CUTM1082	Quality Assurance	2	1-1-0

Objective

- To introduce the concept of SQC
- To understand Design of Experiments concept and ANOVA test
- To learn about the different plots in quality control

Course outcomes

- Understand quality function deployment principles
- Understand concept of Failure mode affect analysis and apply it in product design process.
- Carry out statistical analysis of experiment, ANOVA ratio test and apply advanced DOE method for product testing.
- Understand statistical process control techniques and reliability concepts.
- Understand SIX SIGMA process and lean production concept.
- Prepare Pareto diagrams, cause and effect diagrams, matrix plots and 3-D plots.

Course content

Module I: Design for Quality (1hr)

Quality Function Deployment, Objectives and functions, Design process, controlling factors in design process.

Module II: Failure Mode Effect Analysis (FMEA) (3hrs)

Basic methods: Refining geometry and layout, general process of product embodiment, embodiment checklists, FMEA method.

Practice 1: Performing a FMEA of a Wooden Chair.

Module III: Design of Experiments (DOE) (4hrs)

Design of Experiments: Basic methods, two factorial experiments, orthogonality, Base design method, higher factorial experiments.

Practice 2: Design of Experiments for comfort conditions in a room using Minitab.

Module IV: Analysis of Variance (ANOVA) (4hrs)

Statistical analysis of experiments, degree of freedom, correlation coefficient, ANOVA test, residual plots.

Practice 3: Performing ANOVA to know the significance of influencing parameters for comfort conditions in a room using Minitab.

Module V: Statistical Process Control (SPC) (2hrs)

Frequency distributions and histograms, Pareto diagrams, Probability distribution, Matrix plots and 3D plots.

Module VI: Reliability (4hrs)

Reliability – Survival and Failure, series and parallel systems, mean time between failure, mean time to repair.

Practice 4: Determining the reliability of series and parallel systems.

Module VII: Design of Six Sigma (4hrs)

Basics of six sigma, project selection for six sigma, six sigma problem solving, six sigma and lean production.

Practice 5: Determining the six sigma limits during machining a cylindrical work piece on CNC lathe.

Text Books:

1. Stastical Quality Control, M. Mahajan, Khanna Publisher.
2. Reliability Engineering, L.S. Srinath, Affiliated East West Press.

Reference Books:

1. Robust Design for Quality Engineering and Six Sigma, Sung H. Park, World Scientific Publisher.

Applied Ergonomics

Code	Course Title	Credit	T-P-PJ
CUTM1083	Applied Ergonomics	2	0-1-1

Objective

- Use the Human Ergonomics software to create an accurate simulation of a human entity and its work environment to ensure a natural operation

Course outcomes

- Create, manipulate, and analyze how the manikins interact with a product and its environment

Course content

Module I: Introduction

4(hrs)

Introduction to Human Factors, Anthropometry and Workplace Design, Biomechanics of Work, Work Physiology, Stress and Workload, Introduction to Virtual Ergonomics Solution

Module II: Preparing Work Environment 2 (hrs)

Workbenches & Tool bars, Setting Options, Exploring the 3D Environment

Module III: Creating Manikin & Workspace 2 (hrs)

Creating Workspace, Setting Manikin Properties, Manipulating Manikin, interacting with workspace, setting manikin constraints, creating catalogs, performing clash analysis

Module IV: Human Measurements 2(hrs)

Workbenches & Tool bars, Human measurements editor, summing up using the editor

Module V: Human Activity Analysis 2 (hrs)

Workbenches & Tool bars, Human Activity Analysis, summing up the analysis

Module VI: Human Posture Analysis 2 (hrs)

Workbenches & Tool bars, Human Posture Analysis, summing up the analysis

Module VII: Human Task Simulation 4 (hrs)

Creating Process Activity, Creating a Manikin Activity, Inserting, resources, motion analysis, Human task simulation, Master project on Ergonomics

Text Books:

1. DassaultSystemes Companion Learning Space- Virtual Ergonomics Simulation

Reference Books:

Computer Aided Manufacturing

Code	Course Title	Credit	T-P-PJ
CUTM1084	Computer aided manufacturing	2	0-2-0

Objective

- Create 2-D geometry and 3-D models using various Commands in Master CAM software.
- Create part programs for CNC machining, Contour Concept of cutter compensation using G codes and M codes.
- Create tool path and program for 2-D Lathe operations
- Create tool path and program for 2-D milling, drill tool path, circular milling and facing operation.

Course outcomes

- Create 2-D Geometry and 3-D models using various Command in Master CAM software.
- Identify G-Codes and M-codes for programming
- Create 2-D tool path and program for 2-D facing , turning , drilling in lathe.
- Create 2-D tool path and program for circular milling and facing operations.
- Simulation of CNC programs using Master CAM software.

Course content

Module I: Introduction to CAM and Identification of toolbars in Master CAM software

(2 hrs)

Introduction to Computer Aided manufacturing and Master CAM. Identification of sketch toolbars like profile, operations toolbars and using the toolbars to generate the sketch.

Expt1: Create a 2D sketch using sketch tool bar and operations tool bar

Module II- 3-D models using various Commands in Master CAM software (2 Hrs)

Draw 3-D profiles using various sketch based features like extrude, revolve, Boolean features, rib, slot, groove etc.

Expt-2- Create 3 D model using various commands

Module III : Identification and use of G-code and M code in programming for lathe

(4 hrs)

Functions of G-Code and M-code in lathe machine .Selection and use of G-codes and M codes. Measure tool and work data offset data-X-Z offsets for lathes. Work offsets, length offsets and tool radius for machining center for creating part programming. Cutter compensation.

Expt-3- Create work offset for CNC milling machine using Master CAM.

Expt-4- Create Work off set for CNC lathe using master CAM

Module IV: Create 2D tool path for lathe operations (6hrs)

2D Tool path generation. Concepts of Machining: CNC control basics, & coordinate Systems, Selection of tool, tool parameters, Compensations Program Manager / Creation of 2D tool path for 2D turning , facing ,drilling operations

Expt-5- Create 2D tool path for facing and turning operation in lathe.

Expt-6- Create 2D tool path for a drilling operation in lathe.

Expt-7- Create 2D tool path for a given job in lathe.

Module V: Create 2D tool path for milling operations (6 hrs)

Selection of appropriate tool path for milling operation. Proper machine selection, job setting, tool selection. Selection of appropriate machining tolerance, machining parameters like speed, feed and depth of cut. CNC Programming 2-D milling, circular milling operations.

Expt-8- Create 2D tool path for facing and profile cutting.

Expt-9- Create 2d tool path for circular pocketing.

Expt-10- Create 2D tool path for circular counterboring.

Module VI: Post processing (3 hrs)

Post Processing: Generating NC / NC Files / Editing NC Files / Simulation of tool path.

Expt -11 Create a 2D tool path for a job in CNC milling machine and simulate it.

Expt-12- Create 2D tool path for a job in CNC lathe machine and simulate it.

Module : VII: Transferring Part programming into CNC machine

CNC interface with master CAM ,CNC controls and editing on a machine

Expt-12 : Transfer master CAM program to the CNC machine and perform dry run for a job.

Reference Books:

1. Groover, M.D and simmers ,E.W, CAD/CAM :Computer aided design and Manufacturing ,Person Education India.
2. Manuals of CAD/CAM software package on CAM module and CNC machine.

CNC Programming and CNC Machining

Code	Course Title	Credit	T-P-PJ
CUTM1085	CNC Programming and CNC Machining	2	0-2-0

Objective

- Evaluate manufacturing assignment based on critical thinking and problem solving skills. Become a good communicator and effective team member.
- Practice writing complex “G” code programs for CNC turning centers that meet the part specification
- Interpret and demonstrate complex “G” code programs for CNC milling centers that meet the part specification
- Prepare “G: code programs to perform secondary operations including tapping, countersinking, counter boring, and threading.
- Describe and illustrate common problems with tooling and fixtures in CNC programming and machining.

Course outcomes

- Explain applications and advantages of CNC machines and technology
- Demonstrate and explain various CNC control Calculate technological data for CNC machining
- Understand the importance and use of PPE’s
- Prepare and understand line program for various profiles Identify and set parameters for various simulators
- Prepare programs,demonstrate, simulate and operate CNC lathe machines for various machining operations
- Prepare programs,demonstrate, simulate and operate CNC milling machines for various machining operations
- Define and explain Modern CNC systems and explain its importance in manufacturing

Course content

Module I: introduction to CNC technology & programming(3hrs)

Introduction to CNC technology – CNC machines controls. History & development of CNC

technology. Conventional Vs. non-conventional machine tool. Numerical control on CNC machine tools CNC control and CNC Control and types of CNC control Calculation of technological data for CNC machining. CNC clamping system

Expt1: Identification of different parts of CNC lathe including data input

Expt2: Identification of different parts of CNC mill including data input

Module II: Drawing interpretation(3hrs)

Drawing interpretation practice, identifying feature from sketch and operation from feature

Expt3: Practice on CNC controller using on-screen simulation for generating different profile

Module III: CNC programming (4hrs)

Introduction to CNC programming Introduction and demonstration of line programs CNC programming on lathe & milling machine using iso codes into the CNC simulator. CNC programming for lathe and milling machines using different machining cycles into the CNC simulator. Procedures Associated with part programming, Cutting process parameter selection, Process planning issues and path planning, G & M Codes, Interpolations, Canned Cycles and Subprograms.

Expt4: Writing simple code and test on controller for CNC lathe

Expt5: Writing simple code and test on controller for CNC mill

Expt6: programming canned cycles for simple profile

Module IV: Program generation for CNC milling and turning(3hrs)

Tool compensations Exposure for programming and simulator of FANUC, SINUMERIC Programming exercise.

Expt 7: Machining of programmed exercise on CNC lathe machine.

Expt 8: Machining of programmed exercise on CNC milling machine.

Module V: CNC Turning (4hrs)

Plan and optimize programs for CNC turning operations. Calculate parameters like speed feed etc. and set a references for the various operations. Prepare operation and operation sequence for the

lathe operations like turning, grooving etc. Prepare & set CNC lathe operations and test run programmed Execute program and inspect simple geometrical forms / standard parts Use of various PPE's on CNC lathe machine

Expt 9-11: Programming for complex shape cylindrical objects with parameter selection, machining. (at least 3 exercises)

Module VI: CNC Milling(4hrs)

Plan and optimize programs for CNC Milling operations. Calculate parameters like speed feed, depth of cut etc. and set a references for the various operations. Various methods of work process like edge finding block center etc. Prepare & set CNC Milling operations and test run programmed. Execute program and inspect simple geometrical forms / standard parts. Use of various PPE's on CNC milling machine

Expt 12-14: Programming for complex shape prismatic objects with parameter selection, machining. (at least 3 exercises)

Module VII: Modern CNC systems (4hrs)

Introduction to advanced CNC systems: Computer Aided Part Programming (CAPP), it's application using Solidworks/MasterCAM. comparison of manual part programming and CAPP for a simple component, Automatic Tool Changer, Automatic Pallet Control, Automatic Storage & Retrieval Systems.

Expt 15: comparison of manual part programming and CAPP for a simple component

Design of Tools, Jigs and Fixtures

Code	Course Title	Credit	T-P-PJ
CUTM1086	Design of Tools, Jigs and Fixtures	3	2-1-0

Objective

- To learn basic concepts, functions and design principles of Jigs, Fixtures and Dies
- To know the importance of work piece location & clamping

Course outcomes

- Able to Understand and Analyse customers need
- Able discuss and finalise product needs
- Conceive the tool design parameters
- Design against standard and parameters
- Test against specifications and standards
- Develop prototype / simulation
- Interpret of output and confirming to specifications
- Communicate with manufacturing line
- Take remedial action if required

Course content

Module I: Locating Elements (3hrs)

Introduction, Jigs (Production Devices), Locating Principle, Locating methods and devices

Practice 1: Fabrication of a V – Locator for locating a cylindrical work piece.

Module II: Clamping Devices (3hrs)

Introduction, Pneumatics and hydraulic actuation clamping, Analysis of clamping force

Practice 2: Estimation of clamping force during clamping of a cylindrical work piece with a V-Locator.

Module III: Design of Jigs

(6hrs)

Introduction, drill bushes, elements of jig, construction, material for jig elements, different types of jigs

Practice 3: Designing of a Plate Jig.

Practice 4: Designing of a Swinging Leaf Jig.

Module IV: Drill Jigs

(3hrs)

Automatic drill jig, rack and pinion indexing device, Air operated drilling jig component, group jigs and fixtures, chip control, economic justification for jigs and fixtures

Practice 5: Study of Automated Jigs.

Module V: Design of fixtures

(6hrs)

Introduction, Design principles of fixtures, types of fixture, general principles of boring fixtures, classification of boring fixture, lathe fixture, broaching fixture, Milling fixture, Grinding fixture

Practice 6: Designing a Lathe Fixture.

Practice 7: Designing a Milling Fixture.

Module VI: Design of Dies for Sheet Metal Work

(5hrs)

Introduction, Types of dies, clearance and tolerance of die opening and punch, force, power, energy in shearing, strip layouts, economical stock utilization

Practice 8: Designing a progressive die for making of washer

Module VII: Design of Drawing and Forming Dies

(6hrs)

Theory of drawing, blank development, strain factor, calculation of force, construction of drawing and drawing dies, Modern Metal forming techniques

Practice 9: Designing a Forging die for making a gear blank

Practice 10: Designing a drawing die for making a circular cross-sectional wire.

Text Books:

1. Joshi, P H, Jigs & Fixtures, 2010, 3rd Edition, McGraw Hill.

2. Nagpal, G R, Tool Engineering & Design, 2000, Khanna Publishers.

Reference Books:

1. Venkataraman, K, Design of Jigs, Fixtures & Press Tools, 2015, Wiley & Sons
2. Mehta, N K, Metal Cutting and Design of Cutting Tools, Jigs & Fixtures, 2015, McGraw Hill

Advanced Metrology

Course Code	Course Title	Credit	T-P-PJ
CUTM1087	Advanced Metrology	2	1-1-0

Course Objective

- To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- Analyze Measurement Requirement.
- Can Choose Transducer & Sensors for Products.

Course Outline

Module: I Introduction to Metrology

(2Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice-1: Introduction to Metrology laboratory. Steel Rule, Tape, Right Angle Protractor, Surface Plate

Module: II Standards of Measurement (4 Hours)

Verniers and micrometers least count calculation, Uses of Slide callipers, Height Gauge, Micrometer and 3 point bore micrometer

Practice-2. Vernier Caliper inside, outside, depth measurement and Height Gauge

Practice-3. Micrometers, Outside Inside Micrometer, Depth Micrometer

Practice-4 Three point Bore Micrometer

Module: III Slip Gauges (2 Hours)

Types of Slip Gauge blocks and uses

Practice 5- Calibration of measuring Instruments using slip gauge blocks

Module: IV Limits, Fits and Tolerances (3 Hours)

Limits, Fits, Tolerances: Definitions, Types of Fits (Clearance, Transition and Interference) Allowances, Hole and Shaft basis systems with Numerical

Module: V Angle Measurement (3 Hours)

Spirit Level, Sine Bar and Bevel Protractor. Least count determination and applications

Practice-6. Sine Bar/Spirit Level Measurement of Angles on a Surface plate

Practice 7: Angle measurement by Bevel Protractor

Module: VI Gauge Design (2 Hours)

Design of Go and NO GO gauges, Ring gauge and Plug Gauge applications

Practice-8. Study and use Gauges-Filler, Radius, Thread, Wire, Snap, Go-NoGo gauge

Module: VII Measurement Machines (6 Hours)

Tool makers Microscope: Principle and applications, Measuring Machines: Coordinate Measuring Machine, Talysurf, Profile Projector

Practice-9. Measurement of template using Profile Projector

Practice 10: Measurement of Profile by Tool makers microscope

Practice 11: Measurement of surface roughness using Talysurf

Thermodynamics

Code	Course Title	Credit	T-P-PJ
CUTM1088	Thermodynamics	3	2-1-0

Objective

- To know the laws of thermodynamics and conditions for energy transformation
- To get familiar with different thermodynamic properties of pure substances

Course outcomes

- Utilize the concepts of work and energy to evaluate control volumes as well as closed systems
- Students will be able to do energy analysis and determine efficiency of various thermal devices

Course content

Module I: Basic Concepts of Thermodynamics 4(hrs)

System, Surroundings, Universe, State, Thermodynamic Properties, Process, Types of Process, Reversible and Irreversible process, Quasi-static Process, Cycle, Point and path functions, Thermodynamic Equilibrium, Ideal gas, Ideal gas equation

Module II: Zeroth Law of Thermodynamics 4(hrs)

Zeroth Law of Thermodynamics, Temperature, Measurement of Temperature, Temperature Measuring Instruments, Relationship between Temperature Scales

Practice:

Temperature Measurement by using Thermocouple, Thermistors and Resistance Temperature Detector (RTD)

Module III: Work Transfer and Heat Transfer 5(hrs) Work Transfer, Sign Convention of Work, PdV Work for Various Quasistatic Processes, Heat Transfer, Different Modes of Heat Transfer

Practice:

- Simulation of Heat Transfer in Conduction, Convection and Radiation using Finite Element Method in Simulia (Plane Wall, Fin, Metal Rod)
- Thermal Stress Analysis of IC Engine Piston using Simulia
- Thermal Analysis of Intake Manifold of Engine using Simulia

Module IV: First Law of Thermodynamics6(hrs)

First Law of Thermodynamics Applied to Closed System, Energy, PMM1, Enthalpy, Specific Heat at Constant Volume and Constant Pressure, First Law of Thermodynamics Applied to Open System, Control Volume, Mass Balance and Energy Balance, Nozzle, Diffuser, Turbine, Compressor, Throttling Device, Heat Exchanger

Practice:

- Thermal Analysis of Nozzle, Diffuser, Turbine, Compressor, Boiler, Heat exchanger using Simulia

Module V: Second Law of Thermodynamics5(hrs)

Kelvin Planks statement, Clausius Statement, PMM2, Working of Heat Engine, Refrigerator and Heat Pump, Carnot Cycle & Carnot Theorem

Practice:

- Working of Refrigerator and Heat Engine

Module VI: Entropy4(hrs)

Introduction to Entropy, Principle of Increase of Entropy, Clausius Inequality, Change in Entropy in Different Processes

Practice:

- Entropy Change of Metal Bar with Temperature Gradient using Simulia

Module VII: Properties of Pure Substances 5(hrs)

Introduction to Pure Substance, Phase Change Processes of Pure Substances, T-V, P-V, P-T and H-S Diagram for Steam, Dryness Fraction of Steam, Different Types of Steam. Introduction to

Steam Tables: Specific Volume, Pressure, Temperature, Enthalpy and Entropy

Practice:

- Conversion of water to steam
- Determination of properties of steam from Mollier Chart

Text Books:

1. P.K. Nag, "Engineering Thermodynamics", Tata Mcgraw-Hill Publishing Company Limited
2. Y.A Cengel, M. A Boles, "Thermodynamics an Engineering Approach", Tata Mcgraw-Hill Publishing Company Limited

Fluid Mechanics with Finite Volume Method

Code	Course Title	(Credit)	T-P-PJ
CUTM1089	Fluid Mechanics with Finite Volume Method	3	2-1-0

Objective

- To learn To learn fundamentals of computational methods like FVM for solving linear and non-linear partial differential equations related to fluid dynamics
- To emphasizes the basic underlying fluid mechanical principles governing energy transfer in a fluid flow systems with their performances in different field of engineering applications

Course outcomes

- After completion of the course, the students will able to evaluate finite difference/volume schemes on model problems of computational fluid dynamics.
- Students will learn to develop steady state mechanical energy balance equation for fluid flow systems, estimate pressure drop in fluid flow systems

Course content

Module I: Introduction to Finite volume Method

(6 hrs)

Fundamentals of Finite volume methods, different types of finite volume grids, approximation of surface and volume integrals; interpolation methods, Review of governing equations, Classification of governing equations , Staggered and co-located formulation

Practice:

1. 2D mapped Mesh for rectangular pipe
2. 2D mapped Meshing for Aerofoil.

Module II: Grid generation

(6 hrs)

Grid generation, creating, updating and managing meshes, Steady diffusion equation on structured meshes, Unsteady diffusion equation on structured meshes, Linear system solvers, finite volume discretization of steady and unsteady diffusion equation, Finite volume discretization of convection-diffusion problem

Practice:

3. 3D structure mesh of Circular Cylinder
4. 3D unstructured mesh with primes layers for Aerofoil
5. 3D coarse/ medium/ fine sweep mesh for pipe

Module III: Incompressible flow field calculation with finite volume method (5 hrs)

Navier-stokes equation, Discretization of the Momentum Equation: Stream Function-Vorticity approach and Primitive variable approach, Staggered grid and Collocated grid solutions of Navier-stokes equation with finite volume method, boundary condition, Reynolds averaged Navier-Stokes equations.

Module IV: Fluid kinematics (2 hrs)

Types of flow, Continuity equation (in one, two & three dimension steady state fluid flow analysis with finite volume method, velocity and acceleration fields, streamline, streak line, path line, velocity potential function and stream function, Rotation and vorticity.

Module V: Fluid Dynamics with Finite volume method (4 hrs)

Lagrangian and Eulerian Approach, Euler's equation of motion along a stream line for ideal flow, Principle of conservation of energy with finite volume method, Integration of Euler's equation along a stream line, Bernoulli's equation

Practice:

6. Fluid Analysis of Bernoulli's equation: Flow in a contracting pipe through CFD simulation

Module VI: Flow through Pipes (5 hrs)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, Introduction Turbulence modeling through Finite volume method, Hagen Poiseuille Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe.

Practice:

7. Fluid Analysis of Laminar flow in 3D Circular Pipe through CFD simulation
8. CFD Simulation of the Water Flow Passing Through a Converging Pipe.
9. CFD Analysis to determine the frictional losses in the pipe.

Module VII: Flow Measurement (5 hrs)

Flow through small orifice meter, Mouthpiece, Velocity Measurement using Pitot tube, Prandtl

tube, Flow measurement in pipes-Flow, Venturi Meter, Flow rate Measurement in channel- Weir and Notches

Practice:

10. CFD Analysis of Fluid flow through Orifice meter
11. CFD Analysis of Fluid flow through adjustable channel
12. CFD Analysis of Fluid flow simulation through Venturi Meter

Text Books:

1. R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications, ninth edition

Reference Books:

2. P.N. Modi & S.N. Seth, Hydraulics & Fluid Mechanics, Rajsons Publications Pvt. Ltd, Twentieth Edition

Hydraulic Machinery

Code	Course Title	(Credit)	T-P-PJ
CUTM1090	Hydraulic Machinery	2	1-1-0

Objective

- To emphasize Principle of operation of hydraulic machines and their system design
- To familiarize their huge applications in different industries

Course outcomes

- After completion of the course, the students will have a strong foundation on the pertinent equations to engineering design of the machines for required applications.
- Students will learn to determine performance characteristics of fluid machinery by using various simulation tools

Course content

Module I: Principle of Operation of Hydraulic Machinery (2 hrs)

Introduction to hydraulic machines: Classification and operation principle, Euler equation for turbo machines: net head developed by pump and Turbines

Module II: Radial and Axial flow pumps (8 hrs)

Velocity triangle of pumps, effect of inlet swirl on velocity triangles, Constructional features of Centrifugal Pump, design aspect, working principle and efficiencies, work done by the impeller, priming, specific speed, NPSH, effect of swirl on the cavitations, working principle and design aspect of gear oil pump.

Practice:

1. Flow analysis of fluid of Centrifugal pump through Simulia software
2. Flow analysis of gear oil pump through Simulia software
3. Performance Characteristics of Centrifugal Pump through Virtual lab

Module III: Positive displacement Pumps (3 hrs)

Working principle of Reciprocating Pump, discharge, work done and power requirement, ideal indicator diagram, and slip, characteristic H-Q curve of positive displacement pump

Practice:

4. Performance Characteristics of Double Acting Reciprocating Pump through Virtual lab.

Module IV: Hydraulic Turbine: Impulse Turbine (6 hrs)

Classification, definitions of heads and efficiencies, Pelton Wheel - Construction and working principle, work done and hydraulic efficiency, design aspects.

Practice:

5. Simulation of Pelton Turbine through simulia software

6. Performance Characteristics of Pelton Turbine through Virtual lab.

Module V: Hydraulic Turbine: Reaction Turbine (6 hrs)

Reaction turbine (Francis, Kaplan) -Components, working principle, work done and efficiency, draft tube, specific speed, cavitations

Practice:

7. Performance Characteristics of Francis Turbine Simulia software.

8. Simulation of Kaplan turbine through Virtual lab.

Text Books:

Theory of Machines

Code	Course Title	(Credit)	T-P-PJ
CUTM1091	Theory of Machines	3	2-1-0

Objective

- To cover the kinematics and dynamics of planar single degree freedom mechanisms
- To develop skills for designing and analyzing linkages, cams, gears and other mechanisms
- To address the underlying concepts, methods and application of different machines.

Course outcomes

- To understand the implication of computed results in kinematics to improve design of a mechanism.
- To Interpret the simple given dynamic problems and solve them for positions, velocities and accelerations, etc

Course content

Module I: MECHANISMS

(03hrs)

Theory

Planar Mechanisms: Kinematic Link, Pair, Chain and Mechanism, Types of Links and Joints, Degree of Freedom, Grashof's Law for four bar Mechanism; Inversions of four bar Mechanism, Single Slider Crank Mechanism and Double Slider Crank Mechanism;

Practice

(01 hrs)

1. Position Analysis of Grashof and Non-Grashof four bar Mechanism.
2. Position Analysis of Slider Crank Mechanism, Scotch Yoke Mechanism and Elliptical Trammel

Module II: MOTION ANALYSIS(03hrs)

Theory

Instantaneous Centre of Rotation, Number and Types of Instantaneous Centers, Kennedy Theorem, Relative Velocity Method, Velocities and acceleration in Four Bar and Slider Crank Mechanism.

Practice

(02 hrs)

3. Instantaneous Center Method to Find Velocity of Various Mechanisms.

4. Velocity Analysis of Grashof and Non-Grashof Four Bar Mechanism
5. Velocity Analysis of Slider Crank Mechanism .
6. Acceleration Analysis of Slider Crank Mechanism

Module III: POWER TRANSMISSION SYSTEM(03hrs)

Theory

Classification and Basic Terminology, Fundamental Law of Gearing,

Gear trains: Simple, Compound, Reverted and Epi-Cyclic Gear Trains

Flat Belt, V Belt and Rope Drives and chain drives ,Length of open and cross belt drive, Power Transmitted by Belts and Ropes.

Practice

(02 hrs)

7.Experiment to calculate sensitiveness of Governor

8.Length of open and cross belt drive

Module IV: CAMS& GOVERNOR(03hrs)

Theory

Various Types of Cams and Followers; Displacement, Velocity and Acceleration Diagrams for Different Follower Motions; Nomenclature of Cam Profile;

Classification of Governors, Working principle of various type of centrifugal governors, Terminology related to Governor.

Practice

(03 hrs)

9. Construction of cam profile using Solid works software

10. Cam analysis of a Knife edge and roller follower

11.To calculate sensitiveness of Governor

Module V: GYROSCOPE (02hrs)

Theory

Gyroscopic Couple, Gyroscopic Effect on Naval Ships and Aeroplanes, Stability of four wheeler

Practice (01 hrs)

12. Determine Gyroscopic Couple on Motorized Gyroscope

Module VI: BALANCING(03hrs)

Theory

Static and Dynamic Balancing, Balancing of Several Masses Revolving in the Same Plane and Different Planes, Balancing of Reciprocating Mass

Practice (02 hrs)

13. Balancing of Several Masses Revolving in the Same and Different Planes

14. Balancing of Reciprocating masses by Simulation

Module VII: VIBRATION (03hrs)

Theory

Basic Concepts and Types of Vibration, Methods of Vibration Analysis, Free Undamped Longitudinal, Transverse and Torsional Vibrations, Damped Free Vibrations, Logarithmic Decrement, Vibration Isolation and Transmissibility;

Practice (02 hrs)

15. Determination of Critical or Whirling Speed of Shaft

16. Simple and Compound Pendulum

Text Books:

- 1.S. S. Rattan Theory of Machines,. Tata McGraw-Hill Education, 2014
2. Joseph E Shingley Theory of Machines and Machinery oxford publication

Reference Books:

2. Singh. S, Theory of Machines, Khanna publishers.
3. Norton R.L, Design of Machinery, McGraw-Hill.

Heat and Mass Transfer With FDM/FVM

Code	Course Title	Credit	T-P-PJ
CUTM1092	Heat and Mass Transfer With FDM/FVM	3	2-1-0

Objective

- To provide a good exposure for the students to various phenomena associated with fluid flow and different modes of heat & mass transfer

Course outcomes

- Students will be able to analyze and design various Equipment used in industry using principles of Heat Transfer

Course content

Module I: Conduction

(5 Hrs)

Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, One Dimensional Steady State Conduction in Composite Cylinders and Composite Spheres with Convective Atmosphere. Electrical Analogy, Conduction with Internal Heat Generation.

Practice

1. To find the thermal conductivity of a material by the two slabs guarded hot plate method.
2. To find heat transfer through composite wall using Simulia

Module II: Fins and Transient Conduction

(6 Hrs)

Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.

Practice

3. To find the thermal resistance of the sample.
4. To find the thermal resistance of the sample using Simulia
5. To find the heat transfer in Transient Heat Conduction using Simulia

Module III: Convection

(9 Hrs)

Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces.

Practice

6. To determine the overall heat transfer coefficient at the surface of a given vertical metal cylinder by the natural convection method.
7. To verify Newton's Law of Cooling of different materials and different liquids.
8. To determine heat transfer coefficient using Simulia
9. To find the temperature variation and heat transfer along cylinder in forced convection using Simulia
10. To find the temperature variation and heat transfer along solid cylinder in natural convection using Simulia

Module IV: Heat Transfer With Phase Change

(2 Hrs)

Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.

Module V: Heat Exchangers

(6 Hrs)

Types of Heat Exchangers, Heat Exchanger Analysis Types of Heat Exchangers, Heat Exchanger Analysis, LMTD, Overall Heat Transfer Coefficient, Heat Exchanger Effectiveness, NTU.

Practice

11. Determination of Effectiveness and Efficiency of Parallel Flow and Counter Flow Heat Exchanger.
12. CFD simulation of Heat Exchanger using Simulia

Module VI: Radiation

(8 Hrs)

Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black and Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.

Practice

13. To find the emissivity of different material surface.
14. Verification of Stefan Boltzmann's Law using simulia

Module VII: Mass Transfer

(4 Hrs)

Introduction, Analogy between heat and mass transfer, Mass diffusion, Fick's law of diffusion, boundary conditions, Steady mass diffusion through a wall, Mass convection.

Text Books:

1. Mahesh M. Rathore, Engineering Heat Transfer , Jones & Bartlett Learning, 2011
2. YunusCengel, Heat And Mass Transfer: Fundamentals And Applications, McGraw-Hill Higher Education, 2014

Theories of Failure Using Finite Element Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1062	Theories of Failure Using Finite Element Analysis	4	2-2-0

Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on Finite Element Analysis concept applicable to Practical conditions.
- To educate the students on Failure Criterion which will be useful for designing Practical problems.
- To educate the students on using 3D Experience Tools for analysis of various mechanical structures and load transmitting elements.

Learning outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy 3D Experience Platform to develop design solutions.
- Students will be able to apply the Concept of Meshing and Failure Criteria to Practical Problems which will lead Economical and safe in Design Aspect.

Course content

Module I Introduction to Finite Element Analysis (FEA) and 3D Experience Platform - (4(T)+5(P)) (9 Hours)

Introduction to FEA: Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence; General Procedure of FEA.

Material failure Behaviour: Stress–Strain Diagrams for Ductile and Brittle Materials.

Equivalent stresses for varying orientations, Principal stresses, maximum shear stress, Mohr's circles.

Practice:

1. Introduction to 3D Experience Platform: About the Apps and their Applications from

Engineering Point of View.

2. Analysis of Steel Bridge – Simulation using 3D Experience Tool.

3. Tensile Test using Simulation 3D Experience Tool.

4. Stress Strain Curve of a Ductile Material (Mild Steel) using Universal Testing Machine

Module II Mesh Generation and Modeling of Truss Structure (1(T)+ 4(P) (5 Hours)

Mesh Generation and Methods of Meshing and Types of Meshing. Procedure for selecting the method of meshing and type of meshing. Importance and application of Stiffness Matrix for different types of elements and the procedure for getting the results.

Practice:

5. 3D Experience Simulia – Modelling and Meshing of Transmission line tower.

Module III Stresses and Deflection Criteria: (5(T)+ 4(P) (9 Hours)

Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

Stresses (No Derivation): Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination of Bending Stresses, Shear Stress Distribution for Different Sections.

Deflection: Equation of Elastic Curve, Direct Integration Method

Practice:

6. 3D Experience Simulia – Modelling and Finite Element Analysis of Framed Structure subjected Earthquake Loads.

Module IV: Theories of Failure: (2(T)+ 4(P) (6 Hours)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

Practice:

7. 3D Experience Simulia: Bicycle Frame Structural Analysis

Module V: Torsion: (3(T)+ 4(P) (7 Hours)

Torsion: Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and

Parallel.

Dynamic Analysis: Fundamentals of Vibration; Evaluation of Natural Frequencies and Mode Shapes (Eigen values and Eigenvectors); Non-linear Analysis, Fatigue Analysis. Structures Subjected to Blast Loads.

Practice:

8. Simulation: Static and Dynamic Analysis of Shaft

Module VI Pressure Vessels (1(T)+ 2(P)) (3 Hours)

Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Practice:

9. Simulation: Crack Analysis of Thin walled Pressure Vessels.

Module VII Fatigue and Fracture: (3(T)+ 4(P)) (7 Hours)

Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Crack Growth and Stress Intensity Factor.

10. Fatigue Analysis of Crankshaft of Two-Wheeler

Text Books:

1. Strength of Materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced Mechanics of Materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

1. Elements of Fracture mechanics, Prashant Kumar, McGraw Hill Education (India)
2. Engineering Mechanics of Solids, Egor P. Popov, Pearson publication
3. Strength of Materials, R.K.Bansal, Laxmi Publications.

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1093	Optimization Techniques	2	0-2-0

Objective

- To Create an Engineering design methodology using a mathematical formulation of a design problem to support selection of the optimal design among alternatives

Learning outcome

- Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems
- Ability to go in research by applying optimization techniques in problems of Engineering and Technology
- Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course content

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Database Management Systems

Code	Course Title	Credit	T-P-PJ
CUTM1059	Database Management Systems	3	2-1-0

Objective

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database Modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential Properties of DBMS concepts such as: database security, integrity, concurrency
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Learning outcome

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data
- Improve the database design by normalization
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing

Course content

Module-1: DBMS Concepts [5 Hrs]

Data Abstraction - Data models and data independence. Instances and Schemas. Components of a DBMS and overall structure of a DBMS- Life Cycle of a DBMS application- Database terminology.

Module-2: Data Modeling [5Hrs]

Basic concepts- Types of data models- Conceptual, physical and logical database models- E-R data model and Object-oriented data model. Components of ER Model- ER Modeling symbols.

Entity and entity sets- Relations and relationship sets- E-R Diagrams- Reducing E-R Diagrams into tables.

Practice

Assume we have the following application that models soccer teams, the games they play, and the

players in each team. In the design, we want to capture the following:

- We have a set of teams, each team has an ID (unique identifier), name, main stadium, and to which city this team belongs.
- Each team has many players, and each player belongs to one team. Each player has a number (unique identifier), name, DoB, start year, and shirt number that he uses.
- Teams play matches, in each match there is a host team and a guest team. The match takes place in the stadium of the host team.
- For each match we need to keep track of the following:
 - The date on which the game is played
 - The final result of the match
 - The players participated in the match. For each player, how many goals he scored, whether or not he took yellow card, and whether or not he took red card.
 - During the match, one player may substitute another player. We want to capture this substitution and the time at which it took place.
 - Each match has exactly three referees. For each referee we have an ID (unique identifier), name, DoB, years of experience. One referee is the main referee and the other two are assistant referee.

Design an ER diagram to capture the above requirements. State any assumptions you have that affects your design (use the back of the page if needed). Make sure cardinalities and primary keys are clear.

Module-3: Relational DBMS Model [5 Hrs]

Basic concepts, Attributes and domains- Intention and extensions of a relation- concept of integrity and referential constraints- Relational Query Languages (Relational algebra and relational calculus (Tuple and domain relational calculus)).

Module-4: Relational Database Design [6 Hrs]

Notion of normalized relations- Normalization using Functional Dependency- First Normal form- Second Normal Form- Third Normal form- BCNF.

Practice

Perform NF on the given table

[CLICK HERE FOR TABLE](#)

Module-5: SQL [6 Hrs]

Structure of a SQL query- DDL and DML, TCL- SQL queries and sub queries- Tables, views and indexes.

Practice

To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

```
CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5) ,CNAME VARCHAR2(18) , BNAME
VARCHAR2(18) , AMOUNT NUMBER(8,2) ,ADATE DATE);
CREATE TABLE BRANCH(BNAME VARCHAR2(18),CITY VARCHAR2(18)); CREATE
TABLE CUSTOMERS(CNAME VARCHAR2(19) ,CITY VARCHAR2(18));
CREATE TABLE BORROW(LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME
VARCHAR2(18), AMOUNT NUMBER (8,2));
```

(ii) Insert the data as shown below.

DEPOSIT

[CLICK HERE FOR TABLE](#)

BRANCH

[CLICK HERE FOR TABLE](#)

CUSTOMERS

[CLICK HERE FOR TABLE](#)

BORROW

[CLICK HERE FOR TABLE](#)

- (1) Describe deposit, branch.
- (2) Describe borrow, customers.
- (3) List all data from table DEPOSIT.
- (4) List all data from table BORROW.
- (5) List all data from table CUSTOMERS.
- (6) List all data from table BRANCH.
- (7) Give account no and amount of depositors.
- (8) Give name of depositors having amount greater than 4000.
- (9) Give name of customers who opened account after date '1-12-96'.

Module-6:Aggregate functions [4 Hrs]

Set Operations, predicates and joins, Set Membership- Tuple variables- Set comparison- Database modifications using SQL.

Practice

Create the below given table and insert the data accordingly.

Create Table Job (job_id, job_title, min_sal, max_sal)

COLUMN NAME DATA TYPE

job_id Varchar2(15)

job_title Varchar2(30)

min_sal Number(7,2)

max_sal Number(7,2)

Create table Employee (emp_no, emp_name, emp_sal, emp_comm, dept_no)

COLUMN NAME DATA TYPE

emp_no Number(3)

emp_name Varchar2(30)

emp_sal Number(8,2)

emp_comm Number(6,1)

dept_no Number(3)

Create table deposit(a_no,cname,bname,amount,a_date).

COLUMN NAME DATA TYPE

a_no Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Number(7,2)

a_date Date

Create table borrow(loanno,cname,bname,amount).

COLUMN NAME DATA TYPE

loanno Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Varchar2(7,2)

Insert following values in the table Employee.

emp_n emp_name emp_sal emp_comm dept _no

101 Smith 800 20

102 Snehal 1600 300 25

103 Adama 1100 0 20

104 Aman 3000 15

105 Anita 5000 50,000 10

106 Sneha 2450 24,500 10

107 Anamika 2975 30

Insert following values in the table job.

[CLICK HERE FOR TABLE](#)

Insert following values in the table deposit.

[CLICK HERE FOR TABLE](#)

Perform following queries

- (1) Retrieve all data from employee, jobs and deposit.
- (2) Give details of account no. and deposited rupees of customers having account opened between dates 01-01-06 and 25-07-06.
- (3) Display all jobs with minimum salary is greater than 4000.
- (4) Display name and salary of employee whose department no is 20. Give alias name to name of employee.
- (5) Display employee no,name and department details of those employee whose department lies in(10,20)

To study various options of LIKE predicate

- (1) Display all employee whose name start with 'A' and third character is 'a'.
- (2) Display name, number and salary of those employees whose name is 5 characters long and first three characters are 'Ani'.
- (3) Display the non-null values of employees and also employee name second character should be 'n' and string should be 5 character long.
- (4) Display the null values of employee and also employee name's third character should be 'a'.
- (5) What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'

To Perform various data manipulation commands, aggregate functions and sorting concept on all created tables.

- (1) List total deposit from deposit.
- (2) List total loan from karolbagh branch
- (3) Give maximum loan from branch vrce.
- (4) Count total number of customers
- (5) Count total number of customer's cities.
- (6) Create table supplier from employee with all the columns.
- (7) Create table sup1 from employee with first two columns.
- (8) Create table sup2 from employee with no data
- (9) Insert the data into sup2 from employee whose second character should be 'n' and string should be 5 characters long in employee name field.
- (10) Delete all the rows from sup1.
- (11) Delete the detail of supplier whose sup_no is 103.
- (12) Rename the table sup2.
- (13) Destroy table sup1 with all the data.
- (14) Update the value dept_no to 10 where second character of emp. name is 'm'.
- (15) Update the value of employee name whose employee number is 103.

To study Single-row functions.

- (1) Write a query to display the current date. Label the column Date
- (2) For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary
- (3) Modify your query no 4.(2) to add a column that subtracts the old salary from the new salary. Label the column Increase
- (4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.
- (5) Write a query that produces the following for each employee:
earns monthly
- (6) Display the name, hire date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.
- (7) Display the hiredate of emp in a format that appears as Seventh of June 1994 12:00:00 AM.
- (8) Write a query to calculate the annual compensation of all employees (sal+comm.).

Displaying data from Multiple Tables (join)

- (1) Give details of customers ANIL.
- (2) Give name of customer who are borrowers and depositors and having living city nagpur
- (3) Give city as their city name of customers having same living branch.
- (4) Write a query to display the last name, department number, and department name for all employees.
- (5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output
- (6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.
- (7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.
- (8) Create a query to display the name and hire date of any employee hired after employee SCOTT.

Module-7: Transaction Management [8 Hrs]

Subqueries, Manipulating Data, Transaction management and Concurrency control

Practice

To apply the concept of Aggregating Data using Group functions.

- (1) List total deposit of customer having account date after 1-jan-96.
- (2) List total deposit of customers living in city Nagpur.
- (3) List maximum deposit of customers living in bombay.
- (4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
- (5) Write a query that displays the difference between the highest and lowest salaries. Label the

column DIFFERENCE.

- (6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
- (7) Find the average salaries for each department without displaying the respective department numbers.
- (8) Write a query to display the total salary being paid to each job title, within each department.
- (9) Find the average salaries > 2000 for each department without displaying the respective department numbers.
- (10) Display the job and total salary for each job with a total salary amount exceeding 3000, in which excludes president and sorts the list by the total salary.
- (11) List the branches having sum of deposit more than 5000 and located in city bombay.

To solve queries using the concept of sub query.

- (1) Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
- (2) Give name of customers who are depositors having same branch city of mr. sunil.
- (3) Give deposit details and loan details of customer in same city where pramod is living.
- (4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
- (5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000
- (6) Display the last name and salary of every employee who reports to ford.
- (7) Display the department number, name, and job for every employee in the Accounting department.
- (8) List the name of branch having highest number of depositors.
- (9) Give the name of cities where in which the maximum numbers of branches are located.
- (10) Give name of customers living in same city where maximum depositors are located.

Manipulating Data

- (1) Give 10% interest to all depositors.
- (2) Give 10% interest to all depositors having branch vrce
- (3) Give 10% interest to all depositors living in n agpur and having branch city bombay.
- (4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844's current department number.
- (5) Transfer 10 Rs from account of anil to sunil if both are having same branch.
- (6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.
- (7) Delete depositors of branches having number of customers between 1 to 3.
- (8) Delete deposit of vijay.
- (9) Delete borrower of branches having average loan less than 1000.

To apply the concept of security and privileges.

To study Transaction control commands

Programming in Java(Same as Java Technologies)

Code	Course Title	Credit	T-P-PJ
CUTM1058	Programming in Java(Same as Java Technologies)	3	2-1-0

Objective

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development
- Have the ability to write a computer program to solve specified problems
- Have the ability to write a computer program to solve specified problems
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Learning outcome

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Identify and fix defects the common safety issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project
- Qualify confidently any interview process where Java is the requirement

Course content

Module I: Introduction to Java (8 hrs)

Features and Installation, Java Programming Basics, Decision Making and Looping, Class and Object, Inheritance

Practice 1 (1 Hr)

Practice 2 (1 Hr)

Module II: Package and Safe Code (5 Hr)

Interfaces, Packages and Access Protection, Exception Handling (Fault Tolerant Programming)

Practice 3 (1 Hr)

Module III: Collection and Threads (5 Hr)

ArrayList, Vector, Set, Map, Multi-threaded Programming, Synchronization

Practice 4 (1 Hr)

Module IV: Language and Utility Packages (5 Hr)

String Handling, Wrappers, Runtime Memory Management, Cloning, Calendar, Date and Time Facilities, Scanner, Internationalization

Practice 5 (1 Hr)

Practice 6 (1 Hr)

Module V: Input/ Output and Applets (5 Hr)

Byte and Character Stream I/O, Persistence, Applet: Architecture, Skeleton, and Implementation

Practice 7 (1 Hr)

Practice 8 (1 Hr)

Module VI: GUI Programming (5 Hr)

AWT: Container, Components, Layout Managers, Event Handling

Practice 9 (1 Hr)

Practice 10 (1 Hr)

Module VII: Networking and Advanced (5 Hr)

Networking Fundamental, Client-Server Communication, Remote Method Invocation (RMI),

Java Virtual Machine (JVM) Tuning, Java Profiler

Practice 11 (1 Hr)

Practice 12 (1 Hr)

Online Coding Practice: <https://www.hackerrank.com/>

List of Practices:

Practice 1 (Module-I)

Program-1:

Write a program that computes the standard deviation of a set of floating point numbers that the user enters. First the user says how many numbers N are to follow. Then the program asks for and reads in

each floating point number. Finally it writes out the standard deviation. The standard deviation of a set of numbers X_i is:

$$SD = \text{Math.sqrt}(\text{avgSquare} - \text{avg}^2)$$

Here, avg is the average of the N numbers, and avg^2 is its square.

avgSquare is the average of $X_i * X_i$. In other words, this is the average of the squared value of each floating point number.

For example, if $N = 4$, say the numbers were:

$X_i \quad X_i * X_i$

2.0 4.0

3.0 9.0

1.0 1.0

2.0 4.0

sum 8.0 18.0

Now:

$$\text{avg} = 8.0/4 = 2.0$$

$$\text{avg}^2 = 4.0$$

$$\text{avgSquare} = 18.0/4 = 4.5$$

$$SD = \text{Math.sqrt}(4.5 - 4.0) = \text{Math.sqrt}(.5) = 0.7071067812$$

To do this you will need to do several things inside the loop body for each floating point value as it comes in: add it to a sum, square it and add it to a sum of squares. Then after the loop is finished apply the formula.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 2 (Module-I)

Program-1:

Better encapsulation of the Goods class would call making instance variables private and using getter and setter methods to access them. A further refinement would be to make the class abstract and to define additional child classes. Here is a revised Goods class:

```
public abstract class GoodsSGA
{
    private String description;
    private double price;
    private int quantity;
    public GoodsSGA( String des, double pr, int quant )
    {description = des;
    price = pr;
    quantity = quant;}
    double getPrice()
    {return price;}
    void setPrice( double newPrice)
    {price = newPrice;}
    int getQuantity()
    {return quantity;}
    void setQuantity ( int newQuantity )
    {quantity = newQuantity;}
    public String toString()
    {return "item: " + description + " quantity: " + quantity + " price: " + price ;}
```

Revise the source code for the classes Food, Toy, and Book. (Perhaps call the revised classes FoodSG,

ToySG, and BookSG.) create a new class ToiletrySG for things like bubble bath. Create a new testing class, StoreSG to test your revised classes.

Note: the child classes will need to use the getter and setter methods to access the instance variables that are declared as private in GoodsSG.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 3 (Module-II)

Program-1:

User-Friendly Division Practice:

Put in a loop so that the user is repeatedly asked for the numerator and the divisor. For each set of data, the program prints out the result, or an informative error message if there is a problem (division by zero or poor input data).

The program continues looping, even if there is a problem Exit the loop when data entered for the numerator start with characters "q" or "Q". Don't print out an error message in this case.

Don't ask for the divisor if the user just asked to quit.

Here is sample output from one run:

Enter the numerator: 12

Enter the divisor: 4

12 / 4 is 3

Enter the numerator: 12

Enter the divisor : 0

You can't divide 12 by 0

Enter the numerator: glarch

You entered bad data.

Please try again.

Enter the numerator: quit

You will need to use the method `charAt()` from the `String` class.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 4 (Module-III)

Program-1:

In mathematics, several operations are defined on sets. The union of two sets A and B is a set that contains all the elements that are in A together with all the elements that are in B . The intersection of A and B is the set that contains elements that are in both A and B . The difference of A and B is the set that contains all the elements of A except for those elements that are also in B .

Suppose that A and B are variables of type `set` in Java. The mathematical operations on A and B can be computed using methods from the `Set` interface. In particular:

`A.addAll(B)` computes the union of A and B ; `A.retainAll(B)` computes the intersection of A and B ; and `A.removeAll(B)` computes the difference of A and B . (These operations change the contents of the set A , while the mathematical operations create a new set without changing A , but that difference is not relevant to this exercise.)

For this exercise, you should write a program that can be used as a “set calculator” for simple operations on sets of non-negative integers. (Negative integers are not allowed.) A set of such integers will be represented as a list of integers, separated by commas and, optionally, spaces and enclosed in square brackets. For example: `[1,2,3]` or `[17, 42, 9, 53,108]`. The characters `+`, `*`, and `-` will be used for the union, intersection, and difference operations. The user of the program will type in lines of input containing two sets, separated by an operator. The program should perform the operation and print the resulting set.

Here are some examples:

Input Output

[1, 2, 3] + [3, 5, 7] [1, 2, 3, 5, 7]

[10,9,8,7] * [2,4,6,8] [8]

[5, 10, 15, 20] - [0, 10, 20] [5, 15]

To represent sets of non-negative integers, use sets of type `TreeSet<Integer>`. Read the user's input, create two `TreeSets`, and use the appropriate `TreeSet` method to perform the requested operation on the two sets. Your program should be able to read and process any number of lines of input. If a line contains a syntax error, your program should not crash. It should report the error and move on to the next line of input. (Note: To print out a Set, A, of Integers, you can just say `System.out.println(A)`. We've chosen the syntax for sets to be the same as that used by the system for outputting a set.)

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 5 (Module-IV)

Program-1:

Password Checker:

Write a program that repeatedly asks the user for a proposed password until the user enters an acceptable password. When the user enters an acceptable password, the program writes a message and exits.

Acceptable passwords:

Are at least 7 characters long.

Contain both upper and lower case alphabetic characters. Contain at least 1 digit. The logic of this program can be quite tricky. Hint: use `toUpperCase()`, `toLowerCase`, and `equals()`. You will also need nested ifs.

Here is a run of the program:

Enter your password:

snowflake

That password is not acceptable.

Enter your password:

SnowFlake

That password is not acceptable.

Enter your password:

snowflake47

That password is not acceptable.

Enter your password:

Snowflake47

Acceptable password.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 6 (Module-IV)

Program-1:

Secret Code:

A text message has been encoded by replacing each character of the message with an integer. Each integer is an index into a key-phrase that contains all the lower case letters of the alphabet as well as the space character. The key-phrase may contain the same character in several locations. The encoded text is series of integers, like this:

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

To decode the message, look up each integer in the key-phrase and output the corresponding character.

For example, say that the key-phrase is this (the index of each character has been written above it):

111111111122222222223333333333444444444455

0123456789012345678901234567890123456789012345678901

six perfect quality black jewels amazed the governor

using each integer from the encoded text as an index into the phrase results in the decoded message:

attack the bridge at dawn

Write a program that decodes a secret message contained in a text file. The first line of the text file contains the key-phrase. Then the file contains a sequence of integers, each of which indexes the key-phrase. Find the character corresponding to each integer and output the secret message. Note if a character character such as 'e' occurs several places in the key-phrase it may be encoded as different integers in different parts of the secret message.

(The recipient of the secret message gets only the file of integers and must put the key-phrase at the top of the file.) For example, here is the contents of a secret message file ready for the program:

six perfect quality black jewels amazed the governor

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

Here is a sample run of the program:

```
C:\> java Decode < secretFile.txt
```

attack the bridge at dawn

You will need the charAt() method of String.

Here is another secret message file, with key-phrase inserted, that you can use to test your program:

six perfect quality black jewels amazed the governor

31 16 2 3 4 42 48 7 27 9 10 43 12 13 35 15 1 40 18 3

20 15 33 23 24 32 26 29 28 27 21 31 25 14 34 14 36

42 38 19 40 41 27 3 44 50 46 42 48 49 50 6

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 7 (Module-V)

Program-1:

Stop Word Remover:

Write a program that reads in a file of text, perhaps the text of a novel. The program copies the same text to an output file, except that all the useless words such as "the", "a", and "an" are removed. (Decide on what other words you wish to remove. The list of words removed is called a stop list.) Do this by reading the text file token by token using `hasNext()` and `next()`, but only writing out tokens not on the stop list.

Prompt the user for the names of the input and output files.

Fairly Easy: The output file will have only N tokens per line. Do this by counting tokens as you output them. N will be something like 10 or 12.

Improved Program: Preserve the line structure of the input file. Do this by reading each line using `nextLine()` and then creating a new `Scanner` for that line. (Look at the on-line documentation for `Scanner`.)

With each line's `Scanner`, use `hasNext()` and `next()` to scan through its tokens.

Harder: Write out no more than N characters per line. N will be something like 50. Do this by keeping count of the number of characters written out per line. The `length()` method of `String` will be useful. If X characters has already been written to the current line, and if X plus the length of the current token exceeds N , then start a new line.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 8 (Module-V)

Program-1:

E-Mail Address Extractor:

Write a program that scans a text file for possible e-mail addresses. Addresses look like this:

someone@somewhere.net

Read tokens from the input file one by one using `hasNext()` and `next()`. With the default delimiters of `Scanner`, an entire e-mail address will be returned as one token. Examine each token using the `indexOf()` method of `String`. If a token contains an at sign `@` followed some characters later by a period, regard it as a possible e-mail address and write it to the output file.

Programs such as this scan through web pages looking for e-mail addresses that become the targets of spam. Because of this, many web pages contain disguised e-mail addresses that can't easily be automatically extracted.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 9 (Module-VI)

Program-1:

User-friendly Fat Calculator, with Advice:

Further modify the calories from fat calculator so that it includes another `TextField` that will be set with the text "Too many fat calories" if the percentage of calories from fat is equal or greater than 30 percent, or to "Healthy amount of fat" if the percentage is less than that.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 10 (Module-VI)

Program-1:

Three Button Monte:

Write a program to implement a game:

There are three buttons in the frame. Two of the buttons cause the program to quit using `System.exit(0)`; the remaining button changes the frame to green (a win!) The winning button is different each time the game is played.

The easy way to do this (although it seems unfair to the user) treats each button the same way. The `actionPerformed()` method does not check which button was clicked. When any button is clicked, the method picks a random integer from 0 to 2 and performs the "winning" action if the integer happens to be 0. Otherwise, it performs the "losing" action. To the user, it seems like there is a "winning" button and two "losing" buttons. But, in fact, it does not matter which button was clicked.

This is similar to some electronic gambling devices in casinos, where it appears to the user that there are "winning moves" and "losing moves" but in fact the machine actually ignores what the user has done and just declares a "win" every now and then, according to predetermined odds.

You will need the `Random` class:

```
Random randNum = new Random(); // create a Random number object
```

```
...
```

```
int someInt = randNum.nextInt(3); // someInt gets a number from 0 to 2
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 11 (Module-VII)

Content Delivery with Networking:

Write a Client-Server program where the client queries with a name of file and the server delivers the content of requested files to the client over the network.

(Improve the program by making the server multi-threaded)

Practice 12 (Module-VII)

Greet the user with Remote Method Invocation:

Write a program using RMI, where the user invokes a method on remote object with username as parameter and receives a greeting message based on time of the day along with username.

Projects

However, not limited to:

1. Chat application
2. Text Editor application
3. GUI based Scientific Calculator
4. Paint application
5. Slam book

(*PROJECT REVIEWS WILL COMMENCE BEYOND CLASS HOURS)

Monitoring:

Credit will be received only on making an honest effort. It is expected that students will finish watching all lecture video and complete all challenge problems by the end of each lecture week.

Borrowing code from other sources is allowed only with proper attribution and credit given to the original author(s).

List of Common Programs to solve using Java:

1. Program to calculate area of a triangle

2. Program to solve quadratic equation

3. Program to swap two variables (with and without using third variable)

4. *Program to generate random numbers in various ways*
5. *Program to convert miles to kilometers and vice-versa*
6. *Program to convert celsius to fahrenheit and vice-versa*
7. *Program to check if a number is odd or even*
8. *Program to check if input year is leap year*
9. *Program to test primality*
10. *Program to print all prime numbers in an interval using "Sieve of Eratosthenes"*
11. *Program to generate factorial of all elements in an array*
12. *Program to display the multiplication table up to 20*
13. *Program to print the fibonacci sequence*
14.
Program to check armstrong number, perfect number, Harshad number
15. *Program to generate armstrong numbers in an Interval*
16. *Program to find the sum of Harshad numbers in an interval*
17. *Program to display powers of two Using lambda*
18. *Program to perform conversions among decimal to binary, octal and hexadecimal*
19. *Program to display ASCII table*
20. *Program to find HCF/GCD and LCM*
21. *Program to find factors of given natural number*
22. *Program to make a simple calculator*

23. *Program to shuffle deck of cards*
24. *Program to generate fibonacci sequence using recursion*
25. *Program to find sum of natural numbers using recursion*
26. *Program to find factorial of number using recursion*
27. *Program to convert decimal to binary using recursion*
28. *Program to add two matrices*
29. *Program to obtain transpose of a matrix*
30. *Program to multiply two matrices*
31. *Program to check if a string is palindrome*
32. *Program to remove punctuations from a string*
33. *Program to sort words lexicographically*
34. *Program to illustrate different set operations*
35. *Program to count frequency of each vowel in a string*
36. *Program to find hash value of a file*

This course on courseware: <http://courseware.cutm.ac.in/courses/java-technologies/>

Database Management Systems

Code	Course Title	Credit	T-P-PJ
CUTM1059	Database Management Systems	3	2-1-0

Objective

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database Modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential Properties of DBMS concepts such as: database security, integrity, concurrency
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Learning outcome

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data
- Improve the database design by normalization
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing

Course content

Module-1: DBMS Concepts [5 Hrs]

Data Abstraction - Data models and data independence. Instances and Schemas. Components of a DBMS and overall structure of a DBMS- Life Cycle of a DBMS application- Database terminology.

Module-2: Data Modeling [5Hrs]

Basic concepts- Types of data models- Conceptual, physical and logical database models- E-R data model and Object-oriented data model. Components of ER Model- ER Modeling symbols. Entity and entity sets- Relations and relationship sets- E-R Diagrams- Reducing E-R Diagrams into tables.

Practice

Assume we have the following application that models soccer teams, the games they play, and

the

players in each team. In the design, we want to capture the following:

- We have a set of teams, each team has an ID (unique identifier), name, main stadium, and to which city this team belongs.
- Each team has many players, and each player belongs to one team. Each player has a number (unique identifier), name, DoB, start year, and shirt number that he uses.
- Teams play matches, in each match there is a host team and a guest team. The match takes place

place

in the stadium of the host team.

- For each match we need to keep track of the following:
 - The date on which the game is played
 - The final result of the match
 - The players participated in the match. For each player, how many goals he scored, whether or not he took yellow card, and whether or not he took red card.
 - During the match, one player may substitute another player. We want to capture this substitution and the time at which it took place.
 - Each match has exactly three referees. For each referee we have an ID (unique identifier), name, DoB, years of experience. One referee is the main referee and the other two are assistant referee.

Design an ER diagram to capture the above requirements. State any assumptions you have that affects your design (use the back of the page if needed). Make sure cardinalities and primary keys are clear.

Module-3: Relational DBMS Model [5 Hrs]

Basic concepts, Attributes and domains- Intention and extensions of a relation- concept of integrity and referential constraints- Relational Query Languages (Relational algebra and relational calculus (Tuple and domain relational calculus).

Module-4: Relational Database Design [6 Hrs]

Notion of normalized relations- Normalization using Functional Dependency- First Normal form- Second Normal Form- Third Normal form- BCNF.

Practice

Perform NF on the given table

[CLICK HERE FOR TABLE](#)

Module-5: SQL [6 Hrs]

Structure of a SQL query- DDL and DML, TCL- SQL queries and sub queries- Tables, views and indexes.

Practice

To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

```
CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5) ,CNAME VARCHAR2(18) , BNAME
VARCHAR2(18) , AMOUNT NUMBER(8,2) ,ADATE DATE);
```

```
CREATE TABLE BRANCH(BNAME VARCHAR2(18),CITY VARCHAR2(18)); CREATE
TABLE CUSTOMERS(CNAME VARCHAR2(19) ,CITY VARCHAR2(18));
```

```
CREATE TABLE BORROW(LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME
```

VARCHAR2(18), AMOUNT NUMBER (8,2));

(ii) Insert the data as shown below.

DEPOSIT

[CLICK HERE FOR TABLE](#)

BRANCH

[CLICK HERE FOR TABLE](#)

CUSTOMERS

[CLICK HERE FOR TABLE](#)

BORROW

[CLICK HERE FOR TABLE](#)

- (1) Describe deposit, branch.
- (2) Describe borrow, customers.
- (3) List all data from table DEPOSIT.
- (4) List all data from table BORROW.
- (5) List all data from table CUSTOMERS.
- (6) List all data from table BRANCH.
- (7) Give account no and amount of depositors.
- (8) Give name of depositors having amount greater than 4000.
- (9) Give name of customers who opened account after date '1-12-96'.

Module-6:Aggregate functions [4 Hrs]

Set Operations, predicates and joins, Set Membership- Tuple variables- Set comparison- Database modifications using SQL.

Practice

Create the below given table and insert the data accordingly.

Create Table Job (job_id, job_title, min_sal, max_sal)

COLUMN NAME DATA TYPE

job_id Varchar2(15)

job_title Varchar2(30)

min_sal Number(7,2)

max_sal Number(7,2)

Create table Employee (emp_no, emp_name, emp_sal, emp_comm, dept_no)

COLUMN NAME DATA TYPE

emp_no Number(3)

emp_name Varchar2(30)

emp_sal Number(8,2)

emp_comm Number(6,1)

dept_no Number(3)

Create table deposit(a_no,cname,bname,amount,a_date).

COLUMN NAME DATA TYPE

a_no Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Number(7,2)

a_date Date

Create table borrow(loanno,cname,bname,amount).

COLUMN NAME DATA TYPE

loanno Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Varchar2(7,2)

Insert following values in the table Employee.

emp_n emp_name emp_sal emp_comm dept_no

101 Smith 800 20

102 Snehal 1600 300 25

103 Adama 1100 0 20

104 Aman 3000 15

105 Anita 5000 50,000 10

106 Sneha 2450 24,500 10

107 Anamika 2975 30

Insert following values in the table job.

[CLICK HERE FOR TABLE](#)

Insert following values in the table deposit.

[CLICK HERE FOR TABLE](#)

Perform following queries

(1) Retrieve all data from employee, jobs and deposit.

(2) Give details of account no. and deposited rupees of customers having account opened between dates 01-01-06 and 25-07-06.

(3) Display all jobs with minimum salary is greater than 4000.

(4) Display name and salary of employee whose department no is 20. Give alias name to name of employee.

(5) Display employee no,name and department details of those employee whose department lies in(10,20)

To study various options of LIKE predicate

(1) Display all employee whose name start with 'A' and third character is 'a'.

(2) Display name, number and salary of those employees whose name is 5 characters long and first three characters are 'Ani'.

(3) Display the non-null values of employees and also employee name second character should be 'n' and string should be 5 character long.

(4) Display the null values of employee and also employee name's third character should be 'a'.

(5) What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'

To Perform various data manipulation commands, aggregate functions and sorting concept on all created tables.

(1) List total deposit from deposit.

(2) List total loan from karolbagh branch

(3) Give maximum loan from branch vrce.

(4) Count total number of customers

(5) Count total number of customer's cities.

(6) Create table supplier from employee with all the columns.

- (7) Create table sup1 from employee with first two columns.
- (8) Create table sup2 from employee with no data
- (9) Insert the data into sup2 from employee whose second character should be 'n' and string should be 5 characters long in employee name field.
- (10) Delete all the rows from sup1.
- (11) Delete the detail of supplier whose sup_no is 103.
- (12) Rename the table sup2.
- (13) Destroy table sup1 with all the data.
- (14) Update the value dept_no to 10 where second character of emp. name is 'm'.
- (15) Update the value of employee name whose employee number is 103.

To study Single-row functions.

- (1) Write a query to display the current date. Label the column Date
- (2) For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary
- (3) Modify your query no 4.(2) to add a column that subtracts the old salary from the new salary. Label the column Increase
- (4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.
- (5) Write a query that produces the following for each employee:
earns monthly
- (6) Display the name, hire date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.
- (7) Display the hiredate of emp in a format that appears as Seventh of June 1994 12:00:00 AM.
- (8) Write a query to calculate the annual compensation of all employees (sal+comm.).

Displaying data from Multiple Tables (join)

- (1) Give details of customers ANIL.
- (2) Give name of customer who are borrowers and depositors and having living city nagpur
- (3) Give city as their city name of customers having same living branch.
- (4) Write a query to display the last name, department number, and department name for all employees.
- (5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output
- (6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.
- (7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.
- (8) Create a query to display the name and hire date of any employee hired after employee SCOTT.

Module-7: Transaction Management [8 Hrs]

Subqueries, Manipulating Data, Transaction management and Concurrency control

Practice

To apply the concept of Aggregating Data using Group functions.

- (1) List total deposit of customer having account date after 1-jan-96.
 - (2) List total deposit of customers living in city Nagpur.
 - (3) List maximum deposit of customers living in bombay.
 - (4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
 - (5) Write a query that displays the difference between the highest and lowest salaries. Label the column DIFFERENCE.
 - (6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
 - (7) Find the average salaries for each department without displaying the respective department numbers.
 - (8) Write a query to display the total salary being paid to each job title, within each department.
 - (9) Find the average salaries > 2000 for each department without displaying the respective department numbers.
 - (10) Display the job and total salary for each job with a total salary amount exceeding 3000, in which excludes president and sorts the list by the total salary.
 - (11) List the branches having sum of deposit more than 5000 and located in city bombay.
- To solve queries using the concept of sub query.

- (1) Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
- (2) Give name of customers who are depositors having same branch city of mr. sunil.
- (3) Give deposit details and loan details of customer in same city where pramod is living.
- (4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
- (5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000
- (6) Display the last name and salary of every employee who reports to ford.
- (7) Display the department number, name, and job for every employee in the Accounting department.
- (8) List the name of branch having highest number of depositors.
- (9) Give the name of cities where in which the maximum numbers of branches are located.
- (10) Give name of customers living in same city where maximum depositors are located.

Manipulating Data

- (1) Give 10% interest to all depositors.
- (2) Give 10% interest to all depositors having branch vnce
- (3) Give 10% interest to all depositors living in n agpur and having branch city bombay.
- (4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844's current department number.
- (5) Transfer 10 Rs from account of anil to sunil if both are having same branch.
- (6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.
- (7) Delete depositors of branches having number of customers between 1 to 3.

(8) Delete deposit of vijay.

(9) Delete borrower of branches having average loan less than 1000.

To apply the concept of security and privileges.

To study Transaction control commands

[VIRTUAL LAB](#)

TEXT BOOKS

Database Management Systems: Raghu Ramakrishnan

ORACLE PL/SQL Programming – Scott Urman BPB Publications.

CUTM1010	Environmental Studies	2	0+0+2

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function)),10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Highjer Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

- 1) Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
- 2) Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd & 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: John Wiley & Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

- 1) Advanced Engineering Mathematics by P.V. O'Neil Publisher: Thomson
- 2) Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff & A.D. Snider Publisher: Pearson
- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.

4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs ,both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II

(3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III**(3 Hours)**

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV**(3Hours)**

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V**(3 Hours)**

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI**(3 Hours)**

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII**(4 Hours)**

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009.

Chapters: 1(1.1, 1.2, 1.3, 1.5); 7(7.1, 7.6); 8(8.1 to 8.5, 8.7, 8.8); 9(9.1, 9.4, 9.5).

Reference Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Trembkay, R. Manohar, Tata MC Graw – Hill Edition 38th reprint, 2010.
2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.
3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- To apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1. Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd. Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition
Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.
- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid**(2 Hrs.)**

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia**(3 Hrs. + 2 Hrs. practice)**

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion**(3 Hrs.)**

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion**(3 Hrs. + 4 Hrs. Practice)**

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law, Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

1. A Text Book of Optics by M.N. Avadhanulu, BrijLal, N. Subrahmanyam, S Chand; 23rd Rev. Edn. [Module I&II]

3. Principles of Engineering Physics-2 by Md.Khan, S.Panigrahi, Cambridge University Press 2016. [module-V, VI&VII]

Reference Books:

1. Optics by Ajoy Ghatak, McGraw Hill Education; 6 edition, 2017.
2. Physics-I for engineering degree students by B.B. Swain and P.K. Jena.
3. Concepts in Engineering Physics by I Md. N. Kha, 2016.

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compound in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)
4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using pycnometer. (V.lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Calomel/ Quinhydrone Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3:Water resources and its conservation

Assignment-4:Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4: Environmental protection act, 1986

Reference Books:

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply. Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects. Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management;Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 4) Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata McGraw Hill, New Delhi.
- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like India
- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,

- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - Introduction to Gender

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - Gender issues in health

PPT 3 - Gender issues in education

PPT 4 - Gender issues in Governance

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - WID WAD GAD

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - Gender and Organisations

PPT 7 - Gender Equality in Organisations

PPT 8 - Gender Mainstreaming and Attitude in Workplace

PPT 9 - Gender Sensitisation

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

<https://www.youtube.com/watch?v=p6w-d1mmjFU>

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)
4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations

- LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)
- LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain
- LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth
GOAL 9: Industry, Innovation and Infrastructure
GOAL 10: Reduced Inequality
GOAL 11: Sustainable Cities and Communities
GOAL 12: Responsible Consumption and Production
GOAL 13: Climate Action
GOAL 14: Life Below Water
GOAL 15: Life on Land
GOAL 16: Peace and Justice Strong Institutions
GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)
2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGalzqIw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk <https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>
2. Overview of Sustainable Development Goals - <https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers

4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:
<https://drive.google.com/file/d/1Wst-jdAJuHHVtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables
- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions

- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks
- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount

- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments
- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular

- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

2020

**Course Structure
Basket - III**

Course Code	Course Title	Credits	Course Type T+P+PJ
CUTM1017	Industrial IOT and Automation	6	3-2-1
CUTM1018	Data Analysis and Visualisation using Python	4	0-1-3
CUTM1019	Machine Learning using Python	4	1-2-1
CUTM1020	Robotic automation with ROS and C++	4	1-2-1
CUTM1021	Basics of Design Thinking	2	0-0-2
CUTM1022	System Integration with DYMOLA	2	0-0-2
CUTM1023	Smart Engineering Project (G2M)	3	0-0-3

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID
Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus
Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, could

Computing, fog or edge computing,

Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development

Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram

12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2 2.

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madisetti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALISATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators

3. ERP dashboarding

4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.
- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .

- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT

P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

P3.1 Port handling of 8951

P3.2 Port handling of Arduino

P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

4.1 Designing of sequential robot control system.

4.2 Writing of programs in different programming languages.

4.3 Controlling of input/output devices.

Practice

P4.1 Programming of controllers with different programming languages

P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

5.1 What is Ubuntu & ROS?

5.2 Requirement and application of ROS.

5.3 ROS based simulation of Turtlbot.

5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlbot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. 3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.

- Design a Fund raising campaign

Books: Tom Kelly & Jonathan Littman (2001). “The Art of Innovation” Broadway Publication.

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation Window, Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages,

Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_YI3RiTl14

Basket V: Domain/Skill/MOOC/Minor Project/Internship/Applied Courses

Domain:

- Industrial Automation
- Operation and Maintenance of Electrical Grid System & Transformers
- Embedded System Design
- Renewable Energy Applications
- GO-TO MARKET (Digital Manufacturing)

Basket IV: Core Courses Syllabus

OOPs with C++ Programming

Code	Course Title	Credit	T-P-PJ
CUTM1028	OOPs with C++ Programming	4	1-2-1

Objective

- To understand how C++ improves C with object-oriented features
- To learn how to design C++ classes for code reuse
- To learn how inheritance and virtual functions implement dynamic binding with polymorphism
- To learn how to use exception handling in C++ programs

Course Outcome

- Apply the object-oriented programming approach in connection with C++
- Illustrate the process of data file manipulations using C++
- Apply virtual and pure virtual function & complex programming situations
- Write an error free program of minimum 200 lines of code

Course content

Module I: Revision of C programming

(8 hrs)

Revision of C Programming, Pointers, Functions (Call by value and reference), Recursion, Arrays using Pointers, Structures, Union, Enumeration and Typedef, File handling.

Programs:

1. Write a Program to perform Parameter passing.
2. Write a program to create a scientific calculator.
3. Write a program to convert a decimal to binary number using recursion.
4. Write a program to Read 'n' employee details and display the top 10 employees as per the salary.
5. Write a program to evaluate MCQ questions of an examination and generate the results using files.

Module II: Basics of Object oriented concepts

(8 hrs)

Object oriented concepts Classes and Objects, Encapsulation, Abstraction, Overloading, Inheritance, Polymorphism.

Beginning with C++, Tokens, Static Members, Constant Members, Expressions, Control Structure, Functions: parameter passing, inline function, function overloading.

Programs:

1. Write a program to read a number and check whether the number is Prime number , Palindrome number , Magic number , Armstrong number , Strong number or not.
2. Write definitions for two versions of an overloaded function. This function's 1st version sum() takes an argument, int array, and returns the sum of all the elements of the passed array. The 2nd version of sum() takes two arguments, an int array and a character ('E' or 'O'). If the passed character is 'E', it returns the sum of even elements of the passed array and if the passed character is 'O', it returns the sum of odd elements. In case of any other character, it returns 0 (zero).

Module III: Class-Object-Constructor**(10 hrs)**

Classes: data members, member function, array of objects, static data members, constant members function, and friend function.

Constructors, Encapsulating into an object, Destructors.

Programs:

1. Define a class to represent a book in a library. Include the following members:

Data Members

Book Number, Book Name, Author, Publisher, Price, No. of copies issued, No. of copies

Member Functions

- (i) To assign initial values
- (ii) To issue a book after checking for its availability
- (iii) To return a book
- (iv) To display book information.

2. A bank maintains two kinds of accounts for customers, one called as savings and the other as current account. The savings account provides compound interest and withdrawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level a service charge is imposed.

Define a class to represent a bank account. Include the following members: Data members: 1. Name of the depositor. 2. Account number. 3. Type of account. 4. Balance amount in the account. Member functions: 1. To assign initial values. 2. To deposit an amount. 3. To withdraw an amount after checking the balance. 4. To display the name and balance. Write a main program to test the program

3. Declare a class to represent fixed-deposit account of 10 customers with the following data members:

Name of the depositor, Account Number, Time Period (1 or 3 or 5 years), Amount.

The class also contains following member functions:

- (a) To initialize data members.
- (b) For withdrawal of money (after half of the time period has passed).
- (c) To display the data members.

4. Create two classes DM and DB which store the value of distances. DM stores distances in meters and centimeters and DB in feet and inches. Write a program that can read values for the class objects and add one object of DM with another object of DB. Use a friend function to carry out the addition operation. The object that stores the results may be a DM object or DB object, depending on the units in which the results are required. The display should be in the format of feet and inches or meters and centimeters depending on the object on display.

Module IV: Inheritance

(8 hrs)

Associations, Inner Classes, Memory Management and pointers

Inheritance: Derived classes, member accessibility, forms of inheritance, virtual base classes.

Programs:

1. Write a Program to describe about all types of inheritance.
2. Create a base class called shape. Use this class to store two double type values that could be used to compute the area of figures. Derive two specific classes called triangle and rectangle from the base shape. Add to the base class, a member function `get_data()` to initialize base class data members and another member function `display_area()` to compute and display the area of figures. Make `display_area()` as a virtual function and redefine this function in the derived classes to suit their requirements. Using these three classes, design a program that will accept dimensions of a triangle or a rectangle interactively, and display the area.
3. An educational institution wishes to maintain a database of its employees. The database is divided into a number of classes whose hierarchical relationships are shown in following figure. The figure also shows the minimum information required for each class. Specify all classes and define functions to create the database and retrieve individual information as and when required.

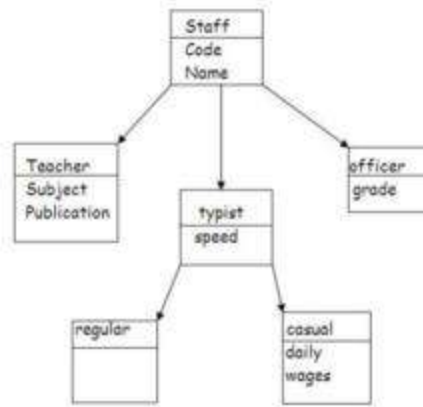

fig: class relationships (for exercise 8.3)

Module V: Polymorphism (8 hrs)

Polymorphism (Compile time Polymorphism, Run time Polymorphism), Virtual Functions, Abstract class, virtual destructors, Interfaces.

Programs:

1. Write a Program to overload ++ operator.
2. Write a program to overload + operator by concatenating strings.
3. Write a program to describe about virtual function.

Module VI: Exception Handling

(8 hrs)

Exception Handling, Managing Console I/O Operations, Streams & Files: streams, hierarchy of stream classes, working with files

Programs:

1. Write a Program to describe about exception handling mechanism.
2. Write a Program to describe multi catch statement.
3. Write a program to read a list containing item name, item code, and cost interactively and produce a three column output as shown below.

Name	Code	Cost
Turbo C++	1001	250.95
C primer	905	95.70
.....
.....

Note that the name and code are left-justified and the cost is right justified with a precision of two digits. Trailing zeros are shown.

4. Write a program that reads a text file and creates another file that is identical except that every sequence of consecutive blank spaces is replaced by a single space.

5. Write a program that reads character from the keyboard one by one. All lower case characters get store inside the file LOWER, all upper case characters get stored inside the file UPPER and all other characters get stored inside OTHERS.

Module VII: Templates

(8 hrs)

Advance Topics in C++ Object Design and Templates STL (Standard Type Libraries)RTTI (Run Time Type Identification) Advanced Typecasting ,new data types, new operators, class implementation, namespace scope , operator keywords, new headers , C++ Containers

Programs:

1. Write a function template for finding the minimum value contained in an array.

2. Imagine a publishing company that markets both books and audio-cassette versions of its works. Create a class called Publication that stores the title (a string) and price of a publication. From this class derive two classes: Book, which adds a page count (type int); and Tape, which adds a playing time in minutes (type float). Each of the three class should have a getdata() function to get its data from the user at the keyboard, and a putdata() function to display the data. Write a main() program that creates an array of pointers to Publication. In a loop, ask the user for data about a particular book or Tape, and use new to create a object of type Book or Tape to hold the data. Put the pointer to the object in the data for all books and tapes, display the resulting data for all the books and taps entered, using a for loop and a single statement such as `pubarr[i]->putdata();`to display the data from each object in the array.

Text Books:

3. E Balagurusamy, “Object Oriented Programming with C++”, Tata McGraw Hill, Sixth Edition.
4. Herbert Schlitz, “The Compete Reference C++”, Tata McGraw Hill, Fourth Edition.

Reference Books:

6. Ashok Kamthane, “Object Oriented Programming with ANSI and Turbo C++”, Pearson.
7. Behrouz A. Forouzan & Richard F. Gilberg “A Structured approach using C++” Cengage Learning Indian Edition.

Data Structures using C++

Code	Course Title	Credit	T-P-PJ
CUTM1029	Data Structures using C++	3	1-2-1

Objective

- Be familiar with techniques of algorithm analysis and Recursive method
- Be familiar with implementation of linked data structures such as linked lists and binary trees
- Be familiar with several sub-quadratic sorting algorithms including quick sort, merge sort and heap sort
- Be familiar with some graph algorithms such as shortest path and minimum spanning tree

Course Outcome

- Evaluate algorithms and data structures in terms of time and memory complexity of basic operations
- Define basic static and dynamic data structures and relevant standard algorithms for them: stack, queue, dynamically linked lists, trees, graphs, heap, priority queue, hash tables, sorting algorithms, min-max algorithm
- Determine and demonstrate bugs in program, recognize needed basic operations with data structures
- Formulate new solutions for programming problems or improve existing code using learned algorithms and data structures

Course content

Module I: Problem Solving Analysis

(6 hrs)

Define the problem, Identify the problem, Introduction to Problem Solving, Problem solving basics, Defining creativity v/s innovation

Find Creative Solutions using creativity tools

Effective problem solving approaches , Critical thinking and information analysis , Brainstorming, Reverse Brainstorming, Imagineering, Mind Mapping, Six Thinking Hats: A Tool to Strengthen Critical Thinking, Collaboration, Communication, and Creativity Skills , Analyzing the situation, Gathering information, Identifying solution criteria , Decision Making Methods , Charts and Diagrams , Applying outcome-based thinking

Evaluate and Select solution

Pro's and Con's, Force field analysis, Feasibility/Capability Analysis, Decision analysis, evaluating problems , Choosing among alternatives , Qualitative analysis, discussing qualitative

analysis techniques , Establishing objectives , Assigning weight to objectives in order to make the best decision , Creating a satisfaction scale to choose between alternatives

Implementing Decisions

Create an action plan, Break solution into action steps, Prioritize actions and assign roles (setting priorities for taking action) ,Follow-up at milestones

Programs:

1. Problem solving (Control structures, Arrays) using Raptor Tool.

Module II: Array & Stack

(9 hrs)

Analysis of different Algorithms, Asymptotic analysis, Algorithm analysis, Complexity Analysis, Application of Data structures

Basic Data Structures, Arrays, Stacks and its applications (Recursion, Infix to Postfix Conversion and Postfix Evolution

Programs:

1. Write a program to perform the following menu driven program on the input array.

- a. Insertion
- b. Deletion
- c. Searching
- d. Sorting
- e. Merging
- f. Display
- g. Exit

2. Write a program to perform the following menu driven program on the STACK.

- a. Push
- b. Pop
- c. Display
- d. Exit

Module III: Queue & Linked List

(9 hrs)

Queues, Priority Queues, Dequeues.

Linked lists: Single Linked List and Operations on Single Linked List (Creation Insertion , Deletion , Sorting and Reverse).

Programs:

1. Write a program to perform the following menu driven program on the Queue.

- a. Insertion

- b. Deletion
- c. Display
- d. Exit

2. Write a program to create a single linked list performs the following menu driven program.

- a. Insertion at front
- b. Insertion at end
- c. Insertion at particular position
- d. Deletion at front
- e. Deletion at end
- f. Deletion at particular position
- g. Display

Module IV: Stack & Queue Using Linked List

(8 hrs)

Circular linked list and Double linked list, Stack implementation using Linked List and Queue implementation using Linked List

Programs:

1. Write a program to create a Double linked list performs the following menu driven program.

- a. Insertion at front
- b. Insertion at end
- c. Insertion at particular position
- d. Deletion at front
- e. Deletion at end
- f. Deletion at particular position
- g. Display

2. Write a program to create a circular linked list and display it.

3. Write a program to implement Stack Using Linked List.

4. Write a program to implement Queue Using Linked List.

Module V: Trees

(10 hrs)

Trees and hierarchical orders ,Introduction to trees , Abstract trees , Tree traversals , Forests , Ordered trees , Binary trees , Perfect binary trees , Complete binary trees , Search trees , Binary search trees , AVL trees

Programs:

1. Write a program to create Binary tree and display it.

2. Write a program to create a BST and display it.
3. Write a program to print all pairs from two BSTs whose sum is greater than the given value.
4. Write a program to remove duplicate entries from the BST.
5. Write a program to create a AVL tree and display it.

Module VI: Searching & Sorting

(8 hrs)

Searching & Sorting algorithms , Objectives of Searching , The Sequential Search , Analysis of Sequential Search , The Binary Search , Analysis of Binary Search , Introduction to sorting , Insertion sort , Bubble sort , Heap sort ,Merge sort ,Quick sort

Programs:

1. Write a program to perform linear and binary search.
2. Write a program to perform selection sort, Bubble sort and Insertion sort.
3. Write a program to perform merge and quick sort.
4. Write a program to perform Heap sort.

Module VII: Hashing

(8 hrs)

Hash functions and hash tables ,Hashing & Introduction to hash tables ,Hash functions , Mapping down to $0 \dots M - 1$, Chained hash tables , Scatter tables , Open addressing , Linear probing , Quadratic probing , Double hashing, Poisson distribution , Collision Resolution Graph Terminology and Traversals.

Programs:

1. Write a program to perform Linear Probing.
2. Write a program to perform Double Hashing

Text Books:

1. Data Structures, Algorithms and Applications in C++, Sartaj Sahani, 2nd Edition.
2. Data Structures and Algorithms in C++, Michael T.Goodrich, R, Tamassia and D.Mount, wiley Student Edition, 7th edition, John Wiley and Sons.

Reference Books:

1. Data Structures and Algorithms Analysis in C++ by Mark Allen Weiss.
2. Data Structures and Algorithms in C++, 3rd edition, Adam Drozdek, Cengage Learning.

Advanced Web Programming

Code	Course Title	Credit	T-P-PJ
CUTM1030	Advanced Web Programming	4	1-2-1

Objective

- Understand client server architecture and able to use the skills for web project development.
- Create job opportunities as a web developer

Course Outcome

- Develop a static, interactive and well-formed webpage using JavaScript, CSS3 and HTML5.
- Use PHP7 to improve accessibility of a web document.
- Gain necessary skills for designing and developing web applications.

Course content

Module I: Web Programming Concepts(7hrs)

Architecture of the Web (1)

HTTP Protocols(1)

Difference HTTP1.0 and HTTP 1.1, Stateless nature of the protocol, Methods (GET, POST, HEAD, PUT, DELETE), HTTP session, Statuscodes, Persistent connections, HTTPS

HTML(1)

Document Object Model (DOM), Elements, Events

HTML 5(2)

Elements, Objects, Events, Canvas, Audio & Video Support, Geo-location Support

CSS(2)

Styling HTML with CSS, Inline Styling (Inline CSS), External Styling (External CSS), CSS Fonts, The CSS Box Model, The id Attribute, The class Attribute, HTML Style Tags

Practice

1. Write an HTML code to display your CV on a web page.
2. Write an HTML code to create a Home page having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.
3. Write an HTML code to create a Registration Form. On submitting the form, the user should be asked to login with this new credentials.
4. Write an HTML code to create your Institute website, Department Website and Tutorial website for specific subject.
5. Write an HTML code to create a frameset having header, navigation and content sections.

6. Write an HTML code to demonstrate the usage of inline CSS.
7. Write an HTML code to demonstrate the usage of internal CSS.
8. Write an HTML code to demonstrate the usage of external CSS.
- 9: Design your own website using HTML CSS
- 10: Design form using HTML and apply CCS

Module II: JavaScript & jQuery(14 hrs)

JavaScript (10)

Introduction to JavaScript: Variable, statements, Operators, Comments, constructs, Functions, expressions, Javascript console, Scope, Events, Strings, String Methods, Numbers, Number Methods, Dates, Date Formats, Date, Methods, Arrays, Array Methods, Booleans, Comparisons
Control Structures: Conditions, Switch, Loop For, Loop While, Break

Functions: Function Definitions, Function Parameters, Function Invocation, Function Closures

Objects: Object Definitions, Object Properties, Object Methods, Object Prototypes

Object Oriented Programming:

Method, Constructor, Inheritance, Encapsulation, Abstraction, Polymorphism, Javascript Validations, Document Object Model, Document and Events (DOM Manipulation)

HTML DOM: DOM Intro, DOM Methods, DOM Document, DOM Elements, DOM HTML, DOM CSS, DOM Animations, DOM Events, DOM EventListener, DOM Navigation, DOM Nodes, DOM Nodelist, Debugging, Type Conversion, Regular expressions, Errors, Debugging

Forms: Forms Validation, Forms API, JS Browser BOM, Window, Screen, Location, History, Navigator, Popup Alert, Timing, Cookies, Javascript Windows, Pushing code quality via JSLint tool, Security in Java Script

jQuery(4)

Basics of jQuery, jQuery selection and events, jQuery Effects, jquery traversal and manipulation, Data attributes and templates, jQuery Plugins, JQuery / Google Web Toolkit

Practice:

1. Write a Java script to prompt for users name and display it on the screen.
2. Design HTML form for keeping student record and validate it using Java script.
3. Write programs using Java script for Web Page to display browsers information.

4: Validate form page using JavaScript

5: use JQuery effect in page

6. Write a jQuery Code to Find the data passed with the on() method for each element.

7. Find the position of the mouse pointer relative to the left and top edges of the document.

8. Count the number of milliseconds between the two click events on a paragraph

9. Find all the text nodes inside a paragraph and wrap them with an italic tag

Module III: AJAX& JSON(8 hrs)

AJAX(3)

Design Introduction to Ajax, Web services and Ajax, Ajax using HTML, CSS, JavaScript, Ajax Framework and DOM, XMLHttpRequest, Ajax Architecture

Working with JSON (5)

JSON – Introduction, Need of JSON, JSON Syntax Rules, JSON Data - a Name and a Value, JSON Objects, JSON Arrays, JSON Uses JavaScript Syntax, JSON Files, JSON & Security

Concerns, Cross Site Request Forgery (CSRF), Injection

Attacks, XMLHttpRequest functions, JavaScript XMLHttpRequest & Web APIs, JSON & Client Side Frameworks, JSON & Server Side Frameworks, Replacing XML with JSON, JSON

parsing, AJAX using JSON and jQuery

Practice:

1. Create a simple application using AJAX to show the table of numbers given by user at runtime.

2. Access web service using Ajax and handle using JSON

Module IV: Responsive Web Design (5 hrs)

Introduction

The Best Experience for All Users

- Desktop
- Tablet
- Mobile

Bootstrap

Overview of Bootstrap

Need to use Bootstrap

Bootstrap Grid System, Grid Classes, Basic Structure of a Bootstrap Grid

Typography

Tables, Images, Jumbotron, Wells, Alerts, Buttons, Button Groups, Badges/Labels, Progress

Bars, Pagination, List Groups, Panels, Dropdowns, Collapse, Tabs/Pills, Navbar, Forms, Inputs

Bootstrap Grids, Grid System, Stacked/Horizontal

Bootstrap Themes, Templates

Practice:

1. Create a responsive website using bootstrap

Module V: PHP(10 hrs)

PHP(10):

Introduction to PHP, Working with arrays, Functions, Forms, Handling date and Times, Working with Files, Session and state management, Database operations from PHP

Practice:

1. Develop student registration web application using PHP
2. Write a PHP database application that collects comments from users and makes it possible for users to view all the comments that have been submitted. You will need three files: an HTML page with a form where the user can enter a comment; a PHP program to process the input from this form by adding the comment to the database; and a PHP program that displays all the comments.

Module VI: Introduction to Drupal(5 hrs)

Drupal Basics, Content Management System, Content Management Framework, Web Application, Framework, Drupal Workflow, Bootstrap, hooks, callbacks, output, Modules (Core and Contributed), Nodes, Blocks, Regions, The Admin Interface (Overview), Content Management, Site Building, Site Configuration, User Management, Reports, Help, Content Translation, User Contributed Modules, Layouts in Drupal, File Systems

Practice:

1. Setup Drupal server and develop a site on it

Module VII: XML & Web Security (6 hrs)

XML (2)

Introduction to XML,XML Validation,Reason for XML,XML Tree Structure, XML DOM,XML DTD,XML Schema

XML style language(2)

XML and XSLT, XML Parsing,XML parsers (DOM & SAX),XML WSDL,RSS Feed

Web Security(2)

SQL Injection,Cross-Site Scripting (XSS),Security standards (OWASP)

Practice:

1. Creating XML Document
- 2.DTD creation
- 3.Test SQL Injection for student resgistration application

Text/Reference Books

- 1.Web Technologies: HTML, JAVASCRIPT, PHP, JAVA, JSP, XML and AJAX, Black Book Kindle Edition,byKogent Learning Solutions Inc.
- 2.HTML 5 Black Book, Covers CSS 3, JavaScript, XML, XHTML, AJAX, PHP and jQuery, 2ed Kindle Edition,by DT Editorial Services
- 3.Programming PHP: Creating Dynamic Web Pages, Third Edition, by Kevin Tatroe, O'REILLY
- 4.Introduction to JavaScript Object Notation: A To-the-Point Guide to JSON kindle Edition by Lindsay Bassett,O'REILLY
- 5.Bootstrap: Responsive Web Development by Jake Spurlock, Paperback

Project Work

- 1.Online Quiz System
- 2.Online Student feedback System
- 3.. Online Tutorial System
- 4.Restaurant Billing System
- 5.Online MCQ Database Bank System

Source of reference:<https://nqr.gov.in/qualification-title?nid=3002>

Courseware Link: <http://courseware.cutm.ac.in/courses/advanced-web-programming/Course>

Java Technologies

ode	Course Title	Credit	T-P-PJ
CUTM1031	Java Technologies	4	2-1-1

Objective

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development
- Have the ability to write a computer program to solve specified problems
- Have the ability to write a computer program to solve specified problems
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Course Outcome

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Identify and fix defects the common safety issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project
- Qualify confidently any interview process where Java is the requirement

Course content

Module I: Introduction to Java (8 hrs)

Features and Installation, Java Programming Basics, Decision Making and Looping, Class and Object, Inheritance

Practice 1 (1 Hr)

Practice 2 (1 Hr)

Module II: Package and Safe Code (5 Hr)

Interfaces, Packages and Access Protection, Exception Handling (Fault Tolerant Programming)

Practice 3 (1 Hr)

Module III: Collection and Threads (5 Hr)

ArrayList, Vector, Set, Map, Multi-threaded Programming, Synchronization

Practice 4 (1 Hr)

Module IV: Language and Utility Packages (5 Hr)

String Handling, Wrappers, Runtime Memory Management, Cloning, Calendar, Date and Time Facilities, Scanner, Internationalization

Practice 5 (1 Hr)

Practice 6 (1 Hr)

Module V: Input/ Output and Applets (5 Hr)

Byte and Character Stream I/O, Persistence, Applet: Architecture, Skeleton, and Implementation

Practice 7 (1 Hr)

Practice 8 (1 Hr)

Module VI: GUI Programming (5 Hr)

AWT: Container, Components, Layout Managers, Event Handling

Practice 9 (1 Hr)

Practice 10 (1 Hr)

Module VII: Networking and Advanced (5 Hr)

Networking Fundamental, Client-Server Communication, Remote Method Invocation (RMI), Java Virtual Machine (JVM) Tuning, Java Profiler

Practice 11 (1 Hr)

Practice 12 (1 Hr)

Software/Tool(s): Java 8, Eclipse IDE

Online Compiler: <https://ideone.com/>

Online Coding Practice: <https://www.hackerrank.com/>

List of Practices:

Practice 1 (Module-I)

Program-1:

Write a program that computes the standard deviation of a set of floating point numbers that the user enters. First the user says how many numbers N are to follow. Then the program asks for and reads in each floating point number. Finally it writes out the standard deviation. The standard deviation of a set of numbers X_i is:

$$SD = \text{Math.sqrt}(\text{avgSquare} - \text{avg}^2)$$

Here, avg is the average of the N numbers, and avg² is its square.

avgSquare is the average of $X_i * X_i$. In other words, this is the average of the squared value of each floating point number.

For example, if N = 4, say the numbers were:

$X_i \quad X_i * X_i$

2.0 4.0

3.0 9.0

1.0 1.0

2.0 4.0

sum 8.0 18.0

Now:

$$\text{avg} = 8.0/4 = 2.0$$

$$\text{avg}^2 = 4.0$$

$$\text{avgSquare} = 18.0/4 = 4.5$$

$$SD = \text{Math.sqrt}(4.5 - 4.0) = \text{Math.sqrt}(.5) = 0.7071067812$$

To do this you will need to do several things inside the loop body for each floating point value as

it comes in: add it to a sum, square it and add it to a sum of squares. Then after the loop is finished apply the formula.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 2 (Module-I)

Program-1:

Better encapsulation of the Goods class would call making instance variables private and using getter and setter methods to access them. A further refinement would be to make the class abstract and to define additional child classes. Here is a revised Goods class:

```
public abstract class GoodsSGA
{private String description;
private double price;
private int quantity;
public GoodsSGA( String des, double pr, int quant )
{description = des;price = pr;
quantity = quant;}
double getPrice()
{return price;}
void setPrice( double newPrice)
{price = newPrice;}
int getQuantity()
{return quantity;}
void setQuantity ( int newQuantity )
{quantity = newQuantity;}
public String toString()
{return "item: " + description + " quantity: " + quantity + " price: " + price ;}}
```

Revise the source code for the classes Food, Toy, and Book. (Perhaps call the revised classes

FoodSG, ToySG, and BookSG.) create a new class ToiletrySG for things like bubble bath. Create a new testing class, StoreSG to test your revised classes.

Note: the child classes will need to use the getter and setter methods to access the instance variables that are declared as private in GoodsSG.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 3 (Module-II)

Program-1:

User-Friendly Division Practice:

Put in a loop so that the user is repeatedly asked for the numerator and the divisor. For each set of data, the program prints out the result, or an informative error message if there is a problem (division by zero or poor input data).

The program continues looping, even if there is a problem Exit the loop when data entered for the numerator start with characters "q" or "Q". Don't print out an error message in this case.

Don't ask for the divisor if the user just asked to quit.

Here is sample output from one run:

Enter the numerator: 12

Enter the divisor: 4

12 / 4 is 3

Enter the numerator: 12

Enter the divisor : 0

You can't divide 12 by 0

Enter the numerator: glarch

You entered bad data.

Please try again.

Enter the numerator: quit

You will need to use the method charAt() from the String class.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 4 (Module-III)

Program-1:

In mathematics, several operations are defined on sets. The union of two sets A and B is a set that contains all the elements that are in A together with all the elements that are in B. The intersection of A and B is the set that contains elements that are in both A and B. The difference of A and B is the set that contains all the elements of A except for those elements that are also in B.

Suppose that A and B are variables of type set in Java. The mathematical operations on A and B can be computed using methods from the Set interface. In particular:

A.addAll(B) computes the union of A and B; A.retainAll(B) computes the intersection of A and B; and A.removeAll(B) computes the difference of A and B. (These operations change the contents of the set A, while the mathematical operations create a new set without changing A, but that difference is not relevant to this exercise.)

For this exercise, you should write a program that can be used as a “set calculator” for simple operations on sets of non-negative integers. (Negative integers are not allowed.) A set of such integers will be represented as a list of integers, separated by commas and, optionally, spaces and enclosed in square brackets. For example: [1,2,3] or [17, 42, 9, 53,108]. The characters +, *, and - will be used for the union, intersection, and difference operations. The user of the program will type in lines of input containing two sets, separated by an operator. The program should perform the operation and print the resulting set.

Here are some examples:

Input Output

[1, 2, 3] + [3, 5, 7] [1, 2, 3, 5, 7]

[10,9,8,7] * [2,4,6,8] [8]

[5, 10, 15, 20] - [0, 10, 20] [5, 15]

To represent sets of non-negative integers, use sets of type `TreeSet<Integer>`. Read the user's input, create two `TreeSets`, and use the appropriate `TreeSet` method to perform the requested operation on the two sets. Your program should be able to read and process any number of lines of input. If a line contains a syntax error, your program should not crash. It should report the error and move on to the next line of input. (Note: To print out a Set, A, of Integers, you can just say `System.out.println(A)`. We've chosen the syntax for sets to be the same as that used by the system for outputting a set.)

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 5 (Module-IV)

Program-1:

Password Checker:

Write a program that repeatedly asks the user for a proposed password until the user enters an acceptable password. When the user enters an acceptable password, the program writes a message and exits.

Acceptable passwords:

Are at least 7 characters long.

Contain both upper and lower case alphabetic characters. Contain at least 1 digit. The logic of this program can be quite tricky. Hint: use `toUpperCase()`, `toLowerCase`, and `equals()`. You will also need nested ifs.

Here is a run of the program:

Enter your password:

snowflake

That password is not acceptable.

Enter your password:

SnowFlake

That password is not acceptable.

Enter your password:

snowflake47

That password is not acceptable.

Enter your password:

Snowflake47

Acceptable password.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 6 (Module-IV)

Program-1:

Secret Code:

A text message has been encoded by replacing each character of the message with an integer.

Each integer is an index into a key-phrase that contains all the lower case letters of the alphabet

as well as the space character. The key-phrase may contain the same character in several

locations. The encoded text is series of integers, like this:

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

To decode the message, look up each integer in the key-phrase and output the corresponding

character. For example, say that the key-phrase is this (the index of each character has been

written above it):

111111111122222222223333333333444444444455

0123456789012345678901234567890123456789012345678901

six perfect quality black jewels amazed the governor

using each integer from the encoded text as an index into the phrase results in the decoded

message:

attack the bridge at dawn

Write a program that decodes a secret message contained in a text file. The first line of the text file contains the key-phrase. Then the file contains a sequence of integers, each of which indexes the key-phrase. Find the character corresponding to each integer and output the secret message. Note if a character character such as 'e' occurs several places in the key-phrase it may be encoded as different integers in different parts of the secret message.

(The recipient of the secret message gets only the file of integers and must put the key-phrase at the top of the file.) For example, here is the contents of a secret message file ready for the program:

```
six perfect quality black jewels amazed the governor  
35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49
```

Here is a sample run of the program:

```
C:\> java Decode < secretFile.txt  
attack the bridge at dawn
```

You will need the charAt() method of String.

Here is another secret message file, with key-phrase inserted, that you can use to test your program:

```
six perfect quality black jewels amazed the governor  
31 16 2 3 4 42 48 7 27 9 10 43 12 13 35 15 1 40 18 3  
20 15 33 23 24 32 26 29 28 27 21 31 25 14 34 14 36  
42 38 19 40 41 27 3 44 50 46 42 48 49 50 6
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 7 (Module-V)

Program-1:

Stop Word Remover:

Write a program that reads in a file of text, perhaps the text of a novel. The program copies the same text to an output file, except that all the useless words such as "the", "a", and "an" are removed. (Decide on what other words you wish to remove. The list of words removed is called a stop list.) Do this by reading the text file token by token using `hasNext()` and `next()`, but only writing out tokens not on the stop list.

Prompt the user for the names of the input and output files.

Fairly Easy: The output file will have only N tokens per line. Do this by counting tokens as you output them. N will be something like 10 or 12.

Improved Program: Preserve the line structure of the input file. Do this by reading each line using `nextLine()` and then creating a new `Scanner` for that line. (Look at the on-line documentation for `Scanner`.) With each line's `Scanner`, use `hasNext()` and `next()` to scan through its tokens.

Harder: Write out no more than N characters per line. N will be something like 50. Do this by keeping count of the number of characters written out per line. The `length()` method of `String` will be useful. If X characters has already been written to the current line, and if X plus the length of the current token exceeds N, then start a new line.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 8 (Module-V)

Program-1:

E-Mail Address Extractor:

Write a program that scans a text file for possible e-mail addresses. Addresses look like this:
someone@somewhere.net

Read tokens from the input file one by one using `hasNext()` and `next()`. With the default delimiters of `Scanner`, an entire e-mail address will be returned as one token. Examine each token using the `indexOf()` method of `String`. If a token contains an at sign @ followed some characters later by a period, regard it as a possible e-mail address and write it to the output file.

Programs such as this scan through web pages looking for e-mail addresses that become the targets of spam. Because of this, many web pages contain disguised e-mail addresses that can't easily be automatically extracted.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 9 (Module-VI)

Program-1:

User-friendly Fat Calculator, with Advice:

Further modify the calories from fat calculator so that it includes another TextField that will be set with the text "Too many fat calories" if the percentage of calories from fat is equal or greater than 30 percent, or to "Healthy amount of fat" if the percentage is less than that.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 10 (Module-VI)

Program-1:

Three Button Monte:

Write a program to implement a game:

There are three buttons in the frame. Two of the buttons cause the program to quit using `System.exit(0)`; the remaining button changes the frame to green (a win!) The winning button is different each time the game is played.

The easy way to do this (although it seems unfair to the user) treats each button the same way. The `actionPerformed()` method does not check which button was clicked. When any button is clicked, the method picks a random integer from 0 to 2 and performs the "winning" action if the integer happens to be 0. Otherwise, it performs the "losing" action. To the user, it seems like there is a "winning" button and two "losing" buttons. But, in fact, it does not matter which button was clicked.

This is similar to some electronic gambling devices in casinos, where it appears to the user that there are "winning moves" and "losing moves" but in fact the machine actually ignores what the user has done and just declares a "win" every now and then, according to predetermined odds.

You will need the Random class:

```
Random randNum = new Random(); // create a Random number object  
int someInt = randNum.nextInt(3); // someInt gets a number from 0 to 2
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 11 (Module-VII)

Content Delivery with Networking:

Write a Client-Server program where the client queries with a name of file and the server delivers the content of requested files to the client over the network.

(Improve the program by making the server multi-threaded)

Practice 12 (Module-VII)

Greet the user with Remote Method Invocation:

Write a program using RMI, where the user invokes a method on remote object with username as parameter and receives a greeting message based on time of the day along with username.

Projects

However, not limited to:

1. Chat application
2. Text Editor application
3. GUI based Scientific Calculator
4. Paint application
5. Slam book

(*PROJECT REVIEWS WILL COMMENCE BEYOND CLASS HOURS)

Monitoring:

Credit will be received only on making an honest effort. It

is expected that students will finish watching all lecture video and complete all challenge problems by the end of each lecture week.

Borrowing code from other sources is allowed only with proper attribution and credit given to the original author(s).

List of Common Programs to solve using Java:

1. Program to calculate area of a triangle

3. Program to solve quadratic equation

3. Program to swap two variables (with and without using third variable)

4. Program to generate random numbers in various ways

5. Program to convert miles to kilometers and vice-versa

6. Program to convert celsius to fahrenheit and vice-versa

7. Program to check if a number is odd or even

8. Program to check if input year is leap year

9. Program to test primality

10. Program to print all prime numbers in an interval using "Sieve of Eratosthenes"

11. Program to generate factorial of all elements in an array

12. Program to display the multiplication table up to 20

13. Program to print the fibonacci sequence

14. Program to check armstrong number, perfect number, Harshad number

15. Program to generate armstrong numbers in an Interval

16. Program to find the sum of Harshad numbers in an interval

17. Program to display powers of two Using lambda

18. Program to perform conversions among decimal to binary, octal and hexadecimal

19. Program to display ASCII table

20. Program to find HCF/GCD and LCM

21. Program to find factors of given natural number
22. Program to make a simple calculator
23. Program to shuffle deck of cards
24. Program to generate fibonacci sequence using recursion
25. Program to find sum of natural numbers using recursion
26. Program to find factorial of number using recursion
27. Program to convert decimal to binary using recursion
28. Program to add two matrices
29. Program to obtain transpose of a matrix
30. Program to multiply two matrices
31. Program to check if a string is palindrome
32. Program to remove punctuations from a string
33. Program to sort words lexicographically
34. Program to illustrate different set operations
35. Program to count frequency of each vowel in a string
36. Program to find hash value of a file

Embedded System Programming with ARM-Cortex

Code	Course Title	Credit	T-P-PJ
CUTM1039	Embedded System Programming with ARM-Cortex	6	3-2-1

Objective

- To allow students in Embedded System sectors to learn programming / Interfacing peripherals to ARM Cortex based Microcontroller

Course Outcome

- Describe the architectural features and instructions of 32 bit ARM Cortex M3 microcontroller.
- Understand the basic hardware components and their selection method based on the

characteristics and attributes of an Embedded System.

- Understand various Sensors, Actuators & Interfacing Modules.

Course content

Module I: EMBEDDED C

(4 Hrs)

Embedded System, Programming Embedded system, Factor for selecting the Programming language, Embedded C programming Language, Embedded C vs C.

Practice:

1. Familiarization with tools (STM32CubeMX, KeilVision IDE, Flash Magic & Proteus Simulator).
2. Programming STM32 using KeilVision& STM32CubeMX.

Module II: ARM-32 bit MICROCONTROLLER

(6 Hrs)

ARM Design Philosophy & RISC Architecture, Programmer's Model. ARM Cortex M, Cortex M Architecture, ARM Cortex-M Internals & Debugging.

Practice:

1. Familiarization with Different Processors and Controllers Boards (8, 16, 32, 64 bits)

Module III: STM32 GPIO MANAGEMENT

(14 Hrs)

GPIO Configuration, Driving De-initialization, Interfacing IO devices and its type – LEDs, Switches, Buzzer, Seven Segment Display, LCD (4 bit, 8 bit Mode), Keypad (4*4), DC Motor, Stepper Motor, Servo motor, Relay.

Practice:

1. Write an Embedded C program to interface LEDs with STM32.
2. Write an Embedded C program to interface Switch with STM32.
3. Write an Embedded C Program to design up counter & down counter using Seven Segment Display. (1 digit, 2 digit)
4. Write an Embedded C program to interface buzzer to control with the help of Switch.
5. Write an Embedded C program to display characters on Alphanumeric LCD.
6. Write an Embedded C program to interface Keypad and LCD with STM32.
7. Write an Embedded C program to interface DC Motors, Stepper Motor, and Servo Motor rotate clockwise, anticlockwise and in angle (45°, 90°, 180°).
8. Write an Embedded C program to interface relay to control the AC Appliances.

Module IV: STM32 INTERRUPT MANAGEMENT & UART

(14 Hrs)

NVIC Controller, Enabling Interrupt, Interrupt Priority Levels, UART Initialization, UART communication in polling Mode & in Interrupt Mode. Wireless Technologies- Bluetooth, Wi-Fi, RF.

Practice:

1. Write an embedded C program to generate an Interrupt process using STM32.
2. Write an Embedded C program to interface STM32 to Bluetooth Module to send & receive Data.
3. Write an Embedded C program to interface STM32 to GPS module to get a Location Coordinate.
4. Write an Embedded C program to interface STM32 to GSM module to Send & Receive SMS.
5. Write an Embedded C program RF module with STM32 to send and receive the data wirelessly.
6. Write and Embedded C program to design a system to read the RFID cards using STM32.
7. Write and Embedded C program to connect ESP8266 with STM32 to create a Webserver.

Module V: STM32 TIMERS , ADC, & DAC

(10 Hrs)

Timers Basics, General Purpose Timer, SysTick Timer, ADC & DAC Basics, Initialization, DAC Peripherals & Modules. Analog Sensors and its Types(Ultrasonic Sensor, Temperature, Humidity, Soil Moisture Sensor, PIR sensor)

Practice:

1. Write an Embedded C Programs to generate Delay using Timer.
2. Write an Embedded C program to display output for given analog input using internal ADC. (Use of Analog Sensors like Ultrasonic Sensor, Temperature, Humidity, Soil Moisture Sensor, PIR sensor)
3. Write an embedded C program to generate Triangular and Square waves using DAC.

Module VI: STM32 I2C & SPI

(10 Hrs)

I2C specification, Protocol configuration, I2C Peripherals. SPI Specification, Protocol configuration, it's Peripheral and Modules.

Practice:

1. Write an Embedded C program to build I2C communication between STM32 and Arduino
2. Write an Embedded C program to build SPI communication STM32 to the Arduino board.

Module VII: PWM & CAN (8 Hrs)

RTC feature and its Module, CAN Protocols Overview, Application, Architecture, Data Transmission & Data Frames.

Practice:

1. Write an Embedded C program to implement a Real-Time Clock.
2. Write an Embedded C program to Speed Control of DC motor using PWM.
3. Write an Embedded C program to change the intensity of Light using PWM.

VLSI Design

Code	Course Title	Credit	T-P-PJ
CUTM1040	VLSI Design	6	3-2-1

Objective

- The objective of the course is to provide understanding of the entire logic design process with the analysis from combinational and sequential digital circuit design.
- Provide understanding of the techniques essential to the Verilog programming for Verification and Testing.
- To learn the architecture of most prominent vendor in the FPGA market, Xilinx FPGAs and Altera FPGAs.

Course Outcome

- Analyze combinational and sequential circuit design concepts.
- Develop FSMs & ASMs for the given problems.
- Write Verilog code, compile, simulate and execute on any VLSI design platform.
- Apply Verilog HDL for FPGA Programming.
- Implement Digital Circuits on Xilinx FPGAs and Altera FPGAs using Verilog HDL.

Course content

Module I: Introduction to VERILOG

(10 hrs)

Introduction to Verilog HDL & Hierarchical Modeling Concepts, Lexical Conventions & Data Types, System Tasks & Compiler Directives, Modules, Ports and Module Instantiation Methods, Modeling methods, Design Verification using Test benches

Practice

1. Introduction to Xilinx EDA Tool.
2. Introduction to XST Tool and ISIM Tool
3. Xilinx Tool Flow: Simulation and Synthesis
4. Module and Ports in Verilog
5. Data Types in Verilog Programming.

Module II: Boolean Algebra and Logic Minimization

(8hrs)

Binary Arithmetic and 1's and 2's Complementation, Basic Theorems and Properties, Canonical and Standard Form, Algebraic Simplification of Digital Logic Gates, The Karnaugh Map Method, Prime and Essential Implications, Don't Care Map Entries.

Practice

1. Gate level Modelling in Verilog.
2. Data flow Modelling in Verilog.
3. Behavioral Modelling in Verilog.

Module III: Combinational Circuit Design

(12hrs)

Arithmetic Circuits: Adder/Subtractor Circuits, Ripple Carry Adder, Universal Ripple carry Adder, BCD Adder, MultipliersComparators, Multiplexer, Demultiplexer, Decoder, Encoder and Priority Encoder, Code Converters: Binary to Gray, Binary to BCD.

1. Design of Arithmetic Circuits using Verilog.
2. Design of Encoder and Decoder using Verilog.
3. Design of Data selector and Data Distributor using Verilog.
4. Design of comparator and Code converters using Verilog.

Module IV: Sequential Circuit Design

(14hrs)

Latch, Flip-Flop: S-R,D,J-K,T, Flip-Flop Conversion and Excitations Counter: Asynchronous and Synchronous counter Design, Register: SISO, SIPO,PISO and PIPO, Universal Shift Register, Johnson counter and Ring Counter.

Practice

1. Design SR and D-Flip Flop Using Continuous and Procedural Assignments.
2. Design JK-Flip Flop And T-Flip Flop Using Verilog.
3. Design Shift Registers (SISO, SIPO, PISO, PIPO) using Verilog.
4. Design Ripple Counter and Up/Down Synchronous Binary Counter Using Verilog.

Module V: State Machines

(10 hrs)

Basic Finite state machines (FSM) structures, Mealy and Moore type FSM,Design of controller and Data path units,Controller Design using FSMs & ASMs

Practice

1. Design of Sequence Detectors allowing overlapping as well as non-overlapping.
2. Design of Mealy and Moore type FSM using Verilog.
3. Design of data controller using ASM.

Module VI: FPGA Architecture and Prototyping

(5 hrs)

Introduction to Programmable Logic and FPGAs, Popular CPLD & FPGA Families, Architecture of Xilinx and Altera FPGAs

Practice

1. Proto-typing of a design using FPGA Design Kit

Module VII: Synthesis and Timing

(6hrs)

FPGA Design Flow, Implementation Details Advanced FPGA Design tips, Logic Synthesis for FPGA, Static Timing Analysis

Practice

1. Design mapping and optimization
2. Analyze and resolve design problems
3. Report generation
4. Verilog gate-level netlist generation and post-synthesis timing data (SDF) extraction
5. Design constraints generation for placement and routing

Text Books:

1. M.Morris Mano., “Digital Design”, Pearson Education, 4th Edition.

Electromagnetic Field Theory & Transmission Lines

Code	Course Title	Credit	T-P-PJ
CUTM1042	Electromagnetic Field Theory & Transmission Lines	3	2-1-0

Objective

- To introduce the fundamental theory and concepts of electromagnetic waves and transmission lines
- To impart knowledge on the concepts of electrostatics, electric potential, energy density and their applications.
- To impart knowledge on the concepts of magnetostatics, magnetic flux density, scalar and vector potential and its applications.
- To impart knowledge on the concepts of Faraday's law, induced emf and Maxwell's equations.
- Model and design the transmission lines at high frequencies.
- To apply Smith chart use for solution of transmission line problems and impedance matching.

Course Outcome

- Apply the principles of electrostatics to the solutions of problems relating to electric field and electric potential.
- Apply the principles of electrostatics to the solutions of problems relating to boundary conditions and electric energy density.
- Apply the principles of magnetostatics to the solutions of problems relating to magnetic field and magnetic potential,
- Apply the principles of magnetostatics to the solutions of problems relating to boundary conditions and magnetic energy density.
- Understand the concepts related to Faraday's law, induced emf and Maxwell's equations.
- Apply Maxwell's equations to solutions of problems relating to transmission lines and uniform plane wave propagation.

Course content

Module I: Electrostatics

(3hrs Theory + 2hrs Practice)

Introduction to Electrostatic Fields, Gauss's Law and Applications, Electric Potential, Maxwell's Two Equations for Electrostatic Fields, Electric Current and Current Density, Continuity Equation, Relaxation Time, Laplace's and Poisson's Equations.

Practice:

1. To Calculate the Electric field of a dipole using Coulomb's law in Matlab
2. Simulation of Electric Potential and Electric Field in Matlab

Module II: Magnetostatics**(3hrs Theory + 2hrs Practice)**

Biot-Savart Law: Current Flow – which path does it take, Ampere's Circuital Law, Magnetic Flux Density: Closed Loop Circuits, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Inductances and Magnetic Energy.

Practice:

1. Magnetic field by an infinitely long line current using matlab
2. Magnetic field of a Circular current loop using Biot Savart's Law

Module III: Maxwell's Equations**(3hrs Theory + 1hr Practice)**

Maxwell's Equations and Boundary Conditions.

Practice:

1. Maxwell's Equation using matlab

Module IV: Electromagnetic Waves (3hrs Theory + 4hrs Practice)

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves, Wave Propagation in Lossless and Conducting Media, Polarization, Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance. Poynting Vector and Poynting Theorem.

Practice:

1. Linear and Circular Polarization of waves using matlab
2. 1-D standing wave using matlab
3. 2-D standing wave (TE) using matlab
4. 2-D standing wave (TM) using matlab
5. Design of Wireless Power Transfer using matlab

Module V: Introduction to Transmission Line Modelling (3hrs Theory + 3hrs Practice)

Introduction to Transmission line equations, Primary & Secondary constants Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Losslessness/Low Loss Characterization, Distortion, Loading, Transmission Line Effects, SC and OC Lines,

Reflection Coefficient, VSWR, $\lambda/8$, $\lambda/4$, $\lambda/2$ line impedance Transformations, Smith Chart – Configuration and Applications, Impedance Control.

Practice:

1. Reflection and transmission of a plane wave (S-wave)
2. Reflection and transmission of a plane wave (P-wave)
3. Radiation by an infinitesimal dipole

Module VI: Waveguides

(3hrs Theory)

Introduction, Rectangular Waveguides, electric and magnetic field patterns in TE₁₀ and TE₁₁ mode configuration, modes of TE wave in rectangular waveguide, field equations, impossibility of TEM wave propagation in waveguides, cutoff frequency of rectangular waveguide, propagation constant, wave impedance, phase velocity, group velocity, dominant mode and degenerate modes, related problems.

Module VII: Electromagnetic Computational Techniques

(3hrs Theory)

Introduction, Finite Difference Method (FDM), Finite Element Method (FEM) and Method of moments (MOM) technique.

Text Books:

1. Matthew N.O. Sadiku, “Elements of Electromagnetics”, Oxford Univ. Press.
2. G.S.N.Raju, “Electromagnetic Field Theory and Transmission Lines”, Pearson Education (Singapore) Pvt., Ltd.

Network Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1043	Network Analysis	3	2-1-0

Objective

- To learn techniques of solving circuits involving different active and passive elements.
- To deliver problem solving skills on circuits through the application of simulation & programming techniques and principles to common circuit problems.
- To analyze the behavior of the circuit's response in time domain.

Course Outcome

- Apply the knowledge of basic circuit law and simplify the network using different techniques.
- Analyze the circuit using graphical method and network theorems.
- Infer and evaluate transient response, Steady state response
- Obtain the maximum power transfer to the load, and Analyze the series resonant and parallel resonant circuit.
- Evaluate two-port network parameters.

Course Content

Module I

(4 hrs)

Network Topology

Graph of a network, Concept of tree, Incidence matrix, Tie-set matrix, Cut-set matrix, Formulation and solution of network equilibrium equations on loop and node basis

Practice

- Incidence Matrix Formulation
- Tie-set Matrix Formulation
- Cut-set Matrix Formulation

Module II

(5 hrs)

Network Theorems

Substitution theorem, Reciprocity theorem, Maximum power transfer theorem, Tellegen's theorem, Millman's theorem, Compensation theorem

Practice

- Verification of Reciprocity theorem
- Verification of Tellegen's theorem
- Verification of Millman's theorem
- Verification of Maximum power transfer theorem
- Verification of Compensation theorem

Module III
Coupled Circuits

(5 hrs)

Theory

Coupled Circuits, Dot Convention for representing coupled circuits, Coefficient of coupling, Series and parallel resonant circuits: Band Width and Q-factor

Practice

1. Self-inductance, mutual inductance and coefficient of coupling to be determined for a 1- \emptyset transformer representing coupled circuit.
2. Frequency response of a series and parallel resonant circuit by laboratory set up.

Module IV
Network Laplace Transform

(5 hrs)

Application of Laplace transform: Circuit Analysis (Steady State and Transient)

Practice:

- Analysis of transient characteristics using Matlab
- AC and DC transient response analysis for RL,RC and RLC circuits

Module V
Two Port Network

(5 hrs)

Z, Y, ABCD and h-parameters, Reciprocity and Symmetry, Interrelation of two-port parameters, Interconnection of two-port networks

Practice:

- Determination of Z parameters
- Determination of Y parameters
- Determination of h parameters
- Determination of ABCD parameters

Module VI
Filters

(4 hrs)

Brief idea about network filters (Low pass, High pass, Band pass and Band elimination) and their frequency response

Practice:

- Design and frequency response analysis of Low Pass filter
- Design and frequency response analysis of High Pass filter
- Design and frequency response analysis of Band Pass filter
- Design and frequency response analysis of Band elimination filter

Module VII
Fourier Series

(5 hrs)

Theory

Fourier series, Fourier analysis and evaluation of coefficients, Steady state response of network to periodic signals, Fourier transform and convergence, Fourier transform of some functions

Practice:

- Fourier series expansion of Square wave
- Fourier series expansion of Sine wave

Text Books:

1. M. E. VAN VALKENBURG- *Network Analysis, PHI Publications*

Energy Production & Transmission

Code	Course Title	Credit	T-P-PJ
CUTM1051	Energy Production & Transmission	3	2-1-0

Course Objective

- | |
|---|
| <ul style="list-style-type: none"> • To understand power generation and economics • To design the transmission line parameters • To understand the mechanical design of transmission lines |
|---|

Course Outcome

- | |
|--|
| <ul style="list-style-type: none"> • Able to understand the different functions of major equipment of the power plants and layout designing of the plants |
|--|

- Able to understand the economic aspects of power system generation
- Able to design transmission line cables

Course content

Module I: Thermal & Nuclear Power Plants

(6Hours)

Introduction: Statistics of generation of electric power from Conventional and non conventional sources of energy, Thermal & Nuclear power station: Schematic arrangement, Types of prime movers, types of reactors, speed control & auxiliaries, Environmental aspects for selecting the sites and locations, Hazards.

Practice:

1. Schematic Layout design Thermal Plant using AutoCad
2. Schematic Layout design Nuclear Plant using AutoCad

Module II: Hydro & Wind power plants

(4Hours)

Hydro power station: Schematic arrangement, Hydro turbines, Environmental aspects for selecting the sites and locations of hydro power stations, small hydro for irrigation, Wind power generation.

Practice:

3. Schematic Layout design of Hydro Plant using AutoCad

Module III: Power Generation Tariffs

(5Hours)

Tariff and Economic aspects in power Generation: Terms commonly used in system operation, various factors affecting cost of generation: Load curves, load duration curves, Connected load, maximum load, Peak load, base load and peak load power plants, load factor, Plant capacity factor, Plant use factor, Demand factor, diversity factor, Cost of power plant.

Practice: MATLAB

4. Preparation of Load calculator using MATLAB

Module IV: Transmission systems

(4 Hours)

Supply System: Different kinds of supply system and their comparison, choice of transmission voltage. Transmission Lines: Configurations, types of conductors, resistance of line, skin effect, Kelvin's law, Proximity effect,

Module V: Transmission line Parameters

(5 Hours)

Calculation of inductance and capacitance of single phase, three phase, single circuit and double circuit transmission lines, Representation and performance of short, medium and long transmission lines, T & Pi networks, ABCD parameters, Ferranti effect, Surge impedance loading.

Practice:

5. Designing of transmission line parameters using MATLAB

Module VI: Transmission line operation & Insulators**(5Hours)**

Phenomenon of corona, corona formation, calculation of potential gradient, corona loss, factors affecting corona, methods of reducing corona and interference Electrostatic and electromagnetic interference with communication lines.

Overhead line Insulators:

Type of insulators and their applications, potential distribution over a string of insulators, methods of equalizing the potential, string efficiency.

Practice:**6. Designing of Insulators and calculation of voltages using MATLAB****Module VII: Design of cables****(4 Hours)**

Calculation of sag & tension, effects of wind and ice loading, sag template, vibration dampers. Under Ground Insulated cables: Type of cables and their construction, dielectric stress, grading of cables, insulation resistance, capacitance of single phase and three phase cables, dielectric loss, heating of cables, Transmission line tower designs

Practice:**7. Designing of Cables****Text Books:**

1. Electrical power Generation, Transmission and Distribution S.N. Singh PHI 2nd Edition, 2009

Reference Books:

1. A Text Book on Power System Engineering A.Chakrabarti, Dhanpath Rai 2nd Edition

Substation Switch Gear & Protection

Code	Course Title	(Credit)	T-P-PJ
CUTM1052	Substation Switch Gear & Protection	4	2-1-1

Objective

- To understand the different components of substation.
- To understand the protection of different equipment in power system.

Course Outcome

- Able to understand the performance of different protection methods of different equipments.

- Able to understand the different components of substation and their operation.
- Able to design the power system switchgear.

Course content

Module I: Substation Systems

(6 Hours)

Introduction to Substation System: Definition of substation, necessity of substation, essential features, types of substation, single line diagram of substation, List and functions of each component of substation. Auxiliary systems, Over head earthing screen, Sub-station earthing system.

Practice:

1. Layout Design of 220KV substation using MATLAB
2. Layout Design of 400KV & 750KV substation using MATLAB as per IEEE standards

Module II: Operation & Maintenance of Substations

(10 Hours)

Testing and maintenance of Bus Bars, and Isolators: Types and ratings – Bus bar configuration, Tests on Bus bars. Types of isolators and ratings, Load Break switches, Maintenance of isolators, testing and maintenance of Power Transformers, Current and Voltage Transformers and Insulators: Preliminary tests, Final tests, Impulse test, Partial discharge test, Transformer maintenance. Current Transformer tests, Potential Transformer tests. CT and PT maintenance, Tests and maintenance of insulator

Practice:

3. Maintenance tests of CT & PT of substation as per manufacturers Hand book
4. Maintenance tests of Lightning Arrestor & Circuit Breaker of substation as per manufacturers Hand book
5. Maintenance tests of transformer as per manufacturers Hand book

Module III: Protection & System components

(5 Hours)

Need for protective schemes, Nature and Cause of Faults, Types of Fault, Effects of Faults, Zones of Protection, Primary and Backup Protection, Essential Qualities of Protection, Classification of Protective Relays, Automatic Reclosing, Current Transformers for protection, Voltage Transformers for Protection.

Module IV: Relays

(4 Hours)

Introduction, -Electromechanical Relays, Static Relays – Merits and Demerits of Static Relays, Numerical Relays, Comparison between Electromechanical Relays and Numerical Relays.

Practice:

6. Designing of a Digital Relay

Module V: Relay Operations

(7 Hours)

Introduction, Time – current Characteristics, Current Setting, Time Setting, Overcurrent Protective Schemes, Reverse Power or Directional Relay, Protection of Parallel Feeders, Protection of Ring Mains, Earth Fault and Phase Fault Protection, Combined Earth Fault and Phase Fault Protective Scheme, Phase Fault Protective Scheme, Directional Earth Fault Relay, Static Overcurrent Relays, Numerical Overcurrent Relays.

Module VI: Protection control systems

(5Hours)

Pilot Relaying Schemes: Introduction, Wire Pilot Protection, Carrier Current Protection
Numerical Differential Relays: Simple Differential Protection, Percentage or Biased Differential Relay, Differential Protection of 3 Phase Circuits, Balanced (Opposed) Voltage Differential Protection.

Rotating Machines Protection: Introduction, Protection of Generators

Transformer and Buszone Protection: Introduction, Transformer Protection, Buszone Protection, Frame Leakage Protection

Practice:

7. Design of Protection Scheme using MATLAB

Module VII: Circuit Breakers

(8 Hours)

Introduction, Fault Clearing Time of a Circuit Breaker, Arc Voltage, Arc Interruption, Restriking Voltage and Recovery Voltage, Current Chopping, Interruption of Capacitive Current, Classification of Circuit Breakers, Air – Break Circuit Breakers, Oil Circuit Breakers, Air – Blast Circuit Breakers, SF6 Circuit Breakers, Vacuum Circuit Breakers, High Voltage Direct Current Circuit Breakers, Rating of Circuit Breakers, Testing of Circuit Breakers.

Practice:

8. Design & simulation of Circuit breaker using 3DS Tools

Project:

1. Analysis of critically operating power system using MATLAB/DYMOLA

Text Books:

1. Fundamentals of Power System Protection Y.G.Paithankar S.R. Bhide PHI 1 st Edition, 2009

Reference Books:

1. Power System Protection and Switchgear, BhuvaneshOza et al McGraw Hill 1 st Edition, 2010

System Modeling & Control

Code	Course Title	(Credit)	T-P-PJ
CUTM1053	System Modeling and Control	4	3-1-0

Objective

- To teach how to convert a physical systems consist of mechanical and electrical system into a mathematical model.
- Analysis of a live system in time domain and frequency domain and application of controllers to get the desired response.

Course Outcome

- Students will understand the basics of a system.
- Student gain knowledge on stability of a system.
- Student will analyze the system and controller.
- Students will develop skill of designing automatic control system and controller for a particular application.

Course content

Module I: Introduction

(6 Hours)

Theory

Introduction to Control Systems: Basic Concepts of Control Systems, Open loop and closed loop systems; Servomechanisms, Laplace transform, Transfer functions, Concept of Pole and Zero.

Practice: Hardware/MATLAB

1. Study of Temperature control system
2. Using MATLAB, find the poles, zeros, gain and draw the pole-zero plot of the transfer function.

Module II: System Dynamics

(10 Hours)

Theory

Mathematical Models of Physical Systems: Differential Equations of Physical Systems, Mechanical Translational Systems, Rotational systems, Electrical Systems, Analogy between Mechanical and electrical quantities, Derivation of Transfer functions, Block Diagram Algebra, Signal Flow Graphs and Mason's Gain Formula.

Practice: MATLAB

3. Using MATLAB, find the transfer function from given block diagram.

Module III: Time Response Analysis

(8Hours)

Theory

Time Response Analysis: Type Test Signals, Time response of first order systems to unit step and unit ramp inputs, Time Response of Second order systems to unit step input, Time Response specifications, Steady State Errors and Static Error Constants of different types of systems.

Practice: MATLAB/DYMOLA

4. Standard Test Signals
5. Time response of first order systems to unit step and unit ramp inputs
6. Time Response of Second order systems to unit step input
7. Using MATLAB, determine the steady state error of the given system.

Module IV: Stability in Time Domain

(4 Hours)

Theory

Stability in Time Domain: Stability and Algebraic Criteria, concept of stability, Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion and Application of the Routh stability criterion to linear feedback system

Module V: Root Locus Technique

(5 Hours)

Theory

Root Locus Technique: Root locus concepts, Rules of Construction of Root locus and Determination of Roots from Root locus for a specified open loop gain.

Practice: MATLAB

8. Construct the root locus for 2nd & 3rd order system and analyze its stability (Gain)

Module VI: Frequency Response Analysis

(6Hours)

Theory

Frequency Response Analysis: Frequency domain specifications, correlation between Time and Frequency Response with respect to second order system, Bode plot, Determination of Gain Margin and Phase Margin from Bode plot.

Practice: MATLAB

9. Construct the bode plot for 2nd and 3rd order system and analyze its stability (PM & GM)

Module VII: Controllers

(4 Hours)

Theory

Controllers: Concept of Proportional, Derivative and Integral Control actions, P, PD, PI and PID controllers.

Practice: MATLAB/DYMOLA

10. Design of P, PD, PI and PID Controller for 2nd or 3rd order system

Text Books:

1. Saeed S. Hasan, "Automatic Control Systems," Kataria Publication, 9th Edition-2017.

Reference Books:

2. Nagrath J. and Gopal M., "Control Systems Engineering," New Age International Publishers, 6th Edition-2017.

Electrical Machines Operation and Control

Code	Course Title	T-P-PJ	Prerequisite
CUTM1054	Electrical Machines Operation and Control	3-1-0	Basic Electrical Engineering

Objective

- To introduce the students about principles of electromagnetism applied to alternating machines.
- To familiarize the students about the fundamental laws that governs the operation of machines and to extend its application to synchronous generator and motors.
- To introduce the students about the constraints associated with starting of Induction motors.
- Develop selection skill to identify the type of generators or motors required for particular application.
- Highlight the importance of transformers in transmission and distribution of electric power.

Course Outcome

- Distinguish the constructional similarity and dissimilarity between various machines.
- Perform different tests on various machines.
- Understand electromagnetic and electromagnetic induction
- Understand DC Machines
- Understand single and three phase A.C circuits, and Understand AC machines

Course content

Module-I: D.C. Machines (5 Hrs)

Theory

Construction, Classification and Principle of operation of DC machines.

Theory & testing:-EMF equation of DC generator, DC Motor Characteristics, Speed Equation of DC Motor. Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors

Application- DC Generator, DC Motor-Types

Practice:

- 1) Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
- 2) Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.
- 3) Starting & Speed Control of D.C Series motor by (i) Field flux control method & (ii) armature voltage control method.

MODULE II: Stepper Motors (Precision Machines) (6 Hrs)

Theory

Stepper motor drive, basic principles involved in stepper motor control, stepper motor specification, operation and commercial driver chips and packages, Brushless DC Motors, Reluctance Motor, Hysteresis Motor
Application in Medical, Automobile, Civil, Electrical etc

Practice:

- 4) Motor Voltage and Current Measurement.
- 5) ON-Load Tap changer

Module-III: Induction Motors (8 Hrs)

Theory

Principles of operation of induction motors, both single and 3-phase types. Torque-speed curves, Different types of single phase motors

Three Phase Induction Motor

Equivalent Circuit and Phasor Diagram, No-Load and Blocked Rotor tests, Determination of Parameters, Slip-Torque Characteristics Losses and Efficiency, Effect of rotor resistance, Starting and speed control methods, Cogging, Crawling and Electrical Braking of Induction Motors.

Applications of three & single phase motors which will assist in picking the right one for an application.

Practice:

- 5) Determination of parameter of a single phase induction motor and study of (a) Capacitor start induction motor (b) Capacitor start and capacitor run induction motor
- 6) Determination of Efficiency, Plotting of Torque-Slip Characteristics of Three Phase Induction motor by Brake Test.
- 7) Load test of a 3 phase slip ring induction motor.

Module-IV: Three Phase Synchronous Generators (7 Hrs)

Theory

Construction, Principle, Coil Pitch, Distributed Windings in A.C. Machines, The Equivalent Circuit of a Synchronous Generator (Armature Reaction Reactance, Synchronous Reactance and Impedance). The Phasor Diagram of a Synchronous Generator, Power and Torque in Synchronous Generators (Power Angle Equation and Power Angle Characteristic)

Practice:

- 8) Plotting the open circuit and short circuit characteristics of alternator.
- 9) Calculating the voltage regulation by synchronous impedance method.
- 10) Calculating the voltage regulation by zero power factor method.

Module-V: Parallel Operation Of Three Phase AC Synchronous Generators (4 Hrs)

Theory

Synchronous condenser, Hunting, Paralleling-Conditions, Procedure, Operation of Generators in Parallel with Infinite bus bar, Effect of excitation, effect of unequal voltage and steam power supply.

Practice:

- 11) Connection & verifying the conditions of parallel operation of alternators.
- 12) Verification of direct axis reactance, quadrature axis reactance
- 13) Load Sharing during parallel operation using Dymola.

Module-VI: Three Phase Synchronous Motors (6 Hrs)

Theory

Basic Principles of Motor operation, Construction, Starting Synchronous Motors, Synchronous Motor Ratings, Equivalent circuit & phasor diagram, Effect of excitation on varying load, power developed in a synchronous motor.

Applications of synchronous motors

Practice:

14) Study of universal motor and shaded pole motor.

15) Use of synchronous motor as a synchronous condenser for p.f improvement.

Module-VII: Single-Phase Transformers (9 Hrs):

Theory

Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, Delta-star, Zig-zag connections. Scott connection, Open delta connection. Auto Transformers, Welding Transformer.

Application of Single & Three Phase transformer

Practice:

16) Prescribed tests of single phase and three phase Transformer.

17) Load balancing in a three phase distribution Transformer.

18) Simulation of open delta condition of Transformer.

TEXT BOOK:

1. Electrical Machines – D P Kothari and I J Nagrath, Fourth Edition – Tata McGraw Hill.

REFERENCE BOOKS:

1. Electrical Machinery – P S Bimbhra – Khanna Publishers.
2. Electrical Machines - P. K. Mukherjee, S. Chakravarti, Dhanpat Rai & Sons

Industrial Power Electronics

Code	Course Title	Credit	T-P-PJ
CUTM1055	Industrial Power Electronics	4	2-1-1

Course Objective

- They must meet industrial requirement for power electronic engineers.
- They must be gaining adequate practical knowledge on power semiconductor devices, converters and their control techniques.
- They should know the typical applications to motor drives.

Course Outcome

- They will apply their knowledge of the electrical characteristics of power semiconductor devices.
- They will know how to select power semiconductor devices for a range of applications.
- They will understand the basic topology of converters, inverters and power supplies and design calculations for drive
- They will learn the power converter applications, and understand the approximations used.

Course content

Module I (6hrs.)

Power Semiconductor Devices

Introduction to power electronics, uncontrolled switches, semi-controlled switches, fully controlled switches, constructional features, operating principle, characteristics and specification of power semiconductor devices, hard and soft switching of power semiconductor switches.

Practice

1. Simulation of V-I characteristics of power diode & power transistor.
2. Simulation of V-I characteristics of MOSFET & IGBT.
3. Simulation of V-I characteristics of silicon-controlled rectifier.

Module II (3 hrs.)

Triggering Circuits

R- Triggering, R-C triggering, UJT triggering, design of UJT triggering circuit.

Practice

4. Simulation of R and RC triggering.
5. Simulation of UJT triggering

Module III (8 hrs)

AC to DC Converter

Overview of rectifiers, half wave uncontrolled rectifier with R load and R-L load, use of freewheeling diode, half wave rectifier R-L load with FWD, full wave bridge uncontrolled rectifier, half wave controlled rectifier with R load, R-L load and R-L load with free-wheeling diode, half controlled bridge rectifier, fully controlled bridge rectifier, effect of source inductance on the performance of ac to dc converters, power factor improvement, harmonic reduction, filter design.

Practice

6. Simulation of single phase half-wave and full-wave diode rectifier using R & L load.

7. Simulation of single phase fully controlled converter using R & L load.

8. Simulation of single phase semi converter using R-L load.

9. Simulation of 3-phase semi converter with R, R-L and dc motor load with/without freewheeling diode.

10. Simulation of 3-phase bridge converter with R, R-L and dc motor load with/without freewheeling diode.

Module IV: (10 hrs.)

DC to DC Converter

Introduction to chopper (Type A, B, C, D, E), switching techniques, step down dc chopper with R load, R-L-E load, step up dc chopper with R, R-L, R-L-E load, buck regulator, boost regulator, Buck-boost regulator, CUK and SEPIC converter, commutation of thyristor based circuits part-I, commutation of thyristor based circuits part-II, introduction to SMPS circuits, fly back type SMPS, forward type SMPS, design of transformer for SMPS circuits.

Practice

11. Simulation of buck converter.

12. Simulation of boost converter.

13. Simulation of buck boost converter.

Module V (6 hrs.)

DC to AC Converter

Introduction to inverters, importance and application of inverters, single phase half bridge inverter with R and R-L load, single phase bridge inverter with R and R-L load, three phase inverters, control techniques of inverter, single/multiple pulse width modulation, sinusoidal pulse width modulation and its realization, CSI, load-commutated CSI, industrial inverter.

Practice

14. Simulation of single-phase inverter & three phase inverter.

Module VI (3 hrs.)

AC to AC Converter

AC voltage controller: Single phase bi-directional controllers with R and R-L load, single phase cyclo-converters.

Practice

15. Simulation of single phase AC voltage controller&cyclo-converter.

Module VII

(9 hrs)

Application of Power Electronics Converters

Analysis of converter fed dc drives, analysis of chopper fed dc drives, analysis of VSI, CSI fed induction motor drives, automotive & traction system, industries as rolling mills, pumps, elevators, utility systems as FACTs, smart grid, and renewable energy as wind turbine.

Practice

16. Simulation of converter fed dc drives (Wind Turbines).

17. Simulation of chopper fed dc drives (PV Systems).

18. Simulation of induction motor drives (e-Vehicle).

19. Simulation of railway electrification system using Dymola

Project

1. 500 VA Sine wave Inverter

2. Industrial Battery Charger using SCR

3. Precision Illumination control of Lamp

4. Dual Converter using Thyristors

Text Books:

1. M. H. Rashid, "Power Electronics: Circuits, Devices and Applications," 4th Edition, Pearson, 2017
2. M. D. Singh & K. B. Khanchandani, "Power electronics", 2nd Edition, Tata McGraw-Hill, 2008

Reference Books:

1. J. Vithayathil, "Power Electronics: Principles and Applications", 2nd Edition TMH Edition, 1995
2. Mohan, Undeland and Robbins, "Power Electronics: Converters, Applications and Design" 3rd Edition Edition, 2007

Digital Measurement and Instrumentation

Code	Course Title	Credit	T-P-PJ
CUTM1056	Digital Measurement and Instrumentation	3	2-1-0

Objective

- The main objective of this course is to explain the operation, performance and application of Digital Measuring Instruments to the students.

Course Outcome

- Understand the construction, principle and characteristics of different types of digital measuring instruments
- Apply the knowledge about different instruments and can identify the best suitable instrument for a required typical measurement

Course Content

Module I (6 hrs)

Philosophy of digital measurements

Time Measurement Techniques: Error analysis in digital measurement, Measurement of time interval between two events, Error in time interval measurement, Vernier technique for small time measurement, Measurement of time interval with constraints, Measurement of periodic time, phase, Quality factor of ringing circuit, Decibel meter, Software controlled measurement.

Practice

- Error analysis of digital measurement using Matlab
- Simulation of Quality Factor of ringing circuit

Module II (5 hrs)

Digital frequency measurement techniques

Measurement of frequency, Ratio of two frequencies, Product of two frequencies, High frequency, average Frequency difference, Deviation of power frequency, Peak frequency. Fast low-frequency measurement, Digital Tachometer.

Practice

- Addition and product of different frequencies using Matlab
- Simulation of digital tachometer using Matlab

Module III (5 hrs)

Digitally Programmable Circuits

Single mode switching, Group mode switching, Resistors, Potentiometers, Amplifiers, Schmitt trigger, Dual polarity gain amplifiers. Programmable gain amplifier with dual output, Two stage programming, Programmable Biquads.

Practice:

- Analysis of switching using Matlab
- Simulation of programmable biquads using Matlab

Module IV (4 hrs)

Digital to Analog Converters

Output Input relation, DACs derived from programmable gain amplifiers, Weighted-resistor DAC, Weighted current DAC, Weighted reference voltage DAC, Ladder DAC, Switches.

Practice:

- Simulation of programmable gain amplifier using Matlab
- Simulation of DAC using Matlab

Module V (5 hrs)

Digital Voltage Measurement Techniques

Sampling theorem, Time-division multiplexing, Quantization, Indirect type A/D converters, Direct type A/D converters, Input circuitry of a digital voltmeter.

Practice:

- Simulation of Digital voltmeter using Matlab
- Analysis and simulation of digital multi-meter.

Module VI (4 hrs)

Digital Instrument

Need for digital instruments, Advantages of digital instruments, Essentials of digital instrument, Performance characteristics of digital instrument.

Digital Recording Systems

Input Conditioning Equipment, Digitizer, Multiplexer, Programme Pinboard, Linearizer, Digital Clock, Limit Detectors, Output Devices

Practice:

- Data fetching using controllers
- Simulation of digital clock using Matlab

Module VII: (4 hrs)

Signal Generator, Analyzers and Oscilloscopes:

Function Generator, Pulse Generator, RF Signal Generator, Harmonic Distortion Analyzer, Spectrum Analyzer, Digital Storage CROs

Practice:

- To study block wise Construction of a Function Generator
- Measure Voltage, Frequency, Phase and Modulation Index (Trapezoidal Method) using CRO
- Demonstrate features of Digital Storage Oscilloscope
- Measure unknown Frequency using Lissajous Patterns

Text Books:

1. T. S. Rathore- Digital Measurement Techniques, Alpha Science International Ltd
2. David A. Bell - Electronic Instrumentation and Measurements, Oxford Univ. Press, 1997
3. A. K. Sawhney – A Course in Electrical and Electronic Measurements and Instrumentation, Dhanpat Rai & Co

Reference Books:

2. H.S. Kalsi-Electronic Instrumentation, Tata McGraw-Hill, New Delhi, 2010
3. R. K. Rajput- Electrical & Electronic measurement and Instrumentation, S. Chand Publication
4. K. Lal Kishore- Electronic Measurements and Instrumentation, Pearson Education 2010

Basic Electrical Engineering

Code	Course Title	(Credit)	T-P-PJ
CUTM1057	Basic Electrical Engineering	2	1-1-0

Objective

- In this course, student will come to know about the Basics of Electrical Engineering, Currents and Voltages across various Electrical elements.
- Their behavior in both Alternating Current and Direct Current circuits.
- Analysis of 1-phase and 3-phase AC wave forms.

Course Outcome

- Student will be exposed to the breadth of electrical engineering, able to gain knowledge in Electrical Circuits (AC and DC).
- Acquire knowledge on various parameters of electrical engineering and their properties with hands-on-practice of basic electrical experiments.

Course content

Module I: Basic Concepts and Basic Laws

(4hrs)

Theory

Essence of Electricity, Electric Field; Electric Current, Potential and Potential Difference, E.M.F., Electric Power, Ohm's Law, Basic Circuit Components, Ideal and Practical Sources, Source Conversion.

Practice:

1. Design and Analysis of Basic electrical circuits using Dymola. Plotting the V-I Characteristics of Incandescent lamp using Dymola.

Module II: Methods of Analysis (4hrs)

Theory

Network Analysis using Series and Parallel Equivalent, Voltage and Current Divider Circuits, Nodal Analysis, Mesh Analysis, Delta-Star & Star-Delta conversion.

Practice :

2. Verification of KCL and KVL in series and parallel circuits using Dymola.

Module III: DC Network Theorems (3hrs)

Theory

Analysis of Superposition, Thevenin's and Norton's theorem.

Practice:

3. Verification of Superposition, Thevenin's and Norton's theorem using Dymola.

Module IV: Introduction to Electromagnetism (4hrs)

Theory

Magnetic Circuits, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. Methods of preventing such losses. Solenoids and field coils. Application of solenoids in different circuits in Automobiles and in electrical circuit.

Practice (Hardware):

4. Observation of generation of magnetic flux for different input current in a coil and plotting B-H Curve.

Module V: Single-Phase Transformer (2hrs)

Practice (Hardware):

5. Study of Transformers, Linear Transformer Model, Ideal Transformer Model, No-load Loss and Load-loss Calculation.

Module VI: AC Circuit Analysis (3hrs)

Theory

Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor.

Practice:

6. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply using Dymola.

Module VII: Phasor Analysis (3hrs)

Theory

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.

Practice

7. Measurement of power and power factor in a 3- \emptyset AC circuit by (one, two and three) wattmeter using Dymola.

Recommended Books:

1. P. K. Sathpathy, "Basic Electrical Engineering," 3rd Edition, Oxford.
2. B. L. Thereja, "Electrical Technology", Volume-I, 2005 Edition (24th Revised Edition)
3. Hughes, "Electrical & Electronic Technology", Ninth Edition (Revised by J Hiley, K Brown, and I Smith), Pearson Education

Industrial Automation

Course Code	Course Title	Credits	Type T-P-PJ
CUIA2100	Introduction to Industrial Automation	1	1-0-0
CUIA2101	Advanced Programming & Control Blocks of PLC	3	1-2-0
CUIA2102	Control & Signal Wiring of PLC	2	0-2-0
CUIA2103	SCADA based advanced features	2	1-1-0
CUIA2104	SCADA & PLC based sequential control	1	0-1-0
CUIA2105	Human Machine Interface	3	1-2-0
CUIA2106	OPC server base data fetching & control	2	1-1-0
CUIA2107	Project	6	0-0-6
CUIA2108	Internship	4	0-0-4
	Total Credits	24	

Domain Track Objectives

- To upgrade knowledge levels needed for modern industries.
- Process & sequential control logic of industry.
- Project based training.

Domain Track Course Outcomes

- Gain knowledge on advanced industrial automation.
- Understand different types of Devices to which PLC input and output modules are connected.
- Provide the knowledge about understand various types of mobile applications.
- Industry based project & advanced learning.
- Students will develop skill of designing automatic control system and controller for a particular application.

Domain Syllabus

Course – 1: INTRODUCTION TO INDUSTRIAL AUTOMATION

- 1.1 Automation Uses
- 1.2 Automation - PLC Basics
- 1.3 Mechanical relays versus PLC
- 1.4 Functions of various blocks and working principle of advanced blocks.

Course – 2: ADVANCED PROGRAMMING & CONTROL BLOCKS OF PLC

- 2.1 CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD
- 2.2 MOV, MVM, AND, OR, XOR, NOT. CLR.
- 2.3 BSL, BSR, SQC, SQL, SQO, FFL, FFU, LFL, LFU
- 2.4 JMP, LBL, JSR, MCR
- 2.5 Connecting PLC software with SCADA software

Practice:

- P2.1 - Comparison of industry based analog signals.
- P2,2 - Detecting different product output of an industry
- P2.3 - Sequential control of an industry by using advanced blocks.
- P2.4 - Emergency control system of an industry
- P2.5 - Connecting PLC software with SCADA software

Course – 3: CONTROL & SIGNAL WIRING OF PLC

- 3.1 Control wiring of PLC.
- 3.2 PLC, Sensor and field instruments signal flow wiring.
- 3.3 Device connectivity

Practice:

- P3.1 PLC input/output wiring concept.

P3.2 Connecting relay, contactor, sensors and other field instruments.

P3.3 Controlling an industry motor using STAR-DELTA connection

Course – 4: SCADA BASED ADVANCED FEATURES

4.1 Alarms

4.2 Trends, Data base connectivity & Report generation

4.3 Recipe management

4.4 Security

Practice:

P4.1 - Data fetching and representing on graph and excel

P4.2 - Advanced controlling of industry by using SCADA

Course – 5: SCADA & PLC BASED SEQUENTIAL CONTROL

5.1 Script

5.2 Networking

5.3 Device connectivity.

Practice:

P5.1 Script

P5.2 Networking

P5.3 Device connectivity

Course – 6: HUMAN MACHINE INTERFACE

6.1 What is HMI. Use of HMI

6.2 Concept of different operational features

6.3 Connectivity of HMI and PLC.

Practice:

- P6.1 Alarms
- P6.2 Security
- P6.3 Recipe manager

Course – 7: OPC SERVER BASE DATA FETCHING & CONTROL

- 7.1 Study of Open Platform Communications
- 7.2 OPC to control PLC, SCADA.
- 7.3 OPC based different protocol concept.
- 7.4 Data handling using OPC.

Practice:

- P7.1 Installation of OPC
- P7.2 OPC protocols
- P7.3 Connectivity of PLC, SCADA & ARDUINO to OPC.

Operation and Maintenance of Electrical Grid System & Transformers

Domain Name	Code	Type of course	T-P-P	Pre-requisite
Operation and Maintenance of Electrical Grid System & Transformers	EGCU2090	Theory + Practice + Project	6-14-4	Nil

1. Track Total Credits:

Theory + Practice + Project: [6+14+4] (24)

2. Course objectives :

A] To create technically trained manpower readily available for recruitment to the power/energy Companies & Transformer Manufacturing firms in Electrical Sector.

B] Develop digital prototypes of the products and validate them and innovate for design efficiency

3. Course Outcomes :

A] Product: Manufacturing of commercially used distribution transformer

B] Project Report: Report on different Operation and maintenance procedures carried out on transmission and distribution system including Transformer Manufacturing & Testing Process

4. **Domain Structure** : The Domain will consist of following components and these components will be reflected in the grade sheet.

- a. CUEG 2090: Introduction, Power Scenario, Power Quality & Faulty clearance, [1-1-0]
- b. CUEG 2091: Switchyard & substation Networks, [1-2-0]
- c. CUEG 2092: Protection scheme & Switchgear, [1-2-0]
- d. CUEG 2093: Cable system & Testing, [1-2-0]
- e. CUEG 2094: Power Markets, [1-0-0]
- f. CUEG 2095: Grid Safety, [0-2-0]
- g. CUEG 2096: Transformer Manufacturing, [1-5-0]
- h. CUEG 2097: Project, [0-0-4]

The Domain will be delivered through case studies, assignments and product development

Product Development Stack :

1. Distribution Transformer (Full product)
2. Smart Energy Meter (Modular Platform design and electric power train design , BIW)

5. Session Plan for the Entire Domain:

Course 1: **Generation, Transmission & Distribution scenario in India**

[Interactive + Modelling], [1-1-0], [20 Hrs]

- 1.1 Types of generation: Conventional and Non-conventional,
- 1.2 Thermal Power Plant, Hydro Power Plant,
- 1.3 Gas Power Plant, Nuclear Power Plant,
- 1.4 Co-generation Various sources Non-conventional Energy Sources.
- 1.5 Role of computers in distribution system planning-Load modelling
- 1.6 characteristics: definition of basic terms and loss factor
- 1.7 Classification of loads and their characteristics.
- 1.8 Distribution Feeders and Substations: Design consideration of Distribution feeders: Radial and loop types of primary feeders, voltage levels, and feeder-loading.

Video Links

- 1.2.1 https://www.youtube.com/watch?v=lh5_7sHyLU4
- 1.2.2 Hydro Power
- 1.3.1 Gas Power Plant
- 1.3.2 Nuclear Power Plant
- 1.3.3 1.4.1 Co-Generation

Practice

- 1. Load Modeling
- 2. Substation Modeling

Course 2: Switchyard/Substation Types

[Lab Practice in Own Distribution Network, Modelling], [1-2-0], [20 Hrs]

- 2.1 Single line diagram/equipments [Equipments-transformer, CB, fuse etc.]
- 2.2 Relays, Relaying schemes and auxiliaries Wiring Diagram
- 2.3 Layout of Sub-Station(33/11KV S/S, 220/33KV S/S)
- 2.4 Indoor and outdoor busbars — bus-bar mountings and their clearances.
- 2.5 Designing Electrical Transmission Tower Types and Design

Video Links

- 2.3.1 Substation layout
- 2.5.1 Transmission Tower Design

Practice

- 1. Design 33/11 KV substation
- 2. Single Line layout of substation

Course 3: System Protection & Auxiliaries

[Field Visit+ Lab Practice in Own Distribution Network] [1-2-0] [20 Hrs]

- 3.1 CT & PTs, Local & Back-up Protection. Protection Schemes,
- 3.2 New Generation Relays, Different types of indoor and outdoor CB, Breaker Maintenance,
- 3.3 Lightning Arrestors/Surge Arrestors, Isolators And Insulators,
- 3.4 Grounding system, Auxiliary System in Switchyard/Substation

Video Links

- 3.1.1 CT, PT, Relay
- 3.2.1 Distance Protection
- 3.4.1 Grounding/Earthing

Practice

1. Design Over current Protection for sub-station Feeder.
2. Measuring Earth Insulation Resistance

Course 4: Cables in Electrical System

[Visit to Standard Testing Lab, Workshop Practice], [1-2-0], [20 Hrs]

- 4.1 Modern trends in Underground Cabling Basic Concepts,
- 4.2 Materials Used in Cables, Conductors,
- 4.3 Testing and Commissioning of cables,

Video Links

- 4.1.1 Under Ground Cable
- 4.3.1 [Cable Laying](#)

Practice

1. IR Test of Cable
2. Cable Jointing

Course 5: Power System Market, Markets For Electrical Energy, Energy Conservation

[Interactive], [1-0-0] [3 Hrs]

- 5.1 Electricity Business
- 5.2 Electricity Market Models
- 5.3 Power Transfer, Inter & Intra State
- 5.4 Energy Efficiency in Grid

5.5 Energy conservation measures

Video Links

5.1 Power Market Fundamental

5.2 Power Exchange

5.5 Energy Conservation

Practice

1. Developing Market Model for electricity trading

Course 6: GRID Safety Norms, Electrical Accidents and prevention, Electricity Costing & Audit,

[Field Survey], [0-2-0], [5 Hrs]

6.1 Safety Requirement, Hazards, Electrical Accidents and prevention, First Aid

6.2 Safety : Safety Philosophy, Safety Procedures, GRID Safety Norms, Procedures for issuing L.C.P. and cancellation, Maintenance of Safety records.

6.3 First Aid : Places of Potential Hazards, Electric Shock Treatment, Artificial Respiration, Handling Emergency Conditions, Treatment of Wounds, Injuries & Burns.

6.4 Fire Fighting: Causes of Fire, Fire Extinction, Classification of Fires, Fire Fighting, Equipment: their operation – maintenance & refilling, Fire prevention.

6.5 Energy Audit.

Video Link

6.1.1 General Grid Safety

6.2.2 Industrial Safety

6.3.1 Electrical Shock First Aid

6.4.1 Fire Extinguisher

Practice

Hazard Analysis & Mitigation

Course 7: Principles of transformer

[DS Tools, Workshop Practice], [1-5-0], [20 Hrs]

7.1 Inner & Outer Part of Transformer,

7.2 Manufacturing of Transformer,

7.3 Transformer Test,

7.4 Conditions leading to faults in Transformer,

7.5 Maintenance of transformer

Practice

1. Transformer Manufacturing

2. Transformer Testing

3. Fault Finding & Corrective action

6. List of Projects/products to be done in domain: [200 Hrs]

1. Substation layout & Placement of equipment.
2. Protection System of 33/11/0.4 KV substation.
3. O & M of distribution substation.
4. Energy Audit
5. Safety Practice.
6. Transformer Manufacturing & Testing.

EVALUATION: As per Central QA system policy

School of Forensic Sciences

B.Sc. Forensic Science (2020)

Programme Objectives:

POs: Forensic Science Graduates will be able to:

POs Outcomes	POs Outcomes
PO1	Forensic knowledge: Apply knowledge of mathematics, various disciplines of science and basic principles of forensic in investigation.
PO2.	Perform experiments as well as to carry out problem analysis and data interpretation of instrumental analysis
PO3	The crime and society: Apply reasoning informed by the contextual knowledge to assess civil and criminal laws,society,health and cultural issues and the consequent responsibilities relevant to forensics
PO4	Individual and team work: Function affectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings in the field of forensic Science.
PO5	Conduct investigations: Visit crime scene and help the police officials in proper collection, preservation and handling of scientific evidences which will aid in maintaining the integrity of evidences
PO6	Understanding of professional and ethical responsibility of forensic scientist
PO7	Communication: Communicate effectively on various activities of forensics with proper understanding of scientific and legal terminologies
PO8	Understand psychology of criminal mind
PO9	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of forensic science.
PO10	Project Management: Demonstrate knowledge & understanding of the forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in forensic science.
PO11	Use of modern techniques, skills, and instruments necessary for forensic expert or any person working in such field.

PO12	Make a robust report on the basis of scientific analysis.
------	---

PSO (Program Specific Outcomes)

Sl No.	Program Specific Outcomes
PSO1	Graduate will be able to develop skill which can be applied in the jobs of Forensic Science
PSO2	Graduate will be able to pursue higher studies and research
PSO3	Graduate will be able to use software and technologies that can be effectively used to solve various problems encountered during investigations.

Course Outcome (CO)

CUTM1659: Basics of Forensic Science

Course Objective : To teach in depth knowledge of forensic science, it's disciplines and importance and working of FSL.

Course Outcome : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	know the significance of forensic science to human society.
CO-2	understand fundamental principles and functions of forensic science.
CO-3	get idea about working of the forensic establishments in India and abroad.

CUTM1660: Crime and Society

Course Objective : To obtain knowledge about criminology i.e. crime and its causes, its impact on society and basic elements of justice delivery system.

Course Outcome : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Student will know about importance of criminology.
CO-2	Understand the causes of criminal behaviour.
CO-3	Understand the significance of criminal profiling to mitigate crime.
CO-4	Understand the elements of criminal justice system.

CUTM1661: Criminal Law

Course Objective : To obtain knowledge about basic law which governs our society

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about Elements of Criminal Procedure Code related to forensic science.
CO-2	Understand the acts and provisions of the Constitution of India related to forensic science.
CO-3	Understand the acts governing socio-economic crimes.
CO-4	Understand acts governing environmental crimes

CUTM1662: Forensic Psychology

Course Objective : To obtain knowledge about forensic psychology and various psychological investigative tools.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about importance of psychological assessment in gauging criminal behaviour.

CO-2	Understand the legal aspects of forensic psychology.
CO-3	Understand the significance of criminal profiling.
CO-4	Do critical assessment of advanced forensic techniques like polygraph, Narco analysis and brain electrical oscillation signatures.

CUTM1663 : Forensic Dermatoglyphics

Course Objective : To study fingerprints and its fundamental principles, its role in linking a person to the crime scene, techniques to develop prints

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Know about physical and chemical techniques of developing fingerprints on crime science evidence.
CO-2	Understand the significance of foot, palm, ear and lip prints.
CO-3	Understand pattern types and matching

CUTM1664 : Technological Methods in Forensic Science

Course Objective: To gain knowledge about various instruments and techniques used in analysis and examination of evidences

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the importance of chromatographic and spectroscopic techniques in processing crime scene evidence.
CO-2	Understand the significance of microscopy in visualizing trace evidence and comparing it with control samples.
CO-3	Understand usefulness of photography and videography for recording the crime scenes.

CUTM1665: Criminalistics

Course Objective: To gain knowledge about crime scene and its processing including securing, searching and documentation as well as collection and packaging of evidences.

Course Outcome: On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the methods of securing, searching and documenting crime scenes.
CO-2	Understand the tools and techniques for analysis of different types of crime scene evidence.
CO-3	Understand about legal importance of chain of custody.

CUTM1666: Forensic Chemistry

Course Objective : The study enhances ability of investigating officer in arson cases. Scientific study to analyse the explosives and Petroleum product and investigation in cases of IED.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the methods of analysing trace amounts of petroleum products in crime scene evidence.
CO-2	Understand the classification of explosives, including the synthesis and characterization of representative analogues.
CO-3	Understand significance of bomb scene management.

CUTM1667 : Questioned Documents

Course Objective : helps in understanding nature of paper and some other characteristics of written as well printed document with respect to class and individual characteristics and helps to examine fraud cases.

Course Outcome : On completion of this course, the successful students should be able to :

CO	Statements
CO-1	Understand the importance of examining questioned documents in crime cases.
CO-2	Understand the tools required for examination of questioned documents.
CO-3	Understand significance of comparing hand writing samples.
CO-4	Know about the importance of detecting frauds and forgeries by analysing questioned Documents.

CUTM1668: Forensic Biology

Course Objective: To teach about biological fluid which helps to determine source of origin among the individuals. Hair evidence distinguishes between human and animal. Study of wild life forensic science enhances skill and knowledge of investigator in investigation smuggling cases.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the significance of biological and serological evidence.
CO-2	Understand importance of biological fluids – blood, urine, semen, saliva, sweat and milk – in crime investigations.
CO-3	Know about how wildlife forensics aid in conserving natural resources.
CO-4	Know about how forensic entomology assists in death investigations

CUTM1669: Forensic Ballistics

Course Objective: It helps to identify class and individual characteristics of firearm and ammunition. Enhance the skill and knowledge of investigating officer.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about classification of firearms and their firing mechanisms..

CO-2	Understand importance of firearm evidence
CO-3	Know about methods of identifying firearms.
CO-4	Know about methods for characterization of gunshot residue.

CUTM1670: Forensic Toxicology

Course Objective : To study qualitative and quantitative analysis of poison in body fluids. It also helps understanding mode of administration of poison and their absorption.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the significance of toxicological studies in forensic science.
CO-2	Classify poisons and their modes of actions.
CO-3	Understand classification and characteristics of the narcotics, drugs and psychotropic substances.
CO-4	Know about menace of designer drugs.

CUTM1671: Forensic Anthropology

Course Objective : Study focuses on skeletal parts and their significance in determining identification of person, characteristics that helps in identifying missing person as well facial reconstruction through sketching of individual characteristics.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the importance of forensic anthropology in identification of persons.
CO-2	Classify poisons and their modes of actions.
CO-3	Understand different techniques of facial reconstruction and their forensic importance.
CO-4	Know about significance of somatoscopy and somatometry

CUTM1672: Forensic Medicine

Course Objective Study helps to distinguish between postmortem and anti-mortem characteristics of corpus delicti. Age and sex can also be determined by forensic odontology.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the importance of forensic odontology
CO-2	Understand the importance of autopsy
CO-3	Understand the importance of bloodstain patterns in reconstructing the crime scene.
CO-4	importance of bloodstain patterns in reconstructing the crime scene.

Ability Enhancement Elective Course

CUTM1673: English

Course Objective: To expose the students to a variety of self-instructional, learner-friendly modes of language learning and to enable them to learn better pronunciation through stress on word accent, intonation, and rhythm.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Communicate fluently in different business situation
CO-2	Use appropriate words with correct pronunciation
CO-3	Do effective oral and written communication

CUTM1674: Environmental Science

Course Objective : To understand the concept of multi-disciplinary nature of Environmental Science where different aspects are dealt with a holistic approach.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	develop a sense of community responsibility by becoming aware of environmental issues in the larger social context.
CO-2	Characterize and analyze human impacts on the environment
CO-3	Design and evaluate strategies, technologies and methods for sustainable management of environmental systems and for the remediation or restoration of degraded environments.
CO-4	Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.

Ability Enhancement Elective (Skill Based) course

CUTM1675: Introduction to Biometry

Course Objective : To understand the concept of biometry and its role in identification and various kinds of biometrics.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basis of biometry.
CO-2	Know about the classification of biometric processes
CO-3	Know about the importance of behavioural biometry

CUTM1676 : Handwriting Identification and Recognition

Course Objective : To understand the important features of handwriting identification and perform detection of document forgery or alteration.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand important features in handwriting identification.
CO-2	Learn about basis of handwriting characteristics.
CO-3	Know about significance of forensic documentation.

Discipline Specific Elective

CUFS2410 : Digital Forensics

Course Objective : To understand the basic concepts of digital forensics and types of digital forensics, malwares and investigation methods applied in such cases.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basics of digital forensics.
CO-2	Analyse the cases which fall under the purview of digital crimes.
CO-3	Understand the types of digital crimes.
CO-4	Understand the elements involved in investigation of digital crimes.

CUFS2411 : Economic Offences

Course Objective: To introduce to terminologies related to economic offences, some common economic offences and its impact on society.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand basic economic and financial terminology.
CO-2	Understand steps involved in mitigating economic crimes.
CO-3	Know about types of common economic offences and their consequences.

CUFS2412: Forensic Serology

Course Objective: To gain knowledge about serological evidences and their importance in crucial cases and methods of their detection.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the significance of serological evidence.
CO-2	The importance of biological fluids – blood, urine, semen, saliva, sweat and milk – in crime investigations.
CO-3	Know about the usefulness of genetic markers in forensic investigations.

CUFS2413 : Accident Investigations

Course Objective: To study methods of investigation in accidental cases, types of injuries in accidents, documentation, collection and preservation of evidences and their analysis.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the significance of tiremark evidence.
CO-2	Understand the importance of air bags and photography of accident cases
CO-3	Know about the usefulness of trace evidences in forensic investigations.

CUFS2414 : DNA Forensics

Course Objective: Understanding basic concepts of DNA Analysis, DNA Typing, STR markers.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basic principle of DNA analysis and its significance
CO-2	Understand the importance of short tandem repeats and restriction fragment length polymorphism in DNA technique.
CO-3	Know about role of DNA typing in parentage testing

CUFS2415 : Audio Recognition and Video Analysis

Course Objective: To Understand the role of voice in forensic investigations, understanding speaker recognition and identification and their analysis.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the basic principle of voice production and forensic significance speaker identification and recognition.
CO-2	Know about the importance of audio recording evidences.
CO-3	Use various software in audio recognition and video analysis.

CUFS2416 : Explosives Analysis & Post Blast Investigation

Course Objective: To study the protocols followed for analysis of explosives and get in depth knowledge about post blast investigations.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about History and development of explosives.
CO-2	Understand processing of crime scene.
CO-3	Know about clandestine Laboratories.

CUTM2328 : Quality Control and Quality Assurance

Course Objective : To study the various aspects of quality control and assurance aspects and understand important parameters such as cGMP, QC tests, documentation, Quality certifications, GLP and regulatory affairs.

Course Outcome: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the cGMP aspects in a pharmaceutical industry.
CO-2	Know about the importance of documentation.
CO-3	Understand the Scope of quality certifications applicable to Pharmaceutical industries and responsibilities of QA and QC department.

School of Forensic Sciences

M.Sc. Cyber Security and Digital Forensics

Programme Outcomes (PO) :

POs	Outcomes
PO1	Cyber forensic knowledge: Apply knowledge of mathematics, tools, techniques various disciplines of science and basic principles of digital forensic in investigation.
PO2	Perform live hands on as well as to carry out problem analysis and data interpretation of tools analysis.
PO3	The cybercrime and digital society: Apply cognitive informed by the circumstantial knowledge to assess corporate and digital criminal laws, society, health and educational issues and the consequent responsibilities relevant to the cyber forensics
PO4	Discrete and team work: Functions affectively as an individual, and as a member or leader in assorted teams, and in multidisciplinary settings in the field of digital forensics.
PO5	Conduct digital investigations: Tracing cyber victims and help the cyber police officials in proper collection, preservation and handling of digital evidences which will aid in maintaining the integrity of digital evidences.
PO6	Understanding of professional and ethical responsibility of cyber security professionals.
PO7	Communication: Communicate effectively on various activities of digital forensics with proper understanding of scientific tools and legal terminologies.
PO8	Understand thinking of felonious mind and finding digital signatures.
PO9	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of cyber forensic science.
PO10	Project Management: Demonstrate knowledge & understanding of the digital forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in cyber forensic science.
PO11	Use of modern techniques, tools, skills, and digital devices necessary for forensic expert or any person working in such field.
PO12	Make a robust documentation on the basis of scientific tools analysis.

Programme Specific Outcomes (PSO):

PSO1: Masters will be able to develop skill which can be applied in the jobs of Cyber Forensic Science in private and public sector.

PSO2: Masters will be able to pursue higher studies and research.

PSO3: Masters will be able to use software and technologies that can be effectively used to solve various problems encountered during digital investigations.

CUTM1618 : PRINCIPLES OF INFORMATION SECURITY

Course Objective: The objective of this course is to focus on the models, tools, and techniques for enforcement of security. Student will also learn security from multiple perspectives.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Will gain familiarity with computer network, defences against them, and forensics to investigate the aftermath.
CO-2	Develop a basic understanding of Risk assessment
CO-3	Develop an understanding of security policies as well as protocols to implement such policies.

CUTM1619: DIGITAL FORENSICS

Course Objective : This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Explain the origins of forensic science.
CO-2	Explain the difference between scientific conclusions and legal decision-making
CO-3	Explain the role of digital forensics and the relationship of digital forensics to traditional forensic science, traditional science and the appropriate use of scientific methods
CO-4	Outline a range of situations where digital forensics may be applicable
CO-5	Identify and explain at least three current issues in the practice of digital forensic investigations.

CUTM1620 : COMPUTER NETWORKS

Course Objective: The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	explain the concepts of confidentiality, availability, and integrity (CIA) in context of Information Assurance; articulate the threats to CIA and be able to analyse a given architecture, discern vulnerabilities, and recommend physical, logical, or administrative controls to mitigate the threat; (Cybersecurity Fundamentals—Theory)
CO-2	demonstrate expertise in configuring host and network level technical security controls, to include host firewalls, user access controls, host logging, network

	filtering, intrusion detection, and prevention and encryption at all levels; (Managing Security—Applied)
CO-3	describe the hardware, software, and services that comprise an enterprise network, and be able to articulate how these components integrate to form a network solution; (Network Integration—Theory)
CO-4	Explain key networking protocols, and their hierarchical relationship in the context of a conceptual model, such as the OSI and TCP/IP framework; be able to articulate the low-level data communications and subsequent abstractions that allow networked hosts and applications to communicate across the internet; (Networking Protocols—Theory)
CO-5	Build multiple host and network architectures, given business requirements and constraints; student will configure operating systems, network specific services, routing, switching, and remote access solutions; (Networking—Applied)

CUTM1621: CYBER CRIME & INVESTIGATIONS

Course Objective: This course focusses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Discuss data and identify data sources
CO-2	Describe and discuss digital evidence
CO-3	Compare and contrast the differences between digital evidence and traditional evidence
CO-4	Describe and critique digital forensics process models
CO-5	Describe and critique digital forensics process models
CO-6	Critically evaluate standards and good practices for digital evidence and digital forensics

CUTM1622 : INTELLECTUAL PROPERTY RIGHTS

Course Objective : The main objective of the IPR is to make the students aware of their rights for the protection of their invention done in their project work. The students will get a basic idea about registration in India and abroad of their invention, designs, thesis written/developed by them during their project work and for this they must have knowledge of patents, copy right, trademarks, designs.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Once the students complete their syllabus and assessment, they will develop the basic knowledge and awareness of acquiring the patent and copyright for their innovative works.
CO-2	They will also get an idea about plagiarism while writing any article, blog, research or review paper and learn how to avoid it.

CUTM1623 : NUMBER THEORY & CRYPTOGRAPHY

Course Objective : Covers fundamental algorithms for integer arithmetic, greatest common divisor calculation, modular arithmetic, and other number theoretic computations. Algorithms are derived, implemented and analysed for primality testing and integer factorization. Applications to cryptography are explored including symmetric and public-key cryptosystems. A cryptosystem will be implemented and methods of attack investigated. To be able to implement and analyse algorithms for integer factorization and primality testing. To be able to use a system like Maple to explore concepts and theorems from number theory. To understand fundamental algorithms from symmetric key and public key cryptography.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	To understand fundamental number theoretic algorithms such as the Euclidean algorithm, the Chinese Remainder algorithm, binary powering, and algorithms for integer arithmetic.
CO-2	To understand fundamental algorithms for symmetric key and public key cryptography.
CO-3	To understand the number theoretic foundations of modern cryptography and the principles behind their security.
CO-4	To implement and analyze cryptographic and number theoretic algorithms.
CO-5	To be able to use Maple to explore mathematical concepts and theorems.

CUTM1624: ADVANCED INFORMATION SECURITY

Course Objective: The objective of this course is to focus on the models, tools, and techniques for enforcement of security. Students will learn security from multiple Perspectives.

Course Outcomes:

CO	Statements
CO-1	Will gain familiarity with computer network, defences against them, and forensics to investigate.
CO-2	Develop a basic understanding of Risk assessment
CO-3	Develop an understanding of security policies as well as protocols to implement such policies

CUTM1625: CYBER FORENSICS

Course Objective: The aim of this course is to equip you with the knowledge and techniques to computer forensics practices and evidence analysis. It prepares you to use various forensic investigation approaches and tools necessary to start a computer forensics investigation. It also aims at increasing the knowledge and understanding in cyber security and ethical hacking.

Course Outcomes:

CO	Statements
CO-1	Define computer forensics.
CO-2	Identify the process in taking digital evidence.
CO-3	Describe how to conduct an investigation using methods of memory, operating system, network and email forensics.
CO-4	Assess the different forensics tools.
CO-5	Differentiate among different types of security attacks.
CO-6	Describe the concept of ethical hacking.

CUTM1626: SYSTEM & NETWORK SECURITY

Course Objective: The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Able to understand the concepts of confidentiality, availability, and integrity (CIA) in context of Information Assurance.
CO-2	Articulate the threats to CIA and be able to analyze a given architecture.
CO-3	Discern vulnerabilities.
CO-4	Recommend physical, logical, or administrative controls to mitigate the threat; (Cybersecurity Fundamentals—Theory)

CUTM1627: CYBER LAW

Course Objective: The Objectives of This Course Is to Enable Learner to Understand, Explore, And Acquire A Critical Understanding Cyber Law. Develop Competencies for Dealing with Frauds and Deceptions (Confidence Tricks, Scams) And Other Cyber Crimes for Example, Child Pornography Etc. That Are Taking Place Via the Internet.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Make Learner Conversant with The Social and Intellectual Property Issues Emerging From 'Cyberspace.
CO-2	Give Learners in Depth Knowledge of Information Technology Act and Legal Frame Work Of Right to Privacy, Data Security and Data Protection.
CO-3	Make Study on Various Case Studies on Real Time Crimes.

3RD SEMESTER

CUTM1628: MOBILE SECURITY ANALYSIS

Course Objective: This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Students learn cryptography basics (concepts, algorithms, techniques,

	implementation, and evaluation) for mobile apps.
CO-2	Students learn basic cryptography implementation for Android mobile security.
CO-3	Understand how to outsource application and data to a cloud in mobile computing which will leverage services provided by cloud providers.
CO-4	Deal with the various aspects arising in architecting secure complex systems, such as analysing and identifying system threats and vulnerabilities, and investigating operating systems security.

CUTM1629: IT GOVERNANCE, RISK& COMPLIANCE

Course Objective: This course focusses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the concepts of governance, risk management and compliance (GRC) and regulatory environment.
CO-2	Identify high-risk areas and compliance in your organization and apply Risk-based Approach
CO-3	Develop and implement a governance, risk management and compliance strategic plan
CO-4	Understand, define, and enhance organizational culture as it relates to performance, risk, and compliance
CO-5	Implement governance, risk management and compliance processes that are effective and efficient
CO-6	Using a risk-based audit approach

CUTM1630: BUSINESS CONTINUITY PLANNING & DISASTER RECOVERY

Course Objective: This course focuses on two aspects of Cyber Security: analysis and assessment of risk plus how to minimize it, and, how to extract and use digital information from a wide range of systems and devices. The course is structured so that all students cover the same introductory material, but then choose to specialize in either Cyber Security or Digital

Forensics. Any aforesaid science graduate who requires keen interest & knowledge of IT programming languages with basic knowledge of math beyond calculus.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the concept of business continuity
CO-2	Learn the importance of a BCP (business continuity planning)
CO-3	See how load balancing maintains business continuity
CO-4	Discover how a DCP (Disaster recovery plan) is a second line of defence
CO-5	Learn how to choose the right failure over solution

CUTM1631: PENETRATION TESTING & VULNERABILITY ASSESSMENT

Course Objective: In the end, the goal is to identify security weaknesses in a network, machine, or piece of software. Once they're caught, the people maintaining the systems or software can eliminate or reduce the weaknesses before hostile parties discover them. "Security" isn't limited to how well the machines and software stand up against penetration attempts.

Course Outcomes :

CO	Statements
CO-1	Explain the basic principles and techniques of how attackers can enter computer systems.
CO-2	Put acquired knowledge into practice by performing ethical penetration tests and hide the intrusion.
CO-3	Perform analyses of data breaches and audits of information technology security.
CO-4	Evaluate the strengths and weaknesses of various information technology solutions in terms of data security.
CO-5	Independently present and perform demonstrations of pen-tests for educational purposes.
CO-6	Evaluate the societal role of hacking from a social, ethical and economic standpoint

CUTM1632 : DIGITAL FRAUDS

Course Objective: To provide students with a comprehensive overview of collecting, investigating, preserving, and presenting evidence of cybercrime left in digital storage devices. To introduce topics of forensic data examination of computers and digital storage media.

Investigation of computers used for wrong-doing. Understand file system basics and where hidden files may lie on the disk, as well as how to extract the data and preserve it for analysis. Understand some of the tools of e-discovery. Legal aspects must form a constant background for these types of investigations.

Course Outcomes :

CO	Statements
CO-1	Understand the importance of a systematic procedure for investigation of data found on digital storage media that might provide evidence of wrong-doing.
CO-2	Understand the file system storage mechanisms of two common desktop operating systems (i.e., versions of Microsoft Windows and LINUX)
CO-3	Use tools for faithful preservation of data on disks for analysis. Find data that may be clear or hidden on a computer disk.

4TH SEMESTER

CUTM1633 : PROJECT/ DISSERTATION

Course Objective: To help in training of students with hands on experience of instruments while working on any research topic.

Course Outcomes : On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Have understanding of research methodology and lab work/field work.

School of Forensic Sciences

M.Sc. Forensic Science

Programme Outcome:

POs: Forensic Science postgraduate will be able to:

POs	Outcomes
PO1	Forensic knowledge: Apply knowledge of mathematics, various disciplines of science and basic principles of forensic in investigation.
PO2	Knowledge of psychology and law related to forensic science. Understanding of psychology of criminal mind and modus operandi of crime and statistical analysis in forensic science.
PO3	Knowledge and understanding of crime scene and their management, Visit crime scene and help the police officials in proper collection, preservation and handling of scientific evidences which will aid in maintaining the integrity of evidences.
PO4	Individual and team work: Function affectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings in the field of forensic Science.
PO5	Identification of individuals by knowledge and understanding of Fingerprints. Identify and analyse the questioned documents to aid the police officials and court of law.
PO6	Understanding of different instruments used for forensic analysis and perform experiments as well as to carry out problem analysis and data interpretation of instrumental analysis
PO7	Understanding of professional and ethical responsibility of forensic scientist.
PO8	Communication: Communicate and convey effectively on various activities of forensics with proper understanding of scientific and legal terminologies.
PO9	Understanding of drugs analysis, explosive materials, adulteration analysis as well as poison detection and analysis in forensic science.
PO10	Knowledge and understanding of biological aspects, serological analysis and DNA profiling as well as medico legal aspects in forensic science.

PO11	Understanding and knowledge of ballistics for the analysis of fire arms and projectiles in forensic science.
PO12	Life- long learning: Recognize the need for lifelong learning in the broadest contest of challenges and recent advances in the field of forensic science.
PO13	Project Management: Demonstrate knowledge & understanding of the forensic science and apply these to one's own work, as a member and leader in a team, to manage projects in forensic science.
PO14	Use of modern techniques, skills, and instruments necessary for forensic expert or any person working in such field.
PO15	Make a robust report on the basis of scientific analysis to administer the court of law.

PSO (Program Specific Outcomes)

Sl No.	Program Specific Outcomes
PSO1	Post-graduate will be able to develop skill and knowledge which can be applied in the jobs of Forensic Science
PSO2	Post-graduate will be able to pursue higher studies and research
PSO3	Post-graduate will be able to use software and technologies that can be effectively used to solve various problems encountered during investigations.

Course Outcome (CO)

1st Semester

CUTM1634 Introduction to Forensics, Psychology, Law and Statistics

Course Objective: To understand the Basic knowledge of Psychology, Law and Statistics in Forensic science.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand criminal mind, their Modus Operandi.
CO-2	Understand the Law used in Forensic science.
CO-3	Get idea about statistical analysis and can use in forensic science.

CUTM1635 Instrumental Techniques

Course Objective: To familiarize the students about the different instruments and their techniques used for analysis in Forensic Science.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand the instrumentation and basic concept of the instruments.
CO-2	Understand the process for analysis of different evidences.
CO-3	Get knowledge on using different instruments, understanding the concept of the instruments.
CO-4	To know the different instruments required for respective evidences and prepare the results to administer the court of law.

CUTM1636 Crime Scene Management and Forensic Physics

Course Objective: To understand the management of crime scene, formulation of hypothesis and processing of evidence to FSL.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Visit the crime scene, conduct the investigation, processed the evidence and sent to FSL.
CO-2	Understanding of different type of evidence, formulation of hypothesis, reconstruction of the crime scene.
CO-3	Skills to investigate the crime scene, find out the evidence and forward the evidence to FSL for analysis.
CO-4	Formulate the hypothesis of the crime and reconstruction of the crime scene.

CUTM1637 Fingerprints and Questioned Documents

Course Objective: To impart knowledge of fingerprint and questioned document and to understand the role of individual characteristics and identification of Friction Ridges.

To equip the students with skills to analyse the fingerprints and questioned documents.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know about the important of fingerprint, pattern and their characteristics. Knowledge of analysis of fingerprints and identification of individuals on the basis of fingerprint pattern.
CO-2	Knowledge of documents evidences and their examination process and techniques.
CO-3	Get knowledge on different techniques and recent technologies developed used in fingerprint and questioned documents.
CO-4	Skills to analyse the fingerprint. Compare the fingerprint to match and identify the individuals.
CO-5	Skills to analyse the different documents and find out the contents and characteristics of the documents. Analyse the authenticity of the documents. Detect the forgery in the documents.

FCHU1203 Business Communication

Course Objective: To impart knowledge on language to communicate in Forensic science.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the basic terminologies.
CO-2	Will be able to communicate with different officers and convey the important information of forensic aspects.

2ND SEMESTER

CUTM1639 Quality Management, Narcotic Drugs, Explosives, and Forensic Chemistry

Course Objective: To understand the quality management and assurance. Knowledge of drugs, explosives materials and their analysis.

To identify the quality of the product. Analysis of drugs and explosive materials.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the concept of quality management and quality assurance.
CO-2	Knowledge of drugs, analysis of drugs and their forensic aspects.
CO-3	Knowledge of explosive and the material used as explosive. Analysis of residue material and parts of the explosives. Detection of the cause of the explosion.
CO-4	Skill to identify the quality of the different product. Examination of different product as per BIS standards.
CO-5	Identification of NDPS drugs and detection of different drugs by different techniques.

CO-6	Identification of explosives materials and detection of explosives by different techniques.
------	---

CUTM1640 Forensic Biology and Forensic Medicine

Course Objective: Impart the knowledge of biological concept and materials used in forensic science, medico legal aspect.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the biological material used in forensic science. Understand the wild life forensic, entomology and odontology.
CO-2	Understand the autopsy used in forensic science. Determine the cause of death and time of death and understanding the medico legal aspects.
CO-3	Skill to analyse the biological material and detection of age, sex, race, height and species origin.
CO-4	Identification of injuries and various types of death by post-mortem examination.

CUTM1641 Forensic Serology and DNA Profiling

Course Objective: To acquaint the students about different body fluids and their analysis. Impart the knowledge of DNA profiling and individualisation.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Know the body fluids analysis and serological techniques.
CO-2	Impart the knowledge of DNA and DNA analysis. Understand the basic concept of individualization and uniqueness of DNA in identification of individuals.
CO-3	Skill to analyse the body fluids and different serological techniques for serological analysis.
CO-4	Identification of individuals by DNA profiling.

CUTM1642 Forensic Toxicology and Pharmacology

Course Objective: To educate students about basic concepts of poison and their analysis.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the knowledge of poison and their analysis. Detection of poison in the body or body fluids.

CO-2	Understanding of drug interaction with body and drug toxicity.
CO-3	Skill to analyse the type of poison and detection of different type of poison in body.
CO-4	Analyse the drug interaction and bioavailability of the drug in the body and their metabolites.

CUTM1643 Forensic Ballistics and Computer Forensics

Course Objective: To impart the knowledge of firearms and projectile and basic understanding of digital platform and cyber laws.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Impart the knowledge of different firearms and projectile. Understanding of bullet and cartridge cases and gunpowder.
CO-2	To understand the computer parts, digital platform, cyber-crime and cyber laws.
CO-3	Skill to analyse the different firearms and projectiles. Identification and detection of gunshot residue, gunshot powder, range, marks and characters of projectiles.
CO-4	Analysis of storage media, deleted files and information from digital platform and tracking.

3RD SEMESTER

Specialisation in Forensic Chemistry and Toxicology

CUTM1647 Pharmacology and Pharmaceutical Drug Analysis

Course Objective: To teach the concepts Drug, analysis of drug. Understanding of drug therapy, abuses and interaction of drug with body.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand about the drug, factors, bioavailability, and responses of drugs.
CO-2	Understanding the different agents of drugs, designer drugs and NDPS substances.
CO-3	Analysis of drugs and agents.
CO-4	Qualitative and quantitative analysis of various chemicals.
CO-5	Instrumental analysis of various chemicals.

CUTM1648 Concepts of Toxicology

Course Objective: Concepts of poison and toxic materials. Understanding of toxic agents and their risk assessments.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get knowledge on different toxic substances and their identification and detection.
CO-2	Understanding of analytical methods of toxicology and application of toxicology.
CO-3	Ability to detect the drugs by various analytical techniques.
CO-4	Ability to detect the poison by various analytical techniques from biological and non-biological matrices.

CUTM1649 Modern and Applied Analytical Forensic Chemistry

Course Objective: Understanding of nuclear forensics, detection and measurement of radioactive substances.

Understanding of drugs chemistry, NDPS laws and analytical method. Understanding and identification of fire crime scene and explosion crime scene.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Acquainted with proper knowledge chemistry of drugs and different laws related to drugs. Understanding the process of analysis involved to identify the drugs.
CO-2	Ability to detect the different drug component. Identify and detect the cause of fire and explosion and analyse the residue materials.
CO-3	Skill to detect the food adulteration in food and identify the adulterated material in food.

Specialisation in Forensic Biology

CUTM1644 Molecular Biology and Genetics

Course Objective: To understand the concept of serological analysis and uses of enzymes and proteins in criminal investigation. Understanding of methodologies in forensic DNA analysis.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understand about the serological methods, enzymes and proteins for criminal investigation. Understanding of parameter and factors in forensic DNA typing.
CO-2	Understanding the different methods and techniques used for DNA analysis and development in technologies and methods for DNA analysis.

CO-3	Understanding of Bioinformatics, population structure and DNA databases.
CO-4	Extraction and estimation of DNA from different sources. Genotyping of the DNA with different markers and interpretation of the result to aid the police officials and court of law.
CO-5	Extraction and estimation of proteins from different sources. Analysis of protein structure using RASMOL software.

CUTM1645 Biotechnology in Pharmaceutical Sciences

Course Objective: Concepts of recombinant DNA technology, bioprocessing, animal and plant biotechnology and industrial microbiology.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get knowledge on recombinant DNA technology and genetically modified organism. Understanding of Blotting techniques and molecular therapy.
CO-2	Understanding of quality control and assurances, regulatory affairs and intellectual property rights.
CO-3	Skills to isolate DNA from different sources and GMO detection.
CO-4	Ability to handle blotting techniques and identification and detection of production of industrial products.

CUTM1646 Environmental Biotechnology

Course Objective: Understanding the component of environment, waste analysis and detection of illegal waste.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Acquainted with proper knowledge of environmental forensic, analysis of the component of pollutants and materials.
CO-2	Acquainted with the knowledge of waste management and detection of waste material in the environments.
CO-3	Ability to detect the pollutants material in the environment and analysis of the pollutants.
CO-4	Skill to identify the adulterated material in food and examine the food quality.

Specialisation in Forensic Physics

CUTM1650 Advances in Physical Techniques

Course Objective: Skill to identify and examine various analyses of techniques used in Forensic Physics

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Ability to detect the various techniques Such as Microscopes, etc.
CO-2	Skill to identify the examination of nanotechnology and Forensic Engineering

CUTM1651 Concepts of Conventional and Modern Ballistics

Course Objective: Concepts of Ballistics, GSR and various Standards of V50, STANNG 4500, NIG .06

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identifications and Examination of Ammunitions Range of Fire.
CO-2	Analysis and Examination of GSR Material with various Standards

CUTM1652 Audio Recognition and Video Analysis

Course Objective: Understanding the anatomy of Voice production, Audio and video Analysis

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Identification and Examination of Voice samples using Gold wave Software, Automatic Speaker recognition.
CO-2	Examination of Audio and Video analysis using AMphed Five.

Specialisation in Fingerprints and Questioned Documents

CUTM1653 Modern Trends in Fingerprint Sciences

Course Objective: Understanding of morphology and anatomy of fingerprints and their method for fingerprints detection.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Fundamental and principle of fingerprints and their detection methods.
CO-2	Understanding of development and detection of fingerprints from various methods.
CO-3	Skill to analyse the fingerprint with microscopic techniques and comparison of male and female fingerprint with specific reference and with AFIS method..

CO-4	Development of fingerprint with various chemical and physical methods.
------	--

CUTM1654 Questioned Document and Forensic Accounting

Course Objective: Concepts of documents and their examination. Understanding of forgery and their detection. Identification of fraud and writings and examination of financial documents.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understanding of writing forgery and documents forgery. Examination of questioned documents and writings.
CO-2	Understanding of frauds, money laundering and financial reports.
CO-3	Skill to examination of ink, paper age, currency notes and detection of forgery of the documents.
CO-4	Examination of passports, stamps, stamps impression.

CUTM1655 Forensic Photography and Biometric Traits

Course Objective: Understanding the knowledge of photography and different biometric techniques.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Skill to analyse the fingerprint with microscopic techniques and comparison of male and female fingerprint with specific reference and with AFIS method..
CO-2	Development of fingerprint with various chemical and physical methods.
CO-3	Do crime scene photography, evidences photography and videography. Development of photographic prints.
CO-4	Do photography with various light sources and with various filters. Analysis of various biometrics.

CUTM1656 : ASSIGNMENT

Course Objective: To familiar and skilled to write the content with order and right pattern.

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Understanding of writing the proper content with professional language and with proper explanation.

CUTM1657 : SEMINAR

Course Objective: to make student familiar and skilled to deliver in seminar

Course Outcomes: On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Get familiar and skilled to deliver in seminar

CUTM1658 : Dissertation/project

Course Objective: To help in training of students with hands on experience of instruments while working on any research topic.

Course Outcome :On completion of this course, the successful students should be able to:

CO	Statements
CO-1	Have understanding of research methodology and lab work/field work.

**CENTURION UNIVERSITY OF TECHNOLOGY AND
MANAGEMENT, ODISHA**

SCHOOL OF PARAMEDICS & ALLIED HEALTH SCIENCES

Centurion
UNIVERSITY

Shaping Lives...
Empowering Communities...

BACHELORE OF SCIENCE IN CLINICAL MICROBIOLOGY

2020

SYLLABUS

Preface: Clinical Microbiology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as Collection of samples like body fluid, tissue, and blood and diagnoses them. It also covers micro-organism screening, sterilization of laboratorial environment and equipments, Antibiotic sensitivity tests.

Clinical Microbiologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Microbiological Laboratory.

With adequate knowledge and experience, Clinical Microbiologist having +2 Sc with biology qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Clinical Microbiology.

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre/ government or private organization, equipped with modern microbiology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of B. Sc. in Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit load of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Clinical Microbiology (B. Sc. CMB)**” from Centurion University.

BACHELOR OF SCIENCE IN CLINICAL MICROBIOLOGY

NOTE: Along with the School core and Discipline core subjects, the students need to opt for AECC Courses, Skill/ Domain/ Elective courses and value- added courses from the University Basket, as per the requirement by the University.

BASKET I

School Core Courses

SC1- CUTM1708- Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+ Practice	2-1-0	Fundamental Science

Course Objective

To identify different types of cells and describe their functions.

To identify the organelles of a typical cell and describe their functions.

To identify the major components of the integumentary system and describe their functions.

To identify the major structures of the skin and describe their functions

To identify the major components of the skeletal system and describe their functions.

To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

Use anatomical terminology to identify and describe locations of major organs of each system covered.

Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.

Describe the interdependency and interactions of the systems.

Explain contributions of organs and systems to the maintenance of homeostasis.

Identify causes and effects of homeostatic imbalances.

Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-I (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-II (13 Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Module-III (15 Hours)

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive

system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.

3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, PublisherSatya

SC2-CUTM1729- Cell Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell Biology	CUTM1729	Theory+ Project	3-0-1	Fundamental Science

Course Objective

<p>.Determine the parts of the cell membrane and the cell wall</p> <p>Distinguish the types and mechanism of mutation</p> <p>Compare and contrast the events of cell cycle and its regulation</p> <p>Understand the dynamic character of cellular organelles</p>
--

Course Outcome

<p>Describe the fundamental principals cellular biology</p> <p>Develop a deeper understanding of cell structure and how it relates to cell functions.</p> <p>Understand how cells grow, divide, and die and how these important processes are regulated.</p> <p>Understand cell signaling and how it regulates cellular functions. Also how its dis- regulation leads to cancer and other diseases.</p>

Course Outline

Module –I (12 Hr)

An Overview of Cells: History, Cell theory, Structure and Function of Cell and its Organelles: Biological membranes - Nucleus - Nuclear envelope, Nucleolus, Mitochondria, Chloroplasts, Lysosomes, Gloxysomes and Peroxisomes, endoplasmic reticulum, ribosomes, Golgi complex (Structural organization, function, marker enzymes of the above organelles), Cell types: prokaryotes vs. eukaryotes; from single cell to multi-cellular organism; Different molecules of cell- water, salt and

mineral ions etc.

Module- II (14 Hr)

Cell cycle and its regulation, Cellular communication and cell mobility: Cell cycle: G₀/G₁, S, G₂ and M phases (Cell Division: Mitosis, meiosis and cytokinesis); regulation of cell cycle; cell adhesion and roles of different adhesion molecules, gap junctions, Extra- Cellular Matrix (ECM), Cell-cell interaction and cell- ECM interaction, The cytoskeleton, Microtubule- based movement and microfilament -based movement.

Module-III (14 Hr)

Cell signaling, Programmed Cell Death (Apoptosis) and Cancer: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors (G-PCR), Tyrosine Kinase, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component systems, bacterial chemotaxis, Intrinsic and Extrinsic apoptotic pathway, Caspase enzyme, Biology and elementary knowledge of development and causes of cancer; Tumor viruses, Oncogenes and tumor suppressor genes.

Suggested Readings:

1. The Cell a Molecular Approach (4th Edition) by Cooper & Hausman
<https://www.thebiomics.com/books/cell-biology/cell-molecular-approach-cooper-and-hausmn-4th-ed.html>
2. Molecular Biology by Friefelder David, Publisher Narosa www.alibris.com/Molecular-Biology-David..
3. Introduction to Cell biology by John K Young, World Scientific publishing company www.overdrive.com/.../introduction-to-cell-biology

SC3-CUTM1730-Basic Medical Instrumentation and Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Medical Instrumentation and Techniques	CUTM1730	Theor+Practice	2-2-0	Fundamental Science

Course Objective

To learn the principle, instrumentation & application of Microscopy

Principle, instrumentation & application of Centrifugation

Principle of Spectroscopy

Course Outcome

After completion of the course the student will be efficient in handling the microscopy equipment's.

They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module -I (12 hrs)

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase–contrast microscopy, fluorescence microscopy, polarization microscopy, electron microscopy (Scanning and Transmission); Bacterial Colony Counter (Principle and working). Laminar Air Flow (Principle and working technique).

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Module- II (14 hrs)

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry. **Centrifugation:** Principle; Preparative, Analytical, Density gradient centrifugation. **Cytometry:** Types, Flow cytometry and its applications.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Module- III (14 hrs)

Microtomy: Sectioning, Staining. Application, Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Principle, working and uses of: Incubator, Hot air oven, Autoclave.

Practice: Demonstration of Auto/ Semi auto Analyzer; Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Readings:

SC4-CUTM1732- Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry	CUTM1732	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

<p>To understand the concept of metabolism of carbohydrates</p> <p>To understand the significance of amino acids, proteins</p> <p>Use of enzymes in enhancing metabolic reactions</p> <p>Role of lipids</p>

Course Outcome

After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.

Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.

They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module- I

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzyme NAD, metal cofactors, Classification of enzymes.

Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis, and Induced Fit hypothesis.

Enzyme inhibition, enzyme kinetics.

Diagnostic value of serum enzymes: Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Practice: Study of effect of temperature on enzyme activity
Study of effect of pH on enzyme activity

Module- II

Carbohydrates: Biomedical importance & properties of Carbohydrates, Classification,

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses. Stereo isomerism of monosaccharides, epimers, Haworth projection formulae for glucose; chair and boat forms of glucose.

Metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, Components of respiratory chain, energy relationships during cell respiration, types of respiration. HMP shunt & Gluconeogenesis, regulation of blood glucose level.

Practice: Estimation of Glucose in urine
Estimation of Glucose in blood

Module- III

Amino acids: Classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism, Classification, biomedical importance.

Metabolism: Ammonia formation & transport, Transamination, Decarboxylation, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids.

Practice: Estimation of Protein in urine
Estimation of Protein in blood

Module- IV

Chemistry of Lipids & their related metabolism: Classification, biomedical importance, essential fatty acids. Brief out line of metabolism: Beta oxidation of fatty acids, fatty liver, Ketogenesis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus: its types, features, gestation diabetes mellitus, glucose tolerance test, glycosuria, Hypoglycaemia & its causes.

Practice: Estimation of Bile pigment in urine
Estimation of Bile salts in urine

Suggested Readings:

SC5-CUTM1715 -Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

Analyze body fluid for diagnosis of disease
Analyze waste product for diagnosis of disease
Understanding DOT Policy
Understand Physiological disorder and infectious disease
Analysis of pregnancy

Course Outcome

Able to collect pathological specimen
Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
Preservation and processing of pathological sample.
Identification of Parasites
Analysis of Infertility disorder

Course Outline

Module-I (16

Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, BJP, Bile Salt and Bile pigment, Chemical Examination of Urine - Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and BJP Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: Microscopic finding of stool, Morphology of stool parasite

Lab:- Stool Analysis: Collection and physical examination, Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain), Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:- Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine Examination

Synovial Fluid: Collection and Routine examination

Pleural Fluid: Collection and routine examination

Pericardial Fluid: Collection and routine examination

Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan

4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC-6 - CUTM1736- Immunology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology	CUTM1736	Theory + Practice	3-2-0	Fundamental Science

Course Objective

Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.

Clinically relevant serological analysis for deeper understanding of antigen- antibody interaction.

Course Outcome

Application of Immunology in disease diagnosis.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. **Antigens:**

Types of antigen, Epitope. Biological Classes of antigens, Superantigens.

Immunoglobulins: Antibody structure, Immunoglobulin classes.

Practice: Collection of blood sample by vein puncture
Separation and preservation of serum

Module-II

Complement System: Principal pathways of Complement activation, Quantitation of Complement (C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests.

Serological Reactions.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test,
Rheumatoid factor (RF) test
Precipitation in agarose gel
Performing Ouchterlony Double diffusion test
Demonstration of SDS-PAGE
Demonstration of ELISA
Demonstration of Western blotting

Module-III

Immune Response: Types of Immune response, Humoral immunity, Cell-mediated Immune Responses, Cytokines, Immunological tolerance.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity-Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity.

SC-7- CUTM1737- Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	CUTM1737	Theory + Project	3-0-1	Fundamental Science

Course Objective

To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.

Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that , can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course Outcome

Conduct independent work in a laboratory.
 Read scientific articles and gain a critical understanding of their contents.
 Give a spoken and written presentation of scientific topics and research results.
 Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Course outline

Module I

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell. Evolution and Molecular structure of cell and its organelles. Types of cells. Including different kinds of Prokaryotic and eukaryotic cells, Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles,

Cell cycle, Cell membrane and its structure (fluid-mosaic model). Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Project Topic: Causes, types and molecular mechanism of human cancer.

Module II

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells: Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, Transferring information from DNA to RNA, Synthesis of RNA, Translation RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes.

Project Topic: Tumor suppressor gene and oncogene.

Module III

General Concept on: a. Regulation of the Gene Expression b. Regulating the Metabolism: The Lac-Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions.

Project Topic: Human Genome Project.

Module IV

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell, Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA (Transcription), RNA polymerase, Initiation and Termination of Transcription, Post and co- transcription modification of the RNA. Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of r-RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

Project Topic: Molecular basis, types, causes and a case study of the effects of DNA mutation.

Suggested Readings:

1. Molecular Biology of the gene (7th Ed) by James D. Watson.
E-book link-<https://www.pdfdrive.com/molecular-biology-of-the-gene-e158278674.html>
2. Genes XII by Lewin's.

E-book link- <https://www.pdfdrive.com/lewins-genes-xii-e168024578.html>

3. Molecular cell biology (5th Ed) by Lodish H.

E-book link- <https://www.pdfdrive.com/molecular-cell-biology-lodish-5th-ed-e15674865.html>

BASKET II

Discipline Core Courses

DC-1-CUTM1731-Haematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Hematology	CUTM1731	Theory+Practice	3-2-0	Basic Medical science

Course Objective

The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.

Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components .

Course Outcome

Differentiate various laboratory test findings with their associated clinical conditions.

Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.

Describe the various components of blood ,their functions, and roles in various disease states.

To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Collection of blood for the investigations.

Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.

To learn about tests carried out for hematological investigations.

To be able to carry out blood sampling.

Course Outline

Module- I (8 Hrs)

Scope & importance of Hematology, important equipment and chemicals, various test performed in Hematology laboratory, Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in hematology- Microscope, Blood Cell

counter

, Sahali's Apparatus.

Module- II (12 Hrs)

Identify and/or confirm the composition & function of various red blood cell inclusions. Function of normal cellular components. Formation of blood, Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis. Anticoagulants: definition, Uses, Different types of Anticoagulants., mode of action, their merits and demerits. Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart.

Demonstration the normal and abnormal morphology of different blood cells.

Module- III (10

Hrs) Hematological

Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
3. Megaloblastic Anemia: Causes, Lab findings.
4. Hemolytic Anemia: Definition, causes, classification & lab findings.

Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black

Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Collection of blood by different methods

Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Module- IV (10 Hrs)

Collection of blood, Methods & Preparation of Stains and Smears

Practice:

Cleaning and drying of glass and plastic ware, Collection of venous and capillary blood, cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents,

Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (Sahali's method and cyanmethaemoglobin method).

Module- V (10 Hrs)

Routine Hematological Tests:

Complete blood cell count, ESR, Differential Leukocyte count, Total leukocyte count, Bleeding time and Clotting time, Blood Grouping and Rh Typing.

Practice:

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count. Determination of ESR by wintrobes, Determination of ESR by Westergeren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Bleeding time and Clotting time, Blood Grouping and Rh Typing

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

10. Ebook link-
<https://books.google.co.in/books?id=QQcYAAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAnoECAIQQAQ#v=onepage&q=hematology&f=false>

DC-2- CUTM1733- Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Microbiology	CUTM1733	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To know various Culture media and their applications and also understand various physical and chemical means of sterilization

To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus

To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.

Understanding the details of microbial cell organelles.

Provides knowledge on growth of microorganism.

Provides knowledge Culturing microorganism.

Course Outline

Module –I (14 Hours)

Microbiology: Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms. Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve

Practice:

1. Handling of Microscope
2. To learn techniques for Inoculation of bacteria on culture media.
3. To isolate specific bacteria from a mixture of organisms.

Module-II (11 Hours)

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:

1. To demonstrate simple staining (Methylene blue)
2. Bacterial identification: To demonstrate reagent preparation and procedure for Gram stain, Z-N staining, Capsule staining, Demonstration of flagella by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure

Module-III (15 Hours)

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice:

1. Biochemical tests for identification of bacteria
2. Preservation of stock cultures of bacteria
3. Antibiotic susceptibility test

Suggested Reading:

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. Microbiology by Prescott
3. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
4. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
6. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
7. Text book of Medical Microbiology by Gruckshiank

DC-3- CUTM1734 - Medical Law and Ethics

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Law and Ethics	CUTM1734	Theory+ Project	2-0-1	Fundamental Science

Course Objective

The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients. It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the law as it relates to medicine.
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life
- decisions,

Course Outline

Module-1

1. The Indian medical council act, 2. Medical council of India (functions),3. Functions of state medical councils, 4. The declaration of Geneva

Module-2

1. Duties of medical practioners 2. Regarding red cross emblem 3. Professional secrecy 4. Privileged communication.

Module-3

1. Professional negligence 2. Medical mal occurrence 3. Contributory negligence 4. Criminal negligence

Module-4

1. Corporate negligence 2. Ethical negligence 3. Precautions against negligence 4. difference between professional negligence and infamous conduct.

Module-5

1. Malpractice litigation involving various specialities 2. Prevention of medical negligence 3. supreme court of India guidelines on medical negligence 3. The therapeutic misadventure 4. Vicarious liability

Module-6

1. Products liability 2. medical indemnity insurance 3. Medical records 4. Consent in medical practice

Module-7

1. Euthenasia 2. Deaths due to medical care 3. Malingering

Text books

1. Medical Law and Ethics by Shaun D Pattinson, 5 th edition, 2017.

DC-4 - CUTM1713- Systemic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	CUTM1713	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Explain the methods of microorganism's control, e.g. chemotherapy & vaccines.

Course Outline

Module –I (9

Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Cocci (Gram Positive): Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp. Anaerobic: Peptococcus spp., Peptostreptococcus spp., Villanelle spp., Acidaminococcus spp, and others. Cocci (Gram Negative): Aerobic: Neisseria spp., Anaerobic Gram-negative bacteria.

Practice: Culture techniques
Culture media
Identification of *Staphylococcus* sp.

Module -II (12 Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of : Aerobic non-spore forming gram positive bacilli: Bacillus spp., Corynebacterium spp., Actinomyces, Nocardia spp., Mycobacterium spp.-pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and Hansen's bacilli and others. Anaerobic: Bifidobacterium spp., Eubacterium spp., Actinomyces spp., Propionebacterium, Clostridium spp., and others.

Practice: Preparation of media
Media used for biochemical identification & their uses
Identification of *Mycobacterium* sp.

Module -III (18 Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of Gram- Negative Bacilli Aerobic: Enterobacteriaceae, Citrobacter spp , Edwardsiella spp ,Enterobacter spp , Escherichia coli, Ewingella , Hafnia spp., Klebsiella spp.,

Morganella spp., Proteus spp., Porvidencia spp., Salmonella spp., Serratia spp., Shigella spp., Yersinia

spp., *Vibrio* spp., *Pseudomonas* spp., *Chlamydia* and *Chlamydozoa*, *Brucella* spp., *Bordetella* spp., *Haemophilus* spp., *Mycoplasma* spp.

Practice: Culture methods & identification of common bacteria on media.
 Antibiotic sensitivity testing.
 Identification of *Escherichia*, *Klebsiella*, *Proteus* sp.

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Microbiology (7th Ed)- by Prescott
3. Medical Microbiology- by David Greenwood et al (Elsevier)
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Medical Microbiology- by Kayser et al
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-5- CUTM1735- Systemic Virology & Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Virology & Mycology	CUTM1735	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Explain the methods of microorganism's control, e.g. chemotherapy & vaccines.

Solve problems in the context of this understanding.

Course Outline

Module-1 (18 Hours)

Structure, cultivation and properties of Viruses. Classification of Medically Important Viruses. Genetic material, Organ system involved, Transmission.

Replication of Viruses, Virus Host Interaction, Bacteriophage. Epidemiology, Pathogenesis, Treatment, Prevention and Control of Viral Diseases (DNA Viruses) *Adenoviridae*, *Poxviridae*, *Herpes viridae*, Epidemiology, Pathogenesis, Treatment, Prevention & Control of Viral Diseases (RNA Viruses) *Orthomyxoviridae*, *Paramyxoviridae*, *Picornaviridae*, *Corona viridae*, *Rhabdoviridae*, *Retrovirida*.

Practice:

1. Demonstration of virus isolation techniques.
2. Demonstration of cell and tissue culture techniques used for virus isolation
3. Serological techniques used in diagnostic virology

Module-2 (7 Hours)

Mycology, Classification, Scope and medical importance of fungi. General Structure of Fungus and Yeast. Laboratory Methods of Fungal Isolation and Identification. Superficial and Cutaneous Mycoses. Subcutaneous Mycoses. Systemic Mycosis caused by Endemic Dimorphic Fungal Pathogens, Opportunistic Mycoses

Practice:

4. Organization of laboratory – Mycology
5. Preparation of different media, chemical and stain for fungus study
6. Microscopic examination of saprophytic molds / Collection of agar plates for exposure

Module-3 (15 Hours)

Pathogenic Group of Fungi: Opportunistic pathogens, True pathogens: *Blastomyces dermatitidis*, *Cooccidioides immitis*, *Paracoccidioides brasiliensis*, *Histoplasma capsulatum*. A. Dermatophytes: *Mycrosporum* (Hair, skin), *Tricophyton* (Skin, hair, nail), *Epidermophyton* (Skin, nail), *Aspergillus spp.* Dermatomycosis (*Candida albicans*, *Cryptococcus neoformans*)

Practice:

7. Slide culture technique for Superficial infections
8. Culture and identification of yeasts
9. Processing of specimens in Mycology lab

Suggested Reading:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Fundamental medical mycology / Errol Reiss, H. Jean Shadomy, and G. Marshall Lyon III
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-6- CUTM1721- Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	CUTM1721	Theory+ Project	2-0-1	Fundamental Science

Course Objective

To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.

Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

Students can understand the ethical and philosophical issues associated with research in education

This study provides knowledge on various modes of presenting and disseminating research findings.

Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

Provide learning opportunities to critically evaluate research methodology and findings.

Enable students to be reflexive about their role and others' roles as researchers.

Course Outline

Module- I (9

Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research Objectives, Types of research Objectives, Qualities of research Objective

Module- II (8 Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III (14 Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire. Interviewing. Tabulation, Coding, Editing. Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections.

Writing a review on Virus culture

Literature survey on Covid-19

Suggested Readings:

1. Research Methodology by C.R. Kothari (3rd Ed)
2. Research Methodology In the Medical & Biological Sciences by Petter Laake et al.
3. Essentials of Research Design and Methodology by Geoffrey Marczyk et al.
4. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO- WIPRO
5. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
6. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research

Council.

7. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

DC-7 - CUTM1738- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	CUTM1738	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

Understanding the concept of Biochemical analyzing instruments both automated and semi automated.

To learn about how to Care & Maintenance of Equipment & Chemicals.

To learn normal ranges of biochemical components in our body.

Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.

To learn about Various tests carried out for biochemical analysis & Hormone investigations.

To learn about safety precautions and handling the equipment in biochemical laboratory.

Course Outline

Module- I (12 Hrs)

Chromatography: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC

Practice: Handling the Equipments and chemicals used in biochemical laboratory.

Module-III (12 Hrs)

Electrophoresis: Moving boundary, Zone (Paper Gel) electrophoresis, Immuno electrophoresis, Isoelectric focusing, 2-D electrophoresis. Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, ESR

Practice: Estimate Erythrocyte sedimentation rate

Module- III (26 Hrs)

Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Method of estimation and assessment for: a. Glucose tolerance test. Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Renal calculi, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice: Glucose Tolerance Test, Clearance Test, Gastric juice collection, Gastric Analysis, Kidney Function Test, Liver Function Test, Lipid Profile, Renal calculi, Hormone Test

Suggested readings:

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H. Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book
4. Principle of Biochemistry by Lehninger
5. Biochemistry by Voet & Voet
6. Biochemistry by Stryer
7. Biochemistry of Metabolic process by Asim Kumar Roy, Kalyani Publication
8. Ebook link-
https://www.cartercenter.org/resources/pdfs/health/ephti/library/lecture_notes/health_science_students/medicalbiochemistry.pdf
9. Ebook link-
https://books.google.co.in/books?id=Je_pJfb2r0cC&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
10. Ebook link-
https://books.google.co.in/books?id=csPcDAAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
11. Ebook link-

DC-8- CUTM1740- Public Health Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Public Health Microbiology	CUTM1740	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.

To understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – Water pollution and waterborne diseases, Air pollution and airborne infections.

Course Outcome

Understanding the role of microbiologist in public health

Study of Air borne & water borne infection

Course Outline

Module- 1 (7 Hours)

Introduction to Public Health: Definition, scope, concept and importance of public health microbiology, Roles of microbiologist in public health, Concept of health and disease, Indicators of health, Microbial association of water, air and soil, Basic concept on pollution (air, water, noise, radiation and waste pollution) and public health hazard in the community.

Practice:

1. Isolation and identification of microorganism from different food products: meat, canned juice, milk, cheese and ice cream.
2. Isolation and Identification of microorganisms (hospital acquired infection)

Module- 2(14 Hours)

Air Borne Infections:

1. Introduction: Air and its composition, Microbial air pollution, Sources of air pollution &

control, Indicator of air pollution – WHO guide line (microbial pollution).

2. Air borne diseases: Transmission of pathogens, Respiratory infection (Viral, bacterial, fungal), Sources of infection, characters of organisms and controls of: Bacterial pneumonia, Diphtheria, Tuberculosis, Influenza, Measles.

3. Method of measuring microorganisms in air.

Practice:

3. Selection, collection, preservation and transportation of samples from the community to the laboratory.

Module- 3 (19 Hours)

Water Borne Infections:

1. Introduction: Definition of wholesome and safe water, Nature, cycle, sources, importance and quality (WHO guide line) of water. Water pollution and sanitation,

2. Microorganisms in water: Transmission of pathogens, Water borne diseases (Viral, bacterial, protozoal), Sources of infection, characters of organisms and control of: Hepatitis, Cholera, Typhoid, Amoebiasis, Giardiasis, Poliomyelitis. Water Pollution Control.

3. Method of Measuring Microorganisms in Water. Water Treatment, Control of Water Borne Diseases.

Practice:

4. Isolation and Identification of microorganisms from air.
5. Isolation and Identification of microorganisms from water and evaluation of water quality

Suggested Readings:

2. A Text Book of Microbiology, by Ghimire P. & Parajuli K. Vidhyarthi Pustak Bhandar Publication, Kathmandu.
3. Text Book of Social and Preventive Medicine by Park JE and Park K
4. Evidence Based Public Health by Brownson, RC., Baker, EA., Leet. TL., Follespie. KN, Oxford University Press
5. The Quest for Health, Educational Enterprises, Kathmandu, by Dixit H.
6. Epidemiology for Public Health Practice, by Friis, RH., and Sellers, TA, 2nd Edition, Gaithersburg, MD: Aspen Publication,
7. Modern Food Microbiology, by Jay, J, H 3rd Edition CBS Publication and Distributors Delhi 1987.
8. Introduction to Soil Microbiology, Martin Alexander, by Academic press, 1961.

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Pharmaceutical Microbiology	CUTM1739	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

Understanding of types & synthesis of antimicrobial agents

Manufacture of antibiotics

To understand the mechanism of action of antibiotics

To study how microorganisms are known to develop resistance to antibiotics

Course Outcome

With the completion of the course, the students will acquire detailed knowledge of antimicrobial agents, their mechanism of action and basis of resistance of microbes to these antimicrobials, formulations.

They will develop an understanding of different types of disinfectants/antiseptics and their uses, evaluation of their bactericidal and bacteriostatic action.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module- I

Pharmaceutical Microbiology: Chemical disinfectants, Antiseptic, Antibiotics, static and cidal activity.

Types of Antibiotics. Synthetic Antimicrobial Agents, Antifungal drug, Antiviral drug.

Practice: Sterilization methods used in Microbiology Lab

Isolation of human pathogens in sterile condition

Module-II

Manufacture of Antibiotics: Production of penicillin, Production of Streptomycin. Assessment of New

Antibiotics: Parameters for determination of the usefulness of antibiotics (in vitro and in vivo).

Pharmacokinetics and Pharmacodynamics of Antimicrobial agents. Antibiotic Assay: Microbiological

methods: Disc diffusion technique, Dilution technique. Microbial Spoilage and Preservation of Pharmaceutical Products.

Practice: Test for Bacteriostatic and Bactericidal activity:

Disc test

Dilution test

Module- III

Mechanisms of Action of Antibiotics: Cell wall synthesis inhibitors, Inhibitors of protein biosynthesis, Inhibitors of tetrahydrofolate, Disorganize the cytoplasm membrane. Mode of action of Antibiotics (Cell wall synthesis inhibitors, Inhibitors of protein biosynthesis, Inhibitors of tetrahydrofolate, Disorganize the cytoplasm membrane). Bacterial Resistance to Antibiotics. Biochemical mechanisms of resistance, Genetic basis of antibiotic resistance. Problems in antibiotic therapy due to resistance.

Practice: Screening of herbal plants for Antibiotic activity

Sterility testing of pharmaceuticals

Bacteriological analysis of water

Suggested Readings:

1. W B Hugo and A D Russel, Pharmaceutical Microbiology, 2nd Edition
(e-Book link: <https://www.pdfdrive.com/hugo-and-russells-pharmaceutical-microbiology-e34745384.html>)

DC-10 - CUTM1741- Industrial Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
---------------------	-------------	-----------------------	---------------	---------------------

Industrial Microbiology	CUTM1741	Theory +Project	3-0-1	General Microbiology
-------------------------	----------	-----------------	-------	----------------------

Course Objective

Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.

To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course Outcome

Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.

Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Developes laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Course Outline:

Module 1

Introduction to Industrial Microbiology: Introduction, History, Definition and scope. Industrial Equipment and Uses. Fermentation Process: Primary and secondary screening, Detection and assay of fermentation products- Physical and chemical assays, Biological assay Stock culture, Fermentation media, Inoculums preparation, Increasing products.

Project Topic: 1. Design a protocol for the treatment of community sewage in your locality.

Module II

Typical Fermentation Process: Antibiotic drug fermentation - Penicillin, Streptomycin, Bacterial insecticide, Other antibiotics. Acetone, Lactic acid, Brewing. Biological Waste Treatment / Bioremediation: Anaerobic fermentation. Production of: Vitamin, Vaccines, Milk & Milk Products, Food, Baker's yeast, Food and feed yeasts, Mushrooms, Vinegar (Acetic acid) Enzymes: Amylase, Proteolytic enzyme, Pectinases, Invertase Other enzymes.

Project Topic:

2. Detail fermentation process of a food product and the advantages of fermented food.
3. Fermenter Designing

Module III

Industrial sewage and its treatment: Introduction, Industrial pollution, Types of sewage. Microbiology of Domestic sewage and industrial sewage. Methods for the treatment of industrial effluent and sewage-Primary treatment, secondary treatment and tertiary treatment.

Project Topic:

4. Impacts of industrial pollution on Society and Environment and its prevention and control.

Suggested Readings:

1. Industrial Microbiology (2nd Ed.) by A. H. Patel.
2. Modern industrial Microbiology and Biotechnology.
(E-book link- <https://www.pdfdrive.com/modern-industrial-microbiology-and-biotechnology-e33452862.html>)
3. L. E. Casida, JR., *Industrial Microbiology*, 1991, Wiley Eastern Limited, New Delhi,

DC-11- CUTM1742- Basic Computer and Information Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Computer and Information Science	CUTM1742	Practice	0-2-0	Fundamentals of Computer

Course Objective

Identify the function of computer hardware components.

Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.

Identify how to maintain computer equipment and solve common problems relating to computer hardware.

Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded

Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.

Understand the difference between an operating system and an application program, and what each is used for in a computer.

Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Course Outline

Module- I

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer. Types of Input output devices. Processor and memory: The Central Processing Unit (CPU), main memory. Storage Devices.

Module- II

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge. Introduction to Excel:

introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs. Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

Module- III

Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external). Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid). Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

DC-12 - CUTM1746- Epidemiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Epidemiology	CUTM1746	Theory+Project	2-0-1	Fundamental Science

Course Objective

<p>Understand the basic epidemiological methods and study designs.</p> <p>Understand and discuss population based perspective to examine disease and health – related events.</p> <p>Discuss the ethical issues in epidemiological research.</p> <p>Explain the importance of epidemiology for informing scientific, ethical, economic and political discussion of health issues.</p> <p>Describe a public health problem in terms of person, place, and time.</p> <p>Evaluate the strengths and limitations of epidemiologic reports</p>

Apply concepts, methods, and tools of public health data collection, analysis and interpretation, and the evidence-based reasoning and informatics approaches that are essential to public health practice.

Course Outcome

Distinguish between definitions of epidemiology and clinical epidemiology and public health research.

Apply the terminology of the Epidemiologic Triad to an infectious disease.

Describe the important historic events in the field of epidemiology.

Course Outline

Module-I (8

Hrs).

Introduction to Principles of Epidemiology: History, Definition, and scope of epidemiology, Achievements in epidemiology, Terms & Terminologies used in epidemiology. Measuring Health and Disease: Definitions of health and disease, Measures of disease frequency Use of available information, Comparing disease occurrence

Module-II (6 Hrs)

Concept of Epidemiological Study: Basic concepts of epidemiology Descriptive / Analytical, Applied/Experimental, Field Epidemiology. Concept of Prevention and Control of Diseases: Causation in epidemiology: The concept of cause, Establishing the cause of a disease Epidemiological markers, Phenotypic and genetic markers including molecular epidemiology. Disease surveillance: Clinical, Laboratory

Module-III (6 Hrs)

Communicable disease epidemiology, Clinical epidemiology, Environmental & occupational epidemiology, Nutritional epidemiology, Reproductive epidemiology, Social epidemiology, Food epidemiology. Epidemiology, Health services and health Policy: Health care planning, Monitoring & evaluation, The planning cycle, Epidemiology, public policy and health policy, Healthy public policy in

practice

Suggested Readings:

1. Basic Epidemiology. By Beaglehole R., Bonita R., Kjellstrom , World Health Organization, Geneva, https://books.google.com/books/about/Basic_Epidemiology.html?id=AAZGobMNTXgC
2. Field Epidemiology, By B Gregg, 2nd Edition, Oxford University Press, 2002
academic.oup.com/aje/article/156/8/783/78217
3. Gordis L. *Epidemiology*, 2nd Edition, WB Saunders Company Aharcourt Health Sciences Company, Philadelphia. [www.bookdepository.com/Epidemiology-Leon-Gordis/..](http://www.bookdepository.com/Epidemiology-Leon-Gordis/)
4. Epidemiology in Medicine, by LippincottEilliams and Wilkins, and Walters Kluwer Company wkauthorservices.editage.com/.../medicine.html
5. Epidemiology, Principle and Method, McMahon B, Trichopoulos D, by 2nd Edition, Boston, Little, Brown.

DC-13- CUTM1747 - Diagnostic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Bacteriology	CUTM1747	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To confirm the suspicion of infectious bacterial disease.

To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections.

Study of control measures for nosocomial infection.

Student can safeguard himself & society and can work diagnostics and hospitals

Course Outline

Module -I (10 Hours)

Aerobic Culture: Scope and importance of aerobic culture, Factors affecting aerobic culture, Various media and techniques of aerobic culture. Laboratory Diagnosis of Enteric Infections: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Enteric fever / Typhoid fever, Bacterial endocarditis, Bacteraemia, Septicemia, Pyrexia of unknown origin (PUO).

Practice:

1. Isolation & identification of different groups of bacteria in laboratory
2. Antibiotic susceptibility test
3. Preparation and use of different stains in bacteriology laboratory Grams stain, ZN stain, Albert stain, Spore stain, Capsule stain, Flagella stain, Motility test

Module -II (7 Hours)

Laboratory Diagnosis of Respiratory Tract Infection (RTI): (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Lower RTI, Upper RTI. Laboratory Diagnosis of Urinary Tract Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods)

Practice:

4. Anaerobic Culture
5. Laboratory Diagnosis of Pus
6. Laboratory Diagnosis of GI Tract

Module -III (10 Hours)

Laboratory Diagnosis of Oral, Throat and Stomach Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Gingivitis and anaerobic infection of oral cavity. Peptic ulcer (with emphasis in mechanism of peptic ulcer caused by *Helicobacter pylori*), Laboratory Diagnosis of Eye Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Corneal ulcer, Conjunctivitis.

Practice:

7. Laboratory Diagnosis of Mycobacterium Infection
8. Laboratory Diagnosis of Venereal Diseases
9. Performance of different Tests Rapid Diagnostic Tests Molecular Tests 8 hours Interpretation of Test Results 5 hours Test reporting

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Bailey and Scott's Diagnostic Microbiology(12th) Ed
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-14 - CUTM1745 - Diagnostic Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Mycology	CUTM1745	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To confirm the suspicion of fungal disease.

To identify the etiologic agent by isolating the causative fungal pathogen.

Course Outcome

This course provides learning opportunities in the basic principles of medical microbiology and infectious fungal diseases.

The course provides the conceptual basis for understanding pathogenic fungi and the mechanisms by which they cause disease in the human body.

Student can safeguard himself & society and can work diagnostics and hospitals

Course Outline

Module-I (11

Hours)

Diagnostic Mycology: Medically important fungi, Opportunistic Fungi

Fungal Diseases: Mycoses

1. Superficial mycoses
2. Subcutaneous mycoses
3. Cutaneous mycoses: Trichophytosis, Microsporiosis, Epidermophytosis.
4. Systemic mycoses: Histoplasmosis, Blastomycosis, Cryptococcosis, Coccidioidosis, Paracoccidioidosis .

Practice:

1. Antifungal Sensitivity Test: Antibiotics.
2. Preparation of stock solution of drug

Module- II (12 Hours)

Pathogenesis and Laboratory Diagnosis of Mycotic Infections: *Aspergillus* spp, *Candida albicans*, *Fusarium* spp, *Cryptococcus neoformans*, *Histoplasma capsulatum*, *Sporothrix* spp, *Philophora* spp., *Trichophyton microsporum*, *Epidermophyton* spp. *Blastomyces dermatitidis*, *Coccidioides immitis*.

Practice:

3. Dilution technique
4. Determination of Minimal inhibitory concentration (MIC)

Module-III (17 Hours)

Isolation and Identification of Fungi (Laboratory Diagnosis): A. Selection, collection and transportation of specimens 5 hours Skin, Hair, Nail, Mucous membranes, Ear, eye, Corneal ulcer, Pus, Blood, Biopsy, Sputum, Urine, Vaginal and Cervical swab, Stool samples, Plural and peritoneal fluid, Superficial, subcutaneous and cutaneous samples. B. Smear Preparation: 2 hours KOH Preparation, 20% KOH with 20% Glycerol, KOH – DMSO (Dimethyl Sulphoxide) 100% Lactophenol Cotton Blue, India ink preparation.

Practice:

5. Preparation of different media, chemical and stain for fungus study
6. Isolation and identification of different fungi of medical importance

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Fundamental medical mycology / Errol Reiss, H. Jean Shadomy, and G. Marshall Lyon III
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-15- CUTM1743- Diagnostic Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic virology	CUTM1743	Theory +Project	3-0-1	Basic virology

Course Objective

Understanding laboratory diagnosis of virus by both conventional and molecular approach.

To produce a cadre of specialized medical virologists who would help establish clinical diagnostic services in various hospitals/centres.

Course Outcome

Organise sample collection, transportation, processing and storage in an appropriate manner.

Plan, write and implement research projects in virology, analyze their results and publish these in peer-reviewed journals.

Coordinate with concerned agencies regarding viral diseases and their outbreaks.

Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Course Outline

Module I

Laboratory Organization: Guidelines on Establishment of Virology Laboratory by WHO – key elements of a virology laboratory- Room (space), Electricity, Water supply, Sterility etc.

Specimen management- Selection of specimen, specimen collection, optimal times for collection of specimen, specimen transport and storage , Biosafety- Personal protective equipment , Minimizing equipment and technique-related hazards, Management of laboratory waste, Labelling of wastes etc. Quality systems – Documentation and Standard Operating Procedure (SOP).

Module II

Clinical Virology-

Viral infections of the skin - including pediatric exanthems and enanthems, Viral respiratory infections- pharyngitis, croup, bronchiolitis, pneumonia etc , Viral CNS infections - encephalitis, meningitis, acute

flaccid paralysis, etc. Viral gastroenteritis - viruses causing diarrhea. Viral hepatitis – due to HAV, HBV, HCV, HDV, HEV etc. Viral infections in the immunocompromised persons—in transplant recipients. Congenital viral infections – Human Cytomegalovirus (HCMV), rubella virus, Varicella Zoster Virus (VZV), etc. Sexually transmitted viral infections .Oncogenic viral infections .HIV/AIDS.

Project Topic: Middle East respiratory syndrome (MERS) respiratory infection in human.

Project Topic: Severe acute respiratory syndrome (SARS) respiratory infection in human.

Module III

Virological techniques for cultivation and identification of virus- Isolation of viruses- Cell (tissue) culture; - Embryonated hen’s egg inoculation (various routes) - Animal inoculation method. Identification of virus- Direct examination of specimen: Electron microscopy (TEM and SEM), Staining and microscopy for viral inclusion bodies, Molecular techniques for direct identification of viral genomes- Nucleic acid amplification techniques (PCR, real-time PCR, etc). Indirect Examination of specimen: Cytopathic effect, Neutralization assay, Haemadsorption etc and serological assay (Immunofluorescence, Haemagglutination inhibition assay (HAI), Complement fixation tests (CFT) and ELISA. Antiviral drugs, Laboratory diagnosis of important DNA and RNA viruses.

Project topic: Molecular methods for laboratory diagnosis of corona virus (CoV).

Project topic: Comparative study of serological and molecular methods for lab diagnosis of coron a virus (CoV).

Suggested Readings:

1. Bailey & Scott’s Diagnostic Microbiology.
(e-book-<https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>)
2. Basic virology by Edward K. Wagner.
(e-book -<https://www.pdfdrive.com/basic-virology-e18900518.html>)
3. Essential in clinical microbiology by C A Kauffman and J D Sobel, 2nd Ed.
(Ebook-link- <https://www.pdfdrive.com/essentials-of-clinical-mycology-second-edition-e39564930.html>)

DC-16- CUTM1744- Diagnostic Parasitology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Parasitology	CUTM1744	Theory+ Practice	3-1-0	Basic Parasitology

Course Objective

To explain the mechanisms of pathogenesis from a gross, microscopic and molecular perspective.

Recognize the diagnostic stage of the infection under the microscope and to manage the infected patient.

To examine parasites and parasitism, emphasizing the influence of parasites on the ecology and evolution of free-living species, and the role of parasites in global public health.

Course Outcome

Organise sample collection, transportation, processing and storage in an appropriate manner.

Plan, write and implement research projects in parasitology, analyze their results and publish these in peer-reviewed journals.

Coordinate with concerned agencies regarding protozoan and helminth diseases and their outbreaks.

Plan and execute epidemiological studies and provide advice in relation to protozoan diseases.

Course Outline:

Module I

Laboratory Organization (Parasitology Lab). Selection, Collection, Preservation and Transportation of Samples.

Practice: Safety measures in Parasitology lab and laboratory organization.

Module II

Laboratory Diagnosis, of the Intestinal and Vaginal Parasites:

(Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) **Protozoa:** Entamoeba histolytica, Giardia lamblia, Trichomonas spp, Cryptosporidium, Cyclospora cayantensis, Isospora

Helminthes: Ascaries lumbricoides, Hook worm: Anacylostoma and Necator, Enterobius vermicularis, Trichuris trichuira, Strongloides spp., Taenia spp., Echinococcus spp., Hymonolepis nana. Tissue and Blood Parasites: Malaria spp, Leishmania spp (Kalaazar), Wacheria spp. Brugia, Loa loa, Oncoerca, Dracuhculus, Paragonimus westermani/hertmani.

Practice: Examination of stool for parasite identification. Examination of clinical sample for parasite identification.

Module III

Laboratory Diagnosis of Various Parasites: Direct method, Indirect method, Rapid methods, Molecular Technique -Parasite Culture. Different Stains used in Diagnostic Parasitology.

Practice: Demonstration of different rapid methods for parasite identification.

Suggested Readings:

1. Textbook of medical Parasitology.
(e-book link- <https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>)
2. Parasitology book by K.D. Chatterjee.
(e-book link- <https://sites.google.com/site/bkthrtzapg/atahrgiwu>.
<https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>.)
3. Stool Examination
<https://www.youtube.com/watch?v=ePqcdDKCe0>
<https://www.youtube.com/watch?v=MRzUXg8kFi>
<https://www.youtube.com/watch?v=-iI2PxmHxuo>
4. Malaria thick smear preparation.
<https://www.youtube.com/watch?v=WPP7AjmStBg>
5. Malaria thin smear preparation.
<https://www.youtube.com/watch?v=acoALifVvb8>

DC-17- CUTM1754- Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
---------------------	-------------	-----------------------	---------------	---------------------

Mini Project	CUTM1754	Project	0-0-2	Basic Medical science
--------------	----------	---------	-------	-----------------------

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

DC-19- CUTM1756 - Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	Basic Medical science

Project work:

Suggested Project title

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherchia coli isolated from wound infected.
2. The incidence of Salmonella and Escherchia coli in livestock (Poultry) feeds
3. Microbial evaluation of milk from a dairy farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

DC-18- CUTM1755 - Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Internship

1. Case record
2. Lab management and ethics
3. Evaluation -Guide(internal)
 - a. -Industries guide(external)
 - b. -University-project report/ Viva

**CENTURION UNIVERSITY OF TECHNOLOGY AND MANAGEMENT,
ODISHA**

SCHOOL OF PARAMEDICS & ALLIED HEALTH SCIENCES

**Centurion
UNIVERSITY**

*Shaping Lives...
Empowering Communities...*

**BACHELORE OF SCIENCE IN MEDICAL LABORATORY
TECHNOLOGY**

2020

SYLLABUS

Preface: Medical Laboratory Technology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as fluid, tissue, and blood. It also covers micro-organism screening, chemical analyses, and cell count.

Medical Technologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Biochemical Laboratories.

With adequate knowledge and experience, Medical Laboratory Technologists having B.Sc. MLT qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Medical Laboratory Technology

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre equipped with modern pathology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a

typewritten and bound form.

Degree: The degree of B. Sc. in Medical Laboratory Technology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Medical Laboratory Technology (B.Sc. MLT)**” from Centurion University.

BACHELOR OF SCIENCE IN MEDICAL LABORATORY TECHNOLOGY

NOTE: Along with the School core and Discipline core subjects, the students need to opt for AECC Courses, Skill/ Domain/ Elective courses and value- added courses from the University Basket, as per the requirement by the University.

BASKET I

School Core Courses

SC1- CUTM1708- Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+ Practice	2-1-0	Fundamental Science

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-1 (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-2 (13 Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Module-3 (15 Hours)

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive

system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.

3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, PublisherSatya

SC2-CUTM1729- Cell Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell Biology	CUTM1729	Theory+ Project	3-0-1	Fundamental Science

Objective

- .Determine the parts of the cell membrane and the cell wall
- Distinguish the types and mechanism of mutation
- Compare and contrast the events of cell cycle and its regulation
- Understand the dynamic character of cellular organelles

Course Outcome

- Describe the fundamental principals cellular biology
- Develop a deeper understanding of cell structure and how it relates to cell functions.
- Understand how cells grow, divide, and die and how these important processes are regulated.
- Understand cell signaling and how it regulates cellular functions. Also how its dis-regulation leads to cancer and other diseases.

Course Outline

Module –I (12 Hr)

An Overview of Cells: History, Cell theory, Structure and Function of Cell and its Organelles: Biological membranes - Nucleus - Nuclear envelope, Nucleolus, Mitochondria, Chloroplasts, Lysosomes, Gloxysomes and Peroxisomes, endoplasmic reticulum, ribosomes, Golgi complex (Structural organization, function, marker enzymes of the above organelles), Cell types: prokaryotes vs.

eukaryotes; from single cell to multi-cellular organism; Different molecules of cell- water, salt and mineral ions etc.

Module- II (14 Hr)

Cell cycle and its regulation, Cellular communication and cell mobility: Cell cycle: G₀/G₁, S, G₂ and M phases (Cell Division: Mitosis, meiosis and cytokinesis); regulation of cell cycle; cell adhesion and roles of different adhesion molecules, gap junctions, Extra- Cellular Matrix (ECM), Cell-cell interaction and cell- ECM interaction, The cytoskeleton, Microtubule- based movement and microfilament -based movement.

Module-III (14 Hr)

Cell signaling, Programmed Cell Death (Apoptosis) and Cancer: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors (G-PCR), Tyrosine Kinase, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component systems, bacterial chemotaxis, Intrinsic and Extrinsic apoptotic pathway, Caspase enzyme, Biology and elementary knowledge of development and causes of cancer; Tumor viruses, Oncogenes and tumor suppressor genes.

Suggested Readings:

1. The Cell a Molecular Approach (4th Edition) by Cooper & Hausman
<https://www.thebiomics.com/books/cell-biology/cell-molecular-approach-cooper-and-hausman-4th-ed.html>
2. Molecular Biology by Friefelder David, Publisher Narosa
www.alibris.com/Molecular-Biology-David..
3. Introduction to Cell biology by John K Young, World Scientific publishing company
www.overdrive.com/.../introduction-to-cell-biology
4. Introduction to biology, 3rd tropic edition by D G Maackean
[www.amazon.com/Introduction-Biology-D-G-Mackean/.](http://www.amazon.com/Introduction-Biology-D-G-Mackean/)

SC3-CUTM1730-Basic Medical Instrumentation and Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Medical Instrumentation and Techniques	CUTM1730	Theor+Practice	2-2-0	Fundamental Science

Objective

- To learn the principle, instrumentation & application of Microscopy
- Principle, instrumentation & application of Centrifugation
- Principle of Spectroscopy

Course Outcome

- After completion of the course the student will be efficient in handling the microscopy equipment's.
- They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi-automated Biochemistry analyzer.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module -I (12 hrs)

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase-contrast microscopy, fluorescence microscopy, polarization microscopy, electron microscopy (Scanning and Transmission); Bacterial Colony Counter (Principle and working). Laminar Air Flow (Principle and working technique).

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Module- II (14 hrs)

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry. **Centrifugation:** Principle; Preparative, Analytical, Density gradient centrifugation. **Cytometry:** Types, Flow cytometry and its applications.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Module- III (14 hrs)

Microtomy: Sectioning, Staining. Application, Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Principle, working and uses of: Incubator, Hot air oven, Autoclave.

Practice: Demonstration of Auto/ Semi auto Analyzer; Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Readings:

1. Wilson K and Walker J. (2010). Principles and Techniques of Biochemistry and Molecular Biology. 7th Ed., Cambridge University Press.
(e-Book link: <https://www.pdfdrive.com/principles-and-techniques-of-biochemistry-and-molecular-biology-e174866056.html>)
2. Nelson DL and Cox MM. (2008). Lehninger Principles of Biochemistry, 5th Ed., W.H. Freeman and Company.
(e-Book link: <https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-d164892141.html>)
3. Willey MJ, Sherwood LM & Woolverton C J. (2013). Prescott, Harley and Klein's Microbiology. 7thEd., McGraw Hill.
(e-Book link: <https://www.pdfdrive.com/prescott-harley-and-kleins-microbiology-7th-ed-e188166539.html>)
4. Labs for Life
(e-source link: <http://labsforlife.in/InstructionalVideo.aspx>
(e-Book link- <https://books.google.co.in/books?id=z9SzvsSCHv4C&printsec=frontcover&dq=instrumentation&hl=en&sa=X&ved=2ahUKEwjipqrO347qAhUjwzgGHRomCNUQ6wEwAHoECAIQAO#v=onepage&q=instrumentation&f=false>)

SC4-CUTM1732- Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry	CUTM1732	Theory+ Practice	3-1-0	Fundamental Science

Objective

- To understand the concept of metabolism of carbohydrates
- To understand the significance of amino acids, proteins
- Use of enzymes in enhancing metabolic reactions
- Role of lipids

Course Outcome

- After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.
- Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.
- They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.
- The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module- I

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzyme NAD, metal cofactors, Classification of enzymes.

Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis, and Induced Fit hypothesis.

Enzyme inhibition, enzyme kinetics.

Diagnostic value of serum enzymes: Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Practice: Study of effect of temperature on enzyme activity
Study of effect of pH on enzyme activity

Module- II

Carbohydrates: Biomedical importance & properties of Carbohydrates, Classification,

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses. Stereo isomerism of monosaccharides, epimers, Haworth projection formulae for glucose; chair and boat forms of glucose.

Metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, Components of respiratory chain, energy relationships during cell respiration, types of respiration. HMP shunt & Gluconeogenesis, regulation of blood glucose level.

Practice: Estimation of Glucose in urine
Estimation of Glucose in blood

Module- III

Amino acids: Classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism, Classification, biomedical importance.

Metabolism: Ammonia formation & transport, Transamination, Decarboxylation, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids.

Practice: Estimation of Protein in urine
Estimation of Protein in blood

Module- IV

Chemistry of Lipids & their related metabolism: Classification, biomedical importance, essential fatty acids. Brief outline of metabolism: Beta oxidation of fatty acids, fatty liver, Ketogenesis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus: its types, features, gestation diabetes mellitus, glucose tolerance test, glycosuria, Hypoglycaemia & its causes.

Practice: Estimation of Bile pigment in urine
Estimation of Bile salts in urine

Suggested Readings:

1. Victor W. Rodwell, David A. Bender, Kathleen M. Botham, Peter J. Kennelly, P. Anthony Weil (2018) Harper's Illustrated Biochemistry. Mc Graw Hill.
(e-Book link: <https://www.pdfdrive.com/harpers-illustrated-biochemistry-d176838999.html>)
2. Nelson DL and Cox MM. (2008). Lehninger Principles of Biochemistry, 5th Ed., W.H. Freeman and Company.
(e-Book link: <https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-d164892141.html>)
3. Donald Voet, Judith G. Voet (2011) Biochemistry 4th Edition. Wiley Publishers.

SC5-CUTM1715 -Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+ Practice	3-1-0	Fundamental Science

Objective

- Analyze body fluid for diagnosis of disease
- Analyze waste product for diagnosis of disease
- Understanding DOT Policy
- Understand Physiological disorder and infectious disease
- Analysis of pregnancy

Course Outcome

- Able to collect pathological specimen
- Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
- Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
- Preservation and processing of pathological sample.
- Identification of Parasites
- Analysis of Infertility disorder

Module-I (16 Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, BJP, Bile Salt and Bile pigment, Chemical Examination of Urine - Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-

Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and BJP Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: *Microscopic finding of stool, Morphology of stool parasite*

Lab:-

Stool Analysis: Collection and physical examination, Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain), Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:-

Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine Examination

Synovial Fluid: Collection and Routine examination

Pleural Fluid: Collection and routine examination

Pericardial Fluid: Collection and routine examination

Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC-6 - CUTM1736- Immunology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology	CUTM1736	Theory + Practice	3-2-0	Fundamental Science

Objective

- Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.
- Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction.

Course Outcome

- Application of Immunology in disease diagnosis.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. **Antigens:** Types of antigen, Epitope. Biological Classes of antigens, Superantigens.

Immunoglobulins: Antibody structure, Immunoglobulin classes.

Practice: Collection of blood sample by vein puncture
Separation and preservation of serum

Module-II

Complement System: Principal pathways of Complement activation, Quantitation of Complement (C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests. Serological Reactions.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test.

Rheumatoid factor (RF) test

Precipitation in agarose gel

Performing Ouchterlony Double diffusion test

Demonstration of SDS-PAGE

Demonstration of ELISA

Demonstration of Western blotting

Module-III

Immune Response: Types of Immune response, Humoral immunity, Cell-mediated Immune Responses, Cytokines, Immunological tolerance.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity-Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity.

SC-7- CUTM1737- Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	CUTM1737	Theory + Project	3-0-1	Fundamental Science

Objective

- To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.
- Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that , can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course Outcome

- Conduct independent work in a laboratory.
- Read scientific articles and gain a critical understanding of their contents.
- Give a spoken and written presentation of scientific topics and research results.
- Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Course outline

Module I

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell. Evolution and Molecular structure of cell and its organelles. Types of cells. Including different kinds of Prokaryotic and eukaryotic cells, Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles, Cell cycle, Cell membrane and its structure (fluid-mosaic model). Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Project Topic: Causes, types and molecular mechanism of human cancer.

Module II

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells: Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, Transferring information from DNA to RNA, Synthesis of RNA, Translation RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes.

Project Topic: Tumor suppressor gene and oncogene.

Module III

General Concept on: a. Regulation of the Gene Expression b. Regulating the Metabolism: The Lac-Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions.

Project Topic: Human Genome Project.

Module IV

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell, Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA (Transcription), RNA polymerase, Initiation and Termination of Transcription, Post and co- transcription modification of the RNA. Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of r-RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

Project Topic: Molecular basis, types, causes and a case study of the effects of DNA mutation.

Suggested Readings:

1. Molecular Biology of the gene (7th Ed) by James D. Watson.
E-book link- <https://www.pdfdrive.com/molecular-biology-of-the-gene-e158278674.html>
2. Genes XII by Lewin's.
E-book link- <https://www.pdfdrive.com/lewins-genes-xii-e168024578.html>
3. Molecular cell biology (5th Ed) by Lodish H.

E-book link-
[e15674865.html](https://www.pdfdrive.com/molecular-cell-biology-lodish-5th-ed-e15674865.html)

BASKET II

Discipline Core Courses

DC-1-CUTM1731-Haematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Hematology	CUTM1731	Theory+Practice	3-2-0	Basic Medical science

Objective

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.
- Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome

- Differentiate various laboratory test findings with their associated clinical conditions.
- Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.
- Describe the various components of blood, their functions, and roles in various disease states.
- To be able to demonstrate good skills in the relevant Hematology laboratory methodology.
- Collection of blood for the investigations.
- Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.
- To learn about tests carried out for hematological investigations.
- To be able to carry out blood sampling.

Course Outline

Module- I (8 Hrs)

Scope & importance of Hematology, important equipment and chemicals, various test performed in Hematology laboratory, Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in hematology- Microscope, Blood Cell counter, Sahali's Apparatus.

Module- II (12 Hrs)

Identify and/or confirm the composition & function of various red blood cell inclusions. Function of normal cellular components. Formation of blood, Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis. Anticoagulants: definition, Uses, Different types of Anticoagulants., mode of action, their merits and demerits.

Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart. Demonstration the normal and abnormal morphology of different blood cells.

Module- III (10 Hrs)

Hematological Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
3. Megaloblastic Anemia: Causes, Lab findings.
4. Hemolytic Anemia: Definition, causes, classification & lab findings.

Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black

Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Collection of blood by different methods
Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Module- IV (10 Hrs)

Collection of blood, Methods & Preparation of Stains and Smears

Practice:

Cleaning and drying of glass and plastic ware, Collection of venous and capillary blood, cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents,

Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (Sahali's method and cyanmethaemoglobin method).

Module- V (10 Hrs)

Routine Hematological Tests:

Complete blood cell count, ESR, Differential Leukocyte count, Total leukocyte count, Bleeding time and Clotting time, Blood Grouping and Rh Typing.

Practice:

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count. Determination of ESR by wintrobes, Determination of ESR by Westergren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Bleeding time and Clotting time, Blood Grouping and Rh Typing

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

10. Ebook link-
<https://books.google.co.in/books?id=QQcYAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAnoECAIQQAQ#v=onepage&q=hematology&f=false>

DC-2- CUTM1733- Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Microbiology	CUTM1733	Theory+ Practice	3-2-0	Fundamental Science

Objective

- To know various Culture media and their applications and also understand various physical and chemical means of sterilization
- To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus
- To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

- This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.
- Understanding the details of microbial cell organelles.
- Provides knowledge on growth of microorganism.
- Provides knowledge Culturing microorganism.

Course Outline

Module -1(14 Hours)

Microbiology: Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms. Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve

Practice:

1. Handling of Microscope
2. To learn techniques for Inoculation of bacteria on culture media.
3. To isolate specific bacteria from a mixture of organisms.

Module-2 (11 Hours)

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:

4. To demonstrate simple staining (Methylene blue)
5. Bacterial identification: To demonstrate reagent preparation and procedure for Gram stain, Z-N staining, Capsule staining, Demonstration of flagella by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure

Module-3 (15 Hours)

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice:

6. Biochemical tests for identification of bacteria
7. Preservation of stock cultures of bacteria
8. Antibiotic susceptibility test

Suggested Reading:

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. Microbiology by Prescott
3. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
4. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
6. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
7. Text book of Medical Microbiology by Gruckshiank

DC-3- CUTM1734 - Medical Law and Ethics

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Law and Ethics	CUTM1734	Theory+ Project	2-0-1	Fundamental Science

Objective

- The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients. It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and
- The role of policy in the formation of law as it relates to medicine.

Course Outline

Module-1

1. The Indian medical council act, 2. Medical council of India (functions),3. Functions of state medical councils, 4. The declaration of Geneva

Module-2

1. Duties of medical practioners 2. Regarding red cross emblem 3. Professional secrecy 4. Privileged communication.

Module-3

1. Professional negligence 2. Medical mal occurrence 3. Contributory negligence 4. Criminal negligence

Module-4

1. Corporate negligence 2. Ethical negligence 3. Precautions against negligence 4. difference between professional negligence and infamous conduct.

Module-5

1. Malpractice litigation involving various specialities 2. Prevention of medical negligence 3. Supreme court of India guidelines on medical negligence 3. The therapeutic misadventure 4. Vicarious liability

Module-6

1. Products liability 2. medical indemnity insurance 3. Medical records 4. Consent in medical practice

Module-7

1. Euthenasia 2. Deaths due to medical care 3. Malingering

Text books

1. Medical Law and Ethics by Shaun D Pattinson, 5 th edition, 2017.

DC-4 - CUTM1720- Histology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histology	CUTM1720	Theory+Practice	3-1-0	Basic Medical Science

Objective

- Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.
- perform routine laboratory procedures encompassing all major areas of the histology laboratory.
- accurately and proficiently embed tissue and understand the principles of microtomy.
- Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outcome

- In this section students will be made aware of terminology used in

histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.

- Reception and labeling of histological specimens.
- Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.
- The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.
- The students will learn about special staining procedures & handling & testing of various cytological specimens.

Course Outline

Module- I (8 Hrs)

Histotechnology, Care & Maintenance of histotechnology equipments and their parts and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues, Collection and transportation of specimens for histological examination, fixation: Process, Various types of fixatives used in a routine histopathology laboratory- Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Care & maintenance of Histology equipments, Collection & transportation of specimens, Fixation

Module- II (8 Hrs)

Decalcification Criteria of a good decalcification agent, Technique of decalcification Followed with selection of tissue fixation, decalcification neutralization of acid and thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination, Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors.

Practice: -Method of Decalcification, Embedding, manual or automatic tissue processings schedule.

Module- III (10 Hrs)

Periodic Acid Schiff Staining, Impregnation and Mountains, Commonly used mountains in histotechnology lab. General Staining Procedures (routine H&E stain, PAP stain and other special stain) for Paraffin Infiltrated and Embedded tissue, To perform & practice the manual & automated Haematoxylin and Eosin staining technique, To perform & practice the Mallory's Phosphotungstic

Acid Haematoxylin (PTAH). Introduction of FNAC and its staining tech, museum technique, post mertum technique.

Practice:

Procedure for manual Staining and Automatic Staining Technique, FNAC technique, Museum technique(Hospital Visit), Post mertum technique(Hospital Visit).

Module- IV (8 Hrs)

Demonstration of instruments used for dissection Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory Reception and labeling of histological specimens Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid, Corney's fluid, 10% Neutral formalin, Formal saline, Formal acetic acid, Pereyn's fluid, prepare 70% alcohol from absolute alcohol. To perform embedding and casting of block.

Practice:

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory, Preparation of various Fixatives, Labeling of Histological specimens, Embedding and Casting of block

Module- V (8 Hrs)

Tissue Processor, Microtomy, Honing and Stropping technique, Use of tissue floating bath, Use of incubator

Practice:

Processing of tissue by manual and automated processor. method To demonstrate various part and types of microtome. To learn sharpening of microtome knife (Honing and stropping technique) To perform section cutting, learn mounting of stained smears. To practice attachment of tissue sections to glass slides To learn using tissue floatation bath drying of sections in incubator (37⁰ C)

Suggested Readings:

1. Color text book of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran, Publisher Elsevier
6. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalami
7. Ebook link-
https://books.google.co.in/books?id=qWScAQAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false

8. Ebook link-
https://books.google.co.in/books?id=MrpEDwAAQBAJ&printsec=frontcover&source=gbs_ge_summar_y_r&cad=0#v=onepage&q&f=false
9. Ebook link-
https://books.google.co.in/books?id=CERPdWAAQBAJ&printsec=frontcover&source=gbs_ge_summar_y_r&cad=0#v=onepage&q&f=false

DC-5- CUTM1727- Advanced Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Advanced Hematology	CUTM1727	Theory+Practice	3-1-0	Fundamental Medical science

Objective

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Demonstrate an understanding of the components of human blood and characteristics, functions, and abnormalities and disease states of each.
- Demonstrate proficiency in the skills necessary to perform blood cell counts, and evaluation of blood elements within stated limits of accuracy.
- Determine suitability of hematology specimens and dispose of them in the appropriate bio-hazard containers.

Course Outcome

- Differentiate various hematological procedures and the use of basic equipment essential to working in a Hematology Laboratory.
- Discuss differences between Quality control, Quality Assurance, and Continuing Quality Improvement principles as used in the Hematology Laboratory.
- Categorize various hematology analyses , operational principles of various hematology instruments, and troubleshooting of various instruments.

- Explain the principles and theories utilized in a variety of problem-solving situations.
- Compare and contrast hematology values under normal and abnormal conditions

Course Outline

Module-I (8 Hrs)

Quality assurance in hematology: Internal and external quality control including reference preparation Routine quality assurance, Protocol, Statistical analysis i.e. Standard deviation, Coefficient variation, accuracy and precision, Safety precautions in hematology. Basic concepts of automation in hematology with special reference to: Blood cell counter, Coagulometer.

Practice: Collection of blood from different body parts. Data and record Maintain, Handling hematological equipments.

Module-II (12 Hrs)

Bone marrow examination:

1. Composition and functions, Aspiration of bone marrow (Adults and children), Processing of aspirated bone marrow (Preparation & staining of smear)
2. Brief knowledge about examination of aspirated bone marrow (differential cell counts and cellular ratios) .Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black
3. Leukemia: Classification, Blood Picture, Differentiation of BlastCells. Laboratory diagnosis of leukaemias , Processing and staining of trephine biopsy specimens.

Practice: Method of aspiration bone marrow, method of Processing and staining of trephine biopsy.

Module-III (10 Hrs)

L.E. cell phenomenon

1. Definition of L.E. cell, Demonstration of L.E. cell by various methods , Clinicals Physiological variations in Hb, PCV, TLC and Platelets. Investigations of a case suffering from bleeding disorders.
2. Quantitative assay of coagulation factors - a. Principle b. Procedure c. Mechanism d. Tests
3. Biomedical waste management in hematology laboratory (Other than Radioactive material)

Practice-: Demonstration of functional aspect of blood cell counter Study the RBCs abnormal morphological form -a. Variation in size, shape and staining Character, b. Red cell inclusion, c. Identify morphologically the- Immature Erythroid series of cells d. Immature Myeloid ad other WBCs series of cells

Module-4 (10 Hrs)

Demonstration of various parts of centrifuge; its functioning and care, Cleaning and drying of glass and plastic ware, Cleaning of glass, syringes and its sterilization. Preparation of various anticoagulants, Preparation of buffers, Preparation of the stains and other reagents.

Practice: Use centrifuge machine to separate serum & plasma from whole blood cells, Sterilization, Buffer & stain preparation.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>
9. Ebook link-

10. Ebook link-
<https://books.google.co.in/books?id=QQcYAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAhoECAIQQAQ#v=onepage&q=hematology&f=false>

DC-6- CUTM1721- Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	CUTM1721	Theory+ Project	2-0-1	Fundamental Science

Objective

- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

- Students can understand the ethical and philosophical issues associated with research in education
- This study provides knowledge on various modes of presenting and disseminating research findings.
- Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
- Provide learning opportunities to critically evaluate research methodology and findings.
- Enable students to be reflexive about their role and others' roles as researchers.

Course Outline

Module- I (9 Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Module- II (8 Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III (14 Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire. Interviewing, Tabulation, Coding, Editing. Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections.

Writing a review on Virus culture

Literature survey on Covid-19

Suggested Readings :

1. Research Methodology by C.R. Kothari (3rd Ed)
2. Research Methodology In the Medical & Biological Sciences by Petter Laake et al.
3. Essentials of Research Design and Methodology by Geoffrey Marczyk et al.
4. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO- WIPRO
5. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
6. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research Council.
7. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

DC-7 - CUTM1738- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	CUTM1738	Theory+ Practice	3-2-0	Fundamental Science

Objective

- Understanding the concept of Biochemical analyzing instruments both automated and semi automated.
- To learn about how to Care & Maintenance of Equipment & Chemicals.
- To learn normal ranges of biochemical components in our body.
- Clinically relevant biochemical analysis for deeper understanding of all biochemical

components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

- Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.
- To learn about Various tests carried out for biochemical analysis & Hormone investigations.
- To learn about safety precautions and handling the equipment in biochemical laboratory.

Course Outline

Module- I (12 Hrs)

Chromatography: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC

Practice: Handling the Equipments and chemicals used in biochemical laboratory.

Module-II (12 Hrs)

Electrophoresis: Moving boundary, Zone (Paper Gel) electrophoresis, Immuno electrophoresis, Isoelectric focusing, 2-D electrophoresis. Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, ESR

Practice: Estimate Erythrocyte sedimentation rate

Module- III (26 Hrs)

Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Method of estimation and assessment for: a. Glucose tolerance test. Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Renal calculi, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice: Glucose Tolerance Test, Clearance Test, Gastric juice collection, Gastric Analysis, Kidney Function Test, Liver Function Test, Lipid Profile, Renal calculi, Hormone Test

Suggested readings:

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H.Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book
4. Principle of Biochemistry by Lehninger
5. Biochemistry by Voet&Voet
6. Biochemistry by Stryer
7. Biochemistry of Metabolic process by Asim Kumar Roy, Kalyani Publication
8. Ebook link-
https://www.cartercenter.org/resources/pdfs/health/ephti/library/lecture_notes/health_science_students/medicalbiochemistry.pdf
9. Ebook link-
https://books.google.co.in/books?id=Je_pJfb2r0cC&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
10. Ebook link-
https://books.google.co.in/books?id=csPcDAAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
11. Ebook link-

DC8-CUTM1749-Applied Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Hematology	CUTM1749	Theory+Practice	3-2-0	Basic Medical science

Objective

- The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.
- Demonstrate an understanding of the components of human blood and characteristics, functions, and abnormalities and disease states of each.
- Demonstrate proficiency in the skills necessary to perform blood cell counts, and evaluation of blood elements within stated limits of accuracy.
- Determine suitability of hematology specimens and dispose of them in the

appropriate bio-hazard containers.

Course Outcome

- The students be made aware of Safety precautions, Quality assurance, biomedical waste management and automation in haematology. It will also cover Red cell abnormalities, Disorder of leukocytes, Investigations of a case suffering from bleeding disorders, To learn about tests carried out for hematological investigations.
- Understanding of Haemopoietic disorders, laboratory diagnosis of leukemia, hemolytic anemia.
- Collection & preservation of blood for the investigations.

Course Outline

Module-I (12 Hrs)

Laboratory diagnosis of leukaemias Definition and laboratory diagnosis of Leukamoid reactions. Cytochemical staining, procedure and their significance in various haemopoietic disorders. Laboratory diagnosis of iron deficiency anaemia, Laboratory diagnosis of megaloblastic anaemia ,Laboratory diagnosis of haemolytic anemia.

Practice: Collection of blood from different body parts. Data and record Maintain, Handling hematological equipments, Demonstrate the different abnormal morphology of RBCs in Anemia cases.

Module-II (8 Hrs)

Chromosomal studies in various hematological disorders and their significance. Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis. Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Practice: Laboratory diagnosis of Hyperfibrinolysis (D- dimer Method), laboratory diagnosis of disseminated intravascular coagulation (DIC)

Module-III (14 Hrs)

Laboratory diagnosis of Hemophilia and von-will brand disease. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP), Platelet function tests and their interpretation.

Practice: Complete Blood Count, Total Platelet Count, Bleeding time, Clotting time, Activated Partial Thromboplastin Time (APTT) Test, Prothrombin Time (PT)

Module-IV (12 Hrs)

Measurement of:

1. Blood volume, b. Determination of Red cell volume and Plasma volume, c. Red cell life span,
2. Platelet life span. Estimate serum iron, total iron, Hb-F, Plasma and urine hemoglobin. Demonstrate the presence of Hb-S by Sickling and solubility, Perform various Platelet function test.

Practice: Demonstrate the sickle cells, To estimate serum iron and total iron binding capacity. To estimate Hb-F in a given blood sample. To estimate plasma and urine. Haemoglobin in the given specimens. To demonstrate the presence of Hb-S by Sickling and solubility tests.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

DC-9- CUTM1750- Immunopathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunopathology	CUTM1750	Theory+ Project	3-0-1	Fundamental Science

Objective

- To understand how the immune system is working, about the components of the immune system, their functioning, the defense mechanisms against different pathogens (viruses, bacteria ,and parasites), the pathogenesis of immune diseases (hypersensitivity ,autoimmunity, immunodeficiencies),and on the mechanisms underlying the rejection of the transplants and the antitumor immune response.
- It also provides knowledge of the main immunological techniques used in research and diagnostics.

Course Outcome

- To know and describe the organization and functioning of the immune system, its cells and its molecules.
- To know the principles of diagnostic tests described on immunological techniques.
- To know the fundamental stages of the immune system and its changes over the course of life (intrauterine life, newborn ,adult, elderly)
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module I (7 Hrs)

Basic Components of the Immune System, Immunological Techniques, Immune Regulation, Immunological Aspects of Infection, Immunological Aspects of Immunodeficiency Diseases.

Module II (8 hrs)

Autoimmunity, Blood related disorder, Chronic Lymphocytic Leukemia, Immunology of HIV Infections and other viral infection, Immunological Aspects of Allergy and Anaphylaxis, Immunological Aspects of Skin and venereal Diseases.

Module III (10 hrs)

Experimental Approaches to the Study of Autoimmune Rheumatoid Arthritis Diseases, Immunological Aspects of Cardiac Disease, Immunological Aspects of Chest Diseases Pulmonary Tuberculosis

(MDRT), and XDRT, Immunological Aspects of Gastrointestinal and Liver in case of Hepatitis, Immunological Aspects of Endocrine Disease (Thyroid, diabetes, hypertension), Immunological aspects of organ transplantation.

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan&Paniker, Publisher Universitiespress
2. Short text book of Medical microbiology by Satish Gupte, Publisher Jaypeebrotthers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by MoniaCheesbrough, publisher Butterworth Heinemannltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and DavidMale.

DC-10- CUTM1748- Parasitology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Parasitology	CUTM1748	Theory+Practice	3-2-0	Fundamental Science

Objective

- Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites (Protozoa, metazoa and Helminth)
- Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites.

Course Outcome

- Identification of pathogenic parasite in disease diagnosis and treatment.
- The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.
- To serve as a resource for the clinical laboratories professionals in the different region.

Course Outline

Module-I

Introduction to Medical Parasitology, General characteristics and classification of protozoa and helminthes. Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Practice: Method of sample Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Module II

Morphology, life cycle and lab diagnosis of *Giardia* and *Entamoeba*, *T.solium*, *T.saginata*, malaria parasite with special reference to *P. vivax* and *P. falciparum* and *Leishmania donovani* (Kala azar). Morphology, life cycle and lab diagnosis of hook worm and round worm (*Ascaris lumbricoides* and *Anchylostoma duodenale*).Most common symptoms of parasitic infection and diagnosis and treatment methods. Procedures used in microscopic examination of stool from a parasitic infected individual.

Practice: Routine Stool examination for detection of intestinal parasites. Concentration techniques for demonstration of Ova (Principles and applications). Identification of adult worms from model's or slide's method.

Module III

Laboratory Diagnosis of Various Parasites: Direct method, Indirect method. Rapid Diagnostic Tests (RDTs), Quantitative buffy coat assay (QBC), Malaria Rapid diagnostic test (MRDT), Leishmanin test.

Practice: Demonstration of some rapid diagnostic method used for parasite identification.

Suggested Readings:

1. Textbook of medical Parasitology. (e-book link-<https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>)
2. Parasitology book by K.D. Chatterjee. (e-book link-<https://sites.google.com/site/bkthtrpazg/atahrgiwu>, <https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>)

DC-11- CUTM1742- Basic Computer and Information Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Computer and Information Science	CUTM1742	Practice	0-2-0	Fundamentals of Computer

Objective

- Identify the function of computer hardware components.
- Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.
- Identify how to maintain computer equipment and solve common problems relating to computer hardware.
- Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded
- Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

- Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.
- Understand the difference between an operating system and an application program, and what each is used for in a computer.
- Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Course Outline

Module- I

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer. Types of Input output devices. Processor and memory: The Central Processing Unit (CPU), main memory. Storage Devices.

Module- II

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge. Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs. Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

Module- III

Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external). Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid). Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

DC-12 - CUTM1725- Blood Banking

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Blood Banking	CUTM1725	Theory+ Project	3-0-1	Fundamental Science

Objective

- Understanding blood bank method, demonstrate knowledge of testing
- Knowledge of Anticoagulant used in blood bank
- Get knowledge about blood regulation policy
- Understanding solid organ transplantation and it's policy
- Basic of transfusion reaction

- Investigation related to blood bank

Course Outcome

- Perform phlebotomy and related donor room activity in blood bank
- Manage the blood bank
- Identifies and communicate abnormal test report by alerting supervisory personal
- Organize blood donation blood bank
- Inventory and stock management in blood bank
- Perform and maintain record of QC procedure related reagents, kits and equipments.

Course Outline

Module-I (11 Hrs)

Basic principle in blood banking, Blood bank organisation, Planning and documentation, NACO Blood bank policy, National blood policy, Equipment used in blood bank. Anticoagulant use in blood bank, Selection of blood donor, Rhesus blood group system, Human blood group system

Practice: Documentation, ABO Grouping, RH Typing, Operation of equipment.

Module-II (14 Hrs)

Auto-mentation technique used in blood bank, Techniques used for the separation of blood constituent, CBC, Blood preservation, Special investigation for processing of blood under the guide lines of NACO, Routine investigation for processing of blood, Phlebotomy in blood bank, Quality control in blood bank

Practice: Phlebotomy in blood bank, Cross matching and compatibility test, Measurement of Blood Pressure, Arrangement of blood bank lab

Module-III (20 Hrs)

Blood transfusion alternative, Prevention of diseases transmitted through blood transfusion, Transfusion reaction investigation, Transfusion reaction, Precaution taken for infusion of blood components, Pre-transfusion testing, Transfusion in solid organ transplantation, Exchange blood transfusion, Pre-surgical

blood transfusion, Blood and blood components transfusion, Selection of blood components, Apheresis and Hemapheresis

Practice: Routine hematological test, HIV, VDRL, Hbs-Ag, Other STD Test.

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Modern Blood Banking and transfusion Practice by Denise M Harming
3. Standards of blood bank by NACO (<http://naco.gov.in/sites/default/files/Standards%20for%20Blood%20Banks%20and%20Blood%20Transfusion%20Services.pdf>)
4. Handbook of blood banking and transfusion medicine (<http://www.uomisan.edu.iq/library/admin/book/77040715888.pdf>)
5. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
6. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
7. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-13- CUTM1751- Medical Laboratory Management

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Laboratory Management	CUTM1751	Theory+ Project	3-0-2	Fundamental Science

Objective

- Explain and apply principle of effective test utilization
- Interpret, implement and complying law, regulation, accrediting standards and guidelines of Govt. and NG organizations.
- Design, implement and evaluate resources in lab
- Communicate effectively with laboratory personnel and health care professional.
- Explain and apply the major principle and tactics of laboratory administration.

Course Outcome

- Become professional competent in medical laboratory
- Exhibit a sense of commitment to the ethical and human aspect of patient care
- Recognize the role of clinical laboratory scientist in the assurance of quality health care
- Application of safety and governmental regulation and standards as applied to medical laboratory practice.

Course Outline

Module-I (16 Hrs)

Ethics of pathological clinics, Code of conduct for medical laboratory personal, Safety measure in the laboratory, Organization of Pathology laboratory under board of quality control, Clinical laboratory science, Functional components of the clinical laboratory, A Standardized clinical laboratory set up, Various types of laboratories, PPE in labs, Important instruction to minimize infection in laboratory workers

Practice: PPE Practice, Lab Setup, Sample collection and preservation.

Module-2 (16 Hrs)

Release of laboratory reports, Clinical alerts , Reporting results: Basic format of pathology reports, Transportation and preservation of lab sample, Patient management for clinical sample collection, National and international agency for clinical laboratory accreditation, Good laboratory practice, Medical legal problems, Laboratory regulation, Factors affecting productivity of laboratory, Responsibility of lab worker

Practice: Report writing, Lab record management

Module-3 (14 Hrs)

Quality management system, NABL Policy, Clinical establishment act policy, Annual maintenance contract for laboratory, General safety precautions in case of STD and drug resistant tuberculosis, Procurement and supply management, Different types of laboratory record management, Laboratory information management system (LIMS), Profit and loss analysis, WHO Policy for medical lab

Practice: Management information system, Procurement management, Profit and loss analysis

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-14 - CUTM1753- Introduction to Quality and Patient Safety

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Introduction to Quality and Patient Safety	CUTM1753	Theory+ Project	3-0-2	Fundamental Science

Objective

- Knowing patient safety
- Report Distribution system
- Laboratory infection control Policy
- Bio-Medical waste management
- Understanding Patient rights
- ISO Policy for medical laboratory

Course Outcome

- Know about rights and duties of patient
- Know about right and duties of lab technician
- Understand various policy to manage lab
- Understand infection control procedure

Course Outline

Module-I (11 Hrs)

Human factor Engineering, Patient safety, Health literacy, Report distribution system,

Error in reporting system, responding to adverse events, Investigation of error/ Root cause analysis, Medical Error, The science of safety

Practice: Safety precaution in laboratory, Report distribution, Prescription reading

Module-II (11 Hrs)

Team work and communication, Leadership, Quality control policy, Major development and evaluation in diagnostic division, Clinical establishment act policy, National accreditation board of laboratory, ISO Policy for medical laboratory, Fire and safety policy for medical laboratory

Practice: Fire Safety in lab, Documentation for Lab establishment

Module-III (13 Hrs)

Personal protective equipment in the laboratory, AIDS and laboratory safety, Safety protection in lab in STD and other infectious disease., Biomedical waste management, Patient care in medical laboratory, Patient rights., Counselling of patient during phlebotomy, First aid in medical laboratory service.

Practice: PPE, Bio-Medical waste management, First-Aid, Patient Counseling

Suggested Readings:

1. Understanding the patient safety (LANGE clinical medicine)
2. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
3. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
4. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
5. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-15 - CUTM1752- Mycology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mycology and virology	CUTM1752	Theory+ Practice	3-2-0	General biology

Objective

- To describe the characteristics and diseases caused by pathogenic viruses and fungi.
- To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.
- Understanding different methods of virus cultivation.
- Understanding collection, transportation and preservation methods of clinical specimen.

Course Outcome

- Broad idea about structure and basic characteristics of virus and fungus.
- Plan, write and implement research projects in virology and mycology analyze their results and publish these in peer-reviewed journals.
- Coordinate with concerned agencies regarding viral and fungal diseases and their outbreaks.
- Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Course outline

Module I

Introduction to medical mycology, Basic concepts about superficial and deep Mycoses. Taxonomy and classification and general characteristics of various medically important fungi. Normal fungal flora. Morphological, cultural characteristics of common fungal laboratory contaminants, Culture media used in mycology and staining process.

Practice-: To prepare culture media used routinely in mycology. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.

Module II

Direct microscopy in Medical mycology laboratory. Processing of clinical samples for diagnosis of fungal infections i.e. Skin, nail, hair, pus, sputum, CSF and other body fluids. Techniques used for isolation and identification of medical important fungi Methods for identification of yeasts and moulds.

Practice-: To identify given yeast culture (By performing various identification techniques studied in theory). To identify given mould culture (By performing various identification techniques studied in theory). To demonstrate dimorphism in fungi. To process clinical samples for laboratory diagnosis of fungal infection that is from skin, hair and nail etc.

Module III

Introduction to medical virology, Classification of viruses. Introduction to medically important viruses (Both DNA and RNA). Collection, transportation and storage of sample for viral diagnosis .Staining techniques used in Virology. Processing of samples for viral diagnosis (Egg inoculation and tissue culture). Antiviral drugs.

Practice: Demonstration of fertilized hen egg. Demonstration of various inoculation routes in fertilized hen egg.

Suggested Readings:

1. Bailey & Scott's Diagnostic Microbiology (**e-book-<https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>**)
2. Basic virology by Edward K. Wagner. (*e-book -<https://www.pdfdrive.com/basic-virology-e18900518.html>*)
3. Essential in clinical microbiology by C A Kauffman and J D Sobel, 2nd Ed. (*Ebook-link-<https://www.pdfdrive.com/essentials-of-clinical-mycology-second-edition-e39564930.html>*)

DC-8- CUTM1754- Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mini Project	CUTM1754	Project	0-0-2	Basic Medical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

DC-18- CUTM1756 - Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	Basic Medical science

Project work:

Suggested Project title

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherchia coli isolated from wound infected.
2. The incidence of Salmonella and Escherchia coli in livestock (Poultry) feeds
3. Microbial evaluation of milk from a dairy farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

DC-17- CUTM1755 - Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Internship

4. Case record
5. Lab management and ethics
6. Evaluation -Guide(internal)
 - Industries guide(external)
 - University-project report/ Viva

MASTEROFSCIENCEINAPPLIED&CLINICALMICROBIOLOGY

2020

SYLLABUS

M.Sc.inAppliedandClinicalMicrobiology

Preface: Medical microbiology is the branch of medical science concerned with the prevention, diagnosis and treatment of infectious diseases. In addition, this field of science studies various clinical applications of microbes for the improvement of health. There are four kinds of microorganisms that cause infectious disease: bacteria, fungi, parasites and viruses and one type of infectious protein called Prion.

A medical microbiologist studies the characteristics of pathogens, their modes of transmission, mechanism of infection and growth. Using this information, a treatment can be revised.

Medical microbiologist often serves as a consultant to a physician, providing identification of a pathogen and suggesting treatment options.

Scope: M. Sc in Applied and Clinical Microbiology gives opportunity for specialized study in the field of medical & clinical microbiology. Candidates who successfully complete M. Sc in Applied and Clinical Microbiology course may obtain jobs as

- Specialized technologist in Microbiology or supervisor of clinical laboratories in hospitals.
- Laboratory scientist in Biomedical and research institutes.
- Teachers in training institutes of Medical Laboratory Technology/graduate & postgraduate programme of microbiology & related areas.
- Utilize or apply the concepts, theories and principles of laboratory science.
- Demonstrate the ability to plan and effect the change in laboratory practice and health care delivery system.
- Establish collaborative relationship with members of other disciplines.
- Demonstrate interest in continued learning and research for personal and professional advancement.
- Be able to interpret or guide the development of medical diagnostics in need locally and cheaply
- Be able to manage and guide appropriately equipped and staffed clinical microbiology laboratories
- Be a highly skilled human resource for the emerging pharmaceutical/medical industry
- Be able to participate in supervised or team-research in universities, industry or government
- Demonstrate advanced knowledge in the fields of Clinical Microbiology and Immunology, with excellent skills to teach and communicate this knowledge
- Demonstrate independent critical and analytical thinking, both within their field of study, and beyond, for the use of their knowledge for service to others.
- Be able to guide patient care and the public on the pathology, pathogenesis and clinical manifestation, mode of transmission, prevention and current control methods for infections of public health importance
- Be a highly skilled human resource in the management of an increasing number of patients with tissue/Organ transplants, Cancers and immunodeficiencies

- Be able to critique and evaluate the impact of the existing national disease control programs on the epidemiology of infectious diseases and advise on improving them
- Have acquired critical and analytical skills required for further studies in specialized areas of microbiology or related studies
- Identify and suggest possible solutions to ethical dilemmas that occur in their work and field of study, and understand the importance of professional ethics in all aspects of scientific communication and laboratory work
- Demonstrate competence in the laboratory, including application of the scientific method and appropriate use of basic and state-of-the-art laboratory tools and techniques
- Demonstrate written and oral skills necessary for communication of research, knowledge, and ideas to scientists and non-scientists alike

Programme: M.Sc. in Applied and Clinical Microbiology

Duration: Two years (Four semesters) full-time programme with 6 months internship in the last semester.

Eligibility: Bachelor's degree in any branch of Life Science / Agriculture / Pharmacy / Veterinary / Medicine (MBBS/BDS).

Examination: Examination rules will be as per guideline of CUTME Examination handbook.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital / Diagnostics Centre / Research Institution equipped with modern laboratory facility, which fulfills the norms decided by the University. Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation / Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typed written and bound form.

Degree: The degree of M. Sc. in Applied and Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than two academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of two years programme, with a minimum course credit of **96 credits**, the candidate will be awarded with “**Master of Science in Applied and clinical microbiology (M.Sc.CMB)**” from Centurion University.

**Master of Science in Applied and Clinical Microbiology

NOTE: Along with the School core and Discipline core subjects, the students need to opt for AECC Courses, Skill/ Domain/ Elective courses and value-added courses from the University Basket, as per the requirement by the University.

BASKETI
School Core Courses
SC1-CUTM1708-Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+Practice	2-1-0	Fundamental Science

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions.
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-I (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-II(13Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. Lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration of the morphology of different blood cells

Measurement of Blood pressure, impulses, Heartbeats, respiration rate etc.

Module-III(15Hours)

Urinary System: Various parts of urinary system and their functions, structure and function of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and function of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of

digestive system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Textbook Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber & Faber.
2. Textbook Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
3. Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
4. Anatomy & Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb & Hoehn.
6. Anatomy and Physiology by N Murgesh, Publisher Satya

SC2-CUTM1709- Analytical Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Techniques	CUTM1709	Theory+Practice	3-1-0	Fundamental Science

Objective

To learn the principle, instrumentation & application of Microscopy
Principle, instrumentation & application of Centrifugation
Chromatographic techniques
Electrophoretic techniques
Principle of Spectroscopy

Course Outcome

After completion of the course the student will be efficient in handling the microscopy equipment's.

They will also be able to have an idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi-automated Biochemistry analyzer.

They will gain knowledge on the principle behind and the application of NMR, X-ray diffraction, ESR.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module-I

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase-contrast microscopy, fluorescence microscopy, polarization microscopy, electron microscopy (Scanning and Transmission);

Bacterial Colony Counter (Principle and working).

Microtomy: Sectioning, Staining. Application.

Cytometry: Types, Flow cytometry and its applications.

Practice: Demonstration of different Microscopes with their operation.
Preparation of specimens for observing under microscopes.
Demonstration of Microtome.

Module-II

Centrifugation: Principle, Preparative, Analytical, Density gradient centrifugation.

Chromatography: Principles and Applications: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC.

Electrophoresis: Immunoelectrophoresis, Isoelectric focusing, 2-D gel electrophoresis.

Practice: Demonstration of Centrifuge

Demonstration of Chromatography techniques
Demonstration of Electrophoresis

Module-III

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry;

Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, EPR. Principle and Application of: Fully Automated Biochemistry Analyser, Semi-automated Biochemistry Analyser, Coagulometer.

Practice: Demonstration of Semi automated Analyzer
Demonstration of Fully automated Analyzer

Suggested Readings:

1. Wilson K and Walker J. (2010). Principles and Techniques of Biochemistry and Molecular Biology. 7th Ed., Cambridge University Press.
(e-Book link: <https://www.pdfdrive.com/principles-and-techniques-of-biochemistry-and-molecular-biology-e174866056.html>)
2. Nelson D L and Cox M M. (2008). Lehninger Principles of Biochemistry, 5th Ed., W. H. Freeman and Company.
(e-Book link: <https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-d164892141.html>)

3. WilleyMJ, SherwoodLM&WoolvertonCJ.(2013).Prescott,HarleyandKlein's

Microbiology. 7th Ed., McGraw Hill.

(e-Book link: <https://www.pdfdrive.com/prescott-harley-and-kleins-microbiology-7th-ed-e188166539.html>)

4. LabsforLife (e-sourcelink: <http://labsforlife.in/InstructionalVideo.aspx>)

SC3- CUTM1710-Biological Chemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biological Chemistry	CUTM1710	Theory+Practice+ Project	2-1-0	General chemistry & Biology

Objective

Work to promote good health by teaching the public and other health professionals about diet and nutrition.

To demonstrate clinical disorders, the biochemical consequences of particular disease processes and the response to therapy.

To describe the various intracellular controls that govern the rate at which the metabolic pathway functions.

To explain the ways in which hormones work in human body and alter cellular activity by binding to intracellular receptors.

Course Outcome

Students will be able to demonstrate an understanding of fundamental biochemical principles, such as the structure/function of metabolic pathways, and the regulation of biological/biochemical processes.

Able to apply and effectively communicate scientific reasoning and data analysis in both written and oral forums.

Demonstrate a thorough knowledge of the intersection between the disciplines of Biology and Chemistry.

Appreciate the way in which practitioners in the disciplines of Biology and Chemistry intersect and bring their expertise to bear in solving complex problems involving living systems.

Course Outline

Module I

Chemical aspects of Food, Nutrition and Vitamins: Energy yielding nutrients and Calorific value of carbohydrates, fats and proteins. Basal metabolic rate (BMR) and Body Mass Index (BMI). The Food Pyramid. History, Chemistry, Absorption, transport, and storage of Vitamins, Metabolic functions and Biochemical manifestations of Water soluble Vitamins-B-Complex Vitamins : Vitamin –B1, Vitamin –B2, Vitamin-B3, Vitamin –B6, Biotin, Panthothenic acid, Folic acid, Vitamin-B12. Coenzymes of B-Complex Vitamins. Fat soluble Vitamins: Vitamin-A, Vitamin-D, Vitamin-E, Vitamin-K.

Practice: Calculation of BMR and BMI.

Module II

Cellular Respiration: Aerobic and anaerobic respiration; Energy yield and regulation. Oxidation of fatty acid, Transamination and Deamination reaction, Urea formation and transport, Ketogenesis.

Practice: Solutions: Definition, use, classification, preparation and storage. Stock and working solutions. Molar and Normal solutions of compounds and acids. (NaCl, NaOH, HCl, H₂SO₄)

Module III

Biochemical aspect of Hormone: Hormone receptors and intracellular messengers, Adenylate cyclase, protein kinase and phosphodiesterase. Role of Insulin, glucagon's, epinephrine and their mechanism of action.

Practice: Diabetes and other disorder identification.

Suggested Readings:

1. Lehninger Principles of Biochemistry (<https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-e164892141.html>)
2. Fundamentals of Biochemistry: Life at the Molecular Level (<https://www.pdfdrive.com/fundamentals-of-biochemistry-life-at-the-molecular-level-e186753533.html>)

SC4-CUTM1712-ClinicalHematology

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
ClinicalHematology	CUTM1712	Theory+Practice	3-1-0	BasicMedicalscience

Objective

The Clinical Hematology course will cover the diagnosis and management of blood cell disorders, anatomy and physiology of hematopoiesis, routine specialized hematology tests, analysis, classification, and monitoring of blood cell abnormalities.

Clinically relevant hematological analysis for deeper understanding evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Be able to handle an investigation of hematological disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.

Course Outcome

- Differentiate various hematological procedures and the use of basic equipment essential to working in a Hematology Laboratory.
- Discuss differences between Quality control, Quality Assurance, and Continuing Quality Improvement principles as used in the Hematology Laboratory.
- Categorize various hematology analyses, operational principles of various hematology instruments, and troubleshooting of various instruments.
- Explain the principles and theories utilized in a variety of problem-solving situations.
- Define testing suitability standards for Hematology specimens.
- To be able to carry out blood sampling & Evaluate specimen acceptability.

Course Outline

Module-I(16Hrs)

Scope & importance of Haematology, important equipment and chemicals, various test performed in Haematology laboratory. Identify and/or confirm the composition of various red blood cell inclusions. Function of normal cellular components, Formation of blood, Erythropoiesis, thrombopoiesis. Anti coagulants, definition, Uses, Different types, mode of action, their merits and demerits. Morphology of normal blood cells, abnormal morphology & diseases, Hematological Disorder

Practice: Demonstration of instruments used in hematology -

Microscope, Blood Cell counter. Demonstration of different blood cell, their synthesis from slide presentation or chart. Demonstration the normal and abnormal morphology of different blood cells.

Module-II(18Hrs)

Collection and preservation of blood: different methods of collection (venous and capillary blood), preservation, changes in stored blood normal and absolute values in hematology, Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman stain, Malaria thick smear preparation, Different types of stains, Romanowsky stains: principle of staining, Hemoglobin estimation (oxy Hb and cyanmethaemoglobin method), Complete Blood Cell Count: Total RBC count, Total WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, Determination of ESR by wintrobe's, Determination of ESR by Westergren's method, Determination of PCV by Wintrobe's, Reticulocyte Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.

Practice: Different methods of collection (venous and capillary blood), Preparation of DLC, TLC, TRBC etc. Estimation of ESR, Complete blood cell count, Blood grouping, Hb and values of MCH, MCV, MCHC, PCV, Staining & Smear preparation.

Module-III(14Hrs)

Hematological Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings. Megaloblastic Anemia: Causes, Lab findings.
3. Hemolytic Anemia: Definition, causes, classification & lab findings.

4. Laboratory diagnosis of Hemophilia and von-willbrand disease.
5. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP),
6. Platelet function tests and their interpretation.

Practice: Observation about different normal and abnormal morphology of RBCs, WBCs, Platelet, Bleeding Time & Clotting Time, PT & APTT.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Godkar Mumbai, Bhalani Publishing House
2. Textbook of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Textbook of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill Education Pvt Limited
6. Textbook of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link - <https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link - <https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>
9. Ebook link - <https://books.google.co.in/books?id=6sfacydDNsUC&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAHoECAQQAQ#v=onepage&q=hematology&f=false>
10. Ebook link - <https://books.google.co.in/books?id=QQcYAAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAhoECAIQQAQ#v=onepage&q=hematology&f=false>

SC5-CUTM1715-Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+Practice	3-1-0	Fundamental Science

Objective

Analyze body fluid for diagnosis of disease

Analyze waste product for diagnosis of disease

Understanding DOT Policy

Understand Physiological disorder and infectious disease

Analysis of pregnancy

Course Outcome

Able to collect pathological specimen
Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorders
Able to detect infectious disease (UTI, Hematuria, Filariasis, Dysentery, Ulcer, TB, etc)
Preservation and processing of pathological sample.
Identification of Parasites
Analysis of Infertility disorder

Course Outline

Module-I (16 Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, Bile, Bile Salt and Bile pigment, Chemical Examination of Urine -

Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-

Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and Bile Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: Microscopic finding of stool, Morphology of stool parasite

Lab:-

Stool Analysis: Collection and physical examination,

Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain),

Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:-

Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine

Examination Synovial Fluid: Collection and Routine

examination Pleural Fluid: Collection and routine

examination Pericardial Fluid: Collection and routine

examination Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohl's, Publisher Mosby
2. Medical laboratory technology Vol. 1 by K. L. Mukherjee, 2007, Publisher Tata McGraw Hill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J. Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC6-CUTM1714-Cell and Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell and Molecular Biology	CUTM1714	Theory+Project	2-0-1	Fundamental Science

Objective

Understanding the central dogma of life
To understand the concept of gene regulation and its impact
The use of several molecular diagnostic techniques for disease interpretation

Course Outcome

After completion of the course the student will be gain knowledge of the significance of genes and proteins.
They will understand the mechanism of gene expression and protein synthesis,
The significance of gene expression regulation will become clear.
The students will understand the use of several molecular techniques in disease diagnosis.

Course Outline

Module-I

DNA structure. Salient features of double helix, Types of DNA. DNA topology - linking number, topoisomerases. Bidirectional and unidirectional replication, semi-conservative, semi-discontinuous replication.

Mechanism of DNA replication. Enzymes and proteins involved in DNA replication.

Module-II

RNA Structure. Transcription: Promoter, Polymerase and the transcription unit. **Transcription in Eukaryotes:** RNA polymerases, general Transcription factors. Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: siRNA, miRNA and its significance.

Translational machinery: Charging of tRNA, aminoacyl tRNA synthetases. Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes.

Malignant transformation of cells and role of oncogenes, Tumor virus, Proto- oncogenes, Tumorsuppressorgenes;Apoptosis,cellregeneration.

Module-III

Moleculardiagnosics: RecombinantDNA Technologyandits applications, Polymerasechainreaction andits application in diagnosis of pathogens, Site directed mutagenesis, DNA finger printing, DNaseFootPrinting, antisenseRNA technology, inheritedgeneticdisordersinmanandgenetherapy.

SC7-CUTM1718–ClinicalBiochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Biochemistry	CUTM1718	Theory+Practice	2-1-0	Basic Medical science

Objective

Understanding the concept of Biochemical analyzing instruments, chemicals and normal ranges of biochemical components in our body.

Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc

Course Outcome

To learn about tests carried out for biochemical investigations.

Understanding of principle of biochemical Clinical biochemistry tests.

To learn normal ranges and abnormal ranges of biochemical components and hormones.

To study about diseases related to biochemical and hormone imbalance in human body.

Course

Outline Module-

I(10Hrs)

LFT, KFT, Lipid profile, Estimation of Glucose, Hormone test: T3, T4, TSH, Prolactin, 17 Kitosteroids

Practice: Demonstration the centrifuge machine, Demonstration of Colorimeter, Method of estimation and assessment for: a. Glucose tolerance test, Detection of sugar in Urine, Estimation of Protein in urine, Estimation of Liver function test, Kidney function test, Lipid profile, Thyroid

Module-II(10Hrs)

Metabolic disorders and Diagnostic enzymology: Disorders of metabolism: carbohydrate, Lipids, Amino acids and Nucleic acids. Diagnostic enzymes: Role of Enzymes in Clinical Practice: Marker enzymes in myocardium, liver and pancreas. Tumor markers, Radioisotope techniques

Module-III(14Hrs)

Organ function tests: Liver function tests, Bile pigment metabolism, tests for liver function. Jaundice and its type, Functions of Kidney, Urine formation and renal function tests disease of kidney, Renal Calculi: Theory of formation and analysis, Gastric Analysis, Composition of gastric juice, concepts of free and bound acid, Fractional Test Meal

Practice: Operation procedure of Centrifuge machine, colorimeter etc. Estimation of Liver function test, Kidney function test, Estimation of bile pigment, bile salt, bilirubin etc.

Suggested Readings

1. Textbook of Medical Laboratory Technology by P.B. Godker, Publisher Bhalani.
2. Textbook of Medical Biochemistry by Chatterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee
4. Principles of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.

SC-8- CUTM1720-Histology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histology	CUTM1720	Theory+Practice	3-1-0	Basic Medical Science

Objective

Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.

perform routine laboratory procedures encompassing all major areas of the histology laboratory.

accurately and proficiently embed tissue and understand the principles of microtomy.

Clinically relevant onchological analysis for deeper understanding of abnormal cell growth that anywhere in human body.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outcome

In this section students will be made aware of terminology used in histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.

Reception and labeling of histological specimens.

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.

The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.

The students will learn about special staining procedures & handling & testing of various cytological specimens.

Module-I(8Hrs)

Histotechnology, Care & Maintenance of histotechnology equipments and their parts and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues, Collection and transportation of specimens for histological examination, fixation: Process, Various types of fixatives used in a routine histopathology laboratory -

Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Care & maintenance of Histology equipments, Collection & transportation of specimens, Fixation

Module- II(8Hrs)

Decalcification Criteria of a good decalcification agent, Technique of decalcification Followed with selection of tissue fixation, decalcification neutralization of acid and thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination, Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors.

Practice: Method of Decalcification, Embedding, manual or automatic tissue processing schedule.

Module- III(10Hrs)

Periodic Acid Schiff Staining, Impregnation and Mounting, Commonly used mounting in histotechnology lab. General Staining Procedures (routine H&E stain, PAP stain and other special stain) for Paraffin Infiltrated and Embedded tissue, To perform & practice the manual & automated Haematoxylin and Eosin staining technique, To perform & practice the Mallory's Phosphotungstic Acid Haematoxylin (PTAH). Introduction of FNAC and its staining tech, museum technique, postmortem technique.

Practice: Procedure for manual Staining and Automatic Staining Technique, FNAC technique, Museum technique (Hospital Visit), Postmortem technique (Hospital Visit).

Module- IV(8Hrs)

Demonstration of instruments used for dissection Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory Reception and labeling of histological specimens Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid, Corney's fluid, 10% Neutral formalin, Formal saline, Formal acetic acid, Pereyn's fluid, prepare 70% alcohol from absolute alcohol. To perform embedding and casting of block.

Practice: Use of antiseptics, disinfectants and insecticides in tissue processing laboratory, Preparation of various Fixatives, Labeling of Histological specimens, Embedding and Casting of block

Module- V(8Hrs)

Tissue Processor, Microtomy, Honing and Stropping technique, Use of tissue floating bath, Use of incubator

Practice: Processing of tissue by manual and automated processor method. To demonstrate various part and types of microtome. To learn sharpening of microtome knife (Honing and stropping

technique) To perform section cutting, learn mounting of stained smears. To practice attachment of tissue sections to glass slides To learn using tissue floatation bath drying of sections in incubator (37⁰ C)

Suggested Readings:

1. Color textbook of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini Kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by J P Gunasegaran, Publisher Elsevier
6. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalami
7. Ebook link-
https://books.google.co.in/books?id=qWSAQAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
8. Ebook link-
https://books.google.co.in/books?id=MrpEDwAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false

https://books.google.co.in/books?id=CERPDwAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false

BASKET II

Discipline Core Courses

DC-1-CUTM1711- General Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
General Microbiology	CUTM1711	Theory+Practice	3-1-0	Fundamental Science

Objective

<p>To know various culture media and their applications and also understand various physical and chemical means of sterilization</p> <p>To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus</p> <p>To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively</p>
--

Course Outcome

This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.

Understanding the details of microbial cell organelles.

Provides knowledge on growth of microorganism.

Provides knowledge culturing microorganism.

Course

Outline Module-

I(12Hours)

History and scope of Microbiology, Recent trends and developments in modern microbiology. Identification, characterization and classification of microorganisms. Distinguishing characteristics between prokaryotic and eukaryotic cells. Structure and function of Cell wall of bacteria, cell membranes, flagella, pili, capsule, gas vesicles, carboxysomes, magnetosomes and phycobolosomes.

Practice:

1. Preparation of bacterial smear and staining – Gram's, Acid-fast, Staining of bacterial spores, flagella, capsule, spirochaetes
2. Demonstration of various parts of microscope and its functioning and care.

Module-II(12Hours)

Methods of sterilization: Physical methods – Dry heat, moist heat, radiation methods, filtration methods, chemical methods and their application. Concept of containment facility, sterilization at industrial level. Different staining techniques used in bacteriology.

Practice:

3. Demonstration of the different types of sterilization technique and operation of the instruments used in microbiological lab.
4. Preparation of media, cultivation of bacteria

Module-III(16Hours)

Bacterial nutrition – Nutritional requirement of bacteria. Cultivation of aerobes and anaerobes, Reproduction in bacteria and spore formation. Bacterial growth curve and bacterial nutrition Media. Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media).

Practice:

5. Biochemical tests for identification of bacteria
6. Preservation of stock cultures of bacteria

Suggested Readings:

1. Textbook of Microbiology - Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology - by Fritz H. Kayser et al
3. Medical Laboratory Technology by Kanai Lal Mukherjee, Publisher Tata McGraw Hill
4. Microbiology (7th Ed) - by Prescott
5. Practical Book of Medical Microbiology by Satish Gupta, Publisher Jaypee Brothers
6. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough
7. Essential Medical Microbiology - by Rajesh Bhatia (4th Ed)
8. Clinical Laboratory Methods and Diagnosis by Gradwohl, 2000, Publisher Mosby
9. Medical Laboratory Science Theory and Practice, Jochei and Kolhatkar, 2002, Publisher TBS

DC-2- CUTM1713-Systematic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	CUTM1713	Theory+Practice	3-1-0	Fundamental Science

Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Solve problems in the context of this understanding.

Course

Outline Module-

I(9Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Cocci (Gram Positive): Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp. Anaerobic: Peptococcus spp., Peptostreptococcus spp., *Vibrio* spp., Acidaminococcus spp, and others. Cocci (Gram Negative): Aerobic: *Neisseria* spp., Anaerobic Gram-negative bacteria.

Practice: Culture techniques
Culture media
Identification of *Staphylococcus* sp.

Module-II(12Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Aerobic non-spore forming gram positive bacilli: *Bacillus* spp., *Corynebacterium* spp., *Actinomyces*, *Nocardia* spp., *Mycobacterium* spp.- pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and Hansen's bacilli and others. Anaerobic: *Bifidobacterium* spp., *Eubacterium* spp., *Actinomyces* spp., *Propionibacterium*, *Clostridium* spp., and others.

Practice: Preparation of media
Media used
for biochemical identification & their uses
Identification of *Mycobacterium* sp.

Module-III(18Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of Gram- Negative Bacilli Aerobic: Enterobacteriaceae, *Citrobacter* spp., *Edwardsiella* spp, *Enterobacter* spp., *Escherichia coli*, *Ewingella*, *Hafnia* spp., *Klebsiella* spp., *Morganella* spp., *Proteus* spp., *Providencia* spp., *Salmonella* spp., *Serratia* spp., *Shigella* spp., *Yersinia* spp., *Vibrio* spp., *Pseudomonas* spp., *Chlamydia* and *Chlamydia*, *Brucella* spp., *Bordetella* spp., *Haemophilus* spp., *Mycoplasma* spp.

Practice: Culture methods & identification of common bacteria on media.

Antibiotic sensitivity testing.

Identification of *Escherichia*, *Klebsiella*, *Proteus* sp.

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Microbiology (7th Ed)- by Prescott
3. Medical Microbiology- by David Greenwood et al (Elsevier)
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Medical Microbiology- by Kayser et al
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-3- CUTM1717- Applied microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Microbiology	CUTM1717	Theory+Practice	2-1-0	Fundamental Science

Objective

To impart knowledge of the basic principles of bacteriology, virology, including the nature of pathogenic microorganisms, pathogenesis, laboratory diagnosis, transmission, prevention and control of diseases common in the country

Course Outcome

To know the applications of microbiology in diagnostics, hospitals and community

Course

Outline Module-

I (6 Hours)

The normal flora, collection and transport of clinical specimens, Collection and preliminary processing of specimens.

Practice:

Isolation of *Streptococcus mutans* from oral cavity
Procedure for sample collection from skin, ear.

Module-II (9 Hours)

Diagnostic microbiology- an approach to laboratory diagnosis, Rapid and automation methods in diagnostic microbiology, Molecular techniques in microbiology, Serological and skin tests

Practice: Demonstration of antigen-antibody reaction
Pus culture and sensitivity

Module-III(8Hours)

Microbiology in the service of human being, Community microbiology, Emerging and re-emerging Microbial disease, Nosocomial infections

Practice: Urine culture and sensitivity
Isolation of microorganism from spoiled fruit juice

Module-IV(6Hours)

Hospital and laboratory waste, Diagnostic virology, Emergency microbiology Bacteriology of Milk, Air and Water

Practice: Isolation of microorganism from curd Isolation of microorganism from Air

Suggested Readings:

1. Medical Parasitology by R. L. Chhpujani and Rajesh Bhatia, Jaypee publisher
2. Short textbook of medical microbiology by Satishgupt, Publisher Jaypee

DC-4-CUTM1716-Medical Parasitology and Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Parasitology and Mycology	CUTM1716	Theory+Practice	3-2-0	Fundamental Science

Objective

Describe basic morphology, lifecycle, pathogenesis, lab diagnosis and treatment of parasites and fungi.

Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.

Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Course Outcome

Identification of pathogenic parasite and fungus in disease diagnosis and treatment.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

To serve as a resource for the clinical laboratories professionals in the different region.

Module I

General Parasitology- Classification of medically important parasites, epidemiology of parasitic infections, immunology of human parasitic infections. Diagnostic parasitology- Systematic study of following parasites (Geographical distribution, habitat, morphology

and lifecycle, risk of infection, pathogenesis, laboratory diagnosis prophylaxis and serological diagnosis)

Practice: Collection & transport of specimens for examination of stool for parasites identification. Examination of other body fluids for parasites identification. Concentration techniques for demonstration of Ova (Principles and applications). Routine Stool examination for detection of intestinal parasites.

Module-II

Protozoa– Intestinal amoeba, free living pathogenic amoeba, giardia, trichomonas, balantidium, isospora, cryptosporidium, microspora, cyclospora Plasmodia, leishmania, trypanosoma, toxoplasma, babesia.

Helminthes– Cestodes–

Taenia, Echinococcus, Diphylobothrium, Hymenolepis, Multiceps, Trematodes–

Schistosoma, Fasciola, Fasciolepis, Paragonimus, Clonorchis, Opisthorchis. Nematodes–

Ascaris, Hookworm (Ancylostoma), Trichuris, Enterobius, Strongyloides, Filaria, Trichinella, Toxocara, Dracunculus Biological vectors.

Practice: Identification of adult worms from model's or slide's. Identification of different parasites their morphology from slide's. Culture techniques for parasites. Serological diagnostic methods.

Module-III

General Mycology – Fungus – Classification Fungal Structure & Morphology, Reproduction of fungi, Immunity to Fungal Infections. Culture Media in Mycology, Stains in Mycology. Normal fungal flora of human beings. Diagnostic Mycology - Epidemiology, Pathogenesis, Laboratory Diagnosis of Fungal Infections. Specimen collection, preservation, Transportation & Identification of Mycological Agent. Biochemical tests for fungal identification, Anti-fungal agents, invitro tests. Serological tests for mycotic infections. Use of laboratory animals in Mycology. Typing of fungi Preparation of fungal antigens & their standardization.

Practice: To prepare culture media used routinely in mycology. Diagnostic Methods in Mycotic Infections. Isolation and identification of fungus from clinical specimen. To perform all the stain in g techniques for identification of fungi.

Practice: Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Culture techniques for parasites. Serological diagnostic methods, skin tests.

Suggested Readings:

1. Parasitology book by K.D. Chatterjee.(e-book link- <https://sites.google.com/site/bkthtrtpazg/atahrgiwu>, <https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>
2. Textbook of medical Parasitology.(e-book link- <https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>
3. Bailey & Scott's Diagnostic Microbiology (e-book- <https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>)

DC-5-CUTM1719-Immunology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology and Virology	CUTM1719	Theory+Practice	3-2-0	Fundamental Science

Objective

Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity. Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction. To understand the concept of cells of immune system and organs of immune

system.

To understand the properties of virus, diagnosis of important viruses and vaccination.

Course Outcome

The student will learn the application of Immunology in disease diagnosis.

Complement system followed by the body on encountering an Antigen.

Immune Response produced on encounter with foreign body.

The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and autoimmune disease.

They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Concept of Innate and Adaptive immunity.

Immune Cells and Organs: Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT

Antigens: Characteristics, Hapten, Epitopes, Adjuvants;

Antibody: Structure & its classes.

Antigen-Antibody interaction, avidity & affinity.

Serological Reactions: Principles of Precipitation, Agglutination, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluorescence, Immunoelectron microscopy.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test, Rheumatoid factor (RF) test

Precipitation in agarose gel

Performing Ouchterlony Double diffusion test

Demonstration of SDS-

PAGE Demonstration of

ELISA Demonstration of Western blotting

ting

Module-II

Complement System: Role of complement system in immune response, Complement components and Activation pathways.

Immune Response: Cell mediated and humoral Immunity.

Monoclonal antibodies: Production, characterization and applications.

Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies, SCID, DiGeorge syndrome, Chediak-Higashi syndrome, Leukocyte adhesion deficiency, CGD.

Module-III

Virus: General properties, concept of viroids, virusoids, satellite viruses and Prions.

Structure of Viruses: Capsid symmetry, enveloped and non-enveloped

viruses. Isolation, purification and cultivation of viruses.

Serological diagnosis of virus infections.

Arthropod borne and rodent borne virus diseases, Picorna viruses and diseases, Hepatitis viruses, Rabies and other neuro viruses, Orthomyxo and paramyxo viruses, Coronaviridae, Pox, Adeno, Herpes, Reo, Rotavirus, HIV Viruses, Oncogenic viruses.

Vaccines: their Preparation and their immunization schedules.

Practice: Serological diagnosis of virus borne diseases: HBsAg, HIV

DC-6- CUTM1722- Clinical Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Bacteriology	CUTM1722	Theory+Practice	3-1-0	Fundamental Science

Objective

To confirm the suspicion of infectious bacterial disease.
To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

To learn the diagnosis of bacteria from infective regions of the body

Study of their sensitivity

Examination of bacteria from common samples.

Study of control measures for nosocomial infection.

Students can safeguard himself & society and can work in diagnostics and hospitals

Course

Outline **Module-**

I (12 Hours)

Laboratory strategy in the diagnosis of various Infective syndromes: Samples of choice, Collection, transportation and processing of samples for laboratory diagnosis of the following complications: a) Septicemia and bacteraemia b) Upper Respiratory tract infections, c) Lower Respiratory tract infections d) Wound, skin, and deep sepsis, e) Urinary tract infections, f) Genital Tract infections, g) Meningitis, h) Gastro intestinal infections, i) Enteric fever, j) Tuberculosis (Pulmonary and Extra-pulmonary), k) Pyrexia of unknown origin

Practice: Collection of nasal swab and its culture Isolation of microorganism from wound

Module-II (6 Hours)

Antibiotic susceptibility testing in bacteriology- a. Definition of antibiotics, b. Culture medium used for Antibiotic susceptibility testing, c. Preparation and standardization of inoculum, d. Control bacterial strains, e. Choice of antibiotics, f. MIC and MBC, g. Various methods of Antibiotic susceptibility testing with special reference to Stokes method and Kirby-Bauer method, h.

Tests for production of β -lactamase

Practice:

Preparation and use of different media in bacteriology laboratory Antibiotic susceptibility testing

Module-3 (10 Hours)

Bacteriological examination of water, milk, food and air-

a. Examination of water - Collection and transportation of water sample, Presumptive coliform count, Eijkman test, Introduction and importance of other bacteria considered as indicators of faecal contamination

b. Examination of Milk and milk products - Basic Concepts regarding gradation of milk,
Various tests for Bacteriological examination

c. Examination of food articles - Basic Concepts regarding classification of food like frozen food,

canned food, raw food, cooked food etc. Various tests for Bacteriological examination with special reference to food poisoning bacteria

d. Examination of Air-

Significance of air bacteriology in healthcare facilities, Collection, processing and reporting of an air sample

Practice: Isolation of microorganisms from frozen food
Isolation of microorganisms from water

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Textbook of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical Microbiology - by Fritz H. Kayser et al
5. Bailey and Scott's Diagnostic Microbiology (12th) Ed
6. Medical Laboratory Technology vol. I, II, III by Mukherjee
7. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough

DC-7-CUTM1721-Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	CUTM1721	Theory+Project	2-0-1	Fundamental Science

Objective

To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
Provide students with in-depth training on the conduct and

Course Outcome

Students can understand the ethical and philosophical issues associated with research in education

This study provides knowledge on various modes of presenting and disseminating research findings.

Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

Provide learning opportunities to critically evaluate research methodology and findings.

Enable students to be reflexive about their role and others' roles as researchers.

Course

Outline **Module-**

I(9Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research

Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search,

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Module- II(8Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III(14Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-

Square Test. Designing Questionnaire. Interviewing. Tabulation, Coding, Editing, Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections. Writi

ngareviewonVirusculture

Literature surveyonCovid-19

SuggestedReadings:

1. ResearchMethodologybyC.R.Kothari(3rdEd)
2. ResearchMethodologyIntheMedical&BiologicalSciencesbyPetterLaakeetal.
3. EssentialsofResearchDesignand MethodologybyGeoffreyMarczyketal.
4. WHO,HealthResearchMethodology:AguidefortraininginresearchMethods,2ndEdition,W HO-WIPRO
5. AStudent’sGuidetoMethodologybyCloughPandNutbrownC.SagePublication.

7. FieldTrialsofHealthInterventionsinDevelopingCountriesbySmithPG,Morrow.

DC-8-CUTM1754-MiniProject

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
MiniProject	CUTM1754	Project	0-0-2	BasicMedical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/survey.

DC-10-CUTM1756-Project

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	BasicMedical science

Projectwork:

SuggestedProjecttitle

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherichia coli isolated from wound infected.
2. The incidence of Salmonella and Escherichia coli in livestock (Poultry) feeds

3. Microbialevaluationofmilkfromadairyfarm.

4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

DC-9- CUTM1755–Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester). The Dissertations should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References

9. Appendix

Internship

1. Case record
2. Labmanagementandethics
3. Evaluation-Guide(internal)
 - a. -Industriesguide(external)
 - b. -University-projectreport/Viva

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function) ,10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Highjer Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd& 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: Johnwiley& Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

- 2) Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff & A.D. Snider Publisher: Pearson
- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs, both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II (3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III (3 Hours)

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV (3Hours)

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V (3 Hours)

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI (3 Hours)

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII (4 Hours)

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

<ul style="list-style-type: none"> • To translate real-world problems into probability models. • To motivate students in an intrinsic interest in statistical thinking. • To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering. • To apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.
--

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1.Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd. Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition
Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.
- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid**(2 Hrs.)**

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia**(3 Hrs. + 2 Hrs. practice)**

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion**(3 Hrs.)**

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion**(3 Hrs. + 4 Hrs. Practice)**

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Reference Books:

Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law, Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics

V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse

osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)
4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using pycnometer. (V. lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Calomel/Quinhydrone Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO_2 and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of

polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
- 2.Engineering Chemistry, by P. C Jain and M. Jain
- 3.Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3:Water resources and its conservation

Assignment-4:Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4:Environmental protection act, 1986

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply.

Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects.

Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management;Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 1) Project Management: A Managerial Process, Clifford F Gray & Eric W Larson, Tata McGrawHill [Text book]
- 2) A Guide to the Project Management Body of Knowledge, 6th Edition, PMI
- 3) Project Management- A system Approach to Planning, Scheduling and Controlling (Harold Kerzner). CBS Publishers and Distributors, New Delhi.
- 4) Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata Mc Graw Hill, New Delhi.
- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like India
- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,
- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - [Introduction to Gender](#)

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - [Gender issues in health](#)

PPT 3 - [Gender issues in education](#)

PPT 4 - [Gender issues in Governance](#)

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - [WID WAD GAD](#)

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - Gender and Organisations

PPT 7 - Gender Equality in Organisations

PPT 8 - Gender Mainstreaming and Attitude in Workplace

PPT 9 - Gender Sensitisation

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

<https://www.youtube.com/watch?v=p6w-d1mmjFU>

Free Readings

Gender and Development - Concepts and Definitions

Gender and Organisational Change Training

Project

-Gender Responsive Governance in times of COVID 19

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)
4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations

LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)

LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain

LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)

2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGalzqlw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk <https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>
2. Overview of Sustainable Development Goals - <https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers
4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job

Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:

<https://drive.google.com/file/d/1Wst-jdAJuHHVtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions

- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables
- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions
- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms

- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks
- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount
- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments
- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular

- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

CUTM1023	Smart Engineering Project (G2M)	3	0-0-3

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ESP8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID

Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus

Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, cloud

Computing, fog or edge computing,

Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development

Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino

issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.

10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram

12. Implementation of Boolean expression using ladder diagram

13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madiseti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALSATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators
3. ERP dashboarding
4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.
- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression

- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .
- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

- P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT
- P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

- P3.1 Port handling of 8951
- P3.2 Port handling of Arduino
- P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

- 4.1 Designing of sequential robot control system.
- 4.2 Writing of programs in different programming languages.
- 4.3 Controlling of input/output devices.

Practice

- P4.1 Programming of controllers with different programming languages
- P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

- 5.1 What is Ubuntu & ROS?
- 5.2 Requirement and application of ROS.
- 5.3 ROS based simulation of Turtlbot.
- 5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

- P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlebot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. 3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.
- Design a Fund raising campaign

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation

Window,

Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages, Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_YI3RiTI14

Syllabus

Geotechnical Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1073	Geotechnical Engineering	3	1-1-1

Objective

- Perform Moisture content, Specific gravity, Atterberg limits tests.
- Perform Grain size distribution, Proctor tests.
- Perform Unconfined compression, Triaxial tests.
- Perform California Bearing Ratio, Vane Shear tests.
- Perform Sand replacement, Core cutter, Permeability tests.

Course Outcome

- To obtain knowledge about soil properties and methods of soil properties determination in the laboratory, using field tests and considering comparable experience. Basic stability and deformation problems. Principle of spread and deep foundation design. To understand fundamental knowledge of geotechnical works for soil improvement, interaction of structure and subsoil. Basic design methods for excavation and foundation pits with dewatering and sealing systems.
- Design and analyse Shallow foundations manually as well as using STAAD Pro
- Design and analyse Deep foundations manually as well as using STAAD Pro
- Carry out Moisture content, Specific gravity, Atterberg limits tests.
- Carry out Grain size distribution, Proctor tests.
- Carry out Unconfined compression, Triaxial tests.
- Carry out California Bearing Ratio, Vane Shear tests
- Carry out Sand replacement, Core cutter, Permeability tests.

Course content

Module I:(5hrs)

Theory :(2hrs)

- (a) INTRODUCTION: Soil formation - soil structure and clay mineralogy - Adsorbed water - Mass- volume relationship - Relative density.

- (b) INDEX PROPERTIES OF SOILS: Grain size analysis - Sieve and Hydrometer methods - Consistency Limits and Indices - I.S. Classification of soils
- (c) PERMEABILITY: Soil water - capillary rise - flow of water through soils - Darcy's law- permeability - Factors affecting - Determination of coefficient of permeability - Permeability of layered systems
- (d) SEEPAGE THROUGH SOILS: Total, neutral and effective stresses - quick sand condition - Seepage through soils - Flow nets: Characteristics and Uses (Basic appraisal only) .

Practice:(3hrs)

1. Determination of water content of soil (1hrs)
2. Determination of specific gravity of soil(1hrs)
3. Grain size analysis by sieving (Dry sieve analysis) (1hrs)

Module II: (5hrs)

Theory :(1.5hrs)

- (e) BCOMPACTION: Mechanism of compaction - factors affecting - effects of compaction on soil properties. Field compaction Equipment - compaction control.
- (f) CONSOLIDATION: Stress history of clay; e-p and e-log p curves - magnitude and rate of 1-D consolidation- Terzaghi's Theory.

Practice:(3:30hrs)

4. Determination of field density by sand replacement method.(1hrs)
5. Determination of consolidation properties of soils.(1:15mins)
6. Determination of unconfined compressive strength of soil(1:15mins)

Module III: (6hrs)

Theory :(1.5hrs)

- (g) SHEAR STRENGTH OF SOILS: Mohr - Coulomb Failure theories
- (h) STRESS DISTRIBUTION IN SOILS: Normal and shear stresses on a plane, Boussinesq's solution.

Practice:(1hrs)

7. Determination of shrinkage limit; Determination of permeability by constant head method (1hrs)

Project :(3:30 hrs)

Types of shear strength test to be delivered as project mode, rest of the topics to be dealt in classroom teaching mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation.

Module IV: (7hrs):

Theory:(1hrs)

(i)DESIGN OF SHALLOW FOUNDATIONS: Introduction, Different types of shallow foundations, (j)DESIGN OF DEEP FOUNDATIONS: Introduction, Different types of deep foundations, Design methodology for piles.

Practice: (1hrs)

8. California bearing ratio test (1hrs)

Project :(5hrs)

Design calculation of shallow foundation to be done in project mode using STAAD Pro software.

design calculation of pile capacity, Analysis of pile group, Settlement of pile group, Concept of negative skin friction, Piles subjected to lateral loads, Pile load test, Design and construction of well foundation. Design of cantilever sheet piles and anchor sheet piles to be done in practice mode as well as project mode using STAAD Pro software.

Module V: (4:30 hrs):

Theory:(2hrs)

(k) FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement, Foundations in swelling soil, Foundations in collapsible soil, Use of soil reinforcement.

(l) MACHINE FOUNDATIONS: Introduction, Free and forced vibration, Lysmer's method, dynamically loaded foundations, Dynamic soil properties, Vibration isolation .
BASIC APPRAISAL ONLY.NO NUMERICAL PROBLEMS)

Practice:(2:30hrs)

9. Determination of shear parameters by Direct shear test(1:30hrs)

10. Determination of compaction properties by standard proctor test. (1hrs)

Module VI: (5 hrs)

Practice: (1 hrs)

11. Determination of shear parameters by Tri-axial test. (1hrs)

Project :(4 hrs)

STABILITY OF SLOPES: soil stabilization measures. Slope stability solutions to done using software Stability analysis of rigid walls, (MATLAB)

Module VII:(2hrs)

- (0) EARTH PRESSURE: Types of Earth pressure. Rankine's Active and passive earth pressure, Smooth Vertical wall with horizontal backfill. Extension to Soil, Coulombs wedge theory.
- (p) DESIGN OF RETAINING STRUCTURES: Introduction, Different types of retaining structures

E Books: Jain A K and Jain A K. 2005. Soil Mechanics and Foundations. Laxmi Publications (P) Ltd. New Delhi.

Ranjan Gopal and Rao A S R. 1993. Basic and Applied Soil Mechanics. Welley Easters Ltd., New Delhi.

Singh Alam. 1994. Soil Engineering Vol. I. CBS Publishers and Distributions, Delhi.

Construction Material Testing

Code	Course Title	Credit	T-P-PJ
CUTM1069	Construction Material Testing	2	0-2-0

Objective

- Understand the range of various materials for Civil Engineering projects.
- Understand relevant properties of common construction materials.
- Perform measuring, testing and evaluating the results.

Course Outcome

- Test, measure, and evaluate the best use of building and construction materials.
- Gain knowledge about how to determine the standard quality of construction materials.

Course Content

MODULE I : PROPERTIES OF CEMENT (3 Hrs)

Chemical composition test (01 Hr)

Fineness test of cement (comparison study) (01 Hr)

Soundness test of cement (comparison study) (01 Hr)

MODULE II: PROPERTIES OF STEEL (3 Hrs)

1. Ultimate Tensile strength test (01 Hr)

2. % of Elongation test (01 Hr)

3. Bend & rebend test (01 Hr)

Module III: PROPERTIES OF CEMENT CONCRETE (5 Hrs)

1. Gradation of Coarse Aggregates (01 Hr)

2. Flakiness Indes & Elongation Index (01 Hr)

3. Silt Content (01 Hr)

4. Preparation of cube mould for durability test (02 Hr)

Module IV : PROPERTIES OF BRICKS (2 Hrs)

1. Compression test on Bricks. (01 Hr)

2. Absorption test of brick. (01 Hr)

Module V : PROPERTIES OF TILES AND MARBLES (3 Hrs)

3. Test on tiles breaking strength. (01 Hr)
4. Water absorption test for marbles. (01 Hr)
5. Hardness test for marbles. (01 Hr)

Module VI : PROPERTIES OF TIMBER MATERIALS(5 Hrs)

1. Test on moisture content on timber. (02 Hr)
2. Air permeability, water tightness and wind resistance test for window and doors. (03 Hr)

Module VII : PROPERTIES OF BUILDING STRUCTURE(5 Hrs)

1. Slip Resistance Checking. (01 Hr)
2. Weather resistance and durability test. (02 Hr)
3. Test on durability of recycled concrete aggregates. (02 Hr)

Text Books

1. B.N Dutta 'Estimating and Costing in Civil Engineering', UBS Publishers & Distributors (P) Ltd, 2010.
2. M.S Shety, S. CHAND Publication, 2006.
3. Building and Construction Materials: Testing and Quality Control (Lab Manual Series) Paperback – 1 July 2017 by M.L. Gambhir (Author), Neha Jamwal (Author).
4. Building Construction and Materials (SI Units) Paperback – 1 January 2017 by Gurcharan Singh (Author)

Structural Detailing and Drawing

Code	Course Title	Credit	T-P-PJ
CUTM1061	Structural Detailing and Drawing	2	0+2+0

Objective

- To introduce the students to basic theory and concepts of Structural Drawing, STAAD Pro and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, types of projections, designing of beam, columns and shear walls.

Course Outcome

- Perform free hand sketching of basic geometrical constructions and multiple views of objects. Concept of projection, Types of section, PEB structure & Steel structure work.
- Demonstrate STAAD- PRO, & its uses. Do frame structure, steel structure & applying properties, loads, shear force and bending moment. Do design of steel, /concrete structure & bridge design.

Course Content

MODULE 1 – INTRODUCTION OF ENGINEERING DRAWING (02 hrs)

Setting of paper size, drawing of title block with border line - Drawing of Types of line, their properties, and arrow head - Types of scale, dimensioning rules & their uses.

MODULE 2 – ORTHOGRAPHIC AND ISOMETRIC PROJECTION (04 hrs)

Concept of projection - Types of projection and applying symbol of projection - Isometric scale - Isometric view.

MODULE 3 – SECTIONING (04 hrs)

Types of section – Application - View positioning - steel structure - PEB structure & Steel structure work - Syphon , culvert & bridge design - Stair ,door & ventilator design and calculation.

MODULE 4 – INTRODUCTION OF STAAD Pro (02 hrs)

Introduction to structural design & analysis, brief introduction about RCC structure - Doing frame structure - Calculating coordinate points, properties of building.

MODULE 5 – PLANE & SPACE FRAME STRUCTURE

(03 hrs)

Load, types & uses of load, calculation of dead load, live load & floor load - Working with design and analysis of building & steel structure, preparation of RCC report - Applying load (wind load, seismic load, floor load, live load, dead load) using by water tank, tower, truss & multi stored building.

MODULE 6 – DESIGN OF BEAM AND COLUMN

(02 hrs)

Design of beam and column, file transfer, concrete design, steel design, slab design, shear force /bending moment, solve some error - Using I.S code to define concrete design, steel & transfer to file from AutoCAD to STAAD PRO through DXF file.

MODULE 7 – SHEAR WALL DESIGN

(03 hrs)

Describe about Shear wall design, & foundation - Using surface panel models to design shear wall (RC walls) & lift rooms, using STAAD -foundation to design, pile, mat, and isolated, combined footings - bridge deck design & stair case design - Response spectrum & foundation design foundation design.

5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

Quantity Estimation & Costing

Code	Course Title	Credit	T-P-PJ
CUTM1063	Quantity Estimation & Costing	3	2+1+0

Objective

- To make familiar with calculation of quantities for different item of works & provide knowledge about estimation of buildings through Estimator-2.0 software
- On completion of this course the students will be able to know the process of making animation of buildings, Sketch up of building plans and building models.

Course Outcome

- Estimating, brick calculations & cost for different materials, foundation & footing calculations.
- Gain knowledge about how to schedule & estimate different construction works both manually and using software.

Course Content

Module - I: BUILDING (2 Hrs)

Reading of Plans, Sections and detailed Drawings Related to buildings; preparation of Quantities and Units. Introduction of estimating & different types of estimate - Requirements for building estimate purpose of estimate - Plinth area estimate, cube rate estimate, annual estimate & maintenance estimate - Brick calculation & cost for different material - No. of brick required for area, weight of bricks, different bricks densities.

Practice Sessions:

1. Study of construction drawings and preparation of WBS. (01 Hr)
2. Detailed estimates for a Shopping Complex using Estimator-2.0 software. (01 Hr)
3. Detailed estimates for a hostel Building using Estimator-2.0 software. (01 Hr)
4. Detailed estimates for a hospital using Estimator-2.0 software. (01 Hr)

Module -II : CULVERT (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to irrigation structures; preparation of Quantities and Units.

1. Detailed estimates (Manual) for a Slab culvert with right angled/ Splayed wing wall. (01

Hr)

2. Detailed estimates (Manual) for a box culvert. (01 Hr)
3. Detailed estimates (Manual) for a Hume pipe Culvert. (01 Hr)

Module –III: ROAD (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Roads structures; preparation of Quantities and Units.

1. Detailed estimates (Manual) for a road. (01 Hr)

Module - IV: SLOPED ROOF (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Sloping roof/Roof truss structures; preparation of Quantities and Units.

1. Detailed estimate (Manual) for a timber roof truss. (01 Hr)
2. Detailed estimate (Manual) for a roof cover of GI sheets. (01 Hr)

Module –V: QUANTITY SURVEY (2 hrs)

Estimations and Quantity Surveying; Preparation of Quantity of materials per unit rate of work; Estimating labor.

- Quantity of materials required for different items of works in buildings (Manual). (01 Hr)
Quantity of different types of labor required for different items of works (Manual). (01 Hr)

Module-VI: RATE ANALYSIS OF BUILDING

Specifications; Rate Analysis as per State Govt. and CPWD Standards.

1. Development of Excel Sheet for Rates, Specifications and Cost Estimates. (01 Hr)
2. Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software. (01 Hr)
3. Rate Analysis and Cost Estimates for a hostel Building and a hospital. (01 Hr)

Module-VII: RATE ANALYSIS OF CULVERT & ROAD

Specifications; Rate Analysis as per State Govt. and CPWD Standards

1. Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software. (01 Hr)
2. Rate Analysis and Cost Estimates for an arch culvert. (01 Hr)
3. Rate Analysis and Cost Estimates for a road. (01 Hr)

MODULE VIII – PROJECT PREPARATION

1. Road section C & L-section. (01 Hr)
2. Report of detailed estimation with hard copy. (01 Hr)

Text Books

1. B.N Dutta ‘Estimating and Costing in Civil Engineering’, UBS Publishers & Distributors (P) Ltd, 2010.
2. B.S.Patil, ‘Civil Engineering Contracts and Estimates’, University Press, 2006.
3. D.N. Banerjee, ‘Principles and Practices of Valuation’, V Edition, Eastern Law House, 1998.

Geometric Modeling

Code	Course Title	Credit	T-P-PJ
CUTM1060	Geometric Modeling	3	0+3+0

Objective

- To introduce the students to basic theory and concepts of AutoCad, Revit and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, dimensions, 3D Modeling and rendering.

Course Outcome

- Demonstrate use of CAD in Civil Construction, basic knowledge of operating software & commands, and benefit of civil developments in the construction industry. Do 2d & 3d drafting /design with AUTO CAD software.
- Architectural modeling set up units & element properties, annotating, detailing, presentation tools, printing, export/import with Revit Architecture Software.

Course content

MODULE 1 - 2D SKETCHES AND DIMENSIONING

1. Study for Drafting and Modeling – Coordinate systems (absolute, relative, polar). (1 Hr)
2. Drawing of a Section for a duplex building. (1 Hr)
3. Drawing of an elevation for a duplex building with dimensions. (2 Hrs)

MODULE 2 - 3D SKETCHES AND PROJECTION OF DUPLEX

1. Drawing of front view and top view of simple solids like prism, pyramid, cylinder, cone, etc, and dimensioning. (1 Hr)
2. Drawing front view, top view and side view of objects and projection of duplex building (2 Hrs)

MODULE 3 – BUILDING PLAN AND TRUSS

1. Drawing of a plan of residential building (Two bed rooms, kitchen, hall, etc.) (2 Hrs)
2. Drawing of a simple steel truss. (1 Hr)
3. Drawing sectional views of prism, pyramid, cylinder, cone, etc, (1 Hr)

MODULE 4 – INTRODUCTION OF REVIT ARCHITECTURE (02hrs)

1. Installing Autodesk Revit architecture and understanding the user interface. (1 Hr)
2. Creation of plan for a project by using level and sketching elements. (2 Hrs)

MODULE 5 - 3D MODELING WITH RIVET

1. Drawing isometric projection of simple objects. (1 Hr)
2. Creation of 3-D models of simple objects and obtaining 2-D multiview drawings from 3-D model. (2 Hrs)
3. Creation of 3d syphon, 3d canal fall, 3d water tank, 3d of trusts & 3d of foot over bridge. (2 Hrs)
4. Assembly drawing & attribute text - Annotation, block & w-block & leader. (2 Hrs)

MODULE 6 – WORKING WITH PROJECT AND WORK PLANES (04hrs)

1. Working with basic building components, site design and massing studies. (2 Hrs)
2. Setting color for wall, about sectioning libraries, basic knowledge of building. (2 Hrs)

MODULE 7 – ANNOTATION AND DETAILING AND RENDERING (04 hrs)

17. Creating text notes, grids, and levels. (1 Hr)
18. Working with label and detailing. (1 Hr)
19. Understanding the rendering workflow, using lights, and creating a lighting fixture. (1 Hr)
20. Displaying a light source in a view, controlling the position of a spotlight in a building model & adding plants and entourage. (2 Hr)

Text Books:

Hydrology and Irrigation

Code	Course Title	Credit	T-P-PJ
CUTM1071	Hydrology and Irrigation	3	1-1-1

Course objective

- To study the basic principles and movement of groundwater and properties of ground water flow.
- To study the watershed characters and applications.
- To study the ground water resources mapping and surface water resources mapping.
- To study the hydrological disaster and role of earth observation technology.

Course outcome

- An ability to manipulate hydrological data and undertake widely used data analysis.
- An ability to use the techniques, skills, and modern engineering tools related to groundwater modelling.
- Project oriented skills shall be gained by students to work efficiently in survey, planning, design and construction in the irrigation sector.

Module I: Hydrology Theory 2 hr

Hydrological cycle, Types of Rainfall, Precipitation - measurement - average precipitation over a basin, evaporation, transpiration, infiltration - Infiltration indices. Runoff -Overland flow, Types of aquifers.

Practice: 2hr

1. Determination of infiltration capacity using double ring infiltrometer.

Module II: Hydrograph 3hr

Direct runoff, Base flow, separation of base flow- Hydrograph, Unit hydrograph - Assumptions of Unit hydrograph, derivation of unit hydrograph from direct runoff hydrograph, Computation of direct runoff hydrograph for different storms using unit hydrograph theory. 1hr

Practice:

2. Construction of double mass curve using Python hr
3. Hydrograph analysis using Python. 1h

Module III: Flood Management and Rainwater Harvesting 4hr

Indian rivers and floods, Causes of floods, Flood damage analysis. Design flood, Flood estimation, Frequency analysis, Flood routing through reservoirs and open channels. 1hr

Necessity of Rainwater harvesting, Importance of Rain water harvesting, Rainwater harvesting methods, Conservation and Harvesting of rain. Types and design of water harvesting structures; traditional rain water harvesting structures. 1hr

Practice:

4. Mapping of Drainage order from toposheets 1hr
5. Calculation of area and length of drainage. 1hr

Module IV: Groundwater Pollution & Quality Analysis 3hr

Sources of pollution; Potential evaluation of groundwater pollution; Physical, Chemical, Biological analysis, Surface and subsurface investigations of groundwater. 1hr

Practice:

6. Physio-chemical analysis of groundwater in laboratory 2hr

Module V: Reservoir 2hr

Types, Investigations, Site selection, Zones of storage, Safe yield, Reservoir capacity, Reservoir sedimentation and control. Introduction to Dams, types of dams, spillways and ancillary works, Site assessment and selection of type of dam, Information about major dams and reservoirs of India.

Module VI: Hydropower Engineering: 2hr

Dams and their causes of failure, planning of water resources projects, single and multipurpose projects, Reservoir Planning: Storage capacity of reservoirs, Yield from reservoir, Mass curve, Reservoir losses, reservoir sedimentation.

Module VII: Irrigation 6hr

Irrigation Engineering: Water requirements of crops, consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies. 1hr

Canals: Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributary canals, most efficient section, lined canals, their design, regime theory - Kennedys and Lacey's theories. Lined canals, Water logging - causes and control. 1hr

Practice :

7. Design of irrigation canal using Kennedy's and Lacey's theory. 1hr
8. Design of lined canal. 1hr
9. Design of tank surplus and vertical drop weir. 1hr
10. Design of head regulators and cross regulators. 1hr

Seminars:

1. Interlinking of River
2. Estimation of Evapotranspiration over land surface
3. Groundwater identification and estimation
4. Runoff computations
5. Attribution of Hydrologic Changes in a Tropical River Basin to Rainfall Variability.

Students take up group projects and deal with the following activities during the project. The project Report should contain the below gate process.

E Books:

1. Todd D.K., (2000) Ground Water Hydrology , John Wiley and Sons,
2. K., subramanya (2008) Engineering Hydrology, Tata McGraw-Hill Publishing Company Limited.

4. Saeid Eslamian (2014) Handbook of Engineering Hydrology: Environmental hydrology and water management, CRC Press.
5. Malcolm. G. Anderson and Jeffrey J Mc Donnell (2005) Encyclopedia of hydrological Science, J Wiley.

Surveying Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1067	Surveying Techniques	3	1-2-0

Objective:

To study the temporary adjustment of survey instruments by standard methods ,levelling and cross sectioning survey and setting out works.

To do various field works with the help of Total station.

To carry out topographic survey

Course Outcome:

- Carry out temporary adjustment of survey instruments by standard methods ,levelling and cross sectioning survey and setting out works
- Carry out topographic survey
- Doing centering, leveling & measuring coordinate points of area and calculation, transfer to data from Total station to software spectrum link
- Doing field work using of simple machine parts such as Total –Station, Auto- level

Course outline:

Module-1(2Th) HRS

Historical survey practice: Introduction to surveying: Classification, Basic Principle, List of Instruments used in surveying.

Module-II (2Th+4Pr) HRS

Leveling: Concept and principles of levelling, different types of levelling, their application ,selection of station points, staff measurement locations, ideal location for etc. ,computation of Reduced levels through rise and fall method and height of collimation method, standard procedure for conducting leveling works , Identification of errors, understanding their source and rectifying the same ,different causes of errors in the leveling works, their impact on the project, procedure for laying slopes and gradients for roads, bridges, pipelines, canals etc ,errors in slope alignment and their implications, identification & rectifications ,procedures for making entries in the field book and make necessary calculations

Practices:

1. Calculation of RL using HI and Rise and fall method.
2. Longitudinal and cross sectional Leveling
3. Check Leveling

Module-III (2+5)HRS

Total station: Parts of the instrument, operational panel, guide light, basic key operation, display functions, setting up the instrument, focusing and target sighting, angle measurement, setting the horizontal, distance and angle measurement, REM measurement, coordinate

measurement ,to view the data/ points collected, area calculation, data download.

Practices:

4. Distance, angle and slope Measurements
5. Traverse adjustment (With help of software)
6. Area calculation using Total station

Module-IV (1Th+5 Pr)HRS

Applications of total station :Detail survey i.e., data collection., Height measurement (Remove elevation measurement- REM,Fixing of missing pillars (or) Setting out (or) Stake out, Resection. etc. Remote distance measurement (RDM) or Missing line measurement (MLM).

Practices:

7. Height measurement (Remote elevation measurement- REM).
8. Fixing of missing pillars (or) Setting out (or) Stake out.

Module-V (1Th+3Pra) HRS

Concept of topographic survey, its importance and different methods of conducting topographic survey using modern and conventional instruments, calculations required for plotting contours, Interpretation and importance of contours. Knowledge of scale and key while plotting a contour map, represent topography of the area in required scale, different methods of computing levels.

Practice:

9. Preparation of contour maps using total station and surfer software.

Module-VI (2Th+4Pra) Hrs

Curves: Types of curves, Properties– simple, compound, reverse and transition curve. of works

Practices:

10. Setting out of different curves (simple, compound, reverse and transition) using Total Station

Module-- VII (4 hours)

Setting out of works

11. Setting out of Building
12. Setting out of culvert

Text Books:

1. Surveying Vol I & II, III B C Purnima, Laxmi Publication.
2. Surveying, volume 1&2 BY S.K.Duggal, TMH publisher.

Reference Books:

1. Surveying & Levelling by T.P Kanitkar& V S Kulkarni

E Books:

1. Source of reference; NSQF

Online Source: NPTEL Videos (www.nptel.ac.in)

Geospatial Survey

Code	Course Title	Credit	T-P-PJ
CUTM1068	Geospatial Survey	3	1-2-0

Objective:

- To teach the basic concept of Geospatial Technology and to do various field works with the help of digital surveying instruments.
- To provide basics of digital surveying and mapping of earth surface using GPS, DGPS, GPR

Course Outcome:

- Gain knowledge about the structure of spatial data including file associations, attribute tables, Metadata, coordinate systems, and projections
- Carryout measurements Differential Global Positioning System (DGPS)/ Global Navigation Satellite System (GNSS) in the field.
- Preparation & digitization of different topography map with the help of Arc-GIS software
- Utility mapping using GPR

Module I: GIS(1Th+4Pra)Hrs

Geographic Information System: Introduction, Definition of GIS, Components of GIS, Geographical concepts, Input data for GIS Types of output products, Application of GIS Practice:

1. Introduction to GIS (Overview, Features, About the software, Main user interface, Main menu Project menu; Layer menu; View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects)
2. Building a catalog of geographic data (Arc Catalog, folder connection, inside the catalog, folder location, create a working copy of the data, connect directly to your copy of the data, and remove folders that do not need)

Module II: GIS Data types (2Th+4Pra)Hrs

Introduction: GIS data types: Data representation: Data sources: Typical GIS data sets Data acquisition, Data verification and editing, Dereferencing of GIS data, Spatial data errors Spatial data models, Spatial data structures, Modelling surfaces , Modelling networks , GIS database and database management system

1. Introduction to Google Earth, Convert Shape file to KML Format, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, Convert KML File to shape file, overlaying an image into google earth

2. Exploring data and adding it to a map (The Contents tab, The Metadata tab, add a layer to a map, import metadata, Search for items, map compose)
3. Managing a dataset (Define a shape file's coordinate system, modify attributes in database tables, calculate attribute values in ArcMap, Update the table's metadata, create a layer using the related attributes, Add the vegetation type layer to the map)
4. ArcGIS Graphics language (generalization, symbology, and colour effect, change symbology and use transparency in creative ways)

Module III: Spatial Data Analysis (1Th+5Pra)Hrs

Spatial Data Analysis: Introduction, Data analysis terminology, Measurement of length, perimeter and area. Queries. Reclassification. Buffering and neighborhood functions. Data integration-map overlay. Spatial interpolation. Surface analysis. Network analysis. Digital terrain visualization

Practice:

1. Topology (Concept of topology, topology in different GIS format, Coverage, shapefile, DXF-Drawing Exchange File, Geodatabase, Topology principle, Topological Error and Correction process, creating personal Geodatabase, creating a features dataset)
2. Buffering and Editing tools: (Buffering in ArcGIS, add the data layer, create the buffer, conflation, extend the line, Erase point, Flip line, Snap, trim line, Densefy, create a polygon, create point, Create polygon)
3. Creation DEM , DSM,TIN from SRTM/Cartosat Data

Module IV: Global Positioning System (2Th+3Pra)Hrs

Introduction of Global Positioning System, Satellite constellation, GPS signals and data, Geo-Positioning-Basic Concepts. Discussion on NAVSTAR, GLONASS, GALLILEO, COMPASS. Basic geodesy, Geoid /datum/ Ellipsoid-definition and basic concepts, Coordinate Systems, Special Referencing system, Map Scale, Scale factors, Indian geodetic System Segments of GPS:Control Segment, Space Segments, User Segment-operations of GPS, accuracy, error sources and analysis, methodology for collection of data, adjustment computations and analysis. Selection of datum, units and scale; GPS measurement. GPS Positioning Types-Absolute Positioning

Practice:

10. Setting of instrument, Observation, Data downloading and processing, Plotting of points, Georeferencing, Error calculation.

Module V: Differential Global Positioning System(2Th+3Pra)Hrs

Differential positioning Methods-Static & Rapid static, Kinematic-Real time kinematic Survey. DGPS-GPS data processing and Accuracy. Selection of Reference Station, Reference Station Equipment: GPS receiver, GPS antenna. Radio and its types, Radio Antenna GP. Application of GPS in Surveying and Mapping, Navigation, Military, Location Based Services, Vehicle tracking, etc. Limitation of GPS & DGPS

Practice:

11.Instrument Setup (Base station and Rover), Post-Processed Kinematic (PPK); Single point observation, Double point with baseline processing methods, Triangulation method, Real-Time Kinematic (RTK);Navigation system, Collection of Ground Control Point (GCP), Data export to GIS software.

Module VI: Ground Penetrating Radar(1Th+3Pra)Hrs

GPR Explain working principle of ground penetrating radar (GPR), Describe the type of antennas used with GPR for different type of underground material detection, Use ground penetrating radar until a predefined depth from sub-surface based on the conductivity of material. Explain use of sketch/single line diagram (SLD).Describe the use of GPS/DGP in sync with GPR to get all data populated on map. Describe the use of other Utility locator like electromagnetic locator and other utility locators

Practice:

12.Instrument setup, Utility mapping (Waterline, electric line, etc.), Processing of data

Module VII: (1Th+3Pra)Hrs

Explain GPR screen reading for the data being recorded, Describe the use of Roadometer with GPR to measure distance, Explain all the connecting cables used with GPR, Describe the power source and running capacity of GPR batteries, Explain handling the GPR and it's components, Describe how to transport GPR instrument, Use appropriate GPR antenna for described type of survey, Demonstrate the assembly of GPR equipment, Demonstrate the GPR data collection using cross section .

Text Books:

- 1.Remote sensing and GIS 2nd Edition, Basudeb Bhatt, Oxford Publication
2. Anji Reddy, M. Remote sensing and Geographical information system, B.S. Publications, 20011.

Concrete Technology

Code	Course Title	Credit	T-P-PJ
CUTM1066	Concrete Technology	3	1-2-0

Course Objective:

- To study properties of cement, sand and aggregate.
- To determine the correct proportion of cement, sand and aggregate ratio for the concrete.
- To perform tests for cement, sand and aggregate
- To perform tests for concrete.
- To supervise and monitor concrete casing and casting for building construction.

Course Outcome:

- Demonstrate test and analysis of cement, aggregate, sand, effect of water cement ratio.
- Prepare concrete, carry out simple formwork and reinforcement with the application of modern Power Tools.
- Prepare reinforcement of different R.C.C. members i.e, Foundation, beams, columns, slabs, Retaining Wall, etc.
- Erect scaffolding and make the intricate formwork at different locations.
- Prepare a bar bending schedule and demonstrate bar bending and calculate the estimated quantity of materials.
- Make different types of arches and lintels with chajja.
- Layout different types of vertical movement according to shape, location, materials by using stair, lift, ramp and escalator.

Course Syllabus

Module I : Aggregate/Sand (5hrs)

Theory:

Aggregate, classification (IS : 383), Grading, Characteristics (grading, fineness modulus), Bulking of fine aggregate, Deleterious substances, factors affecting the strength of concrete. Water, water quality, water requirement for hydration & workability, the effect of impurities present in water, Admixture, the meaning of terms, functions, classification, waterproofing and permeability reducing admixture. Construction Chemicals, Interpretation of specifications manufactures, Meaning of terms, functions, Classification (IS : 4082), waterproofing and permeability reducing admixture. (1hrs)

Practice:

1. Perform sieve analysis on aggregate and determine to grade. (01 hrs)
2. Determine the presence of silt and clay and Perform a test to determine bulking of sand. (01 hrs)

3. Specific Gravity, Water Absorption And Natural Course Of Fine & Coarse Aggregate. (1hr)
4. Aggregate Impact Test, Aggregate Crushing Test (1hr)

Module II: Preparation of Cement Concrete (3hrs)

Theory:-

Preparation of concrete Methods used, merits and demerits of methods, tools and equipment used and precautions to be taken for the following processes, batching, mixing, transportation, placing, compaction, curing, finishing, strength & durability requirements (IS : 456 - 2000), stripping of formwork, application of modern power tools, classification & specifications of concrete, classification of concrete according to grade, weight & methods of mixing ready mixed concrete, self-levelling concrete. (1hr)

Practice:-

Prepare concrete and lay at required places using power tools, (2hrs)

Module III: Workability of Concrete (3.5hrs)

Theory: Introduction to concrete, properties, workability of concrete (0.5hr)

Practice:

1. Workability of Fresh Concrete by (3hr)
 - (a) Slump cone method
 - (b) Compaction factor
 - (c) Flow table methods.

Module IV: Strength of concrete (7hrs)

Theory:

Nominal mixed and design mixed concrete, properties of concrete- workability & consistency, segregation, bleeding, strength, durability, impermeability, volume, stability, R.C.C. members for foundation, beams, columns, slabs, retaining wall etc. Scaffolding & formwork - Definitions of common technical terms used in Scaffolding, formwork. Types & applications Different materials used in formwork. Methods and tools used for formwork. Safety precautions to be observed in scaffolding and formwork Defects in formwork Shuttering /removal of formwork. Maintenance & repair of formwork Plain cement concrete (PCC) & Reinforced cement concrete. Properties of PCC & RCC in the green state and hardened state Importance of formwork and reinforcement in construction. (3hrs)

Practice:

1. Compressive strength of concrete (2hr)
 - (a) Cube Specimen
 - (b) Cylinder Specimen
2. Splitting tensile strength of cylinder. (2hr)

Module V : Design-mix concrete(5 hrs)

Principles of mix proportioning, probabilistic parameters, factors governing selection of mix. Road note - 4, DOE, ACI and IS method of concrete mix design, Variability of test results, acceptance criteria, various IS code provisions. (1hr)

Practice:

1. Preparation of design-mix concrete (2hr)
2. Concrete shotcreting (1hr)
3. Pressure grouting of concrete (1hr)

Module VI: Reinforcement in Concrete (5 hrs)

Theory:

Structural elements & characteristics (simply supported, continuous, fixed, cantilever, overhang), the importance of the use of reinforcement in concrete, tools used in bar bending correct use of tools, different operation in bar bending (straightening of bars, cutting of bars, bending of bars, placing of bars, binding of bars, fixing of cover blocks). (1hr)

Practice:

Making of shuttering & supports with uprights and wedges for Arches, Lintels and Lintels with Chajjahs. (2hrs)

Cutting, bending & placing of reinforcement. (2hrs)

Module VII: Special concreting techniques (7hr):

Theory:

Review of behavior and characteristics of high strength concrete, high performance concrete, fiber reinforced concrete, mass concrete, lightweight and heavyweight concrete, Precast concrete. Pumped concrete, concrete, underwater concrete, pre-placed concrete, vacuum dewatered concrete, hot and cold weather concreting, Ready mixed concrete. (3hr)

Practice:

1. Preparation of Lightweight concrete mix. (1hr)
2. Preparation of Fibre reinforced concrete. (1hr)
3. Preparation of concrete with solid wastes.(1hr)
4. Reactive Powder Concrete design. (1hr)

Reference: NSQF level 6

Electrical, Plumbing and Wood Works

Code	Course Title	Credit	T-P-PJ
CUTM1065	Electrical, Plumbing and Wood Works	3	1-2-0

Course Objectives

- To understand the installation for electrical systems in a building.
To study carpentry work in the building, installation of doors, windows, etc.
To understand and demonstrate installation of plumbing systems in the building.

Course Outcomes

- Identify timber and perform sawing and planing using hand and power tools.
Demonstrate surface finish with exact sizing by planing operation.
Prepare different wooden Joints. (Range of skill - framing joint, Housing joints, broadening joints, Lengthening joints)
Make small wooden job as per drawing with schedule sizes of timber or alternatives of timber i.e. FRP, MDF, FOAM using various hardware.
Make different types of doors and windows with fixing of components.
Demonstrate joining of electrical wire and carry out soldering, crimping observing related safety precautions.
Demonstrate Electrical wiring with fixing of accessories conforming ISI rules (Range of skills - different types of Electrical wiring, joining of Fuses, fixing of MCB, a connection of lamp with switch and different fitting, etc.)
Demonstrate installation of electrical appliances, Earthing and estimate costing of wiring
Prepare a Simple pipe connection demonstrating cutting, joining of pipes with different methods using different types of fittings.
Prepare layout of soil pipe and waste pipe with different types of sanitary fittings

Course Syllabus

Module I: Carpentry Tools (5 hrs)

Theory:

Defects in timber, diseases of timber, knots, shakes, grains, etc. Carpentry hand tools, measuring tools and uses. Work holding devices, power tools, viz. saws, drills, etc. Description of Carpentry Joinery, Planing, Moulding, Rebating, Chamfering, Sawing, Etc. Type of different planes and their proper uses in woodwork. Description, function and its size setting, knowledge of sharpening and uses, etc. knowledge of using marking gauges. Important instruments are necessary for checking flatness and twistness of the surface. Sharpening and grinding angle of the cutter. (2hr)

Practice:-

Identify different wooden sample pieces i.e.- softwood & hardwood, wooden grains, etc. & their applications Annual ring, knots, shakes & chinks, etc.). Demonstrate the application of hand tools, measuring tools, and work holding devices. Demonstrate the use of different power tools, viz. saws, drills, etc. Perform sawing, planing, Moulding, Rebating, Chamfering, etc. using different types of saws, and planes. Sharpen and set different type saw blades and planer blades/ cutters. (---2hrs)

Planing face, face edge, etc. Demonstrate the use of marking, mortise gauge, etc. Test the accuracy of flatness and twist-ness of the surface by using a try square. Demonstrate the use of winding strips, cross planing, edge planing. Demonstrate a portable power planer machine and its function. (---2 hrs)

Module II: Woodwork (5 hrs)

Theory:

Portable power planer - useful in modern woodwork and new technology design. Description of different types of joints. Uses of joint:- Framing joint angle joint and lengthening joint, housing joint, broadening joint, etc. Wood products - Industrial forms of timber - Veneer - Laminated sheet - Fibreboard - Hardboard - Plywood, Calculation of timber required for Wall Bracket. List the sequence of operations of the job. Doors –Parts, Location, standard sizes, types. Windows-types. Ventilators-purpose-types. (2hr)

Practice:

Make framing joint - Mortise and tenon Joint (Single and double, Plain hunched Mitre corner,) Make Housing joints - Full housing, Bridle, Stopped housing. Make broadening joints - Simple butt joint, Riveted butt joint, etc. Lengthening joints: End half-lap joint, End overlap joint, End bends lap joint, slopping scarf, racking scared, half lapping scarf, table scarf joint, etc. (---2hrs)

Make a joint on the hardwood to make a small frame. Stopped the Tenon & Mortise joint on the hardwood in the frame to set themselves. Make shelves by six pieces of hardwood with a single lapped half-lap dovetail joint with frame (two nos. of selves). (---2hrs)

Module III: Electrical Tools and Wiring (7hr)

Theory:-

Electrical Wiring:- Safety precaution and elementary first aid. Artificial respiration and treatment of electrical shock. Elementary electricity and its units. General ideas of the supply system. Wireman's tools kit. Wiring materials. Electrical fittings. System of wirings. Wiring installation for domestic lightings. Conductor, insulator, semiconductor, cable joints, measurement of cable. Types of Fuses, MCB soldering, ELCB, RCCB, ABCB, MCCB AC and DC, AC fundamentals, polyphase types of electrical wiring Different Electrical wiring accessories, ISI rules of wiring Illumination. Earthing, types of earthing Earthing Pit. (1hr)

Practice:-

Prepare terminations of cable ends. Practice on skinning, twisting, and crimping. Identify various types of cables and measure conductor size using SWG and micrometer. (---1hrs)

Make a simple twist, married, Tee, and western union joints. Make Britannia straight, Britannia Tee, and rat tail joints. Practice in Soldering of joints/lugs. (---1hrs)

Demonstrate different electrical wiring systems with fixing of different accessories. Make electrical Fuse joints, fixing MCB.(---2hrs)

Module IV: Electrical Appliances (7hrs)

Theory

Different electrical appliances, accessories, Voltmeter. Estimation and costing of wiring. Explanation and working of different types of transformers and their classification. (1hr)

Practice:

Connect lamps with switches. Staircase circuit wiring. (---1hrs)

Install earthing in different positions. Install and connect electrical appliances and take a reading with Voltmeter. Prepare materials list and cost of wiring. (---1 hrs)

Identify transformer, test and use. (--1hrs)

Module V: Plumbing Tools (7hrs)

Theory:- Plumbing tools, materials used in plumbing, Different types of pipes, fittings and Joints - GI, PVC, AC, SW, CI, lead, steel - Properties and use in plumbing work. Method of cutting and joining of pipes. Drills - types and uses. Tap and Dies - types and uses, calculation of Tap drill size. (2hr)

Practice:-

Perform a Simple pipe connection using G.I. Pipes, socket, elbow, tee, reducing elbow, G.I. union, cap plug, reducer, Three face elbow, reducing socket, plug, G.I. nipple, etc. (2hrs).

Perform Joining of pipe with – thread joint, lead joint, flange joint, cement joint, D. Joint, etc. (---1 hrs)

Module VI Plumbing pipe fitting (7hrs)

Theory:

Sanitary Technical terms - sewer, sewage, sullage, etc. -Soil pipe and waste pipe fitting Different types of water closets Different types of urinal port Kitchen sinks, Bathtub, Washbasin. Water meter, installation of the water meter. Removal of airlock Purification of water Mineral matter, Hardness, Causes of Scale formation & their Removal. (1hr)

Practice:

Perform Joining of pipe with Elbow joint, socket joint, Tee joint, reducing elbow joint, floor trap joint, etc. (---1 hrs)

The layout of soil pipe and waste pipe to the sanitary fitting using different types of fitting viz. Door junction, door Bend, H.R. bend, Plain Bend, Double door junction, inverter junction, cowel , floor trap, Gully trap, P-trap etc. (---2 hrs)

Fitting of I.W.C with a high-level cistern. Fitting of the washbasin. Fitting of E.W.C. with a low-level cistern. Fitting a kitchen sink. Fitting of the bathtub. Fitting a urinal pot with an auto cistern. (---2hrs)

Module VII: Installations (5 hrs)

Theory:

Water Purification: Treatment plants for different groundwater contaminants, Treatment plants for surface water. Types of damages in taps, valves, water meter, and tanks - Method of rectification Water supply - Sources of water Storage of water Distribution of water Different types of valves used in Plumbing, Types of tanks R.C.C., P.V.C. Iron tanks etc. (1 hrs)

Practice:

Install a water meter. Remove the airlock. Determination of pH by pH meter. (----1 hrs)

Recondition taps, valves & flushing tank, test for correct functioning. Prepare a water supply pipeline system in residential buildings using different types of valves, fittings, and appliances. (---1 hrs)

Reference NSQF Level 5

Design of Structures

Code	Course Title	Credit	T-P-PJ
CUTM1074	Design of Structures	4	1-3-0

Course Objectives

To teach the basic theoretical aspects and contemporary issues in the design and fabrication of reinforced concrete members

To teach the basic fundamental behavior of different sections, bolts, members of steel structure used in construction.

To analyze and Design of Concrete Structures and Pre-Engineered Building(PEB) by using Software ETABS

Course Outcomes

To gain the knowledge of RCC design calculation with relevant Indian Standards.

After completion of the courses the students will gain knowledge of Pre-Engineered design calculation with relevant Indian Standards

Students will develop the skill of converting client's requirements to structural drawing by using ETABS.

Course Syllabus

Course content (50 Hours)

Module I: Building Structural Frame (9 Hours):

Introduction to Reinforced Concrete, Mechanical Properties of Concrete, Flexural Analysis, Combined Flexure and Axial Load, Shear analysis. Limit State Method using Indian Standard Codes.

Practice:

1. Draw grids, Reference planes and joints, create new project models and introduction of the layout. (2hr)
2. Draw building structural frame and define material properties (4hrs)

Module II: Load definition to Building frame (5 Hours):

Modeling of Building, Load Calculations, Seismic weight, Base shear, Storey shear, Mass source, diaphragm, Meshing of Slab.

Practice:

3. Building structural frame- Define Properties, Material, Section, Mass source, Load pattern, load combinations

- Define Section Properties + Section Property Modifiers (1hr)
- Load Pattern (Gravity Loads + Earthquake (seismic) Loads (0.5hr)
- Wind Loads, Dead loads, super dead loads and live loads introductory(0.5hr)
- Define Load combination (Manual + Auto)(0.5hr)
- Meshing for Slabs, Walls, beams and Columns (0.5 hr)
- Assign Loads to structure as per IS Codes(0.5)
- Define Mass Source (For Lateral analysis)(0.5 hr)
- Pier Labels and Spandrel Labels for shell members such as shear walls and retaining RCC walls (1hr)

Module III: Analysis and check for Safety (10 Hours):

Analysis checks, Post design checks, Pushover analysis, response spectrum analysis, time history analysis.

Practice:

4. P Delta Analysis Check (How to include P-delta effects) (2hr)
5. Center of Mass and Center of Rigidity (and Building Eccentricity Check)(1hr)
6. Mass (Weight) Irregularity check as per the code (1hr)
7. Story Displacement, Story Drift checks as per code (1hr)
8. Torsional Irregularity check(1hr)
9. Modal Analysis Case [Eigen or Ritz Vectors], Time period (1hr)
10. Time History Analysis (2hrs)

Module IV: Reinforcement Detailing and scheduling (6 Hours):

- Reference of IS codes IS SP 34-1987 (Theory) (1hr)
- IS 13920-1993 Ductile Detailing of RC structures (Theory) (1 hr)

Practice:

11. Detailing of Beams, Columns and slabs using Autocad (4hr)

Module V: Design of Foundations using SAFE foundation (6 Hours):

Introduction to SAFE foundation, familiarizing tools used in SAFE foundation. Types of foundations introduction, isolated footing design, combined footing design and mat foundation design.

Practice:

12. Importing ETABS model file into the SAFE foundation software (0.5 hr)

13. design of isolated footing (1 hr)

14. design of combined footing (1 hr)

15. design of mat foundation (1 hr)

Module VI: Materials and Specifications of Steel/ Pre-Engineered Building (PEB) Structures (06 Hours):

PRE-ENGINEERED BUILDING COMPONENTS: Primary System: Main frames, Gable End Frame - Secondary frame system: Sizes and Properties of Purlins & Girts – Bracing System: Rod, angle, Portal, Pipe bracing – Sheeting and Cladding: Roof Sheeting and Wall sheeting – Accessories: Turbo Ventilators, Ridge vents, Sky Lights, Louvers, Insulation, Stair cases.

Practice:

16. DESIGN LOADS ON PRE-ENGINEERED BUILDINGS. Design of PEB frame under the influence of Dead, Live, Collateral, Wind, Seismic and Other applicable Loads. Serviceability Limits as per code IS:800. (4hrs)

Module VII: PEB DESIGN METHODOLOGY (8 Hours):

Practice:

17. Design Parameters of PEB Frames - Depth of the section, Depth to Flange width ratios, Thickness of Flange to thickness of Web ratio. d/t_w , b_f/t_f ratios of sections as per IS code. Section Sizes as per Manufacturing Limitations. Analysis and Design of Rigid Frames. Rigid Frame Moment Connection, Shear Connection- Anchor bolt and base plate design (Pinned and Fixed). (8hrs)

Text Books:

1. Reinforced Concrete design-S. N. Sinha. Tata McGraw-Hill, New Delhi

2. S K Duggal, " Design of steel structures",2012.

3. S. Ramamurtham and R. Narayan, " Design of steel structures" ,2014

Road Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1070	Road Engineering	3	1-1-1

Course Objectives

- To introduce transportation engineering principles with emphasis on designing principal element of highways along with the safe and efficient operation of highways.

Course Outcomes

- Students will gain knowledge on planning, material selection for construction, Economics and finance and designing of elements on highway.
- Acquire the skill of designing the geometric elements of highway using CIVIL 3D software.

Course Syllabus

THE CLASSES WILL BE DELIVERED IN FLIP CLASS MOD

Module I: Highway introduction planning and development (1 hr)

Highway planning in India, development, rural and urban roads, road departments in India, road classification, road authorities i.e. IRC, NHAI, CRRI, NHDP etc.

Module II: Materials Characteristics and construction (6 hrs)

Introduction, physical and engineering properties of materials of pavement surfaces: Pavement quality concrete (PQC), Plain cement concrete(PCC), Hot Mix Asphalt (HMA), wearing courses, base, sub-base treated layers, types of bitumen, cutback bitumen, bitumen emulsion, tar, types of tar, bituminous mix design.

Practice Sessions:

Test on aggregate

Los angeles abrasion test.

Aggregate crushing test

Aggregate Impact value test

Specific gravity, water absorption, and bulk density

Test on bitumen

Penetration test of bitumen

Ductility value test of bitumen
Softening point test of bitumen
Flash and Fire point test of bitumen
Specific gravity of bitumen
Flakiness index and elongation index test of Aggregate

Test on mix design

Marshall Stability Test of bitumen

Test on subgrade

California bearing ratio test

Module III: Geometric design of roads (12 hrs)

Theory

Introduction to geometry design: Objective of geometric design, Design speed, cross-section elements, pavement surface characteristics-skid resistance, traffic volume, number of lanes, level of services, sight distance, horizontal alignment, vertical alignment, Superelevation, camber, cross-section, lane width.

Practice Sessions:

Design of Horizontal Alignment using CIVIL 3D software.

Design of Vertical Alignment using CIVIL 3D software.

Design of Superelevation using CIVIL 3D software.

Create a profile using CIVIL 3D software.

Module IV: Pavement Engineering (8 hrs)

Design of Flexible pavements and Rigid pavements according to standards.

Practice Sessions:

Design of flexible pavements

Design of rigid pavement

Module V: Traffic Engineering (4 hrs)

Introduction to traffic engineering, road user characteristics, vehicular characteristics, various traffic studies and their application (field study), traffic signals, traffic signs and road marking, parking studies, traffic operations-accident prevention and safety methods, rotary intersection, ITS (intelligent transportation system) Various types of intersection and their design concept

Practice Sessions:

Junction design using civil 3d software

Vehicle volume counts (field study)

Module VI: Construction methodologies (3 hrs)

Cement Concrete Roads: Joints in pavements, Arrangement of joints, joint filler and sealer, Introduction, Components, I-Girder, Box culvert, VUP (Vehicle underpasses), PUP (Pedestrian underpasses), Road construction equipment, Machines used, Estimate a road project, PPP model.

Practice Sessions:

Estimate a road project

Module VII: Pavement evaluation and rehabilitation (1 hr)

Pavement failures, quality control causing deterioration and environmental factors, types of maintenance, maintenance of bituminous and concrete surfaces, roughness measurement, special repairs in pavements, strengthening and widening of an existing road.

Text Books:

k.khanna and C.E.G JUSTO, Highway engineering.

R Kadiyali, Traffic engineering and N B Lal, Principles and practice of highway engineering, Khanna Publications, 2005

Construction Materials

Code	Course Title	Credit	T-P-PJ
CUTM1064	Construction Materials	2	0-0-2

Course Objectives

- To introduce students to various materials commonly used in civil engineering construction and their properties.

Course Outcomes

- **Knowledge:** Able to learn basic theory about main building- and construction materials.
- **Skills:** Able to make the right and well-founded choice of materials.
- **General competence:** Understand how properties of materials that are important in engineering can be related to the characteristics of the material.

Course Syllabus

THE CLASSES WILL BE DELIVERED IN FLIPCLASS MODE.

MODULE I: STRUCTURAL AND NONSTRUCTURAL

MATERIALS (3 hrs)

Overview of Materials and Building/Structural Types, Factors Affecting Choice of Materials and Structural Form, Mechanical Properties, Non-Mechanical Properties (physical properties, durability), Individual Building Materials Manufacturing, Properties, Comparative Behavior, Structural Steel, Composition, Material Properties, and Behaviour, Non-ferrous metals.

MODULE II: STONES, BRICKS, CONCRETE BLOCKS (3 hrs)

Stone as a building material, Criteria for selection, Refractory bricks, Concrete blocks, Lightweight concrete blocks, Air Cleaning Bricks, Passive Cooling Ceramics or hydro ceramic bricks, Fly ash bricks, AAC, ECA, CLC blocks, EPS Building.

MODULE III: TIMBER, ROOF & FLOORING MATERIALS (4 hrs)

Timber, Market forms, Industrial Timber, Plywood, Mass timber, laminated timber and glue, laminated timber, Veneer, thermocol, Panels of laminates, Steel, Aluminum and Other Metallic Materials, Composition, Aluminium composite panel, Market forms, Mechanical treatment, Granite, Tile flooring, Cladding of tiles, materials according to types of roof, Elements of a pitched roof, Trussed roof, Steel Truss, Different roofing materials, R.C.C. Roof.

MODULE IV: NONSTRUCTURAL MATERIALS, ACCESSORIES, AND FINISHES (5 hrs)

Materials for doors and windows, Paneled door, Flush door, Collapsible door, Rolling shutter, PVC Door, Review of Nonstructural Materials and Criteria for Selection, Polymer Floor Finishes, Paints, varnishes, enamel, distemper, Tiles, Acoustic Treatment, Drywalls, Anchors, plumbing and sanitary fittings.

MODULE V: EXTERIOR WALL MATERIALS (4 hrs)

Gypsum Area Separation Walls, Insulated Vinyl Siding, Tilt, Up Walls, OVE Framing, ICF Walls, House Wrap Installation Tips, Common Cladding Alternatives, Insulated Wall Panels, WPC sheets, Cinder Block Walls, GFRG panels, Alusion panels, 3D, printed bioplastics.

MODULE VI: NEW GENERATION CONSTRUCTION MATERIALS (4 hrs)

Glass, Ceramics, Sealants for joints, Fibre glass-reinforced plastic, Clay products, Refractories, Composite materials, Types, Applications of laminar composites, Fibre textiles, Geomembranes and Geotextiles for earth reinforcement, Illuminating Cement, Prefabricated panels, Bubble deck slab, Terracotta hollow brick, Cigarette Butts, Recycled cardboard, Sensitile, electrified wood, flexicombo, Richlite, liquid granite, carbon fibre, bendable concrete, concrete canvas, low e glass, transparent aluminum, paper insulation, Concrete, Masonry, Programmable Cement, Strand Rods, Concrete: Admixture, translucent concrete, FRP, Shotcrete, Epoxy resin, and grouting.

MODULE VII: GREEN AND SUSTAINABLE CONSTRUCTION MATERIALS (2 hrs)

Bamboo, Reclaimed wood, cork, mycelium, recycled steel, straw bales, rammed earth, hempcrete, grasscrete, GGBFS, CSF, geopolymer, Silica fume, Fly ash, Red Mud, copper slag, construction demolition waste, waste plastic.

Text Books:

1. Varghese.P.C, "Building Materials", PHI Learning Pvt Ltd, New Delhi, 2012.
2. Rajput. R.K., "Engineering Materials", S. Chand and company Ltd., 2008.

Water supply and Sanitary Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1072	Water supply and Sanitary Engineering	3	1-1-1

Course Objectives

- To enable the students understand about the drinking water, sources, quality, demand, conveyance, water treatment, design of treatment units, Waste water treatment, STP and solid waste collection, treatment along with house plumbing and different sanitary fittings

Course Outcomes

- To understand the principles of treatment units and their design units of drinking water, solid and liquid waste water treatment units; its recycle, reuse or disposal methods along with hands on practice of house plumbing and sanitary fittings

.Course Syllabus

Module 1: Sources, Quality and Demand of water (Three hours)

Importance and necessity of water supply Engineering; Sources of water; Suitability of water; Choice of source; Types of demand Population forecast; Computation of quantity of water; Fluctuation in demand; Factors affecting demand; Impurities in water; Collection of water sample; Physical Chemical and Biological tests; Standards of quality of water

Module 2 Treatment of water (Three hours)

Objectives of water treatment; Location of water treatment plant; Layout of water treatment plant; Basic principles of working of treatment plant; Various stages of treatment of influent water; ; Functioning of Coagulation treatment plant; Sedimentation; Filtration; Disinfection

Practice session (2Hours)

Practice 1: Predict Population from given field data by various methods

Practice II: Calculation of hardness of water from the observed field data

Module 3: Conveyance of Water (Three Hours)

Pumps and selection (out line only); Types of pipes used for conveyance; Pipe joints; Laying of Pipes; Distribution system; Types of valves; Types of Meters; Pipe fittings and fixtures of different materials their advantages and disadvantages; Necessity; Methods to prevent leaks; Measures for conservation of water

Practice session (2hours)

Practice III: Design lay out of pipe system from the overhead tank to different supply terminals.

Practice IV: **Laboratory works:** Determination of pH value, Turbidity and hardness of water sample

Module 4: Sanitation system (Four Hours)

Objective of sewage disposal; Methods of sewage collection; Conservancy system; Water carriage system; Classification of Drains; Sewer section; Sewer joint; Manhole; Flushing tank; Catch basin; Laying of sewer; Appurtenances and its locations; Maintenance of sewer; Procedure for maintenance of sewerage system; Causes of trouble and odor; Sewer cleaning operations; Requirements of maintenance; Functions of each maintenance equipment and tool; Safety measures for sewer-men

Practice session (2hours)

Practice V: Preparation of AUTOCAD layout plans/ sketches of different Water treatment plant, Sewage treatment plant, sedimentation tank, filters, Manholes, Flushing tanks etc.

Practice VI: Design of Septic tank using HEC software

Module 5: Sewage Treatment and Disposal (Two Hours)

Characteristics of sewage; Sampling of sewage; Treatment of sewage; B.O.D. Test, C.O.D. test; Methods of sewage disposal (STP)

Practice Session (2hours)

Practice VII: Design of Manhole from given field data

Practice VIII: Determination of B.O.D. and C.O.D. of waste water sample

Module 6: Plumbing gadgets and Sanitary fittings (Two Hours)

Plumbing tools; Pipes and pipe fittings; Fixing and jointing pipes and accessories; Traps; House drainage plant; Plumbing practice and operations; Safety and precautions; Sanitary fittings

Field Visit: Four hours

Water treatment plant and a sewage treatment plant must be followed by a field Visit report

Module 7: Recycling and disposal of Waste Water and Solid Waste (Three Hours)

Sewage Treatment plant; Different recycling method with respect to quality of waste water; Utilization and management of solid waste;

Seminar: (Two hours)

The students are made groups and topics related to water supply, Municipal/rural waste disposal system, storm water disposal and Sewerage disposal systems

Suggested Reading

1. Text Book of water supply and sanitary Engineering ; S K Hussain : Oxford and IBH
2. Water supply & Sanitary Engg; : Vazirani & Chandola :Khanna Publishers
3. Municipal and Rural Sanitation :Ehlers & Steel :Mc Graw hill book
4. Elements of Public Health Engineering. :K.N.Duggal :S.Chand & Co.

Computer Aided Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1081	Computer Aided Engineering	3	0-2-1

Objective

- This course will help student to use structural scenario, thermal scenario and to do Structural analysis and Thermal analysis of various problems.

Course Outcome

- Create complete finite element models
- Submit and monitor analysis jobs
- View and evaluate simulation results

Course content

Module I: Material and Selection Properties

(6 Hrs)

Property Module, Material Definitions, Linear Elasticity, Large Strain Elasticity, Metal Plasticity, Material Calibration, Material Databases, Section Properties

Practice:

1. Analysis of crack in pressure vessel
2. Cable stayed bridge simulation

Module II: Element Selection Criteria

(6 Hrs)

Solid Element Selection, Structural vs. Continuum Elements, Modeling Bending Using Continuum Elements, Stress Concentrations

Practice:

3. Stress analysis of rail road with wheel.
4. Bike frame structural analysis

Module III: Meshing

(8 Hrs)

Mesh Module, Mesh Elements Mesh Generation Workflow, Local Fine-tuning Quality Checks, Mesh Compatibility, Mesh Convergence, Dependent and Independent Part Instances

Practice:

5. Airplane bracket structural analysis
6. Structural analysis of wind turbine blade

Module IV: Boundary Condition

(6 Hrs)

Step Module, Analysis Steps and Procedures, Output Requests, Output Files
Load Module, Loads and Boundary Conditions, Initial Conditions

Practice:

7. Generative structural analysis applied for design optimization
8. Stress analysis on a backhoe

Module V: Contact

(6 Hrs)

Mechanical Contact Properties, Contact Domain, Contact Formulation and Controls, Handling
Initial Over closures, Contact Output

Practice:

9. Analysis of Economizer.
10. Analysis of Screw Jack

Module VI: Analysis Procedures

(6 Hrs)

Model and Analysis Steps, Analysis Procedures, The static, general analysis procedure, Finding
a converged solution, The Static, Linear Perturbation procedure, Buckle procedure, Frequency
Procedure, The dynamic, explicit analysis procedure, Stability Limit, Analysis Continuation
Techniques

Practice:

11. Steady state analysis of a composite bar.

Module VII: Thermal Analysis

(8 Hrs)

Steady State Heat Transfer, Transient Heat Transfer, Thermal Interfaces, Thermal Stress
Analysis

Practice:

12. Temperature distribution in radiators used in automobiles
13. Oven radiation simulation
14. Steady state thermal analysis of tungsten coil with internal heat generation
15. Thermal analysis of disc brake

Projects

1. Thermal Analysis of PV Solar Pannel

2. Structural and thermal analysis of Green House
3. Structural analysis of Quadcopter.
4. Structural analysis of landing gear.
5. Numerical study on different types of fins.
6. Overhead tank failure analysis.
7. Analysis of Rocket Nozzle
8. Analysis of BAJA SAE
9. Structural and Thermal Analysis of Downdraft Gasifier
10. Structural and Thermal Analysis of Stirling Engine
11. Structural Analysis of Hydraulic Press
12. Structural Analysis of Elevating Conveyor

1. SIMULIA: 3DS Learning Space

Source of reference: 3DS peer learning

Hydraulic Machinery

Code	Course Title	Credit	T-P-PJ
CUTM1090	Hydraulic Machinery	2	1-1-0

Objective

- To emphasize Principle of operation of hydraulic machines and their system design
- To familiarize their huge applications in different industries

Course Outcome

- After completion of the course, the students will have a strong foundation on the pertinent equations to engineering design of the machines for required applications.
- Students will learn to determine performance characteristics of fluid machinery by using various simulation tools

Course content

Module I: Principle of Operation of Hydraulic Machinery

(2 hrs)

Introduction to hydraulic machines: Classification and operation principle, Euler equation for turbo machines: net head developed by pump and Turbines

Module II: Radial and Axial flow pumps

(8 hrs)

Velocity triangle of pumps, effect of inlet swirl on velocity triangles, Constructional features of Centrifugal Pump, design aspect, working principle and efficiencies, work done by the impeller, priming, specific speed, NPSH, effect of swirl on the cavitations, working principle and design aspect of gear oil pump.

Practice:

1. Flow analysis of fluid of Centrifugal pump through Simulia software
2. Flow analysis of gear oil pump through Simulia software
3. Performance Characteristics of Centrifugal Pump through Virtual lab

Module III: Positive displacement Pumps

(3 hrs)

Working principle of Reciprocating Pump, discharge, work done and power requirement, ideal indicator diagram, and slip, characteristic H-Q curve of positive displacement pump

Practice:

4. Performance Characteristics of Double Acting Reciprocating Pump through Virtual lab.

Module IV: Hydraulic Turbine: Impulse Turbine

(6 hrs)

Classification, definitions of heads and efficiencies, Pelton Wheel - Construction and working principle, work done and hydraulic efficiency, design aspects.

Practice:

5. Simulation of Pelton Turbine through simulia software
6. Performance Characteristics of Pelton Turbine through Virtual lab.

Module V: Hydraulic Turbine: Reaction Turbine

(6 hrs)

Reaction turbine (Francis, Kaplan) -Components, working principle, work done and efficiency, draft tube, specific speed, cavitations

Practice:

7. Performance Characteristics of Francis Turbine Simulia software.
8. Simulation of Kaplan turbine through Virtual lab.

Text Books:

Fluid Mechanics with Finite Volume Method

Code	Course Title	Credit	T-P-PJ
CUTM1089	Fluid Mechanics with Finite Volume Method	3	2-1-0

Objective

- To learn To learn fundamentals of computational methods like FVM for solving linear and non-linear partial differential equations related to fluid dynamics
- To emphasizes the basic underlying fluid mechanical principles governing energy transfer in a fluid flow systems with their performances in different field of engineering applications

Course Outcome

- After completion of the course, the students will able to evaluate finite difference/volume schemes on model problems of computational fluid dynamics.
- Students will learn to develop steady state mechanical energy balance equation for fluid flow systems, estimate pressure drop in fluid flow systems

Course content

Module I: Introduction to Finite volume Method

(6 hrs)

Fundamentals of Finite volume methods, different types of finite volume grids, approximation of surface and volume integrals; interpolation methods, Review of governing equations, Classification of governing equations , Staggered and co-located formulation

Practice:

1. 2D mapped Mesh for rectangular pipe
2. 2D mapped Meshing for Aerofoil.

Module II: Grid generation

(6 hrs)

Grid generation, creating, updating and managing meshes, Steady diffusion equation on structured meshes, Unsteady diffusion equation on structured meshes, Linear system solvers, finite volume discretization of steady and unsteady diffusion equation, Finite volume discretization of convection-diffusion problem

Practice:

3. 3D structure mesh of Circular Cylinder
4. 3D unstructured mesh with primes layers for Aerofoil

5. 3D coarse/ medium/ fine sweep mesh for pipe

Module III: Incompressible flow field calculation with finite volume method (5 hrs)

Navier-stokes equation, Discretization of the Momentum Equation: Stream Function-Vorticity approach and Primitive variable approach, Staggered grid and Collocated grid solutions of Navier-stokes equation with finite volume method, boundary condition, Reynolds averaged Navier-Stokes equations.

Module IV: Fluid kinematics (2 hrs)

Types of flow, Continuity equation (in one, two & three dimension steady state fluid flow analysis with finite volume method, velocity and acceleration fields, streamline, streak line, path line, velocity potential function and stream function, Rotation and vorticity.

Module V: Fluid Dynamics with Finite volume method (4 hrs)

Lagrangian and Eulerian Approach, Euler's equation of motion along a stream line for ideal flow, Principle of conservation of energy with finite volume method, Integration of Euler's equation along a stream line, Bernoulli's equation

Practice:

6. Fluid Analysis of Bernoulli's equation: Flow in a contracting pipe through CFD simulation

Module VI: Flow through Pipes (5 hrs)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, Introduction Turbulence modeling through Finite volume method, Hagen Poiseuille Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe.

Practice:

7. Fluid Analysis of Laminar flow in 3D Circular Pipe through CFD simulation
8. CFD Simulation of the Water Flow Passing Through a Converging Pipe.
9. CFD Analysis to determine the frictional losses in the pipe.

Module VII: Flow Measurement (5 hrs)

Flow through small orifice meter, Mouthpiece, Velocity Measurement using Pitot tube, Prandtl tube, Flow measurement in pipes-Flow, Venturi Meter, Flow rate Measurement in channel-Weir and Notches

Practice:

10. CFD Analysis of Fluid flow through Orifice meter
11. CFD Analysis of Fluid flow through adjustable channel
12. CFD Analysis of Fluid flow simulation through Venturi Meter

Text Books:

1. R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications, ninth edition

Theories of Failure Using Finite Element Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1062	Theories of Failure Using Finite Element Analysis	4	2-2-0

Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on Finite Element Analysis concept applicable to Practical conditions.
- To educate the students on Failure Criterion which will be useful for designing Practical problems.
- To educate the students on using 3D Experience Tools for analysis of various mechanical structures and load transmitting elements.

Course Outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy 3D Experience Platform to develop design solutions.
- Students will be able to apply the Concept of Meshing and Failure Criteria to Practical Problems which will lead Economical and safe in Design Aspect.

Course content

Module I Introduction to Finite Element Analysis (FEA) and 3D Experience Platform - (4(T)+5(P)) (9 Hours)

Introduction to FEA: Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence; General Procedure of FEA.

Material failure Behaviour: Stress–Strain Diagrams for Ductile and Brittle Materials. Equivalent stresses for varying orientations, Principal stresses, maximum shear stress, Mohr's circles.

Practice:

1. Introduction to 3D Experience Platform: About the Apps and their Applications from Engineering Point of View.
2. Analysis of Steel Bridge – Simulation using 3D Experience Tool.
3. Tensile Test using Simulation 3D Experience Tool.
4. Stress Strain Curve of a Ductile Material (Mild Steel) using Universal Testing Machine

Module II Mesh Generation and Modeling of Truss Structure (1(T)+ 4(P) (5 Hours)

Mesh Generation and Methods of Meshing and Types of Meshing. Procedure for selecting the method of meshing and type of meshing. Importance and application of Stiffness Matrix for different types of elements and the procedure for getting the results.

Practice:

5. 3D Experience Simulia – Modelling and Meshing of Transmission line tower.

Module III Stresses and Deflection Criteria: (5(T)+ 4(P) (9 Hours)

Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

Stresses (No Derivation): Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination of Bending Stresses, Shear Stress Distribution for Different Sections.

Deflection : Equation of Elastic Curve, Direct Integration Method

Practice:

6. 3D Experience Simulia – Modelling and Finite Element Analysis of Framed Structure subjected Earthquake Loads.

Module IV: Theories of Failure: (2(T)+ 4(P) (6 Hours)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

Practice:

7. 3D Experience Simulia: Bicycle Frame Structural Analysis

Module V: Torsion: (3(T)+ 4(P) (7 Hours)

Torsion: Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

Dynamic Analysis: Fundamentals of Vibration; Evaluation of Natural Frequencies and Mode Shapes (Eigen values and Eigenvectors); Non-linear Analysis, Fatigue Analysis. Structures Subjected to Blast Loads.

Practice:

8. Simulation: Static and Dynamic Analysis of Shaft

Module VI Pressure Vessels (1(T)+ 2(P) (3 Hours)

Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Practice:

9. Simulation: Crack Analysis of Thin walled Pressure Vessels.

Module VII Fatigue and Fracture: (3(T)+ 4(P) (7 Hours)

Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Crack Growth and Stress Intensity Factor.

10. Fatigue Analysis of Crankshaft of Two-Wheeler

Text Books:

1. Strength of Materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced Mechanics of Materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

1. Elements of Fracture mechanics, Prashant Kumar, McGraw Hill Education (India)
2. Engineering Mechanics of Solids, Egor P. Popov, Pearson publication
3. Strength of Materials, R.K.Bansal, Laxmi Publications.

Disaster Preparedness & Planning Management

Code	Course Title	Credit	T-P-PJ
CUTM1907	Disaster Preparedness & Planning Management	2	2-0-0

The overall aim of this course is to provide broad understanding about the basic concepts of Disaster Management with preparedness as a Civil Engineer. Further, the course introduces the various natural hazards that can pose risk to property, lives, and livestock, etc. and understanding of the social responsibility as an engineer towards preparedness as well as mitigating the damages.

Course objectives of the course are i) To Understand basic concepts in Disaster Management ii) To Understand Definitions and Terminologies used in Disaster Management iii) To Understand Types and Categories of Disasters iv). To Understand the Challenges posed by Disasters vi) To understand Impacts of Disasters Key Skills

Outcomes: The student will develop competencies in → the application of Disaster Concepts to Management → Analyzing Relationship between Development and Disasters. → Ability to understand Categories of Disasters and → realization of the responsibilities to society

Syllabus

Module 1: Introduction - Concepts and definitions: disaster, hazard, vulnerability, risks severity, frequency and details, capacity, impact, prevention, mitigation).

Module 2: Disasters - Disasters classification; natural disasters (floods, draught, cyclones, volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

Module 3: Disaster Impacts - Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

Module 4: Disaster Risk Reduction (DRR) - Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Postdisaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

Module 5: Disasters, Environment and Development - Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, landuse changes, urbanization etc.), sustainable and environmental friendly recovery; reconstruction and development methods.

6. Project

(0-0-4) 54Hours

Objective:

- Apply the principles of Remote Sensing and GIS to collect, map and retrieve spatial information.
- Plan, assess and evaluate natural and manmade systems using geospatial models and methods.
- Use geospatial tools and techniques for natural resources planning and management.

Course Outcome:

- Identify specific data and methodologies for effective mapping and evaluation of natural resources.
- Develop geospatial models and tools to address the social and engineering problems
- Design multi-criteria geospatial systems for decision-making process
- Work in a team using geospatial tools and environment to achieve project objectives.
- Pursue lifelong learning for professional advancement

Evaluation System: As per university norms

Remote Sensing and Digital Image Processing

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Remote Sensing and Digital Image Processing	CUAS2020	T+P	4	2-2-0	NIL

Module: I Basic Concept of Remote Sensing (4+6) Hours

Introduction of Remote Sensing: Principles of RS and its Type; Energy sources and Radiation principles, Pixel, DN value, Energy equation; EMR and Spectrum; EMR interaction with Atmosphere; scattering, Absorption, Atmospheric window, Black body radiation; EMR interaction with earth surface features, reflection, absorption, emission and transmission, Spectral signature; Interaction with vegetation, soil, water bodies; Advantage of RS over conventional method, Limitation, Ideal remote sensing.

Practice:

1. Installation of Image Processing software's
2. Download satellite data from GLOVIS / Earth Explorer / Bhuvan etc.
3. Layer stacking
4. LUT and Image Subset
5. Spectral Signature mapping (soil, vegetation, water)

Module: II Digital Image (2+3) Hours

Data acquisition: Procedure, Reflectance and Digital numbers; Intensity, Reference data, Ground truth, Analog to digital conversion, FCCs, TCC, Platforms and sensors; orbits ,types, Resolutions; Image Interpretation; visual- Interpretation keys.

Practice:

1. FCCs and TCC
2. Resolution
3. Image Interpretation

Module: III Satellite Information and Principles (2+3) Hours

Land observation satellites, characters and applications; PSLV, GSLV, Satellite, Platform Types; LANDSAT series; IRS series; IKONOS Series; QUICKBIRD series; Weather/Meteorological satellites; INSAT series, NOAA, Applications, Marine observation satellites; OCEANSAT

Practice:

1. Image filtering and Band ratioing
2. Mosaicking

Module: IV Image Acquisition and Format (2+4) Hours

Digital Image Processing; Export and import, Data formats; BSQ, BIL, BIP, Run length encoding, Image Compression Data products.

Practice:

1. Export and Import
2. Histogram
3. Subset using AOI

Module: V Image Processing (3+4) Hours

IMAGE RECTIFICATION; Pre-processing and Post processing Geometric distortion; sources and causes for distortion, rectification, GCP, Resampling, Image registration; Radiometric distortion; sources and causes, atmospheric correction.

Practice: (Spectral Python and ENVI)

1. Geometric correction
2. Radiometric correction
3. Atmospheric correction

Module: VI Image Classification (4+4) Hours

IMAGE CLASSIFICATION; Classification techniques, types, Supervised and Un-supervised; Principal Component Analysis (PCA); Image Enhancement; Accuracy assessment.

Practice:

1. PCA analysis (spectral Python and ENVI)
2. NDVI, DVI, NDWI calculation
3. Image classification in Spectral angel Mapper
4. MNF Ratoing
5. Supervised Classification(spectral Python and ENVI)
6. Un-supervised Classification(spectral Python and ENVI)
7. Image Enhancement(ENVI)
8. Accuracy Assessment(ENVI)

Module: VI Remote Sensing and Its application (3+4) Hours

Microwave RS and its application; Thermal RS and its application; Optical RS and its application; Sensor and its types.

Practice: Using Spectral Python

1. Application of microwave remote sensing (Structural Trend line mapping)
2. Application of thermal remote sensing and case study(Land surface Temp. estimation)
3. Application of optical remote sensing and case study

Geospatial Technology and its Application

Module I: GIS & Cartography (2+4) Hours

Components of GIS, Types of Data in GIS, Scale Application of GIS, Advantage and limitation of GIS. History and development of Cartography; Definition, scope and concepts of cartography, Characteristics of Map; Categories of maps, Methods of mapping, relief maps, thematic maps.

Practice:

1. **Symbology** (generalization, symbology, and colour effect, change symbology and use

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Geospatial Technology and its Application	CUAS2021	T+P	4	2-2-0	NIL

transparency in creative ways) using GRASS and QGIS

Geo-referencing (Map to Image and Image to Image), Projection, Data base creation: Digitization using Point, line and polygon, Edit, Clip, Intersect, Union, Merge, Join and subset. Attribute table editing

2. **Google Earth** (Convert Shape file to KML Format and KML File to shape file, Import data into Google earth, Bhuvan view, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, overlaying an image into Google earth)

Module: II Data analysis tools(2+4) Hours

Raster data spatial analysis, Network analysis, Vector operations and analysis, Data editing, Primary and secondary data. Data model and data structure, Geodatabase and metadata, GIS data model, Overlay analysis, Network modeling, Data Structure Models, Spatial interpolation; measurement and analysis methods, Advantage and disadvantage

Practice:

1. Linking of spatial and Non-spatial data and queries, Joining tabular data with the feature attribute data, Non-spatial query, Spatial query, Spatial join, Vector based spatial analysis, Raster based spatial data analysis
2. Buffering and Creation of Contour
3. Network Analysis

Module: III Multi-criteria analysis and decision making (3+4) Hours

Principles and elements of multiple-criteria decision making, Classification of Multiple-criteria Decision Problem: Multi-objective Vs Multi-attribute, Decision Alternatives and constraints, Criterion weighting, Decision rules, Multiple-criteria decision making in spatial data analysis.

Introduction to AHP, Basic Principles of AHP, Effect Table, Pair Wise comparison, Consistency, Weightage, performance score, Case studies involving AHP

Practice:

1. Mapping accident locations using Linear Referencing technique.
2. Preparation of raster layers for Multicriteria Analysis
3. Solving a spatial problem using Multicriteria Analysis (Spatial AHP)

Module: IV Digital Elevation Model (DEM) (2+4) Hours

Concept of DEM, Various techniques to generate DEM, Importance of spatial resolution to DEM, Integration of DEM to satellite data, Common derivatives of DEM, Slope, Aspects, TIN, Sources of DEM, Laminations and future of DEM.

Practice:

1. Google earth to DEM, 3D Map preparation, Contour to DEM, TIN and Aspect
2. DEM based surface Hydrology modeling,
3. LiDAR classification, DEM from LiDAR

Module: V Geospatial Technology for Water resources Engineering (3+4) Hours

Watershed, types, divide catchment, command area, stream types, Drainage network, different pattern; morphometric analysis, Bifurcation ratio analysis; Assessment of **Groundwater potential zones** and Groundwater mapping; Site selection for recharge structures, Hydrogeological Mapping GIS applications to ground water studies.

Practice:

1. Mapping of catchment, command area
2. Drainage network analysis
3. Morphometric analysis
4. Mapping of Groundwater potential zones

Module: VI Geospatial Technology for Environmental Engineering (3+4) Hours

Monitoring atmosphere constituents; air pollution, industrial activity, modeling using GIS, Resource development in remote areas, Impacts of anthropogenic activity, Solid Waste management; Water Pollution, Shortest path Identification, Network analysis.

Practice:

1. Air pollution mapping
2. Solid waste management

3. Water pollution

Photogrammetry and Application

Practice Experiments:

3.1 Scale determination from aerial photo

3.2 Aerial photo Interpretation

3.3 Use of Parallax bar and determination of Height from stereo pair

3.4 Satellite DEM and ortho Image generation

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Photogrammetry and Application	CUAS2022	T+P	2	0-2-0 25Hours	NIL

3.5 Primary and additive colour creation

3.6 Stereo test

3.7 Mosaic

3.8 Stereoscopic vision

3.9 Relief displacement

3.10 Analog to digital conversion, Orientation of stereo model and Determination of Height

3.11 Aerial mapping using DRONE

3.12 Mosaicking of aerial Photo

3.13 Correction and rectification

3.14 DTM generation Image correction, Link between GIS and Digital Photogrammetry and Ortho Image generation

LIDAR Remote Sensing and Application

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
LIDAR Remote Sensing and Application	CUAS2023	T+P	2	0-2-0 25Hours	NIL

Practice Experiments:

4.1 Download of LIDAR data

4.2 Layer stacking

4.3 Data Validation

4.4 Georeferencing Technology

4.5 Boresight Calibration - Lidar Data Pre-processing

4.6 Project Coverage Verification - Review Lidar Data against Field Control

4.7 Lidar data errors and rectifications, - processes calibration of Lidar data - artifacts and anomalies - Lidar Error Budget.

4.8 Noise Removal and other sensor-related artifacts - Layer Extraction - Automated Filtering

4.9 Manual Editing and Product Generation – Surface Editing - Hydrologic Enforcement

4.10 Breaklines, Contours, and Accuracy Assessment

4.11 Topographic Mapping, flood inundation analysis, line-of-sight analysis

4.12 Forestry, various types of LIDAR sensors-, vegetation metric calculations - specific application software.

4.13 Corridor mapping system, data processing and quality control procedures.

4.14 Modelling

Hyperspectral Remote Sensing and Application

Practice Experiments:

5.1 Introduction to ENVI, Python and Downloading, Displaying, and Analyzing Hyperspectral Imagery

5.2 Atmospheric Correction of Hyperspectral Imagery.

5.3 MNF rationing from Hyperspectral(EO1)

5.4 Hyperspectral Image Classification Using Spectral Angle Mapper (SAM) & Spectral

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Hyperspectral Remote Sensing and Application	CUAS2024	T+P	2	0-2-0 25Hours	NIL

Feature Fitting (SFF).

5.5 Hyperspectral Imagery Classification Using an Unsupervised Neuron fuzzy System.

5.6 Application of Hyperspectral Imagery in Geological Studies.

5.7 Hyperspectral Signatures & Feature Fitting.

5.8 Hyperspectral Remote Sensing for Agriculture and soil Studies.

5.9 Hyperspectral Remote Sensing for Forestry Applications.

5.10 Hyperspectral Remote Sensing for Urban Studies.

5.11 Mineral identification from Hyperspectral imagery

5.12 Python Programming for Hyperspectral data analysis.

Project

List of Projects :

1. Flood inundation mapping and Risk Evaluation using Geospatial Technology.

2. Landslide Hazard mapping using GIS and RS.

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Project	CUAS2025	Project	4	0-0-4	NIL

3. Land use and Land cover Dynamics using Earth observation Technology.

4. Mangrove change detection study using Multi-Temporal satellite data.

5. Solid waste management and shortest path identification using GIS Technology.

6. Watershed management using GIS Technology.

7. Identification Mineral mapping using GIS and RS.

8. Crop Health Monitoring using Geospatial Technology.

9. Identification of Hydrocarbon Locales using space inputs and Geospatial Technology.

10. Ground water exploration using GIS and RS Techniques.

11. Interlinking of River using GIS Technology.

12. Biomass estimation using Space Technology.

13. Land surface Temperature mapping using RS Technology.

14. Climate Change study using Earth Observation Technology.

15. Erosion and Accretion study of Shorelines and its impact in coastal habitats.

Students take up group projects and deal the following activities during the project. The project Report should contain below gate process.

Step 1: Functional Planning of the project and Objective Identification

Step 2: Literature Review

Step 3: Preparation of Flow chart for Methodology

Step 4: Layer creation and GIS analysis

Step 5: Identifying the possible Risks involved (specific to the project)

Step 6: Report writing

Each student is expected to do an individual project. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

.....

Domain Track Title: CONSTRUCTION PLANNING, MONITORING AND PROJECTMANAGEMENT

Track Total Credits =Theory + Practice + Project = 16 (4- 6 - 6)

Courses Division (list all divisions):

PHASE I.	Study of Drawings and Plan Hours	(0+2+0)	25
PHASE II.	Project Scheduling & Management Hours	(2+1+0)	30
PHASE III.	Quantity Estimation and Equipment Management Hours	(0+1+1)	25

PHASE IV	Site Study and Study on Contract Laws	(2+1+0)	30
Hours			
PHASE V.	Concepts of Quality Control and Checking	(0+1+1)	25
Hours			
PHASE VI.	Site Supervision Project	(0+0+4)	54
Hours			

Domain Track Objectives:

- Students will be able to work with the latest trend of the construction industry needs.
- Understand different methods of project delivery and the roles and responsibilities of all constituents involved in the design and constant process.
- Give the students experience, supervision and direction in recognizing and applying the concepts of project management and construeplanning.

Domain Track Course Outcomes:

- Students will plan various projects relating to advanced building technology with trust.
- Students will be churned as Construction Manager, Project Engineer, Site Supervisor and Project Consultant.
- Maintain and develop the pupils' ability to put their knowledge of theory into practice using forms of construction.

Domain Syllabus:

PHASE I- STUDY OF DRAWINGS 2+2+0

Inputs required completing the project

1. To ensure the student to read about the technical terms in various building drawings.
2. To give hands on practice to the students in preparing blue prints of a proposed construction.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Preparation of Site Map Practice	Theory + Drawing
Preparation of Electrical and Plumbing drawing Practice	Theory + Drawing
Preparation of Bar Bending Schedule and Carpentry drawing Practice	Theory + Drawing
Structural Detailing of building components Practice	Preparation of Building layouts Theory + Drawing
Report Preparation Practice	Review
Field Work Report Practice	Presentation

Phase II: PROJECT SCHEDULING & MANAGEMENT 0+2+0

1. WBS
2. Equipment Scheduling
3. Labour Scheduling
4. Material Scheduling
5. Financial Resource allocation.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Preparation of Functional Planning	Practice
Detail analysis report about the information of an equipment	Practice
Preparation of datasheet of construction labors	Practice
Preparation of materials list required for the project	Project
Scheduling the resources of the project	Project
Report Preparation	Report
Review	Presentation

PHASE III QUANTITY ESTIMATION AND EQUIPMENT MANAGEMENT

- 1 Identify the particular equipment to be used in the construction project they will undertake.
- 2 Prepare plans for economic management by estimating the costs of the total construction works.

To appraise the student with the aspects related to functioning, operation and maintenance of various construction equipment.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
Planning & Selection of Equipment Learning }	Practice (Self-
Economics of Equipment and procurement techniques. Learning }	Practice (Self-
Estimation for total construction cost. Learning }	Practice (Self-
Estimation for total labor and material Learning }	Practice (Self-
Preparation of BOQ. (Lab)	Estimator 2.0
Review	Presentation

PHASE IV SITE STUDY AND STUDY ON CONTRACT LAWS
2+2+0

To learn about the methods of marking layouts and pre construction process.
 To study the various types of construction contracts and their legal aspects and provisions.
 To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
Marking Layouts of proposed plan.	Field work
Preparation of Site Map Practice	Surveying
Design of contract documents Tenders Prequalification-Bidding- Accepting- Evaluation of Tender from Technical Class Room Practice	Theory+
Contractual and Commercial Points of View. Legal Requirements, Insurance and Bonding, Laws Governing Sale, Purchase and Use of Urban and Rural Land-Land Revenue Codes-Tax Laws Class Room Practice	Theory+
Assessment (Lab) Examination	

PHASE-V 0+1+1 CONCEPTS OF QUALITY CONTROL AND CHECKING

Inputs required completing the project

- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check list
- Carryout the field and laboratory tests for quality assessment in construction industry.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
Generation of sample QC inspection Check list for Practice (Self- Learning) Industrial building.	
Generation of sample QC inspection Check list for Institutional building. (Self- Learning)	Practice
Generation of sample QC inspection Check list for Apartment building. (Self-Learning)	Practice
Generation of sample QC inspection Check list (Self- Learning) Road Structures.	Practice
Report Preparation.	Report
Review.	Presentation

PHASE VI SITE SUPERVISION PRACTICES 0+0+2

To demonstrate supervision of concreting task such as form finish concrete structure, complex structure, slip fc concreting and concreting in extreme weather condition.

Supervise, monitor and evaluate performance of subordinates at workplace.

To study about the processes of various stages of construction on the field.

To fulfill the requirement of the INPUTS the candidate has to Learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
------------------------------	-----------------------------

Supervise and monitor the execution of System/shuttering

Carpentry works.	Practice (Self-Learning)
Supervise and monitor the execution of concreting works.	Practice (Self-Learning)
Supervise and monitor the execution of bar bending works	Practice (Self-Learning)
Supervise and monitor the execution of scaffolding works.	Practice (Self-Learning)
Supervise and monitor the daily- Labour works (DPR).	Practice (Self-Learning)
Assessment (Review)	Presentation

REPORT WRITING

Students take up group projects and deal the following activities during the course of their project.

- Functional Planning of the project
- Identification of Objects
- Literature Review
- Preparation of Flow chart for Methodology
- Sequences of construction process
- Identifying the possible Risks involved (specific to the project)
- Result and Discussion
- Conclusion
- Recommendation
- **References**

Software Handling

- 1 Auto CAD
2. Revit Architecture
- 3 M. S. Project
- 4 Primavera
- s Estimator 2.0

Domain Track Title : Architectural and Structural Design

Track Total Credits (0-15-5)

Courses Divisions:

1. Critical thinking and presenting it with digital platform (AutoCAD leads to 3D base) (0-3-0)
2. Scope to enrich by exposing them to BIM modelling (0-5-0)
3. Design and failure analysis of structure (0-5-0)
4. Amalgamation of architecture and civil requirements using Generative Apps (0-2-0)
5. Project(0-0-5)

Domain Track Objectives:

1. To teach the Principles of architectural building design.
2. To familiarise the student with practicing life in construction industry and orient their learnings towards practical application in the field
3. Make a difference with cutting edge technology

Domain Track Course Outcomes:

1. Strong understanding of architectural design and scope for innovative ideas
2. Case study based practical solution with actual site visits/live buildings
3. Modelling of structural elements and failure analysis
4. Time saving estimations/structural calculations using digital tool

Domain Syllabus:

1. Critical thinking and presenting it with digital platform (37.5 Hrs) (AutoCAD leads to 3D base)

- 1.1 Introduction to Architectural Design
- 1.2 The need and scope of with basics of Design Principles
- 1.3 Ergonomic data and its application
- 1.4 Hands-on experience with designing their own house or hostel
- 1.5 The need of digital drive for 2D design expressions
- 1.6 Basics of AutoCAD, Conceptualization of Design: Own House drafting/Hostel
- 1.7 Addition of Creativity and modifying the design
- 1.8 Study the impact of Geological data, climatological data on design
- 1.9 Modification of design based on hydrology, soil, site conditions

- 1.10 Carving out a meaningful design in terms of architecture and structure both
- 1.11 Application of 2D design/ welcoming them in the world of 3D design
- 1.12 Basics of 3D concepts and commands
- 1.13 Practical techniques for saving area/cost
- 1.14 Presenting a wholesome idea before moving to BIM

2. Scope to enrich by exposing them to BIM modelling (62.5 Hrs)

- 2.1 Introduction to BIM modelling
- 2.2 The need and scope of with live examples
- 2.3 Ergonomic data and its application
- 2.4 Applying learnings to a bigger scale hotel/flat scheme/hostels
- 2.5 Incorporation of site factors
- 2.6 Realistic approach road and building bye-laws
- 2.7 The magic of *Importing previous plans & reorient them to achieve larger scale in no time*
- 2.8 Prepare specifications in BIM
- 2.9 Estimating all the quantities in a very short time
- 2.10 Concepts of CATIA
- 2.11 Layer wise calculation for pipelines, electrical ducts, AC units etc
- 2.12 Introducing structural layers for design
- 2.13 Cross check with grid formation, foundation calculation & column orientation
- 2.14 Data and record for 3D design of individual aspects for the next level

3. Design and Failure Analysis of Structure (62.5 Hrs)

- 3.1 Introduction to steel structures. Modeling, Analysis and design of steel truss in as per AISC 360
- 3.2 Linear buckling analysis of structures

- 3.3 Introduction to PEB, Modelling PEB and assigning properties, load cases, design parameters, Analysis and extracting results.
- 3.4 Introduction to lattice steel structures. Modelling, Analysis and design of lattice steel structures.
- 3.5 Reading design results and optimising the steel structure.
- 3.6 Modelling, Analysis and design of portal frame as per AISC 360 and ASCE 07-16
- 3.7 Introduction to nonlinear static analysis. Perform pushover analysis.
- 3.8 Introduction and modelling of composite deck platform
- 3.9 Modelling of deck slab and assigning section properties with releases
- 3.10 Assigning specifications and diaphragm to the structures
- 3.11 Define and calculate seismic and wind loads as per ASCE 07 and ATC hazards
- 3.12 Define load cases and load combinations, Deflection check concept, floor vibration analysis.
- 3.13 Analyse composite structure and extract results.
- 3.14 How to import CAD MODEL, Design and analysis of multi storey residential building based on different loading criteria (based Code on IS456:2000),Creating plate elements and shear walls.
- 3.15 Design and analysis of frame structures based on different loading criteria (based Code on IS456:2000)
- 3.16 Design, analysis of Foundations (Isolated footing and Combined footing based on code IS456:2000)
- 3.17 Design, analysis of structural elements e.g. Beam, column, Slab (one way and Two way) (based Code on IS456:2000 and BS8007)
- 3.18 Error and warning analysis, Report generation

4. Amalgamation of Architecture and Civil Requirements using Generative Apps or Derivatives of Parametric Design (25 Hrs)

- 4.1 Optimisation of steel cost- using permutation & combination of steel/foundation type or small changes in architectural design
- 4.2 Segregated services
- 4.3 Revising PERT/CPM paths
- 4.4 Addition of storage spaces
- 4.5 Façade treatment/modification
- 4.6 Inclusion of basement/parking areas/bunkers
- 4.7 Reduction of construction cost
- 4.8 Site development and slope calculation (in brief)
- 4.9 Mitigating hydrological impacts on difficult sites

Session Plan for the Entire Domain:

1. Critical thinking and presenting it with digital platform (37.5 Hrs)

Session 1: Architectural Design Basics

<https://www.youtube.com/watch?v=k4dVgbuxBAw>

Session 2: Stages of Architectural Design

<https://www.youtube.com/watch?v=pv-O5VdVjdM>

Session 3: Fundamentals of Building Planning

<https://www.youtube.com/watch?v=LIY7f6kK3Jk>

Session 4: Visualisation of plans

Session 5: Basics of AutoCAD

<https://www.youtube.com/watch?v=hO865EIE0p0>

Session 6: Making a simple floor plan in AutoCAD

<https://www.youtube.com/watch?v=-iX-ZyvOiQA>

Session 7: Creative Design

<https://www.youtube.com/watch?v=YHNYaQzsRf8>

Session 8: Creativity in building design (sample/live case analysis)

<https://www.youtube.com/watch?v=MDtIcrDAPFk>

Session 9: Design is a thinking process

<https://www.youtube.com/watch?v=vmHoGicPQQQ>

Session 10: Modification and correction

Session 11: Adding variables like: Climatology, soil data and hydrology

Session 12: Arriving at a creative and unique solution

Session 13: Printing the ideas in brain

Session 14: Basics of 3D design

https://www.youtube.com/watch?v=MZ89_ozNWIA

Session 15: Exploring various platforms to express the idea in VR

https://www.youtube.com/watch?v=il7m1Ta7_eQ

Session 16: Detailing in 3D

Session 17: Practical techniques for saving area/cost

Session 18: Hands on practice for optimisation of design

2. Scope to enrich by exposing them to BIM modelling (62.5 Hrs)

Session 1: A thorough introduction to BIM

<https://hmcarchitects.com/news/building-information-modeling-benefits-for-architecture-and-construction-2019-06-05/>

Session 2: BIM's extent and various applications

Session 3: Case study and live applications/examples

<https://www.linkedin.com/pulse/200612engineeringtemplateexample-mansukim/?trackingId=tW9ftWdlwLMES034UU2meg%3D%3D>

Session 4: Introduction to bigger scale problems based on previous sample design

Session 5: Time saving factor using 3D skills

<https://www.linkedin.com/pulse/200612engineeringtemplateexample-mansukim/?trackingId=tW9ftWdlwLMES034UU2meg%3D%3D>

Session 6: Specification generation in BIM

<https://www.cadcr.com/bim-and-specifications-writing-the-great-disconnect/>

Session 7: Estimation of quantities

<https://estimationqs.com/bim-vs-bills-of-quantities-3d-model-quantity-takeoff/>

Session 8: 5D estimation and BIM/adding another dimension to BIM

<http://biblus.accasoftware.com/en/perspectives-on-5d-bim-the-fifth-dimension-of-bim-linked-to-construction-estimate/>

Session 9: Layer of services: water supply and Sanitation

Session 10: Calculation and Fitting nitty-gritty

Session 11: Electrical Layout and BIM

https://www.youtube.com/watch?v=SSkl_vT7cCQ

Session 12: Electrical Layout: drawing and estimation

<https://www.youtube.com/watch?v=r5p3LOqPMiM>

Session 13: AC layout ducting (only introduction)

Session 14: Centreline plan and Cross check with grid formation

<https://www.youtube.com/watch?v=dPHYi-fYcnk>

Session 15: Reorientation of columns and beams to form a strong frame

<https://www.youtube.com/watch?v=nKZy4MB-0zY>

Session 16: Cross check in 3D-Quick Revit analysis/SAP

<https://www.youtube.com/watch?v=pIRqWvD0Wqw>

Session 17: Basics of foundation calculation & column

<https://www.youtube.com/watch?v=SUf5h2ulf2U>

Session 18: Report generation

Session 19: Presentation with achievements in project

3. Design and Failure Analysis of the Structure

Session 1: Introduction to Steel Structures, Various types of trusses, Purlins, girders and Sag Rods.

<https://youtu.be/dZctrAnZeI>

Session 2: Modelling of Steel Truss in STAAD as per AISC 360

Session 3: Analysis and Design of Steel Truss in STAAD as per AISC 360

Session 4: Introduction to Linear Buckling Analysis

Session 5: Perform Buckling Analysis for I Shape Column

Session 6: Perform Buckling Analysis for I Shaped Steel Girder

Session 7: Introduction to Pre-Engineered Buildings (PEB)

<https://youtu.be/N024hmP2PYU>

Session 8: Modelling of PEB Shed and Assigning Properties

<https://youtu.be/T2AafFV-KS0>

Session 9: Define Load Cases and Combinations

Session 10: Calculation and Assignment of Dead and Live Loads as per IS 875 and NBC 2016

Session 11: Assignment of Wind Loads on PEB Shed as per the Indian Standards

Session 12: Assigning Analysis and Design Parameters with Extracting Design Results

Session 13: Introduction to Lattice Steel Truss Structures

Session 14: Practical Reference for a Lattice Steel Truss Structure

Session 15: Modelling of Lattice Steel Truss Structure

Session 16: Analysis and Design of Lattice Steel Truss Structure

Session 17: Reading Design Results and Optimizing the Steel Structure

Session 18: Detailed Explanation of Wind Loads as per ASCE07-16

Session 19: Modelling of Portal Frame as per AISC 360 and ASCE07-16

Session 20: Analysis and Design of Portal Frame as per AISC 360 and ASCE07-16

Session 21: Introduction to Non Linear Static Analysis i.e. Pushover Analysis

Session 22: Perform Pushover Analysis for a Steel Frame in STAAD Pro.

Session 23: Introduction to Steel and Composite Buildings

Session 24: Introduction to Cold Formed Steel Structures, Introduction and Modelling of Composite Deck Platform

Session 25: Modelling of Deck Slab and Assigning Section properties with Releases

Session 26: Assigning Specifications, Releases and Diaphragm to the Structure

Session 27: Define and Calculate Seismic and Wind Loads as per ASCE 07 and ATC Hazards

<https://youtu.be/tV3l7SDmiwk>

Session 28: Define Load Cases and Load Combinations

Session 29: Define Analysis and Composite Structure Design Commands

Session 30: Analyzing and Designing the Structure as per AISC 360 for Composite beams

Session 31: Floor Vibration Analysis and Generation of Design Report

Session 32: Deflection Check Concept i.e. DJ1 and DJ2 Design Command

Session 33: Introduction to Plate Girders

Session 34: Design of Plate Girders as per AISC 360

Session 35: Introduction to Linear Cable Analysis and Cable Supported Structures

Session 36: Linear Cable Analysis of a Guyed Tower in STAAD Pro.

Session 37: Introduction to Lifting Arrangement and Basic Modelling of Suspended Arrangement

Session 38: Advanced Cable Analysis and Extraction of the Results

Session 39: Modelling of Steel Structure Platform and defining Load Cases, Combination

<https://youtu.be/YBWPn5jmMGs>

Session 40: Defining Properties, Analysis and Design Parameters

Session 41-42: How to import CAD MODEL, Design and analysis of multi storey residential building based on different loading criteria (based Code on IS456:2000)

<https://youtu.be/xb2I5-89O28>

<https://youtu.be/uGZjESwS6z0>

Session 43: Creating plate elements and shear walls.

<https://youtu.be/YKNfjEmN5O4>

Session 44-45: Design and analysis of frame structures based on different loading criteria (based Code on IS456:2000)

https://youtu.be/_I1qYBIspbk

Session 46-47: Design, analysis of Foundations (Isolated footing and Combined footing based on code IS456:2000)

<https://youtu.be/be20IIMaRS4>

Session 48-49: Design, analysis of structural elements e.g. Beam, column, Slab (one way and Two way) (based Code on IS456:2000 and BS8007)

<https://youtu.be/NXP2cmL8fmY>

<https://youtu.be/-17O4ZSZ9VY>

<https://youtu.be/XueRfUsznhI>

<https://youtu.be/8BX8wDuuVFk>

<https://youtu.be/7hguBoqCajE>

<https://youtu.be/GTDCjEtXI60>

Session 50-51: Error and warning analysis, Report generation

4. Amalgamation of Architecture and Civil Requirements using Generative Apps or Derivatives of Parametric Design (25 Hrs)

Session 1: Variable analysis using BIM: plan, grid, column numbers and even reinforcement detailing

Session 2: Revising estimations in no time

Session 3: Achieving cost effectiveness

Session 4: Checking services' paths-Layering of services

Session 5: Addressing the coinciding issues with services

Ex: AC duct and electrical conduits

Session 6: Visual realisation of reinforcement in all the elements

Session 7: Arriving on shortest timeline-Revising PERT/CPM

Session 8: Exploring possibilities for additional spaces in design

Ex: storage, intermediate water tank, parking area

Session 9: Façade treatment

<https://study.com/academy/lesson/facade-in-architecture-definition-design.html>

Session 10: Dynamic façade design

<https://www.homedit.com/cool-building-facades/>

Session 11: Site development –Phase wise

Session 12: Site development – After completion year wise

Session 13: Scope for future addition/intervention by developer

Session 14: Estimation of effective saving- in terms of time/money/gain

List of Projects:

1. Small scale (initial) with interior

1.a. Hostel room

1.b. Individual home

1.c. Duplex bungalow

1.d. Shop

2. Live/ ongoing Project/Turn key basis

2.a. Multi storey building

2.b. Hospital

2c. Hostel

2.d. Office Building

3. Highway geometry design

4. Design and analysis industrial ware house

5. Design and analysis of auditorium with proper load calculation, load cases, load combination based on code (IS 456:2000 and BS 8007).

6. Design of bridge deck slab

1. Gate Process for Project

1. Gate 0: Project Identification

2. Gate 1: Planning

3. Gate 2: Modelling

4. Gate 3: Design and simulation

5. Gate 4: Documentation

BACHELORE OF SCIENCE IN CLINICAL MICROBIOLOGY

2021

SYLLABUS

Preface: Clinical Microbiology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as Collection of samples like body fluid, tissue, and blood and diagnoses them. It also covers micro-organism screening, sterilization of laboratorial environment and equipments, Antibiotic sensitivity tests.

Clinical Microbiologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Microbiological Laboratory.

With adequate knowledge and experience, Clinical Microbiologist having +2 Sc with biology qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Clinical Microbiology.

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre/ government or private organization, equipped with modern microbiology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typewritten and bound form.

Degree: The degree of B. Sc. in Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit load of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Clinical Microbiology (B. Sc. CMB)**” from Centurion University.

BACHELOR OF SCIENCE IN CLINICAL MICROBIOLOGY

NOTE: Along with the School core and Discipline core subjects, the students need to opt for AECC Courses, Skill/ Domain/ Elective courses and value- added courses from the University Basket, as per the requirement by the University.

BASKET I

School Core Courses

SC1- CUTM1708- Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+ Practice	2-1-0	Fundamental Science

Course Objective

To identify different types of cells and describe their functions.

To identify the organelles of a typical cell and describe their functions.

To identify the major components of the integumentary system and describe their functions.

To identify the major structures of the skin and describe their functions

To identify the major components of the skeletal system and describe their functions.

To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

Use anatomical terminology to identify and describe locations of major organs of each system covered.

Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.

Describe the interdependency and interactions of the systems.

Explain contributions of organs and systems to the maintenance of homeostasis.

Identify causes and effects of homeostatic imbalances.

Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-I (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-II (13 Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Module-III (15 Hours)

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive

system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.

3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, PublisherSatya

SC2-CUTM1729- Cell Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell Biology	CUTM1729	Theory+ Project	3-0-1	Fundamental Science

Course Objective

<p>.Determine the parts of the cell membrane and the cell wall</p> <p>Distinguish the types and mechanism of mutation</p> <p>Compare and contrast the events of cell cycle and its regulation</p> <p>Understand the dynamic character of cellular organelles</p>
--

Course Outcome

<p>Describe the fundamental principals cellular biology</p> <p>Develop a deeper understanding of cell structure and how it relates to cell functions.</p> <p>Understand how cells grow, divide, and die and how these important processes are regulated.</p> <p>Understand cell signaling and how it regulates cellular functions. Also how its dis- regulation leads to cancer and other diseases.</p>

Course Outline

Module –I (12 Hr)

An Overview of Cells: History, Cell theory, Structure and Function of Cell and its Organelles: Biological membranes - Nucleus - Nuclear envelope, Nucleolus, Mitochondria, Chloroplasts, Lysosomes, Gloxysomes and Peroxisomes, endoplasmic reticulum, ribosomes, Golgi complex (Structural organization, function, marker enzymes of the above organelles), Cell types: prokaryotes vs. eukaryotes; from single cell to multi-cellular organism; Different molecules of cell- water, salt and

mineral ions etc.

Module- II (14 Hr)

Cell cycle and its regulation, Cellular communication and cell mobility: Cell cycle: G₀/G₁, S, G₂ and M phases (Cell Division: Mitosis, meiosis and cytokinesis); regulation of cell cycle; cell adhesion and roles of different adhesion molecules, gap junctions, Extra- Cellular Matrix (ECM), Cell-cell interaction and cell- ECM interaction, The cytoskeleton, Microtubule- based movement and microfilament -based movement.

Module-III (14 Hr)

Cell signaling, Programmed Cell Death (Apoptosis) and Cancer: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors (G-PCR), Tyrosine Kinase, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component systems, bacterial chemotaxis, Intrinsic and Extrinsic apoptotic pathway, Caspase enzyme, Biology and elementary knowledge of development and causes of cancer; Tumor viruses, Oncogenes and tumor suppressor genes.

Suggested Readings:

1. The Cell a Molecular Approach (4th Edition) by Cooper & Hausman
<https://www.thebiomics.com/books/cell-biology/cell-molecular-approach-cooper-and-hausmn-4th-ed.html>
2. Molecular Biology by Friefelder David, Publisher Narosa www.alibris.com/Molecular-Biology-David.
3. Introduction to Cell biology by John K Young, World Scientific publishing company www.overdrive.com/.../introduction-to-cell-biology
4. Introduction to biology, 3rd tropic edition by D G Maackean www.amazon.com/Introduction-Biology-D-G-Mackean/.

SC3-CUTM1730-Basic Medical Instrumentation and Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Medical Instrumentation and Techniques	CUTM1730	Theor+Practice	2-2-0	Fundamental Science

Course Objective

To learn the principle, instrumentation & application of Microscopy

Principle, instrumentation & application of Centrifugation

Principle of Spectroscopy

Course Outcome

After completion of the course the student will be efficient in handling the microscopy equipment's.

They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module -I (12 hrs)

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase–contrast microscopy, fluorescense microscopy, polarization microscopy, electron microscopy (Scanning and Transmission); Bacterial Colony Counter (Principle and working). Laminar Air Flow (Principle and working technique).

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Module- II (14 hrs)

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry. **Centrifugation:** Principle; Preparative, Analytical, Density gradient centrifugation. **Cytometry:** Types, Flow cytometry and its applications.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Module- III (14 hrs)

Microtomy: Sectioning, Staining. Application, Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Principle, working and uses of: Incubator, Hot air oven, Autoclave.

Practice: Demonstration of Auto/ Semi auto Analyzer; Working procedure of microtome, Incubator, Hot air oven, autoclave and others

Suggested Readings:

1. Wilson K and Walker J. (2010). Principles and Techniques of Biochemistry and Molecular Biology. 7th Ed., Cambridge University Press.
(e-Book link: <https://www.pdfdrive.com/principles-and-techniques-of-biochemistry-and-molecular-biology-e174866056.html>)
2. Nelson DL and Cox MM. (2008). Lehninger Principles of Biochemistry, 5th Ed., W.H. Freeman and Company.
(e-Book link: <https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-d164892141.html>)
3. Willey MJ, Sherwood LM & Woolverton C J. (2013). Prescott, Harley and Klein's Microbiology. 7thEd., McGraw Hill.
(e-Book link: <https://www.pdfdrive.com/prescott-harley-and-kleins-microbiology-7th-ed-e188166539.html>)
4. Labs for Life
(e-source link: <http://labsforlife.in/InstructionalVideo.aspx>)

(e-Book link- <https://books.google.co.in/books?id=z9SzvsSCHv4C&printsec=frontcover&dq=instrumentation&hl=en&sa=X&ved=2ahUKEwjipqrO347qAhUjwzGHRomCNUQ6wEwAHoECAIQAAQ#v=onepage&q=instrumentation&f=false>)

SC4-CUTM1732- Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry	CUTM1732	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

<p>To understand the concept of metabolism of carbohydrates</p> <p>To understand the significance of amino acids, proteins</p> <p>Use of enzymes in enhancing metabolic reactions</p> <p>Role of lipids</p>

Course Outcome

After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.

Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.

They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module- I

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzyme NAD, metal cofactors, Classification of enzymes.

Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis, and Induced Fit hypothesis.

Enzyme inhibition, enzyme kinetics.

Diagnostic value of serum enzymes: Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Practice: Study of effect of temperature on enzyme activity
Study of effect of pH on enzyme activity

Module- II

Carbohydrates: Biomedical importance & properties of Carbohydrates, Classification,

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses. Stereo isomerism of monosaccharides, epimers, Haworth projection formulae for glucose; chair and boat forms of glucose.

Metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, Components of respiratory chain, energy relationships during cell respiration, types of respiration. HMP shunt & Gluconeogenesis, regulation of blood glucose level.

Practice: Estimation of Glucose in urine
Estimation of Glucose in blood

Module- III

Amino acids: Classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism, Classification, biomedical importance.

Metabolism: Ammonia formation & transport, Transamination, Decarboxylation, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids.

Practice: Estimation of Protein in urine
Estimation of Protein in blood

Module- IV

Chemistry of Lipids & their related metabolism: Classification, biomedical importance, essential fatty acids. Brief outline of metabolism: Beta oxidation of fatty acids, fatty liver, Ketogenesis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus: its types, features, gestation diabetes mellitus, glucose tolerance test, glycosuria, Hypoglycaemia & its causes.

Practice: Estimation of Bile pigment in urine
Estimation of Bile salts in urine

Suggested Readings:

SC5-CUTM1715 -Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

Analyze body fluid for diagnosis of disease
Analyze waste product for diagnosis of disease
Understanding DOT Policy
Understand Physiological disorder and infectious disease
Analysis of pregnancy

Course Outcome

Able to collect pathological specimen
Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
Preservation and processing of pathological sample.
Identification of Parasites
Analysis of Infertility disorder

Course Outline

Module-I (16

Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, BJP, Bile Salt and Bile pigment, Chemical Examination of Urine - Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and BJP Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: Microscopic finding of stool, Morphology of stool parasite

Lab:- Stool Analysis: Collection and physical examination, Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain), Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:- Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine Examination

Synovial Fluid: Collection and Routine examination

Pleural Fluid: Collection and routine examination

Pericardial Fluid: Collection and routine examination

Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan

4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC-6 - CUTM1736- Immunology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology	CUTM1736	Theory + Practice	3-2-0	Fundamental Science

Course Objective

Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.

Clinically relevant serological analysis for deeper understanding of antigen- antibody interaction.

Course Outcome

Application of Immunology in disease diagnosis.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. **Antigens:**

Types of antigen, Epitope. Biological Classes of antigens, Superantigens.

Immunoglobulins: Antibody structure, Immunoglobulin classes.

Practice: Collection of blood sample by vein puncture
Separation and preservation of serum

Module-II

Complement System: Principal pathways of Complement activation, Quantitation of Complement (C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests.

Serological Reactions.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test,
Rheumatoid factor (RF) test
Precipitation in agarose gel
Performing Ouchterlony Double diffusion test
Demonstration of SDS-PAGE
Demonstration of ELISA
Demonstration of Western
blotting

Module-III

Immune Response: Types of Immune response, Humoral immunity, Cell-mediated Immune Responses, Cytokines, Immunological tolerance.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity-Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity.

Suggested Readings:

SC-7- CUTM1737- Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	CUTM1737	Theory + Project	3-0-1	Fundamental Science

Course Objective

To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.

Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that , can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course Outcome

Conduct independent work in a laboratory.
 Read scientific articles and gain a critical understanding of their contents.
 Give a spoken and written presentation of scientific topics and research results.
 Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Course outline

Module I

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell. Evolution and Molecular structure of cell and its organelles. Types of cells. Including different kinds of Prokaryotic and eukaryotic cells, Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles,

Cell cycle, Cell membrane and its structure (fluid-mosaic model). Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Project Topic: Causes, types and molecular mechanism of human cancer.

Module II

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells: Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, Transferring information from DNA to RNA, Synthesis of RNA, Translation RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes.

Project Topic: Tumor suppressor gene and oncogene.

Module III

General Concept on: a. Regulation of the Gene Expression b. Regulating the Metabolism: The Lac-Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions.

Project Topic: Human Genome Project.

Module IV

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell, Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA (Transcription), RNA polymerase, Initiation and Termination of Transcription, Post and co- transcription modification of the RNA. Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of r-RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

Project Topic: Molecular basis, types, causes and a case study of the effects of DNA mutation.

Suggested Readings:

1. Molecular Biology of the gene (7th Ed) by James D. Watson.
E-booklink-<https://www.pdfdrive.com/molecular-biology-of-the-gene-e158278674.html>
2. Genes XII by Lewin's.

E-book link- <https://www.pdfdrive.com/lewins-genes-xii-e168024578.html>

3. Molecular cell biology (5th Ed) by Lodish H.

E-book link- <https://www.pdfdrive.com/molecular-cell-biology-lodish-5th-ed-e15674865.html>

BASKET II

Discipline Core Courses

DC-1-CUTM1731-Haematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Hematology	CUTM1731	Theory+Practice	3-2-0	Basic Medical science

Course Objective

The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.

Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome

Differentiate various laboratory test findings with their associated clinical conditions.

Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.

Describe the various components of blood, their functions, and roles in various disease states.

To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Collection of blood for the investigations.

Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.

To learn about tests carried out for hematological investigations.

To be able to carry out blood sampling.

Course Outline

Module- I (8 Hrs)

Scope & importance of Hematology, important equipment and chemicals, various test performed in Hematology laboratory, Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in hematology- Microscope, Blood Cell

counter

, Sahli's Apparatus.

Module- II (12 Hrs)

Identify and/or confirm the composition & function of various red blood cell inclusions. Function of normal cellular components. Formation of blood, Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis. Anticoagulants: definition, Uses, Different types of Anticoagulants., mode of action, their merits and demerits. Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart.

Demonstration the normal and abnormal morphology of different blood cells.

Module- III (10

Hrs) Hematological

Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
3. Megaloblastic Anemia: Causes, Lab findings.
4. Hemolytic Anemia: Definition, causes, classification & lab findings.

Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black

Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Collection of blood by different methods

Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Module- IV (10 Hrs)

Collection of blood, Methods & Preparation of Stains and Smears

Practice:

Cleaning and drying of glass and plastic ware, Collection of venous and capillary blood, cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents,

Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (Sahli's method and cyanmethaemoglobin method).

Module- V (10 Hrs)

Routine Hematological Tests:

Complete blood cell count, ESR, Differential Leukocyte count, Total leukocyte count, Bleeding time and Clotting time, Blood Grouping and Rh Typing.

Practice:

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count. Determination of ESR by wintrobes, Determination of ESR by Westergren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Bleeding time and Clotting time, Blood Grouping and Rh Typing

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

DC-2- CUTM1733- Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Microbiology	CUTM1733	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To know various Culture media and their applications and also understand various physical and chemical means of sterilization

To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus

To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.

Understanding the details of microbial cell organelles.

Provides knowledge on growth of microorganism.

Provides knowledge Culturing microorganism.

Course Outline

Module –I (14 Hours)

Microbiology: Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms. Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve

Practice:

1. Handling of Microscope
2. To learn techniques for Inoculation of bacteria on culture media.
3. To isolate specific bacteria from a mixture of organisms.

Module-II (11 Hours)

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:

1. To demonstrate simple staining (Methylene blue)
2. Bacterial identification: To demonstrate reagent preparation and procedure for Gram stain, Z-N staining, Capsule staining, Demonstration of flagella by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure

Module-III (15 Hours)

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice:

1. Biochemical tests for identification of bacteria
2. Preservation of stock cultures of bacteria
3. Antibiotic susceptibility test

Suggested Reading:

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. Microbiology by Prescott
3. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
4. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
6. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
7. Text book of Medical Microbiology by Gruckshiank

DC-3- CUTM1734 - Medical Law and Ethics

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Law and Ethics	CUTM1734	Theory+ Project	2-0-1	Fundamental Science

Course Objective

The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients. It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the laws relates to medicine.
- The law of negligence in the context of the provision of healthcare, Legal and ethical issues surrounding end and beginning of life decisions,
- The maintenance of professional standards in the healthcare profession, and
- The role of policy in the formation of law as it relates to medicine.

Course Outline

Module-1

1. The Indian medical council act, 2. Medical council of India (functions),3. Functions of state medical councils, 4. The declaration of Geneva

Module-2

1. Duties of medical practioners 2. Regarding red cross emblem 3. Professional secrecy 4. Privileged communication.

Module-3

1. Professional negligence 2. Medical mal occurrence 3. Contributory negligence 4. Criminal negligence

Module-4

1. Corporate negligence 2. Ethical negligence 3. Precautions against negligence 4. difference between professional negligence and infamous conduct.

Module-5

1. Malpractice litigation involving various specialities 2. Prevention of medical negligence 3. supreme court of India guidelines on medical negligence 3. The therapeutic misadventure 4. Vicarious liability

Module-6

1. Products liability 2. medical indemnity insurance 3. Medical records 4. Consent in medical practice

Module-7

1. Euthenasia 2. Deaths due to medical care 3. Malingering

Text books

1. Medical Law and Ethics by Shaun D Pattinson, 5 th edition, 2017.

DC-4 - CUTM1713- Systemic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	CUTM1713	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Explain the methods of microorganism's control, e.g. chemotherapy & vaccines.

Course Outline

Module –I (9

Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Cocci (Gram Positive): Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp. Anaerobic: Peptococcus spp., Peptostreptococcus spp., Villanelle spp., Acidaminococcus spp, and others. Cocci (Gram Negative): Aerobic: Neisseria spp., Anaerobic Gram-negative bacteria.

Practice: Culture techniques
Culture media
Identification of *Staphylococcus* sp.

Module -II (12 Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of : Aerobic non-spore forming gram positive bacilli: Bacillus spp., Corynebacterium spp., Actinomyces, Nocardia spp., Mycobacterium spp.-pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and Hansen's bacilli and others. Anaerobic: Bifidobacterium spp., Eubacterium spp., Actinomyces spp., Propionebacterium, Clostridium spp., and others.

Practice: Preparation of media
Media used for biochemical identification & their uses
Identification of *Mycobacterium* sp.

Module -III (18 Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of Gram- Negative Bacilli Aerobic: Enterobacteriaceae, Citrobacter spp , Edwardsiella spp ,Enterobacter spp , Escherichia coli, Ewingella , Hafnia spp., Klebsiella spp.,

Morganella spp., Proteus spp., Providencia spp., Salmonella spp., Serratia spp., Shigella spp., Yersinia

spp., *Vibrio* spp., *Pseudomonas* spp., *Chlamydia* and *Chlamydia*, *Brucella* spp., *Bordetella* spp., *Haemophilus* spp., *Mycoplasma* spp.

Practice: Culture methods & identification of common bacteria on media.
 Antibiotic sensitivity testing.
 Identification of *Escherichia*, *Klebsiella*, *Proteus* sp.

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Microbiology (7th Ed)- by Prescott
3. Medical Microbiology- by David Greenwood et al (Elsevier)
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Medical Microbiology- by Kayser et al
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-5- CUTM1735- Systemic Virology & Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Virology & Mycology	CUTM1735	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic Virus and fungus in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Explain the methods of microorganism's control, e.g. chemotherapy & vaccines.

Solve problems in the context of this understanding.

Course Outline

Module-1 (18 Hours)

Structure, cultivation and properties of Viruses. Classification of Medically Important Viruses. Genetic material, Organ system involved, Transmission.

Replication of Viruses, Virus Host Interaction, Bacteriophage. Epidemiology, Pathogenesis, Treatment, Prevention and Control of Viral Diseases (DNA Viruses) *Adenoviridae*, *Poxviridae*, *Herpes viridae*, Epidemiology, Pathogenesis, Treatment, Prevention & Control of Viral Diseases (RNA Viruses) *Orthomyxoviridae*, *Paramyxoviridae*, *Picornaviridae*, *Corona viridae*, *Rhabdoviridae*, *Retrovirida*.

Practice:

1. Demonstration of virus isolation techniques.
2. Demonstration of cell and tissue culture techniques used for virus isolation
3. Serological techniques used in diagnostic virology

Module-2 (7 Hours)

Mycology, Classification, Scope and medical importance of fungi. General Structure of Fungus and Yeast. Laboratory Methods of Fungal Isolation and Identification. Superficial and Cutaneous Mycoses. Subcutaneous Mycoses. Systemic Mycosis caused by Endemic Dimorphic Fungal Pathogens, Opportunistic Mycoses

Practice:

4. Organization of laboratory – Mycology
5. Preparation of different media, chemical and stain for fungus study
6. Microscopic examination of saprophytic molds / Collection of agar plates for exposure

Module-3 (15 Hours)

Pathogenic Group of Fungi: Opportunistic pathogens, True pathogens: *Blastomyces dermatitidis*, *Cooccidioides immitis*, *Paracoccidioides brasiliensis*, *Histoplasma capsulatum*. A. Dermatophytes: *Mycrosporum* (Hair, skin), *Tricophyton* (Skin, hair, nail), *Epidermophyton* (Skin, nail), *Aspergillus spp.* Dermatomycosis (*Candida albicans*, *Cryptococcus neoformans*)

Practice:

7. Slide culture technique for Superficial infections
8. Culture and identification of yeasts
9. Processing of specimens in Mycology lab

Suggested Reading:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Fundamental medical mycology / Errol Reiss, H. Jean Shadomy, and G. Marshall Lyon III
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-6- CUTM1721- Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	CUTM1721	Theory+ Project	2-0-1	Fundamental Science

Course Objective

To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.

Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

Students can understand the ethical and philosophical issues associated with research in education

This study provides knowledge on various modes of presenting and disseminating research findings.

Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

Provide learning opportunities to critically evaluate research methodology and findings.

Enable students to be reflexive about their role and others' roles as researchers.

Course Outline

Module- I (9

Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Module- II (8 Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III (14 Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire. Interviewing. Tabulation, Coding, Editing. Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections.

Writing a review on Virus culture

Literature survey on Covid-19

Suggested Readings:

1. Research Methodology by C.R. Kothari (3rd Ed)
2. Research Methodology In the Medical & Biological Sciences by Petter Laake et al.
3. Essentials of Research Design and Methodology by Geoffrey Marczyk et al.
4. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO- WIPRO
5. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
6. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research

Council.

7. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

DC-7 - CUTM1738- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	CUTM1738	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

Understanding the concept of Biochemical analyzing instruments both automated and semi automated.

To learn about how to Care & Maintenance of Equipment & Chemicals.

To learn normal ranges of biochemical components in our body.

Clinically relevant biochemical analysis for deeper understanding of all biochemical components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.

To learn about Various tests carried out for biochemical analysis & Hormone investigations.

To learn about safety precautions and handling the equipment in biochemical laboratory.

Course Outline

Module- I (12 Hrs)

Chromatography: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC

Practice: Handling the Equipments and chemicals used in biochemical laboratory.

Module-III (12 Hrs)

Electrophoresis: Moving boundary, Zone (Paper Gel) electrophoresis, Immuno electrophoresis, Isoelectric focusing, 2-D electrophoresis. Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, ESR

Practice: Estimate Erythrocyte sedimentation rate

Module- III (26 Hrs)

Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Method of estimation and assessment for: a. Glucose tolerance test. Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Renal calculi, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice: Glucose Tolerance Test, Clearance Test, Gastric juice collection, Gastric Analysis, Kidney Function Test, Liver Function Test, Lipid Profile, Renal calculi, Hormone Test

Suggested readings:

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H.Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book
4. Principle of Biochemistry by Lehninger
5. Biochemistry by Voet&Voet
6. Biochemistry by Stryer
7. Biochemistry of Metabolic process by Asim Kumar Roy, Kalyani Publication
8. Ebook link-
https://www.cartercenter.org/resources/pdfs/health/ephti/library/lecture_notes/health_science_students/medicalbiochemistry.pdf
9. Ebook link-
https://books.google.co.in/books?id=Je_pJfb2r0cC&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
10. Ebook link-
https://books.google.co.in/books?id=csPcDAAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
11. Ebook link-
https://books.google.co.in/books?id=2FkXAwAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false

DC-8- CUTM1740- Public Health Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Public Health Microbiology	CUTM1740	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To learn the occurrence, abundance and distribution of microorganism in the community and their role in the associated with Public health and also learn different methods for their detection and characterization.

To understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems – Water pollution and waterborne diseases, Air pollution and airborne infections.

Course Outcome

Understanding the role of microbiologist in public health

Study of Air borne & water borne infection

Course Outline

Module- 1 (7 Hours)

Introduction to Public Health: Definition, scope, concept and importance of public health microbiology, Roles of microbiologist in public health, Concept of health and disease, Indicators of health, Microbial association of water, air and soil, Basic concept on pollution (air, water, noise, radiation and waste pollution) and public health hazard in the community.

Practice:

1. Isolation and identification of microorganism from different food products: meat, canned juice, milk, cheese and ice cream.
2. Isolation and Identification of microorganisms (hospital acquired infection)

Module- 2(14 Hours)

Air Borne Infections:

1. Introduction: Air and its composition, Microbial air pollution, Sources of air pollution &

control, Indicator of air pollution – WHO guide line (microbial pollution).

2. Air borne diseases: Transmission of pathogens, Respiratory infection (Viral, bacterial, fungal), Sources of infection, characters of organisms and controls of: Bacterial pneumonia, Diphtheria, Tuberculosis, Influenza, Measles.

3. Method of measuring microorganisms in air.

Practice:

3. Selection, collection, preservation and transportation of samples from the community to the laboratory.

Module- 3 (19 Hours)

Water Borne Infections:

1. Introduction: Definition of wholesome and safe water, Nature, cycle, sources, importance and quality (WHO guide line) of water. Water pollution and sanitation,
2. Microorganisms in water: Transmission of pathogens, Water borne diseases (Viral, bacterial, protozoal), Sources of infection, characters of organisms and control of: Hepatitis, Cholera, Typhoid, Amoebiasis, Giardiasis, Poliomyelitis. Water Pollution Control.

3. Method of Measuring Microorganisms in Water. Water Treatment, Control of Water Borne Diseases.

Practice:

4. Isolation and Identification of microorganisms from air.
5. Isolation and Identification of microorganisms from water and evaluation of water quality

Suggested Readings:

2. A Text Book of Microbiology, by Ghimire P. & Parajuli K. Vidhyarthi Pustak Bhandar Publication, Kathmandu.
3. Text Book of Social and Preventive Medicine by Park JE and Park K
4. Evidence Based Public Health by Brownson, RC., Baker, EA., Leet. TL., Follespie. KN, Oxford University Press
5. The Quest for Health, Educational Enterprises, Kathmandu, by Dixit H.
6. Epidemiology for Public Health Practice, by Friis, RH., and Sellers, TA, 2nd Edition, Gaithersburg, MD: Aspen Publication,
7. Modern Food Microbiology, by Jay, J, H 3rd Edition CBS Publication and Distributors Delhi 1987.
8. Introduction to Soil Microbiology, Martin Alexander, by Academic press, 1961.

DC-9- CUTM1739- Pharmaceutical Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Pharmaceutical Microbiology	CUTM1739	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

Understanding of types & synthesis of antimicrobial agents

Manufacture of antibiotics

To understand the mechanism of action of antibiotics

To study how microorganisms are known to develop resistance to antibiotics

Course Outcome

With the completion of the course, the students will acquire detailed knowledge of antimicrobial agents, their mechanism of action and basis of resistance of microbes to these antimicrobials, formulations.

They will develop an understanding of different types of disinfectants/antiseptics and their uses, evaluation of their bactericidal and bacteriostatic action.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module- I

Pharmaceutical Microbiology: Chemical disinfectants, Antiseptic, Antibiotics, static and cidal activity.

Types of Antibiotics. Synthetic Antimicrobial Agents, Antifungal drug, Antiviral drug.

Practice: Sterilization methods used in Microbiology Lab

Isolation of human pathogens in sterile condition

Module-II

Manufacture of Antibiotics: Production of penicillin, Production of Streptomycin. Assessment of New Antibiotics: Parameters for determination of the usefulness of antibiotics (in vitro and in vivo). Pharmacokinetics and Pharmacodynamics of Antimicrobial agents. Antibiotic Assay: Microbiological methods: Disc diffusion technique, Dilution technique. Microbial Spoilage and Preservation of Pharmaceutical Products.

Practice: Test for Bacteriostatic and Bactericidal activity:

Disc test

Dilution test

Module- III

Mechanisms of Action of Antibiotics: Cell wall synthesis inhibitors, Inhibitors of protein biosynthesis, Inhibitors of tetrahydrofolate, Disorganize the cytoplasm membrane. Mode of action of Antibiotics (Cell wall synthesis inhibitors, Inhibitors of protein biosynthesis, Inhibitors of tetrahydrofolate, Disorganize the cytoplasm membrane). Bacterial Resistance to Antibiotics. Biochemical mechanisms of resistance, Genetic basis of antibiotic resistance. Problems in antibiotic therapy due to resistance.

Practice: Screening of herbal plants for Antibiotic activity

Sterility testing of pharmaceuticals

Bacteriological analysis of water

Suggested Readings:

DC-10 - CUTM1741- Industrial Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Industrial Microbiology	CUTM1741	Theory+Project	3-0-1	General Microbiology

Course Objective

Describe the use of microorganism in different industries to produce valuable products like drugs, beverages and different food products etc.

To developed skills for growing microorganisms in the laboratory for the production of different products by different microorganisms.

Course Outcome

Students has acquired a fairly good knowledge of how microbes are used in the fermentative production of organic acids, alcohols, enzymes, antibiotics and various foods in the industry.

Enhances analytic ability of various physical parameters which affect production of industrial products by the microorganisms and the safety aspects of the production and use of these products.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Developes laboratory skills in producing alcohol and enzymes by fermentative process using bacteria/yeast.

Course Outline:

Module 1

Introduction to Industrial Microbiology: Introduction, History, Definition and scope. Industrial

Equipment and Uses. Fermentation Process: Primary and secondary screening, Detection and assay of fermentation products- Physical and chemical assays, Biological assay Stock culture, Fermentation media, Inoculums preparation, Increasing products.

Project Topic: 1. Design a protocol for the treatment of community sewage in your locality.

Module II

Typical Fermentation Process: Antibiotic drug fermentation - Penicillin, Streptomycin, Bacterial insecticide, Other antibiotics. Acetone, Lactic acid, Brewing. Biological Waste Treatment / Bioremediation: Anaerobic fermentation. Production of: Vitamin, Vaccines, Milk & Milk Products, Food, Baker's yeast, Food and feed yeasts, Mushrooms, Vinegar(Acetic acid) Enzymes: Amylase, Proteolytic enzyme, Pectinases, Invertase Other enzymes.

Project Topic:

1. Detail fermentation process of a food product and the advantages of fermented food.
2. Fermenter Designing

Module III

Industrial sewage and its treatment: Introduction, Industrial pollution, Types of sewage. Microbiology of Domestic sewage and industrial sewage. Methods for the treatment of industrial effluent and sewage-Primary treatment, secondary treatment and tertiary treatment.

Project Topic:

1. Impacts of industrial pollution on Society and Environment and its prevention and control.

Suggested Readings:

1. Industrial Microbiology (2nd Ed.) by A. H. Patel.
2. Modern industrial Microbiology and Biotechnology.
(E-book link- <https://www.pdfdrive.com/modern-industrial-microbiology-and-biotechnology-e33452862.html>)
3. L. E. Casida, JR., *Industrial Microbiology*, 1991, Wiley Eastern Limited, New Delhi,

DC-11- CUTM1742- Basic Computer and Information Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Basic Computer and Information Science	CUTM1742	Practice	0-2-0	Fundamentals of Computer
--	----------	----------	-------	--------------------------

Course Objective

Identify the function of computer hardware components.

Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.

Identify how to maintain computer equipment and solve common problems relating to computer hardware.

Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded

Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.

Understand the difference between an operating system and an application program, and what each is used for in a computer.

Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Course Outline

Module- I

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer. Types of Input output devices. Processor and memory: The Central Processing Unit (CPU), main memory. Storage Devices.

Module- II

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge. Introduction to Excel:

introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs. Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

Module- III

Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external). Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid). Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

DC-12 - CUTM1746- Epidemiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Epidemiology	CUTM1746	Theory+Project	2-0-1	Fundamental Science

Course Objective

<p>Understand the basic epidemiological methods and study designs.</p> <p>Understand and discuss population-based perspective to examine disease and health – related events.</p> <p>Discuss the ethical issues in epidemiological research.</p> <p>Explain the importance of epidemiology for informing scientific, ethical, economic and political discussion of health issues.</p> <p>Describe a public health problem in terms of person, place, and time.</p> <p>Evaluate the strengths and limitations of epidemiologic reports</p>

Apply concepts, methods, and tools of public health data collection, analysis and interpretation, and the evidence-based reasoning and informatics approaches that are essential to public health practice.

Course Outcome

Distinguish between definitions of epidemiology and clinical epidemiology and public health research.

Apply the terminology of the Epidemiologic Triad to an infectious disease.

Describe the important historic events in the field of epidemiology.

Course Outline

Module-I (8

Hrs).

Introduction to Principles of Epidemiology: History, Definition, and scope of epidemiology, Achievements in epidemiology, Terms & Terminologies used in epidemiology. Measuring Health and Disease: Definitions of health and disease, Measures of disease frequency Use of available information, Comparing disease occurrence

Module-II (6 Hrs)

Concept of Epidemiological Study: Basic concepts of epidemiology Descriptive / Analytical, Applied/Experimental, Field Epidemiology. Concept of Prevention and Control of Diseases: Causation in epidemiology: The concept of cause, Establishing the cause of a disease Epidemiological markers, Phenotypic and genetic markers including molecular epidemiology. Disease surveillance: Clinical, Laboratory

Module-III (6 Hrs)

Communicable disease epidemiology, Clinical epidemiology, Environmental & occupational epidemiology, Nutritional epidemiology, Reproductive epidemiology, Social epidemiology, Food epidemiology. Epidemiology, Health services and health Policy: Health care planning, Monitoring & evaluation, The planning cycle, Epidemiology, public policy and health policy, Healthy public policy in

practice

Suggested Readings:

1. Basic Epidemiology. By Beaglehole R., Bonita R., Kjellstrom , World Health Organization, Geneva, https://books.google.com/books/about/Basic_Epidemiology.html?id=AAZGobMNTXgC
2. Field Epidemiology, By B Gregg, 2nd Edition, Oxford University Press, 2002
academic.oup.com/aje/article/156/8/783/78217
3. Gordis L. *Epidemiology*, 2nd Edition, WB Saunders Company Aharcourt Health Sciences Company, Philadelphia. [www.bookdepository.com/Epidemiology-Leon-Gordis/..](http://www.bookdepository.com/Epidemiology-Leon-Gordis/)
4. Epidemiology in Medicine, by LippincottEilliams and Wilkins, and Walters Kluwer Company wkauthorservices.editage.com/.../medicine.html
5. Epidemiology, Principle and Method, McMahon B, Trichopoulos D, by 2nd Edition, Boston, Little, Brown.

DC-13- CUTM1747 - Diagnostic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Bacteriology	CUTM1747	Theory+ Practice	3-2-0	Fundamental Science

Course Objective

To confirm the suspicion of infectious bacterial disease.

To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

Study of Lab diagnosis for Enteric infection, Respiratory tract Infection, Oral & Stomach infection, Urinary tract infections.

Study of control measures for nosocomial infection.

Student can safeguard himself & society and can work diagnostics and hospitals

Course Outline

Module -I (10 Hours)

Aerobic Culture: Scope and importance of aerobic culture, Factors affecting aerobic culture, Various media and techniques of aerobic culture. Laboratory Diagnosis of Enteric Infections: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Enteric fever / Typhoid fever, Bacterial endocarditis, Bacteraemia, Septicemia, Pyrexia of unknown origin (PUO).

Practice:

1. Isolation & identification of different groups of bacteria in laboratory
2. Antibiotic susceptibility test
3. Preparation and use of different stains in bacteriology laboratory Grams stain, ZN stain, Albert stain, Spore stain, Capsule stain, Flagella stain, Motility test

Module -II (7 Hours)

Laboratory Diagnosis of Respiratory Tract Infection (RTI): (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Lower RTI, Upper RTI. Laboratory Diagnosis of Urinary Tract Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods)

Practice:

4. Anaerobic Culture
5. Laboratory Diagnosis of Pus
6. Laboratory Diagnosis of GI Tract

Module -III (10 Hours)

Laboratory Diagnosis of Oral, Throat and Stomach Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Gingivitis and anaerobic infection of oral cavity. Peptic ulcer (with emphasis in mechanism of peptic ulcer caused by *Helicobacter pylori*), Laboratory Diagnosis of Eye Infection: (Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) Corneal ulcer, Conjunctivitis.

Practice:

7. Laboratory Diagnosis of Mycobacterium Infection
8. Laboratory Diagnosis of Venereal Diseases
9. Performance of different Tests Rapid Diagnostic Tests Molecular Tests 8 hours Interpretation of Test Results 5 hours Test reporting

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Bailey and Scott's Diagnostic Microbiology(12th) Ed
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-14 - CUTM1745 - Diagnostic Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Mycology	CUTM1745	Theory+ Practice	3-1-0	Fundamental Science

Course Objective

To confirm the suspicion of fungal disease.

To identify the etiologic agent by isolating the causative fungal pathogen.

Course Outcome

This course provides learning opportunities in the basic principles of medical microbiology and infectious fungal diseases.

The course provides the conceptual basis for understanding pathogenic fungi and the mechanisms by which they cause disease in the human body.

Student can safeguard himself & society and can work diagnostics and hospitals

Course Outline

Module-I (11

Hours)

Diagnostic Mycology: Medically important fungi, Opportunistic Fungi

Fungal Diseases: Mycoses

1. Superficial mycoses
2. Subcutaneous mycoses
3. Cutaneous mycoses: Trichophytosis, Microsporiosis, Epidermophytosis.
4. Systemic mycoses: Histoplasmosis, Blastomycosis, Cryptococcosis, Coccidioidosis, Paracoccidioidosis .

Practice:

1. Antifungal Sensitivity Test: Antibiotics.
2. Preparation of stock solution of drug

Module- II (12 Hours)

Pathogenesis and Laboratory Diagnosis of Mycotic Infections: *Aspergillus* spp, *Candida albicans*, *Fusarium* spp, *Cryptococcus neoformans*, *Histoplasma capsulatum*, *Sporothrix* spp, *Philophora* spp., *Trichophyton microsporum*, *Epidermophyton* spp. *Blastomyces dermatitidis*, *Coccidioides immitis*.

Practice:

3. Dilution technique
4. Determination of Minimal inhibitory concentration (MIC)

Module-III (17 Hours)

Isolation and Identification of Fungi (Laboratory Diagnosis): A. Selection, collection and transportation of specimens 5 hours Skin, Hair, Nail, Mucous membranes, Ear, eye, Corneal ulcer, Pus, Blood, Biopsy, Sputum, Urine, Vaginal and Cervical swab, Stool samples, Plural and peritoneal fluid, Superficial, subcutaneous and cutaneous samples. B. Smear Preparation: 2 hours KOH Preparation, 20% KOH with 20% Glycerol, KOH – DMSO (Dimethylsulphoxide) 100% Lactophenol Cotton Blue, India ink preparation.

Practice:

5. Preparation of different media, chemical and stain for fungus study
6. Isolation and identification of different fungi of medical importance

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology-by Fritz H. Kayser et al
3. Fundamental medical mycology / Errol Reiss, H. Jean Shadomy, and G. Marshall Lyon III
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Clinical Microbiology Procedures Handbook- by Amy L. Leber (4th Ed)
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-15- CUTM1743- Diagnostic Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic virology	CUTM1743	Theory +Project	3-0-1	Basic virology

Course Objective

Understanding laboratory diagnosis of virus by both conventional and molecular approach.

To produce a cadre of specialized medical virologists who would help establish clinical diagnostic services in various hospitals/centres.

Course Outcome

Organise sample collection, transportation, processing and storage in an appropriate manner.

Plan, write and implement research projects in virology, analyze their results and publish these in peer-reviewed journals.

Coordinate with concerned agencies regarding viral diseases and their outbreaks.

Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Course Outline

Module I

Laboratory Organization: Guidelines on Establishment of Virology Laboratory by WHO – key elements of a virology laboratory- Room (space), Electricity, Water supply, Sterility etc.

Specimen management- Selection of specimen, specimen collection, optimal times for collection of specimen, specimen transport and storage, Biosafety- Personal protective equipment , Minimizing equipment and technique-related hazards, Management of laboratory waste, Labelling of wastes etc. Quality systems – Documentation and Standard Operating Procedure (SOP).

Module II

Clinical Virology-

Viral infections of the skin - including pediatric exanthems and enanthems, Viral respiratory infections- pharyngitis, croup, bronchiolitis, pneumonia etc , Viral CNS infections - encephalitis, meningitis, acute

flaccid paralysis, etc. Viral gastroenteritis - viruses causing diarrhea. Viral hepatitis – due to HAV, HBV, HCV, HDV, HEV etc. Viral infections in the immunocompromised persons—in transplant recipients. Congenital viral infections – Human Cytomegalovirus (HCMV), rubella virus, Varicella Zoster Virus (VZV), etc. Sexually transmitted viral infections .Oncogenic viral infections .HIV/AIDS.

Project Topic: Middle East respiratory syndrome (MERS) respiratory infection in human.

Project Topic: Severe acute respiratory syndrome (SARS) respiratory infection in human.

Module III

Virological techniques for cultivation and identification of virus- Isolation of viruses- Cell (tissue) culture; - Embryonated hen’s egg inoculation (various routes) - Animal inoculation method. Identification of virus- Direct examination of specimen: Electron microscopy (TEM and SEM), Staining and microscopy for viral inclusion bodies, Molecular techniques for direct identification of viral genomes- Nucleic acid amplification techniques (PCR, real-time PCR, etc). Indirect Examination of specimen: Cytopathic effect, Neutralization assay, Haemadsorption etc and serological assay (Immunofluorescence, Haemagglutination inhibition assay (HAI), Complement fixation tests (CFT) and ELISA. Antiviral drugs, Laboratory diagnosis of important DNA and RNA viruses.

Project topic: Molecular methods for laboratory diagnosis of corona virus (CoV).

Project topic: Comparative study of serological and molecular methods for lab diagnosis of coron a virus (CoV).

Suggested Readings:

1. Bailey & Scott’s Diagnostic Microbiology.
(e-book-<https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>)
2. Basic virology by Edward K. Wagner.
(e-book -<https://www.pdfdrive.com/basic-virology-e18900518.html>)
3. Essential in clinical microbiology by C A Kauffman and J D Sobel, 2nd Ed.
(Ebook-link- <https://www.pdfdrive.com/essentials-of-clinical-mycology-second-edition-e39564930.html>)

DC-16- CUTM1744- Diagnostic Parasitology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Diagnostic Parasitology	CUTM1744	Theory+ Practice	3-1-0	Basic Parasitology

Course Objective

To explain the mechanisms of pathogenesis from a gross, microscopic and molecular perspective.

Recognize the diagnostic stage of the infection under the microscope and to manage the infected patient.

To examine parasites and parasitism, emphasizing the influence of parasites on the ecology and evolution of free-living species, and the role of parasites in global public health.

Course Outcome

Organise sample collection, transportation, processing and storage in an appropriate manner.

Plan, write and implement research projects in parasitology, analyze their results and publish these in peer-reviewed journals.

Coordinate with concerned agencies regarding protozoan and helminth diseases and their outbreaks.

Plan and execute epidemiological studies and provide advice in relation to protozoan diseases.

Course Outline:

Module I

Laboratory Organization (Parasitology Lab). Selection, Collection, Preservation and Transportation of Samples.

Practice: Safety measures in Parasitology lab and laboratory organization.

Module II

Laboratory Diagnosis, of the Intestinal and Vaginal Parasites:

(Terminology, mechanism of infection, etiology, conventional and rapid diagnostic methods) **Protozoa:** Entamoeba histolytica, Giardia lamblia, Trichomonas spp, Cryptosporidium, Cyclospora cayantensis, Isospora

Helminthes: Ascaries lumbricoides, Hook worm: Anacylostoma and Necator, Enterobius vermicularis, Trichuris trichuira, Strongloides spp., Taenia spp., Echinococcus spp., Hymonolepis nana. Tissue and Blood Parasites: Malaria spp, Leishmania spp (Kalaazar), Wacheria spp. Brugia, Loa loa, Oncoerca, Dracuhculus, Paragonimus westermani/hertmani.

Practice: Examination of stool for parasite identification. Examination of clinical sample for parasite identification.

Module III

Laboratory Diagnosis of Various Parasites: Direct method, Indirect method, Rapid methods, Molecular Technique -Parasite Culture. Different Stains used in Diagnostic Parasitology.

Practice: Demonstration of different rapid methods for parasite identification.

Suggested Readings:

1. Textbook of medical Parasitology.
(e-book link- <https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>)
2. Parasitology book by K.D. Chatterjee.
(e-book link- <https://sites.google.com/site/bkthrtzapg/atahrgiwu>.
<https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>.)
3. Stool Examination
<https://www.youtube.com/watch?v=ePqcdDKCe0>
<https://www.youtube.com/watch?v=MRzUXg8kFi>
<https://www.youtube.com/watch?v=-iI2PxmHxuo>
4. Malaria thick smear preparation.
<https://www.youtube.com/watch?v=WPP7AjmStBg>
5. Malaria thin smear preparation.
<https://www.youtube.com/watch?v=acoALifVvb8>

DC-17- CUTM1754- Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
---------------------	-------------	-----------------------	---------------	---------------------

Mini Project	CUTM1754	Project	0-0-2	Basic Medical science
--------------	----------	---------	-------	-----------------------

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

DC-18- CUTM1755 - Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion

7. Recommendation
8. References
9. Appendix

Internship

1. Case record
2. Lab management and ethics
3. Evaluation -Guide(internal)
 - a. -Industries guide(external)
 - b. -University-project report/ Viva

DC-19- CUTM1756 - Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	Basic Medical science

Project work:

Suggested Project title

1. Antibacterial activity of sweet orange (citrus sinesis) on *Staphylococcus aureus* and *Escherchia coli* isolated from wound infected.
2. The incidence of *Salmonella* and *Escherchia coli* in livestock (Poultry) feeds
3. Microbial evaluation of milk from a dairy farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

**CENTURION UNIVERSITY OF TECHNOLOGY AND MANAGEMENT,
ODISHA**

SCHOOL OF PARAMEDICS & ALLIED HEALTH SCIENCES

**Centurion
UNIVERSITY**

*Shaping Lives...
Empowering Communities...*

**BACHELOR OF SCIENCE IN MEDICAL LABORATORY
TECHNOLOGY**

2021

SYLLABUS

Preface: Medical Laboratory Technology helps to diagnose and prevent disease through clinical laboratory tests. It is complementary to medical science. It involves analysis of body matter such as fluid, tissue, and blood. It also covers micro-organism screening, chemical analyses, and cell count.

Medical Technologists are an integral part of the medical profession. These professionals get involved in practical and technical work to aid correct diagnosis and effective functioning of Biochemical Laboratories.

With adequate knowledge and experience, Medical Laboratory Technologists having B.Sc. MLT qualification can work in supervisory or management positions in laboratories and hospitals. They can also work as Laboratory Manager/Consultant/supervisor, health care Administrator, Hospital Outreach coordination, laboratory information system Analyst/Consultant, educational consultant/coordinator etc. Additional opportunities are available in molecular diagnostics, molecular biotechnology companies and in vitro fertilization laboratories as well as in research labs.

Programme: B. Sc. in Medical Laboratory Technology

Duration: Three years (Six semesters) full-time programme with 6 months internship in the last semester.

Eligibility: +2 Science with Physics, Chemistry & Biology or equivalent degree

Examination: Examination rules will be as per guideline of CUTM Examination hand book.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital/Diagnostics Centre equipped with modern pathology laboratory facility or in a fully equipped pathology laboratory, which fulfills the norms decided by the University.

Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation/Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a

typewritten and bound form.

Degree: The degree of B. Sc. in Medical Laboratory Technology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than three academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of three years programme, with a minimum course credit of **140 credits**, the candidate will be awarded with “**Bachelor of Science in Medical Laboratory Technology (B.Sc. MLT)**” from Centurion University.

BACHELOR OF SCIENCE IN MEDICAL LABORATORY TECHNOLOGY

BASKET I

School Core Courses

SC1- CUTM1708- Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+ Practice	2-1-0	Fundamental Science

Objective

To identify different types of cells and describe their functions.

To identify the organelles of a typical cell and describe their functions.

To identify the major components of the integumentary system and describe their functions.

To identify the major structures of the skin and describe their functions

To identify the major components of the skeletal system and describe their functions.

To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course outcome

Use anatomical terminology to identify and describe locations of major organs of each system covered.

Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.

Describe the interdependency and interactions of the systems.

Explain contributions of organs and systems to the maintenance of homeostasis.

Identify causes and effects of homeostatic imbalances.

Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-1 (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-2 (13 Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration the morphology of different blood cells

Measurement of Blood pressure, impulses, Heart beats, respiration rate etc.

Module-3 (15 Hours)

Urinary System: Various parts of urinary system and their functions, structure and functions of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and functions of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of digestive

system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Text book Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber&Faber.
2. Text book Anatomy and Physiology for nurses by Sears, Publisher EdwardArnold.

3. Anatomy & Physiology- by Ross and Wilson, PublisherElsevier.
4. Anatomy& Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb&Hoehn.
6. Anatomy and Physiology by N Murgesh, PublisherSatya

SC2-CUTM1729- Cell Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell Biology	CUTM1729	Theory+ Project	3-0-1	Fundamental Science

Objective

<p>.Determine the parts of the cell membrane and the cell wall</p> <p>Distinguish the types and mechanism of mutation</p> <p>Compare and contrast the events of cell cycle and its regulation</p> <p>Understand the dynamic character of cellular organelles</p>
--

Course outcome

<p>Describe the fundamental principals cellular biology</p> <p>Develop a deeper understanding of cell structure and how it relates to cell functions.</p> <p>Understand how cells grow, divide, and die and how these important processes are regulated.</p> <p>Understand cell signaling and how it regulates cellular functions. Also how its dis- regulation leads to cancer and other diseases.</p>

Course Outline

Module -I (12 Hr)

An Overview of Cells: History, Cell theory, Structure and Function of Cell and its Organelles: Biological membranes - Nucleus - Nuclear envelope, Nucleolus, Mitochondria, Chloroplasts, Lysosomes, Gloxysomes and Peroxisomes, endoplasmic reticulum, ribosomes, Golgi complex (Structural

organization, function, marker enzymes of the above organelles), Cell types: prokaryotes vs.

eukaryotes; from single cell to multi-cellular organism; Different molecules of cell- water, salt and mineral ions etc.

Module- II (14 Hr)

Cell cycle and its regulation, Cellular communication and cell mobility: Cell cycle: G₀/G₁, S, G₂ and M phases (Cell Division: Mitosis, meiosis and cytokinesis); regulation of cell cycle; cell adhesion and roles of different adhesion molecules, gap junctions, Extra- Cellular Matrix (ECM), Cell-cell interaction and cell- ECM interaction, The cytoskeleton, Microtubule- based movement and microfilament -based movement.

Module-III (14 Hr)

Cell signaling, Programmed Cell Death (Apoptosis) and Cancer: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors (G-PCR), Tyrosine Kinase, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component systems, bacterial chemotaxis, Intrinsic and Extrinsic apoptotic pathway, Caspase enzyme, Biology and elementary knowledge of development and causes of cancer; Tumor viruses, Oncogenes and tumor suppressor genes.

Suggested Readings:

1. The Cell a Molecular Approach (4th Edition) by Cooper & Hausman
<https://www.thebiomics.com/books/cell-biology/cell-molecular-approach-cooper-and-hausmn-4th-ed.html>
2. Molecular Biology by Friefelder David, Publisher Narosa www.alibris.com/Molecular-Biology-David..
3. Introduction to Cell biology by John K Young, World Scientific publishing company www.overdrive.com/.../introduction-to-cell-biology
4. Introduction to biology, 3rd tropic edition by D G Maackean www.amazon.com/Introduction-Biology-D-G-Mackean/.

SC3-CUTM1730-Basic Medical Instrumentation and Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Medical Instrumentation and Techniques	CUTM1730	Theor+Practice	2-2-0	Fundamental Science

Objective

To learn the principle, instrumentation & application of Microscopy

Principle, instrumentation & application of Centrifugation

Principle of Spectroscopy

Course outcome

After completion of the course the student will be efficient in handling the microscopy equipment's.

They will also be able to have idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi- automated Biochemistry analyzer.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module -I (12 hrs)

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase-contrast microscopy, fluorescence microscopy, polarization microscopy, electron microscopy (Scanning and Transmission); Bacterial Colony Counter (Principle and working). Laminar Air Flow (Principle and working technique).

Practice: Demonstration of different Microscopes with their operation and maintain technique.

Module- II (14 hrs)

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry. **Centrifugation:** Principle; Preparative, Analytical, Density gradient centrifugation. **Cytometry:** Types, Flow cytometry and its applications.

Practice: Operation, Demonstration and Quality control of Centrifuge, UV-Vis spectrometer, Colorimeter.

Module- III (14 hrs)

Microtomy: Sectioning, Staining. Application, Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Principle, working and uses of: Incubator, Hot air oven, Autoclave.

Practice: Demonstration of Auto/ Semi auto Analyzer; Working procedure of microtome, Incubator, Hot air oven, autoclave and others

SC4-CUTM1732- Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biochemistry	CUTM1732	Theory+ Practice	3-1-0	Fundamental Science

Objective

To understand the concept of metabolism of carbohydrates
To understand the significance of amino acids, proteins
Use of enzymes in enhancing metabolic reactions
Role of lipids

Course outcome

After completion of the course the student will be developed a very good understanding of various biomolecules which are required for development and functioning of cells.

Would have understood the significance of carbohydrates in energy generation and as storage food molecules for cells.

They would have understood the significance of proteins and enzymes in accelerating various metabolic activities.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module- I

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzyme NAD, metal cofactors, Classification of enzymes.

Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis, and Induced Fit hypothesis.

Enzyme inhibition, enzyme kinetics.

Diagnostic value of serum enzymes: Creatinine kinase, Alkaline phosphatase, Acid phosphatase, LDH, SGOT, SGPT, Amylase, Lipase, Carbonic anhydrase etc.

Practice: Study of effect of temperature on enzyme activity
Study of effect of pH on enzyme activity

Module- II

Carbohydrates: Biomedical importance & properties of Carbohydrates, Classification,

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses. Stereo isomerism of monosaccharides, epimers, Haworth projection formulae for glucose; chair and boat forms of glucose.

Metabolism: Glycogenesis & glycogenolysis, Glycolysis, citric acid cycle & its significance, Components of respiratory chain, energy relationships during cell respiration, types of respiration. HMP shunt & Gluconeogenesis, regulation of blood glucose level.

Practice: Estimation of Glucose in urine
Estimation of Glucose in blood

Module- III

Amino acids: Classification, essential & non-essential amino acids. Chemistry of Proteins & their related metabolism, Classification, biomedical importance.

Metabolism: Ammonia formation & transport, Transamination, Decarboxylation, Urea cycle, metabolic disorders in urea cycle, catabolism of amino acids.

Practice: Estimation of Protein in urine
Estimation of Protein in blood

Module- IV

Chemistry of Lipids & their related metabolism: Classification, biomedical importance, essential fatty acids. Brief outline of metabolism: Beta oxidation of fatty acids, fatty liver, Ketogenesis, Cholesterol & its clinical significance, Lipoproteins in the blood composition & their functions in brief, Atherosclerosis.

Diabetes mellitus: its types, features, gestation diabetes mellitus, glucose tolerance test, glycosuria, Hypoglycaemia & its causes.

Practice: Estimation of Bile pigment in urine
Estimation of Bile salts in urine

SC5-CUTM1715 -Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+ Practice	3-1-0	Fundamental Science

Objective

Analyze body fluid for diagnosis of disease
Analyze waste product for diagnosis of disease
Understanding DOT Policy
Understand Physiological disorder and infectious disease
Analysis of pregnancy

Course Outcome

Able to collect pathological specimen
Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorder
Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc.)
Preservation and processing of pathological sample.
Identification of Parasites
Analysis of Infertility disorder

Module-I (16 Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, BJP, Bile Salt and Bile pigment, Chemical Examination of Urine - Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-

Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and BJP Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: *Microscopic finding of stool, Morphology of stool parasite*

Lab:-

Stool Analysis: Collection and physical examination, Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain), Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:-

Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine Examination

Synovial Fluid: Collection and Routine examination

Pleural Fluid: Collection and routine examination

Pericardial Fluid: Collection and routine examination

Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC-6 - CUTM1736- Immunology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology	CUTM1736	Theory + Practice	3-2-0	Fundamental Science

Objective

Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity.

Clinically relevant serological analysis for deeper understanding of antigen- antibody interaction.

Course Outcome

Application of Immunology in disease diagnosis.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Classification, Measurement of immunity, Local immunity, Herd immunity. **Antigens:** Types of antigen, Epitope. Biological Classes of antigens, Superantigens.

Immunoglobulins: Antibody structure, Immunoglobulin classes.

Practice: Collection of blood sample by vein puncture

Separation and preservation of serum

Module-II

Complement System: Principal pathways of Complement activation, Quantitation of Complement (C) and its Components. Biosynthesis of complement, Complement Deficiencies.

Antigen-Antibody Reactions, Antigen-Antibody measurement, Parameters of serological tests. Serological Reactions.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test,

Rheumatoid factor (RF) test

Precipitation in agarose gel

Performing Ouchterlony Double diffusion test

Demonstration of SDS-PAGE

Demonstration of ELISA

Demonstration of Western

blotting

Module-III

Immune Response: Types of Immune response, Humoral immunity, Cell-mediated Immune Responses, Cytokines, Immunological tolerance.

Hypersensitivity Reactions: Classification of hypersensitivity reactions, Type I Hypersensitivity (IgE Dependent). Type II Hypersensitivity: Cytolytic and Cytotoxic. Type III Hypersensitivity-Immune Complex-mediated, Type IV Hypersensitivity-Delayed Hypersensitivity.

SC-7- CUTM1737- Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Molecular Biology	CUTM1737	Theory + Project	3-0-1	Fundamental Science

Objective

To provide depth knowledge of biological or medicinal processes through the investigation of the underlying molecular mechanisms.

Understanding of chemical and molecular processes that occur in and between cells. Understanding will become such that , can be able to describe and explain processes and their meaning for the characteristics of living organisms.

Course Outcome

Conduct independent work in a laboratory.

Read scientific articles and gain a critical understanding of their contents.

Give a spoken and written presentation of scientific topics and research results.

Present hypotheses and select, adapt and conduct molecular and cell-based experiments to either confirm or reject the hypotheses.

Course outline

Module I

Introduction: a. Introduction to molecular biology, b. Molecular biology of cell. Evolution and Molecular structure of cell and its organelles. Types of cells. Including different kinds of Prokaryotic and eukaryotic cells, Cell growth, Cell adhesion, cell junctions and extra cellular matrix organelles, Cell cycle, Cell membrane and its structure (fluid-mosaic model). Factors influencing on membrane fluidity, asymmetry of membrane and membrane transport (active and passive)

Project Topic: Causes, types and molecular mechanism of human cancer.

Module II

Molecular Nature of the Genetic Material in Prokaryotic and Eukaryotic Cells: Molecular biology of Genes, DNA: Molecular structure, types: Primary, secondary and tertiary, Double helix, types, Transferring information from DNA to RNA, Synthesis of RNA, Translation RNA: Molecular structure, types. Evolution of DNA and RNA, Gene and genetic codes.

Project Topic: Tumor suppressor gene and oncogene.

Module III

General Concept on: a. Regulation of the Gene Expression b. Regulating the Metabolism: The Lac-Operon system, Catabolic repression, Trp Operon system: regulating the biosynthesis of the tryptophan, Gene expression in Eukaryotic cells, Plasmids: types, maintenance and functions.

Project Topic: Human Genome Project.

Module IV

DNA Replication and Gene Expression: DNA Replication: Semi conservative Nature of DNA Replication, DNA Replication in prokaryotic Cells, DNA Replication in Eukaryotic cell, Enzymes involved in DNA Replication: DNA polymerases, Proofreading, post-replication Modification of DNA. Transferring information from DNA to RNA, Synthesis of RNA (Transcription), RNA polymerase, Initiation and Termination of Transcription, Post and co- transcription modification of the RNA. Protein Biosynthesis: Translation of the genetic code, Translation of m RNA, Role of r-RNA in protein synthesis, Forming the polypeptides- elongation, Termination of the protein biosynthesis.

Project Topic: Molecular basis, types, causes and a case study of the effects of DNA mutation.

Suggested Readings:

BASKET II Discipline Core Courses

DC-1-CUTM1731-Haematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Hematology	CUTM1731	Theory+Practice	3-2-0	Basic Medical science

Objective

The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

Be able to handle an investigation of hemorrhagic disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.

Clinically relevant hematological analysis for deeper understanding of Evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Course Outcome

Differentiate various laboratory test findings with their associated clinical conditions.

Identify the various skills necessary to perform blood counts, evaluate blood elements, and report results within the stated limits of accuracy.

Describe the various components of blood, their functions, and roles in various disease states.

To be able to demonstrate good skills in the relevant Hematology laboratory methodology.

Collection of blood for the investigations.

Be able to distinguish the developmental stages of blood cells. It will also cover Bone marrow examination.

To learn about tests carried out for hematological investigations.

To be able to carry out blood sampling.

Course Outline

Module- I (8 Hrs)

Scope & importance of Hematology, important equipment and chemicals, various test performed in Hematology laboratory, Focusing different blood cells through microscope.

Practice: Demonstration of instruments used in hematology- Microscope, Blood Cell counter, Sahali's Apparatus.

Module- II (12 Hrs)

Identify and/or confirm the composition & function of various red blood cell inclusions. Function of normal cellular components. Formation of blood, Synthesis of blood in Bone marrow- Erythropoiesis, leucopoiesis, thrombopoiesis. Anticoagulants: definition, Uses, Different types of Anticoagulants., mode of action, their merits and demerits.

Morphology of normal blood cells, abnormal morphology & diseases.

Practice: Demonstration of different blood cell, their synthesis from slide presentation or chart.
Demonstration the normal and abnormal morphology of different blood cells.

Module- III (10

Hrs) Hematological

Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings.
3. Megaloblastic Anemia: Causes, Lab findings.
4. Hemolytic Anemia: Definition, causes, classification & lab findings.

Bone Marrow: Cell composition of normal adult Bone marrow, Aspiration, Indication, Preparation & Staining, Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black

Leukemia: Classification, Blood Picture, Differentiation of Blast Cells.

Practice: Collection of blood by different methods

Different normal and abnormal morphology of RBCs, WBCs, Platelet.

Module- IV (10 Hrs)

Collection of blood, Methods & Preparation of Stains and Smears

Practice:

Cleaning and drying of glass and plastic ware, Collection of venous and capillary blood, cleaning of glass-syringes and its sterilization. Preparation of buffers, Preparation of the stains and other reagents,

Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman- stain, Haemoglobin estimation (Sahali's method and cyanmethaemoglobin method).

Module- V (10 Hrs)

Routine Hematological Tests:

Complete blood cell count, ESR, Differential Leukocyte count, Total leukocyte count, Bleeding time and Clotting time, Blood Grouping and Rh Typing.

Practice:

Complete Blood Counts, Determination of Haemoglobin, TRBC Count by Haemocytometers, TLC by Haemocytometer, Differential Leukocyte count, Determination of Platelet Count. Determination of ESR by wintrobes, Determination of ESR by Westergren's method, Determination of PCV by Wintrobes, Erythrocyte Indices- MCV, MCH, MCHC. Reticulocyte Count, Absolute Eosinophil Count, Bleeding time and Clotting time, Blood Grouping and Rh Typing

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

10. Ebook link-
<https://books.google.co.in/books?id=QQcYAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAnoECAIQQAQ#v=onepage&q=hematology&f=false>

DC-2- CUTM1733- Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Microbiology	CUTM1733	Theory+ Practice	3-2-0	Fundamental Science

Objective

To know various Culture media and their applications and also understand various physical and chemical means of sterilization

To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus

To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively

Course Outcome

This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.

Understanding the details of microbial cell organelles.

Provides knowledge on growth of microorganism.

Provides knowledge Culturing microorganism.

Course Outline

Module -1(14 Hours)

Microbiology: Definition, history, host- microbe relationship, and safety measures in a microbiology laboratory. Morphology of bacterial cell wall, Bacterial anatomy (Bacterial cell structure: including spores, flagella, pili and capsules). Sporulation. Classification of bacteria according to cell wall and shape (arrangement), Classification of micro-organisms. Growth and Nutrition of Microbes: General nutritional requirements of bacteria, Bacterial growth curve

Practice:

1. Handling of Microscope
2. To learn techniques for Inoculation of bacteria on culture media.
3. To isolate specific bacteria from a mixture of organisms.

Module-2 (11 Hours)

Sterilization: Definition, sterilization by dry heat, moist heat (below, at & above 100° C), Autoclave, Hot air oven, Radiation and Filtration, preventive measures, controls and sterilization indicators. Use of laminar flow in sterilization.

Antiseptics and Disinfectants: Definition, types, properties, mode of action and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Practice:

4. To demonstrate simple staining (Methylene blue)
5. Bacterial identification: To demonstrate reagent preparation and procedure for Gram stain, Z-N staining, Capsule staining, Demonstration of flagella by staining methods, Spore staining, To demonstrate spirochetes by Fontana staining procedure

Module-3 (15 Hours)

Staining techniques: Methods of smear preparation, Gram stain, AFB stain, Albert's stain and special staining for spore, capsule and flagella, Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media). Different Culture, media their preparation and uses in microbial growth.

Practice:

6. Biochemical tests for identification of bacteria
7. Preservation of stock cultures of bacteria
8. Antibiotic susceptibility test

Suggested Reading:

1. Medical Laboratory Technology by Kanai Lal Mukherjee; Tata McGraw Hill, New Delhi
2. Microbiology by Prescott
3. An Introduction to Medical Laboratory Technology by FJ Baker; Butterworth – Heinemann; Oxford
4. Practical Book of Medical Microbiology by Satish Gupta; JP Brothers, New Delhi
5. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough; Cambridge University Press; UK
6. Textbook of Medical Laboratory Technology by Praful B Godkar; Bhalani Publishing House, Mumbai
7. Text book of Medical Microbiology by Gruckshiank

DC-3- CUTM1734 - Medical Law and Ethics

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Medical Law and Ethics	CUTM1734	Theory+ Project	2-0-1	Fundamental Science
------------------------	----------	-----------------	-------	---------------------

Objective

The course provides an introduction to ethics generally and more specifically to medical ethics, examining in particular the principle of autonomy, which informs much of medical law. The course then considers the general part of medical law governing the legal relationship between medical practitioners and their patients. It considers the legal implications of the provision of medical advice, diagnosis and treatment. Selected medico-legal issues over a human life are also examined. These may include reproductive technologies, foetal rights, research on human subjects, organ donation, the rights of the dying and the legal definition of death.

Course Outcome

- The ethical underpinnings of the law as it relates to medicine,
- The law of negligence in the context of the provision of healthcare,
- Legal and ethical issues surrounding end and beginning of life
- decisions,

Course Outline

Module-1

1. The Indian medical council act, 2. Medical council of India (functions), 3. Functions of state medical councils, 4. The declaration of Geneva

Module-2

1. Duties of medical practitioners 2. Regarding red cross emblem 3. Professional secrecy 4. Privileged communication.

Module-3

1. Professional negligence 2. Medical mal occurrence 3. Contributory negligence 4. Criminal negligence

Module-4

1. Corporate negligence 2. Ethical negligence 3. Precautions against negligence 4. difference between professional negligence and infamous conduct.

Module-5

1. Malpractice litigation involving various specialities 2. Prevention of medical negligence 3. supreme court of India guidelines on medical negligence 3. The therapeutic misadventure 4. Vicarious liability

Module-6

1. Products liability 2. medical indemnity insurance 3. Medical records 4. Consent in medical practice

Module-7

1. Euthenasia 2. Deaths due to medical care 3. Malingering

Text books

1. Medical Law and Ethics by Shaun D Pattinson, 5 th edition, 2017.

DC-4 - CUTM1720- Histology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histology	CUTM1720	Theory+Practice	3-1-0	Basic Medical Science

Objective

Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.

perform routine laboratory procedures encompassing all major areas of the histology laboratory.

accurately and proficiently embed tissue and understand the principles of microtomy.

Clinically relevant onchological analysis for deeper understanding of abnormal cell growth at anywhere in human body.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outcome

In this section students will be made aware of terminology used in

histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.

Reception and labeling of histological specimens.

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.

The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.

The students will learn about special staining procedures & handling & testing of various cytological specimens.

Course

Outline **Module-**

I (8 Hrs)

Histotechnology, Care & Maintenance of histotechnology equipments and their parts and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues, Collection and transportation of specimens for histological examination, fixation: Process, Various types of fixatives used in a routine histopathology laboratory- Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Care & maintenance of Histology equipments, Collection & transportation of specimens, Fixation

Module- II (8 Hrs)

Decalcification Criteria of a good decalcification agent, Technique of decalcification Followed with selection of tissue fixation, decalcification neutralization of acid and thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination, Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors.

Practice: -Method of Decalcification, Embedding, manual or automatic tissue processings schedule.

Module- III (10 Hrs)

Periodic Acid Schiff Staining, Impregnation and Mountains, Commonly used mountains in histotechnology lab. General Staining Procedures (routine H&E stain, PAP stain and other special stain) for Paraffin Infiltrated and Embedded tissue, To perform & practice the manual & automated

Haematoxylin and Eosin staining technique, To perform & practice the Mallory's Phosphotungstic

Acid Haematoxylin (PTAH). Introduction of FNAC and its staining tech, museum technique, post mertum technique.

Practice:

Procedure for manual Staining and Automatic Staining Technique, FNAC technique, Museum technique(Hospital Visit), Post mertum technique(Hospital Visit).

Module- IV (8 Hrs)

Demonstration of instruments used for dissection Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory Reception and labeling of histological specimens Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid, Corney's fluid, 10% Neutral formalin, Formal saline, Formal acetic acid, Pereyn's fluid, prepare 70% alcohol from absolute alcohol. To perform embedding and casting of block.

Practice:

Use of antiseptics, disinfectants and insecticides in tissue processing laboratory, Preparation of various Fixatives, Labeling of Histological specimens, Embedding and Casting of block

Module- V (8 Hrs)

Tissue Processor, Microtomy, Honing and Stropping technique, Use of tissue floating bath, Use of incubator

Practice:

Processing of tissue by manual and automated processor. method To demonstrate various part and types of microtome. To learn sharpening of microtome knife (Honing and stropping technique) To perform section cutting, learn mounting of stained smears. To practice attachment of tissue sections to glass slides To learn using tissue floatation bath drying of sections in incubator (37⁰ C)

Suggested Readings:

1. Color text book of histology by Gartner &Hiatt, publisherElsevier
2. Netter's essential histology by William Ovalle, publisherElsevier
3. Histology E-book by Barry Mitchell, publisherElsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini kaul, publisherCBS
5. Textbook of Histology and a Practical Guide by JP Gunasegaran, PublisherElsevier
6. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalami
7. Ebook link-

DC-5- CUTM1727- Advanced Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Advanced Hematology	CUTM1727	Theory+Practice	3-1-0	Fundamental Medical science

Objective

The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

Demonstrate an understanding of the components of human blood and characteristics, functions, and abnormalities and disease states of each.

Demonstrate proficiency in the skills necessary to perform blood cell counts, and evaluation of blood elements within stated limits of accuracy.

Determine suitability of hematology specimens and dispose of them in the appropriate bio-hazard containers.

Course Outcome

Differentiate various hematological procedures and the use of basic equipment essential to working in a Hematology Laboratory.

Discuss differences between Quality control, Quality Assurance, and Continuing Quality Improvement principles as used in the Hematology Laboratory.

Categorize various hematology analyses , operational principles of various hematology instruments, and troubleshooting of various

Explain the principles and theories utilized in a variety of problem-solving situations.

Compare and contrast hematology values under normal and abnormal conditions

Course Outline

Module-I (8 Hrs)

Quality assurance in hematology: Internal and external quality control including reference preparation Routine quality assurance, Protocol, Statistical analysis i.e. Standard deviation, Co-efficient variation, accuracy and precision, Safety precautions in hematology. Basic concepts of automation in hematology with special reference to: Blood cell counter, Coagulometer.

Practice: Collection of blood from different body parts. Data and record Maintain, Handling hematological equipments.

Module-II (12 Hrs)

Bone marrow examination:

1. Composition and functions, Aspiration of bone marrow (Adults and children), Processing of aspirated bone marrow (Preparation & staining of smear)
2. Brief knowledge about examination of aspirated bone marrow (differential cell counts and cellular ratios) .Special Stain for Bone Marrow -Periodic Acid Schiff, Sudan Black
3. Leukemia: Classification, Blood Picture, Differentiation of BlastCells. Laboratory diagnosis of leukaemias , Processing and staining of trephine biopsy specimens.

Practice: Method of aspiration bone marrow, method of Processing and staining of trephine biopsy.

Module-III (10 Hrs)

L.E. cell phenomenon

1. Definition of L.E. cell, Demonstration of L.E. cell by various methods , Clinicals Physiological variations in Hb, PCV, TLC and Platelets. Investigations of a case suffering from bleeding disorders.
2. Quantitative assay of coagulation factors - a. Principle b. Procedure c. Mechanism d. Tests
3. Biomedical waste management in hematology laboratory (Other than Radioactive material)

Practice-: Demonstration of functional aspect of blood cell counter Study the RBCs abnormal morphological form -**a.** Variation in size, shape and staining Character, **b.** Red cell inclusion, **c.** Identify morphologically the- Immature Erythroid series of cells **d.** Immature Myeloid ad other WBCs series of cells

Module-4 (10 Hrs)

Demonstration of various parts of centrifuge; its functioning and care, Cleaning and drying of glass and plastic ware, Cleaning of glass, syringes and its sterilization. Preparation of various anticoagulants, Preparation of buffers, Preparation of the stains and other reagents.

Practice: Use centrifuge machine to separate serum & plasma from whole blood cells, Sterilization, Buffer & stain preparation.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. Text book of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

DC-6- CUTM1721- Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
--------------	------	----------------	--------	--------------

Research Methodology	CUTM1721	Theory+ Project	2-0-1	Fundamental Science
-------------------------	----------	-----------------	-------	---------------------

Objective

To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.

Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques.

Course Outcome

Students can understand the ethical and philosophical issues associated with research in education

This study provides knowledge on various modes of presenting and disseminating research findings.

Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

Provide learning opportunities to critically evaluate research methodology and findings.

Enable students to be reflexive about their role and others' roles as researchers.

Course Outline

Module- I (9

Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Module- II (8 Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III (14 Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-Square Test. Designing Questionnaire. Interviewing, Tabulation, Coding, Editing. Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections.

Writing a review on Virus culture

Literature survey on Covid-19

Suggested Readings :

1. Research Methodology by C.R. Kothari (3rd Ed)
2. Research Methodology In the Medical & Biological Sciences by Petter Laake et al.
3. Essentials of Research Design and Methodology by Geoffrey Marczyk et al.
4. WHO, Health Research Methodology: A guide for training in research Methods, 2nd Edition, WHO- WIPRO
5. A Student's Guide to Methodology by Clough P and Nutbrown C. Sage Publication.
6. National Ethical Guidelines for Health Research in Nepal, Available at Nepal Health Research Council.
7. Field Trials of Health Interventions in Developing Countries by Smith PG, Morrow.

DC-7 - CUTM1738- Analytical Biochemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Biochemistry	CUTM1738	Theory+ Practice	3-2-0	Fundamental Science

Objective

Understanding the concept of Biochemical analyzing instruments both automated and semi automated.

To learn about how to Care & Maintenance of Equipment & Chemicals.

To learn normal ranges of biochemical components in our body.

Clinically relevant biochemical analysis for deeper understanding of all biochemical

components i.e., Proteins, Electrolytes, Hormones etc.

Course Outcome

Understanding of instrumentation technique & principle of spectrophotometry, colometry, photometry and electrolyte analyzer.

To learn about Various tests carried out for biochemical analysis & Hormone investigations.

To learn about safety precautions and handling the equipment in biochemical laboratory.

Course Outline

Module- I (12 Hrs)

Chromatography: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC

Practice: Handling the Equipments and chemicals used in biochemical laboratory.

Module-II (12 Hrs)

Electrophoresis: Moving boundary, Zone (Paper Gel) electrophoresis, Immuno electrophoresis, Isoelectric focusing, 2-D electrophoresis. Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, ESR

Practice: Estimate Erythrocyte sedimentation rate

Module- III (26 Hrs)

Principle and Application of: Fully Automated Biochemistry Analyser, Semi- automated Biochemistry Analyser, Coagulometer. Method of estimation and assessment for: a. Glucose tolerance test. Clearance test for renal function. Gastric analysis, LFT, KFT, Lipid profile, Qualitative test for Urobilinogens, Renal calculi, Barbiturates, T3, T4 and TSH, 17 Ketosteroids. Principles, clinical significance and procedures for estimation, of Acid phosphatase, Alkaline phosphatase, Lactate dehydrogenase, Aspartate transaminase, Alanine, transaminase and Creatine phosphokinase.

Practice: Glucose Tolerance Test, Clearance Test, Gastric juice collection, Gastric Analysis, Kidney Function Test, Liver Function Test, Lipid Profile, Renal calculi, Hormone Test

Suggested readings:

1. Handbook of Christen Medical Association, India (CMAI) Medical Laboratory Technology- Robert H.Carman. 2nd Edn. CMAI, New Delhi.
2. Text book of Medical Laboratory Technology, P.B. Godkar 2nd Edn. Bhalani Publication.
3. Handbook of Biochemistry by M. A. Siddique 8th Edn. Vijay Bhagat Scientific Book
4. Principle of Biochemistry by Lehninger
5. Biochemistry by Voet&Voet
6. Biochemistry by Stryer
7. Biochemistry of Metabolic process by Asim Kumar Roy, Kalyani Publication
8. Ebook link-
https://www.cartercenter.org/resources/pdfs/health/ephti/library/lecture_notes/health_science_students/medicalbiochemistry.pdf
9. Ebook link-
https://books.google.co.in/books?id=Je_pJfb2r0cC&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
10. Ebook link-
https://books.google.co.in/books?id=csPcDAAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false
11. Ebook link-

DC8-CUTM1749-Applied Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Hematology	CUTM1749	Theory+Practice	3-2-0	Basic Medical science

Objective

The overall aims are that the student should obtain advanced knowledge of the most common hematologic diseases & understanding the concept of Blood cells and other blood components.

Demonstrate an understanding of the components of human blood and characteristics, functions, and abnormalities and disease states of each.

Demonstrate proficiency in the skills necessary to perform blood cell counts, and evaluation of blood elements within stated limits of accuracy.

appropriate bio-hazard containers.

Course Outcome

The students be made aware of Safety precautions, Quality assurance, biomedical waste management and automation in haematology. It will also cover Red cell abnormalities, Disorder of leukocytes, Investigations of a case suffering from bleeding disorders, To learn about tests carried out for hematological investigations.

Understanding of Haemopoietic disorders, laboratory diagnosis of leukemia, hemolytic anemia.

Collection & preservation of blood for the investigations.

Course Outline

Module-I (12 Hrs)

Laboratory diagnosis of leukaemias Definition and laboratory diagnosis of Leukamoid reactions. Cytochemical staining, procedure and their significance in various haemopoietic disorders. Laboratory diagnosis of iron deficiency anaemia, Laboratory diagnosis of megaloblastic anaemia ,Laboratory diagnosis of haemolytic anemia.

Practice: Collection of blood from different body parts. Data and record Maintain, Handling hematological equipments, Demonstrate the different abnormal morphology of RBCs in Anemia cases.

Module-II (8 Hrs)

Chromosomal studies in various hematological disorders and their significance. Mechanism of normal fibrinolysis and Laboratory diagnosis of hyperfibrinolysis. Mechanism and laboratory diagnosis of disseminated intravascular coagulation (DIC).

Practice: Laboratory diagnosis of Hyperfibrinolysis (D- dimer Method), laboratory diagnosis of disseminated intravascular coagulation (DIC)

Module-III (14 Hrs)

Laboratory diagnosis of Hemophilia and von-will brand disease. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP), Platelet function tests and their interpretation.

Practice: Complete Blood Count, Total Platelet Count, Bleeding time, Clotting time, Activated Partial Thromboplastin Time (APTT) Test, Prothrombin Time (PT)

Module-IV (12 Hrs)

Measurement of:

1. Blood volume, b. Determination of Red cell volume and Plasma volume, c. Red cell life span,
2. Platelet life span. Estimate serum iron, total iron, Hb-F, Plasma and urine hemoglobin. Demonstrate the presence of Hb-S by Sickling and solubility, Perform various Platelet function test.

Practice: Demonstration the sickle cells ,To estimate serum iron and total iron binding capacity. To estimate Hb-F in a given blood sample. To estimate plasma and urine. Haemoglobin in the given specimens. To demonstrate the presence of Hb-S by Sickling and solubility tests.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Gotkar Mumbai, Bhalani Publishing House
2. of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Text book of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill education pvtlimited
6. Text book of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link-<https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>
9. Ebook link-
<https://books.google.co.in/books?id=6sfacydDNsUC&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAHoECAQQAQ#v=onepage&q=hematology&f=false>
10. Ebook link-
<https://books.google.co.in/books?id=QQcYAAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAnoECAIQQAQ#v=onepage&q=hematology&f=false>

DC-9- CUTM1750- Immunopathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunopathology	CUTM1750	Theory+ Project	3-0-1	Fundamental Science

Objective

To understand how the immune system is working, about the components of the immune system, their functioning, the defense mechanisms against different pathogens (viruses, bacteria, and parasites), the pathogenesis of immune diseases (hypersensitivity, autoimmunity, immunodeficiencies), and on the mechanisms underlying the rejection of the transplants and the antitumor immune response.

It also provides knowledge of the main immunological techniques used in research and diagnostics.

Course Outcome

To know and describe the organization and functioning of the immune system, its cells and its molecules.

To know the principles of diagnostic tests described on immunological techniques.

To know the fundamental stages of the immune system and its changes over the course of life (intrauterine life, newborn, adult, elderly)

The conceptual understanding of the subject provides opportunities for employability

Course Outline

Module I (7 Hrs)

Basic Components of the Immune System, Immunological Techniques, Immune Regulation, Immunological Aspects of Infection, Immunological Aspects of Immunodeficiency Diseases.

Module II (8 hrs)

Autoimmunity, Blood related disorder, Chronic Lymphocytic Leukemia, Immunology of HIV Infections and other viral infection, Immunological Aspects of Allergy and Anaphylaxis, Immunological Aspects of Skin and venereal Diseases.

Module III (10 hrs)

Experimental Approaches to the Study of Autoimmune Rheumatoid Arthritis Diseases, Immunological Aspects of Cardiac Disease, Immunological Aspects of Chest Diseases Pulmonary Tuberculosis

(MDRT), and XDRT, Immunological Aspects of Gastrointestinal and Liver in case of Hepatitis, Immunological Aspects of Endocrine Disease (Thyroid, diabetes, hypertension), Immunological aspects of organ transplantation.

Suggested Readings:

1. Text book of Microbiology by Ananthanereyan&Paniker, Publisher Universitiespress
2. Short text book of Medical microbiology by Satish Gupte, Publisher Jaypeebrothers
3. Medical laboratory Technology vol.I ,II, III by K L Mukherjee, Publisher McGraw Hill education
4. Medical Laboratory manual for tropical countries Vol II Microbiology by MoniaCheesbrough, publisher Butterworth Heinemannltd
5. Immunology by Ivan Roitt, JonathaanBrostoff and DavidMale.

DC-10- CUTM1748- Parasitology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Parasitology	CUTM1748	Theory+Practice	3-2-0	Fundamental Science

Objective

Describe basic morphology, life cycle, pathogenesis, lab diagnosis and treatment of parasites (Protozoa, metazoa and Helminth)

Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites.

Course Outcome

Identification of pathogenic parasite in disease diagnosis and treatment.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

To serve as a resource for the clinical laboratories professionals in the different region.

Course Outline

Module-I

Introduction to Medical Parasitology, General characteristics and classification of protozoa and helminthes. Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Practice: Method of sample Collection, Transport, processing and preservation of samples for routine parasitological investigations.

Module II

Morphology, life cycle and lab diagnosis of *Giardia* and *Entamoeba*, *T.solium*, *T.saginata*, malaria parasite with special reference to *P. vivax* and *P. falciparum* and *Leishmania donovani* (Kala azar). Morphology, life cycle and lab diagnosis of hook worm and round worm (*Ascaris lumbricoides* and *Anchylostoma duodenale*).Most common symptoms of parasitic infection and diagnosis and treatment methods. Procedures used in microscopic examination of stool from a parasitic infected individual.

Practice: Routine Stool examination for detection of intestinal parasites. Concentration techniques for demonstration of Ova (Principles and applications). Identification of adult worms from model's or slide's method.

Module III

Laboratory Diagnosis of Various Parasites: Direct method, Indirect method. Rapid Diagnostic Tests (RDTs), Quantitative buffy coat assay (QBC), Malaria Rapid diagnostic test (MRDT), Leishmanin test.

Practice: Demonstration of some rapid diagnostic method used for parasite identification.

Suggested Readings:

1. Textbook of medical Parasitology. (e-book link-<https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>)
2. Parasitology book by K.D. Chatterjee. (e-book link-<https://sites.google.com/site/bkthtrpazg/atahrgiwu>, <https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>)

DC-11- CUTM1742- Basic Computer and Information Science

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Basic Computer and Information Science	CUTM1742	Practice	0-2-0	Fundamentals of Computer

Objective

Identify the function of computer hardware components.

Identify the factors that go into an individual or organizational decision on how to purchase computer equipment.

Identify how to maintain computer equipment and solve common problems relating to computer hardware.

Identify how software and hardware work together to perform computing tasks and how software is developed and upgraded

Identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcome

Understand the fundamental hardware components that make up a computer's hardware and the role of each of these components.

Understand the difference between an operating system and an application program, and what each is used for in a computer.

Describe some examples of computers and state the effect that the use of computer technology has had on some common products

Course Outline

Module- I

Introduction to computer: introduction, characteristics of computer, block diagram of computer, generations of computer. Types of Input output devices. Processor and memory: The Central Processing Unit (CPU), main memory. Storage Devices.

Module- II

Introduction to MS-Word: introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge. Introduction to Excel: introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs. Introduction to power-point: introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

Module- III

Introduction to MS-DOS: History of DOS, features of MS-DOS, MS-DOS Commands (internal and external). Introduction of windows: History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.). Computer networks: introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid). Internet and its Applications: definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet.

Suggested readings:

1. Objective Computer Awareness
2. Computer Networking (Global Edition)

DC-12 - CUTM1725- Blood Banking

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Blood Banking	CUTM1725	Theory+ Project	3-0-1	Fundamental Science

Objective

<p>Understanding blood bank method, demonstrate knowledge of testing</p> <p>Knowledge of Anticoagulant used in blood bank</p> <p>Get knowledge about blood regulation policy</p> <p>Understanding solid organ transplantation and it's policy</p> <p>Basic of transfusion reaction</p>
--

Investigation related to blood bank

Course Outcome

Perform phlebotomy and related donor room activity in blood bank

Manage the blood bank

Identifies and communicate abnormal test report by alerting supervisory personal

Organize blood donation blood bank

Inventory and stock management in blood bank

Perform and maintain record of QC procedure related reagents, kits and equipments.

Course Outline

Module-I (11 Hrs)

Basic principle in blood banking, Blood bank organisation, Planning and documentation, NACO Blood bank policy, National blood policy, Equipment used in blood bank. Anticoagulant use in blood bank, Selection of blood donor, Rhesus blood group system, Human blood group system

Practice: Documentation, ABO Grouping, RH Typing, Operation of equipment.

Module-II (14 Hrs)

Auto-mentation technique used in blood bank, Techniques used for the separation of blood constituent, CBC, Blood preservation, Special investigation for processing of blood under the guide lines of NACO, Routine investigation for processing of blood, Phlebotomy in blood bank, Quality control in blood bank

Practice: Phlebotomy in blood bank, Cross matching and compatibility test, Measurement of Blood Pressure, Arrangement of blood bank lab

Module-III (20 Hrs)

Blood transfusion alternative, Prevention of diseases transmitted through blood transfusion, Transfusion reaction investigation, Transfusion reaction, Precaution taken for infusion of blood components, Pre-transfusion testing, Transfusion in solid organ transplantation, Exchange blood transfusion, Pre-surgical

blood transfusion, Blood and blood components transfusion, Selection of blood components, Apheresis and Hemapheresis

Practice: Routine hematological test, HIV, VDRL, Hbs-Ag, Other STD Test

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Modern Blood Banking and transfusion Practice by Denise M Harming
3. Standards of blood bank by NACO (<http://naco.gov.in/sites/default/files/Standards%20for%20Blood%20Banks%20and%20Blood%20Transfusion%20Services.pdf>)
4. Handbook of blood banking and transfusion medicine (<http://www.uomisan.edu.iq/library/admin/book/77040715888.pdf>)
5. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
6. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
7. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-13- CUTM1751- Medical Laboratory Management

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Laboratory Management	CUTM1751	Theory+ Project	3-0-2	Fundamental Science

Objective

<p>Explain and apply principle of effective test utilization</p> <p>Interpret, implement and complying law, regulation, accrediting standards and guidelines of Govt. and NG organizations.</p> <p>Design, implement and evaluate resources in lab</p> <p>Communicate effectively with laboratory personnel and health care professional.</p> <p>Explain and apply the major principle and tactics of laboratory administration.</p>
--

Course Outcome

Become professional competent in medical laboratory
Exhibit a sense of commitment to the ethical and human aspect of patient care
Recognize the role of clinical laboratory scientist in the assurance of quality health care
Application of safety and governmental regulation and standards as applied to medical laboratory practice.

Course Outline

Module-I (16 Hrs)

Ethics of pathological clinics, Code of conduct for medical laboratory personal, Safety measure in the laboratory, Organization of Pathology laboratory under board of quality control, Clinical laboratory science, Functional components of the clinical laboratory, A Standardized clinical laboratory set up, Various types of laboratories, PPE in labs, Important instruction to minimize infection in laboratory workers

Practice: PPE Practice, Lab Setup, Sample collection and preservation.

Module-2 (16 Hrs)

Release of laboratory reports, Clinical alerts , Reporting results: Basic format of pathology reports, Transportation and preservation of lab sample, Patient management for clinical sample collection, National and international agency for clinical laboratory accreditation, Good laboratory practice, Medical legal problems, Laboratory regulation, Factors affecting productivity of laboratory, Responsibility of lab worker

Practice: Report writing, Lab record management

Module-3 (14 Hrs)

Quality management system, NABL Policy, Clinical establishment act policy, Annual maintenance contact for laboratory, General safety precautions in case of STD and drug resistant tuberculosis, Procurement and supply management, Different types of laboratory record management, Laboratory information management system (LIMS), Profit and loss analysis, WHO Policy for medical lab

Practice: Management information system, Procurement management, Profit and loss analysis

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
2. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-14 - CUTM1753- Introduction to Quality and Patient Safety

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Introduction to Quality and Patient Safety	CUTM1753	Theory+ Project	3-0-2	Fundamental Science

Objective

Knowing patient safety Report Distribution system Laboratory infection control Policy Bio-Medical waste management Understanding Patient rights ISO Policy for medical laboratory
--

Course Outcome

Know about rights and duties of patient Know about right and duties of lab technician Understand various policy to manage lab Understand infection control procedure

Course Outline

Module-I (11

Hrs)

Human factor Engineering, Patient safety, Health literacy, Report distribution system,

Error in reporting system, responding to adverse events, Investigation of error/ Root cause analysis, Medical Error, The science of safety

Practice: Safety precaution in laboratory, Report distribution, Prescription reading

Module-II (11 Hrs)

Team work and communication, Leadership, Quality control policy, Major development and evaluation in diagnostic division, Clinical establishment act policy, National accreditation board of laboratory, ISO Policy for medical laboratory, Fire and safety policy for medical laboratory

Practice: Fire Safety in lab, Documentation for Lab establishment

Module-III (13 Hrs)

Personal protective equipment in the laboratory, AIDS and laboratory safety, Safety protection in lab in STD and other infectious disease., Biomedical waste management, Patient care in medical laboratory, Patient rights., Counselling of patient during phlebotomy, First aid in medical laboratory service.

Practice: PPE, Bio-Medical waste management, First-Aid, Patient Counseling

Suggested Readings:

1. Understanding the patient safety (LANGE clinical medicine)
2. Textbook of Clinical laboratory methods and diagnosis by Gradwohls, Publisher Mosby
3. Medical laboratory technology Vol.1 by K. L. Mukherjee, 2007, Publisher Tata McGrawHill
4. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
5. Medical laboratory science theory and practice by J Ochei and Kolhatkar, 2002, Tata McGraw- Hill, Publisher TBS

DC-15 - CUTM1752- Mycology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mycology and virology	CUTM1752	Theory+ Practice	3-2-0	General biology

Objective

To describe the characteristics and diseases caused by pathogenic viruses and fungi.
To perform basic laboratory techniques in mycology, to isolate fungus from clinical samples.
Understanding different methods of virus cultivation.
Understanding collection, transportation and preservation methods of clinical specimen.

Course Outcome

Broad idea about structure and basic characteristics of virus and fungus.
Plan, write and implement research projects in virology and mycology analyze their results and publish these in peer-reviewed journals.
Coordinate with concerned agencies regarding viral and fungal diseases and their outbreaks.
Plan and execute epidemiological studies and provide advice in relation to viral diseases.

Course outline

Module I

Introduction to medical mycology, Basic concepts about superficial and deep Mycoses. Taxonomy and classification and general characteristics of various medically important fungi. Normal fungal flora. Morphological, cultural characteristics of common fungal laboratory contaminants, Culture media used in mycology and staining process.

Practice-: To prepare culture media used routinely in mycology. To perform all the staining techniques for identification of fungi as mentioned in theory syllabus.

Module II

Direct microscopy in Medical mycology laboratory. Processing of clinical samples for diagnosis of fungal infections i.e. Skin, nail, hair, pus, sputum, CSF and other body fluids. Techniques used for isolation and identification of medical important fungi Methods for identification of yeasts and moulds.

Practice-: To identify given yeast culture (By performing various identification techniques studied in theory). To identify given mould culture (By performing various identification techniques studied in theory). To demonstrate dimorphism in fungi. To process clinical samples for laboratory diagnosis of fungal infection that is from skin, hair and nail etc.

Module III

Introduction to medical virology, Classification of viruses. Introduction to medically important viruses (Both DNA and RNA). Collection, transportation and storage of sample for viral diagnosis .Staining techniques used in Virology. Processing of samples for viral diagnosis (Egg inoculation and tissue culture). Antiviral drugs.

Practice: Demonstration of fertilized hen egg. Demonstration of various inoculation routes in fertilized hen egg.

Suggested Readings:

1. Bailey & Scott's Diagnostic Microbiology (e-book-<https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>)
2. Basic virology by Edward K. Wagner. (e-book -<https://www.pdfdrive.com/basic-virology-e18900518.html>)
3. Essential in clinical microbiology by C A Kauffman and J D Sobel, 2nd Ed. (Ebook-link-<https://www.pdfdrive.com/essentials-of-clinical-mycology-second-edition-e39564930.html>)

DC-8- CUTM1754- Mini Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Mini Project	CUTM1754	Project	0-0-2	Basic Medical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/ case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/ survey.

DC-18- CUTM1756 - Project

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	Basic Medical science

Project work:

Suggested Project title

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherchia coli isolated from wound infected.
2. The incidence of Salmonella and Escherchia coli in livestock (Poultry) feeds
3. Microbial evaluation of milk from a dairy farm.
4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

DC-17- CUTM1755 - Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/ Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester).

The Dissertation should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References
9. Appendix

Internship

4. Case record
5. Lab management and ethics
6. Evaluation -Guide(internal)
 - Industries guide(external)
 - University-project report/ Viva

MASTEROFSCIENCEINAPPLIED&CLINICALMICROBIOLOGY

2021

SYLLABUS

M.Sc.inAppliedandClinicalMicrobiology

Preface: Medical microbiology is the branch of medical science concerned with the prevention, diagnosis and treatment of infectious diseases. In addition, this field of science studies various clinical applications of microbes for the improvement of health. There are four kinds of microorganisms that cause infectious disease: bacteria, fungi, parasites and viruses and one type of infectious protein called Prion.

A medical microbiologist studies the characteristics of pathogens, their modes of transmission, mechanism of infection and growth. Using this information, a treatment can be revised.

Medical microbiologist often serves as a consultant to a physician, providing identification of a pathogen and suggesting a treatment option.

Scope: M. Sc in Applied and Clinical Microbiology gives opportunity for specialized study in the field of medical & clinical microbiology. Candidates who successfully complete M. Sc in Applied and Clinical Microbiology course may obtain jobs as

- Specialized technologist in Microbiology or supervisor of clinical laboratories in hospitals.
- Laboratory scientists in Biomedical and research institutes.
- Teachers in training institutes of Medical Laboratory Technology/graduate & postgraduate programme of microbiology & related areas.
- Utilize or apply the concepts, theories and principles of laboratory science.
- Demonstrate the ability to plan and effect the change in laboratory practice and health care delivery system.
- Establish collaborative relationship with members of other disciplines.
- Demonstrate interest in continued learning and research for personal and professional advancement.
- Be able to interpret or guide the development of medical diagnostics in need locally and cheaply
- Be able to manage and guide appropriately equipped and staffed clinical microbiology laboratories
- Be a highly skilled human resource for the emerging pharmaceutical/medical industry
- Be able to participate in supervised or team-research in universities, industry or government
- Demonstrate advanced knowledge in the fields of Clinical Microbiology and Immunology, with excellent skills to teach and communicate this knowledge
- Demonstrate independent critical and analytical thinking, both within their field of study, and beyond, for the use of their knowledge for service to others.
- Be able to guide patient care and the public on the pathology, pathogenesis and

clinical manifestation, mode of transmission, prevention and current control methods for infections of public health importance

- Be a highly skilled human resource in the management of an increasing number of patients with tissue/Organ transplants, Cancers and immunodeficiencies

- Be able to critique and evaluate the impact of the existing national disease control programmes on the epidemiology of infectious diseases and advise on improving them
- Have acquired critical and analytical skills required for further studies in specialized areas of microbiology or related studies
- Identify and suggest possible solutions to ethical dilemmas that occur in their work and field of study, and understand the importance of professional ethics in all aspects of scientific communication and laboratory work
- Demonstrate competence in the laboratory, including application of the scientific method and appropriate use of basic and state-of-the-art laboratory tools and techniques
- Demonstrate written and oral skills necessary for communication of research, knowledge, and ideas to scientists and non-scientists alike

Programme: M.Sc. in Applied and Clinical Microbiology

Duration: Two years (Four semesters) full-time programme with 6 months internship in the last semester.

Eligibility: Bachelor's degree in any branch of Life Science / Agriculture / Pharmacy / Veterinary / Medicine (MBBS/BDS).

Examination: Examination rules will be as per guideline of CUTME Examination handbook.

Mini Project: A candidate will have to carry out a mini project work as mentioned in the course structure. After completion of the mini project, the student has to submit the dissertation of the mini project. Internal evaluation of the same (consisting of presentation and viva-voce) will be conducted by the respective School.

Internship: A candidate will have to undergo internship for a period of six calendar months in a hospital / Diagnostics Centre / Research Institution equipped with modern laboratory facility, which fulfills the norms decided by the University. Dissertation will be compulsory to all students. Students will carry out dissertation work individually or in the group of not more than three students. The format for dissertation / Internship report will be similar to the research thesis style; incorporating chapters on: Introduction, Materials and Methods, Results and Discussion and References / Bibliography. The dissertation will be submitted in a typed written and bound form.

Degree: The degree of M. Sc. in Applied and Clinical Microbiology course of the University shall be conferred on the candidates who have pursued the prescribed course of study for not less than two academic years and have passed examinations as prescribed under the relevant scheme and completed 6 months of compulsory internship in the last semester.

On successful completion of two years programme, with a minimum course credit of **96 credits**, the

candidate will be awarded with “**Master of Science in Applied and clinical microbiology (M.Sc.CMB)**” from Centurion University.

**Master of Science in Applied and Clinical Microbiology

NOTE: Along with the School core and Discipline core subjects, the students need to opt for AECC Courses, Skill/ Domain/ Elective courses and value-added courses from the University Basket, as per the requirement by the University.

BASKETI
School Core Courses
SC1-CUTM1708-Human Anatomy and Physiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Human Anatomy and Physiology	CUTM1708	Theory+Practice	2-1-0	Fundamental Science

Objective

- To identify different types of cells and describe their functions.
- To identify the organelles of a typical cell and describe their functions.
- To identify the major components of the integumentary system and describe their functions.
- To identify the major structures of the skin and describe their functions.
- To identify the major components of the skeletal system and describe their functions.
- To identify the major components of the circulatory, endocrine, nervous system etc and describe their functions.

Course Outcome

- Use anatomical terminology to identify and describe locations of major organs of each system covered.
- Explain interrelationships among molecular, cellular, tissue, and organ functions in each system.
- Describe the interdependency and interactions of the systems.
- Explain contributions of organs and systems to the maintenance of homeostasis.
- Identify causes and effects of homeostatic imbalances.
- Describe modern technology and tools used to study anatomy and physiology.

Course Outline

Module-I (10 Hours)

Scope of Anatomy and physiology. Terms and terminology used in Anatomy. Structure of cell, function of its components with special reference to mitochondria and microsomes.

Elementary tissues: Anatomy of epithelial tissue, muscular tissue, connective tissue and nervous tissue.

Skeletal System: Skeleton system with classification, types of bone, features of long bone, ossification, blood supply, Joints – classification with examples, structure of typical synovial joints, Joint disorders.

Practice: Demonstration of individual bone from skeleton.

Identification of different organs and system from chart.

Module-II(13Hours)

Cardiovascular System: Composition and functions of blood. Blood groups – ABO system and Rh factor and coagulation of blood. Brief information regarding disorders of blood. lymph – origin, circulation, functions of lymph and lymph nodes. Structure and functions of various parts of the heart. Blood pressure and its recording. Brief information about cardiovascular disorders.

Respiratory system: Introduction and functional anatomy of respiratory tract, physiology of respiration.

Practice: Demonstration of the morphology of different blood cells

Measurement of Blood pressure, impulses, Heartbeats, respiration rate etc.

Module-III(15Hours)

Urinary System: Various parts of urinary system and their functions, structure and function of kidney. Physiology of urine formation. Patho-physiology of renal diseases and edema.

Digestive System: Anatomy of digestive system and their functions. Structure and function of liver, physiology of digestion and absorption.

Endocrine System: Endocrine glands and Hormones. Reproductive system. Structure and function of sense organs.

Practice: Demonstration of various parts of body, tissues of body, parts of

digestive system, parts of respiratory system, parts of excretory system. Identification of different organs and system from chart

Suggested Readings:

1. Textbook Anatomy & Physiology for nurses by Evelyn Pearce, Publisher Faber & Faber.
2. Textbook Anatomy and Physiology for nurses by Sears, Publisher Edward Arnold.
3. Anatomy & Physiology- by Ross and Wilson, Publisher Elsevier.
4. Anatomy & Physiology: Understanding the human body by Clark, Publisher Jones & Bartlett.
5. Anatomy and Physiology for nurses by Pearson, Publisher Marieb & Hoehn.
6. Anatomy and Physiology by N Murgesh, Publisher Satya

SC2-CUTM1709- Analytical Techniques

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Analytical Techniques	CUTM1709	Theory+Practice	3-1-0	Fundamental Science

Objective

To learn the principle, instrumentation & application of Microscopy
Principle, instrumentation & application of Centrifugation
Chromatographic techniques
Electrophoretic techniques
Principle of Spectroscopy

Course Outcome

After completion of the course the student will be efficient in handling the microscopy equipment's.

They will also be able to have an idea about handling instruments like centrifuge, spectrophotometer, chromatography, flow cytometer, Automated and semi-automated Biochemistry analyzer.

They will gain knowledge on the principle behind and the application of NMR, X-ray diffraction, ESR.

The conceptual understanding of the subject provides opportunities for skill enhancement and scopes for higher education.

Course Outline

Module-I

Microscopic techniques: Principle, Instrumentation, Specimen preparation and Application: Phase-contrast microscopy, fluorescence microscopy, polarization microscopy, electron microscopy (Scanning and Transmission);

Bacterial Colony Counter (Principle and working).

Microtomy: Sectioning, Staining. Application.

Cytometry: Types, Flow cytometry and its applications.

Practice: Demonstration of different Microscopes with their operation.
Preparing specimens for observing under microscopes.
Demonstration of Microtome.

Module-II

Centrifugation: Principle, Preparative, Analytical, Density gradient centrifugation.

Chromatography: Principles and Applications: Paper, Thin layer, Column, Ion exchange, Affinity chromatography, Gel filtration, Gas Chromatography, HPLC, FPLC.

Electrophoresis: Immunoelectrophoresis, Isoelectric focusing, 2-D gel electrophoresis.

Practice: Demonstration of Centrifuge

Demonstration of Chromatography techniques
Demonstration of Electrophoresis

Module-III

Colorimeter: Principle and Instrumentation; **Spectrophotometry:** Ultraviolet, Mass spectrophotometry; Flame photometry;

Principle, Instrumentation, Specimen preparation and Application of: X-ray diffraction, NMR, EPR. Principle and Application of: Fully Automated Biochemistry Analyser, Semi-automated Biochemistry Analyser, Coagulometer.

Practice: Demonstration of Semi automated Analyzer
Demonstration of Fully automated Analyzer

Suggested Readings:

SC3- CUTM1710-Biological Chemistry

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Biological Chemistry	CUTM1710	Theory+Practice+ Project	2-1-0	General chemistry & Biology

Objective

Work to promote good health by teaching the public and other health professionals about diet and nutrition.

To demonstrate clinical disorders, the biochemical consequences of particular disease processes and the response to therapy.

To describe the various intracellular controls that govern the rate at which the metabolic pathway functions.

To explain the ways in which hormones work in human body and alter cellular activity by binding to intracellular receptors.

Course Outcome

Students will be able to demonstrate an understanding of fundamental biochemical principles, such as the structure/function of metabolic pathways, and the regulation of biological/biochemical processes.

Able to apply and effectively communicate scientific reasoning and data analysis in both written and oral forums.

Demonstrate a thorough knowledge of the intersection between the disciplines of Biology and Chemistry.

Appreciate the way in which practitioners in the disciplines of Biology and Chemistry intersect and bring their expertise to bear in solving complex problems involving living systems.

Course Outline

Module I

Chemical aspects of Food, Nutrition and Vitamins: Energy yielding nutrients and Calorific value of carbohydrates, fats and proteins. Basal metabolic rate (BMR) and Body Mass Index (BMI). The Food Pyramid. History, Chemistry, Absorption, transport, and storage of Vitamins, Metabolic functions and Biochemical manifestations of Water soluble Vitamins-B-Complex Vitamins : Vitamin –B1, Vitamin –B2, Vitamin-B3, Vitamin –B6, Biotin, Panthothenic acid, Folic acid, Vitamin-B12. Coenzymes of B-Complex Vitamins. Fat soluble Vitamins: Vitamin-A, Vitamin-D, Vitamin-E, Vitamin-K.

Practice: Calculation of BMR and BMI.

Module II

Cellular Respiration: Aerobic and anaerobic respiration; Energy yield and regulation. Oxidation of fatty acid, Transamination and Deamination reaction, Urea formation and transport, Ketogenesis.

Practice: Solutions: Definition, use, classification, preparation and storage. Stock and working solutions. Molar and Normal solutions of compounds and acids. (NaCl, NaOH, HCl, H₂SO₄)

Module III

Biochemical aspect of Hormone: Hormone receptors and intracellular messengers, Adenylate cyclase, protein kinase and phosphodiesterase. Role of Insulin, glucagon's, epinephrine and their mechanism of action.

Practice: Diabetes and other disorder identification.

Suggested Readings:

1. Lehninger Principles of Biochemistry (<https://www.pdfdrive.com/lehninger-principles-of-biochemistry-5th-edition-e164892141.html>)
2. Fundamentals of Biochemistry: Life at the Molecular Level (<https://www.pdfdrive.com/fundamentals-of-biochemistry-life-at-the-molecular-level-e186753533.html>)

SC4-CUTM1712-Clinical Hematology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Hematology	CUTM1712	Theory+Practice	3-1-0	Basic Medical science

Objective

The Clinical Hematology course will cover the diagnosis and management of blood cell disorders, anatomy and physiology of hematopoiesis, routine specialized hematology tests, analysis, classification, and monitoring of blood cell abnormalities.

Clinically relevant hematological analysis for deeper understanding evaluate normal and abnormal cell morphology with associated diseases and other blood components.

Be able to handle an investigation of hematological disorder and laboratory abnormalities such as anaemia, polycythemia, leukopenia, leukocytosis, thrombocytopenia, thrombocytosis, elevated ESR etc within hematology.

Course Outcome

- Differentiate various hematological procedures and the use of basic equipment essential to working in a Hematology Laboratory.
- Discuss differences between Quality control, Quality Assurance, and Continuing Quality Improvement principles as used in the Hematology Laboratory.
- Categorize various hematology analyses, operational principles of various hematology instruments, and troubleshooting of various instruments.
- Explain the principles and theories utilized in a variety of problem-solving situations.
- Define testing suitability standards for Hematology specimens.
- To be able to carry out blood sampling & Evaluate specimen acceptability.

Course Outline

Module-I(16Hrs)

Scope & importance of Haematology, important equipment and chemicals, various test performed in Haematology laboratory. Identify and/or confirm the composition of various red blood cell inclusions. Function of normal cellular components, Formation of blood, Erythropoiesis, thrombopoiesis. Anti coagulants, definition, Uses, Different types, mode of action, their merits and demerits. Morphology of normal blood cells, abnormal morphology & diseases, Hematological Disorder

Practice: Demonstration of instruments used in hematology -

Microscope, Blood Cell counter. Demonstration of different blood cell, their synthesis from slide presentation or chart. Demonstration the normal and abnormal morphology of different blood cells.

Module-II(18Hrs)

Collection and preservation of blood: different methods of collection (venous and capillary blood), preservation, changes in stored blood normal and absolute values in hematology, Preparation of peripheral blood film (PBF), To stain a peripheral blood Film by Leishman stain, Malaria thick smear preparation, Different types of stains, Romanowsky stains: principle of staining, Hemoglobin estimation (oxy Hb and cyanmethaemoglobin method), Complete Blood Cell Count: Total RBC count, Total WBC count, Platelet count, DLC value, HB, MCH, MCV, MCHC, Determination of ESR by Wintrobe's, Determination of ESR by Westergren's method, Determination of PCV by Wintrobe's, Reticulocyte Count, Absolute Eosinophil Count, Morphology of Red Blood Cells.

Practice: Different methods of collection (venous and capillary blood), Preparation of DLC, TLC, TRBC etc. Estimation of ESR, Complete blood cell count, Blood grouping, Hb and values of MCH, MCV, MCHC, PCV, Staining & Smear preparation.

Module-III(14Hrs)

Hematological Disorders

1. Classification of Anemia: Morphological & etiological.
2. Iron Deficiency Anemia: Distribution of body Iron, Iron Absorption, causes of iron deficiency, lab findings. Megaloblastic Anemia: Causes, Lab findings.
3. Hemolytic Anemia: Definition, causes, classification & lab findings.

4. Laboratory diagnosis of Hemophilia and von-willbrand disease.
5. Laboratory diagnosis of Idiopathic thrombocytopenic purpura (ITP),
6. Platelet function tests and their interpretation.

Practice: Observation about different normal and abnormal morphology of RBCs, WBCs, Platelet, Bleeding Time & Clotting Time, PT & APTT.

Suggested Readings:

1. Textbook of Medical Laboratory Technology P.B Godkar Mumbai, Bhalani Publishing House
2. Textbook of Medical Laboratory Technology by Paraful B. Godkar, Publisher Bhalani
3. Textbook of Medical Laboratory Technology (2nd edition) by V.H Talib, Publisher CBS
4. Atlas of hematology (5th edition) by G.A. McDonald, Publisher Churchill Livingstone
5. Medical Laboratory Technology By K.L Mukharjee, Publisher McGraw Hill Education Pvt Limited
6. Textbook of Medical Laboratory Technology (6th edition) by Ramnik Sood, Jaypee Publication.
7. Ebook link - <https://www.pdfdrive.com/hematology-basic-principles-and-practice-e176384006.html>
8. Ebook link - <https://www.pdfdrive.com/hematology-basic-principles-and-practice-expert-consult-online-and-print-expert-consult-title-online-print-5th-edition-e186195241.html>

10. Ebook link - <https://books.google.co.in/books?id=QQcYAAAAAYAAJ&printsec=frontcover&dq=hematology&hl=en&sa=X&ved=2ahUKEwja9-ve3I7qAhUwzTgGHSMUDekQ6wEwAhoECAIQQAQ#v=onepage&q=hematology&f=false>

SC5-CUTM1715-Clinical Pathology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical pathology	CUTM1715	Theory+Practice	3-1-0	Fundamental Science

Objective

Analyze body fluid for diagnosis of disease

Analyze waste product for diagnosis of disease

Understanding DOT Policy

Understand Physiological disorder and infectious disease

Analysis of pregnancy

Course Outcome

Able to collect pathological specimen
Able to detect diabetes, ketosis, nephritis, jaundice and other physiological disorders
Able to detect infectious disease (UTI, Hematuria, Filaria, Dysentery, Ulcer, TB, etc)
Preservation and processing of pathological sample.
Identification of Parasites
Analysis of Infertility disorder

Course Outline

Module-I (16 Hrs)

Introduction of clinical pathology, Composition, collection and preservation of urine, Physical examination of Urine, Chemical Examination of Urine - Sugar and Ketone bodies, Diabetes and Ketosis, Nephritis and UTI, Albumin, Phosphate, BJP, Bile Salt and Bile pigment, Chemical Examination of Urine -

Multistix reagent strip, Jaundice, Microscopical Examination of Urine, Operation of Urine Analyzer, Pregnancy test, Report writing and report analysis of Urine

Practice: Operation of Urine analyzer, Benedict Test, Heat and Acid Test, Rothera's Test, Benzidine Test, Fouchet's Test

Lab:-

Urine Analysis: Collection and Physical Examination, Specific Gravity, Benedict's Qualitative test, Acetone Rothera's Test, Protein and BJP Test, Hay's Test and Fouchet's test, Benzidine test, Microscopical Examination, Pregnancy Test, Auto-mentation by Urine analyzer

Module-II (14 Hrs)

Respiratory Tract Infection: Gram Staining and ZN Staining, Basic of DOT Centre, Report writing and report analysis of sputum, Sputum for the diagnosis of Mycobacterium tuberculosis, Clinical significance and Report writing of Stool, Difference between Amoebic, Dysentery and Bacillary Dysentery, Microscopical Examination of Stool, Physical and Chemical examination of Stool, Composition, collection and preservation of stool

Practice: Microscopic finding of stool, Morphology of stool parasite

Lab:-

Stool Analysis: Collection and physical examination,

Chemical Examination, Occult test and reducing sugar, Microscopical Examination: Protozoa, Microscopical Examination: Helminthes

Sputum Analysis: Collection and physical examination, Tuberculosis (ZN Stain),

Respiratory infection (Gram Stain)

Module-III (15 Hrs)

Routine laboratory investigation of Pleural Fluid, Routine laboratory investigation of Pericardial Fluid, Routine laboratory investigation of Synovial Fluid, Synovial fluid: Collection and preservation, Examination of CSF related to Meningitis, Brain Tumour and other disorder, CSF: Composition, Collection, Preservation and physical examination, Report analysis and report writing of Semen, Semen examination for male infertility disorder, Semen: Composition, function, collection and physical examination

Practice: Gram stain, ZN Stain, General consideration on specimen collection

Lab:-

Semen Analysis: Collection and physical examination, Chemical Examination, Microscopical examination

CSF Analysis: Collection and Routine

Examination Synovial Fluid: Collection and Routine

examination Pleural Fluid: Collection and routine

examination Pericardial Fluid: Collection and routine

examination Bacteriological Examination of throat swab

Suggested Readings:

1. Textbook of Clinical laboratory methods and diagnosis by Gradwohl's, Publisher Mosby
2. Medical laboratory technology Vol. 1 by K. L. Mukherjee, 2007, Publisher Tata McGraw Hill
3. Textbook of medical laboratory technology by Praful B Godkar, Publisher Bhalan
4. Medical laboratory science theory and practice by J. Ochei and Kolhatkar, 2002, Tata McGraw-Hill, Publisher TBS

SC6-CUTM1714-Cell and Molecular Biology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Cell and Molecular Biology	CUTM1714	Theory+Project	2-0-1	Fundamental Science

Objective

Understanding the central dogma of life
To understand the concept of gene regulation and its impact
The use of several molecular diagnostic techniques for disease interpretation

Course Outcome

After completion of the course the student will be gain knowledge of the significance of genes and proteins.
They will understand the mechanism of gene expression and protein synthesis,
The significance of gene expression regulation will become clear.
The students will understand the use of several molecular techniques in disease diagnosis.

Course Outline

Module-I

DNA structure. Salient features of double helix, Types of DNA. DNA topology - linking number, topoisomerases. Bidirectional and unidirectional replication, semi-conservative, semi-discontinuous replication.

Mechanism of DNA replication. Enzymes and proteins involved in DNA replication.

Module-II

RNA Structure. Transcription: Promoter, Polymerase and the transcription unit. **Transcription in Eukaryotes:** RNA polymerases, general Transcription factors. Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: siRNA, miRNA and its significance.

Translational machinery: Charging of tRNA, aminoacyl tRNA synthetases. Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes.

Malignant transformation of cells and role of oncogenes, Tumor virus, Proto- oncogenes, Tumorsuppressorgenes;Apoptosis,cellregeneration.

Module-III

Moleculardiagnosics: RecombinantDNA Technologyandits applications, Polymerasechainreaction andits application in diagnosis of pathogens, Site directed mutagenesis, DNA finger printing, DNaseFootPrinting, antisenseRNA technology, inheritedgeneticdisordersinmanandgenetherapy.

SC7-CUTM1718–ClinicalBiochemistry

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
Clinical Biochemistry	CUTM1718	Theory+Practice	2-1-0	BasicMedical science

Objective

UnderstandingtheconceptofBiochemicalanalyzinginstruments,chemicals andnormalrangesofbiochemicalcomponentsinourbody.

Clinicallyrelevantbiochemicalanalysisfordeeperunderstandingofallbiochemicalcomponentsi.e.,Proteins,Electrolytes, Hormonesetc

Course Outcome

Tolearnabouttests carriedoutfor biochemicalinvestigations.

Understanding ofprincipleofbiochemicalClinicalbiochemistrytests.

Tolearnnormalrangesand abnormalrangesofbiochemicalcomponentsandhormones.

Tostudyaboutdiseasesrelatedtobiochemicalandhormoneimbalanceinhumanbody.

Course

OutlineModule-

I(10Hrs)

LFT, KFT, Lipidprofile, EstimationofGlucose, Hormonetest: T3, T4, TSH, Prolactin, 17Kitosteroids

Practice: Demonstration the centrifuge machine, Demonstration of Colorimeter, Method of estimationand assessment for: a. Glucose tolerance test, Detection of sugar in Urine, Estimation ofProteininurine, Estimationof Liverfunctiontest, Kidneyfunctiontest, Lipidprofile, Thyroid

Module-II(10Hrs)

MetabolicdisordersandDiagnosticenzymology: Disordersofmetabolism: carbohydrate, Lipids, Amino acids and Nucleic acids. Diagnostic enzymes: Role of Enzymes in Clinical Practice: Markerenzymesin myocardium, liverand pancreas. Tumormarkers, Radioisotope techniques

Module-III(14Hrs)

Organ function tests: Liver function tests, Bile pigment metabolism, tests for liver function. Jaundice and its type, Functions of Kidney, Urine formation and renal function tests disease of kidney, Renal Calculi: Theory of formation and analysis, Gastric Analysis, Composition of gastric juice, concepts of free and bound acid, Fractional Test Meal

Practice: Operation procedure of Centrifuge machine, colorimeter etc. Estimation of Liver function test, Kidney function test, Estimation of bile pigment, bile salt, bilirubin etc.

Suggested Readings

1. Textbook of Medical Laboratory Technology by P.B. Godker, Publisher Bhalani.
2. Textbook of Medical Biochemistry by Chatterjee & Shinde, Publisher JPB
3. Medical Laboratory Technology by Mukherjee
4. Principles of Biochemistry by Lehninger, Publisher Kalyani
5. Practical Clinical Biochemistry by Harold Varley, Publisher CBS.
6. Ebook link-

SC-8- CUTM1720-Histology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Histology	CUTM1720	Theory+Practice	3-1-0	Basic Medical Science

Objective

Understanding the concept of histotechnology; Basic concepts about routine methods of examination of tissues Collection.

perform routine laboratory procedures encompassing all major areas of the histology laboratory.

accurately and proficiently embed tissue and understand the principles of microtomy.

Clinically relevant onchological analysis for deeper understanding of abnormal cell growth that anywhere in human body.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outcome

In this section students will be made aware of terminology used in histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.

Reception and labeling of histological specimens.

Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory.

The students will learn about various staining procedures for demonstration of different substances & various cytological investigations.

The students will learn about special staining procedures & handling & testing of various cytological specimens.

Module-I(8Hrs)

Histotechnology, Care & Maintenance of histotechnology equipments and their parts and Safety measures of laboratory equipment used in histotechnology. Basic concepts about routine methods of examination of tissues, Collection and transportation of specimens for histological examination, fixation: Process, Various types of fixatives used in a routine histopathology laboratory -

Simple fixatives, Compound fixatives, Special fixatives for demonstration of various tissue elements.

Practice: Care & maintenance of Histology equipments, Collection & transportation of specimens, Fixation

Module- II(8Hrs)

Decalcification Criteria of a good decalcification agent, Technique of decalcification Followed with selection of tissue fixation, decalcification neutralization of acid and thorough washing. Various types of decalcifying fluids, Processing of various tissues for histological examination, Embedding, Schedule for manual or automatic Tissue processing, Components & principles of various types of a tissue processors.

Practice: Method of Decalcification, Embedding, manual or automatic tissue processing schedule.

Module- III(10Hrs)

Periodic Acid Schiff Staining, Impregnation and Mounting, Commonly used mounting in histotechnology lab. General Staining Procedures (routine H&E stain, PAP stain and other special stain) for Paraffin Infiltrated and Embedded tissue, To perform & practice the manual & automated Haematoxylin and Eosin staining technique, To perform & practice the Mallory's Phosphotungstic Acid Haematoxylin (PTAH). Introduction of FNAC and its staining tech, museum technique, postmortem technique.

Practice: Procedure for manual Staining and Automatic Staining Technique, FNAC technique, Museum technique (Hospital Visit), Postmortem technique (Hospital Visit).

Module- IV(8Hrs)

Demonstration of instruments used for dissection Use of antiseptics, disinfectants and insecticides in a tissue processing laboratory Reception and labeling of histological specimens Preparation of various fixatives -Helly's fluid, Zenker's fluid, Bouin's fluid, Corney's fluid, 10% Neutral formalin, Formal saline, Formal acetic acid, Pereyn's fluid, prepare 70% alcohol from absolute alcohol. To perform embedding and casting of block.

Practice: Use of antiseptics, disinfectants and insecticides in tissue processing laboratory, Preparation of various Fixatives, Labeling of Histological specimens, Embedding and Casting of block

Module- V(8Hrs)

Tissue Processor, Microtomy, Honing and Stropping technique, Use of tissue floating bath, Use of incubator

Practice: Processing of tissue by manual and automated processor method. To demonstrate various part and types of microtome. To learn sharpening of microtome knife (Honing and stropping)

technique) To perform section cutting, learn mounting of stained smears. To practice attachment of tissue sections to glass slides To learn using tissue floatation bath drying of sections in incubator (37⁰ C)

Suggested Readings:

1. Color textbook of histology by Gartner & Hiatt, publisher Elsevier
2. Netter's essential histology by William Ovalle, publisher Elsevier
3. Histology E-book by Barry Mitchell, publisher Elsevier
4. Textbook of Histology (color atlas) by Krishna Garg, Indira Bahl, Mohini Kaul, publisher CBS
5. Textbook of Histology and a Practical Guide by J P Gunasegaran, Publisher Elsevier
6. Textbook of Medical Laboratory Technology by Praful B Godkar, Publisher Bhalami
7. Ebook link-

https://books.google.co.in/books?id=CERPDwAAQBAJ&printsec=frontcover&source=gbs_ge_summary_r&cad=0#v=onepage&q&f=false

BASKET II

Discipline Core Courses

DC-1-CUTM1711- General Microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
General Microbiology	CUTM1711	Theory+Practice	3-1-0	Fundamental Science

Objective

<p>To know various culture media and their applications and also understand various physical and chemical means of sterilization</p> <p>To know General bacteriology and microbial techniques for isolation of pure cultures of bacteria, fungi and virus</p> <p>To master aseptic techniques and be able to perform routine culture handling tasks safely and effectively</p>
--

Course Outcome

This study demonstrates the theory and practical skills in microscopy and their handling techniques and staining procedures.

Understanding the details of microbial cell organelles.

Provides knowledge on growth of microorganism.

Provides knowledge culturing microorganism.

Course

Outline Module-

I(12Hours)

History and scope of Microbiology, Recent trends and developments in modern microbiology. Identification, characterization and classification of microorganisms. Distinguishing characteristics between prokaryotic and eukaryotic cells. Structure and function of Cell wall of bacteria, cell membranes, flagella, pili, capsule, gas vesicles, carboxysomes, magnetosomes and phycobolosomes.

Practice:

1. Preparation of bacterial smear and staining – Gram's, Acid-fast, Staining of bacterial spores, flagella, capsule, spirochaetes
2. Demonstration of various parts of microscope and its functioning and care.

Module-II(12Hours)

Methods of sterilization: Physical methods – Dry heat, moist heat, radiation methods, filtration methods, chemical methods and their application. Concept of containment facility, sterilization at industrial level. Different staining techniques used in bacteriology.

Practice:

3. Demonstration of the different types of sterilization technique and operation of the instruments used in microbiological lab.
4. Preparation of media, cultivation of bacteria

Module-III(16Hours)

Bacterial nutrition – Nutritional requirement of bacteria. Cultivation of aerobes and anaerobes, Reproduction in bacteria and spore formation. Bacterial growth curve and bacterial nutrition Media. Culture Media, Liquid and solid media, defined and synthetic media, routine laboratory media (basal, enriched, selective, enrichment, indicator, and transport media).

Practice:

5. Biochemical tests for identification of bacteria
6. Preservation of stock cultures of bacteria

Suggested Readings:

1. Textbook of Microbiology - Ananthanarayan & Paniker (10th Ed)
2. Medical Microbiology - by Fritz H. Kayser et al
3. Medical Laboratory Technology by Kanai Lal Mukherjee, Publisher Tata McGraw Hill
4. Microbiology (7th Ed) - by Prescott
5. Practical Book of Medical Microbiology by Satish Gupta, Publisher Jaypee Brothers
6. Medical Laboratory Manual for Tropical Countries Vol. I and II by Monica Cheesbrough
7. Essential Medical Microbiology - by Rajesh Bhatia (4th Ed)
8. Clinical Laboratory Methods and Diagnosis by Gradwohl, 2000, Publisher Mosby
9. Medical Laboratory Science Theory and Practice, Jochei and Kolhatkar, 2002, Publisher TBS

DC-2- CUTM1713-Systematic Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Systemic Bacteriology	CUTM1713	Theory+Practice	3-1-0	Fundamental Science

Objective

To learn opportunities in the basic principles of medical microbiology and infectious disease.

To study mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.

To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

Course Outcome

The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.

Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

Solve problems in the context of this understanding.

Course

Outline Module-

I(9Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Cocci (Gram Positive): Aerobic: Micrococcus spp., Staphylococcus spp., Streptococcus spp. Anaerobic: Peptococcus spp., Peptostreptococcus spp., *Vibrio* spp., *Acidaminococcus* spp. and others. Cocci (Gram Negative): Aerobic: *Neisseria* spp., Anaerobic Gram-negative bacteria.

Practice: Culture techniques

Culture media

Identification of *Staphylococcus* sp.

Module-II(12Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of: Aerobic non-spore forming gram positive bacilli:

Bacillus spp., *Corynebacterium* spp., *Actinomyces*, *Nocardia* spp., *Mycobacterium* spp. - pathogenic, Tubercle bacilli and MOTT bacilli (Atypical mycobacterium) and Hansen's bacilli and others. Anaerobic: *Bifidobacterium* spp., *Eubacterium* spp., *Actinomyces* spp., *Propionibacterium*, *Clostridium* spp., and others.

Practice: Preparation of media

Media used

for biochemical identification & their uses Identification of

Mycobacterium sp.

Module-III(18Hrs)

Morphology, cultural characteristics, biochemical reaction, pathogenesis/disease caused & lab diagnosis, Prevention and Control of Gram- Negative Bacilli Aerobic: Enterobacteriaceae, *Citrobacter* spp., *Edwardsiella* spp., *Enterobacter* spp., *Escherichia coli*, *Ewingella*, *Hafnia* spp., *Klebsiella* spp., *Morganella* spp., *Proteus* spp., *Providencia* spp., *Salmonella* spp., *Serratia* spp., *Shigella* spp., *Yersinia* spp., *Vibrio* spp., *Pseudomonas* spp., *Chlamydia* and *Chlamyphila*, *Brucella* spp., *Bordetella* spp., *Haemophilus* spp., *Mycoplasma* spp.

Practice: Culture methods & identification of common bacteria on media.
Antibiotic sensitivity testing.

Identification of *Escherichia*, *Klebsiella*, *Proteus* sp.

Suggested Readings:

1. Textbook of Microbiology- Ananthanarayan & Paniker (10th Ed)
2. Microbiology (7th Ed)- by Prescott
3. Medical Microbiology- by David Greenwood et al (Elsevier)
4. Essential Medical Microbiology- by Rajesh Bhatia (4th Ed)
5. Medical Microbiology- by Kayser et al
6. The short text book of medical microbiology- by Satis Gupte (10th Ed)

DC-3- CUTM1717- Applied microbiology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Applied Microbiology	CUTM1717	Theory+Practice	2-1-0	Fundamental Science

Objective

To impart knowledge of the basic principles of bacteriology, virology, including the nature of pathogenic microorganisms, pathogenesis, laboratory diagnosis, transmission, prevention and control of diseases common in the country

Course Outcome

To know the applications of microbiology in diagnostics, hospitals and community

Course

Outline Module-

I (6 Hours)

The normal flora, collection and transport of clinical specimens, Collection and preliminary processing of specimens.

Practice:

Isolation of *Streptococcus mutans* from oral cavity
Procedure for sample collection from skin, ear.

Module-II (9 Hours)

Diagnostic microbiology- an approach to laboratory diagnosis, Rapid and automation methods in diagnostic microbiology, Molecular techniques in microbiology, Serological and skin tests

Practice: Demonstration of antigen-antibody reaction
Pus culture and sensitivity

Module-III(8Hours)

Microbiology in the service of human being, Community microbiology, Emerging and re-emerging Microbial disease, Nosocomial infections

Practice: Urine culture and sensitivity
Isolation of microorganism from spoiled fruit juice

Module-IV(6Hours)

Hospital and laboratory waste, Diagnostic virology, Emergency microbiology Bacteriology of Milk, Air and Water

Practice: Isolation of microorganism from curd Isolation of microorganism from Air

Suggested Readings:

1. Medical Parasitology by R. L. Chhpujani and Rajesh Bhatia, Jaypee publisher
2. Short textbook of medical microbiology by Satishgupt, Publisher Jaypee

DC-4-CUTM1716-Medical Parasitology and Mycology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Medical Parasitology and Mycology	CUTM1716	Theory+Practice	3-2-0	Fundamental Science

Objective

Describe basic morphology, lifecycle, pathogenesis, lab diagnosis and treatment of parasites and fungi.

Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Describe basic principle and procedures of isolation of fungus and parasites from clinical samples like stool, vaginal swab etc.

Perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi.

Course Outcome

Identification of pathogenic parasite and fungus in disease diagnosis and treatment.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

To serve as a resource for the clinical laboratories professionals in the different region.

Module I

General Parasitology- Classification of medically important parasites, epidemiology of parasitic infections, immunology of human parasitic infections. Diagnostic parasitology- Systematic study of following parasites (Geographical distribution, habitat, morphology

and lifecycle, risk of infection, pathogenesis, laboratory diagnosis prophylaxis and serological diagnosis)

Practice: Collection & transport of specimens for examination of stool for parasites identification. Examination of other body fluids for parasites identification. Concentration techniques for demonstration of Ova (Principles and applications). Routine Stool examination for detection of intestinal parasites.

Module-II

Protozoa– Intestinal amoeba, free living pathogenic amoeba, giardia, trichomonas, balantidium, isospora, cryptosporidium, microspora, cyclospora Plasmodia, leishmania, trypanosoma, toxoplasma, babesia.

Helminthes– Cestodes–

Taenia, Echinococcus, Diphylobothrium, Hymenolepis, Multiceps, Trematodes–

Schistosoma, Fasciola, Fasciolepis, Paragonimus, Clonorchis, Opisthorchis. Nematodes–

Ascaris, Hookworm (Ancylostoma), Trichuris, Enterobius, Strongyloides, Filaria, Trichinella, Toxocara, Dracunculus Biological vectors.

Practice: Identification of adult worms from model's or slide's. Identification of different parasites their morphology from slide's. Culture techniques for parasites. Serological diagnostic methods.

Module-III

General Mycology – Fungus – Classification Fungal Structure & Morphology, Reproduction of fungi, Immunity to Fungal Infections. Culture Media in Mycology, Stains in Mycology. Normal fungal flora of human beings. Diagnostic Mycology - Epidemiology, Pathogenesis, Laboratory Diagnosis of Fungal Infections. Specimen collection, preservation, Transportation & Identification of Mycological Agent. Biochemical tests for fungal identification, Anti-fungal agents, invitro tests. Serological tests for mycotic infections. Use of laboratory animals in Mycology. Typing of fungi Preparation of fungal antigens & their standardization.

Practice: To prepare culture media used routinely in mycology. Diagnostic Methods in Mycotic Infections. Isolation and identification of fungus from clinical specimen. To perform all the stain in g techniques for identification of fungi.

Practice: Collection & transport of specimens Examination of stool for parasites. Examination of blood & bone marrow for parasites. Examination of other body fluids & biopsy specimens for parasites. Culture techniques for parasites. Serological diagnostic methods, skin tests.

Suggested Readings:

1. Parasitology book by K.D. Chatterjee.(e-book link- <https://sites.google.com/site/bkthrtprazg/atahrgiwu>, <https://www.goodreads.com/book/show/24366965-parasitology-protozoology-and-helminthology-with-two-hundred-fourteen>
2. Textbook of medical Parasitology.(e-book link- <https://www.pdfdrive.com/textbook-of-medical-parasitology-textbook-of-medical-parasitology-e128716897.html>
3. Bailey & Scott's Diagnostic Microbiology (e-book- <https://www.pdfdrive.com/bailey-scotts-diagnostic-microbiology-e187863782.html>)

DC-5-CUTM1719-Immunology & Virology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Immunology and Virology	CUTM1719	Theory+Practice	3-2-0	Fundamental Science

Objective

Understanding the concept of Innate & adaptive immune system; complement system; Hypersensitivity. Clinically relevant serological analysis for deeper understanding of antigen-antibody interaction. To understand the concept of cells of immune system and organs of immune

system.

To understand the properties of virus, diagnosis of important viruses and vaccination.

Course Outcome

The student will learn the application of Immunology in disease diagnosis.

Complement system followed by the body on encountering an Antigen.

Immune Response produced on encounter with foreign body.

The students will learn the role of immunity in fighting disease, along with consequence of undesirable expression of immune system such as, hypersensitivity and autoimmune disease.

They will gather knowledge regarding the properties, diagnosis of virus and vaccination against them.

The conceptual understanding of the subject provides opportunities for employability and scopes for higher education.

Course Outline

Module-I

Immunity: Concept of Innate and Adaptive immunity.

Immune Cells and Organs: Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT

Antigens: Characteristics, Hapten, Epitopes, Adjuvants;

Antibody: Structure & its classes.

Antigen-Antibody interaction, avidity & affinity.

Serological Reactions: Principles of Precipitation, Agglutination, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluorescence, Immunoelectron microscopy.

Practice: Performing Serological tests: Widal test, VDRL test, ASO test, C-Reactive Protein test, Rheumatoid factor (RF) test

Precipitation in agarose gel

Performing Ouchterlony Double diffusion test

Demonstration of SDS-

PAGE Demonstration of

ELISA Demonstration of Western blotting

otting

Module-II

Complement System: Role of complement system in immune response, Complement components and Activation pathways.

Immune Response: Cell mediated and humoral Immunity.

Monoclonal antibodies: Production, characterization and applications.

Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies, SCID, DiGeorge syndrome, Chediak-Higashi syndrome, Leukocyte adhesion deficiency, CGD.

Module-III

Virus: General properties, concept of viroids, virusoids, satellite viruses and Prions.

Structure of Viruses: Capsid symmetry, enveloped and non-enveloped

viruses. Isolation, purification and cultivation of viruses.

Serological diagnosis of virus infections.

Arthropod borne and rodent borne virus diseases, Picorna viruses and diseases, Hepatitis viruses, Rabies and other neuro viruses, Orthomyxo and paramyxo viruses, Coronaviridae, Pox, Adeno, Herpes, Reo, Rotavirus, HIV Viruses, Oncogenic viruses.

Vaccines: their Preparation and their immunization schedules.

Practice: Serological diagnosis of virus borne diseases: HBsAg, HIV

Suggested Readings:

1. Kuby's Immunology (7th Ed)-
by J. Owen, J. Punt, S. Strandford. Macmillan Higher Education, England.
(e-book link: <https://www.pdfdrive.com/kuby-immunology-7th-edition-2013-e44842271.html>)

DC-6- CUTM1722- Clinical Bacteriology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Clinical Bacteriology	CUTM1722	Theory+Practice	3-1-0	Fundamental Science

Objective

To confirm the suspicion of infectious bacterial disease.
To identify the etiologic agent by isolating the causative bacterial pathogen.

Course Outcome

To learn the diagnosis of bacteria from infective regions of the body

Study of their sensitivity

Examination of bacteria from common samples.

Study of control measures for nosocomial infection.

Students can safeguard himself & society and can work in diagnostics and hospitals

Course

Outline **Module-**

I (12 Hours)

Laboratory strategy in the diagnosis of various Infective syndromes: Samples of choice, Collection, transportation and processing of samples for laboratory diagnosis of the following complications: a) Septicemia and bacteraemia b) Upper Respiratory tract infections, c) Lower Respiratory tract infections d) Wound, skin, and deep sepsis, e) Urinary tract infections, f) Genital Tract infections, g) Meningitis, h) Gastro intestinal infections, i) Enteric fever, j) Tuberculosis (Pulmonary and Extra-pulmonary), k) Pyrexia of unknown origin

Practice: Collection of nasal swab and its culture Isolation of microorganism from wound

Module-II (6 Hours)

Antibiotic susceptibility testing in bacteriology- a. Definition of antibiotics, b. Culture medium used for Antibiotic susceptibility testing, c. Preparation and standardization of inoculum, d. Control bacterial strains, e. Choice of antibiotics, f. MIC and MBC, g. Various methods of Antibiotic susceptibility testing with special reference to Stokes method and Kirby-Bauer method, h. Tests for production of β -lactamase

Practice: Preparation and use of different media in bacteriology laboratory Antibiotic susceptibility testing

Module-3 (10 Hours)

Bacteriological examination of water, milk, food and air-

a. Examination of water - Collection and transportation of water sample, Presumptive coliform count, Eijkman test, Introduction and importance of other bacteria considered as indicators of faecal contamination

b. Examination of Milk and milk products - Basic Concepts regarding gradation of milk,
Various tests for Bacteriological examination

c. Examination of food articles - Basic Concepts regarding classification of food like frozen food,

canned food, raw food, cooked food etc. Various tests for Bacteriological examination with special reference to food poisoning bacteria

d. Examination of Air-

Significance of air bacteriology in healthcare facilities, Collection, processing and reporting of an air sample

Practice: Isolation of microorganisms from frozen food
Isolation of microorganisms from water

Suggested Readings:

1. Practical Medical Microbiology by Mackie & MacCartney Volume 1 and 2
2. Textbook of Microbiology by Ananthanereyan
3. Medical Microbiology by Paniker & Satish Gupte
4. Medical Microbiology - by Fritz H. Kayser et al
5. Bailey and Scott's Diagnostic Microbiology (12th) Ed
6. Medical Laboratory Technology vol. I, II, III by Mukherjee
7. Medical Laboratory manual for tropical countries Vol II Microbiology by Monia Cheesbrough

DC-7-CUTM1721-Research Methodology

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Research Methodology	CUTM1721	Theory+Project	2-0-1	Fundamental Science

Objective

To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
Provide students with in-depth training on the conduct and

Course Outcome

Students can understand the ethical and philosophical issues associated with research in education

This study provides knowledge on various modes of presenting and disseminating research findings.

Enable students to acquire expertise in the use and application of the methods of data collection and analysis.

Provide learning opportunities to critically evaluate research methodology and findings.

Enable students to be reflexive about their role and others' roles as researchers.

Course

Outline Module-

I (9Hrs)

Introduction to Research: Definition, Scope, Limitations, and Types. Objectives of Research. Research

Process: Proposal Development: Basic steps involved in the health research proposal development process Literature Review: Importance and Sources, Strategies for gaining access to information, Library search, Computer search.

Research Designs: Research Title and Objectives Criteria for selecting a research title, Formulation of research objectives, Types of research objectives, Qualities of research objective

Module- II (8Hrs)

Data Collection: Secondary Data, Primary Data, and Methods of Collection. Scaling Techniques: Concept, Types, Rating scales & Ranking Scales, Scale Construction Techniques and Multi-Dimensional Scaling. Sampling Designs: Concepts, Types and Techniques and Sample size Decision.

Module- III (14Hrs)

Research Hypothesis: Definition, Qualities of research hypothesis Importance and types of research hypothesis. Theory of Estimation and Testing of Hypothesis Small & Large Sample Tests, Tests of Significance based on t, F, Z test and Chi-

Square Test. Designing Questionnaire. Interviewing. Tabulation, Coding, Editing, Interpretation and Report Writing.

Project: Writing a review on Nosocomial urinary tract infection.

Writing a research article on antibiotic resistance patterns in wound infections. Writi

ngareviewonVirusculture

Literature surveyonCovid-19

SuggestedReadings:

1. ResearchMethodologybyC.R.Kothari(3rdEd)
2. ResearchMethodologyIntheMedical&BiologicalSciencesbyPetterLaakeetal.
3. EssentialsofResearchDesignand MethodologybyGeoffreyMarczyketal.
4. WHO,HealthResearchMethodology:AguidefortraininginresearchMethods,2ndEdition,W
HO-WIPRO
5. AStudent’sGuidetoMethodologybyCloughPandNutbrownC.SagePublication.

HealthResearchCouncil.
7. FieldTrialsofHealthInterventionsinDevelopingCountriesbySmithPG,Morrow.

DC-8-CUTM1754-MiniProject

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
MiniProject	CUTM1754	Project	0-0-2	BasicMedical science

The student is supposed to carry out project work in assistance with a mentor. The project should be relevant to the syllabus and should be qualitatively initiated towards fetching a research publication/case study/ clinical study/ community service/ survey on successful completion within the stipulated time.

Outcome: Research paper publication/ new idea generation/ case study/ clinical study/ community service/survey.

DC-10-CUTM1756-Project

Subject Name	Code	Typeofcourse	T-P-Pj	Prerequisite
Project	CUTM1756	Project	0-0-12	BasicMedical science

Projectwork:

SuggestedProjecttitle

1. Antibacterial activity of sweet orange (citrus sinensis) on Staphylococcus aureus and Escherichia coli isolated from wound infected.
2. The incidence of Salmonella and Escherichia coli in livestock (Poultry) feeds

3. Microbialevaluationofmilkfromadairyfarm.

4. Gastroenteritis in primary school children (6-12yr) of specific locality.
5. Comparative analysis of microbial load of the main water production and water available to CUTM campus

DC-9- CUTM1755–Internship

Subject Name	Code	Type of course	T-P-Pj	Prerequisite
Internship	CUTM1755	Project	0-0-12	Basic Medical science

Internship Thesis Guideline

This Guideline is designed to provide students the knowledge and practice of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to:

1. Search relevant scientific literature
2. Develop a research proposal
3. Employ appropriate data collection techniques and tools
4. Manage collected data
5. Analyze data with appropriate statistical techniques
6. Write thesis
7. Defend the findings

Proposal Development:

At the ending of third year (Sixth Semester), students individually consultation with designated faculties and extensive literature survey will develop research proposal during the initial 6 months period.

Data Collection/Thesis Writing:

Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Six Semester). The Dissertations should have following format:

1. Title
2. Introduction
3. Materials and Methods
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References

9. Appendix

Internship

1. Case record
2. Labmanagementandethics
3. Evaluation-Guide(internal)
 - a. -Industriesguide(external)
 - b. -University-projectreport/Viva

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function) ,10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Higher Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

- 1) Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
- 2) Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd & 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: John Wiley & Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

- 1) Advanced Engineering Mathematics by P.V. O'Neil Publisher: Thomson
- 2) Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff & A.D. Snider Publisher: Pearson

- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs, both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II

(3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III

(3 Hours)

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV

(3Hours)

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V

(3 Hours)

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI

(3 Hours)

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII

(4 Hours)

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009.
Chapters: 1(1.1 ,1.2,1.3, 1.5); 7(7.1,7.6); 8(8.1 to8.5, 8.7, 8.8);9(9.1,9.4,9.5).

Reference Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Trembkay, R. Manohar, Tata MC Graw – Hill Edition 38th reprint, 2010.
2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.
3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- T o apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.

- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and

Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1.Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd. Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition

Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.

- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium (3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction (2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid**(2 Hrs.)**

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia**(3 Hrs. + 2 Hrs. practice)**

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion**(3 Hrs.)**

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion**(3 Hrs. + 4 Hrs. Practice)**

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Reference Books:

Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill
Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law, Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics
V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

1. A Text Book of Optics by M.N. Avadhanulu, BrijLal, N. Subrahmanyam, S Chand; 23rd Rev. Edn. [Module I&II]
2. Engineering Physics, by D.Thirupathi Naidu, M.Veeranjaneyulu, V.G.S Book links, 2017. [Module-III, IV]

3. Principles of Engineering Physics-2 by Md.Khan, S.Panigrahi, Cambridge University Press 2016. [module-V,VI&VII]

Reference Books:

1. Optics by AjoyGhatak, McGraw Hill Education; 6 edition, 2017.
2. Physics-I for engineering degree students by B.B. Swain and P.K.Jena.
3. Concepts in Engineering Physics by I Md. N. Kha, 2016.

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)

4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using pycnometer. (V.lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Clomel/Quinhydrone Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3:Water resources and its conservation

Assignment-4:Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4:Environmental protection act, 1986

Reference Books:

1. Environmental Studies by U.N. Dash & H. D. Kumar, India Tech Publication, New Delhi
2. Environmental Studies by R. Rajagopalan Oxford University Press
3. Environmental Science and Engineering, 2E, by Aloka Debi, University Press

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply.

Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method,

Net present value method, internal rate of return method, Cost-benefit analysis in public projects.

Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management;Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 1) Project Management: A Managerial Process, Clifford F Gray & Eric W Larson, Tata McGrawHill
[Text book]
- 2) A Guide to the Project Management Body of Knowledge, 6th Edition, PMI

- 4) Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata McGraw Hill, New Delhi.
- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like India
- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,
- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - [Introduction to Gender](#)

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - [Gender issues in health](#)

PPT 3 - [Gender issues in education](#)

PPT 4 - [Gender issues in Governance](#)

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - [WID WAD GAD](#)

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - [Gender and Organisations](#)

PPT 7 - [Gender Equality in Organisations](#)

PPT 8 - [Gender Mainstreaming and Attitude in Workplace](#)

PPT 9 - [Gender Sensitisation](#)

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)
4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations

LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)

LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain

LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)
2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGalzqlw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk
<https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>

2. Overview of Sustainable Development Goals -
<https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers
4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job

Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:

<https://drive.google.com/file/d/1Wst-jdAJuHHVtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)

- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables
- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions
- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks
- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount
- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule

- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments
- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular

- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

Centurion University of Technology and Management Odisha

CHOICE BASED CREDIT SYSTEM

COURSE STRUCTURE & SYLLABUS

BASKET - III

School of Engineering & Technology

2020

**Course Structure
Basket - III**

Course Code	Course Title	Credits	Course Type T+P+PJ
CUTM1017	Industrial IOT and Automation	6	3-2-1
CUTM1018	Data Analysis and Visualisation using Python	4	0-1-3
CUTM1019	Machine Learning using Python	4	1-2-1
CUTM1020	Robotic automation with ROS and C++	4	1-2-1
CUTM1021	Basics of Design Thinking	2	0-0-2
CUTM1022	System Integration with DYMOLA	2	0-0-2
CUTM1023	Smart Engineering Project (G2M)	3	0-0-3

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID

Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus

Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, cloud

Computing, fog or edge computing,

Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development

Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino

issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram
12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2 2.

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madiseti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV,

MS Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALSATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators
3. ERP dashboarding
4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.
- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.

- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .
- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.

- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

- P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT
- P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

- P3.1 Port handling of 8951
- P3.2 Port handling of Arduino
- P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

- 4.1 Designing of sequential robot control system.
- 4.2 Writing of programs in different programming languages.
- 4.3 Controlling of input/output devices.

Practice

- P4.1 Programming of controllers with different programming languages
- P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

- 5.1 What is Ubuntu & ROS?
- 5.2 Requirement and application of ROS.
- 5.3 ROS based simulation of Turtlbot.
- 5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

- P5.1 Ubuntu basic command.
- P5.2 Installation of Ubuntu, ROS & Gazebo
- P5.3 Turtlbot control application
- P5.4 Gazebo based robot control and simulation.
- P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot

2. Autonomous operated robot.
3. 3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.
- Design a Fund raising campaign

Books: Tom Kelly & Jonathan Littman (2001). “The Art of Innovation” Broadway Publication.

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation

Window,

Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages, Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=zz-_crJOG0&t=26s

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_YI3RiTI14

Syllabus

Geotechnical Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1073	Geotechnical Engineering	3	1-1-1

Objective

- Perform Moisture content, Specific gravity, Atterberg limits tests.
- Perform Grain size distribution, Proctor tests.
- Perform Unconfined compression, Triaxial tests.
- Perform California Bearing Ratio, Vane Shear tests.
- Perform Sand replacement, Core cutter, Permeability tests.

Course Outcome

- To obtain knowledge about soil properties and methods of soil properties determination in the laboratory, using field tests and considering comparable experience. Basic stability and deformation problems. Principle of spread and deep foundation design. To understand fundamental knowledge of geotechnical works for soil improvement, interaction of structure and subsoil. Basic design methods for excavation and foundation pits with dewatering and sealing systems.
- Design and analyse Shallow foundations manually as well as using STAAD Pro
- Design and analyse Deep foundations manually as well as using STAAD Pro
- Carry out Moisture content, Specific gravity, Atterberg limits tests.
- Carry out Grain size distribution, Proctor tests.
- Carry out Unconfined compression, Triaxial tests.
- Carry out California Bearing Ratio, Vane Shear tests
- Carry out Sand replacement, Core cutter, Permeability tests.

Course content

Module I:(5hrs)

Theory :(2hrs)

- (a) INTRODUCTION: Soil formation - soil structure and clay mineralogy - Adsorbed water - Mass- volume relationship - Relative density.
- (b) INDEX PROPERTIES OF SOILS: Grain size analysis - Sieve and Hydrometer

methods - Consistency Limits and Indices - I.S. Classification of soils

- (c) PERMEABILITY: Soil water - capillary rise - flow of water through soils - Darcy's law- permeability - Factors affecting - Determination of coefficient of permeability - Permeability of layered systems
- (d) SEEPAGE THROUGH SOILS: Total, neutral and effective stresses - quick sand condition - Seepage through soils - Flow nets: Characteristics and Uses (Basic appraisal only) .

Practice:(3hrs)

1. Determination of water content of soil (1hrs)
2. Determination of specific gravity of soil(1hrs)
3. Grain size analysis by sieving (Dry sieve analysis) (1hrs)

Module II: (5hrs)

Theory :(1.5hrs)

- (e) BCOMPACTION: Mechanism of compaction - factors affecting - effects of compaction on soil properties. Field compaction Equipment - compaction control.
- (f) CONSOLIDATION: Stress history of clay; e-p and e-log p curves - magnitude and rate of 1-D consolidation- Terzaghi's Theory.

Practice:(3:30hrs)

4. Determination of field density by sand replacement method.(1hrs)
5. Determination of consolidation properties of soils.(1:15mins)
6. Determination of unconfined compressive strength of soil(1:15mins)

Module III: (6hrs)

Theory :(1.5hrs)

- (g) SHEAR STRENGTH OF SOILS: Mohr - Coulomb Failure theories
- (h) STRESS DISTRIBUTION IN SOILS: Normal and shear stresses on a plane, Boussinesq's solution.

Practice:(1hrs)

7. Determination of shrinkage limit; Determination of permeability by constant head method (1hrs)

Project :(3:30 hrs)

Types of shear strength test to be delivered as project mode, rest of the topics to be dealt in classroom teaching mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation.

Module IV: (7hrs):

Theory:(1hrs)

(i)DESIGN OF SHALLOW FOUNDATIONS: Introduction, Different types of shallow foundations, (j)DESIGN OF DEEP FOUNDATIONS: Introduction, Different types of deep foundations, Design methodology for piles.

Practice: (1hrs)

8. California bearing ratio test (1hrs)

Project :(5hrs)

Design calculation of shallow foundation to be done in project mode using STAAD Pro software.

design calculation of pile capacity, Analysis of pile group, Settlement of pile group, Concept of negative skin friction, Piles subjected to lateral loads, Pile load test, Design and construction of well foundation. Design of cantilever sheet piles and anchor sheet piles to be done in practice mode as well as project mode using STAAD Pro software.

Module V: (4:30 hrs):

Theory:(2hrs)

(k) FOUNDATIONS IN DIFFICULT GROUNDS: Introduction, Techniques of ground improvement, Foundations in swelling soil, Foundations in collapsible soil, Use of soil reinforcement.

(l) MACHINE FOUNDATIONS: Introduction, Free and forced vibration, Lysmer's method, dynamically loaded foundations, Dynamic soil properties, Vibration isolation .
BASIC APPRAISAL ONLY.NO NUMERICAL PROBLEMS)

Practice:(2:30hrs)

9. Determination of shear parameters by Direct shear test(1:30hrs)

10. Determination of compaction properties by standard proctor test. (1hrs)

Module VI: (5 hrs)

Practice: (1 hrs)

11. Determination of shear parameters by Tri-axial test. (1hrs)

Project :(4 hrs)

STABILITY OF SLOPES: soil stabilization measures. Slope stability solutions to done using software Stability analysis of rigid walls, (MATLAB)

Module VII:(2hrs)

- (0) EARTH PRESSURE: Types of Earth pressure. Rankine's Active and passive earth pressure, Smooth Vertical wall with horizontal backfill. Extension to Soil, Coulombs wedge theory.
- (p) DESIGN OF RETAINING STRUCTURES: Introduction, Different types of retaining structures

E Books: Jain A K and Jain A K. 2005. Soil Mechanics and Foundations. Laxmi Publications (P) Ltd. New Delhi.

Ranjan Gopal and Rao A S R. 1993. Basic and Applied Soil Mechanics. Welley Easters Ltd., New Delhi.

Singh Alam. 1994. Soil Engineering Vol. I. CBS Publishers and Distributions, Delhi.

Construction Material Testing

Code	Course Title	Credit	T-P-PJ
CUTM1069	Construction Material Testing	2	0-2-0

Objective

- Understand the range of various materials for Civil Engineering projects.
- Understand relevant properties of common construction materials.
- Perform measuring, testing and evaluating the results.

Course Outcome

- Test, measure, and evaluate the best use of building and construction materials.
- Gain knowledge about how to determine the standard quality of construction materials.

Course Content

MODULE I : PROPERTIES OF CEMENT (3 Hrs)

Chemical composition test (01 Hr)

Fineness test of cement (comparison study) (01 Hr)

Soundness test of cement (comparison study) (01 Hr)

MODULE II: PROPERTIES OF STEEL (3 Hrs)

1. Ultimate Tensile strength test (01 Hr)

2. % of Elongation test (01 Hr)

3. Bend & rebend test (01 Hr)

Module III: PROPERTIES OF CEMENT CONCRETE (5 Hrs)

1. Gradation of Coarse Aggregates (01 Hr)

2. Flakiness Indes & Elongation Index (01 Hr)

3. Silt Content (01 Hr)

4. Preparation of cube mould for durability test (02 Hr)

Module IV : PROPERTIES OF BRICKS (2 Hrs)

1. Compression test on Bricks. (01 Hr)

2. Absorption test of brick. (01 Hr)

Module V : PROPERTIES OF TILES AND MARBLES (3 Hrs)

3. Test on tiles breaking strength. (01 Hr)
4. Water absorption test for marbles. (01 Hr)
5. Hardness test for marbles. (01 Hr)

Module VI : PROPERTIES OF TIMBER MATERIALS(5 Hrs)

1. Test on moisture content on timber. (02 Hr)
2. Air permeability, water tightness and wind resistance test for window and doors. (03 Hr)

Module VII : PROPERTIES OF BUILDING STRUCTURE(5 Hrs)

1. Slip Resistance Checking. (01 Hr)
2. Weather resistance and durability test. (02 Hr)
3. Test on durability of recycled concrete aggregates. (02 Hr)

Structural Detailing and Drawing

Code	Course Title	Credit	T-P-PJ
CUTM1061	Structural Detailing and Drawing	2	0+2+0

Objective

- To introduce the students to basic theory and concepts of Structural Drawing, STAAD Pro and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, types of projections, designing of beam, columns and shear walls.

Course Outcome

- Perform free hand sketching of basic geometrical constructions and multiple views of objects. Concept of projection, Types of section, PEB structure & Steel structure work.
- Demonstrate STAAD- PRO, & its uses. Do frame structure, steel structure & applying properties, loads, shear force and bending moment. Do design of steel, /concrete structure & bridge design.

Course Content

MODULE 1 – INTRODUCTION OF ENGINEERING DRAWING

(02 hrs)

Setting of paper size, drawing of title block with border line - Drawing of Types of line, their properties, and arrow head - Types of scale, dimensioning rules & their uses.

MODULE 2 – ORTHOGRAPHIC AND ISOMETRIC PROJECTION

(04 hrs)

Concept of projection - Types of projection and applying symbol of projection - Isometric scale - Isometric view.

MODULE 3 – SECTIONING

(04 hrs)

Types of section – Application - View positioning - steel structure - PEB structure & Steel structure work - Syphon , culvert & bridge design - Stair ,door & ventilator design and calculation.

MODULE 4 – INTRODUCTION OF STAAD Pro

(02 hrs)

Introduction to structural design & analysis, brief introduction about RCC structure - Doing frame structure - Calculating coordinate points, properties of building.

MODULE 5 – PLANE & SPACE FRAME STRUCTURE

(03 hrs)

Load, types & uses of load, calculation of dead load, live load & floor load - Working with design and analysis of building &, steel structure, preparation of RCC report - Applying load (wind load, seismic load, floor load, live load, dead load) using by water tank, tower, truss & multi stored building.

MODULE 6 – DESIGN OF BEAM AND COLUMN

(02 hrs)

Design of beam and column, file transfer, concrete design, steel design, slab design, shear force /bending moment, solve some error - Using I.S code to define concrete design, steel & transfer to file from AutoCAD to STAAD PRO through DXF file.

MODULE 7 – SHEAR WALL DESIGN

(03 hrs)

Describe about Shear wall design, & foundation - Using surface panel models to design shear wall (RC walls) & lift rooms, using STAAD -foundation to design, pile, mat, and isolated, combined footings - bridge deck design & stair case design - Response spectrum & foundation design foundation design.

Quantity Estimation & Costing

Code	Course Title	Credit	T-P-PJ
CUTM1063	Quantity Estimation & Costing	3	2+1+0

Objective

- To make familiar with calculation of quantities for different item of works & provide knowledge about estimation of buildings through Estimator-2.0 software
- On completion of this course the students will be able to know the process of making animation of buildings, Sketch up of building plans and building models.

Course Outcome

- Estimating, brick calculations & cost for different materials, foundation & footing calculations.
- Gain knowledge about how to schedule & estimate different construction works both manually and using software.

Course Content

Module - I: BUILDING (2 Hrs)

Reading of Plans, Sections and detailed Drawings Related to buildings; preparation of Quantities and Units. Introduction of estimating & different types of estimate - Requirements for building estimate purpose of estimate - Plinth area estimate, cube rate estimate, annual estimate & maintenance estimate - Brick calculation & cost for different material - No. of brick required for area, weight of bricks, different bricks densities.

Practice Sessions:

1. Study of construction drawings and preparation of WBS. (01 Hr)
2. Detailed estimates for a Shopping Complex using Estimator-2.0 software. (01 Hr)
3. Detailed estimates for a hostel Building using Estimator-2.0 software. (01 Hr)
4. Detailed estimates for a hospital using Estimator-2.0 software. (01 Hr)

Module -II : CULVERT (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to irrigation structures; preparation of Quantities and Units.

1. Detailed estimates (Manual) for a Slab culvert with right angled/ Splayed wing wall. (01 Hr)

2. Detailed estimates (Manual) for a box culvert. (01 Hr)
3. Detailed estimates (Manual) for a Hume pipe Culvert. (01 Hr)

Module –III: ROAD (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Roads structures; preparation of Quantities and Units.

1. Detailed estimates (Manual) for a road. (01 Hr)

Module - IV: SLOPED ROOF (2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Sloping roof/Roof truss structures; preparation of Quantities and Units.

1. Detailed estimate (Manual) for a timber roof truss. (01 Hr)
2. Detailed estimate (Manual) for a roof cover of GI sheets. (01 Hr)

Module –V: QUANTITY SURVEY (2 hrs)

Estimations and Quantity Surveying; Preparation of Quantity of materials per unit rate of work; Estimating labor.

Quantity of materials required for different items of works in buildings (Manual). (01 Hr)
Quantity of different types of labor required for different items of works (Manual). (01 Hr)

Module-VI: RATE ANALYSIS OF BUILDING

Specifications; Rate Analysis as per State Govt. and CPWD Standards.

1. Development of Excel Sheet for Rates, Specifications and Cost Estimates. (01 Hr)
2. Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software. (01 Hr)
3. Rate Analysis and Cost Estimates for a hostel Building and a hospital. (01 Hr)

Module-VII: RATE ANALYSIS OF CULVERT & ROAD

Specifications; Rate Analysis as per State Govt. and CPWD Standards

1. Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software. (01 Hr)
2. Rate Analysis and Cost Estimates for an arch culvert. (01 Hr)
3. Rate Analysis and Cost Estimates for a road. (01 Hr)

MODULE VIII – PROJECT PREPARATION

1. Road section C & L-section. (01 Hr)
2. Report of detailed estimation with hard copy. (01 Hr)

Text Books

1. B.N Dutta ‘Estimating and Costing in Civil Engineering’, UBS Publishers & Distributors (P) Ltd, 2010.

Geometric Modeling

Code	Course Title	Credit	T-P-PJ
CUTM1060	Geometric Modeling	3	0+3+0

Objective

- To introduce the students to basic theory and concepts of AutoCad, Revit and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, dimensions, 3D Modeling and rendering.

Course Outcome

- Demonstrate use of CAD in Civil Construction, basic knowledge of operating software & commands, and benefit of civil developments in the construction industry. Do 2d & 3d drafting /design with AUTO CAD software.
- Architectural modeling set up units & element properties, annotating, detailing, presentation tools, printing, export/import with Revit Architecture Software.

Course content

MODULE 1 - 2D SKETCHES AND DIMENSIONING

1. Study for Drafting and Modeling – Coordinate systems (absolute, relative, polar). (1 Hr)
2. Drawing of a Section for a duplex building. (1 Hr)
3. Drawing of an elevation for a duplex building with dimensions. (2 Hrs)

MODULE 2 - 3D SKETCHES AND PROJECTION OF DUPLEX

1. Drawing of front view and top view of simple solids like prism, pyramid, cylinder, cone, etc, and dimensioning. (1 Hr)
2. Drawing front view, top view and side view of objects and projection of duplex building (2 Hrs)

MODULE 3 – BUILDING PLAN AND TRUSS

1. Drawing of a plan of residential building (Two bed rooms, kitchen, hall, etc.) (2 Hrs)
2. Drawing of a simple steel truss. (1 Hr)
3. Drawing sectional views of prism, pyramid, cylinder, cone, etc, (1 Hr)

MODULE 4 – INTRODUCTION OF REVIT ARCHITECTURE (02hrs)

1. Installing Autodesk Revit architecture and understanding the user interface. (1 Hr)
2. Creation of plan for a project by using level and sketching elements. (2 Hrs)

MODULE 5 - 3D MODELING WITH RIVET

1. Drawing isometric projection of simple objects. (1 Hr)
2. Creation of 3-D models of simple objects and obtaining 2-D multiview drawings from 3-D model. (2 Hrs)
3. Creation of 3d syphon, 3d canal fall, 3d water tank, 3d of trusts & 3d of foot over bridge. (2 Hrs)
4. Assembly drawing & attribute text - Annotation, block & w-block & leader. (2 Hrs)

MODULE 6 – WORKING WITH PROJECT AND WORK PLANES (04hrs)

1. Working with basic building components, site design and massing studies. (2 Hrs)
2. Setting color for wall, about sectioning libraries, basic knowledge of building. (2 Hrs)

MODULE 7 – ANNOTATION AND DETAILING AND RENDERING (04 hrs)

17. Creating text notes, grids, and levels. (1 Hr)
18. Working with label and detailing. (1 Hr)
19. Understanding the rendering workflow, using lights, and creating a lighting fixture. (1 Hr)
20. Displaying a light source in a view, controlling the position of a spotlight in a building model & adding plants and entourage. (2 Hr)

Hydrology and Irrigation

Code	Course Title	Credit	T-P-PJ
CUTM1071	Hydrology and Irrigation	3	1-1-1

Course objective

- To study the basic principles and movement of groundwater and properties of ground water flow.
- To study the watershed characters and applications.
- To study the ground water resources mapping and surface water resources mapping.
- To study the hydrological disaster and role of earth observation technology.

Course outcome

- An ability to manipulate hydrological data and undertake widely used data analysis.
- An ability to use the techniques, skills, and modern engineering tools related to groundwater modelling.
- Project oriented skills shall be gained by students to work efficiently in survey, planning, design and construction in the irrigation sector.

Module I: Theory 2 hr

Hydrological cycle, Types of Rainfall, Precipitation - measurement - average precipitation over a basin, evaporation, transpiration, infiltration - Infiltration indices. Runoff -Overland flow, Types of aquifers.

Practice: 2hr

1. Determination of infiltration capacity using double ring infiltrometer.

Module II: Hydrograph 3hr

Direct runoff, Base flow, separation of base flow- Hydrograph, Unit hydrograph - Assumptions of Unit hydrograph, derivation of unit hydrograph from direct runoff hydrograph, Computation of direct runoff hydrograph for different storms using unit hydrograph theory. 1hr

Practice:

2. Construction of double mass curve using Python hr
3. Hydrograph analysis using Python. 1h

Module III: Flood Management and Rainwater Harvesting 4hr

Indian rivers and floods, Causes of floods, Flood damage analysis. Design flood, Flood estimation, Frequency analysis, Flood routing through reservoirs and open channels. 1hr

Necessity of Rainwater harvesting, Importance of Rain water harvesting, Rainwater harvesting methods, Conservation and Harvesting of rain. Types and design of water harvesting structures; traditional rain water harvesting structures. 1hr

Practice:

4. Mapping of Drainage order from toposheets 1hr
5. Calculation of area and length of drainage. 1hr

Module IV: Groundwater Pollution & Quality Analysis 3hr

Sources of pollution; Potential evaluation of groundwater pollution; Physical, Chemical, Biological analysis, Surface and subsurface investigations of groundwater. 1hr

Practice:

6. Physio-chemical analysis of groundwater in laboratory 2hr

Module V: Reservoir 2hr

Types, Investigations, Site selection, Zones of storage, Safe yield, Reservoir capacity, Reservoir sedimentation and control. Introduction to Dams, types of dams, spillways and ancillary works, Site assessment and selection of type of dam, Information about major dams and reservoirs of India.

Module VI: Hydropower Engineering: 2hr

Dams and their causes of failure, planning of water resources projects, single and multipurpose projects, Reservoir Planning: Storage capacity of reservoirs, Yield from reservoir, Mass curve, Reservoir losses, reservoir sedimentation.

Module VII: Irrigation 6hr

Irrigation Engineering: Water requirements of crops, consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies. 1hr

Canals: Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributary canals, most efficient section, lined canals, their design, regime theory - Kennedys and Lacey's theories. Lined canals, Water logging - causes and control. 1hr

Practice :

7. Design of irrigation canal using Kennedy's and Lacey's theory. 1hr
8. Design of lined canal. 1hr
9. Design of tank surplus and vertical drop weir. 1hr
10. Design of head regulators and cross regulators. 1hr

Seminars:

1. Interlinking of River
2. Estimation of Evapotranspiration over land surface
3. Groundwater identification and estimation
4. Runoff computations
5. Attribution of Hydrologic Changes in a Tropical River Basin to Rainfall Variability.

Students take up group projects and deal with the following activities during the project. The project Report should contain the below gate process.

E Books:

1. Todd D.K., (2000) Ground Water Hydrology , John Wiley and Sons,
2. K., subramanya (2008) Engineering Hydrology, Tata McGraw-Hill Publishing Company Limited.
3. Ahmadi, A., Akhbari., M., and Karamouz, M (2011) Groundwater Hydrology: Engineering, Planning and Management, CRC Press.
4. Saeid Eslamian (2014) Handbook of Engineering Hydrology: Environmental hydrology and water management, CRC Press.
5. Malcolm. G. Anderson and Jeffrey J Mc Donnell (2005) Encyclopedia of hydrological Science, J Wiley.

Surveying Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1067	Surveying Techniques	3	1-2-0

Objective:

To study the temporary adjustment of survey instruments by standard methods ,levelling and cross sectioning survey and setting out works.

To do various field works with the help of Total station.

To Carry out topographic survey

Course Outcome:

- Carry out temporary adjustment of survey instruments by standard methods ,levelling and cross sectioning survey and setting out works
- Carry out topographic survey
- Doing centering, leveling & measuring coordinate points of area and calculation, transfer to data from Total station to software spectrum link
- Doing field work using of simple machine parts such as Total –Station, Auto- level

Course outline:

Module-1(2Th) HRS

Historical survey practice: Introduction to surveying: Classification, Basic Principle, List of Instruments used in surveying.

Module-II (2Th+4Pr) HRS

Leveling: Concept and principles of levelling, different types of levelling, their application ,selection of station points, staff measurement locations, ideal location for etc. ,computation of Reduced levels through rise and fall method and height of collimation method, standard procedure for conducting leveling works , Identification of errors, understanding their source and rectifying the same ,different causes of errors in the leveling works, their impact on the project, procedure for laying slopes and gradients for roads, bridges, pipelines, canals etc ,errors in slope alignment and their implications, identification & rectifications ,procedures for making entries in the field book and make necessary calculations

Practices:

1. Calculation of RL using HI and Rise and fall method.
2. Longitudinal and cross sectional Leveling
3. Check Leveling

Module-III (2+5)HRS

Total station: Parts of the instrument, operational panel, guide light, basic key operation, display functions, setting up the instrument, focusing and target sighting, angle measurement, setting the horizontal, distance and angle measurement, REM measurement, coordinate measurement ,to view the data/ points collected, area calculation, data download.

Practices:

4. Distance, angle and slope Measurements
5. Traverse adjustment (With help of software)
6. Area calculation using Total station

Module-IV (1Th+5 Pr)HRS

Applications of total station :Detail survey i.e., data collection., Height measurement (Remove elevation measurement- REM,Fixing of missing pillars (or) Setting out (or) Stake out, Resection. etc. Remote distance measurement (RDM) or Missing line measurement (MLM).

Practices:

7. Height measurement (Remote elevation measurement- REM).
8. Fixing of missing pillars (or) Setting out (or) Stake out.

Module-V (1Th+3Pra) HRS

Concept of topographic survey, its importance and different methods of conducting topographic survey using modern and conventional instruments, calculations required for plotting contours, Interpretation and importance of contours. Knowledge of scale and key while plotting a contour map, represent topography of the area in required scale, different methods of computing levels.

Practice:

9. Preparation of contour maps using total station and surfer software.

Module-VI (2Th+4Pra) Hrs

Curves: Types of curves, Properties– simple, compound, reverse and transition curve. of works

Practices:

10. Setting out of different curves (simple, compound, reverse and transition) using Total Station

Module-- VII (4 hours)

Setting out of works

11. Setting out of Building
12. Setting out of culvert

Text Books:

1. Surveying Vol I & II, III B C Purnima, Laxmi Publication.
2. Surveying, volume 1&2 BY S.K.Duggal, TMH publisher.

Reference Books:

1. Surveying & Levelling by T.P Kanitkar& V S Kulkarni

E Books:

1. Source of reference; NSQF

Online Source: NPTEL Videos (www.nptel.ac.in)

Geospatial Survey

Code	Course Title	Credit	T-P-PJ
CUTM1068	Geospatial Survey	3	1-2-0

Objective:

- To teach the basic concept of Geospatial Technology and to do various field works with the help of digital surveying instruments.
- To provide basics of digital surveying and mapping of earth surface using GPS, DGPS, GPR

Course Outcome:

- Gain knowledge about the structure of spatial data including file associations, attribute tables, metadata, coordinate systems, and projections
- Carryout measurements Differential Global Positioning System (DGPS)/ Global Navigation Satellite System (GNSS) in the field.
- Preparation & digitization of different topography map with the help of Arc-GIS software
- Utility mapping using GPR

Module I: GIS(1Th+4Pra)Hrs

Geographic Information System: Introduction, Definition of GIS, Components of GIS, Geographical concepts, Input data for GIS Types of output products, Application of GIS Practice:

1. Introduction to GIS (Overview, Features, About the software, Main user interface, Main menu Project menu; Layer menu; View menu; Bookmarks menu; Plug-ins menu; Help menu, Toolbar, Legend window, Preview map, add data to the map area, Opening and saving projects)
2. Building a catalog of geographic data (Arc Catalog, folder connection, inside the catalog, folder location, create a working copy of the data, connect directly to your copy of the data, and remove folders that do not need)

Module II: GIS Data types (2Th+4Pra)Hrs

Introduction: GIS data types: Data representation: Data sources: Typical GIS data sets Data acquisition, Data verification and editing, Dereferencing of GIS data, Spatial data errors Spatial data models, Spatial data structures, Modelling surfaces , Modelling networks , GIS database and database management system

1. Introduction to Google Earth, Convert Shape file to KML Format, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, Convert KML File to shape file, overlaying an image into google earth

2. Exploring data and adding it to a map (The Contents tab, The Metadata tab, add a layer to a map, import metadata, Search for items, map compose)
3. Managing a dataset (Define a shape file's coordinate system, modify attributes in database tables, calculate attribute values in ArcMap, Update the table's metadata, create a layer using the related attributes, Add the vegetation type layer to the map)
4. ArcGIS Graphics language (generalization, symbology, and colour effect, change symbology and use transparency in creative ways)

Module III: Spatial Data Analysis (1Th+5Pra)Hrs

Spatial Data Analysis: Introduction, Data analysis terminology, Measurement of length, perimeter and area. Queries. Reclassification. Buffering and neighborhood functions. Data integration-map overlay. Spatial interpolation. Surface analysis. Network analysis. Digital terrain visualization

Practice:

1. Topology (Concept of topology, topology in different GIS format, Coverage, shapefile, DXF-Drawing Exchange File, Geodatabase, Topology principle, Topological Error and Correction process, creating personal Geodatabase, creating a features dataset)
2. Buffering and Editing tools: (Buffering in ArcGIS, add the data layer, create the buffer, conflation, extend the line, Erase point, Flip line, Snap, trim line, Densify, create a polygon, create point, Create polygon)
3. Creation DEM , DSM,TIN from SRTM/Cartosat Data

Module IV: Global Positioning System (2Th+3Pra)Hrs

Introduction of Global Positioning System, Satellite constellation, GPS signals and data, Geo-Positioning-Basic Concepts. Discussion on NAVSTAR, GLONASS, GALLILEO, COMPASS. Basic geodesy, Geoid /datum/ Ellipsoid-definition and basic concepts, Coordinate Systems, Special Referencing system, Map Scale, Scale factors, Indian geodetic System Segments of GPS:Control Segment, Space Segments, User Segment-operations of GPS, accuracy, error sources and analysis, methodology for collection of data, adjustment computations and analysis. Selection of datum, units and scale; GPS measurement. GPS Positioning Types-Absolute Positioning

Practice:

10. Setting of instrument, Observation, Data downloading and processing, Plotting of points, Georeferencing, Error calculation.

Module V: Differential Global Positioning System(2Th+3Pra)Hrs

Differential positioning Methods-Static & Rapid static, Kinematic-Real time kinematic Survey. DGPS-GPS data processing and Accuracy. Selection of Reference Station, Reference Station Equipment: GPS receiver, GPS antenna. Radio and its types, Radio Antenna GP. Application of GPS in Surveying and Mapping, Navigation, Military, Location Based Services, Vehicle tracking, etc. Limitation of GPS & DGPS

Practice:

11.Instrument Setup (Base station and Rover), Post-Processed Kinematic (PPK); Single point observation, Double point with baseline processing methods, Triangulation method, Real-Time Kinematic (RTK);Navigation system, Collection of Ground Control Point (GCP), Data export to GIS software.

Module VI: Ground Penetrating Radar(1Th+3Pra)Hrs

GPR Explain working principle of ground penetrating radar (GPR), Describe the type of antennas used with GPR for different type of underground material detection, Use ground penetrating radar until a predefined depth from sub-surface based on the conductivity of material. Explain use of sketch/single line diagram (SLD).Describe the use of GPS/DGP in sync with GPR to get all data populated on map. Describe the use of other Utility locator like electromagnetic locator and other utility locators

Practice:

12.Instrument setup, Utility mapping (Waterline, electric line, etc.), Processing of data

Module VII: (1Th+3Pra)Hrs

Explain GPR screen reading for the data being recorded, Describe the use of Roadometer with GPR to measure distance, Explain all the connecting cables used with GPR, Describe the power source and running capacity of GPR batteries, Explain handling the GPR and it's components, Describe how to transport GPR instrument, Use appropriate GPR antenna for described type of survey, Demonstrate the assembly of GPR equipment, Demonstrate the GPR data collection using cross section .

Text Books:

- 1.Remote sensing and GIS 2nd Edition, Basudeb Bhatt, Oxford Publication
2. Anji Reddy, M. Remote sensing and Geographical information system, B.S. Publications, 20011.

Concrete Technology

Code	Course Title	Credit	T-P-PJ
CUTM1066	Concrete Technology	3	1-2-0

Course Objective:

- To study properties of cement, sand and aggregate.
- To determine the correct proportion of cement, sand and aggregate ratio for the concrete.
- To perform tests for cement, sand and aggregate
- To perform tests for concrete.
- To supervise and monitor concrete casing and casting for building construction.

Course Outcome:

- Demonstrate test and analysis of cement, aggregate, sand, effect of water cement ratio.
- Prepare concrete, carry out simple formwork and reinforcement with the application of modern Power Tools.
- Prepare reinforcement of different R.C.C. members i.e, Foundation, beams, columns, slabs, Retaining Wall, etc.
- Erect scaffolding and make the intricate formwork at different locations.
- Prepare a bar bending schedule and demonstrate bar bending and calculate the estimated quantity of materials.
- Make different types of arches and lintels with chajja.
- Layout different types of vertical movement according to shape, location, materials by using stair, lift, ramp and escalator.

Course Syllabus

Module I : Aggregate/Sand (5hrs)

Theory:

Aggregate, classification (IS : 383), Grading, Characteristics (grading, fineness modulus), Bulking of fine aggregate, Deleterious substances, factors affecting the strength of concrete. Water, water quality, water requirement for hydration & workability, the effect of impurities present in water, Admixture, the meaning of terms, functions, classification, waterproofing and permeability reducing admixture. Construction Chemicals, Interpretation of specifications manufactures, Meaning of terms, functions, Classification (IS : 4082), waterproofing and permeability reducing admixture. (1hrs)

Practice:

1. Perform sieve analysis on aggregate and determine to grade. (01 hrs)
2. Determine the presence of silt and clay and Perform a test to determine bulking of sand. (01 hrs)
3. Specific Gravity, Water Absorption And Natural Course Of Fine & Coarse Aggregate. (1hr)
4. Aggregate Impact Test, Aggregate Crushing Test (1hr)

Module II: Preparation of Cement Concrete (3hrs)

Theory:-

Preparation of concrete Methods used, merits and demerits of methods, tools and equipment used and precautions to be taken for the following processes, batching, mixing, transportation, placing, compaction, curing, finishing, strength & durability requirements (IS : 456 - 2000), stripping of formwork, application of modern power tools, classification & specifications of concrete, classification of concrete according to grade, weight & methods of mixing ready mixed concrete, self-levelling concrete. (1hr)

Practice:-

Prepare concrete and lay at required places using power tools, (2hrs)

Module III: Workability of Concrete (3.5hrs)

Theory: Introduction to concrete, properties, workability of concrete (0.5hr)

Practice:

1. Workability of Fresh Concrete by (3hr)
 - (a) Slump cone method
 - (b) Compaction factor
 - (c) Flow table methods.

Module IV: Strength of concrete (7hrs)

Theory:

Nominal mixed and design mixed concrete, properties of concrete- workability & consistency, segregation, bleeding, strength, durability, impermeability, volume, stability, R.C.C. members for foundation, beams, columns, slabs, retaining wall etc. Scaffolding & formwork - Definitions of common technical terms used in Scaffolding, formwork. Types & applications Different materials used in formwork. Methods and tools used for formwork. Safety precautions to be observed in scaffolding and formwork Defects in formwork Shuttering /removal of formwork. Maintenance & repair of formwork Plain cement concrete (PCC) & Reinforced cement concrete. Properties of PCC & RCC in the green state and hardened state Importance of formwork and reinforcement in construction. (3hrs)

Practice:

1. Compressive strength of concrete (2hr)
 - (a) Cube Specimen
 - (b) Cylinder Specimen
2. Splitting tensile strength of cylinder. (2hr)

Module V : Design-mix concrete(5 hrs)

Principles of mix proportioning, probabilistic parameters, factors governing selection of mix. Road note - 4, DOE, ACI and IS method of concrete mix design, Variability of test results, acceptance criteria, various IS code provisions. (1hr)

Practice:

1. Preparation of design-mix concrete (2hr)

2. Concrete shotcreting (1hr)
3. Pressure grouting of concrete (1hr)

Module VI: Reinforcement in Concrete (5 hrs)

Theory:

Structural elements & characteristics (simply supported, continuous, fixed, cantilever, overhang), the importance of the use of reinforcement in concrete, tools used in bar bending correct use of tools, different operation in bar bending (straightening of bars, cutting of bars, bending of bars, placing of bars, binding of bars, fixing of cover blocks). (1hr)

Practice:

Making of shuttering & supports with uprights and wedges for Arches, Lintels and Lintels with Chajjahs. (2hrs)

Cutting, bending & placing of reinforcement. (2hrs)

Module VII: Special concreting techniques (7hr):

Theory:

Review of behavior and characteristics of high strength concrete, high performance concrete, fiber reinforced concrete, mass concrete, lightweight and heavyweight concrete, Precast concrete. Pumped concrete, concrete, underwater concrete, pre-placed concrete, vacuum dewatered concrete, hot and cold weather concreting, Ready mixed concrete. (3hr)

Practice:

1. Preparation of Lightweight concrete mix. (1hr)
2. Preparation of Fibre reinforced concrete. (1hr)
3. Preparation of concrete with solid wastes.(1hr)
4. Reactive Powder Concrete design. (1hr)

Reference: NSQF level 6

Electrical, Plumbing and Wood Works

Code	Course Title	Credit	T-P-PJ
CUTM1065	Electrical, Plumbing and Wood Works	3	1-2-0

Course Objectives

- To understand the installation for electrical systems in a building. To study carpentry work in the building, installation of doors, windows, etc. To understand and demonstrate installation of plumbing systems in the building.

Course Outcomes

- Identify timber and perform sawing and planing using hand and power tools. Demonstrate surface finish with exact sizing by planing operation. Prepare different wooden Joints. (Range of skill - framing joint, Housing joints, broadening joints, Lengthening joints) Make small wooden job as per drawing with schedule sizes of timber or alternatives of timber i.e. FRP, MDF, FOAM using various hardware. Make different types of doors and windows with fixing of components. Demonstrate joining of electrical wire and carry out soldering, crimping observing related safety precautions. Demonstrate Electrical wiring with fixing of accessories conforming ISI rules (Range of skills - different types of Electrical wiring, joining of Fuses, fixing of MCB, a connection of lamp with switch and different fitting, etc.) Demonstrate installation of electrical appliances, Earthing and estimate costing of wiring Prepare a Simple pipe connection demonstrating cutting, joining of pipes with different methods using different types of fittings. Prepare layout of soil pipe and waste pipe with different types of sanitary fittings

Course Syllabus

Module I: Carpentry Tools (5 hrs)

Theory:

Defects in timber, diseases of timber, knots, shakes, grains, etc. Carpentry hand tools, measuring tools and uses. Work holding devices, power tools, viz. saws, drills, etc. Description of Carpentry Joinery, Planing, Moulding, Rebating, Chamfering, Sawing, Etc. Type of different planes and their proper uses in woodwork. Description, function and its size setting, knowledge of sharpening and uses, etc. knowledge of using marking gauges. Important instruments are necessary for checking flatness and twistness of the surface. Sharpening and grinding angle of the cutter. (2hr)

Practice:-

Identify different wooden sample pieces i.e.- softwood & hardwood, wooden grains, etc. & their applications Annual ring, knots, shakes & chinks, etc.). Demonstrate the application of hand tools, measuring tools, and work holding devices. Demonstrate the use of different power tools, viz. saws, drills, etc. Perform sawing, planing, Moulding, Rebating, Chamfering, etc. using different types of saws, and planes. Sharpen and set different type saw blades and planer blades/ cutters. (---2hrs)

Planing face, face edge, etc. Demonstrate the use of marking, mortise gauge, etc. Test the accuracy of flatness and twist-ness of the surface by using a try square. Demonstrate the use of winding strips, cross planing, edge planing. Demonstrate a portable power planer machine and its function. (---2 hrs)

Module II: Woodwork (5 hrs)

Theory:

Portable power planer - useful in modern woodwork and new technology design. Description of different types of joints. Uses of joint:- Framing joint angle joint and lengthening joint, housing joint, broadening joint, etc. Wood products - Industrial forms of timber - Veneer - Laminated sheet - Fibreboard - Hardboard - Plywood, Calculation of timber required for Wall Bracket. List the sequence of operations of the job. Doors –Parts, Location, standard sizes, types. Windows-types. Ventilators-purpose-types. (2hr)

Practice:

Make framing joint - Mortise and tenon Joint (Single and double, Plain hunched Mitre corner,) Make Housing joints - Full housing, Bridle, Stopped housing. Make broadening joints - Simple butt joint, Riveted butt joint, etc. Lengthening joints: End half-lap joint, End overlap joint, End bends lap joint, slopping scarf, racking scared, half lapping scarf, table scarf joint, etc. (---2hrs)

Make a joint on the hardwood to make a small frame. Stopped the Tenon & Mortise joint on the hardwood in the frame to set themselves. Make shelves by six pieces of hardwood with a single lapped half-lap dovetail joint with frame (two nos. of selves). (---2hrs)

Module III: Electrical Tools and Wiring (7hr)

Theory:-

Electrical Wiring:- Safety precaution and elementary first aid. Artificial respiration and treatment of electrical shock. Elementary electricity and its units. General ideas of the supply system. Wireman's tools kit. Wiring materials. Electrical fittings. System of wirings. Wiring installation for domestic lightings. Conductor, insulator, semiconductor, cable joints, measurement of cable. Types of Fuses, MCB soldering, ELCB, RCCB, ABCB, MCCB AC and DC, AC fundamentals, polyphase types of electrical wiring Different Electrical wiring accessories, ISI rules of wiring Illumination. Earthing, types of earthing Earthing Pit. (1hr)

Practice:-

Prepare terminations of cable ends. Practice on skinning, twisting, and crimping. Identify various types of cables and measure conductor size using SWG and micrometer. (---1hrs)

Make a simple twist, married, Tee, and western union joints. Make Britannia straight, Britannia Tee, and rat tail joints. Practice in Soldering of joints/lugs. (---1hrs)

Demonstrate different electrical wiring systems with fixing of different accessories. Make electrical Fuse joints, fixing MCB.(---2hrs)

Module IV: Electrical Appliances (7hrs)

Theory

Different electrical appliances, accessories, Voltmeter. Estimation and costing of wiring. Explanation and working of different types of transformers and their classification. (1hr)

Practice:

Connect lamps with switches. Staircase circuit wiring. (---1hrs)

Install earthing in different positions. Install and connect electrical appliances and take a reading with Voltmeter. Prepare materials list and cost of wiring. (---1 hrs)

Identify transformer, test and use. (--1hrs)

Module V: Plumbing Tools (7hrs)

Theory:- Plumbing tools, materials used in plumbing, Different types of pipes, fittings and Joints - GI, PVC, AC, SW, CI, lead, steel - Properties and use in plumbing work. Method of cutting and joining of pipes. Drills - types and uses. Tap and Dies - types and uses, calculation of Tap drill size. (2hr)

Practice:-

Perform a Simple pipe connection using G.I. Pipes, socket, elbow, tee, reducing elbow, G.I. union, cap plug, reducer, Three face elbow, reducing socket, plug, G.I. nipple, etc. (2hrs).

Perform Joining of pipe with – thread joint, lead joint, flange joint, cement joint, D. Joint, etc. (---1 hrs)

Module VI Plumbing pipe fitting (7hrs)

Theory:

Sanitary Technical terms - sewer, sewage, sullage, etc. -Soil pipe and waste pipe fitting Different types of water closets Different types of urinal port Kitchen sinks, Bathtub, Washbasin. Water meter, installation of the water meter. Removal of airlock Purification of water Mineral matter, Hardness, Causes of Scale formation & their Removal. (1hr)

Practice:

Perform Joining of pipe with Elbow joint, socket joint, Tee joint, reducing elbow joint, floor trap joint, etc. (---1 hrs)

The layout of soil pipe and waste pipe to the sanitary fitting using different types of fitting viz. Door junction, door Bend, H.R. bend, Plain Bend, Double door junction, inverter junction, cowel , floor trap, Gully trap, P-trap etc. (---2 hrs)

Fitting of I.W.C with a high-level cistern. Fitting of the washbasin. Fitting of E.W.C. with a low-level cistern. Fitting a kitchen sink. Fitting of the bathtub. Fitting a urinal pot with an auto cistern. (---2hrs)

Module VII: Installations (5 hrs)

Theory:

Water Purification: Treatment plants for different groundwater contaminants, Treatment plants for surface water. Types of damages in taps, valves, water meter, and tanks - Method of rectification Water supply - Sources of water Storage of water Distribution of water Different types of valves used in Plumbing, Types of tanks R.C.C., P.V.C. Iron tanks etc. (1 hrs)

Practice:

Install a water meter. Remove the airlock. Determination of pH by pH meter. (----1 hrs)

Recondition taps, valves & flushing tank, test for correct functioning. Prepare a water supply pipeline system in residential buildings using different types of valves, fittings, and appliances. (---1 hrs)

Reference NSQF Level 5

Design of Structures

Code	Course Title	Credit	T-P-PJ
CUTM1074	Design of Structures	4	1-3-0

Course Objectives

To teach the basic theoretical aspects and contemporary issues in the design and fabrication of reinforced concrete members

To teach the basic fundamental behavior of different sections, bolts, members of steel structure used in construction.

To analyze and Design of Concrete Structures and Pre-Engineered Building(PEB) by using Software ETABS

Course Outcomes

To gain the knowledge of RCC design calculation with relevant Indian Standards.

After completion of the courses the students will gain knowledge of Pre-Engineered design calculation with relevant Indian Standards

Students will develop the skill of converting client's requirements to structural drawing by using ETABS.

Course Syllabus

Course content (50 Hours)

Module I: Building Structural Frame (9 Hours):

Introduction to Reinforced Concrete, Mechanical Properties of Concrete, Flexural Analysis, Combined Flexure and Axial Load, Shear analysis. Limit State Method using Indian Standard Codes.

Practice:

1. Draw grids, Reference planes and joints, create new project models and introduction of the layout. (2hr)
2. Draw building structural frame and define material properties (4hrs)

Module II: Load definition to Building frame (5 Hours):

Modeling of Building, Load Calculations, Seismic weight, Base shear, Storey shear, Mass source, diaphragm, Meshing of Slab.

Practice:

3. Building structural frame- Define Properties, Material, Section, Mass source, Load pattern, load combinations

- Define Section Properties + Section Property Modifiers (1hr)
- Load Pattern (Gravity Loads + Earthquake (seismic) Loads (0.5hr)
- Wind Loads, Dead loads, super dead loads and live loads introductory(0.5hr)
- Define Load combination (Manual + Auto)(0.5hr)
- Meshing for Slabs, Walls, beams and Columns (0.5 hr)
- Assign Loads to structure as per IS Codes(0.5)
- Define Mass Source (For Lateral analysis)(0.5 hr)
- Pier Labels and Spandrel Labels for shell members such as shear walls and retaining RCC walls (1hr)

Module III: Analysis and check for Safety (10 Hours):

Analysis checks, Post design checks, Pushover analysis, response spectrum analysis, time history analysis.

Practice:

4. P Delta Analysis Check (How to include P-delta effects) (2hr)
5. Center of Mass and Center of Rigidity (and Building Eccentricity Check)(1hr)
6. Mass (Weight) Irregularity check as per the code (1hr)
7. Story Displacement, Story Drift checks as per code (1hr)
8. Torsional Irregularity check(1hr)
9. Modal Analysis Case [Eigen or Ritz Vectors], Time period (1hr)
10. Time History Analysis (2hrs)

Module IV: Reinforcement Detailing and scheduling (6 Hours):

- Reference of IS codes IS SP 34-1987 (Theory) (1hr)
- IS 13920-1993 Ductile Detailing of RC structures (Theory) (1 hr)

Practice:

11. Detailing of Beams, Columns and slabs using Autocad (4hr)

Module V: Design of Foundations using SAFE foundation (6 Hours):

Introduction to SAFE foundation, familiarizing tools used in SAFE foundation. Types of foundations introduction, isolated footing design, combined footing design and mat foundation design.

Practice:

12. Importing ETABS model file into the SAFE foundation software (0.5 hr)
13. design of isolated footing (1 hr)
14. design of combined footing (1 hr)
15. design of mat foundation (1 hr)

Module VI: Materials and Specifications of Steel/ Pre-Engineered Building (PEB) Structures (06 Hours):

PRE-ENGINEERED BUILDING COMPONENTS: Primary System: Main frames, Gable End Frame - Secondary frame system: Sizes and Properties of Purlins & Girts – Bracing System: Rod, angle, Portal, Pipe bracing – Sheeting and Cladding: Roof Sheeting and Wall sheeting – Accessories: Turbo Ventilators, Ridge vents, Sky Lights, Louvers, Insulation, Stair cases.

Practice:

16. DESIGN LOADS ON PRE-ENGINEERED BUILDINGS. Design of PEB frame under the influence of Dead, Live, Collateral, Wind, Seismic and Other applicable Loads. Serviceability Limits as per code IS:800. (4hrs)

Module VII: PEB DESIGN METHODOLOGY (8 Hours):

Practice:

17. Design Parameters of PEB Frames - Depth of the section, Depth to Flange width ratios, Thickness of Flange to thickness of Web ratio. d/t_w , b_f/t_f ratios of sections as per IS code. Section Sizes as per Manufacturing Limitations. Analysis and Design of Rigid Frames. Rigid Frame Moment Connection, Shear Connection- Anchor bolt and base plate design (Pinned and Fixed). (8hrs)

Text Books:

1. Reinforced Concrete design-S. N. Sinha. Tata McGraw-Hill, New Delhi
2. S K Duggal, " Design of steel structures",2012.
3. S. Ramamurtham and R. Narayan, " Design of steel structures" ,2014

Reference:

2. Etabs Full - Video

Road Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1070	Road Engineering	3	1-1-1

Course Objectives

- To introduce transportation engineering principles with emphasis on designing principal element of highways along with the safe and efficient operation of highways.

Course Outcomes

- Students will gain knowledge on planning, material selection for construction, Economics and finance and designing of elements on highway.
- Acquire the skill of designing the geometric elements of highway using CIVIL 3D software.

Course Syllabus

THE CLASSES WILL BE DELIVERED IN FLIP CLASS MOD

Module I: Highway introduction planning and development (1 hr)

Highway planning in India, development, rural and urban roads, road departments in India, road classification, road authorities i.e. IRC, NHAI, CRRI, NHDP etc.

Module II: Materials Characteristics and construction (6 hrs)

Introduction, physical and engineering properties of materials of pavement surfaces: Pavement quality concrete (PQC), Plain cement concrete(PCC), Hot Mix Asphalt (HMA), wearing courses, base, sub-base treated layers, types of bitumen, cutback bitumen, bitumen emulsion, tar, types of tar, bituminous mix design.

Practice Sessions:

Test on aggregate

Los angeles abrasion test.
Aggregate crushing test
Aggregate Impact value test
Specific gravity, water absorption, and bulk density

Test on bitumen

Penetration test of bitumen
Ductility value test of bitumen
Softening point test of bitumen
Flash and Fire point test of bitumen
Specific gravity of bitumen

Flakiness index and elongation index test of Aggregate

Test on mix design

Marshall Stability Test of bitumen

Test on subgrade

California bearing ratio test

Module III: Geometric design of roads (12 hrs)

Theory

Introduction to geometry design: Objective of geometric design, Design speed, cross-section elements, pavement surface characteristics-skid resistance, traffic volume, number of lanes, level of services, sight distance, horizontal alignment, vertical alignment, Superelevation, camber, cross-section, lane width.

Practice Sessions:

Design of Horizontal Alignment using CIVIL 3D software.

Design of Vertical Alignment using CIVIL 3D software.

Design of Superelevation using CIVIL 3D software.

Create a profile using CIVIL 3D software.

Module IV: Pavement Engineering (8 hrs)

Design of Flexible pavements and Rigid pavements according to standards.

Practice Sessions:

Design of flexible pavements

Design of rigid pavement

Module V: Traffic Engineering (4 hrs)

Introduction to traffic engineering, road user characteristics, vehicular characteristics, various traffic studies and their application (field study), traffic signals, traffic signs and road marking, parking studies, traffic operations-accident prevention and safety methods, rotary intersection, ITS (intelligent transportation system) Various types of intersection and their design concept

Practice Sessions:

Junction design using civil 3d software

Vehicle volume counts (field study)

Module VI: Construction methodologies (3 hrs)

Cement Concrete Roads: Joints in pavements, Arrangement of joints, joint filler and sealer, Introduction, Components, I-Girder, Box culvert, VUP (Vehicle underpasses), PUP (Pedestrian underpasses), Road construction equipment, Machines used, Estimate a road project, PPP model.

Practice Sessions:

Estimate a road project

Module VII: Pavement evaluation and rehabilitation (1 hr)

Pavement failures, quality control causing deterioration and environmental factors, types of maintenance, maintenance of bituminous and concrete surfaces, roughness measurement, special repairs in pavements, strengthening and widening of an existing road.

Text Books:

k.khanna and C.E.G JUSTO, Highway engineering.

R Kadiyali, Traffic engineering and N B Lal, Principles and practice of highway engineering, Khanna Publications, 2005

Construction Materials

Code	Course Title	Credit	T-P-PJ
CUTM1064	Construction Materials	2	0-0-2

Course Objectives

- To introduce students to various materials commonly used in civil engineering construction and their properties.

Course Outcomes

- **Knowledge:** Able to learn basic theory about main building- and construction materials.
- **Skills:** Able to make the right and well-founded choice of materials.
- **General competence:** Understand how properties of materials that are important in engineering can be related to the characteristics of the material.

Course Syllabus

THE CLASSES WILL BE DELIVERED IN FLIPCLASS MODE.

MODULE I: STRUCTURAL AND NONSTRUCTURAL

MATERIALS (3 hrs)

Overview of Materials and Building/Structural Types, Factors Affecting Choice of Materials and Structural Form, Mechanical Properties, Non-Mechanical Properties (physical properties, durability), Individual Building Materials Manufacturing, Properties, Comparative Behavior, Structural Steel, Composition, Material Properties, and Behaviour, Non-ferrous metals.

MODULE II: STONES, BRICKS, CONCRETE BLOCKS (3 hrs)

Stone as a building material, Criteria for selection, Refractory bricks, Concrete blocks, Lightweight concrete blocks, Air Cleaning Bricks, Passive Cooling Ceramics or hydro ceramic bricks, Fly ash bricks, AAC, ECA, CLC blocks, EPS Building.

MODULE III: TIMBER, ROOF & FLOORING MATERIALS (4 hrs)

Timber, Market forms, Industrial Timber, Plywood, Mass timber, laminated timber and glue, laminated timber, Veneer, thermocol, Panels of laminates, Steel, Aluminum and Other Metallic Materials, Composition, Aluminium composite panel, Market forms, Mechanical treatment, Granite, Tile flooring, Cladding of tiles, materials according to types of roof, Elements of a pitched roof, Trussed roof, Steel Truss, Different roofing materials, R.C.C. Roof.

MODULE IV: NONSTRUCTURAL MATERIALS, ACCESSORIES, AND FINISHES (5 hrs)

Materials for doors and windows, Paneled door, Flush door, Collapsible door, Rolling shutter, PVC Door, Review of Nonstructural Materials and Criteria for Selection, Polymer Floor Finishes, Paints, varnishes, enamel, distemper, Tiles, Acoustic Treatment, Drywalls, Anchors, plumbing and sanitary fittings.

MODULE V: EXTERIOR WALL MATERIALS (4 hrs)

Gypsum Area Separation Walls, Insulated Vinyl Siding, Tilt, Up Walls, OVE Framing, ICF Walls, House Wrap Installation Tips, Common Cladding Alternatives, Insulated Wall Panels, WPC sheets, Cinder Block Walls, GFRG panels, Alusion panels, 3D, printed bioplastics.

MODULE VI: NEW GENERATION CONSTRUCTION MATERIALS (4 hrs)

Glass, Ceramics, Sealants for joints, Fibre glass-reinforced plastic, Clay products, Refractories, Composite materials, Types, Applications of laminar composites, Fibre textiles, Geomembranes and Geotextiles for earth reinforcement, Illuminating Cement, Prefabricated panels, Bubble deck slab, Terracotta hollow brick, Cigarette Butts, Recycled cardboard, Sensitile, electrified wood, flexicombo, Richlite, liquid granite, carbon fibre, bendable concrete, concrete canvas, low e glass, transparent aluminum, paper insulation, Concrete, Masonry, Programmable Cement, Strand Rods, Concrete: Admixture, translucent concrete, FRP, Shotcrete, Epoxy resin, and grouting.

MODULE VII: GREEN AND SUSTAINABLE CONSTRUCTION MATERIALS (2 hrs)

Bamboo, Reclaimed wood, cork, mycelium, recycled steel, straw bales, rammed earth, hempcrete, grasscrete, GGBFS, CSF, geopolymer, Silica fume, Fly ash, Red Mud, copper slag, construction demolition waste, waste plastic.

Text Books:

1. Varghese.P.C, "Building Materials", PHI Learning Pvt Ltd, New Delhi, 2012.
2. Rajput. R.K., "Engineering Materials", S. Chand and company Ltd., 2008.

Water supply and Sanitary Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1072	Water supply and Sanitary Engineering	3	1-1-1

Course Objectives

- To enable the students understand about the drinking water, sources, quality, demand, conveyance, water treatment, design of treatment units, Waste water treatment, STP and solid waste collection, treatment along with house plumbing and different sanitary fittings

Course Outcomes

- To understand the principles of treatment units and their design units of drinking water, solid and liquid waste water treatment units; its recycle, reuse or disposal methods along with hands on practice of house plumbing and sanitary fittings

.Course Syllabus

Module 1: Sources, Quality and Demand of water (Three hours)

Importance and necessity of water supply Engineering; Sources of water; Suitability of water; Choice of source; Types of demand Population forecast; Computation of quantity of water; Fluctuation in demand; Factors affecting demand; Impurities in water; Collection of water sample; Physical Chemical and Biological tests; Standards of quality of water

Module 2 Treatment of water (Three hours)

Objectives of water treatment; Location of water treatment plant; Layout of water treatment plant; Basic principles of working of treatment plant; Various stages of treatment of influent water; ; Functioning of Coagulation treatment plant; Sedimentation; Filtration; Disinfection

Practice session (2Hours)

Practice 1: Predict Population from given field data by various methods

Practice II: Calculation of hardness of water from the observed field data

Module 3: Conveyance of Water (Three Hours)

Pumps and selection (out line only); Types of pipes used for conveyance; Pipe joints; Laying of Pipes; Distribution system; Types of valves; Types of Meters; Pipe fittings and fixtures of different materials their advantages and disadvantages; Necessity; Methods to prevent leaks; Measures for conservation of water

Practice session (2hours)

Practice III: Design lay out of pipe system from the overhead tank to different supply terminals.

Practice IV: **Laboratory works:** Determination of pH value, Turbidity and hardness of water sample

Module 4: Sanitation system (Four Hours)

Objective of sewage disposal; Methods of sewage collection; Conservancy system; Water carriage system; Classification of Drains; Sewer section; Sewer joint; Manhole; Flushing tank; Catch basin; Laying of sewer; Appurtenances and its locations; Maintenance of sewer; Procedure for maintenance of sewerage system; Causes of trouble and odor; Sewer cleaning operations; Requirements of maintenance; Functions of each maintenance equipment and tool; Safety measures for sewer-men

Practice session (2hours)

Practice V: Preparation of AUTOCAD layout plans/ sketches of different Water treatment plant, Sewage treatment plant, sedimentation tank, filters, Manholes, Flushing tanks etc.

Practice VI: Design of Septic tank using HEC software

Module 5: Sewage Treatment and Disposal (Two Hours)

Characteristics of sewage; Sampling of sewage; Treatment of sewage; B.O.D. Test, C.O.D. test; Methods of sewage disposal (STP)

Practice Session (2hours)

Practice VII: Design of Manhole from given field data

Practice VIII: Determination of B.O.D. and C.O.D. of waste water sample

Module 6: Plumbing gadgets and Sanitary fittings (Two Hours)

Plumbing tools; Pipes and pipe fittings; Fixing and jointing pipes and accessories; Traps; House drainage plant; Plumbing practice and operations; Safety and precautions; Sanitary fittings

Field Visit: Four hours

Water treatment plant and a sewage treatment plant must be followed by a field Visit report

Module 7: Recycling and disposal of Waste Water and Solid Waste (Three Hours)

Sewage Treatment plant; Different recycling method with respect to quality of waste water; Utilization and management of solid waste;

Seminar: (Two hours)

The students are made groups and topics related to water supply, Municipal/rural waste disposal system, storm water disposal and Sewerage disposal systems

Suggested Reading

1. Text Book of water supply and sanitary Engineering ; S K Hussain : Oxford and IBH
2. Water supply & Sanitary Engg; : Vazirani & Chandola :Khanna Publishers
3. Municipal and Rural Sanitation :Ehlers & Steel :Mc Graw hill book
4. Elements of Public Health Engineering. :K.N.Duggal :S.Chand & Co.

Computer Aided Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1081	Computer Aided Engineering	3	0-2-1

Objective

- This course will help student to use structural scenario, thermal scenario and to do Structural analysis and Thermal analysis of various problems.

Course Outcome

- Create complete finite element models
- Submit and monitor analysis jobs
- View and evaluate simulation results

Course content

Module I: Material and Selection Properties

(6 Hrs)

Property Module, Material Definitions, Linear Elasticity, Large Strain Elasticity, Metal Plasticity, Material Calibration, Material Databases, Section Properties

Practice:

1. Analysis of crack in pressure vessel
2. Cable stayed bridge simulation

Module II: Element Selection Criteria

(6 Hrs)

Solid Element Selection, Structural vs. Continuum Elements, Modeling Bending Using Continuum Elements, Stress Concentrations

Practice:

3. Stress analysis of rail road with wheel.
4. Bike frame structural analysis

Module III: Meshing

(8 Hrs)

Mesh Module, Mesh Elements Mesh Generation Workflow, Local Fine-tuning Quality Checks, Mesh Compatibility, Mesh Convergence, Dependent and Independent Part Instances

Practice:

5. Airplane bracket structural analysis
6. Structural analysis of wind turbine blade

Module IV: Boundary Condition

(6 Hrs)

Step Module, Analysis Steps and Procedures, Output Requests, Output Files
Load Module, Loads and Boundary Conditions, Initial Conditions

Practice:

7. Generative structural analysis applied for design optimization
8. Stress analysis on a backhoe

Module V: Contact

(6 Hrs)

Mechanical Contact Properties, Contact Domain, Contact Formulation and Controls, Handling
Initial Over closures, Contact Output

Practice:

9. Analysis of Economizer.
10. Analysis of Screw Jack

Module VI: Analysis Procedures

(6 Hrs)

Model and Analysis Steps, Analysis Procedures, The static, general analysis procedure, Finding
a converged solution, The Static, Linear Perturbation procedure, Buckle procedure, Frequency
Procedure, The dynamic, explicit analysis procedure, Stability Limit, Analysis Continuation
Techniques

Practice:

11. Steady state analysis of a composite bar.

Module VII: Thermal Analysis

(8 Hrs)

Steady State Heat Transfer, Transient Heat Transfer, Thermal Interfaces, Thermal Stress
Analysis

Practice:

12. Temperature distribution in radiators used in automobiles
13. Oven radiation simulation
14. Steady state thermal analysis of tungsten coil with internal heat generation
15. Thermal analysis of disc brake

Projects

1. Thermal Analysis of PV Solar Pannel
2. Structural and thermal analysis of Green House
3. Structural analysis of Quadcopter.
4. Structural analysis of landing gear.
5. Numerical study on different types of fins.
6. Overhead tank failure analysis.
7. Analysis of Rocket Nozzle
8. Analysis of BAJA SAE
9. Structural and Thermal Analysis of Downdraft Gasifier
10. Structural and Thermal Analysis of Stirling Engine
11. Structural Analysis of Hydraulic Press
12. Structural Analysis of Elevating Conveyor

Hydraulic Machinery

Code	Course Title	Credit	T-P-PJ
CUTM1090	Hydraulic Machinery	2	1-1-0

Objective

- To emphasize Principle of operation of hydraulic machines and their system design
- To familiarize their huge applications in different industries

Course Outcome

- After completion of the course, the students will have a strong foundation on the pertinent equations to engineering design of the machines for required applications.
- Students will learn to determine performance characteristics of fluid machinery by using various simulation tools

Course content

Module I: Principle of Operation of Hydraulic Machinery

(2 hrs)

Introduction to hydraulic machines: Classification and operation principle, Euler equation for turbo machines: net head developed by pump and Turbines

Module II: Radial and Axial flow pumps

(8 hrs)

Velocity triangle of pumps, effect of inlet swirl on velocity triangles, Constructional features of Centrifugal Pump, design aspect, working principle and efficiencies, work done by the impeller, priming, specific speed, NPSH, effect of swirl on the cavitations, working principle and design aspect of gear oil pump.

Practice:

1. Flow analysis of fluid of Centrifugal pump through Simulia software
2. Flow analysis of gear oil pump through Simulia software
3. Performance Characteristics of Centrifugal Pump through Virtual lab

Module III: Positive displacement Pumps

(3 hrs)

Working principle of Reciprocating Pump, discharge, work done and power requirement, ideal indicator diagram, and slip, characteristic H-Q curve of positive displacement pump

Practice:

4. Performance Characteristics of Double Acting Reciprocating Pump through Virtual lab.

Module IV: Hydraulic Turbine: Impulse Turbine**(6 hrs)**

Classification, definitions of heads and efficiencies, Pelton Wheel - Construction and working principle, work done and hydraulic efficiency, design aspects.

Practice:

5. Simulation of Pelton Turbine through simulia software
6. Performance Characteristics of Pelton Turbine through Virtual lab.

Module V: Hydraulic Turbine: Reaction Turbine**(6 hrs)**

Reaction turbine (Francis, Kaplan) -Components, working principle, work done and efficiency, draft tube, specific speed, cavitations

Practice:

7. Performance Characteristics of Francis Turbine Simulia software.
8. Simulation of Kaplan turbine through Virtual lab.

Fluid Mechanics with Finite Volume Method

Code	Course Title	Credit	T-P-PJ
CUTM1089	Fluid Mechanics with Finite Volume Method	3	2-1-0

Objective

- To learn To learn fundamentals of computational methods like FVM for solving linear and non-linear partial differential equations related to fluid dynamics
- To emphasizes the basic underlying fluid mechanical principles governing energy transfer in a fluid flow systems with their performances in different field of engineering applications

Course Outcome

- After completion of the course, the students will able to evaluate finite difference/volume schemes on model problems of computational fluid dynamics.
- Students will learn to develop steady state mechanical energy balance equation for fluid flow systems, estimate pressure drop in fluid flow systems

Course content

Module I: Introduction to Finite volume Method

(6 hrs)

Fundamentals of Finite volume methods, different types of finite volume grids, approximation of surface and volume integrals; interpolation methods, Review of governing equations, Classification of governing equations , Staggered and co-located formulation

Practice:

1. 2D mapped Mesh for rectangular pipe
2. 2D mapped Meshing for Aerofoil.

Module II: Grid generation

(6 hrs)

Grid generation, creating, updating and managing meshes, Steady diffusion equation on structured meshes, Unsteady diffusion equation on structured meshes, Linear system solvers, finite volume discretization of steady and unsteady diffusion equation, Finite volume discretization of convection-diffusion problem

Practice:

3. 3D structure mesh of Circular Cylinder
4. 3D unstructured mesh with primes layers for Aerofoil
5. 3D coarse/ medium/ fine sweep mesh for pipe

Module III: Incompressible flow field calculation with finite volume method (5 hrs)

Navier-stokes equation, Discretization of the Momentum Equation: Stream Function-Vorticity approach and Primitive variable approach, Staggered grid and Collocated grid solutions of Navier-stokes equation with finite volume method, boundary condition, Reynolds averaged Navier-Stokes equations.

Module IV: Fluid kinematics

(2 hrs)

Types of flow, Continuity equation (in one, two & three dimension steady state fluid flow analysis with finite volume method, velocity and acceleration fields, streamline, streak line, path line, velocity potential function and stream function, Rotation and vorticity.

Module V: Fluid Dynamics with Finite volume method

(4 hrs)

Lagrangian and Eulerian Approach, Euler's equation of motion along a stream line for ideal flow, Principle of conservation of energy with finite volume method, Integration of Euler's equation along a stream line, Bernoulli's equation

Practice:

6. Fluid Analysis of Bernoulli's equation: Flow in a contracting pipe through CFD simulation

Module VI: Flow through Pipes

(5 hrs)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, Introduction Turbulence modeling through Finite volume method, Hagen Poiseuille Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe.

Practice:

7. Fluid Analysis of Laminar flow in 3D Circular Pipe through CFD simulation

8. CFD Simulation of the Water Flow Passing Through a Converging Pipe.

9. CFD Analysis to determine the frictional losses in the pipe.

Module VII: Flow Measurement

(5 hrs)

Flow through small orifice meter, Mouthpiece, Velocity Measurement using Pitot tube, Prandtl tube, Flow measurement in pipes-Flow, Venturi Meter, Flow rate Measurement in channel-Weir and Notches

Practice:

10. CFD Analysis of Fluid flow through Orifice meter

11. CFD Analysis of Fluid flow through adjustable channel

12. CFD Analysis of Fluid flow simulation through Venturi Meter

Theories of Failure Using Finite Element Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1062	Theories of Failure Using Finite Element Analysis	4	2-2-0

Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on Finite Element Analysis concept applicable to Practical conditions.
- To educate the students on Failure Criterion which will be useful for designing Practical problems.
- To educate the students on using 3D Experience Tools for analysis of various mechanical structures and load transmitting elements.

Course Outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy 3D Experience Platform to develop design solutions.
- Students will be able to apply the Concept of Meshing and Failure Criteria to Practical Problems which will lead Economical and safe in Design Aspect.

Course content

Module I Introduction to Finite Element Analysis (FEA) and 3D Experience Platform - (4(T)+5(P)) (9 Hours)

Introduction to FEA: Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence; General Procedure of FEA.

Material failure Behaviour: Stress–Strain Diagrams for Ductile and Brittle Materials.

Equivalent stresses for varying orientations, Principal stresses, maximum shear stress, Mohr's circles.

Practice:

1. Introduction to 3D Experience Platform: About the Apps and their Applications from Engineering Point of View.
2. Analysis of Steel Bridge – Simulation using 3D Experience Tool.
3. Tensile Test using Simulation 3D Experience Tool.
4. Stress Strain Curve of a Ductile Material (Mild Steel) using Universal Testing Machine

Module II Mesh Generation and Modeling of Truss Structure (1(T)+ 4(P) (5 Hours)

Mesh Generation and Methods of Meshing and Types of Meshing. Procedure for selecting the

method of meshing and type of meshing. Importance and application of Stiffness Matrix for different types of elements and the procedure for getting the results.

Practice:

5. 3D Experience Simulia – Modelling and Meshing of Transmission line tower.

Module III Stresses and Deflection Criteria: (5(T)+ 4(P)) (9 Hours)

Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

Stresses (No Derivation): Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination of Bending Stresses, Shear Stress Distribution for Different Sections.

Deflection : Equation of Elastic Curve, Direct Integration Method

Practice:

6. 3D Experience Simulia – Modelling and Finite Element Analysis of Framed Structure subjected Earthquake Loads.

Module IV: Theories of Failure: (2(T)+ 4(P)) (6 Hours)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

Practice:

7. 3D Experience Simulia: Bicycle Frame Structural Analysis

Module V: Torsion: (3(T)+ 4(P)) (7 Hours)

Torsion: Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and Parallel.

Dynamic Analysis: Fundamentals of Vibration; Evaluation of Natural Frequencies and Mode Shapes (Eigen values and Eigenvectors); Non-linear Analysis, Fatigue Analysis. Structures Subjected to Blast Loads.

Practice:

8. Simulation: Static and Dynamic Analysis of Shaft

Module VI Pressure Vessels (1(T)+ 2(P)) (3 Hours)

Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Practice:

9. Simulation: Crack Analysis of Thin walled Pressure Vessels.

Module VII Fatigue and Fracture: (3(T)+ 4(P)) (7 Hours)

Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Crack Growth and Stress Intensity Factor.

10. Fatigue Analysis of Crankshaft of Two-Wheeler

Text Books:

1. Strength of Materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced Mechanics of Materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

1. Elements of Fracture mechanics, Prashant Kumar, McGraw Hill Education (India)
2. Engineering Mechanics of Solids, Egor P. Popov, Pearson publication
3. Strength of Materials, R.K.Bansal, Laxmi Publications.

Disaster Preparedness & Planning Management

Code	Course Title	Credit	T-P-PJ
CUTM1907	Disaster Preparedness & Planning Management	2	2-0-0

The overall aim of this course is to provide broad understanding about the basic concepts of Disaster Management with preparedness as a Civil Engineer. Further, the course introduces the various natural hazards that can pose risk to property, lives, and livestock, etc. and understanding of the social responsibility as an engineer towards preparedness as well as mitigating the damages.

Course objectives of the course are i) To Understand basic concepts in Disaster Management ii) To Understand Definitions and Terminologies used in Disaster Management iii) To Understand Types and Categories of Disasters iv). To Understand the Challenges posed by Disasters vi) To understand Impacts of Disasters Key Skills

Outcomes: The student will develop competencies in → the application of Disaster Concepts to Management → Analyzing Relationship between Development and Disasters. → Ability to understand Categories of Disasters and → realization of the responsibilities to society

Syllabus

Module 1: Introduction - Concepts and definitions: disaster, hazard, vulnerability, risks severity, frequency and details, capacity, impact, prevention, mitigation).

Module 2: Disasters - Disasters classification; natural disasters (floods, draught, cyclones, volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

Module 3: Disaster Impacts - Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age,

special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

Module 4: Disaster Risk Reduction (DRR) - Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Postdisaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

Module 5: Disasters, Environment and Development - Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, landuse changes, urbanization etc.), sustainable and environmental friendly recovery; reconstruction and development methods.

Aerial Surveying and Remote Sensing Applications

Course Title	Code	Type of course	T-P-PJ	Prerequisite
Aerial Surveying and Remote Sensing Applications	ASCU2020	Theory + Practice + Project	4 - 10 - 4	Nil

Courses Division:

- | | |
|--|-----------------|
| 1. Remote Sensing & Digital Image Processing | (2-2-0) 45Hours |
| 2. Geospatial Technology and its Application | (2-2-0)45Hours |
| 3. Photogrammetry and its Application | (0-2-0) 25Hours |
| 4. Lidar Remote sensing and its Applications | (0-2-0) 25Hours |
| 5. Hyper-spectral Remote Sensing and its Application | (0-2-0) 25Hours |
| 6. Project | (0-0-4) 54Hours |

Objective:

- Apply the principles of Remote Sensing and GIS to collect, map and retrieve spatial information.
- Plan, assess and evaluate natural and manmade systems using geospatial models and methods.
- Use geospatial tools and techniques for natural resources planning and management.

Course Outcome:

- Identify specific data and methodologies for effective mapping and evaluation of natural resources.
- Develop geospatial models and tools to address the social and engineering problems
- Design multi-criteria geospatial systems for decision-making process
- Work in a team using geospatial tools and environment to achieve project objectives.
- Pursue lifelong learning for professional advancement

Evaluation System: As per university norms

Remote Sensing and Digital Image Processing

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Remote Sensing and Digital Image Processing	CUAS2020	T+P	4	2-2-0	NIL

Module: I Basic Concept of Remote Sensing (4+6) Hours

Introduction of Remote Sensing: Principles of RS and its Type; Energy sources and Radiation principles, Pixel, DN value, Energy equation; EMR and Spectrum; EMR interaction with Atmosphere; scattering, Absorption, Atmospheric window, Black body radiation; EMR interaction with earth surface features, reflection, absorption, emission and transmission, Spectral signature; Interaction with vegetation, soil, water bodies; Advantage of RS over conventional method, Limitation, Ideal remote sensing.

Practice:

1. Installation of Image Processing software's
2. Download satellite data from GLOVIS / Earth Explorer / Bhuvan etc.
3. Layer stacking
4. LUT and Image Subset
5. Spectral Signature mapping (soil, vegetation, water)

Module: II Digital Image (2+3) Hours

Data acquisition: Procedure, Reflectance and Digital numbers; Intensity, Reference data, Ground truth, Analog to digital conversion, FCCs, TCC, Platforms and sensors; orbits ,types, Resolutions; Image Interpretation; visual- Interpretation keys.

Practice:

1. FCCs and TCC
2. Resolution
3. Image Interpretation

Module: III Satellite Information and Principles (2+3) Hours

Land observation satellites, characters and applications; PSLV, GSLV, Satellite, Platform Types; LANDSAT series; IRS series; IKONOS Series; QUICKBIRD series; Weather/Meteorological satellites; INSAT series, NOAA, Applications, Marine observation satellites; OCEANSAT

Practice:

1. Image filtering and Band ratioing
2. Mosaicking

Module: IV Image Acquisition and Format (2+4) Hours

Digital Image Processing; Export and import, Data formats; BSQ, BIL, BIP, Run length encoding, Image Compression Data products.

Practice:

1. Export and Import
2. Histogram
3. Subset using AOI

Module: V Image Processing (3+4) Hours

IMAGE RECTIFICATION; Pre-processing and Post processing Geometric distortion; sources and causes for distortion, rectification, GCP, Resampling, Image registration; Radiometric distortion; sources and causes, atmospheric correction.

Practice: (Spectral Python and ENVI)

1. Geometric correction
2. Radiometric correction
3. Atmospheric correction

Module: VI Image Classification (4+4) Hours

IMAGE CLASSIFICATION; Classification techniques, types, Supervised and Un-supervised; Principal Component Analysis (PCA); Image Enhancement; Accuracy assessment.

Practice:

1. PCA analysis (spectral Python and ENVI)
2. NDVI, DVI, NDWI calculation
3. Image classification in Spectral angel Mapper
4. MNF Ratoing
5. Supervised Classification(spectral Python and ENVI)
6. Un-supervised Classification(spectral Python and ENVI)
7. Image Enhancement(ENVI)
8. Accuracy Assessment(ENVI)

Module: VI Remote Sensing and Its application (3+4) Hours

Microwave RS and its application; Thermal RS and its application; Optical RS and its application; Sensor and its types.

Practice: Using Spectral Python

1. Application of microwave remote sensing (Structural Trend line mapping)
2. Application of thermal remote sensing and case study(Land surface Temp. estimation)
3. Application of optical remote sensing and case study

Module I: GIS & Cartography (2+4) Hours

Components of GIS, Types of Data in GIS, Scale Application of GIS, Advantage and limitation of GIS. History and development of Cartography; Definition, scope and concepts of cartography, Characteristics of Map; Categories of maps, Methods of mapping, relief maps, thematic maps.

Practice:

1. **Symbology** (generalization, symbology, and colour effect, change symbology and use transparency in creative ways) using GRASS and QGIS

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Geospatial Technology and its Application	CUAS2021	T+P	4	2-2-0	NIL

Geo-referencing (Map to Image and Image to Image), Projection, Data base creation: Digitization using Point, line and polygon, Edit, Clip, Intersect, Union, Merge, Join and subset. Attribute table editing

2. **Google Earth** (Convert Shape file to KML Format and KML File to shape file, Import data into Google earth, Bhuvan view, Extract data From Google Earth, Extract Point Data, Extract Polygon data, Extract line data, overlaying an image into Google earth)

Module: II Data analysis tools(2+4) Hours

Raster data spatial analysis, Network analysis, Vector operations and analysis, Data editing, Primary and secondary data. Data model and data structure, Geodatabase and metadata, GIS data model, Overlay analysis, Network modeling, Data Structure Models, Spatial interpolation; measurement and analysis methods, Advantage and disadvantage

Practice:

1. Linking of spatial and Non-spatial data and queries, Joining tabular data with the feature attribute data, Non-spatial query, Spatial query, Spatial join, Vector based spatial analysis, Raster based spatial data analysis
2. Buffering and Creation of Contour
3. Network Analysis

Module: III Multi-criteria analysis and decision making (3+4) Hours

Principles and elements of multiple-criteria decision making, Classification of Multiple-criteria Decision Problem: Multi-objective Vs Multi-attribute, Decision Alternatives and constraints, Criterion weighting, Decision rules, Multiple-criteria decision making in spatial data analysis.

Introduction to AHP, Basic Principles of AHP, Effect Table, Pair Wise comparison, Consistency, Weightage, performance score, Case studies involving AHP

Practice:

1. Mapping accident locations using Linear Referencing technique.
2. Preparation of raster layers for Multicriteria Analysis
3. Solving a spatial problem using Multicriteria Analysis (Spatial AHP)

Module: IV Digital Elevation Model (DEM) (2+4) Hours

Concept of DEM, Various techniques to generate DEM, Importance of spatial resolution to DEM, Integration of DEM to satellite data, Common derivatives of DEM, Slope, Aspects, TIN, Sources of DEM, Laminations and future of DEM.

Practice:

1. Google earth to DEM, 3D Map preparation, Contour to DEM, TIN and Aspect
2. DEM based surface Hydrology modeling,
3. LiDAR classification, DEM from LiDAR

Module: V Geospatial Technology for Water resources Engineering (3+4) Hours

Watershed, types, divide catchment, command area, stream types, Drainage network, different pattern; morphometric analysis, Bifurcation ratio analysis; Assessment of **Groundwater potential zones** and Groundwater mapping; Site selection for recharge structures, Hydrogeological Mapping GIS applications to ground water studies.

Practice:

1. Mapping of catchment, command area
2. Drainage network analysis
3. Morphometric analysis
4. Mapping of Groundwater potential zones

Module: VI Geospatial Technology for Environmental Engineering (3+4) Hours

Monitoring atmosphere constituents; air pollution, industrial activity, modeling using GIS, Resource development in remote areas, Impacts of anthropogenic activity, Solid Waste management; Water Pollution, Shortest path Identification, Network analysis.

Practice:

1. Air pollution mapping
2. Solid waste management
3. Water pollution

Photogrammetry and Application

Practice Experiments:

3.1 Scale determination from aerial photo

3.2 Aerial photo Interpretation

3.3 Use of Parallax bar and determination of Height from stereo pair

3.4 Satellite DEM and ortho Image generation

3.5 Primary and additive colour creation

3.6 Stereo test

3.7 Mosaic

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
Photogrammetry and Application	CUAS2022	T+P	2	0-2-0 25Hours	NIL

3.8 Stereoscopic vision

3.9 Relief displacement

3.10 Analog to digital conversion, Orientation of stereo model and Determination of Height

3.11 Aerial mapping using DRONE

3.12 Mosaicking of aerial Photo

3.13 Correction and rectification

3.14 DTM generation Image correction, Link between GIS and Digital Photogrammetry and Ortho Image generation

LIDAR Remote Sensing and Application

Practice Experiments:

4.1 Download of LIDAR data

4.2 Layer stacking

4.3 Data Validation

4.4 Georeferencing Technology

4.5 Boresight Calibration - Lidar Data Pre-processing

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
LIDAR Remote Sensing and Application	CUAS2023	T+P	2	0-2-0 25Hours	NIL
Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite

4.6 Project Coverage Verification - Review Lidar Data against Field Control

4.7 Lidar data errors and rectifications, - processes calibration of Lidar data - artifacts and anomalies - Lidar Error Budget.

4.8 Noise Removal and other sensor-related artifacts - Layer Extraction - Automated Filtering

4.9 Manual Editing and Product Generation – Surface Editing - Hydrologic Enforcement

4.10 Breaklines, Contours, and Accuracy Assessment

4.11 Topographic Mapping, flood inundation analysis, line-of-sight analysis

4.12 Forestry, various types of LIDAR sensors-, vegetation metric calculations - specific application software.

4.13 Corridor mapping system, data processing and quality control procedures.

4.14 Modelling

Hyperspectral Remote Sensing and Application

Hyperspectral Remote Sensing and Application	CUAS2024	T+P	2	0-2-0 25Hours	NIL
---	----------	-----	---	------------------	-----

Practice Experiments:

5.1 Introduction to ENVI, Python and Downloading, Displaying, and Analyzing

Subject Name	Code	Type of course	Credit	T-P-P	Prerequisite
---------------------	-------------	-----------------------	---------------	--------------	---------------------

Hyperspectral Imagery

5.2 Atmospheric Correction of Hyperspectral Imagery.

5.3 MNF rationing from Hyperspectral(EO1)

5.4 Hyperspectral Image Classification Using Spectral Angle Mapper (SAM) & Spectral Feature Fitting (SFF).

5.5 Hyperspectral Imagery Classification Using an Unsupervised Neuron fuzzy System.

5.6 Application of Hyperspectral Imagery in Geological Studies.

5.7 Hyperspectral Signatures & Feature Fitting.

5.8 Hyperspectral Remote Sensing for Agriculture and soil Studies.

5.9 Hyperspectral Remote Sensing for Forestry Applications.

5.10 Hyperspectral Remote Sensing for Urban Studies.

5.11 Mineral identification from Hyperspectral imagery

5.12 Python Programming for Hyperspectral data analysis.

Project

Project	CUAS2025	Project	4	0-0-4	NIL
----------------	----------	---------	---	-------	-----

List of Projects :

1. Flood inundation mapping and Risk Evaluation using Geospatial Technology.
2. Landslide Hazard mapping using GIS and RS.
3. Land use and Land cover Dynamics using Earth observation Technology.
4. Mangrove change detection study using Multi-Temporal satellite data.
5. Solid waste management and shortest path identification using GIS Technology.
6. Watershed management using GIS Technology.
7. Identification Mineral mapping using GIS and RS.
8. Crop Health Monitoring using Geospatial Technology.
9. Identification of Hydrocarbon Locales using space inputs and Geospatial Technology.
10. Ground water exploration using GIS and RS Techniques.
11. Interlinking of River using GIS Technology.
12. Biomass estimation using Space Technology.
13. Land surface Temperature mapping using RS Technology.
14. Climate Change study using Earth Observation Technology.
15. Erosion and Accretion study of Shorelines and its impact in coastal habitats.

Students take up group projects and deal the following activities during the project. The project Report should contain below gate process.

Step 1: Functional Planning of the project and Objective Identification

Step 2: Literature Review

Step 3: Preparation of Flow chart for Methodology

Step 4: Layer creation and GIS analysis

Step 5: Identifying the possible Risks involved (specific to the project)

Step 6: Report writing

Each student is expected to do an individual project. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

.....

Domain Track Title: CONSTRUCTION PLANNING, MONITORING AND PROJECTMANAGEMENT

Track Total Credits =Theory + Practice + Project = 16 (4- 6 - 6)

Courses Division (list all divisions):

PHASE I.	Study of Drawings and Plan Hours	(0+2+0)	25
PHASE II.	Project Scheduling & Management Hours	(2+1+0)	30
PHASE III.	Quantity Estimation and Equipment Management Hours	(0+1+1)	25
PHASE IV	Site Study and Study on Contract Laws Hours	(2+1+0)	30
PHASE V.	Concepts of Quality Control and Checking Hours	(0+1+1)	25
PHASE VI.	Site Supervision Project Hours	(0+0+4)	54

Domain Track Objectives:

- Students will be able to work with the latest trend of the construction industry

needs.

- Understand different methods of project delivery and the roles and responsibilities of all constituents involved in the design and constant process.
- Give the students experience, supervision and direction in recognizing and applying the concepts of project management and construeplanning.

Domain Track Course Outcomes:

- Students will plan various projects relating to advanced building technology with trust.
- Students will be churned as Construction Manager, Project Engineer, Site Supervisor and Project Consultant.
- Maintain and develop the pupils' ability to put their knowledge of theory into practice using forms of construction.

Domain Syllabus:

PHASE I- STUDY OF DRAWINGS 2+2+0

Inputs required completing the project

1. To ensure the student to read about the technical terms in various building drawings.
2. To give hands on practice to the students in preparing blue prints of a proposed construction.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
Preparation of Site Map Practice	Theory + Drawing
Preparation of Electrical and Plumbingdrawing Practice	Theory + Drawing
Preparation of Bar Bending Schedule and Carpentry drawing Practice	Theory + Drawing
Structural Detailing of building components Preparation of Building layouts Practice	Theory + Drawing

Report Preparation Review
Practice

Theory + Drawing

Field Work Report Presentation
Practice

Theory + Drawing

Phase II: PROJECT SCHEDULING & MANAGEMENT 0+2+0

1. WBS
2. Equipment Scheduling
3. Labour Scheduling
4. Material Scheduling
5. Financial Resource allocation.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Preparation of Functional Planning	Practice
Detail analysis report about the information of an equipment	Practice
Preparation of datasheet of construction labors	Practice
Preparation of materials list required for the project	Project
Scheduling the resources of the project	Project
Report Preparation	Report
Review	Presentation

PHASE III QUANTITY ESTIMATION AND EQUIPMENT MANAGEMENT

- 1 Identify the particular equipment to be used in the construction project they will undertake.
- 2 Prepare plans for economic management by estimating the costs of the total construction works.

To appraise the student with the aspects related to functioning, operation and maintenance of various construction equipment.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Planning & Selection of Equipment Learning }	Practice (Self-
Economics of Equipment and procurement techniques. Learning }	Practice (Self-
Estimation for total construction cost. Learning }	Practice (Self-

Estimation for total labor and material Learning }	Practice (Self-
Preparation of BOQ. (Lab)	Estimator 2.0
Review	Presentation

PHASE IV SITE STUDY AND STUDY ON CONTRACT LAWS
2+2+0

To learn about the methods of marking layouts and pre construction process.
To study the various types of construction contracts and their legal aspects and provisions.
To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

<u>TYPES OF INPUT</u>	<u>TYPE OF STUDY</u>
Marking Layouts of proposed plan.	Field work
Preparation of Site Map Practice	Surveying
Design of contract documents Tenders Prequalification-Bidding- Accepting- Evaluation of Tender from Technical Class Room Practice	Theory+
Contractual and Commercial Points of View. Legal Requirements, Insurance and Bonding, Laws Governing Sale, Purchase and Use of Urban and Rural Land-Land Revenue Codes-Tax Laws Class Room Practice	Theory+
Assessment (Lab) Examination	

PHASE-V 0+1+1 CONCEPTS OF QUALITY CONTROL AND CHECKING

Inputs required completing the project

- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check list
- Carryout the field and laboratory tests for quality assessment in construction industry.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Generation of sample QC inspection Check list for Practice (Self- Learning) Industrial building.	
Generation of sample QC inspection Check list for Institutional building. (Self- Learning)	Practice
Generation of sample QC inspection Check list for Apartment building. (Self-Learning)	Practice
Generation of sample QC inspection Check list (Self- Learning) Road Structures.	Practice
Report Preparation.	Report
Review.	Presentation

PHASE VI SITE SUPERVISION PRACTICES 0+0+2

To demonstrate supervision of concreting task such as form finish concrete structure, complex structure, slip fc concreting and concreting in extreme weather condition.
Supervise, monitor and evaluate performance of subordinates at workplace.
To study about the processes of various stages of construction on the field.
To fulfill the requirement of the INPUTS the candidate has to Learn the following steps:

TYPES OF INPUT

TYPE OF STUDY

Supervise and monitor the execution of System/shuttering Carpentry works. Learning)	Practice (Self-
Supervise and monitor the execution of concreting works. Learning	Practice (Self-
Supervise and monitor the execution of bar bending works Learning	Practice (Self-
Supervise and monitor the execution of scaffolding works. Learning	Practice (Self-
Supervise and monitor the daily- Labour works (DPR). Learning	Practice (Self-
Assessment (Review)	Presentation

REPORT WRITING

Students take up group projects and deal the following activities during the course of their project.

- Functional Planning of the project
- Identification of Objects
- Literature Review
- Preparation of Flow chart for Methodology
- Sequences of construction process
- Identifying the possible Risks involved (specific to the project)
- Result and Discussion
- Conclusion
- Recommendation
- **References**

Software Handling

- 1 Auto CAD
2. Revit Architecture
- 3 M. S. Project
- 4 Primavera
- s Estimator 2.0

Domain Track Title : **Architectural and Structural Design**

Track Total Credits (0-15-5)

Courses Divisions:

1. Critical thinking and presenting it with digital platform (AutoCAD leads to 3D base) (0-3-0)
2. Scope to enrich by exposing them to BIM modelling (0-5-0)
3. Design and failure analysis of structure (0-5-0)
4. Amalgamation of architecture and civil requirements using Generative Apps (0-2-0)
5. Project(0-0-5)

Domain Track Objectives:

1. To teach the Principles of architectural building design.
2. To familiarise the student with practicing life in construction industry and orient their learnings towards practical application in the field
3. Make a difference with cutting edge technology

Domain Track Course Outcomes:

1. Strong understanding of architectural design and scope for innovative ideas
2. Case study based practical solution with actual site visits/live buildings
3. Modelling of structural elements and failure analysis
4. Time saving estimations/structural calculations using digital tool

Domain Syllabus:

1. Critical thinking and presenting it with digital platform (37.5 Hrs) (AutoCAD leads to 3D base)

- 1.1 Introduction to Architectural Design
- 1.2 The need and scope of with basics of Design Principles
- 1.3 Ergonomic data and its application
- 1.4 Hands-on experience with designing their own house or hostel
- 1.5 The need of digital drive for 2D design expressions
- 1.6 Basics of AutoCAD, Conceptualization of Design: Own House drafting/Hostel
- 1.7 Addition of Creativity and modifying the design
- 1.8 Study the impact of Geological data, climatological data on design
- 1.9 Modification of design based on hydrology, soil, site conditions
- 1.10 Carving out a meaningful design in terms of architecture and structure both

- 1.11 Application of 2D design/ welcoming them in the world of 3D design
- 1.12 Basics of 3D concepts and commands
- 1.13 Practical techniques for saving area/cost
- 1.14 Presenting a wholesome idea before moving to BIM

2. Scope to enrich by exposing them to BIM modelling (62.5 Hrs)

- 2.1 Introduction to BIM modelling
- 2.2 The need and scope of with live examples
- 2.3 Ergonomic data and its application
- 2.4 Applying learnings to a bigger scale hotel/flat scheme/hostels
- 2.5 Incorporation of site factors
- 2.6 Realistic approach road and building bye-laws
- 2.7 The magic of *Importing previous plans & reorient them to achieve larger scale in no time*
- 2.8 Prepare specifications in BIM
- 2.9 Estimating all the quantities in a very short time
- 2.10 Concepts of CATIA
- 2.11 Layer wise calculation for pipelines, electrical ducts, AC units etc
- 2.12 Introducing structural layers for design
- 2.13 Cross check with grid formation, foundation calculation & column orientation
- 2.14 Data and record for 3D design of individual aspects for the next level

3. Design and Failure Analysis of Structure (62.5 Hrs)

- 3.1 Introduction to steel structures. Modeling, Analysis and design of steel truss in as per AISC 360
- 3.2 Linear buckling analysis of structures
- 3.3 Introduction to PEB, Modelling PEB and assigning properties, load cases, design parameters, Analysis and extracting results.

- 3.4 Introduction to lattice steel structures. Modelling, Analysis and design of lattice steel structures.
- 3.5 Reading design results and optimising the steel structure.
- 3.6 Modelling, Analysis and design of portal frame as per AISC 360 and ASCE 07-16
- 3.7 Introduction to nonlinear static analysis. Perform pushover analysis.
- 3.8 Introduction and modelling of composite deck platform
- 3.9 Modelling of deck slab and assigning section properties with releases
- 3.10 Assigning specifications and diaphragm to the structures
- 3.11 Define and calculate seismic and wind loads as per ASCE 07 and ATC hazards
- 3.12 Define load cases and load combinations, Deflection check concept, floor vibration analysis.
- 3.13 Analyse composite structure and extract results.
- 3.14 How to import CAD MODEL, Design and analysis of multi storey residential building based on different loading criteria (based Code on IS456:2000),Creating plate elements and shear walls.
- 3.15 Design and analysis of frame structures based on different loading criteria (based Code on IS456:2000)
- 3.16 Design, analysis of Foundations (Isolated footing and Combined footing based on code IS456:2000)
- 3.17 Design, analysis of structural elements e.g. Beam, column, Slab (one way and Two way) (based Code on IS456:2000 and BS8007)
- 3.18 Error and warning analysis, Report generation

4. Amalgamation of Architecture and Civil Requirements using Generative Apps or Derivatives of Parametric Design (25 Hrs)

- 4.1 Optimisation of steel cost- using permutation & combination of steel/foundation type or small changes in architectural design
- 4.2 Segregated services
- 4.3 Revising PERT/CPM paths
- 4.4 Addition of storage spaces
- 4.5 Façade treatment/modification
- 4.6 Inclusion of basement/parking areas/bunkers
- 4.7 Reduction of construction cost
- 4.8 Site development and slope calculation (in brief)
- 4.9 Mitigating hydrological impacts on difficult sites

Session Plan for the Entire Domain:

1. Critical thinking and presenting it with digital platform (37.5 Hrs)

Session 1: Architectural Design Basics

<https://www.youtube.com/watch?v=k4dVgbuxBAw>

Session 2: Stages of Architectural Design

<https://www.youtube.com/watch?v=pv-O5VdVjdM>

Session 3: Fundamentals of Building Planning

<https://www.youtube.com/watch?v=LIY7f6kK3Jk>

Session 4: Visualisation of plans

Session 5: Basics of AutoCAD

<https://www.youtube.com/watch?v=hO865EIE0p0>

Session 6: Making a simple floor plan in AutoCAD

<https://www.youtube.com/watch?v=-iX-ZyvOiQA>

Session 7: Creative Design

<https://www.youtube.com/watch?v=YHNYaQzsRf8>

Session 8: Creativity in building design (sample/live case analysis)

<https://www.youtube.com/watch?v=MDtlcrDApFk>

Session 9: Design is a thinking process

<https://www.youtube.com/watch?v=vmHoGicPQQQ>

Session 10: Modification and correction

Session 11: Adding variables like: Climatology, soil data and hydrology

Session 12: Arriving at a creative and unique solution

Session 13: Printing the ideas in brain

Session 14: Basics of 3D design

https://www.youtube.com/watch?v=MZ89_ozNWiA

Session 15: Exploring various platforms to express the idea in VR

https://www.youtube.com/watch?v=il7m1Ta7_eQ

Session 16: Detailing in 3D

Session 17: Practical techniques for saving area/cost

Session 18: Hands on practice for optimisation of design

2. Scope to enrich by exposing them to BIM modelling (62.5 Hrs)

Session 1: A thorough introduction to BIM

<https://hmcarchitects.com/news/building-information-modeling-benefits-for-architecture-and-construction-2019-06-05/>

Session 2: BIM's extent and various applications

Session 3: Case study and live applications/examples

<https://www.linkedin.com/pulse/200612engineeringtemplateexample-mansu-kim/?trackingId=tW9ftWdlwLMES034UU2meg%3D%3D>

Session 4: Introduction to bigger scale problems based on previous sample design

Session 5: Time saving factor using 3D skills

<https://www.linkedin.com/pulse/200612engineeringtemplateexample-mansu-kim/?trackingId=tW9ftWdlwLMES034UU2meg%3D%3D>

Session 6: Specification generation in BIM

<https://www.cadcr.com/bim-and-specifications-writing-the-great-disconnect/>

Session 7: Estimation of quantities

<https://estimationqs.com/bim-vs-bills-of-quantities-3d-model-quantity-takeoff/>

Session 8: 5D estimation and BIM/adding another dimension to BIM

<http://biblus.accasoftware.com/en/perspectives-on-5d-bim-the-fifth-dimension-of-bim-linked-to-construction-estimate/>

Session 9: Layer of services: water supply and Sanitation

Session 10: Calculation and Fitting nitty-gritty

Session 11: Electrical Layout and BIM

https://www.youtube.com/watch?v=SSkl_vT7cCQ

Session 12: Electrical Layout: drawing and estimation

<https://www.youtube.com/watch?v=r5p3LOqPMiM>

Session 13: AC layout ducting (only introduction)

Session 14: Centreline plan and Cross check with grid formation

<https://www.youtube.com/watch?v=dPHYi-fYcnk>

Session 15: Reorientation of columns and beams to form a strong frame

<https://www.youtube.com/watch?v=nKZy4MB-0zY>

Session 16: Cross check in 3D-Quick Revit analysis/SAP

<https://www.youtube.com/watch?v=pIRqWvD0Wqw>

Session 17: Basics of foundation calculation & column

<https://www.youtube.com/watch?v=SUF5h2ulf2U>

Session 18: Report generation

Session 19: Presentation with achievements in project

3. Design and Failure Analysis of the Structure

Session 1: Introduction to Steel Structures, Various types of trusses, Purlins, girders and Sag Rods.

<https://youtu.be/dZctrAnZeI>

Session 2: Modelling of Steel Truss in STAAD as per AISC 360

Session 3: Analysis and Design of Steel Truss in STAAD as per AISC 360

Session 4: Introduction to Linear Buckling Analysis

Session 5: Perform Buckling Analysis for I Shape Column

Session 6: Perform Buckling Analysis for I Shaped Steel Girder

Session 7: Introduction to Pre-Engineered Buildings (PEB)

<https://youtu.be/N024hmp2PYU>

Session 8: Modelling of PEB Shed and Assigning Properties

<https://youtu.be/T2AafFV-KS0>

Session 9: Define Load Cases and Combinations

Session 10: Calculation and Assignment of Dead and Live Loads as per IS 875 and NBC 2016

Session 11: Assignment of Wind Loads on PEB Shed as per the Indian Standards

Session 12: Assigning Analysis and Design Parameters with Extracting Design Results

Session 13: Introduction to Lattice Steel Truss Structures

Session 14: Practical Reference for a Lattice Steel Truss Structure

Session 15: Modelling of Lattice Steel Truss Structure

Session 16: Analysis and Design of Lattice Steel Truss Structure

Session 17: Reading Design Results and Optimizing the Steel Structure

Session 18: Detailed Explanation of Wind Loads as per ASCE07-16

Session 19: Modelling of Portal Frame as per AISC 360 and ASCE07-16

Session 20: Analysis and Design of Portal Frame as per AISC 360 and ASCE07-16

Session 21: Introduction to Non Linear Static Analysis i.e. Pushover Analysis

Session 22: Perform Pushover Analysis for a Steel Frame in STAAD Pro.

Session 23: Introduction to Steel and Composite Buildings

Session 24: Introduction to Cold Formed Steel Structures, Introduction and Modelling of Composite Deck Platform

Session 25: Modelling of Deck Slab and Assigning Section properties with Releases

Session 26: Assigning Specifications, Releases and Diaphragm to the Structure

Session 27: Define and Calculate Seismic and Wind Loads as per ASCE 07 and ATC Hazards

<https://youtu.be/tV3I7SDmiwk>

Session 28: Define Load Cases and Load Combinations

Session 29: Define Analysis and Composite Structure Design Commands

Session 30: Analyzing and Designing the Structure as per AISC 360 for Composite beams

Session 31: Floor Vibration Analysis and Generation of Design Report

Session 32: Deflection Check Concept i.e. DJ1 and DJ2 Design Command

Session 33: Introduction to Plate Girders

Session 34: Design of Plate Girders as per AISC 360

Session 35: Introduction to Linear Cable Analysis and Cable Supported Structures

Session 36: Linear Cable Analysis of a Guyed Tower in STAAD Pro.

Session 37: Introduction to Lifting Arrangement and Basic Modelling of Suspended Arrangement

Session 38: Advanced Cable Analysis and Extraction of the Results

Session 39: Modelling of Steel Structure Platform and defining Load Cases, Combination

<https://youtu.be/YBWPn5jmMGs>

Session 40: Defining Properties, Analysis and Design Parameters

Session 41-42: How to import CAD MODEL, Design and analysis of multi storey residential building based on different loading criteria (based Code on IS456:2000)

<https://youtu.be/xb2I5-89O28>

<https://youtu.be/uGZjESwS6z0>

Session 43: Creating plate elements and shear walls.

<https://youtu.be/YKNfjEmN5O4>

Session 44-45: Design and analysis of frame structures based on different loading criteria (based Code on IS456:2000)

https://youtu.be/_I1qYBIspbk

Session 46-47: Design, analysis of Foundations (Isolated footing and Combined footing based on code IS456:2000)

<https://youtu.be/be20IIMaRS4>

Session 48-49: Design, analysis of structural elements e.g. Beam, column, Slab (one way and Two way) (based Code on IS456:2000 and BS8007)

<https://youtu.be/NXP2cmL8fmY>

<https://youtu.be/-17O4ZSZ9VY>

<https://youtu.be/XueRfUsznhI>

<https://youtu.be/8BX8wDuuVFk>

<https://youtu.be/7hguBoqCajE>

<https://youtu.be/GTDCjEtXI60>

Session 50-51: Error and warning analysis, Report generation

4. Amalgamation of Architecture and Civil Requirements using Generative Apps or Derivatives of Parametric Design (25 Hrs)

Session 1: Variable analysis using BIM: plan, grid, column numbers and even reinforcement detailing

Session 2: Revising estimations in no time

Session 3: Achieving cost effectiveness

Session 4: Checking services' paths-Layering of services

Session 5: Addressing the coinciding issues with services

Ex: AC duct and electrical conduits

Session 6: Visual realisation of reinforcement in all the elements

Session 7: Arriving on shortest timeline-Revising PERT/CPM

Session 8: Exploring possibilities for additional spaces in design

Ex: storage, intermediate water tank, parking area

Session 9: Façade treatment

<https://study.com/academy/lesson/facade-in-architecture-definition-design.html>

Session 10: Dynamic façade design

<https://www.homedit.com/cool-building-facades/>

Session 11: Site development –Phase wise

Session 12: Site development – After completion year wise

Session 13: Scope for future addition/intervention by developer

Session 14: Estimation of effective saving- in terms of time/money/gain

List of Projects:

1. Small scale (initial) with interior
 - 1.a. Hostel room
 - 1.b. Individual home
 - 1.c. Duplex bungalow
 - 1.d. Shop
 2. Live/ ongoing Project/Turn key basis
 - 2.a. Multi storey building
 - 2.b. Hospital
 - 2c. Hostel
 - 2.d. Office Building
 3. Highway geometry design
 4. Design and analysis industrial ware house
 5. Design and analysis of auditorium with proper load calculation, load cases, load combination based on code (IS 456:2000 and BS 8007).
 6. Design of bridge deck slab
-
1. Gate Process for Project
 1. Gate 0: Project Identification
 2. Gate 1: Planning
 3. Gate 2: Modelling
 4. Gate 3: Design and simulation
 5. Gate 4: Documentation

The following colour represents the syllabus revision, skill, employability and entrepreneurship.

Green : Skill

Pink : Employability

Sky : Entrepreneurship

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function)),10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Highjer Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

- 1) Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
- 2) Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd & 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: Johnwiley& Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

1) Advanced Engineering Mathematics by P.V. O'Neil Publisher: Thomson

- 2) Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff & A.D. Snider Publisher: Pearson
- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar & R.K. Jain; New Age International Publishers.
- 4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs, both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II (3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III (3 Hours)

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV (3Hours)

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V (3 Hours)

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI (3 Hours)

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII (4 Hours)

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009.
Chapters: 1(1.1 ,1.2,1.3, 1.5); 7(7.1,7.6); 8(8.1 to8.5, 8.7, 8.8);9(9.1,9.4,9.5).

Reference Books:

2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.
3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- To apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability

and conditional probability of events.

- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1.Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work,

circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd.
Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition
Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.
- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid

(2 Hrs.)

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia

(3 Hrs. + 2 Hrs. practice)

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion

(3 Hrs.)

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion

(3 Hrs. + 4 Hrs. Practice)

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Reference Books:

Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law .Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics
V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

1. A Text Book of Optics by M.N. Avadhanulu, BrijLal, N. Subrahmanyam, S Chand; 23rd Rev. Edn. [Module I&II]

3. Concepts in Engineering Physics by I Md. N. Kha, 2016.

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)
4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using piknometer. (V.lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms,Factors affecting Corrosion;Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Clomel/ Quin Hydron Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of

polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3: Water resources and its conservation

Assignment-4: Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4: Environmental protection act, 1986

Reference Books:

1. Environmental Studies by U.N. Dash & H. D. Kumar, India Tech Publication, New Delhi
2. Environmental Studies by R. Rajagopalan Oxford University Press
3. Environmental Science and Engineering, 2E, by Aloka Debi, University Press

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing

and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply. Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects. Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management; Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like

India

- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,
- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - Introduction to Gender

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - Gender issues in health

PPT 3 - Gender issues in education

PPT 4 - Gender issues in Governance

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - WID WAD GAD

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - Gender and Organisations

PPT 7 - Gender Equality in Organisations

PPT 8 - Gender Mainstreaming and Attitude in Workplace

PPT 9 - Gender Sensitisation

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

<https://www.youtube.com/watch?v=p6w-d1mmjFU>

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)

4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

- LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations
- LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)
- LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain
- LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)
2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGaIzqIw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk <https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>

2. Overview of Sustainable Development Goals -
<https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers
4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job

Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:
<https://drive.google.com/file/d/1Wst-jdAJuHHvtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables

- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions
- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks

- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount
- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments

- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular
- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

CUTM1023	Smart Engineering Project (G2M)	3	0-0-3

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID

Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus

Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, cloud

Computing, fog or edge computing,

Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development

Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram
12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madiseti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS

Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALISATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators
3. ERP dashboarding
4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.

- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .
- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

- P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT
- P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

- P3.1 Port handling of 8951
- P3.2 Port handling of Arduino
- P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

- 4.1 Designing of sequential robot control system.
- 4.2 Writing of programs in different programming languages.
- 4.3 Controlling of input/output devices.

Practice

P4.1 Programming of controllers with different programming languages

P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

5.1 What is Ubuntu & ROS?

5.2 Requirement and application of ROS.

5.3 ROS based simulation of Turtlbot.

5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlbot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.
- Design a Fund raising campaign

Recommended References:

Books: Tom Kelly & Jonathan Littman (2001). “The Art of Innovation” Broadway Publication.

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation Window, Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages,

Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_YI3RiTI14

Basket IV Core Courses Syllabus

Computer Aided Drafting

Code	Course Title	Credit	T-P-PJ
CUTM1075	Computer Aided Drafting	3	0-2-1

Objective

- How to create simple parts, assemblies and drawings.
- How to use different feature-based tools to build, review and modify a model.
- How to create and analyze assemblies and how to produce a drawing with different views.
- How to dimension the drawing and annotate the views.

Course outcomes

- Students will be able to use CATIA for creation of 3D models, Assembly Designs and Drawings

Course content

Module I: Sketcher - Creating Profiles 2 (hrs)

PLM Objects, Sketch Support, Simple elements, constraining sketches, simple and complex profiles, transforming sketches, saving documents

Practice-1 : Hands on Session on Sketcher Workbench

Module II: Part Design -Creating Basic Features 5 (hrs)

Extruded Features, revolved features, holes, threads, taps, drafts, fillets, chamfers, shelling and stiffeners, relational dimensions,

Practice-2 : Hands on Session on Sketch Based Features & Dress Up Features

Practice-3: Hands on Session on Transformation Features

Module III: Reviewing & Modifying 2 (hrs)

Measuring the model, re using the data, editing features

Practice-4: Hands on Session on Measuring Tools & Editing Features

Module IV: Finalizing Design 5 (hrs)

Adding parameters, reusing features, rendering, weight calculation,

Practice-5: Hands on Session on Parametric Design

Practice-6: Hands on Session on Rendering, Material Addition

Module V: Creating & Managing Products **6 (hrs)**

Positioning Components, constraining Components, Analyzing weight distribution, replacing and revising parts

Practice-7: Hands on Session on Assembly Design

Practice-8 : Hands on Session on Digital Mock Up

Module VI: Creating Drawings **4 (hrs)**

Creating Drawing, Modifying, dimensioning, Annotations, Finalizing & Printing

Practice-9: Hands on Session on Drawing Conventions

Practice-10: Hands on Session on Creating Drawings

Module VII: Master Exercise **(5 hrs)**

Heat Sink , PC Card Slide

Practice-11: Modeling of Heat Sink

Practice-12: Modeling and Assembly of PC card Slide

Text Books:

3. Mechanical Design Fundamentals : Dassault Systemes Companion Learning Space Material

Reference Books:

Note: 1 credit theory=10 hrs lecture, 1 credit practice/project=12.5 hrs lab/workshop/field work in a semester

Product Design & Development

Code	Course Title	Credit	T-P-PJ
CUTM1076	Product Design & Development	2	1-1-0

Objective

- Understand modern product development processes.
- Understand and explain the concept of Industrial design and robust design concepts.
- Understand the concept of Design for manufacture and assembly.
- Understand the legal factors, social issues, engineering ethics related to product design

Course outcomes

- Prepare primary designs taking into consideration all relevant ergonomics and aesthetic aspects of the product.

Course content

Module I: Introduction

2 (hrs)

Introduction to product design, Morphology of design, Modern product development process, Innovative thinking

Module II: Conceptual

3 (hrs)

Generation, Selection and embodiment of concept, Product Architecture

Practice 1: Concept Design using 3D Experience Platform

Module III: Industrial

5 (hrs)

Process and need, Robust design concepts: Taguchi Design and DOE, case studies on various robust design concepts

Practice 2: Failure Analysis through Simulia - Structural Analysis,

Practice 3: Thermal Analysis using Simulia

Module IV:

3 (hrs)

Optimization Optimization using 3D Experience- Function Generative Design

Practice 4: Shape Optimization using 3D Experience

Module V: Design for Manufacturing & Assembly 3 (hrs)

Methods, Design for Maintainability, Designs for Environment, Product costing

Practice 5: Assembly Design Review using 3D Experience

Module VI: Value Engineering & Analysis 3 (hrs)

Definition, Methodology & Case Studies, Economic analysis: Qualitative & Quantitative

Module VII: Ergonomics & Aesthetics 3 (hrs)

Gross human autonomy, Anthropometry, Man-Machine interaction, Concepts of size and texture, color, Comfort criteria, Psychological & Physiological Considerations

Practice 6 : Human Ergonomics using 3D Experience

Text Books:

4. Engineering Design , George E.Dieter, Fourth Edition, McGraw Hill
5. Chitale, A K, Product Design & Manufacturing, 2013, 6th Edition, PHI publication, India

Reference Books:

6. DassaultSystemes Companion Learning Space Material on Product Design
7. DassaultSystemes Companion Learning Space Material on Function Generative Design
8. DassaultSystemes Companion Learning Space Material on Virtual Ergonomics Simulation
Fundamentals- Delmia Ergonomics at Work

Reverse Engineering & Rapid Prototype

Code	Course Title	Credit	T-P-PJ
CUTM1077	Reverse Engineering & Rapid Prototype	4	1-2-1

Objective

- Understand concept of reverse engineering
- Understand principles of imaging, cross-sectional scanning, digital data, computational graphics
- Understand legality of reverse engineering concept

Course outcomes

- Use the Digitized Shape Editor (DSE) workbench
- Import and process the digitized data (scans or clouds of points),
- Quick Surface Reconstruction (QSR) from the digitized data.
- Create a mesh and extract characteristic curves to create surfaces using point cloud data

Course content

Module I: Introduction to Reverse Engineering

2 (hrs)

Historical Background & Industrial Evolution, Reverse Engineering in Modern Industries, Motivation and Challenge, Analysis and Verification, Applications of Reverse Engineering & 3D scanning.

Practice :1 Generate a Model from a Product

Module II: Processing the Point data & Creating Tessellated Mesh

2 (hrs)

Stages in the Process, Introduction to Digitized shape editor, Importing the Point data, editing the cloud, Creating & Correcting the mesh, editing the mesh, creating tessellated mesh

Practice:2 Cloud Point Generation

Practice :3 Mesh Generation from Cloud Point data

Module III: Curve Creation & Processing

2 (hrs)

Stages in the Process, creating and editing scans, creating curves, Additional tools, Introduction to quick surface reconstruction, creating scans by segmentation, processing curves

Practice : 4 Curve Generation

Module IV: Creating Surface

2 (hrs)

Stages in the Process, creating surface, using automatic processes, checking deviations

Practice :5 Surface Generation & Optimization

Module V : Additive Manufacturing

2 (hrs)

Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology, Classification – Stereo lithography Apparatus (SLA)- Principle, process, advantages –Fused Deposition Modeling – Principle, process, advantages. Selective Laser Sintering – Principle, Process, advantages, Three Dimensional Printing – Principle, process, advantages - Laser Engineered Net Shaping (LENS)

Module VI : Delmia Additive Part Preparation Essentials

Preparing Infrastructure, Preparing Parts, Managing Rules, Generating the Slicing Path,

Practice : 6 Prepare a part for 3D Printing

Module VII: Master Project

2 (hrs)

Reverse Engineering of the Car Fender and 3D Printing

Text Books:

1. DassaultSystemes Companion Learning Space : Catia Reverse Engineering Essentials

Reference Books:

Product Life Cycle Management

Code	Course Title	Credit	T-P-PJ
CUTM1078	Product Life Cycle Management	2	0-1-1

Objective

- Use ENOVIA Engineering BOM Management
- Create parts and specifications
- Create Change Orders

Course outcomes

- Manage the engineering change process
- Raise Change Requests for the parts and specifications
- Generate various types of reports.

Course content

Module I: Introduction

3 (hrs)

Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of PLM, Widespread Impact of PLM, Focus and Application

Module II: ENOVIA

2(hrs)

Getting Started, Working with Parts, Creating & Attaching Specifications

Module III: EBOM

2 (hrs)

Creating Engineering Bill of Materials

Module IV: ECM

2 (hrs)

Releasing parts using Enterprise Change Management, Reports

Module V: Collaborative Life Cycle Management

4 (hrs)

Getting Started, Creating a Product Structure, Managing the Structure

Module VI: 3D Tolerancing & Annotation 3 (hrs)

Dimensions & Tolerances, Assembly Specifications, Validate Annotations, Generate Drawings, Review through 3D Play.

Module VII: Master Project

3(hrs)

Master Project on ENOVIA EBOM Management

Text Books:

1. DassaultSystemes Companion Learning Space- ENOVIA EBOM Management
2. DassaultSystemes Companion Learning Space- Collaborative Lifecycle Management
3. DassaultSystemes Companion Learning Space- 3D Tolerancing& Annotation

Manufacturing Process-Process Planning and Heat Treatment

Code	Course Title	Credit	T-P-PJ
CUTM1079	Manufacturing Process-Process Planning and Heat Treatment	3	2-1-0

Objective

- To Understand the Importance of Materials, Manufacturing Processes, Process Planning & Design in Product Manufacturing

Course outcomes

- Select Engineering Material for a Required Purpose
- Identify Various Manufacturing Processes
- Implement Modern Approaches to Process Planning, Product Design & Development

Course content

Module I: Classification of Materials(5hrs)

Common Engineering Materials; Crystal Geometry (Crystal Types, Crystal Structures, Crystal Defects, Recrystallization, Crystal Growth, Methods of Determining Crystal Structure, Scanning Electron Microscope); **Mechanical Properties, Mechanical Tests and Deformation of Materials** (Mechanism of Strengthening in Metals. Grain Size and its relation to Mechanical Properties, Review and Brief Discussion on Stress Strain Diagram of Steel and the Parameters for Ductility, Percentage of Elongation, Toughness, Strain Hardening, and Tensile Strength, etc., Fracture Toughness and Crack Growth Measurement, Failure Analysis), Fatigue and Creep Testing, Testing for Residual Stresses.

Module II: Tool Materials (4hrs)

Engineering Alloys (Selection and Specification of Carbon and Alloy Steels for General Engineering Purpose, Specification of Materials as per Various Standards- IS, BS, AISI, APS etc.); **Steels** (Case Hardening Steels, Cold Work Tool Steels, Hot Work Tool Steels, High Speed Tool Steels; **Modern Cutting Tool Materials** (Carbide, Coated carbides, Ceramics, CBN, Diamond, SiALON, Impregnated tools); **Introduction to Plastics** (Properties of Plastics, Thermo Plastics-Thermo Setting Plastics, Methods of Processing of Plastics); **Cast Iron** (Grey

Iron Casting IS: 210 SG Cast Iron IS: 865, Malleable Iron Castings IS: 2108 and IS: 2640); **Non-Ferrous Alloys** (Zn & Al Alloys); **Powder Metallurgy** (Methods for Production of Powders, Powder Metallurgy Steps).

Module III: Heat Treatment (4hrs)

Heat Treatment of Steel (Hardenability Concepts and its Role in Steel Specification, Hardening and Annealing of Tool Steels, Case Hardening and Local Hardening, Isothermal Transformation Diagrams, Austempering, Martempering and Isothermal Annealing for Tool Steels,. Major Defects in Metals or Alloys due to Faulty Heat Treatment, ION Nitrating, Vacuum Carburizing, Chemical Vapour Depositing); **Heat Treatment of Non-ferrous Materials** (Classification of Heat Treatment Processes for Aluminium Alloys, Heat Treatment of Wrought & Cast Aluminium Alloys).

Module IV: Manufacturing Processes(7 hrs)

Forming Processes (Cold & Hot Working, Rolling, Forging, Drawing, Bending & Extrusion); **Joining Processes** (Arc Welding, Gas Welding, Resistance Welding, Thermit Welding, TIG & MIG Welding, LBW, EBW, Adhesive Bonding, Soldering & Brazing,); **Casting Process**(Sand Casting, Die Casting, Investment Casting, Centrifugal Casting, Vacuum Casting, Plaster Mould Casting, Lost Foam Method, Continuous Casting); **Machining Processes** (Traditional-Turning, Milling, Drilling, Shaping, Grinding & Finishing, Non-Traditional- EDM. AJM, LBM etc.)

Practice:

1. Pattern & Mold Making in Sand Casting.
2. Butt Joint by using Oxy Acetylene Gas Welding.
3. Joining of Metal Sheets using Spot Welding.
4. Soldering & Brazing Practice.
5. TIG Welding of Stainless Steel
6. MIG Welding Technique and Applications
7. EDM working Principle and Process Parameters

Module V: Process Planning (5 hrs)

Process Planning (Concept, Manufacturing Planning, Process Design, Process Planning Activities, Process Sheet, Process Selection Parameters, Steps in Process Planning, Computer Aided Process Planning)

Practice

8. Process Planning & Simulation in DELMIA

Module VI: Computer Aided Production Management(7 hrs)

Role of Computer in Product Design and Management(Computer in Manufacturing & Design Process, Creation of Manufacturing Data Base, Computer Integrated Manufacturing, Communication Network, Production Flow Analysis, Group Technology); **Process & Product Design** (Degree of Accuracy, Finish and Tolerance, Capability Studies, Basic Product Design Rules for Casting, Forging, Machining, Sheet Metal and Welding.Physical Properties of Engineering Materials and their Importance on Products, Selection of Plastics, Rubber, Composites and Ceramics for Product Design)

9. Casting Design & Analysis using CATIA

10. Forging Design & Analysis using CATIA

Module VII: Industrial Ergonomics (3 hrs)

Man/Machine Considerations, Ease of Maintenance.Ergonomic Considerations in Product Design, Anthropometry, Design of Controls& Displays, Man/Machine Information Exchange, Process Sheet Detail and Their Importance, Advanced Techniques for Higher Productivity, Just-in-Time and Kanban System, **Modern Approaches to Product Design**(Concurrent Design, Quality Function Development, Rapid Prototyping)

Text Books:

1. Balasubramaniam R.,”Callister's Materials Science and Engineering”, 2nd Edition, Wiley.
2. Rao P.N., “Manufacturing Technology”, Volume 1, Mc-Graw Hill.
3. Chitale A.K.,Gupta R.C.”Product Design & Manufacturing”, 6th Edition, PHI Learning.

Reference Books:

1. Campbell F., “Elements of Metallurgy and Engineering Alloys”, ASM International.

2. Kesavan R., Elanchezhian C., Vijaya Ramnath B., “Process Planning & Cost Estimation”, New Age International.

Material in Product Design and Development

Code	Course Title	Credit	T-P-PJ
CUTM1080	Material in Product Design and Development	2	1-1-0

Objective

- Identify and select suitable material for product design.
- Understanding various material selection for manufacturing processes
- Application of smart materials, shape memory metals, Nano materials.
- Understand the concept of bio materials.
- Understand concept of smart and hybrid materials.

Course outcomes

- Understand the concept of elastic and plastic deformation.
- Identify and select suitable material for product design.
- Understand manufacturing characteristics of materials
- Understanding various manufacturing process.
- Understanding Application of smart materials, shape memory metal, Nano material.
- Understood the concept of smart and hybrid materials.

Course content

Module I: Classification of materials

(2 hrs)

Introduction to material classification, Steel, Stainless Steel & Types, HSLA Steels, Dual Phase Steels, Tool and Die Steels. Nonferrous Alloys- Aluminum & Alloys, Copper & Alloys, Zinc & alloys, Nickel & Alloys , Magnesium Alloys, Titanium Alloys, Super Alloys.

Module II : Material behavior

(10 hrs)

Elastic and Plastic deformation- Mechanism of Plastic deformation-yield stress and shear strength-Perfect and Real crystals- Effect of strain rate and temperature on plastic behavior- Super plasticity- Deformation of non crystalline materials

Expt-1 - To study Creep transient for different materials using virtual lab.

Expt-2: To study the effect of obstacle distance on the creep transient behavior of materials using virtual lab.

Expt-3: To evaluate modulus of elasticity of materials using nano indentation using virtual lab.

Expt-4: To find indent depth on materials using nano indentation.

Expt- 5-To find out plastic work done during nano indentation.

Module III: Material Selection for Process modeling and product design (4 hrs)

Material selection- Cost and service requirement- Recycling- Selection of material for mechanical properties- Strength, toughness and fatigue- Material selection for durability and surface wear and Corrosion resistance- Functional relation between materials and processing- Manufacturing characteristics of metals- Material selection using Ashby charts and other aids material selection for aero, auto and nuclear application- Case studies in material selection.

Expt-6- Practice on material selection using Ashby charts

Expt-7- Case study on material selection for bicycle frame using material chart.

Expt-8- Case study on material selection for car brake using material chart.

Expt-9- Case study on material selection for Knee implant.

Module III: Shape memory Alloys and Nano materials (3 hrs)

Introduction to Smart materials and its applications, Shape memory metals and its applications, Introduction to Nano-materials, CNTs Production Process and Uses, Fibers Production and Uses. Introduction to bio materials.

Expt-10- To imagine the cytoskeleton of cells proliferation on bio materials Surface.

Module IV: Polymer Composite materials (3 hrs)

Polymer- Thermosetting, Thermoplastics; Elastomers- Natural & Synthetic Rubber; Composites Material- Classification Based on Matrix and Topology, Particle Reinforced Composites, Fiber Reinforced Composites. Structural Composites, Constituents of Composites, MMC, PMC and FRP. Ceramic Composites, Geo synthetics, Pre-stressed Hollow Concrete Panel, Carbon Composites Fullerenes, Bucky Ball Structures, Grapheme.

Module V: Prefab materials (2 Hrs)

Prefabricated Materials: Types and Applications, Autoclaved Aerated Concrete (AAC), Cellular Lightweight Concrete (CLC).

Module VI: Developments in material processing (3 hrs)

Introduction to Microelectro mechanical Systems (MEMS) and its applications, Micro fabrication technologies- Tool for micro fabrication- Diamond and high speed machining- LIGA micro fabrication process- Multilayer X-ray lithography-

**Module VII: Introduction to smart /intelligent and Hybrid materials
hours)**

Overview of Smart / Intelligent Materials, Primitive Functions of Intelligent materials, Intelligence Inherent in Materials, Actuator Materials, Sensing Technologies, Micro-sensors, Intelligent Systems, Hybrid Smart Materials, Passive Sensory Smart Structures, Reactive actuators based smart structures, Active Sensing and Reactive Smart Structures, Smart Skins

Practice :

1. Virtual lab by IIT kanpur.

Text Books:

1. Materials Science and Engineering, W D Callister, 2014, 2nd Edition, Wiley India Private Limited, India.

Reference Books:

1. Material Science and Engineering, V Raghavan, 2013, 5th Edition, PHI publication, India.
2. Material Science and Engineering, S Chawla, 2011, 1st Edition, Dhanpat Rai & co Private Ltd., India.

Computer Aided Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1081	Computer Aided Engineering	3	0-2-1

Objective

- This course will help student to use structural scenario, thermal scenario and to do Structural analysis and Thermal analysis of various problems.

Course outcomes

- Create complete finite element models
- Submit and monitor analysis jobs
- View and evaluate simulation results

Course content

Module I: Material and Selection Properties

(6 Hrs)

Property Module, Material Definitions, Linear Elasticity, Large Strain Elasticity, Metal Plasticity, Material Calibration, Material Databases, Section Properties

Practice:

1. Analysis of crack in pressure vessel
2. Cable stayed bridge simulation

Module II: Element Selection Criteria

(6 Hrs)

Solid Element Selection, Structural vs. Continuum Elements, Modeling Bending Using Continuum Elements, Stress Concentrations

Practice:

3. Stress analysis of rail road with wheel.
4. Bike frame structural analysis

Module III: Meshing

(8 Hrs)

Mesh Module, Mesh Elements Mesh Generation Workflow, Local Fine-tuning Quality Checks, Mesh Compatibility, Mesh Convergence, Dependent and Independent Part Instances

Practice:

5. Airplane bracket structural analysis
6. Structural analysis of wind turbine blade

Module IV: Boundary Condition

(6 Hrs)

Step Module, Analysis Steps and Procedures, Output Requests, Output Files

Load Module, Loads and Boundary Conditions, Initial Conditions

Practice:

7. Generative structural analysis applied for design optimization
8. Stress analysis on a backhoe

Module V: Contact

(6 Hrs)

Mechanical Contact Properties, Contact Domain, Contact Formulation and Controls, Handling

Initial Over closures, Contact Output

Practice:

9. Analysis of Economizer.
10. Analysis of Screw Jack

Module VI: Analysis Procedures

(6 Hrs)

Model and Analysis Steps, Analysis Procedures, The static, general analysis procedure, Finding a converged solution, The Static, Linear Perturbation procedure, Buckle procedure, Frequency Procedure, The dynamic, explicit analysis procedure, Stability Limit, Analysis Continuation Techniques

Practice:

11. Steady state analysis of a composite bar.

Module VII: Thermal Analysis

(8 Hrs)

Steady State Heat Transfer, Transient Heat Transfer, Thermal Interfaces, Thermal Stress Analysis

Practice:

12. Temperature distribution in radiators used in automobiles
13. Oven radiation simulation

14. Steady state thermal analysis of tungsten coil with internal heat generation
15. Thermal analysis of disc brake

Projects

1. Thermal Analysis of PV Solar Pannel
2. Structural and thermal analysis of Green House
3. Structural analysis of Quadcopter.
4. Structural analysis of landing gear.
5. Numerical study on different types of fins.
6. Overhead tank failure analysis.
7. Analysis of Rocket Nozzle
8. Analysis of BAJA SAE
9. Structural and Thermal Analysis of Downdraft Gasifier
10. Structural and Thermal Analysis of Stirling Engine
11. Structural Analysis of Hydraulic Press
12. Structural Analysis of Elevating Conveyor

1. SIMULIA: 3DS Learning Space

Source of reference: 3DS peer learning

Quality Assurance

Code	Course Title	Credit	T-P-PJ
CUTM1082	Quality Assurance	2	1-1-0

Objective

- To introduce the concept of SQC
- To understand Design of Experiments concept and ANOVA test
- To learn about the different plots in quality control

Course outcomes

- Understand quality function deployment principles
- Understand concept of Failure mode affect analysis and apply it in product design process.
- Carry out statistical analysis of experiment, ANOVA ratio test and apply advanced DOE method for product testing.
- Understand statistical process control techniques and reliability concepts.
- Understand SIX SIGMA process and lean production concept.
- Prepare Pareto diagrams, cause and effect diagrams, matrix plots and 3-D plots.

Course content

Module I: Design for Quality (1hr)

Quality Function Deployment, Objectives and functions, Design process, controlling factors in design process.

Module II: Failure Mode Effect Analysis (FMEA) (3hrs)

Basic methods: Refining geometry and layout, general process of product embodiment, embodiment checklists, FMEA method.

Practice 1: Performing a FMEA of a Wooden Chair.

Module III: Design of Experiments (DOE) (4hrs)

Design of Experiments: Basic methods, two factorial experiments, orthogonality, Base design method, higher factorial experiments.

Practice 2: Design of Experiments for comfort conditions in a room using Minitab.

Module IV: Analysis of Variance (ANOVA) (4hrs)

Statistical analysis of experiments, degree of freedom, correlation coefficient, ANOVA test, residual plots.

Practice 3: Performing ANOVA to know the significance of influencing parameters for comfort conditions in a room using Minitab.

Module V: Statistical Process Control (SPC) (2hrs)

Frequency distributions and histograms, Pareto diagrams, Probability distribution, Matrix plots and 3D plots.

Module VI: Reliability (4hrs)

Reliability – Survival and Failure, series and parallel systems, mean time between failure, mean time to repair.

Practice 4: Determining the reliability of series and parallel systems.

Module VII: Design of Six Sigma (4hrs)

Basics of six sigma, project selection for six sigma, six sigma problem solving, six sigma and lean production.

Practice 5: Determining the six sigma limits during machining a cylindrical work piece on CNC lathe.

Text Books:

1. Stastical Quality Control, M. Mahajan, Khanna Publisher.
2. Reliability Engineering, L.S. Srinath, Affiliated East West Press.

Reference Books:

1. Robust Design for Quality Engineering and Six Sigma, Sung H. Park, World Scientific Publisher.

Applied Ergonomics

Code	Course Title	Credit	T-P-PJ
CUTM1083	Applied Ergonomics	2	0-1-1

Objective

- Use the Human Ergonomics software to create an accurate simulation of a human entity and its work environment to ensure a natural operation

Course outcomes

- Create, manipulate, and analyze how the manikins interact with a product and its environment

Course content

Module I: Introduction

4(hrs)

Introduction to Human Factors, Anthropometry and Workplace Design, Biomechanics of Work, Work Physiology, Stress and Workload, Introduction to Virtual Ergonomics Solution

Module II: Preparing Work Environment 2 (hrs)

Workbenches & Tool bars, Setting Options, Exploring the 3D Environment

Module III: Creating Manikin & Workspace 2 (hrs)

Creating Workspace, Setting Manikin Properties, Manipulating Manikin, interacting with workspace, setting manikin constraints, creating catalogs, performing clash analysis

Module IV: Human Measurements 2(hrs)

Workbenches & Tool bars, Human measurements editor, summing up using the editor

Module V: Human Activity Analysis 2 (hrs)

Workbenches & Tool bars, Human Activity Analysis, summing up the analysis

Module VI: Human Posture Analysis 2 (hrs)

Workbenches & Tool bars, Human Posture Analysis, summing up the analysis

Module VII: Human Task Simulation 4 (hrs)

Creating Process Activity, Creating a Manikin Activity, Inserting, resources, motion analysis, Human task simulation, Master project on Ergonomics

Text Books:

1. DassaultSystemes Companion Learning Space- Virtual Ergonomics Simulation

Reference Books:

Computer Aided Manufacturing

Code	Course Title	Credit	T-P-PJ
CUTM1084	Computer aided manufacturing	2	0-2-0

Objective

- Create 2-D geometry and 3-D models using various Commands in Master CAM software.
- Create part programs for CNC machining, Contour Concept of cutter compensation using G codes and M codes.
- Create tool path and program for 2-D Lathe operations
- Create tool path and program for 2-D milling, drill tool path, circular milling and facing operation.

Course outcomes

- Create 2-D Geometry and 3-D models using various Command in Master CAM software.
- Identify G-Codes and M-codes for programming
- Create 2-D tool path and program for 2-D facing , turning , drilling in lathe.
- Create 2-D tool path and program for circular milling and facing operations.
- Simulation of CNC programs using Master CAM software.

Course content

Module I: Introduction to CAM and Identification of toolbars in

Master CAM software

(2 hrs)

Introduction to Computer Aided manufacturing and Master CAM. Identification of sketch toolbars like profile, operations toolbars and using the toolbars to generate the sketch.

Expt1: Create a 2D sketch using sketch tool bar and operations tool bar

Module II- 3-D models using various Commands in Master CAM software (2 Hrs)

Draw 3-D profiles using various sketch based features like extrude, revolve, Boolean features, rib, slot, groove etc.

Expt-2- Create 3 D model using various commands

Module III : Identification and use of G-code and M code in programming for lathe

(4 hrs)

Functions of G-Code and M-code in lathe machine .Selection and use of G-codes and M codes. Measure tool and work data offset data-X-Z offsets for lathes. Work offsets, length offsets and tool radius for machining center for creating part programming. Cutter compensation.

Expt-3- Create work offset for CNC milling machine using Master CAM.

Expt-4- Create Work off set for CNC lathe using master CAM

Module IV: Create 2D tool path for lathe operations (6hrs)

2D Tool path generation. Concepts of Machining: CNC control basics, & coordinate Systems, Selection of tool, tool parameters, Compensations Program Manager / Creation of 2D tool path for 2D turning , facing ,drilling operations

Expt-5- Create 2D tool path for facing and turning operation in lathe.

Expt-6- Create 2D tool path for a drilling operation in lathe.

Expt-7- Create 2D tool path for a given job in lathe.

Module V: Create 2D tool path for milling operations (6 hrs)

Selection of appropriate tool path for milling operation. Proper machine selection, job setting, tool selection. Selection of appropriate machining tolerance, machining parameters like speed, feed and depth of cut. CNC Programming 2-D milling, circular milling operations.

Expt-8- Create 2D tool path for facing and profile cutting.

Expt-9- Create 2d tool path for circular pocketing.

Expt-10- Create 2D tool path for circular counterering.

Module VI: Post processing (3 hrs)

Post Processing: Generating NC / NC Files / Editing NC Files / Simulation of tool path.

Expt -11 Create a 2D tool path for a job in CNC milling machine and simulate it.

Expt-12- Create 2D tool path for a job in CNC lathe machine and simulate it.

Module : VII: Transferring Part programming into CNC machine

CNC interface with master CAM ,CNC controls and editing on a machine

Expt-12 : Transfer master CAM program to the CNC machine and perform dry run for a job.

Reference Books:

1. Groover, M.D and simmers ,E.W, CAD/CAM :Computer aided design and Manufacturing ,Person Education India.
2. Manuals of CAD/CAM software package on CAM module and CNC machine.

CNC Programming and CNC Machining

Code	Course Title	Credit	T-P-PJ
CUTM1085	CNC Programming and CNC Machining	2	0-2-0

Objective

- Evaluate manufacturing assignment based on critical thinking and problem solving skills. Become a good communicator and effective team member.
- Practice writing complex “G” code programs for CNC turning centers that meet the part specification
- Interpret and demonstrate complex “G” code programs for CNC milling centers that meet the part specification
- Prepare “G: code programs to perform secondary operations including tapping, countersinking, counter boring, and threading.
- Describe and illustrate common problems with tooling and fixtures in CNC programming and machining.

Course outcomes

- Explain applications and advantages of CNC machines and technology
- Demonstrate and explain various CNC control Calculate technological data for CNC machining
- Understand the importance and use of PPE’s
- Prepare and understand line program for various profiles Identify and set parameters for various simulators
- Prepare programs,demonstrate, simulate and operate CNC lathe machines for various machining operations
- Prepare programs,demonstrate, simulate and operate CNC milling machines for various machining operations
- Define and explain Modern CNC systems and explain its importance in manufacturing

Course content

Module I: introduction to CNC technology & programming(3hrs)

Introduction to CNC technology – CNC machines controls. History & development of CNC

technology. Conventional Vs. non-conventional machine tool. Numerical control on CNC machine tools CNC control and CNC Control and types of CNC control Calculation of technological data for CNC machining. CNC clamping system

Expt1: Identification of different parts of CNC lathe including data input

Expt2: Identification of different parts of CNC mill including data input

Module II: Drawing interpretation(3hrs)

Drawing interpretation practice, identifying feature from sketch and operation from feature

Expt3: Practice on CNC controller using on-screen simulation for generating different profile

Module III: CNC programming (4hrs)

Introduction to CNC programming Introduction and demonstration of line programs CNC programming on lathe & milling machine using iso codes into the CNC simulator. CNC programming for lathe and milling machines using different machining cycles into the CNC simulator. Procedures Associated with part programming, Cutting process parameter selection, Process planning issues and path planning, G & M Codes, Interpolations, Canned Cycles and Subprograms.

Expt4: Writing simple code and test on controller for CNC lathe

Expt5: Writing simple code and test on controller for CNC mill

Expt6: programming canned cycles for simple profile

Module IV: Program generation for CNC milling and turning(3hrs)

Tool compensations Exposure for programming and simulator of FANUC, SINUMERIC Programming exercise.

Expt 7: Machining of programmed exercise on CNC lathe machine.

Expt 8: Machining of programmed exercise on CNC milling machine.

Module V: CNC Turning (4hrs)

Plan and optimize programs for CNC turning operations. Calculate parameters like speed feed etc. and set a references for the various operations. Prepare operation and operation sequence for the

lathe operations like turning, grooving etc. Prepare & set CNC lathe operations and test run programmed Execute program and inspect simple geometrical forms / standard parts Use of various PPE's on CNC lathe machine

Expt 9-11: Programming for complex shape cylindrical objects with parameter selection, machining. (at least 3 exercises)

Module VI: CNC Milling(4hrs)

Plan and optimize programs for CNC Milling operations. Calculate parameters like speed feed, depth of cut etc. and set a references for the various operations. Various methods of work process like edge finding block center etc. Prepare & set CNC Milling operations and test run programmed. Execute program and inspect simple geometrical forms / standard parts. Use of various PPE's on CNC milling machine

Expt 12-14: Programming for complex shape prismatic objects with parameter selection, machining. (at least 3 exercises)

Module VII: Modern CNC systems (4hrs)

Introduction to advanced CNC systems: Computer Aided Part Programming (CAPP), it's application using Solidworks/MasterCAM. comparison of manual part programming and CAPP for a simple component, Automatic Tool Changer, Automatic Pallet Control, Automatic Storage & Retrieval Systems.

Expt 15: comparison of manual part programming and CAPP for a simple component

Design of Tools, Jigs and Fixtures

Code	Course Title	Credit	T-P-PJ
CUTM1086	Design of Tools, Jigs and Fixtures	3	2-1-0

Objective

- To learn basic concepts, functions and design principles of Jigs, Fixtures and Dies
- To know the importance of work piece location & clamping

Course outcomes

- Able to Understand and Analyse customers need
- Able discuss and finalise product needs
- Conceive the tool design parameters
- Design against standard and parameters
- Test against specifications and standards
- Develop prototype / simulation
- Interpret of output and confirming to specifications
- Communicate with manufacturing line
- Take remedial action if required

Course content

Module I: Locating Elements (3hrs)

Introduction, Jigs (Production Devices), Locating Principle, Locating methods and devices

Practice 1: Fabrication of a V – Locator for locating a cylindrical work piece.

Module II: Clamping Devices (3hrs)

Introduction, Pneumatics and hydraulic actuation clamping, Analysis of clamping force

Practice 2: Estimation of clamping force during clamping of a cylindrical work piece with a V-Locator.

Module III: Design of Jigs

(6hrs)

Introduction, drill bushes, elements of jig, construction, material for jig elements, different types of jigs

Practice 3: Designing of a Plate Jig.

Practice 4: Designing of a Swinging Leaf Jig.

Module IV: Drill Jigs

(3hrs)

Automatic drill jig, rack and pinion indexing device, Air operated drilling jig component, group jigs and fixtures, chip control, economic justification for jigs and fixtures

Practice 5: Study of Automated Jigs.

Module V: Design of fixtures

(6hrs)

Introduction, Design principles of fixtures, types of fixture, general principles of boring fixtures, classification of boring fixture, lathe fixture, broaching fixture, Milling fixture, Grinding fixture

Practice 6: Designing a Lathe Fixture.

Practice 7: Designing a Milling Fixture.

Module VI: Design of Dies for Sheet Metal Work

(5hrs)

Introduction, Types of dies, clearance and tolerance of die opening and punch, force, power, energy in shearing, strip layouts, economical stock utilization

Practice 8: Designing a progressive die for making of washer

Module VII: Design of Drawing and Forming Dies

(6hrs)

Theory of drawing, blank development, strain factor, calculation of force, construction of drawing and drawing dies, Modern Metal forming techniques

Practice 9: Designing a Forging die for making a gear blank

Practice 10: Designing a drawing die for making a circular cross-sectional wire.

Text Books:

1. Joshi, P H, Jigs & Fixtures, 2010, 3rd Edition, McGraw Hill.

2. Nagpal, G R, Tool Engineering & Design, 2000, Khanna Publishers.

Advanced Metrology

Course Code	Course Title	Credit	T-P-PJ
CUTM1087	Advanced Metrology	2	1-1-0

Course Objective

- To Make Students Familiar with the Measuring Systems, and the Standard of Measurements. Learns about Basic Measurement Devices.
- Understanding the Basic Measurement Systems in the Real Time Engineering Applications.
- Enables Students to Work in Quality Control and Quality Assurances Divisions Industries.

Course Outcomes

- Selecting Suitable Measuring Instruments for Basic and Typical Applications in the Industries.
- Analyze Measurement Requirement.
- Can Choose Transducer & Sensors for Products.

Course Outline

Module: I Introduction to Metrology

(2Hours)

Introduction to Metrology; Importance and Need for Measurements and Metrology; Need for Inspection; Precision & Accuracy; Errors in Measurement.

Practice-1: Introduction to Metrology laboratory. Steel Rule, Tape, Right Angle Protractor, Surface Plate

Module: II Standards of Measurement (4 Hours)

Verniers and micrometers least count calculation, Uses of Slide callipers, Height Gauge, Micrometer and 3 point bore micrometer

Practice-2. Vernier Caliper inside, outside, depth measurement and Height Gauge

Practice-3. Micrometers, Outside Inside Micrometer, Depth Micrometer

Practice-4 Three point Bore Micrometer

Module: III Slip Gauges (2 Hours)

Types of Slip Gauge blocks and uses

Practice 5- Calibration of measuring Instruments using slip gauge blocks

Module: IV Limits, Fits and Tolerances (3 Hours)

Limits, Fits, Tolerances: Definitions, Types of Fits (Clearance, Transition and Interference) Allowances, Hole and Shaft basis systems with Numerical

Module: V Angle Measurement (3 Hours)

Spirit Level, Sine Bar and Bevel Protractor. Least count determination and applications

Practice-6. Sine Bar/Spirit Level Measurement of Angles on a Surface plate

Practice 7: Angle measurement by Bevel Protractor

Module: VI Gauge Design (2 Hours)

Design of Go and NO GO gauges, Ring gauge and Plug Gauge applications

Practice-8. Study and use Gauges-Filler, Radius, Thread, Wire, Snap, Go-NoGo gauge

Module: VII Measurement Machines (6 Hours)

Tool makers Microscope: Principle and applications, Measuring Machines: Coordinate Measuring Machine, Talysurf, Profile Projector

Practice-9. Measurement of template using Profile Projector

Practice 10: Measurement of Profile by Tool makers microscope

Practice 11: Measurement of surface roughness using Talysurf

Text books:

Thermodynamics

Code	Course Title	Credit	T-P-PJ
CUTM1088	Thermodynamics	3	2-1-0

Objective

- To know the laws of thermodynamics and conditions for energy transformation
- To get familiar with different thermodynamic properties of pure substances

Course outcomes

- Utilize the concepts of work and energy to evaluate control volumes as well as closed systems
- Students will be able to do energy analysis and determine efficiency of various thermal devices

Course content

Module I: Basic Concepts of Thermodynamics 4(hrs)

System, Surroundings, Universe, State, Thermodynamic Properties, Process, Types of Process, Reversible and Irreversible process, Quasi-static Process, Cycle, Point and path functions, Thermodynamic Equilibrium, Ideal gas, Ideal gas equation

Module II: Zeroth Law of Thermodynamics 4(hrs)

Zeroth Law of Thermodynamics, Temperature, Measurement of Temperature, Temperature Measuring Instruments, Relationship between Temperature Scales

Practice:

Temperature Measurement by using Thermocouple, Thermistors and Resistance Temperature Detector (RTD)

Module III: Work Transfer and Heat Transfer 5(hrs) Work Transfer, Sign Convention of Work, PdV Work for Various Quasistatic Processes, Heat Transfer, Different Modes of Heat Transfer

Practice:

- Simulation of Heat Transfer in Conduction, Convection and Radiation using Finite Element Method in Simulia (Plane Wall, Fin, Metal Rod)
- Thermal Stress Analysis of IC Engine Piston using Simulia
- Thermal Analysis of Intake Manifold of Engine using Simulia

Module IV: First Law of Thermodynamics6(hrs)

First Law of Thermodynamics Applied to Closed System, Energy, PMM1, Enthalpy, Specific Heat at Constant Volume and Constant Pressure, First Law of Thermodynamics Applied to Open System, Control Volume, Mass Balance and Energy Balance, Nozzle, Diffuser, Turbine, Compressor, Throttling Device, Heat Exchanger

Practice:

- Thermal Analysis of Nozzle, Diffuser, Turbine, Compressor, Boiler, Heat exchanger using Simulia

Module V: Second Law of Thermodynamics5(hrs)

Kelvin Planks statement, Clausius Statement, PMM2, Working of Heat Engine, Refrigerator and Heat Pump, Carnot Cycle & Carnot Theorem

Practice:

- Working of Refrigerator and Heat Engine

Module VI: Entropy4(hrs)

Introduction to Entropy, Principle of Increase of Entropy, Clausius Inequality, Change in Entropy in Different Processes

Practice:

- Entropy Change of Metal Bar with Temperature Gradient using Simulia

Module VII: Properties of Pure Substances 5(hrs)

Introduction to Pure Substance, Phase Change Processes of Pure Substances, T-V, P-V, P-T and H-S Diagram for Steam, Dryness Fraction of Steam, Different Types of Steam. Introduction to

Steam Tables: Specific Volume, Pressure, Temperature, Enthalpy and Entropy

Practice:

- Conversion of water to steam
- Determination of properties of steam from Mollier Chart

Text Books:

1. P.K. Nag, "Engineering Thermodynamics", Tata Mcgraw-Hill Publishing Company Limited
2. Y.A Cengel, M. A Boles, "Thermodynamics an Engineering Approach", Tata Mcgraw-Hill Publishing Company Limited

Fluid Mechanics with Finite Volume Method

Code	Course Title	(Credit)	T-P-PJ
CUTM1089	Fluid Mechanics with Finite Volume Method	3	2-1-0

Objective

- To learn To learn fundamentals of computational methods like FVM for solving linear and non-linear partial differential equations related to fluid dynamics
- To emphasizes the basic underlying fluid mechanical principles governing energy transfer in a fluid flow systems with their performances in different field of engineering applications

Course outcomes

- After completion of the course, the students will able to evaluate finite difference/volume schemes on model problems of computational fluid dynamics.
- Students will learn to develop steady state mechanical energy balance equation for fluid flow systems, estimate pressure drop in fluid flow systems

Course content

Module I: Introduction to Finite volume Method

(6 hrs)

Fundamentals of Finite volume methods, different types of finite volume grids, approximation of surface and volume integrals; interpolation methods, Review of governing equations, Classification of governing equations , Staggered and co-located formulation

Practice:

1. 2D mapped Mesh for rectangular pipe
2. 2D mapped Meshing for Aerofoil.

Module II: Grid generation

(6 hrs)

Grid generation, creating, updating and managing meshes, Steady diffusion equation on structured meshes, Unsteady diffusion equation on structured meshes, Linear system solvers, finite volume discretization of steady and unsteady diffusion equation, Finite volume discretization of convection-diffusion problem

Practice:

3. 3D structure mesh of Circular Cylinder
4. 3D unstructured mesh with primes layers for Aerofoil
5. 3D coarse/ medium/ fine sweep mesh for pipe

Module III: Incompressible flow field calculation with finite volume method (5 hrs)

Navier-stokes equation, Discretization of the Momentum Equation: Stream Function-Vorticity approach and Primitive variable approach, Staggered grid and Collocated grid solutions of Navier-stokes equation with finite volume method, boundary condition, Reynolds averaged Navier-Stokes equations.

Module IV: Fluid kinematics (2 hrs)

Types of flow, Continuity equation (in one, two & three dimension steady state fluid flow analysis with finite volume method, velocity and acceleration fields, streamline, streak line, path line, velocity potential function and stream function, Rotation and vorticity.

Module V: Fluid Dynamics with Finite volume method (4 hrs)

Lagrangian and Eulerian Approach, Euler's equation of motion along a stream line for ideal flow, Principle of conservation of energy with finite volume method, Integration of Euler's equation along a stream line, Bernoulli's equation

Practice:

6. Fluid Analysis of Bernoulli's equation: Flow in a contracting pipe through CFD simulation

Module VI: Flow through Pipes (5 hrs)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, Introduction Turbulence modeling through Finite volume method, Hagen Poiseuille Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe.

Practice:

7. Fluid Analysis of Laminar flow in 3D Circular Pipe through CFD simulation
8. CFD Simulation of the Water Flow Passing Through a Converging Pipe.
9. CFD Analysis to determine the frictional losses in the pipe.

Module VII: Flow Measurement (5 hrs)

Flow through small orifice meter, Mouthpiece, Velocity Measurement using Pitot tube, Prandtl

tube, Flow measurement in pipes-Flow, Venturi Meter, Flow rate Measurement in channel- Weir and Notches

Practice:

10. CFD Analysis of Fluid flow through Orifice meter
11. CFD Analysis of Fluid flow through adjustable channel
12. CFD Analysis of Fluid flow simulation through Venturi Meter

Text Books:

1. R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications, ninth edition

Reference Books:

2. P.N. Modi & S.N. Seth, Hydraulics & Fluid Mechanics, Rajsons Publications Pvt. Ltd, Twentieth Edition

Hydraulic Machinery

Code	Course Title	(Credit)	T-P-PJ
CUTM1090	Hydraulic Machinery	2	1-1-0

Objective

- To emphasize Principle of operation of hydraulic machines and their system design
- To familiarize their huge applications in different industries

Course outcomes

- After completion of the course, the students will have a strong foundation on the pertinent equations to engineering design of the machines for required applications.
- Students will learn to determine performance characteristics of fluid machinery by using various simulation tools

Course content

Module I: Principle of Operation of Hydraulic Machinery (2 hrs)

Introduction to hydraulic machines: Classification and operation principle, Euler equation for turbo machines: net head developed by pump and Turbines

Module II: Radial and Axial flow pumps (8 hrs)

Velocity triangle of pumps, effect of inlet swirl on velocity triangles, Constructional features of Centrifugal Pump, design aspect, working principle and efficiencies, work done by the impeller, priming, specific speed, NPSH, effect of swirl on the cavitations, working principle and design aspect of gear oil pump.

Practice:

1. Flow analysis of fluid of Centrifugal pump through Simulia software
2. Flow analysis of gear oil pump through Simulia software
3. Performance Characteristics of Centrifugal Pump through Virtual lab

Module III: Positive displacement Pumps (3 hrs)

Working principle of Reciprocating Pump, discharge, work done and power requirement, ideal indicator diagram, and slip, characteristic H-Q curve of positive displacement pump

Practice:

4. Performance Characteristics of Double Acting Reciprocating Pump through Virtual lab.

Module IV: Hydraulic Turbine: Impulse Turbine (6 hrs)

Classification, definitions of heads and efficiencies, Pelton Wheel - Construction and working principle, work done and hydraulic efficiency, design aspects.

Practice:

5. Simulation of Pelton Turbine through simulia software
6. Performance Characteristics of Pelton Turbine through Virtual lab.

Module V: Hydraulic Turbine: Reaction Turbine (6 hrs)

Reaction turbine (Francis, Kaplan) -Components, working principle, work done and efficiency, draft tube, specific speed, cavitations

Practice:

7. Performance Characteristics of Francis Turbine Simulia software.
8. Simulation of Kaplan turbine through Virtual lab.

Text Books:

1. R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications, ninth edition

Theory of Machines

Code	Course Title	(Credit)	T-P-PJ
CUTM1091	Theory of Machines	3	2-1-0

Objective

<ul style="list-style-type: none"> To cover the kinematics and dynamics of planar single degree freedom mechanisms To develop skills for designing and analyzing linkages, cams, gears and other mechanisms To address the underlying concepts, methods and application of different machines.

Course outcomes

<ul style="list-style-type: none"> To understand the implication of computed results in kinematics to improve design of a mechanism. To Interpret the simple given dynamic problems and solve them for positions, velocities and accelerations, etc

Course content

Module I: MECHANISMS

(03hrs)

Theory

Planar Mechanisms: Kinematic Link, Pair, Chain and Mechanism, Types of Links and Joints, Degree of Freedom, Grashof's Law for four bar Mechanism; Inversions of four bar Mechanism, Single Slider Crank Mechanism and Double Slider Crank Mechanism;

Practice

(01 hrs)

1. Position Analysis of Grashof and Non-Grashof four bar Mechanism.
2. Position Analysis of Slider Crank Mechanism, Scotch Yoke Mechanism and Elliptical Trammel

Module II: MOTION ANALYSIS(03hrs)

Theory

Instantaneous Centre of Rotation, Number and Types of Instantaneous Centers, Kennedy Theorem, Relative Velocity Method, Velocities and acceleration in Four Bar and Slider Crank Mechanism.

Practice

(02 hrs)

3. Instantaneous Center Method to Find Velocity of Various Mechanisms.

4. Velocity Analysis of Grashof and Non-Grashof Four Bar Mechanism
5. Velocity Analysis of Slider Crank Mechanism .
6. Acceleration Analysis of Slider Crank Mechanism

Module III: POWER TRANSMISSION SYSTEM(03hrs)

Theory

Classification and Basic Terminology, Fundamental Law of Gearing,

Gear trains: Simple, Compound, Reverted and Epi-Cyclic Gear Trains

Flat Belt, V Belt and Rope Drives and chain drives ,Length of open and cross belt drive, Power Transmitted by Belts and Ropes.

Practice

(02 hrs)

7.Experiment to calculate sensitiveness of Governor

8.Length of open and cross belt drive

Module IV: CAMS& GOVERNOR(03hrs)

Theory

Various Types of Cams and Followers; Displacement, Velocity and Acceleration Diagrams for Different Follower Motions; Nomenclature of Cam Profile;

Classification of Governors, Working principle of various type of centrifugal governors, Terminology related to Governor.

Practice

(03 hrs)

9. Construction of cam profile using Solid works software

10. Cam analysis of a Knife edge and roller follower

11.To calculate sensitiveness of Governor

Module V: GYROSCOPE (02hrs)

Theory

Gyroscopic Couple, Gyroscopic Effect on Naval Ships and Aeroplanes, Stability of four wheeler

Practice (01 hrs)

12. Determine Gyroscopic Couple on Motorized Gyroscope

Module VI: BALANCING(03hrs)

Theory

Static and Dynamic Balancing, Balancing of Several Masses Revolving in the Same Plane and Different Planes, Balancing of Reciprocating Mass

Practice (02 hrs)

13. Balancing of Several Masses Revolving in the Same and Different Planes

14. Balancing of Reciprocating masses by Simulation

Module VII: VIBRATION (03hrs)

Theory

Basic Concepts and Types of Vibration, Methods of Vibration Analysis, Free Undamped Longitudinal, Transverse and Torsional Vibrations, Damped Free Vibrations, Logarithmic Decrement, Vibration Isolation and Transmissibility;

Practice (02 hrs)

15. Determination of Critical or Whirling Speed of Shaft

16. Simple and Compound Pendulum

Text Books:

- 1.S. S. Rattan Theory of Machines,. Tata McGraw-Hill Education, 2014
2. Joseph E Shingley Theory of Machines and Mechanisms oxford publication

Reference Books:

2. Singh. S, Theory of Machines, Khanna publishers.
3. Norton R.L, Design of Machinery, McGraw-Hill.

Heat and Mass Transfer With FDM/FVM

Code	Course Title	Credit	T-P-PJ
CUTM1092	Heat and Mass Transfer With FDM/FVM	3	2-1-0

Objective

- To provide a good exposure for the students to various phenomena associated with fluid flow and different modes of heat & mass transfer

Course outcomes

- Students will be able to analyze and design various Equipment used in industry using principles of Heat Transfer

Course content

Module I: Conduction

(5 Hrs)

Fourier's Law of Conduction, General Heat Conduction Equation in Different Coordinate Systems (No Derivation), One Dimensional Steady State Conduction in Plane Wall, Composite Wall, One Dimensional Steady State Conduction in Composite Cylinders and Composite Spheres with Convective Atmosphere. Electrical Analogy, Conduction with Internal Heat Generation.

Practice

1. To find the thermal conductivity of a material by the two slabs guarded hot plate method.
2. To find heat transfer through composite wall using Simulia

Module II: Fins and Transient Conduction

(6 Hrs)

Overall Heat Transfer Coefficients, Critical Thickness of Insulation, Heat Transfer from Extended Surfaces, Effectiveness and Efficiency, Unsteady State Heat Conduction, Lumped Heat Capacity System and Lumped Capacitance Method.

Practice

3. To find the thermal resistance of the sample.
4. To find the thermal resistance of the sample using Simulia
5. To find the heat transfer in Transient Heat Conduction using Simulia

Module III: Convection

(9 Hrs)

Hydrodynamic and Thermal Boundary Layer, Principles and Governing Equations, Forced Convection: External Flow over a Flat Plate, Cylinder, Sphere and Non-Circular Ducts, Use of Empirical Relations, Internal Flow Through Pipe, Annular Spaces and Non-Circular Conduits, Natural Convection: Vertical, Horizontal, Inclined Surfaces.

Practice

6. To determine the overall heat transfer coefficient at the surface of a given vertical metal cylinder by the natural convection method.
7. To verify Newton's Law of Cooling of different materials and different liquids.
8. To determine heat transfer coefficient using Simulia
9. To find the temperature variation and heat transfer along cylinder in forced convection using Simulia
10. To find the temperature variation and heat transfer along solid cylinder in natural convection using Simulia

Module IV: Heat Transfer With Phase Change

(2 Hrs)

Film Wise and Drop Wise Condensation, Boiling Heat Transfer, Regimes of Boiling.

Module V: Heat Exchangers

(6 Hrs)

Types of Heat Exchangers, Heat Exchanger Analysis Types of Heat Exchangers, Heat Exchanger Analysis, LMTD, Overall Heat Transfer Coefficient, Heat Exchanger Effectiveness, NTU.

Practice

11. Determination of Effectiveness and Efficiency of Parallel Flow and Counter Flow Heat Exchanger.
12. CFD simulation of Heat Exchanger using Simulia

Module VI: Radiation

(8 Hrs)

Electromagnetic Spectrum, Black Body Emission, Emissive Power, Laws of Radiation, Nature of Black and Grey Bodies, Concepts, Radiation Shape Factor, Thermal Resistance and Electrical Analogy, Radiation Heat Transfer Between Two Surfaces, Reradiating Surface, Radiation Shield.

Practice

13. To find the emissivity of different material surface.
14. Verification of Stefan Boltzmann's Law using simulia

Module VII: Mass Transfer

(4 Hrs)

Introduction, Analogy between heat and mass transfer, Mass diffusion, Fick's law of diffusion, boundary conditions, Steady mass diffusion through a wall, Mass convection.

Text Books:

1. Mahesh M. Rathore, Engineering Heat Transfer , Jones & Bartlett Learning, 2011
2. YunusCengel, Heat And Mass Transfer: Fundamentals And Applications, McGraw-Hill Higher Education, 2014

Theories of Failure Using Finite Element Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1062	Theories of Failure Using Finite Element Analysis	4	2-2-0

Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on Finite Element Analysis concept applicable to Practical conditions.
- To educate the students on Failure Criterion which will be useful for designing Practical problems.
- To educate the students on using 3D Experience Tools for analysis of various mechanical structures and load transmitting elements.

Learning outcome

- Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.
- Students will be able to deploy 3D Experience Platform to develop design solutions.
- Students will be able to apply the Concept of Meshing and Failure Criteria to Practical Problems which will lead Economical and safe in Design Aspect.

Course content

Module I Introduction to Finite Element Analysis (FEA) and 3D Experience Platform - (4(T)+5(P)) (9 Hours)

Introduction to FEA: Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence; General Procedure of FEA.

Material failure Behaviour: Stress–Strain Diagrams for Ductile and Brittle Materials.

Equivalent stresses for varying orientations, Principal stresses, maximum shear stress, Mohr's circles.

Practice:

1. Introduction to 3D Experience Platform: About the Apps and their Applications from

Engineering Point of View.

2. Analysis of Steel Bridge – Simulation using 3D Experience Tool.

3. Tensile Test using Simulation 3D Experience Tool.

4. Stress Strain Curve of a Ductile Material (Mild Steel) using Universal Testing Machine

Module II Mesh Generation and Modeling of Truss Structure (1(T)+ 4(P) (5 Hours)

Mesh Generation and Methods of Meshing and Types of Meshing. Procedure for selecting the method of meshing and type of meshing. Importance and application of Stiffness Matrix for different types of elements and the procedure for getting the results.

Practice:

5. 3D Experience Simulia – Modelling and Meshing of Transmission line tower.

Module III Stresses and Deflection Criteria: (5(T)+ 4(P) (9 Hours)

Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

Stresses (No Derivation): Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination of Bending Stresses, Shear Stress Distribution for Different Sections.

Deflection: Equation of Elastic Curve, Direct Integration Method

Practice:

6. 3D Experience Simulia – Modelling and Finite Element Analysis of Framed Structure subjected Earthquake Loads.

Module IV: Theories of Failure: (2(T)+ 4(P) (6 Hours)

Theories of Failure: Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure In Post-Manufacturing Stage.

Practice:

7. 3D Experience Simulia: Bicycle Frame Structural Analysis

Module V: Torsion: (3(T)+ 4(P) (7 Hours)

Torsion: Torsion Equation, Design of Shafts, Power Transmitted by Shafts, Composite Shafts, Combined Bending and Torsion, Closed-Coiled Helical Springs, Spring Connected in Series and

Parallel.

Dynamic Analysis: Fundamentals of Vibration; Evaluation of Natural Frequencies and Mode Shapes (Eigen values and Eigenvectors); Non-linear Analysis, Fatigue Analysis. Structures Subjected to Blast Loads.

Practice:

8. Simulation: Static and Dynamic Analysis of Shaft

Module VI Pressure Vessels (1(T)+ 2(P)) (3 Hours)

Longitudinal and Hoop Stress in Thin-walled Pressure Vessels Subjected to Internal Pressure.

Practice:

9. Simulation: Crack Analysis of Thin walled Pressure Vessels.

Module VII Fatigue and Fracture: (3(T)+ 4(P)) (7 Hours)

Fatigue: Failure Under Cyclic Loading, Endurance Limit. S-N Curve, Stress Concentration, Goodman and Soderberg Criteria.

Fracture: Types of Failure, Brittle and Ductile Fracture, Basic Modes of Fracture. Griffith's Analysis, Crack Growth and Stress Intensity Factor.

10. Fatigue Analysis of Crankshaft of Two-Wheeler

Text Books:

1. Strength of Materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced Mechanics of Materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

2. Engineering Mechanics of Solids, Egor P. Popov, Pearson publication
3. Strength of Materials, R.K.Bansal, Laxmi Publications.

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1093	Optimization Techniques	2	0-2-0

Objective

- To Create an Engineering design methodology using a mathematical formulation of a design problem to support selection of the optimal design among alternatives

Learning outcome

- Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems
- Ability to go in research by applying optimization techniques in problems of Engineering and Technology
- Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course content

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Database Management Systems

Code	Course Title	Credit	T-P-PJ
CUTM1059	Database Management Systems	3	2-1-0

Objective

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database Modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential Properties of DBMS concepts such as: database security, integrity, concurrency
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Learning outcome

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data
- Improve the database design by normalization
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing

Course content

Module-1: DBMS Concepts [5 Hrs]

Data Abstraction - Data models and data independence. Instances and Schemas. Components of a DBMS and overall structure of a DBMS- Life Cycle of a DBMS application- Database terminology.

Module-2: Data Modeling [5Hrs]

Basic concepts- Types of data models- Conceptual, physical and logical database models- E-R data model and Object-oriented data model. Components of ER Model- ER Modeling symbols.

Entity and entity sets- Relations and relationship sets- E-R Diagrams- Reducing E-R Diagrams into tables.

Practice

Assume we have the following application that models soccer teams, the games they play, and the

players in each team. In the design, we want to capture the following:

- We have a set of teams, each team has an ID (unique identifier), name, main stadium, and to which city this team belongs.
- Each team has many players, and each player belongs to one team. Each player has a number (unique identifier), name, DoB, start year, and shirt number that he uses.
- Teams play matches, in each match there is a host team and a guest team. The match takes place in the stadium of the host team.
- For each match we need to keep track of the following:
 - The date on which the game is played
 - The final result of the match
 - The players participated in the match. For each player, how many goals he scored, whether or not he took yellow card, and whether or not he took red card.
 - During the match, one player may substitute another player. We want to capture this substitution and the time at which it took place.
 - Each match has exactly three referees. For each referee we have an ID (unique identifier), name, DoB, years of experience. One referee is the main referee and the other two are assistant referee.

Design an ER diagram to capture the above requirements. State any assumptions you have that affects your design (use the back of the page if needed). Make sure cardinalities and primary keys are clear.

Module-3: Relational DBMS Model [5 Hrs]

Basic concepts, Attributes and domains- Intention and extensions of a relation- concept of integrity and referential constraints- Relational Query Languages (Relational algebra and relational calculus (Tuple and domain relational calculus)).

Module-4: Relational Database Design [6 Hrs]

Notion of normalized relations- Normalization using Functional Dependency- First Normal form- Second Normal Form- Third Normal form- BCNF.

Practice

Perform NF on the given table

[CLICK HERE FOR TABLE](#)

Module-5: SQL [6 Hrs]

Structure of a SQL query- DDL and DML, TCL- SQL queries and sub queries- Tables, views and indexes.

Practice

To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

```
CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5) ,CNAME VARCHAR2(18) , BNAME  
VARCHAR2(18) , AMOUNT NUMBER(8,2) ,ADATE DATE);  
CREATE TABLE BRANCH(BNAME VARCHAR2(18),CITY VARCHAR2(18)); CREATE  
TABLE CUSTOMERS(CNAME VARCHAR2(19) ,CITY VARCHAR2(18));  
CREATE TABLE BORROW(LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME  
VARCHAR2(18), AMOUNT NUMBER (8,2));
```

(ii) Insert the data as shown below.

DEPOSIT

[CLICK HERE FOR TABLE](#)

BRANCH

[CLICK HERE FOR TABLE](#)

CUSTOMERS

[CLICK HERE FOR TABLE](#)

BORROW

[CLICK HERE FOR TABLE](#)

- (1) Describe deposit, branch.
- (2) Describe borrow, customers.
- (3) List all data from table DEPOSIT.
- (4) List all data from table BORROW.
- (5) List all data from table CUSTOMERS.
- (6) List all data from table BRANCH.
- (7) Give account no and amount of depositors.
- (8) Give name of depositors having amount greater than 4000.
- (9) Give name of customers who opened account after date '1-12-96'.

Module-6:Aggregate functions [4 Hrs]

Set Operations, predicates and joins, Set Membership- Tuple variables- Set comparison- Database modifications using SQL.

Practice

Create the below given table and insert the data accordingly.

Create Table Job (job_id, job_title, min_sal, max_sal)

COLUMN NAME DATA TYPE

job_id Varchar2(15)

job_title Varchar2(30)

min_sal Number(7,2)

max_sal Number(7,2)

Create table Employee (emp_no, emp_name, emp_sal, emp_comm, dept_no)

COLUMN NAME DATA TYPE

emp_no Number(3)

emp_name Varchar2(30)

emp_sal Number(8,2)

emp_comm Number(6,1)

dept_no Number(3)

Create table deposit(a_no,cname,bname,amount,a_date).

COLUMN NAME DATA TYPE

a_no Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Number(7,2)

a_date Date

Create table borrow(loanno,cname,bname,amount).

COLUMN NAME DATA TYPE

loanno Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Varchar2(7,2)

Insert following values in the table Employee.

emp_n emp_name emp_sal emp_comm dept _no

101 Smith 800 20

102 Snehal 1600 300 25

103 Adama 1100 0 20

104 Aman 3000 15

105 Anita 5000 50,000 10

106 Sneha 2450 24,500 10

107 Anamika 2975 30

Insert following values in the table job.

[CLICK HERE FOR TABLE](#)

Insert following values in the table deposit.

[CLICK HERE FOR TABLE](#)

Perform following queries

- (1) Retrieve all data from employee, jobs and deposit.
- (2) Give details of account no. and deposited rupees of customers having account opened between dates 01-01-06 and 25-07-06.
- (3) Display all jobs with minimum salary is greater than 4000.
- (4) Display name and salary of employee whose department no is 20. Give alias name to name of employee.
- (5) Display employee no,name and department details of those employee whose department lies in(10,20)

To study various options of LIKE predicate

- (1) Display all employee whose name start with 'A' and third character is 'a'.
- (2) Display name, number and salary of those employees whose name is 5 characters long and first three characters are 'Ani'.
- (3) Display the non-null values of employees and also employee name second character should be 'n' and string should be 5 character long.
- (4) Display the null values of employee and also employee name's third character should be 'a'.
- (5) What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'

To Perform various data manipulation commands, aggregate functions and sorting concept on all created tables.

- (1) List total deposit from deposit.
- (2) List total loan from karolbagh branch
- (3) Give maximum loan from branch vrce.
- (4) Count total number of customers
- (5) Count total number of customer's cities.
- (6) Create table supplier from employee with all the columns.
- (7) Create table sup1 from employee with first two columns.
- (8) Create table sup2 from employee with no data
- (9) Insert the data into sup2 from employee whose second character should be 'n' and string should be 5 characters long in employee name field.
- (10) Delete all the rows from sup1.
- (11) Delete the detail of supplier whose sup_no is 103.
- (12) Rename the table sup2.
- (13) Destroy table sup1 with all the data.
- (14) Update the value dept_no to 10 where second character of emp. name is 'm'.
- (15) Update the value of employee name whose employee number is 103.

To study Single-row functions.

- (1) Write a query to display the current date. Label the column Date
- (2) For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary
- (3) Modify your query no 4.(2) to add a column that subtracts the old salary from the new salary. Label the column Increase
- (4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.
- (5) Write a query that produces the following for each employee:
earns monthly
- (6) Display the name, hire date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.
- (7) Display the hiredate of emp in a format that appears as Seventh of June 1994 12:00:00 AM.
- (8) Write a query to calculate the annual compensation of all employees (sal+comm.).

Displaying data from Multiple Tables (join)

- (1) Give details of customers ANIL.
- (2) Give name of customer who are borrowers and depositors and having living city nagpur
- (3) Give city as their city name of customers having same living branch.
- (4) Write a query to display the last name, department number, and department name for all employees.
- (5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output
- (6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.
- (7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.
- (8) Create a query to display the name and hire date of any employee hired after employee SCOTT.

Module-7: Transaction Management [8 Hrs]

Subqueries, Manipulating Data, Transaction management and Concurrency control

Practice

To apply the concept of Aggregating Data using Group functions.

- (1) List total deposit of customer having account date after 1-jan-96.
- (2) List total deposit of customers living in city Nagpur.
- (3) List maximum deposit of customers living in bombay.
- (4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
- (5) Write a query that displays the difference between the highest and lowest salaries. Label the

column DIFFERENCE.

- (6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
- (7) Find the average salaries for each department without displaying the respective department numbers.
- (8) Write a query to display the total salary being paid to each job title, within each department.
- (9) Find the average salaries > 2000 for each department without displaying the respective department numbers.
- (10) Display the job and total salary for each job with a total salary amount exceeding 3000, in which excludes president and sorts the list by the total salary.
- (11) List the branches having sum of deposit more than 5000 and located in city bombay.

To solve queries using the concept of sub query.

- (1) Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
- (2) Give name of customers who are depositors having same branch city of mr. sunil.
- (3) Give deposit details and loan details of customer in same city where pramod is living.
- (4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
- (5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000
- (6) Display the last name and salary of every employee who reports to ford.
- (7) Display the department number, name, and job for every employee in the Accounting department.
- (8) List the name of branch having highest number of depositors.
- (9) Give the name of cities where in which the maximum numbers of branches are located.
- (10) Give name of customers living in same city where maximum depositors are located.

Manipulating Data

- (1) Give 10% interest to all depositors.
- (2) Give 10% interest to all depositors having branch vrce
- (3) Give 10% interest to all depositors living in n
agpur and having branch city bombay.
- (4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844's current department number.
- (5) Transfer 10 Rs from account of anil to sunil if both are having same branch.
- (6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.
- (7) Delete depositors of branches having number of customers between 1 to 3.
- (8) Delete deposit of vijay.
- (9) Delete borrower of branches having average loan less than 1000.

To apply the concept of security and privileges.

To study Transaction control commands

Programming in Java(Same as Java Technologies)

Code	Course Title	Credit	T-P-PJ
CUTM1058	Programming in Java(Same as Java Technologies)	3	2-1-0

Objective

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development
- Have the ability to write a computer program to solve specified problems
- Have the ability to write a computer program to solve specified problems
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Learning outcome

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Identify and fix defects the common safety issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project
- Qualify confidently any interview process where Java is the requirement

Course content

Module I: Introduction to Java (8 hrs)

Features and Installation, Java Programming Basics, Decision Making and Looping, Class and Object, Inheritance

Practice 1 (1 Hr)

Practice 2 (1 Hr)

Module II: Package and Safe Code (5 Hr)

Interfaces, Packages and Access Protection, Exception Handling (Fault Tolerant Programming)

Practice 3 (1 Hr)

Module III: Collection and Threads (5 Hr)

ArrayList, Vector, Set, Map, Multi-threaded Programming, Synchronization

Practice 4 (1 Hr)

Module IV: Language and Utility Packages (5 Hr)

String Handling, Wrappers, Runtime Memory Management, Cloning, Calendar, Date and Time Facilities, Scanner, Internationalization

Practice 5 (1 Hr)

Practice 6 (1 Hr)

Module V: Input/ Output and Applets (5 Hr)

Byte and Character Stream I/O, Persistence, Applet: Architecture, Skeleton, and Implementation

Practice 7 (1 Hr)

Practice 8 (1 Hr)

Module VI: GUI Programming (5 Hr)

AWT: Container, Components, Layout Managers, Event Handling

Practice 9 (1 Hr)

Practice 10 (1 Hr)

Module VII: Networking and Advanced (5 Hr)

Networking Fundamental, Client-Server Communication, Remote Method Invocation (RMI), Java Virtual Machine (JVM) Tuning, Java Profiler

Practice 11 (1 Hr)

Practice 12 (1 Hr)

Software/Tool(s): Java 8, Eclipse IDE

Online Compiler: <https://ideone.com/>

Online Coding Practice: <https://www.hackerrank.com/>

List of Practices:

Practice 1 (Module-I)

Program-1:

Write a program that computes the standard deviation of a set of floating point numbers that the user enters. First the user says how many numbers N are to follow. Then the program asks for and reads in

each floating point number. Finally it writes out the standard deviation. The standard deviation of a set of numbers X_i is:

$$SD = \text{Math.sqrt}(\text{avgSquare} - \text{avg}^2)$$

Here, avg is the average of the N numbers, and avg^2 is its square.

avgSquare is the average of $X_i * X_i$. In other words, this is the average of the squared value of each floating point number.

For example, if $N = 4$, say the numbers were:

$X_i \quad X_i * X_i$

2.0 4.0

3.0 9.0

1.0 1.0

2.0 4.0

sum 8.0 18.0

Now:

$$\text{avg} = 8.0/4 = 2.0$$

$$\text{avg}^2 = 4.0$$

$$\text{avgSquare} = 18.0/4 = 4.5$$

$$SD = \text{Math.sqrt}(4.5 - 4.0) = \text{Math.sqrt}(.5) = 0.7071067812$$

To do this you will need to do several things inside the loop body for each floating point value as it comes in: add it to a sum, square it and add it to a sum of squares. Then after the loop is finished apply the formula.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 2 (Module-I)

Program-1:

Better encapsulation of the Goods class would call making instance variables private and using getter and setter methods to access them. A further refinement would be to make the class abstract and to define additional child classes. Here is a revised Goods class:

```
public abstract class GoodsSGA
{
    private String description;
    private double price;
    private int quantity;
    public GoodsSGA( String des, double pr, int quant )
    {description = des;
    price = pr;
    quantity = quant;}
    double getPrice()
    {return price;}
    void setPrice( double newPrice)
    {price = newPrice;}
    int getQuantity()
    {return quantity;}
    void setQuantity ( int newQuantity )
    {quantity = newQuantity;}
    public String toString()
    {return "item: " + description + " quantity: " + quantity + " price: " + price ;}
```

Revise the source code for the classes Food, Toy, and Book. (Perhaps call the revised classes FoodSG,

ToySG, and BookSG.) create a new class ToiletrySG for things like bubble bath. Create a new testing class, StoreSG to test your revised classes.

Note: the child classes will need to use the getter and setter methods to access the instance variables that are declared as private in GoodsSG.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 3 (Module-II)

Program-1:

User-Friendly Division Practice:

Put in a loop so that the user is repeatedly asked for the numerator and the divisor. For each set of data, the program prints out the result, or an informative error message if there is a problem (division by zero or poor input data).

The program continues looping, even if there is a problem Exit the loop when data entered for the numerator start with characters "q" or "Q". Don't print out an error message in this case.

Don't ask for the divisor if the user just asked to quit.

Here is sample output from one run:

Enter the numerator: 12

Enter the divisor: 4

12 / 4 is 3

Enter the numerator: 12

Enter the divisor : 0

You can't divide 12 by 0

Enter the numerator: glarch

You entered bad data.

Please try again.

Enter the numerator: quit

You will need to use the method `charAt()` from the `String` class.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 4 (Module-III)

Program-1:

In mathematics, several operations are defined on sets. The union of two sets A and B is a set that contains all the elements that are in A together with all the elements that are in B. The intersection of A and B is the set that contains elements that are in both A and B. The difference of A and B is the set that contains all the elements of A except for those elements that are also in B.

Suppose that A and B are variables of type `Set` in Java. The mathematical operations on A and B can be computed using methods from the `Set` interface. In particular:

`A.addAll(B)` computes the union of A and B; `A.retainAll(B)` computes the intersection of A and B; and `A.removeAll(B)` computes the difference of A and B. (These operations change the contents of the set A, while the mathematical operations create a new set without changing A, but that difference is not relevant to this exercise.)

For this exercise, you should write a program that can be used as a “set calculator” for simple operations on sets of non-negative integers. (Negative integers are not allowed.) A set of such integers will be represented as a list of integers, separated by commas and, optionally, spaces and enclosed in square brackets. For example: `[1,2,3]` or `[17, 42, 9, 53,108]`. The characters `+`, `*`, and `-` will be used for the union, intersection, and difference operations. The user of the program will type in lines of input containing two sets, separated by an operator. The program should perform the operation and print the resulting set.

Here are some examples:

Input Output

[1, 2, 3] + [3, 5, 7] [1, 2, 3, 5, 7]

[10,9,8,7] * [2,4,6,8] [8]

[5, 10, 15, 20] - [0, 10, 20] [5, 15]

To represent sets of non-negative integers, use sets of type `TreeSet<Integer>`. Read the user's input, create two `TreeSets`, and use the appropriate `TreeSet` method to perform the requested operation on the two sets. Your program should be able to read and process any number of lines of input. If a line contains a syntax error, your program should not crash. It should report the error and move on to the next line of input. (Note: To print out a Set, A, of Integers, you can just say `System.out.println(A)`. We've chosen the syntax for sets to be the same as that used by the system for outputting a set.)

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 5 (Module-IV)

Program-1:

Password Checker:

Write a program that repeatedly asks the user for a proposed password until the user enters an acceptable password. When the user enters an acceptable password, the program writes a message and exits.

Acceptable passwords:

Are at least 7 characters long.

Contain both upper and lower case alphabetic characters. Contain at least 1 digit. The logic of this program can be quite tricky. Hint: use `toUpperCase()`, `toLowerCase`, and `equals()`. You will also need nested ifs.

Here is a run of the program:

Enter your password:

snowflake

That password is not acceptable.

Enter your password:

SnowFlake

That password is not acceptable.

Enter your password:

snowflake47

That password is not acceptable.

Enter your password:

Snowflake47

Acceptable password.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 6 (Module-IV)

Program-1:

Secret Code:

A text message has been encoded by replacing each character of the message with an integer. Each integer is an index into a key-phrase that contains all the lower case letters of the alphabet as well as the space character. The key-phrase may contain the same character in several locations. The encoded text is series of integers, like this:

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

To decode the message, look up each integer in the key-phrase and output the corresponding character.

For example, say that the key-phrase is this (the index of each character has been written above it):

111111111122222222223333333333444444444455

0123456789012345678901234567890123456789012345678901

six perfect quality black jewels amazed the governor

using each integer from the encoded text as an index into the phrase results in the decoded message:

attack the bridge at dawn

Write a program that decodes a secret message contained in a text file. The first line of the text file contains the key-phrase. Then the file contains a sequence of integers, each of which indexes the key-phrase. Find the character corresponding to each integer and output the secret message. Note if a character character such as 'e' occurs several places in the key-phrase it may be encoded as different integers in different parts of the secret message.

(The recipient of the secret message gets only the file of integers and must put the key-phrase at the top of the file.) For example, here is the contents of a secret message file ready for the program:

six perfect quality black jewels amazed the governor

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

Here is a sample run of the program:

```
C:\> java Decode < secretFile.txt
```

attack the bridge at dawn

You will need the charAt() method of String.

Here is another secret message file, with key-phrase inserted, that you can use to test your program:

six perfect quality black jewels amazed the governor

31 16 2 3 4 42 48 7 27 9 10 43 12 13 35 15 1 40 18 3

20 15 33 23 24 32 26 29 28 27 21 31 25 14 34 14 36

42 38 19 40 41 27 3 44 50 46 42 48 49 50 6

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 7 (Module-V)

Program-1:

Stop Word Remover:

Write a program that reads in a file of text, perhaps the text of a novel. The program copies the same text to an output file, except that all the useless words such as "the", "a", and "an" are removed. (Decide on what other words you wish to remove. The list of words removed is called a stop list.) Do this by reading the text file token by token using `hasNext()` and `next()`, but only writing out tokens not on the stop list.

Prompt the user for the names of the input and output files.

Fairly Easy: The output file will have only N tokens per line. Do this by counting tokens as you output them. N will be something like 10 or 12.

Improved Program: Preserve the line structure of the input file. Do this by reading each line using `nextLine()` and then creating a new `Scanner` for that line. (Look at the on-line documentation for `Scanner`.)

With each line's `Scanner`, use `hasNext()` and `next()` to scan through its tokens.

Harder: Write out no more than N characters per line. N will be something like 50. Do this by keeping count of the number of characters written out per line. The `length()` method of `String` will be useful. If X characters has already been written to the current line, and if X plus the length of the current token exceeds N , then start a new line.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 8 (Module-V)

Program-1:

E-Mail Address Extractor:

Write a program that scans a text file for possible e-mail addresses. Addresses look like this:

someone@somewhere.net

Read tokens from the input file one by one using `hasNext()` and `next()`. With the default delimiters of `Scanner`, an entire e-mail address will be returned as one token. Examine each token using the `indexOf()` method of `String`. If a token contains an at sign `@` followed some characters later by a period, regard it as a possible e-mail address and write it to the output file.

Programs such as this scan through web pages looking for e-mail addresses that become the targets of spam. Because of this, many web pages contain disguised e-mail addresses that can't easily be automatically extracted.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 9 (Module-VI)

Program-1:

User-friendly Fat Calculator, with Advice:

Further modify the calories from fat calculator so that it includes another `TextField` that will be set with the text "Too many fat calories" if the percentage of calories from fat is equal or greater than 30 percent, or to "Healthy amount of fat" if the percentage is less than that.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 10 (Module-VI)

Program-1:

Three Button Monte:

Write a program to implement a game:

There are three buttons in the frame. Two of the buttons cause the program to quit using `System.exit(0)`; the remaining button changes the frame to green (a win!) The winning button is different each time the game is played.

The easy way to do this (although it seems unfair to the user) treats each button the same way. The `actionPerformed()` method does not check which button was clicked. When any button is clicked, the method picks a random integer from 0 to 2 and performs the "winning" action if the integer happens to be 0. Otherwise, it performs the "losing" action. To the user, it seems like there is a "winning" button and two "losing" buttons. But, in fact, it does not matter which button was clicked.

This is similar to some electronic gambling devices in casinos, where it appears to the user that there are "winning moves" and "losing moves" but in fact the machine actually ignores what the user has done and just declares a "win" every now and then, according to predetermined odds.

You will need the `Random` class:

```
Random randNum = new Random(); // create a Random number object
```

```
...
```

```
int someInt = randNum.nextInt(3); // someInt gets a number from 0 to 2
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 11 (Module-VII)

Content Delivery with Networking:

Write a Client-Server program where the client queries with a name of file and the server delivers the content of requested files to the client over the network.

(Improve the program by making the server multi-threaded)

Practice 12 (Module-VII)

Greet the user with Remote Method Invocation:

Write a program using RMI, where the user invokes a method on remote object with username as parameter and receives a greeting message based on time of the day along with username.

Projects

However, not limited to:

1. Chat application
2. Text Editor application
3. GUI based Scientific Calculator
4. Paint application
5. Slam book

(*PROJECT REVIEWS WILL COMMENCE BEYOND CLASS HOURS)

Monitoring:

Credit will be received only on making an honest effort. It is expected that students will finish watching all lecture video and complete all challenge problems by the end of each lecture week.

Borrowing code from other sources is allowed only with proper attribution and credit given to the original author(s).

List of Common Programs to solve using Java:

1. Program to calculate area of a triangle

2. Program to solve quadratic equation

3. Program to swap two variables (with and without using third variable)

4. *Program to generate random numbers in various ways*
5. *Program to convert miles to kilometers and vice-versa*
6. *Program to convert celsius to fahrenheit and vice-versa*
7. *Program to check if a number is odd or even*
8. *Program to check if input year is leap year*
9. *Program to test primality*
10. *Program to print all prime numbers in an interval using "Sieve of Eratosthenes"*
11. *Program to generate factorial of all elements in an array*
12. *Program to display the multiplication table up to 20*
13. *Program to print the fibonacci sequence*
14.
Program to check armstrong number, perfect number, Harshad number
15. *Program to generate armstrong numbers in an Interval*
16. *Program to find the sum of Harshad numbers in an interval*
17. *Program to display powers of two Using lambda*
18. *Program to perform conversions among decimal to binary, octal and hexadecimal*
19. *Program to display ASCII table*
20. *Program to find HCF/GCD and LCM*
21. *Program to find factors of given natural number*
22. *Program to make a simple calculator*

23. *Program to shuffle deck of cards*
24. *Program to generate fibonacci sequence using recursion*
25. *Program to find sum of natural numbers using recursion*
26. *Program to find factorial of number using recursion*
27. *Program to convert decimal to binary using recursion*
28. *Program to add two matrices*
29. *Program to obtain transpose of a matrix*
30. *Program to multiply two matrices*
31. *Program to check if a string is palindrome*
32. *Program to remove punctuations from a string*
33. *Program to sort words lexicographically*
34. *Program to illustrate different set operations*
35. *Program to count frequency of each vowel in a string*
36. *Program to find hash value of a file*

Database Management Systems

Code	Course Title	Credit	T-P-PJ
CUTM1059	Database Management Systems	3	2-1-0

Objective

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database Modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential Properties of DBMS concepts such as: database security, integrity, concurrency
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Learning outcome

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data
- Improve the database design by normalization
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing

Course content

Module-1: DBMS Concepts [5 Hrs]

Data Abstraction - Data models and data independence. Instances and Schemas. Components of a DBMS and overall structure of a DBMS- Life Cycle of a DBMS application- Database terminology.

Module-2: Data Modeling [5Hrs]

Basic concepts- Types of data models- Conceptual, physical and logical database models- E-R data model and Object-oriented data model. Components of ER Model- ER Modeling symbols. Entity and entity sets- Relations and relationship sets- E-R Diagrams- Reducing E-R Diagrams into tables.

Practice

Assume we have the following application that models soccer teams, the games they play, and

the

players in each team. In the design, we want to capture the following:

- We have a set of teams, each team has an ID (unique identifier), name, main stadium, and to which city this team belongs.
- Each team has many players, and each player belongs to one team. Each player has a number (unique identifier), name, DoB, start year, and shirt number that he uses.
- Teams play matches, in each match there is a host team and a guest team. The match takes place

place

in the stadium of the host team.

- For each match we need to keep track of the following:
 - The date on which the game is played
 - The final result of the match
 - The players participated in the match. For each player, how many goals he scored, whether or not he took yellow card, and whether or not he took red card.
 - During the match, one player may substitute another player. We want to capture this substitution and the time at which it took place.
 - Each match has exactly three referees. For each referee we have an ID (unique identifier), name, DoB, years of experience. One referee is the main referee and the other two are assistant referee.

Design an ER diagram to capture the above requirements. State any assumptions you have that affects your design (use the back of the page if needed). Make sure cardinalities and primary keys are clear.

Module-3: Relational DBMS Model [5 Hrs]

Basic concepts, Attributes and domains- Intention and extensions of a relation- concept of integrity and referential constraints- Relational Query Languages (Relational algebra and relational calculus (Tuple and domain relational calculus).

Module-4: Relational Database Design [6 Hrs]

Notion of normalized relations- Normalization using Functional Dependency- First Normal form- Second Normal Form- Third Normal form- BCNF.

Practice

Perform NF on the given table

[CLICK HERE FOR TABLE](#)

Module-5: SQL [6 Hrs]

Structure of a SQL query- DDL and DML, TCL- SQL queries and sub queries- Tables, views and indexes.

Practice

To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

```
CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5) ,CNAME VARCHAR2(18) , BNAME
VARCHAR2(18) , AMOUNT NUMBER(8,2) ,ADATE DATE);
```

```
CREATE TABLE BRANCH(BNAME VARCHAR2(18),CITY VARCHAR2(18)); CREATE
TABLE CUSTOMERS(CNAME VARCHAR2(19) ,CITY VARCHAR2(18));
```

```
CREATE TABLE BORROW(LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME
```

VARCHAR2(18), AMOUNT NUMBER (8,2));

(ii) Insert the data as shown below.

DEPOSIT

[CLICK HERE FOR TABLE](#)

BRANCH

[CLICK HERE FOR TABLE](#)

CUSTOMERS

[CLICK HERE FOR TABLE](#)

BORROW

[CLICK HERE FOR TABLE](#)

- (1) Describe deposit, branch.
- (2) Describe borrow, customers.
- (3) List all data from table DEPOSIT.
- (4) List all data from table BORROW.
- (5) List all data from table CUSTOMERS.
- (6) List all data from table BRANCH.
- (7) Give account no and amount of depositors.
- (8) Give name of depositors having amount greater than 4000.
- (9) Give name of customers who opened account after date '1-12-96'.

Module-6:Aggregate functions [4 Hrs]

Set Operations, predicates and joins, Set Membership- Tuple variables- Set comparison- Database modifications using SQL.

Practice

Create the below given table and insert the data accordingly.

Create Table Job (job_id, job_title, min_sal, max_sal)

COLUMN NAME DATA TYPE

job_id Varchar2(15)

job_title Varchar2(30)

min_sal Number(7,2)

max_sal Number(7,2)

Create table Employee (emp_no, emp_name, emp_sal, emp_comm, dept_no)

COLUMN NAME DATA TYPE

emp_no Number(3)

emp_name Varchar2(30)

emp_sal Number(8,2)

emp_comm Number(6,1)

dept_no Number(3)

Create table deposit(a_no,cname,bname,amount,a_date).

COLUMN NAME DATA TYPE

a_no Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Number(7,2)

a_date Date

Create table borrow(loanno,cname,bname,amount).

COLUMN NAME DATA TYPE

loanno Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Varchar2(7,2)

Insert following values in the table Employee.

emp_n emp_name emp_sal emp_comm dept_no

101 Smith 800 20

102 Snehal 1600 300 25

103 Adama 1100 0 20

104 Aman 3000 15

105 Anita 5000 50,000 10

106 Sneha 2450 24,500 10

107 Anamika 2975 30

Insert following values in the table job.

[CLICK HERE FOR TABLE](#)

Insert following values in the table deposit.

[CLICK HERE FOR TABLE](#)

Perform following queries

(1) Retrieve all data from employee, jobs and deposit.

(2) Give details of account no. and deposited rupees of customers having account opened between dates 01-01-06 and 25-07-06.

(3) Display all jobs with minimum salary is greater than 4000.

(4) Display name and salary of employee whose department no is 20. Give alias name to name of employee.

(5) Display employee no,name and department details of those employee whose department lies in(10,20)

To study various options of LIKE predicate

(1) Display all employee whose name start with 'A' and third character is 'a'.

(2) Display name, number and salary of those employees whose name is 5 characters long and first three characters are 'Ani'.

(3) Display the non-null values of employees and also employee name second character should be 'n' and string should be 5 character long.

(4) Display the null values of employee and also employee name's third character should be 'a'.

(5) What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'

To Perform various data manipulation commands, aggregate functions and sorting concept on all created tables.

(1) List total deposit from deposit.

(2) List total loan from karolbagh branch

(3) Give maximum loan from branch vrce.

(4) Count total number of customers

(5) Count total number of customer's cities.

(6) Create table supplier from employee with all the columns.

- (7) Create table sup1 from employee with first two columns.
- (8) Create table sup2 from employee with no data
- (9) Insert the data into sup2 from employee whose second character should be 'n' and string should be 5 characters long in employee name field.
- (10) Delete all the rows from sup1.
- (11) Delete the detail of supplier whose sup_no is 103.
- (12) Rename the table sup2.
- (13) Destroy table sup1 with all the data.
- (14) Update the value dept_no to 10 where second character of emp. name is 'm'.
- (15) Update the value of employee name whose employee number is 103.

To study Single-row functions.

- (1) Write a query to display the current date. Label the column Date
- (2) For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary
- (3) Modify your query no 4.(2) to add a column that subtracts the old salary from the new salary. Label the column Increase
- (4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.
- (5) Write a query that produces the following for each employee:
earns monthly
- (6) Display the name, hire date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.
- (7) Display the hiredate of emp in a format that appears as Seventh of June 1994 12:00:00 AM.
- (8) Write a query to calculate the annual compensation of all employees (sal+comm.).

Displaying data from Multiple Tables (join)

- (1) Give details of customers ANIL.
- (2) Give name of customer who are borrowers and depositors and having living city nagpur
- (3) Give city as their city name of customers having same living branch.
- (4) Write a query to display the last name, department number, and department name for all employees.
- (5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output
- (6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.
- (7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.
- (8) Create a query to display the name and hire date of any employee hired after employee SCOTT.

Module-7: Transaction Management [8 Hrs]

Subqueries, Manipulating Data, Transaction management and Concurrency control

Practice

To apply the concept of Aggregating Data using Group functions.

- (1) List total deposit of customer having account date after 1-jan-96.
 - (2) List total deposit of customers living in city Nagpur.
 - (3) List maximum deposit of customers living in bombay.
 - (4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
 - (5) Write a query that displays the difference between the highest and lowest salaries. Label the column DIFFERENCE.
 - (6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
 - (7) Find the average salaries for each department without displaying the respective department numbers.
 - (8) Write a query to display the total salary being paid to each job title, within each department.
 - (9) Find the average salaries > 2000 for each department without displaying the respective department numbers.
 - (10) Display the job and total salary for each job with a total salary amount exceeding 3000, in which excludes president and sorts the list by the total salary.
 - (11) List the branches having sum of deposit more than 5000 and located in city bombay.
- To solve queries using the concept of sub query.

- (1) Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
- (2) Give name of customers who are depositors having same branch city of mr. sunil.
- (3) Give deposit details and loan details of customer in same city where pramod is living.
- (4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
- (5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000
- (6) Display the last name and salary of every employee who reports to ford.
- (7) Display the department number, name, and job for every employee in the Accounting department.
- (8) List the name of branch having highest number of depositors.
- (9) Give the name of cities where in which the maximum numbers of branches are located.
- (10) Give name of customers living in same city where maximum depositors are located.

Manipulating Data

- (1) Give 10% interest to all depositors.
- (2) Give 10% interest to all depositors having branch vnce
- (3) Give 10% interest to all depositors living in n agpur and having branch city bombay.
- (4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844's current department number.
- (5) Transfer 10 Rs from account of anil to sunil if both are having same branch.
- (6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.
- (7) Delete depositors of branches having number of customers between 1 to 3.

(8) Delete deposit of vijay.

(9) Delete borrower of branches having average loan less than 1000.

To apply the concept of security and privileges.

To study Transaction control commands

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T-P-PJ
CUTM1001	Differential Equations and Linear Algebra	3	2-0-1

Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course outcome

- Understand the importance of linear functions in mathematics.
- Solve systems of linear equations using Gauss- elimination to reduce to echelon form.
- Learn fundamental concepts of ODE theories and where and how such equations arise in applications to scientific and engineering problems.
- Be competent in solving linear/non-linear 1st & higher order ODEs using analytical methods to obtain their exact solutions

Course content

Module-I

First order linear differential equations and its applications(Kirchhoff's law)

Project-1:Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, Finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

Module IV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition
Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana
Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T-P-PJ
CUTM1002	Laplace and Fourier Transform	3	2-0-1

Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcome

- Solve differential equations with initial conditions using Laplace transform.
- Evaluate the Fourier transform of a continuous function and be familiar with its basic properties.

Course content

Module-I (T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II (T-2-Pj-2)

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III (T-3-Pj-2)

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV (T-2-Pj-2)

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V (T-4-Pj-2)

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI(T-3-Pj-2)

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII(T-3)

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

- E. Kreyszig , Advanced Engineering Mathematics, Johnwiley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function)),10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
- Highjer Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

- 1) Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
- 2) Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2-0-1

Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcome

- To get equipped with the understanding of the fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.
- Evaluate complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.
- Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.

Course Outline

Module I (T-3 hrs-P-0-hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule

Module – VII (T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd & 4th order methods

- 3) Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar& R.K. Jain; New Age International Publishers.

4) Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2-0-1

Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network

Course Outcome

- Apply the logical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
- Evaluate elementary mathematical arguments and identify fallacious reasoning
- Reformulate statements from common language to formal logic
- Apply truth tables and the rules of propositional and predicate calculus
- Model and solve real world problems using graphs ,both quantitatively and qualitatively

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II

(3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III**(3 Hours)**

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV**(3Hours)**

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V**(3 Hours)**

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI**(3 Hours)**

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII**(4 Hours)**

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009.

Chapters: 1(1.1 ,1.2,1.3, 1.5); 7(7.1,7.6); 8(8.1 to8.5, 8.7, 8.8);9(9.1,9.4,9.5).

2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.
3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2-0-1

Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- To apply probability and statistics in engineering and science like disease modeling, climate prediction and computer networks etc.

Course outcome

- Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events.
- Define, illustrate and apply the concepts of discrete and continuous random variables, the discrete and continuous probability distributions.
- Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random variables.
- Compute probabilities based on practical situations using the Binomial, Poisson and Normal distributions.

Course content

Module I :(3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II :(3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III:(3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV:(3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V:(3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI:(3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII:(3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition

Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1. Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.

2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcome

- Calculate curvature and radius of curvature for a given curve.
- Determine the important quantities associated with scalar and vector fields.
- Find gradient of a scalar point function, divergence and curl of a vector point function.
- Evaluate line integral, double integral and applying these concepts to find out work done by a force, volume of regions in space, center of gravity of a mass etc.
- Transform double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.

Course Outline

Module-I(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III(2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: the Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd. Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Willey & Sons Inc.- 8th Edition Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2-1-0

Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcome

- Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- Analyze the frictional forces involved in planes, ladder friction and belt friction.
- Determine the centroid and moment of inertia of composite shapes.
- Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems.
- Apply basic knowledge of mathematics and physics to solve real-world problems.

Course content

Module I: Force and Moment (4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid**(2 Hrs.)**

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia**(3 Hrs. + 2 Hrs. practice)**

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion**(3 Hrs.)**

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion**(3 Hrs. + 4 Hrs. Practice)**

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications

Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill

Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2-1-0

Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomenon so that these can be applied to actual field studies.

Course outcome

- Students should understand optical phenomena.
- Students should learn about different light sources and their use
- After completion of the course the students shall be able to understand the basic knowledge of solar cell, laser and optical fiber and instrumentation involved.
- Students should be able to understand optical fiber principle, operations and its applications.

Course outline

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of glass slab using travelling microscope.

Module II: Lenses (Derivation is not required) (2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required) (2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wave length of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required) (3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law, Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find grating element of a plan transmission diffraction grating.

Module V: Optical Properties and Laser (3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only),

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers (4hours+1hours)

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

Applied Analytical Chemistry

Code	Course Title	Credit	T-P-PJ
CUTM1008	Applied Analytical Chemistry	3	2-1-0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compound in an environmental matrix

Course Outcome

- Apply quality control on chemical analysis and laboratory work and explain its importance
- Plan and carry out laboratory experiments, including data analysis and conclusions
- Point out suitable techniques for sampling and handling of environmental samples

Module-I(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numericals on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. [Determination of Dissolved Oxygen in water.](#) (V. lab)
4. [Determination of Biological Oxygen Demand.](#) (V. lab)
5. [Determination of Chemical Oxygen Demand.](#) (V. lab)

Module-II(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using pycnometer. (V.lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III (4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV (3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V(3Hrs)

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI (2Hrs)

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Calomel/ Quinhydrone Electrode.

Module-VII(2Hrs)

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T-P-PJ
CUTM1009	Applied Engineering Material	3	2-0-1

Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course outcome

- Students will understand the physical/chemical behaviors of materials.
- Students will be able to select materials, based on their properties and behaviors, for a given application.
- Students will understand how molecular interactions to the behavior of material give rise to macroscopic properties.

Course content

Module I: New Materials/Nanomaterials (5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel ,Sonication and Precipitaion method and study their application .

Module II: Carbon Nanomaterials (5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon , Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer (5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, Conducting polymers and applications, Fabrication and moulding of polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites (5hrs)

Composites: characteristics, types and applications, Nanocomposites , Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants (4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I (4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

4. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B. Kronberg and B. Lindman
5. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T-P-PJ
CUTM1010	Environmental Studies	2	0-0-2

Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcome

- After learning this course one should be able to control pollution at individual level and also gains an idea about conservation of natural resources and its management.

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2:Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3:Water resources and its conservation

Assignment-4:Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4: Environmental protection act, 1986

Reference Books:

1. Environmental Studies by U.N. Dash & H. D. Kumar, India Tech Publication, New Delhi
2. Environmental Studies by R. Rajagopalan Oxford University Press
3. Environmental Science and Engineering, 2E, by Aloka Debi, University Press

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0-2-0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes: After completion of the course students

LO1. Ability to apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems

LO2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology

LO3. Ability to solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2-0-1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

CO1. Facilitate students to understand the basics of Economics and its application in the field of engineering

CO1.Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering project

CO1.Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes: After completion of the course students

LO1. Apply the microeconomics concepts related to business and its impact on enterprise

LO1.Develop an awareness and understanding time value of money and techniques for evaluation of engineering project

LO1.Apply cost concepts to analyse common business management decisions such as pricing a product and services.

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply. Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects. Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2-0-1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team
- The achievement of the project's main goal within the given constraints

Course outcome:

- Develop a Project Charter document for any project
- Develop Project Management Plan document
- Acquire 10 knowledge area identified by PMI and its application while delivering a projects
- Implement the Project and Prepare a project document that they have undertaken as a learning tool
- Qualify CAPM/PMP certification offered by PMI

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management;Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

- 1) Project Management: A Managerial Process, Clifford F Gray & Eric W Larson, Tata McGrawHill
[Text book]
- 2) A Guide to the Project Management Body of Knowledge, 6th Edition, PMI
- 3) Project Management- A system Approach to Planning, Scheduling and Controlling (Harold Kerzner). CBS Publishers and Distributers, New Delhi.
- 4) Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata McGraw Hill, New Delhi.
- 5) Project Management (Nagarajan, K), New Age Publishers, New Delhi.
- 6) Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5-0-1.5

Course Objectives

This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:

- To develop an understanding of gender, human rights and ethics in an unequal society like India
- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

- Understanding the complexity of issues and challenges relating to gender, human rights and ethics
- Be sensitive to gender, human rights and ethics within an organizational context,

- To integrate concerns related to gender, human rights and ethics into the policies, processes and systems in an organization.

Course Syllabus

Module 1

- Difference between sex and gender; social construction of gender and its outcomes in the form of behavior, roles, gender based division of labour, hierarchy; gender relations.
- Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level
- Gender implications at workplace, management and leadership, Laws and Acts
- Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

- Introduction to human rights, Meaning and Definition, Types
- Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights
- Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

- Introduction to and study of ethics; Indian and Western ethics
- Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations
- Critique of various ethical positions and develop their own position in an organizational context.

Session Plan

Session 1

Basic concepts on sex and gender; social construction of gender; constitutional provisions for gender equality.

PPT 1 - Introduction to Gender

1.5 mins video on Gender Equality and Poverty

<https://www.youtube.com/watch?v=4viXOGvvu0Y>

Session 2

Gender issues in different sectors – Health, Education, Governance, Livelihoods

PPT 2 - Gender issues in health

PPT 3 - Gender issues in education

PPT 4 - Gender issues in Governance

1.3 mins video on gender stereotypes and education

<https://www.youtube.com/watch?v=nrZ21nD9I-0>

Session 3

Approaches to address gender inequality – WID, WAD and GAD

PPT 5 - WID WAD GAD

TED talk by Deepa Bhardwaj - True equality is when both women and men have a voice - 13 mins

https://www.youtube.com/watch?v=BSRTZ_q4RX8

Session 4 & 5

Gender and organizational issues

PPT 6 - Gender and Organisations

PPT 7 - Gender Equality in Organisations

PPT 8 - Gender Mainstreaming and Attitude in Workplace

PPT 9 - Gender Sensitisation

3.22 mins on The Future of Gender Equality in Work by ILO

https://www.ilo.org/global/about-the-ilo/multimedia/video/institutional-videos/WCMS_558508/lang--en/index.htm

4.22 mins video on Gender Based Analysis

<https://www.youtube.com/watch?v=p6w-d1mmjFU>

Free Readings

Gender and Development - Concepts and Definitions

Gender and Organisational Change Training

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5-0-1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Module 1: Climate Change and Organisations

Course Objectives:

- CO1. To develop an understanding about climate change in general, responses and debates
- CO2. To create awareness about the impact of climate change on organisations in performance, growth and sustainability
- CO3. To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcomes:

- LO1. Students will be exposed to current climate change issues, challenges and debates
- LO2. They will be sensitive to its implications for organisations in different sectors
- LO3. The course will equip the students of Management to develop strategies for perspective planning of organisations

Course Contents:

1. Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques
2. Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing
3. Climate change – specific impacts (Migration, Disasters and Pandemics)
4. Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Session Plan for Module 1 – Climate Change and Organisations (10 one hour sessions)

Session 1: Basic concepts of climate change, impacts, issues and challenges

Session 2: Responses and mitigation efforts by state and non-state agencies

Session 3: Debates and critiques on climate change

Session 4: Climate change and ecosystem

Session 5: Climate change and social sector – health, education and livelihood/food security

Session 6: Climate change and infrastructure and services – buildings, transportation, communication, electricity/energy

Session 7: Mitigation and adaptation of climate change impacts on business organisations

Session 8 and 9: Climate change impacts of migration, disasters and pandemics – societal and organisational implication

Session 10: Develop reference points to factor into perspective planning and development of organisations

Module 2 – Sustainability in Organisations

Course Objectives:

CO1. To develop an understanding of sustainable development, SDGs and their relevance for sustainability of organisations

CO2. To comprehend the application of the Integrated Reporting Framework for Sustainability in business.

Course Outcomes:

LO1. The student will develop an understanding of perspectives on SDGs, sustainability and development in the context of organisations

- LO2. Argue the business case for sustainability informed by an understanding of the impact of current global and local economic, social and environmental pressures (including pandemics)
- LO3. Develop an Action Plan through a Case Study for integrating sustainability across an organisation's value chain
- LO4. Develop and apply the Integrated Reporting Framework for Sustainability through a case.

Course Contents:

1. Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action
2. Regulatory environment and International policy; Integrated Reporting Framework for Sustainability
3. Production and consumption; Design, technology, and planning for sustainability
4. Communication and marketing; Collaboration and partnerships

Projects: Small group exercises, case analysis, video and book reviews

Session Plan for Module 2 – Sustainability in Organisations (10 one hour sessions)

Session 1: Sustainable development basics and introduction to SDGs (rationale, issues and challenges for India)

Session 2 to 6: Discussion on the 17 SDGs

Session 7: SDGs and its relevance for organisations

Session 8 to 10: Integrated framework for reporting sustainability in organisations; factoring aspects of SD into performance of organisations

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth
GOAL 9: Industry, Innovation and Infrastructure
GOAL 10: Reduced Inequality
GOAL 11: Sustainable Cities and Communities
GOAL 12: Responsible Consumption and Production
GOAL 13: Climate Action
GOAL 14: Life Below Water
GOAL 15: Life on Land
GOAL 16: Peace and Justice Strong Institutions
GOAL 17: Partnerships to achieve the Goal

Videos – Climate Change

1. CSE Climate Change Analysis - <https://www.youtube.com/watch?v=5fyT3-9kxU4> (7.5 mins)
2. Climate Change is having Massive Impact on Indian Farmers - <https://www.youtube.com/watch?v=A8gcGalzqIw> (8.5 mins)
3. Climate Change in India: The Risks we face (NDTV) - <https://www.youtube.com/watch?v=AT1yi1tDenM> (20.28 mins)

Videos – Sustainable Development

1. Short Videos (5) on Sustainable Development Goals and one TED Talk <https://developmenteducation.ie/blog/2017/09/5-videos-sustainable-development-goals-worth-view-useful-ted-talk/>
2. Overview of Sustainable Development Goals - <https://www.youtube.com/watch?v=s190sjqYRdg> (7.43 mins)

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisherfolk
3. Forest dwellers

4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting

Job Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

Develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

Achieve the following scores as a minimum:

IELTS 6.5

Verbal: 60% (average of 10 exams)

Quantitative: 60% (average of 10 exams)

Logical Reasoning: 60% (average of 10 exams)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:
<https://drive.google.com/file/d/1Wst-jdAJuHHVtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables
- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions

- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks
- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount

- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments
- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles
- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular

- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

CUTM1023	Smart Engineering Project (G2M)	3	0-0-3

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3-2-1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

- Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- Explore IoT technologies, architectures, standards, and regulation
- Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- Examine technological developments that will likely shape the industrial landscape in the future
- Understand how to develop and implement own IoT technologies, solutions, and applications
- At the end of the program, students will be able to understand how to develop and implement their own IoT technologies, solutions, and applications.

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node.

Challenges of IIOT

Hands-On

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system.

Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic

Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11).Digital switch, Electro

Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID
Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus
Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT

Theory:

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, could
Computing, fog or edge computing,
Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development
Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:

Theory

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino
issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation

Theory

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA).

HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram

12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2 2.

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)
2. Industrial Internet of Things: Cybermanufacturing System, Sabina Jeschke, Christian Brecher, Houbing Song, Danda B. Rawat (Springer Publication)
3. Internet of Things- A Hands on Approach, Arshdeep Bahga and Vijay Madisetti , Universities Press , 2015.

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualisation Using Python	4	0-1-3

Objective

- How to tell a story from data
- How to marshal the data for storyline
- The ability to develop visualisation to tell the story
- The focus is on analysis of data using visualisation as a tool

Course outcome

- To create impactful visualization with good story line.

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALISATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators

3. ERP dashboarding

4. Details of Social/ Empowerment schemes of Govt. etc.

Reading materials and videos available on internet on how to use ANACONDA, JUPYTER NOTEBOOK and Python Libraries

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1-2-1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

- Students will able to Create and incorporate ML solutions in their respective fields of study.

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.
- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 - Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .

- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.
- Implementation of K-Means clustering for IRIS datasets

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1-2-1

Course Content:

1. Robotic Automation Introduction
2. Sensors & Controllers
3. Sequential robot control
4. ROS & C++
5. Project

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

- Advanced knowledge on robotic automation
- Understand different types of devices to which robotic modules are connected
- Provide the knowledge about understand various types of robotic applications.
- Industry based project & advanced learning.

Course Syllabus

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT

P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller
- 3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

P3.1 Port handling of 8951

P3.2 Port handling of Arduino

P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

4.1 Designing of sequential robot control system.

4.2 Writing of programs in different programming languages.

4.3 Controlling of input/output devices.

Practice

P4.1 Programming of controllers with different programming languages

P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

5.1 What is Ubuntu & ROS?

5.2 Requirement and application of ROS.

5.3 ROS based simulation of Turtlbot.

5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlbot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. 3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0-0-2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where designer’s sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systemic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively explore the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives: The course aims to

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcome: After completion of the course the students

- will be able to apply the design thinking process to innovative problem solving

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.

- Design a Fund raising campaign

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0-0-2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.
- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

- The use of open standards such as DYMOLA (Modelica and FMI) is a key enabler to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.
- DYMOLA is not only capable to support an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.
- The user can able to create new elements in an easy and intuitive way, to answer to its own modeling requirements.
- Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.

Course Syllabus

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation Window, Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages,

Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Session Plan

Session 1

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Session 2

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Session 3

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Session 4

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

<https://www.youtube.com/watch?v=9RgdZUvEjPw>

Session 5

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 6

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 7

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 8

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.

Workbench Use: Behavior Modeling.

Session 9

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Session 10

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.

Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Session 11

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 12

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Session 13

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Session 14

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Session 15

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Session 16

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

Basket V: Domain/Skill/MOOC/Minor Project/Internship/Applied Courses

Domain:

- Industrial Automation
- Operation and Maintenance of Electrical Grid System & Transformers
- Embedded System Design
- Renewable Energy Applications
- GO-TO MARKET (Digital Manufacturing)

Basket IV: Core Courses Syllabus

OOPs with C++ Programming

Code	Course Title	Credit	T-P-PJ
CUTM1028	OOPs with C++ Programming	4	1-2-1

Objective

- To understand how C++ improves C with object-oriented features
- To learn how to design C++ classes for code reuse
- To learn how inheritance and virtual functions implement dynamic binding with polymorphism
- To learn how to use exception handling in C++ programs

Course Outcome

- Apply the object-oriented programming approach in connection with C++
- Illustrate the process of data file manipulations using C++
- Apply virtual and pure virtual function & complex programming situations
- Write an error free program of minimum 200 lines of code

Course content

Module I: Revision of C programming

(8 hrs)

Revision of C Programming, Pointers, Functions (Call by value and reference), Recursion, Arrays using Pointers, Structures, Union, Enumeration and Typedef, File handling.

Programs:

1. Write a Program to perform Parameter passing.
2. Write a program to create a scientific calculator.
3. Write a program to convert a decimal to binary number using recursion.
4. Write a program to Read 'n' employee details and display the top 10 employees as per the salary.
5. Write a program to evaluate MCQ questions of an examination and generate the results using files.

Module II: Basics of Object oriented concepts

(8 hrs)

Object oriented concepts Classes and Objects, Encapsulation, Abstraction, Overloading, Inheritance, Polymorphism.

Beginning with C++, Tokens, Static Members, Constant Members, Expressions, Control Structure, Functions: parameter passing, inline function, function overloading.

Programs:

1. Write a program to read a number and check whether the number is Prime number , Palindrome number , Magic number , Armstrong number , Strong number or not.
2. Write definitions for two versions of an overloaded function. This function's 1st version sum() takes an argument, int array, and returns the sum of all the elements of the passed array. The 2nd version of sum() takes two arguments, an int array and a character ('E' or 'O'). If the passed character is 'E', it returns the sum of even elements of the passed array and if the passed character is 'O', it returns the sum of odd elements. In case of any other character, it returns 0 (zero).

Module III: Class-Object-Constructor**(10 hrs)**

Classes: data members, member function, array of objects, static data members, constant members function, and friend function.

Constructors, Encapsulating into an object, Destructors.

Programs:

1. Define a class to represent a book in a library. Include the following members:

Data Members

Book Number, Book Name, Author, Publisher, Price, No. of copies issued, No. of copies

Member Functions

- (i) To assign initial values
- (ii) To issue a book after checking for its availability
- (iii) To return a book
- (iv) To display book information.

2. A bank maintains two kinds of accounts for customers, one called as savings and the other as current account. The savings account provides compound interest and withdrawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level a service charge is imposed.

Define a class to represent a bank account. Include the following members: Data members: 1. Name of the depositor. 2. Account number. 3. Type of account. 4. Balance amount in the account. Member functions: 1. To assign initial values. 2. To deposit an amount. 3. To withdraw an amount after checking the balance. 4. To display the name and balance. Write a main program to test the program

3. Declare a class to represent fixed-deposit account of 10 customers with the following data members:

Name of the depositor, Account Number, Time Period (1 or 3 or 5 years), Amount.

The class also contains following member functions:

- (a) To initialize data members.
- (b) For withdrawal of money (after half of the time period has passed).
- (c) To display the data members.

4. Create two classes DM and DB which store the value of distances. DM stores distances in meters and centimeters and DB in feet and inches. Write a program that can read values for the class objects and add one object of DM with another object of DB. Use a friend function to carry out the addition operation. The object that stores the results may be a DM object or DB object, depending on the units in which the results are required. The display should be in the format of feet and inches or meters and centimeters depending on the object on display.

Module IV: Inheritance

(8 hrs)

Associations, Inner Classes, Memory Management and pointers

Inheritance: Derived classes, member accessibility, forms of inheritance, virtual base classes.

Programs:

1. Write a Program to describe about all types of inheritance.
2. Create a base class called shape. Use this class to store two double type values that could be used to compute the area of figures. Derive two specific classes called triangle and rectangle from the base shape. Add to the base class, a member function `get_data()` to initialize base class data members and another member function `display_area()` to compute and display the area of figures. Make `display_area()` as a virtual function and redefine this function in the derived classes to suit their requirements. Using these three classes, design a program that will accept dimensions of a triangle or a rectangle interactively, and display the area.
3. An educational institution wishes to maintain a database of its employees. The database is divided into a number of classes whose hierarchical relationships are shown in following figure. The figure also shows the minimum information required for each class. Specify all classes and define functions to create the database and retrieve individual information as and when required.

fig: class relationships (for exercise 8.3)

Module V: Polymorphism (8 hrs)

Polymorphism (Compile time Polymorphism, Run time Polymorphism), Virtual Functions, Abstract class, virtual destructors, Interfaces.

Programs:

1. Write a Program to overload ++ operator.
2. Write a program to overload + operator by concatenating strings.
3. Write a program to describe about virtual function.

Module VI: Exception Handling

(8 hrs)

Exception Handling, Managing Console I/O Operations, Streams & Files: streams, hierarchy of stream classes, working with files

Programs:

1. Write a Program to describe about exception handling mechanism.
2. Write a Program to describe multi catch statement.
3. Write a program to read a list containing item name, item code, and cost interactively and produce a three column output as shown below.

Name	Code	Cost
Turbo C++	1001	250.95
C primer	905	95.70
.....
.....

Note that the name and code are left-justified and the cost is right justified with a precision of two digits. Trailing zeros are shown.

4. Write a program that reads a text file and creates another file that is identical except that every sequence of consecutive blank spaces is replaced by a single space.

5. Write a program that reads character from the keyboard one by one. All lower case characters get store inside the file LOWER, all upper case characters get stored inside the file UPPER and all other characters get stored inside OTHERS.

Module VII: Templates

(8 hrs)

Advance Topics in C++ Object Design and Templates STL (Standard Type Libraries)RTTI (Run Time Type Identification) Advanced Typecasting ,new data types, new operators, class implementation, namespace scope , operator keywords, new headers , C++ Containers

Programs:

1. Write a function template for finding the minimum value contained in an array.

2. Imagine a publishing company that markets both books and audio-cassette versions of its works. Create a class called Publication that stores the title (a string) and price of a publication. From this class derive two classes: Book, which adds a page count (type int); and Tape, which adds a playing time in minutes (type float). Each of the three class should have a getdata() function to get its data from the user at the keyboard, and a putdata() function to display the data. Write a main() program that creates an array of pointers to Publication. In a loop, ask the user for data about a particular book or Tape, and use new to create a object of type Book or Tape to hold the data. Put the pointer to the object in the data for all books and tapes, display the resulting data for all the books and taps entered, using a for loop and a single statement such as `pubarr[i]->putdata();`to display the data from each object in the array.

Text Books:

3. E Balagurusamy, “Object Oriented Programming with C++”, Tata McGraw Hill, Sixth Edition.
4. Herbert Schlitz, “The Compete Reference C++”, Tata McGraw Hill, Fourth Edition.

Reference Books:

6. Ashok Kamthane, “Object Oriented Programming with ANSI and Turbo C++”, Pearson.
7. Behrouz A. Forouzan & Richard F. Gilberg “A Structured approach using C++” Cengage Learning Indian Edition.

Data Structures using C++

Code	Course Title	Credit	T-P-PJ
CUTM1029	Data Structures using C++	3	1-2-1

Objective

- Be familiar with techniques of algorithm analysis and Recursive method
- Be familiar with implementation of linked data structures such as linked lists and binary trees
- Be familiar with several sub-quadratic sorting algorithms including quick sort, merge sort and heap sort
- Be familiar with some graph algorithms such as shortest path and minimum spanning tree

Course Outcome

- Evaluate algorithms and data structures in terms of time and memory complexity of basic operations
- Define basic static and dynamic data structures and relevant standard algorithms for them: stack, queue, dynamically linked lists, trees, graphs, heap, priority queue, hash tables, sorting algorithms, min-max algorithm
- Determine and demonstrate bugs in program, recognize needed basic operations with data structures
- Formulate new solutions for programming problems or improve existing code using learned algorithms and data structures

Course content

Module I: Problem Solving Analysis

(6 hrs)

Define the problem, Identify the problem, Introduction to Problem Solving, Problem solving basics, Defining creativity v/s innovation

Find Creative Solutions using creativity tools

Effective problem solving approaches , Critical thinking and information analysis , Brainstorming, Reverse Brainstorming, Imagineering, Mind Mapping, Six Thinking Hats: A Tool to Strengthen Critical Thinking, Collaboration, Communication, and Creativity Skills , Analyzing the situation, Gathering information, Identifying solution criteria , Decision Making Methods , Charts and Diagrams , Applying outcome-based thinking

Evaluate and Select solution

Pro's and Con's, Force field analysis, Feasibility/Capability Analysis, Decision analysis, evaluating problems , Choosing among alternatives , Qualitative analysis, discussing qualitative

analysis techniques , Establishing objectives , Assigning weight to objectives in order to make the best decision , Creating a satisfaction scale to choose between alternatives

Implementing Decisions

Create an action plan, Break solution into action steps, Prioritize actions and assign roles (setting priorities for taking action) ,Follow-up at milestones

Programs:

1. Problem solving (Control structures, Arrays) using Raptor Tool.

Module II: Array & Stack

(9 hrs)

Analysis of different Algorithms, Asymptotic analysis, Algorithm analysis, Complexity Analysis, Application of Data structures

Basic Data Structures, Arrays, Stacks and its applications (Recursion, Infix to Postfix Conversion and Postfix Evolution

Programs:

1. Write a program to perform the following menu driven program on the input array.

- a. Insertion
- b. Deletion
- c. Searching
- d. Sorting
- e. Merging
- f. Display
- g. Exit

2. Write a program to perform the following menu driven program on the STACK.

- a. Push
- b. Pop
- c. Display
- d. Exit

Module III: Queue & Linked List

(9 hrs)

Queues, Priority Queues, Dequeues.

Linked lists: Single Linked List and Operations on Single Linked List (Creation Insertion , Deletion , Sorting and Reverse).

Programs:

1. Write a program to perform the following menu driven program on the Queue.

- a. Insertion

- b. Deletion
- c. Display
- d. Exit

2. Write a program to create a single linked list performs the following menu driven program.

- a. Insertion at front
- b. Insertion at end
- c. Insertion at particular position
- d. Deletion at front
- e. Deletion at end
- f. Deletion at particular position
- g. Display

Module IV: Stack & Queue Using Linked List

(8 hrs)

Circular linked list and Double linked list, Stack implementation using Linked List and Queue implementation using Linked List

Programs:

1. Write a program to create a Double linked list performs the following menu driven program.

- a. Insertion at front
- b. Insertion at end
- c. Insertion at particular position
- d. Deletion at front
- e. Deletion at end
- f. Deletion at particular position
- g. Display

2. Write a program to create a circular linked list and display it.

3. Write a program to implement Stack Using Linked List.

4. Write a program to implement Queue Using Linked List.

Module V: Trees

(10 hrs)

Trees and hierarchical orders ,Introduction to trees , Abstract trees , Tree traversals , Forests , Ordered trees , Binary trees , Perfect binary trees , Complete binary trees , Search trees , Binary search trees , AVL trees

Programs:

1. Write a program to create Binary tree and display it.

2. Write a program to create a BST and display it.
3. Write a program to print all pairs from two BSTs whose sum is greater than the given value.
4. Write a program to remove duplicate entries from the BST.
5. Write a program to create a AVL tree and display it.

Module VI: Searching & Sorting

(8 hrs)

Searching & Sorting algorithms , Objectives of Searching , The Sequential Search , Analysis of Sequential Search , The Binary Search , Analysis of Binary Search , Introduction to sorting , Insertion sort , Bubble sort , Heap sort ,Merge sort ,Quick sort

Programs:

1. Write a program to perform linear and binary search.
2. Write a program to perform selection sort, Bubble sort and Insertion sort.
3. Write a program to perform merge and quick sort.
4. Write a program to perform Heap sort.

Module VII: Hashing

(8 hrs)

Hash functions and hash tables ,Hashing & Introduction to hash tables ,Hash functions , Mapping down to $0 \dots M - 1$, Chained hash tables , Scatter tables , Open addressing , Linear probing , Quadratic probing , Double hashing, Poisson distribution , Collision Resolution Graph Terminology and Traversals.

Programs:

1. Write a program to perform Linear Probing.
2. Write a program to perform Double Hashing

Text Books:

1. Data Structures, Algorithms and Applications in C++, Sartaj Sahani, 2nd Edition.
2. Data Structures and Algorithms in C++, Michael T.Goodrich, R, Tamassia and D.Mount, wiley Student Edition, 7th edition, John Wiley and Sons.

Reference Books:

1. Data Structures and Algorithms Analysis in C++ by Mark Allen Weiss.
2. Data Structures and Algorithms in C++, 3rd edition, Adam Drozdek, Cengage Learning.

Advanced Web Programming

Code	Course Title	Credit	T-P-PJ
CUTM1030	Advanced Web Programming	4	1-2-1

Objective

- Understand client server architecture and able to use the skills for web project development.
- Create job opportunities as a web developer

Course Outcome

- Develop a static, interactive and well-formed webpage using JavaScript, CSS3 and HTML5.
- Use PHP7 to improve accessibility of a web document.
- Gain necessary skills for designing and developing web applications.

Course content

Module I: Web Programming Concepts(7hrs)

Architecture of the Web (1)

HTTP Protocols(1)

Difference HTTP1.0 and HTTP 1.1, Stateless nature of the protocol, Methods (GET, POST, HEAD, PUT, DELETE), HTTP session, Statuscodes, Persistent connections, HTTPS

HTML(1)

Document Object Model (DOM), Elements, Events

HTML 5(2)

Elements, Objects, Events, Canvas, Audio & Video Support, Geo-location Support

CSS(2)

Styling HTML with CSS, Inline Styling (Inline CSS), External Styling (External CSS), CSS Fonts, The CSS Box Model, The id Attribute, The class Attribute, HTML Style Tags

Practice

1. Write an HTML code to display your CV on a web page.
2. Write an HTML code to create a Home page having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.
3. Write an HTML code to create a Registration Form. On submitting the form, the user should be asked to login with this new credentials.
4. Write an HTML code to create your Institute website, Department Website and Tutorial website for specific subject.
5. Write an HTML code to create a frameset having header, navigation and content sections.

6. Write an HTML code to demonstrate the usage of inline CSS.
7. Write an HTML code to demonstrate the usage of internal CSS.
8. Write an HTML code to demonstrate the usage of external CSS.
- 9: Design your own website using HTML CSS
- 10: Design form using HTML and apply CCS

Module II: JavaScript & jQuery(14 hrs)

JavaScript (10)

Introduction to JavaScript: Variable, statements, Operators, Comments, constructs, Functions, expressions, Javascript console, Scope, Events, Strings, String Methods, Numbers, Number Methods, Dates, Date Formats, Date, Methods, Arrays, Array Methods, Booleans, Comparisons
Control Structures: Conditions, Switch, Loop For, Loop While, Break

Functions: Function Definitions, Function Parameters, Function Invocation, Function Closures

Objects: Object Definitions, Object Properties, Object Methods, Object Prototypes

Object Oriented Programming:

Method, Constructor, Inheritance, Encapsulation, Abstraction, Polymorphism, Javascript Validations, Document Object Model, Document and Events (DOM Manipulation)

HTML DOM: DOM Intro, DOM Methods, DOM Document, DOM Elements, DOM HTML, DOM CSS, DOM Animations, DOM Events, DOM EventListener, DOM Navigation, DOM Nodes, DOM Nodelist, Debugging, Type Conversion, Regular expressions, Errors, Debugging

Forms: Forms Validation, Forms API, JS Browser BOM, Window, Screen, Location, History, Navigator, Popup Alert, Timing, Cookies, Javascript Windows, Pushing code quality via JSLint tool, Security in Java Script

jQuery(4)

Basics of jQuery, jQuery selection and events, jQuery Effects, jquery traversal and manipulation, Data attributes and templates, jQuery Plugins, JQuery / Google Web Toolkit

Practice:

1. Write a Java script to prompt for users name and display it on the screen.
2. Design HTML form for keeping student record and validate it using Java script.
3. Write programs using Java script for Web Page to display browsers information.

4: Validate form page using JavaScript

5: use JQuery effect in page

6. Write a jQuery Code to Find the data passed with the on() method for each element.

7.Find the position of the mouse pointer relative to the left and top edges of the document.

8.Count the number of milliseconds between the two click events on a paragraph

9.Find all the text nodes inside a paragraph and wrap them with an italic tag

Module III: AJAX& JSON(8 hrs)

AJAX(3)

Design Introduction to Ajax,Web services and Ajax,Ajax using HTML, CSS, JavaScript,Ajax Framework and DOM,XMLHttpRequest,Ajax Architecture

Working with JSON (5)

JSON – Introduction,Need of JSON,JSON Syntax Rules,JSON Data - a Name and a Value,JSONObjects,JSONArrays,JSON Uses JavaScript Syntax,JSONFiles,JSON& Security

Concerns, Cross Site Request Forgery (CSRF), Injection

Attacks,JSXMLHttpRequestfunctions,JavaScriptXMLHttpRequest& Web APIs,JSON& Client Side Frameworks,JSON& Server Side Frameworks,Replacing XML with JSON,JSON

parsing,AJAX using JSON and jQuery

Practice:

1.Create an simple application using AJAX to show the table of numbers given by user at runtime.

2.Access web service using Ajax and handle using JSON

Module IV: Responsive Web Design (5 hrs)

Introduction

The Best Experience for All Users

- Desktop
- Tablet
- Mobile

Bootstrap

Overview of Bootstrap

Need to use Bootstrap

Bootstrap Grid System, Grid Classes, Basic Structure of a Bootstrap Grid

Typography

Tables, Images, Jumbotron, Wells, Alerts, Buttons, Button Groups, Badges/Labels, Progress

Bars, Pagination, List Groups, Panels, Dropdowns, Collapse, Tabs/Pills, Navbar, Forms, Inputs

Bootstrap Grids, Grid System, Stacked/Horizontal

Bootstrap Themes, Templates

Practice:

1. Create a responsive website using bootstrap

Module V: PHP(10 hrs)

PHP(10):

Introduction to PHP, Working with arrays, Functions, Forms, Handling date and Times, Working with Files, Session and state management, Database operations from PHP

Practice:

1. Develop student registration web application using PHP
2. Write a PHP database application that collects comments from users and makes it possible for users to view all the comments that have been submitted. You will need three files: an HTML page with a form where the user can enter a comment; a PHP program to process the input from this form by adding the comment to the database; and a PHP program that displays all the comments.

Module VI: Introduction to Drupal(5 hrs)

Drupal Basics, Content Management System, Content Management Framework, Web Application, Framework, Drupal Workflow, Bootstrap, hooks, callbacks, output, Modules (Core and Contributed), Nodes, Blocks, Regions, The Admin Interface (Overview), Content Management, Site Building, Site Configuration, User Management, Reports, Help, Content Translation, User Contributed Modules, Layouts in Drupal, File Systems

Practice:

1. Setup Drupal server and develop a site on it

Module VII: XML & Web Security (6 hrs)

XML (2)

Introduction to XML,XML Validation,Reason for XML,XML Tree Structure, XML DOM,XML DTD,XML Schema

XML style language(2)

XML and XSLT, XML Parsing,XML parsers (DOM & SAX),XML WSDL,RSS Feed

Web Security(2)

SQL Injection,Cross-Site Scripting (XSS),Security standards (OWASP)

Practice:

1. Creating XML Document
- 2.DTD creation
- 3.Test SQL Injection for student resgistration application

Text/Reference Books

- 1.Web Technologies: HTML, JAVASCRIPT, PHP, JAVA, JSP, XML and AJAX, Black Book Kindle Edition,byKogent Learning Solutions Inc.
- 2.HTML 5 Black Book, Covers CSS 3, JavaScript, XML, XHTML, AJAX, PHP and jQuery, 2ed Kindle Edition,by DT Editorial Services
- 3.Programming PHP: Creating Dynamic Web Pages, Third Edition, by Kevin Tatroe, O'REILLY
- 4.Introduction to JavaScript Object Notation: A To-the-Point Guide to JSON kindle Edition by Lindsay Bassett,O'REILLY
- 5.Bootstrap: Responsive Web Development by Jake Spurlock, Paperback

Project Work

- 1.Online Quiz System
- 2.Online Student feedback System
- 3.. Online Tutorial System
- 4.Restaurant Billing System
- 5.Online MCQ Database Bank System

Courseware Link: <http://courseware.cutm.ac.in/courses/advanced-web-programming/Course>

Java Technologies

ode	Course Title	Credit	T-P-PJ
CUTM1031	Java Technologies	4	2-1-1

Objective

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development
- Have the ability to write a computer program to solve specified problems
- Have the ability to write a computer program to solve specified problems
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Course Outcome

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs
- Read and make elementary modifications to Java programs that solve real-world problems
- Identify and fix defects the common safety issues in code
- Document a Java program using Javadoc
- Use a version control system to track source code in a project
- Qualify confidently any interview process where Java is the requirement

Course content

Module I: Introduction to Java (8 hrs)

Features and Installation, Java Programming Basics, Decision Making and Looping, Class and Object, Inheritance

Practice 1 (1 Hr)

Practice 2 (1 Hr)

Module II: Package and Safe Code (5 Hr)

Interfaces, Packages and Access Protection, Exception Handling (Fault Tolerant Programming)

Practice 3 (1 Hr)

Module III: Collection and Threads (5 Hr)

ArrayList, Vector, Set, Map, Multi-threaded Programming, Synchronization

Practice 4 (1 Hr)

Module IV: Language and Utility Packages (5 Hr)

String Handling, Wrappers, Runtime Memory Management, Cloning, Calendar, Date and Time Facilities, Scanner, Internationalization

Practice 5 (1 Hr)

Practice 6 (1 Hr)

Module V: Input/ Output and Applets (5 Hr)

Byte and Character Stream I/O, Persistence, Applet: Architecture, Skeleton, and Implementation

Practice 7 (1 Hr)

Practice 8 (1 Hr)

Module VI: GUI Programming (5 Hr)

AWT: Container, Components, Layout Managers, Event Handling

Practice 9 (1 Hr)

Practice 10 (1 Hr)

Module VII: Networking and Advanced (5 Hr)

Networking Fundamental, Client-Server Communication, Remote Method Invocation (RMI), Java Virtual Machine (JVM) Tuning, Java Profiler

Practice 11 (1 Hr)

Practice 12 (1 Hr)

Online Compiler: <https://ideone.com/>

Online Coding Practice: <https://www.hackerrank.com/>

List of Practices:

Practice 1 (Module-I)

Program-1:

Write a program that computes the standard deviation of a set of floating point numbers that the user enters. First the user says how many numbers N are to follow. Then the program asks for and reads in each floating point number. Finally it writes out the standard deviation. The standard deviation of a set of numbers X_i is:

$$SD = \text{Math.sqrt}(\text{avgSquare} - \text{avg}^2)$$

Here, avg is the average of the N numbers, and avg² is its square.

avgSquare is the average of $X_i * X_i$. In other words, this is the average of the squared value of each floating point number.

For example, if N = 4, say the numbers were:

$X_i \quad X_i * X_i$

2.0 4.0

3.0 9.0

1.0 1.0

2.0 4.0

sum 8.0 18.0

Now:

$$\text{avg} = 8.0/4 = 2.0$$

$$\text{avg}^2 = 4.0$$

$$\text{avgSquare} = 18.0/4 = 4.5$$

$$SD = \text{Math.sqrt}(4.5 - 4.0) = \text{Math.sqrt}(.5) = 0.7071067812$$

To do this you will need to do several things inside the loop body for each floating point value as

it comes in: add it to a sum, square it and add it to a sum of squares. Then after the loop is finished apply the formula.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 2 (Module-I)

Program-1:

Better encapsulation of the Goods class would call making instance variables private and using getter and setter methods to access them. A further refinement would be to make the class abstract and to define additional child classes. Here is a revised Goods class:

```
public abstract class GoodsSGA
{private String description;
private double price;
private int quantity;
public GoodsSGA( String des, double pr, int quant )
{description = des;price = pr;
quantity = quant;}
double getPrice()
{return price;}
void setPrice( double newPrice)
{price = newPrice;}
int getQuantity()
{return quantity;}
void setQuantity ( int newQuantity )
{quantity = newQuantity;}
public String toString()
{return "item: " + description + " quantity: " + quantity + " price: " + price ;}}
```

Revise the source code for the classes Food, Toy, and Book. (Perhaps call the revised classes

FoodSG, ToySG, and BookSG.) create a new class ToiletrySG for things like bubble bath. Create a new testing class, StoreSG to test your revised classes.

Note: the child classes will need to use the getter and setter methods to access the instance variables that are declared as private in GoodsSG.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 3 (Module-II)

Program-1:

User-Friendly Division Practice:

Put in a loop so that the user is repeatedly asked for the numerator and the divisor. For each set of data, the program prints out the result, or an informative error message if there is a problem (division by zero or poor input data).

The program continues looping, even if there is a problem Exit the loop when data entered for the numerator start with characters "q" or "Q". Don't print out an error message in this case.

Don't ask for the divisor if the user just asked to quit.

Here is sample output from one run:

Enter the numerator: 12

Enter the divisor: 4

12 / 4 is 3

Enter the numerator: 12

Enter the divisor : 0

You can't divide 12 by 0

Enter the numerator: glarch

You entered bad data.

Please try again.

Enter the numerator: quit

You will need to use the method charAt() from the String class.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 4 (Module-III)

Program-1:

In mathematics, several operations are defined on sets. The union of two sets A and B is a set that contains all the elements that are in A together with all the elements that are in B. The intersection of A and B is the set that contains elements that are in both A and B. The difference of A and B is the set that contains all the elements of A except for those elements that are also in B.

Suppose that A and B are variables of type set in Java. The mathematical operations on A and B can be computed using methods from the Set interface. In particular:

A.addAll(B) computes the union of A and B; A.retainAll(B) computes the intersection of A and B; and A.removeAll(B) computes the difference of A and B. (These operations change the contents of the set A, while the mathematical operations create a new set without changing A, but that difference is not relevant to this exercise.)

For this exercise, you should write a program that can be used as a “set calculator” for simple operations on sets of non-negative integers. (Negative integers are not allowed.) A set of such integers will be represented as a list of integers, separated by commas and, optionally, spaces and enclosed in square brackets. For example: [1,2,3] or [17, 42, 9, 53,108]. The characters +, *, and - will be used for the union, intersection, and difference operations. The user of the program will type in lines of input containing two sets, separated by an operator. The program should perform the operation and print the resulting set.

Here are some examples:

Input Output

[1, 2, 3] + [3, 5, 7] [1, 2, 3, 5, 7]

[10,9,8,7] * [2,4,6,8] [8]

[5, 10, 15, 20] - [0, 10, 20] [5, 15]

To represent sets of non-negative integers, use sets of type `TreeSet<Integer>`. Read the user's input, create two `TreeSets`, and use the appropriate `TreeSet` method to perform the requested operation on the two sets. Your program should be able to read and process any number of lines of input. If a line contains a syntax error, your program should not crash. It should report the error and move on to the next line of input. (Note: To print out a Set, A, of Integers, you can just say `System.out.println(A)`. We've chosen the syntax for sets to be the same as that used by the system for outputting a set.)

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 5 (Module-IV)

Program-1:

Password Checker:

Write a program that repeatedly asks the user for a proposed password until the user enters an acceptable password. When the user enters an acceptable password, the program writes a message and exits.

Acceptable passwords:

Are at least 7 characters long.

Contain both upper and lower case alphabetic characters. Contain at least 1 digit. The logic of this program can be quite tricky. Hint: use `toUpperCase()`, `toLowerCase`, and `equals()`. You will also need nested ifs.

Here is a run of the program:

Enter your password:

snowflake

That password is not acceptable.

Enter your password:

SnowFlake

That password is not acceptable.

Enter your password:

snowflake47

That password is not acceptable.

Enter your password:

Snowflake47

Acceptable password.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 6 (Module-IV)

Program-1:

Secret Code:

A text message has been encoded by replacing each character of the message with an integer.

Each integer is an index into a key-phrase that contains all the lower case letters of the alphabet

as well as the space character. The key-phrase may contain the same character in several

locations. The encoded text is series of integers, like this:

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

To decode the message, look up each integer in the key-phrase and output the corresponding

character. For example, say that the key-phrase is this (the index of each character has been

written above it):

1111111111222222222233333333333444444444455

0123456789012345678901234567890123456789012345678901

six perfect quality black jewels amazed the governor

using each integer from the encoded text as an index into the phrase results in the decoded

message:

attack the bridge at dawn

Write a program that decodes a secret message contained in a text file. The first line of the text file contains the key-phrase. Then the file contains a sequence of integers, each of which indexes the key-phrase. Find the character corresponding to each integer and output the secret message. Note if a character character such as 'e' occurs several places in the key-phrase it may be encoded as different integers in different parts of the secret message.

(The recipient of the secret message gets only the file of integers and must put the key-phrase at the top of the file.) For example, here is the contents of a secret message file ready for the program:

```
six perfect quality black jewels amazed the governor  
35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49
```

Here is a sample run of the program:

```
C:\> java Decode < secretFile.txt  
attack the bridge at dawn
```

You will need the charAt() method of String.

Here is another secret message file, with key-phrase inserted, that you can use to test your program:

```
six perfect quality black jewels amazed the governor  
31 16 2 3 4 42 48 7 27 9 10 43 12 13 35 15 1 40 18 3  
20 15 33 23 24 32 26 29 28 27 21 31 25 14 34 14 36  
42 38 19 40 41 27 3 44 50 46 42 48 49 50 6
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 7 (Module-V)

Program-1:

Stop Word Remover:

Write a program that reads in a file of text, perhaps the text of a novel. The program copies the same text to an output file, except that all the useless words such as "the", "a", and "an" are removed. (Decide on what other words you wish to remove. The list of words removed is called a stop list.) Do this by reading the text file token by token using `hasNext()` and `next()`, but only writing out tokens not on the stop list.

Prompt the user for the names of the input and output files.

Fairly Easy: The output file will have only N tokens per line. Do this by counting tokens as you output them. N will be something like 10 or 12.

Improved Program: Preserve the line structure of the input file. Do this by reading each line using `nextLine()` and then creating a new `Scanner` for that line. (Look at the on-line documentation for `Scanner`.) With each line's `Scanner`, use `hasNext()` and `next()` to scan through its tokens.

Harder: Write out no more than N characters per line. N will be something like 50. Do this by keeping count of the number of characters written out per line. The `length()` method of `String` will be useful. If X characters has already been written to the current line, and if X plus the length of the current token exceeds N, then start a new line.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 8 (Module-V)

Program-1:

E-Mail Address Extractor:

Write a program that scans a text file for possible e-mail addresses. Addresses look like this:
someone@somewhere.net

Read tokens from the input file one by one using `hasNext()` and `next()`. With the default delimiters of `Scanner`, an entire e-mail address will be returned as one token. Examine each token using the `indexOf()` method of `String`. If a token contains an at sign @ followed some characters later by a period, regard it as a possible e-mail address and write it to the output file.

Programs such as this scan through web pages looking for e-mail addresses that become the targets of spam. Because of this, many web pages contain disguised e-mail addresses that can't easily be automatically extracted.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 9 (Module-VI)

Program-1:

User-friendly Fat Calculator, with Advice:

Further modify the calories from fat calculator so that it includes another TextField that will be set with the text "Too many fat calories" if the percentage of calories from fat is equal or greater than 30 percent, or to "Healthy amount of fat" if the percentage is less than that.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 10 (Module-VI)

Program-1:

Three Button Monte:

Write a program to implement a game:

There are three buttons in the frame. Two of the buttons cause the program to quit using `System.exit(0)`; the remaining button changes the frame to green (a win!) The winning button is different each time the game is played.

The easy way to do this (although it seems unfair to the user) treats each button the same way. The `actionPerformed()` method does not check which button was clicked. When any button is clicked, the method picks a random integer from 0 to 2 and performs the "winning" action if the integer happens to be 0. Otherwise, it performs the "losing" action. To the user, it seems like there is a "winning" button and two "losing" buttons. But, in fact, it does not matter which button was clicked.

This is similar to some electronic gambling devices in casinos, where it appears to the user that there are "winning moves" and "losing moves" but in fact the machine actually ignores what the user has done and just declares a "win" every now and then, according to predetermined odds.

You will need the Random class:

```
Random randNum = new Random(); // create a Random number object  
int someInt = randNum.nextInt(3); // someInt gets a number from 0 to 2
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 11 (Module-VII)

Content Delivery with Networking:

Write a Client-Server program where the client queries with a name of file and the server delivers the content of requested files to the client over the network.

(Improve the program by making the server multi-threaded)

Practice 12 (Module-VII)

Greet the user with Remote Method Invocation:

Write a program using RMI, where the user invokes a method on remote object with username as parameter and receives a greeting message based on time of the day along with username.

Projects

However, not limited to:

1. Chat application
2. Text Editor application
3. GUI based Scientific Calculator
4. Paint application
5. Slam book

(*PROJECT REVIEWS WILL COMMENCE BEYOND CLASS HOURS)

Monitoring:

Credit will be received only on making an honest effort. It

is expected that students will finish watching all lecture video and complete all challenge problems by the end of each lecture week.

Borrowing code from other sources is allowed only with proper attribution and credit given to the original author(s).

List of Common Programs to solve using Java:

1. Program to calculate area of a triangle

3. Program to solve quadratic equation

3. Program to swap two variables (with and without using third variable)

4. Program to generate random numbers in various ways

5. Program to convert miles to kilometers and vice-versa

6. Program to convert celsius to fahrenheit and vice-versa

7. Program to check if a number is odd or even

8. Program to check if input year is leap year

9. Program to test primality

10. Program to print all prime numbers in an interval using "Sieve of Eratosthenes"

11. Program to generate factorial of all elements in an array

12. Program to display the multiplication table up to 20

13. Program to print the fibonacci sequence

14. Program to check armstrong number, perfect number, Harshad number

15. Program to generate armstrong numbers in an Interval

16. Program to find the sum of Harshad numbers in an interval

17. Program to display powers of two Using lambda

18. Program to perform conversions among decimal to binary, octal and hexadecimal

19. Program to display ASCII table

20. Program to find HCF/GCD and LCM

21. Program to find factors of given natural number
22. Program to make a simple calculator
23. Program to shuffle deck of cards
24. Program to generate fibonacci sequence using recursion
25. Program to find sum of natural numbers using recursion
26. Program to find factorial of number using recursion
27. Program to convert decimal to binary using recursion
28. Program to add two matrices
29. Program to obtain transpose of a matrix
30. Program to multiply two matrices
31. Program to check if a string is palindrome
32. Program to remove punctuations from a string
33. Program to sort words lexicographically
34. Program to illustrate different set operations
35. Program to count frequency of each vowel in a string
36. Program to find hash value of a file

This course on courseware: <http://courseware.cutm.ac.in/courses/java-technologies/>

Embedded System Programming with ARM-Cortex

Code	Course Title	Credit	T-P-PJ
CUTM1039	Embedded System Programming with ARM-Cortex	6	3-2-1

Objective

- To allow students in Embedded System sectors to learn programming / Interfacing peripherals to ARM Cortex based Microcontroller

Course Outcome

- Describe the architectural features and instructions of 32 bit ARM Cortex M3 microcontroller.
- Understand the basic hardware components and their selection method based on the

characteristics and attributes of an Embedded System.

- Understand various Sensors, Actuators & Interfacing Modules.

Course content

Module I: EMBEDDED C

(4 Hrs)

Embedded System, Programming Embedded system, Factor for selecting the Programming language, Embedded C programming Language, Embedded C vs C.

Practice:

1. Familiarization with tools (STM32CubeMX, KeilVision IDE, Flash Magic & Proteus Simulator).
2. Programming STM32 using KeilVision& STM32CubeMX.

Module II: ARM-32 bit MICROCONTROLLER

(6 Hrs)

ARM Design Philosophy & RISC Architecture, Programmer's Model. ARM Cortex M, Cortex M Architecture, ARM Cortex-M Internals & Debugging.

Practice:

1. Familiarization with Different Processors and Controllers Boards (8, 16, 32, 64 bits)

Module III: STM32 GPIO MANAGEMENT

(14 Hrs)

GPIO Configuration, Driving De-initialization, Interfacing IO devices and its type – LEDs, Switches, Buzzer, Seven Segment Display, LCD (4 bit, 8 bit Mode), Keypad (4*4), DC Motor, Stepper Motor, Servo motor, Relay.

Practice:

1. Write an Embedded C program to interface LEDs with STM32.
2. Write an Embedded C program to interface Switch with STM32.
3. Write an Embedded C Program to design up counter & down counter using Seven Segment Display. (1 digit, 2 digit)
4. Write an Embedded C program to interface buzzer to control with the help of Switch.
5. Write an Embedded C program to display characters on Alphanumeric LCD.
6. Write an Embedded C program to interface Keypad and LCD with STM32.
7. Write an Embedded C program to interface DC Motors, Stepper Motor, and Servo Motor rotate clockwise, anticlockwise and in angle (45°, 90°, 180°).
8. Write an Embedded C program to interface relay to control the AC Appliances.

Module IV: STM32 INTERRUPT MANAGEMENT & UART

(14 Hrs)

NVIC Controller, Enabling Interrupt, Interrupt Priority Levels, UART Initialization, UART communication in polling Mode & in Interrupt Mode. Wireless Technologies- Bluetooth, Wi-Fi, RF.

Practice:

1. Write an embedded C program to generate an Interrupt process using STM32.
2. Write an Embedded C program to interface STM32 to Bluetooth Module to send & receive Data.
3. Write an Embedded C program to interface STM32 to GPS module to get a Location Coordinate.
4. Write an Embedded C program to interface STM32 to GSM module to Send & Receive SMS.
5. Write an Embedded C program RF module with STM32 to send and receive the data wirelessly.
6. Write and Embedded C program to design a system to read the RFID cards using STM32.
7. Write and Embedded C program to connect ESP8266 with STM32 to create a Webserver.

Module V: STM32 TIMERS , ADC, & DAC

(10 Hrs)

Timers Basics, General Purpose Timer, SysTick Timer, ADC & DAC Basics, Initialization, DAC Peripherals & Modules. Analog Sensors and its Types(Ultrasonic Sensor, Temperature, Humidity, Soil Moisture Sensor, PIR sensor)

Practice:

1. Write an Embedded C Programs to generate Delay using Timer.
2. Write an Embedded C program to display output for given analog input using internal ADC. (Use of Analog Sensors like Ultrasonic Sensor, Temperature, Humidity, Soil Moisture Sensor, PIR sensor)
3. Write an embedded C program to generate Triangular and Square waves using DAC.

Module VI: STM32 I2C & SPI

(10 Hrs)

I2C specification, Protocol configuration, I2C Peripherals. SPI Specification, Protocol configuration, it's Peripheral and Modules.

Practice:

1. Write an Embedded C program to build I2C communication between STM32 and Arduino
2. Write an Embedded C program to build SPI communication STM32 to the Arduino board.

Module VII: PWM & CAN (8 Hrs)

RTC feature and its Module, CAN Protocols Overview, Application, Architecture, Data Transmission & Data Frames.

Practice:

1. Write an Embedded C program to implement a Real-Time Clock.
2. Write an Embedded C program to Speed Control of DC motor using PWM.
3. Write an Embedded C program to change the intensity of Light using PWM.

VLSI Design

Code	Course Title	Credit	T-P-PJ
CUTM1040	VLSI Design	6	3-2-1

Objective

- The objective of the course is to provide understanding of the entire logic design process with the analysis from combinational and sequential digital circuit design.
- Provide understanding of the techniques essential to the Verilog programming for Verification and Testing.
- To learn the architecture of most prominent vendor in the FPGA market, Xilinx FPGAs and Altera FPGAs.

Course Outcome

- Analyze combinational and sequential circuit design concepts.
- Develop FSMs & ASMs for the given problems.
- Write Verilog code, compile, simulate and execute on any VLSI design platform.
- Apply Verilog HDL for FPGA Programming.
- Implement Digital Circuits on Xilinx FPGAs and Altera FPGAs using Verilog HDL.

Course content

Module I: Introduction to VERILOG

(10 hrs)

Introduction to Verilog HDL & Hierarchical Modeling Concepts, Lexical Conventions & Data Types, System Tasks & Compiler Directives, Modules, Ports and Module Instantiation Methods, Modeling methods, Design Verification using Test benches

Practice

1. Introduction to Xilinx EDA Tool.
2. Introduction to XST Tool and ISIM Tool
3. Xilinx Tool Flow: Simulation and Synthesis
4. Module and Ports in Verilog
5. Data Types in Verilog Programming.

Module II: Boolean Algebra and Logic Minimization

(8hrs)

Binary Arithmetic and 1's and 2's Complementation, Basic Theorems and Properties, Canonical and Standard Form, Algebraic Simplification of Digital Logic Gates, The Karnaugh Map Method, Prime and Essential Implications, Don't Care Map Entries.

Practice

1. Gate level Modelling in Verilog.
2. Data flow Modelling in Verilog.
3. Behavioral Modelling in Verilog.

Module III: Combinational Circuit Design

(12hrs)

Arithmetic Circuits: Adder/Subtractor Circuits, Ripple Carry Adder, Universal Ripple carry Adder, BCD Adder, MultipliersComparators, Multiplexer, Demultiplexer, Decoder, Encoder and Priority Encoder, Code Converters: Binary to Gray, Binary to BCD.

1. Design of Arithmetic Circuits using Verilog.
2. Design of Encoder and Decoder using Verilog.
3. Design of Data selector and Data Distributor using Verilog.
4. Design of comparator and Code converters using Verilog.

Module IV: Sequential Circuit Design

(14hrs)

Latch, Flip-Flop: S-R,D,J-K,T, Flip-Flop Conversion and Excitations Counter: Asynchronous and Synchronous counter Design, Register: SISO, SIPO,PISO and PIPO, Universal Shift Register, Johnson counter and Ring Counter.

Practice

1. Design SR and D-Flip Flop Using Continuous and Procedural Assignments.
2. Design JK-Flip Flop And T-Flip Flop Using Verilog.
3. Design Shift Registers (SISO, SIPO, PISO, PIPO) using Verilog.
4. Design Ripple Counter and Up/Down Synchronous Binary Counter Using Verilog.

Module V: State Machines

(10 hrs)

Basic Finite state machines (FSM) structures, Mealy and Moore type FSM,Design of controller and Data path units,Controller Design using FSMs & ASMs

Practice

1. Design of Sequence Detectors allowing overlapping as well as non-overlapping.
2. Design of Mealy and Moore type FSM using Verilog.
3. Design of data controller using ASM.

Module VI: FPGA Architecture and Prototyping

(5 hrs)

Introduction to Programmable Logic and FPGAs, Popular CPLD & FPGA Families, Architecture of Xilinx and Altera FPGAs

Practice

1. Proto-typing of a design using FPGA Design Kit

Module VII: Synthesis and Timing

(6hrs)

FPGA Design Flow, Implementation Details Advanced FPGA Design tips, Logic Synthesis for FPGA, Static Timing Analysis

Practice

1. Design mapping and optimization
2. Analyze and resolve design problems
3. Report generation
4. Verilog gate-level netlist generation and post-synthesis timing data (SDF) extraction
5. Design constraints generation for placement and routing

Text Books:

1. M.Morris Mano., “Digital Design”, Pearson Education, 4th Edition.
2. Palnitkar, S. (2003). Verilog HDL: a guide to digital design and synthesis (Vol. 1). Prentice Hall Professional.

Reference Books:

2. Jain, R. P. (2003). Modern digital electronics. Tata McGraw-Hill Education.

Electromagnetic Field Theory & Transmission Lines

Code	Course Title	Credit	T-P-PJ
CUTM1042	Electromagnetic Field Theory & Transmission Lines	3	2-1-0

Objective

- To introduce the fundamental theory and concepts of electromagnetic waves and transmission lines
- To impart knowledge on the concepts of electrostatics, electric potential, energy density and their applications.
- To impart knowledge on the concepts of magnetostatics, magnetic flux density, scalar and vector potential and its applications.
- To impart knowledge on the concepts of Faraday's law, induced emf and Maxwell's equations.
- Model and design the transmission lines at high frequencies.
- To apply Smith chart use for solution of transmission line problems and impedance matching.

Course Outcome

- Apply the principles of electrostatics to the solutions of problems relating to electric field and electric potential.
- Apply the principles of electrostatics to the solutions of problems relating to boundary conditions and electric energy density.
- Apply the principles of magnetostatics to the solutions of problems relating to magnetic field and magnetic potential,
- Apply the principles of magnetostatics to the solutions of problems relating to boundary conditions and magnetic energy density.
- Understand the concepts related to Faraday's law, induced emf and Maxwell's equations.
- Apply Maxwell's equations to solutions of problems relating to transmission lines and uniform plane wave propagation.

Course content

Module I: Electrostatics

(3hrs Theory + 2hrs Practice)

Introduction to Electrostatic Fields, Gauss's Law and Applications, Electric Potential, Maxwell's Two Equations for Electrostatic Fields, Electric Current and Current Density, Continuity Equation, Relaxation Time, Laplace's and Poisson's Equations.

Practice:

1. To Calculate the Electric field of a dipole using Coulomb's law in Matlab
2. Simulation of Electric Potential and Electric Field in Matlab

Module II: Magnetostatics**(3hrs Theory + 2hrs Practice)**

Biot-Savart Law: Current Flow – which path does it take, Ampere's Circuital Law, Magnetic Flux Density: Closed Loop Circuits, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Inductances and Magnetic Energy.

Practice:

1. Magnetic field by an infinitely long line current using matlab
2. Magnetic field of a Circular current loop using Biot Savart's Law

Module III: Maxwell's Equations**(3hrs Theory + 1hr Practice)**

Maxwell's Equations and Boundary Conditions.

Practice:

1. Maxwell's Equation using matlab

Module IV: Electromagnetic Waves (3hrs Theory + 4hrs Practice)

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves, Wave Propagation in Lossless and Conducting Media, Polarization, Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance. Poynting Vector and Poynting Theorem.

Practice:

1. Linear and Circular Polarization of waves using matlab
2. 1-D standing wave using matlab
3. 2-D standing wave (TE) using matlab
4. 2-D standing wave (TM) using matlab
5. Design of Wireless Power Transfer using matlab

Module V: Introduction to Transmission Line Modelling (3hrs Theory + 3hrs Practice)

Introduction to Transmission line equations, Primary & Secondary constants Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Losslessness/Low Loss Characterization, Distortion, Loading, Transmission Line Effects, SC and OC Lines,

Reflection Coefficient, VSWR, $\lambda/8$, $\lambda/4$, $\lambda/2$ line impedance Transformations, Smith Chart – Configuration and Applications, Impedance Control.

Practice:

1. Reflection and transmission of a plane wave (S-wave)
2. Reflection and transmission of a plane wave (P-wave)
3. Radiation by an infinitesimal dipole

Module VI: Waveguides

(3hrs Theory)

Introduction, Rectangular Waveguides, electric and magnetic field patterns in TE₁₀ and TE₁₁ mode configuration, modes of TE wave in rectangular waveguide, field equations, impossibility of TEM wave propagation in waveguides, cutoff frequency of rectangular waveguide, propagation constant, wave impedance, phase velocity, group velocity, dominant mode and degenerate modes, related problems.

Module VII: Electromagnetic Computational Techniques

(3hrs Theory)

Introduction, Finite Difference Method (FDM), Finite Element Method (FEM) and Method of moments (MOM) technique.

Text Books:

1. Matthew N.O. Sadiku, “Elements of Electromagnetics”, Oxford Univ. Press.
2. G.S.N.Raju, “Electromagnetic Field Theory and Transmission Lines”, Pearson Education (Singapore) Pvt., Ltd.

Reference:

Network Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1043	Network Analysis	3	2-1-0

Objective

- To learn techniques of solving circuits involving different active and passive elements.
- To deliver problem solving skills on circuits through the application of simulation & programming techniques and principles to common circuit problems.
- To analyze the behavior of the circuit's response in time domain.

Course Outcome

- Apply the knowledge of basic circuit law and simplify the network using different techniques.
- Analyze the circuit using graphical method and network theorems.
- Infer and evaluate transient response, Steady state response
- Obtain the maximum power transfer to the load, and Analyze the series resonant and parallel resonant circuit.
- Evaluate two-port network parameters.

Course Content

Module I

(4 hrs)

Network Topology

Graph of a network, Concept of tree, Incidence matrix, Tie-set matrix, Cut-set matrix, Formulation and solution of network equilibrium equations on loop and node basis

Practice

- Incidence Matrix Formulation
- Tie-set Matrix Formulation
- Cut-set Matrix Formulation

Module II

(5 hrs)

Network Theorems

Substitution theorem, Reciprocity theorem, Maximum power transfer theorem, Tellegen's theorem, Millman's theorem, Compensation theorem

Practice

- Verification of Reciprocity theorem
- Verification of Tellegen's theorem
- Verification of Millman's theorem
- Verification of Maximum power transfer theorem
- Verification of Compensation theorem

Module III
Coupled Circuits

(5 hrs)

Theory

Coupled Circuits, Dot Convention for representing coupled circuits, Coefficient of coupling, Series and parallel resonant circuits: Band Width and Q-factor

Practice

1. Self-inductance, mutual inductance and coefficient of coupling to be determined for a 1- \emptyset transformer representing coupled circuit.
2. Frequency response of a series and parallel resonant circuit by laboratory set up.

Module IV
Network Laplace Transform

(5 hrs)

Application of Laplace transform: Circuit Analysis (Steady State and Transient)

Practice:

- Analysis of transient characteristics using Matlab
- AC and DC transient response analysis for RL,RC and RLC circuits

Module V
Two Port Network

(5 hrs)

Z, Y, ABCD and h-parameters, Reciprocity and Symmetry, Interrelation of two-port parameters, Interconnection of two-port networks

Practice:

- Determination of Z parameters
- Determination of Y parameters
- Determination of h parameters
- Determination of ABCD parameters

Module VI
Filters

(4 hrs)

Brief idea about network filters (Low pass, High pass, Band pass and Band elimination) and their frequency response

Practice:

- Design and frequency response analysis of Low Pass filter
- Design and frequency response analysis of High Pass filter
- Design and frequency response analysis of Band Pass filter
- Design and frequency response analysis of Band elimination filter

Module VII
Fourier Series

(5 hrs)

Theory

Fourier series, Fourier analysis and evaluation of coefficients, Steady state response of network to periodic signals, Fourier transform and convergence, Fourier transform of some functions

Practice:

- Fourier series expansion of Square wave
- Fourier series expansion of Sine wave

Text Books:

1. *M. E. VAN VALKENBURG- Network Analysis, PHI Publications*
2. *A K Chakraborty, “Network Theory,” DhanpatRai Publication*
3. *MAHMOOD NAHVI – Electric Circuits, SCHAUM’S Outlines Fifth Edition*

2. *Dr. B.R.GUPTA-Network Analysis & Synthesis, S.Chand*

Energy Production & Transmission

Code	Course Title	Credit	T-P-PJ
CUTM1051	Energy Production & Transmission	3	2-1-0

Course Objective

- | |
|---|
| <ul style="list-style-type: none"> • To understand power generation and economics • To design the transmission line parameters • To understand the mechanical design of transmission lines |
|---|

Course Outcome

- | |
|--|
| <ul style="list-style-type: none"> • Able to understand the different functions of major equipment of the power plants and layout designing of the plants |
|--|

- Able to understand the economic aspects of power system generation
- Able to design transmission line cables

Course content

Module I: Thermal & Nuclear Power Plants

(6Hours)

Introduction: Statistics of generation of electric power from Conventional and non conventional sources of energy, Thermal & Nuclear power station: Schematic arrangement, Types of prime movers, types of reactors, speed control & auxiliaries, Environmental aspects for selecting the sites and locations, Hazards.

Practice:

1. Schematic Layout design Thermal Plant using AutoCad
2. Schematic Layout design Nuclear Plant using AutoCad

Module II: Hydro & Wind power plants

(4Hours)

Hydro power station: Schematic arrangement, Hydro turbines, Environmental aspects for selecting the sites and locations of hydro power stations, small hydro for irrigation, Wind power generation.

Practice:

3. Schematic Layout design of Hydro Plant using AutoCad

Module III: Power Generation Tariffs

(5Hours)

Tariff and Economic aspects in power Generation: Terms commonly used in system operation, various factors affecting cost of generation: Load curves, load duration curves, Connected load, maximum load, Peak load, base load and peak load power plants, load factor, Plant capacity factor, Plant use factor, Demand factor, diversity factor, Cost of power plant.

Practice: MATLAB

4. Preparation of Load calculator using MATLAB

Module IV: Transmission systems

(4 Hours)

Supply System: Different kinds of supply system and their comparison, choice of transmission voltage. Transmission Lines: Configurations, types of conductors, resistance of line, skin effect, Kelvin's law, Proximity effect,

Module V: Transmission line Parameters

(5 Hours)

Calculation of inductance and capacitance of single phase, three phase, single circuit and double circuit transmission lines, Representation and performance of short, medium and long transmission lines, T & Pi networks, ABCD parameters, Ferranti effect, Surge impedance loading.

Practice:

5. Designing of transmission line parameters using MATLAB

Module VI: Transmission line operation & Insulators**(5Hours)**

Phenomenon of corona, corona formation, calculation of potential gradient, corona loss, factors affecting corona, methods of reducing corona and interference Electrostatic and electromagnetic interference with communication lines.

Overhead line Insulators:

Type of insulators and their applications, potential distribution over a string of insulators, methods of equalizing the potential, string efficiency.

Practice:**6. Designing of Insulators and calculation of voltages using MATLAB****Module VII: Design of cables****(4 Hours)**

Calculation of sag & tension, effects of wind and ice loading, sag template, vibration dampers. Under Ground Insulated cables: Type of cables and their construction, dielectric stress, grading of cables, insulation resistance, capacitance of single phase and three phase cables, dielectric loss, heating of cables, Transmission line tower designs

Practice:**7. Designing of Cables****Text Books:**

1. Electrical power Generation, Transmission and Distribution S.N. Singh PHI 2nd Edition, 2009

Reference Books:

1. A Text Book on Power System Engineering A.Chakrabarti, Dhanpath Rai 2nd Edition

Substation Switch Gear & Protection

Code	Course Title	(Credit)	T-P-PJ
CUTM1052	Substation Switch Gear & Protection	4	2-1-1

Objective

- To understand the different components of substation.
- To understand the protection of different equipment in power system.

Course Outcome

- Able to understand the performance of different protection methods of different equipments.

- Able to understand the different components of substation and their operation.
- Able to design the power system switchgear.

Course content

Module I: Substation Systems

(6 Hours)

Introduction to Substation System: Definition of substation, necessity of substation, essential features, types of substation, single line diagram of substation, List and functions of each component of substation. Auxiliary systems, Over head earthing screen, Sub-station earthing system.

Practice:

1. Layout Design of 220KV substation using MATLAB
2. Layout Design of 400KV & 750KV substation using MATLAB as per IEEE standards

Module II: Operation & Maintenance of Substations

(10 Hours)

Testing and maintenance of Bus Bars, and Isolators: Types and ratings – Bus bar configuration, Tests on Bus bars. Types of isolators and ratings, Load Break switches, Maintenance of isolators, testing and maintenance of Power Transformers, Current and Voltage Transformers and Insulators: Preliminary tests, Final tests, Impulse test, Partial discharge test, Transformer maintenance. Current Transformer tests, Potential Transformer tests. CT and PT maintenance, Tests and maintenance of insulator

Practice:

3. Maintenance tests of CT & PT of substation as per manufacturers Hand book
4. Maintenance tests of Lightning Arrestor & Circuit Breaker of substation as per manufacturers Hand book
5. Maintenance tests of transformer as per manufacturers Hand book

Module III: Protection & System components

(5 Hours)

Need for protective schemes, Nature and Cause of Faults, Types of Fault, Effects of Faults, Zones of Protection, Primary and Backup Protection, Essential Qualities of Protection, Classification of Protective Relays, Automatic Reclosing, Current Transformers for protection, Voltage Transformers for Protection.

Module IV: Relays

(4 Hours)

Introduction, -Electromechanical Relays, Static Relays – Merits and Demerits of Static Relays, Numerical Relays, Comparison between Electromechanical Relays and Numerical Relays.

Practice:

6. Designing of a Digital Relay

Module V: Relay Operations

(7 Hours)

Introduction, Time – current Characteristics, Current Setting, Time Setting, Overcurrent Protective Schemes, Reverse Power or Directional Relay, Protection of Parallel Feeders, Protection of Ring Mains, Earth Fault and Phase Fault Protection, Combined Earth Fault and Phase Fault Protective Scheme, Phase Fault Protective Scheme, Directional Earth Fault Relay, Static Overcurrent Relays, Numerical Overcurrent Relays.

Module VI: Protection control systems

(5Hours)

Pilot Relaying Schemes: Introduction, Wire Pilot Protection, Carrier Current Protection
Numerical Differential Relays: Simple Differential Protection, Percentage or Biased Differential Relay, Differential Protection of 3 Phase Circuits, Balanced (Opposed) Voltage Differential Protection.

Rotating Machines Protection: Introduction, Protection of Generators

Transformer and Buszone Protection: Introduction, Transformer Protection, Buszone Protection, Frame Leakage Protection

Practice:

7. Design of Protection Scheme using MATLAB

Module VII: Circuit Breakers

(8 Hours)

Introduction, Fault Clearing Time of a Circuit Breaker, Arc Voltage, Arc Interruption, Restriking Voltage and Recovery Voltage, Current Chopping, Interruption of Capacitive Current, Classification of Circuit Breakers, Air – Break Circuit Breakers, Oil Circuit Breakers, Air – Blast Circuit Breakers, SF6 Circuit Breakers, Vacuum Circuit Breakers, High Voltage Direct Current Circuit Breakers, Rating of Circuit Breakers, Testing of Circuit Breakers.

Practice:

8. Design & simulation of Circuit breaker using 3DS Tools

Project:

1. Analysis of critically operating power system using MATLAB/DYMOLA

Text Books:

1. Fundamentals of Power System Protection Y.G.Paithankar S.R. Bhide PHI 1 st Edition, 2009

Reference Books:

1. Power System Protection and Switchgear, BhuvaneshOza et al McGraw Hill 1 st Edition, 2010

System Modeling & Control

Code	Course Title	(Credit)	T-P-PJ
CUTM1053	System Modeling and Control	4	3-1-0

Objective

- To teach how to convert a physical systems consist of mechanical and electrical system into a mathematical model.
- Analysis of a live system in time domain and frequency domain and application of controllers to get the desired response.

Course Outcome

- Students will understand the basics of a system.
- Student gain knowledge on stability of a system.
- Student will analyze the system and controller.
- Students will develop skill of designing automatic control system and controller for a particular application.

Course content

Module I: Introduction

(6 Hours)

Theory

Introduction to Control Systems: Basic Concepts of Control Systems, Open loop and closed loop systems; Servomechanisms, Laplace transform, Transfer functions, Concept of Pole and Zero.

Practice: Hardware/MATLAB

1. Study of Temperature control system
2. Using MATLAB, find the poles, zeros, gain and draw the pole-zero plot of the transfer function.

Module II: System Dynamics

(10 Hours)

Theory

Mathematical Models of Physical Systems: Differential Equations of Physical Systems, Mechanical Translational Systems, Rotational systems, Electrical Systems, Analogy between Mechanical and electrical quantities, Derivation of Transfer functions, Block Diagram Algebra, Signal Flow Graphs and Mason's Gain Formula.

Practice: MATLAB

3. Using MATLAB, find the transfer function from given block diagram.

Module III: Time Response Analysis

(8Hours)

Theory

Time Response Analysis: Type Test Signals, Time response of first order systems to unit step and unit ramp inputs, Time Response of Second order systems to unit step input, Time Response specifications, Steady State Errors and Static Error Constants of different types of systems.

Practice: MATLAB/DYMOLA

4. Standard Test Signals
5. Time response of first order systems to unit step and unit ramp inputs
6. Time Response of Second order systems to unit step input
7. Using MATLAB, determine the steady state error of the given system.

Module IV: Stability in Time Domain

(4 Hours)

Theory

Stability in Time Domain: Stability and Algebraic Criteria, concept of stability, Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion and Application of the Routh stability criterion to linear feedback system

Module V: Root Locus Technique

(5 Hours)

Theory

Root Locus Technique: Root locus concepts, Rules of Construction of Root locus and Determination of Roots from Root locus for a specified open loop gain.

Practice: MATLAB

8. Construct the root locus for 2nd & 3rd order system and analyze its stability (Gain)

Module VI: Frequency Response Analysis

(6Hours)

Theory

Frequency Response Analysis: Frequency domain specifications, correlation between Time and Frequency Response with respect to second order system, Bode plot, Determination of Gain Margin and Phase Margin from Bode plot.

Practice: MATLAB

9. Construct the bode plot for 2nd and 3rd order system and analyze its stability (PM & GM)

Module VII: Controllers

(4 Hours)

Theory

Controllers: Concept of Proportional, Derivative and Integral Control actions, P, PD, PI and PID controllers.

Practice: MATLAB/DYMOLA

10. Design of P, PD, PI and PID Controller for 2nd or 3rd order system

Text Books:

1. Saeed S. Hasan, "Automatic Control Systems," Kataria Publication, 9th Edition-2017.

Reference Books:

2. Nagrath J. and Gopal M., "Control Systems Engineering," New Age International Publishers, 6th Edition-2017.

Electrical Machines Operation and Control

Code	Course Title	T-P-PJ	Prerequisite
CUTM1054	Electrical Machines Operation and Control	3-1-0	Basic Electrical Engineering

Objective

- To introduce the students about principles of electromagnetism applied to alternating machines.
- To familiarize the students about the fundamental laws that governs the operation of machines and to extend its application to synchronous generator and motors.
- To introduce the students about the constraints associated with starting of Induction motors.
- Develop selection skill to identify the type of generators or motors required for particular application.
- Highlight the importance of transformers in transmission and distribution of electric power.

Course Outcome

- Distinguish the constructional similarity and dissimilarity between various machines.
- Perform different tests on various machines.
- Understand electromagnetic and electromagnetic induction
- Understand DC Machines
- Understand single and three phase A.C circuits, and Understand AC machines

Course content

Module-I: D.C. Machines (5 Hrs)

Theory

Construction, Classification and Principle of operation of DC machines.

Theory & testing:-EMF equation of DC generator, DC Motor Characteristics, Speed Equation of DC Motor. Characteristic for Speed Armature Current, Torque Armature Current and Speed Torque of (i) Separately Excited DC Motor, (ii) DC Shunt Motor, (iii) DC Series Motor, and (iv) DC Compound Motor, Comparison between Different types of DC Motors

Application- DC Generator, DC Motor-Types

Practice:

- 1) Determination of OCC (Open Circuit Characteristics) of D.C Shunt Generator.
- 2) Starting & Speed Control of D.C Shunt motor by (i) Field flux control method & (ii) armature voltage control method.
- 3) Starting & Speed Control of D.C Series motor by (i) Field flux control method & (ii) armature voltage control method.

MODULE II: Stepper Motors (Precision Machines) (6 Hrs)

Theory

Stepper motor drive, basic principles involved in stepper motor control, stepper motor specification, operation and commercial driver chips and packages, Brushless DC Motors, Reluctance Motor, Hysteresis Motor
Application in Medical, Automobile, Civil, Electrical etc

Practice:

- 4) Motor Voltage and Current Measurement.
- 5) ON-Load Tap changer

Module-III: Induction Motors (8 Hrs)

Theory

Principles of operation of induction motors, both single and 3-phase types. Torque-speed curves, Different types of single phase motors

Three Phase Induction Motor

Equivalent Circuit and Phasor Diagram, No-Load and Blocked Rotor tests, Determination of Parameters, Slip-Torque Characteristics Losses and Efficiency, Effect of rotor resistance, Starting and speed control methods, Cogging, Crawling and Electrical Braking of Induction Motors.

Applications of three & single phase motors which will assist in picking the right one for an application.

Practice:

- 5) Determination of parameter of a single phase induction motor and study of (a) Capacitor start induction motor (b) Capacitor start and capacitor run induction motor
- 6) Determination of Efficiency, Plotting of Torque-Slip Characteristics of Three Phase Induction motor by Brake Test.
- 7) Load test of a 3 phase slip ring induction motor.

Module-IV: Three Phase Synchronous Generators (7 Hrs)

Theory

Construction, Principle, Coil Pitch, Distributed Windings in A.C. Machines, The Equivalent Circuit of a Synchronous Generator (Armature Reaction Reactance, Synchronous Reactance and Impedance). The Phasor Diagram of a Synchronous Generator, Power and Torque in Synchronous Generators (Power Angle Equation and Power Angle Characteristic)

Practice:

- 8) Plotting the open circuit and short circuit characteristics of alternator.
- 9) Calculating the voltage regulation by synchronous impedance method.
- 10) Calculating the voltage regulation by zero power factor method.

Module-V: Parallel Operation Of Three Phase AC Synchronous Generators (4 Hrs)

Theory

Synchronous condenser, Hunting, Paralleling-Conditions, Procedure, Operation of Generators in Parallel with Infinite bus bar, Effect of excitation, effect of unequal voltage and steam power supply.

Practice:

- 11) Connection & verifying the conditions of parallel operation of alternators.
- 12) Verification of direct axis reactance, quadrature axis reactance
- 13) Load Sharing during parallel operation using Dymola.

Module-VI: Three Phase Synchronous Motors (6 Hrs)

Theory

Basic Principles of Motor operation, Construction, Starting Synchronous Motors, Synchronous Motor Ratings, Equivalent circuit & phasor diagram, Effect of excitation on varying load, power developed in a synchronous motor.

Applications of synchronous motors

Practice:

14) Study of universal motor and shaded pole motor.

15) Use of synchronous motor as a synchronous condenser for p.f improvement.

Module-VII: Single-Phase Transformers (9 Hrs):

Theory

Construction and principle of operation, EMF Equation, Transformation ratio, Practical and Ideal transformers

Three Phase Transformers: Three-phase transformer connections- Star-star, Two Single-Phase Transformers connected in Open Delta (V-Connection) and their rating, Delta-star, Zig-zag connections. Scott connection, Open delta connection. Auto Transformers, Welding Transformer.

Application of Single & Three Phase transformer

Practice:

16) Prescribed tests of single phase and three phase Transformer.

17) Load balancing in a three phase distribution Transformer.

18) Simulation of open delta condition of Transformer.

TEXT BOOK:

1. Electrical Machines – D P Kothari and I J Nagrath, Fourth Edition – Tata McGraw Hill.

REFERENCE BOOKS:

1. Electrical Machinery – P S Bimbhra – Khanna Publishers.
2. Electrical Machines - P. K. Mukherjee, S. Chakravarti, Dhanpat Rai & Sons

Industrial Power Electronics

Code	Course Title	Credit	T-P-PJ
CUTM1055	Industrial Power Electronics	4	2-1-1

Course Objective

- They must meet industrial requirement for power electronic engineers.
- They must be gaining adequate practical knowledge on power semiconductor devices, converters and their control techniques.
- They should know the typical applications to motor drives.

Course Outcome

- They will apply their knowledge of the electrical characteristics of power semiconductor devices.
- They will know how to select power semiconductor devices for a range of applications.
- They will understand the basic topology of converters, inverters and power supplies and design calculations for drive
- They will learn the power converter applications, and understand the approximations used.

Course content

Module I (6hrs.)

Power Semiconductor Devices

Introduction to power electronics, uncontrolled switches, semi-controlled switches, fully controlled switches, constructional features, operating principle, characteristics and specification of power semiconductor devices, hard and soft switching of power semiconductor switches.

Practice

1. Simulation of V-I characteristics of power diode & power transistor.
2. Simulation of V-I characteristics of MOSFET & IGBT.
3. Simulation of V-I characteristics of silicon-controlled rectifier.

Module II (3 hrs.)

Triggering Circuits

R- Triggering, R-C triggering, UJT triggering, design of UJT triggering circuit.

Practice

4. Simulation of R and RC triggering.
5. Simulation of UJT triggering

Module III (8 hrs)

AC to DC Converter

Overview of rectifiers, half wave uncontrolled rectifier with R load and R-L load, use of freewheeling diode, half wave rectifier R-L load with FWD, full wave bridge uncontrolled rectifier, half wave controlled rectifier with R load, R-L load and R-L load with free-wheeling diode, half controlled bridge rectifier, fully controlled bridge rectifier, effect of source inductance on the performance of ac to dc converters, power factor improvement, harmonic reduction, filter design.

Practice

6. Simulation of single phase half-wave and full-wave diode rectifier using R & L load.

7. Simulation of single phase fully controlled converter using R & L load.

8. Simulation of single phase semi converter using R-L load.

9. Simulation of 3-phase semi converter with R, R-L and dc motor load with/without freewheeling diode.

10. Simulation of 3-phase bridge converter with R, R-L and dc motor load with/without freewheeling diode.

Module IV: (10 hrs.)

DC to DC Converter

Introduction to chopper (Type A, B, C, D, E), switching techniques, step down dc chopper with R load, R-L-E load, step up dc chopper with R, R-L, R-L-E load, buck regulator, boost regulator, Buck-boost regulator, CUK and SEPIC converter, commutation of thyristor based circuits part-I, commutation of thyristor based circuits part-II, introduction to SMPS circuits, fly back type SMPS, forward type SMPS, design of transformer for SMPS circuits.

Practice

11. Simulation of buck converter.

12. Simulation of boost converter.

13. Simulation of buck boost converter.

Module V (6 hrs.)

DC to AC Converter

Introduction to inverters, importance and application of inverters, single phase half bridge inverter with R and R-L load, single phase bridge inverter with R and R-L load, three phase inverters, control techniques of inverter, single/multiple pulse width modulation, sinusoidal pulse width modulation and its realization, CSI, load-commutated CSI, industrial inverter.

Practice

14. Simulation of single-phase inverter & three phase inverter.

Module VI (3 hrs.)

AC to AC Converter

AC voltage controller: Single phase bi-directional controllers with R and R-L load, single phase cyclo-converters.

Practice

15. Simulation of single phase AC voltage controller&cyclo-converter.

Module VII

(9 hrs)

Application of Power Electronics Converters

Analysis of converter fed dc drives, analysis of chopper fed dc drives, analysis of VSI, CSI fed induction motor drives, automotive & traction system, industries as rolling mills, pumps, elevators, utility systems as FACTs, smart grid, and renewable energy as wind turbine.

Practice

16. Simulation of converter fed dc drives (Wind Turbines).

17. Simulation of chopper fed dc drives (PV Systems).

18. Simulation of induction motor drives (e-Vehicle).

19. Simulation of railway electrification system using Dymola

Project

1. 500 VA Sine wave Inverter

2. Industrial Battery Charger using SCR

3. Precision Illumination control of Lamp

4. Dual Converter using Thyristors

Text Books:

1. M. H. Rashid, "Power Electronics: Circuits, Devices and Applications," 4th Edition, Pearson, 2017
2. M. D. Singh & K. B. Khanchandani, "Power electronics", 2nd Edition, Tata McGraw-Hill, 2008

Reference Books:

1. J. Vithayathil, "Power Electronics: Principles and Applications", 2nd Edition TMH Edition, 1995
2. Mohan, Undeland and Robbins, "Power Electronics: Converters, Applications and Design" 3rd Edition Edition, 2007

Digital Measurement and Instrumentation

Code	Course Title	Credit	T-P-PJ
CUTM1056	Digital Measurement and Instrumentation	3	2-1-0

Objective

- The main objective of this course is to explain the operation, performance and application of Digital Measuring Instruments to the students.

Course Outcome

- Understand the construction, principle and characteristics of different types of digital measuring instruments
- Apply the knowledge about different instruments and can identify the best suitable instrument for a required typical measurement

Course Content

Module I (6 hrs)

Philosophy of digital measurements

Time Measurement Techniques: Error analysis in digital measurement, Measurement of time interval between two events, Error in time interval measurement, Vernier technique for small time measurement, Measurement of time interval with constraints, Measurement of periodic time, phase, Quality factor of ringing circuit, Decibel meter, Software controlled measurement.

Practice

- Error analysis of digital measurement using Matlab
- Simulation of Quality Factor of ringing circuit

Module II (5 hrs)

Digital frequency measurement techniques

Measurement of frequency, Ratio of two frequencies, Product of two frequencies, High frequency, average Frequency difference, Deviation of power frequency, Peak frequency. Fast low-frequency measurement, Digital Tachometer.

Practice

- Addition and product of different frequencies using Matlab
- Simulation of digital tachometer using Matlab

Module III (5 hrs)

Digitally Programmable Circuits

Single mode switching, Group mode switching, Resistors, Potentiometers, Amplifiers, Schmitt trigger, Dual polarity gain amplifiers. Programmable gain amplifier with dual output, Two stage programming, Programmable Biquads.

Practice:

- Analysis of switching using Matlab
- Simulation of programmable biquads using Matlab

Module IV (4 hrs)

Digital to Analog Converters

Output Input relation, DACs derived from programmable gain amplifiers, Weighted-resistor DAC, Weighted current DAC, Weighted reference voltage DAC, Ladder DAC, Switches.

Practice:

- Simulation of programmable gain amplifier using Matlab
- Simulation of DAC using Matlab

Module V (5 hrs)

Digital Voltage Measurement Techniques

Sampling theorem, Time-division multiplexing, Quantization, Indirect type A/D converters, Direct type A/D converters, Input circuitry of a digital voltmeter.

Practice:

- Simulation of Digital voltmeter using Matlab
- Analysis and simulation of digital multi-meter.

Module VI (4 hrs)

Digital Instrument

Need for digital instruments, Advantages of digital instruments, Essentials of digital instrument, Performance characteristics of digital instrument.

Digital Recording Systems

Input Conditioning Equipment, Digitizer, Multiplexer, Programme Pinboard, Linearizer, Digital Clock, Limit Detectors, Output Devices

Practice:

- Data fetching using controllers
- Simulation of digital clock using Matlab

Module VII: (4 hrs)

Signal Generator, Analyzers and Oscilloscopes:

Function Generator, Pulse Generator, RF Signal Generator, Harmonic Distortion Analyzer, Spectrum Analyzer, Digital Storage CROs

Practice:

- To study block wise Construction of a Function Generator
- Measure Voltage, Frequency, Phase and Modulation Index (Trapezoidal Method) using CRO
- Demonstrate features of Digital Storage Oscilloscope
- Measure unknown Frequency using Lissajous Patterns

Text Books:

1. T. S. Rathore- Digital Measurement Techniques, Alpha Science International Ltd
2. David A. Bell - Electronic Instrumentation and Measurements, Oxford Univ. Press, 1997
3. A. K. Sawhney – A Course in Electrical and Electronic Measurements and Instrumentation, Dhanpat Rai & Co

Reference Books:

1. PrithwirajPurkait- Electrical and Electronics Measurement and Instrumentation, MC Graw Hill Publishers
2. H.S. Kalsi-Electronic Instrumentation, Tata McGraw-Hill, New Delhi, 2010
3. R. K. Rajput- Electrical & Electronic measurement and Instrumentation, S. Chand Publication
4. K. Lal Kishore- Electronic Measurements and Instrumentation, Pearson Education 2010

Basic Electrical Engineering

Code	Course Title	(Credit)	T-P-PJ
CUTM1057	Basic Electrical Engineering	2	1-1-0

Objective

- In this course, student will come to know about the Basics of Electrical Engineering, Currents and Voltages across various Electrical elements.
- Their behavior in both Alternating Current and Direct Current circuits.
- Analysis of 1-phase and 3-phase AC wave forms.

Course Outcome

- Student will be exposed to the breadth of electrical engineering, able to gain knowledge in Electrical Circuits (AC and DC).
- Acquire knowledge on various parameters of electrical engineering and their properties with hands-on-practice of basic electrical experiments.

Course content

Module I: Basic Concepts and Basic Laws

(4hrs)

Theory

Essence of Electricity, Electric Field; Electric Current, Potential and Potential Difference, E.M.F., Electric Power, Ohm's Law, Basic Circuit Components, Ideal and Practical Sources, Source Conversion.

Practice:

1. Design and Analysis of Basic electrical circuits using Dymola. Plotting the V-I Characteristics of Incandescent lamp using Dymola.

Module II: Methods of Analysis (4hrs)

Theory

Network Analysis using Series and Parallel Equivalent, Voltage and Current Divider Circuits, Nodal Analysis, Mesh Analysis, Delta-Star & Star-Delta conversion.

Practice :

2. Verification of KCL and KVL in series and parallel circuits using Dymola.

Module III: DC Network Theorems (3hrs)

Theory

Analysis of Superposition, Thevenin's and Norton's theorem.

Practice:

3. Verification of Superposition, Thevenin's and Norton's theorem using Dymola.

Module IV: Introduction to Electromagnetism (4hrs)

Theory

Magnetic Circuits, B-H curve, Permeability, Reluctance, Solution of simple magnetic circuits, Hysteresis and Eddy current loss. Methods of preventing such losses. Solenoids and field coils. Application of solenoids in different circuits in Automobiles and in electrical circuit.

Practice (Hardware):

4. Observation of generation of magnetic flux for different input current in a coil and plotting B-H Curve.

Module V: Single-Phase Transformer (2hrs)

Practice (Hardware):

5. Study of Transformers, Linear Transformer Model, Ideal Transformer Model, No-load Loss and Load-loss Calculation.

Module VI: AC Circuit Analysis (3hrs)

Theory

Single-phase EMF Generation, Waveform and Phasor Representation, Average and Effective value of sinusoids, Peak factor & Form factor, Complex Impedance and Power using j-operator, Power factor.

Practice:

6. Calculation of current, voltage, power & power factor of series RLC circuit excited by 1- \emptyset A.C Supply using Dymola.

Module VII: Phasor Analysis (3hrs)

Theory

Three-Phase AC Circuits: Comparison between single-phase and three-phase systems, Three-phase EMF Generation, Line and Phase quantities in star and delta networks, Power and its measurement in three-phase balanced circuits.

Practice

7. Measurement of power and power factor in a 3- \emptyset AC circuit by (one, two and three) wattmeter using Dymola.

Recommended Books:

1. P. K. Sathpathy, "Basic Electrical Engineering," 3rd Edition, Oxford.
2. B. L. Thereja, "Electrical Technology", Volume-I, 2005 Edition (24th Revised Edition)
3. Hughes, "Electrical & Electronic Technology", Ninth Edition (Revised by J Hiley, K Brown, and I Smith), Pearson Education

Industrial Automation

Code	Course Title	(Credit)	T-P-PJ
IACU2100	Industrial Automation	24	5-9-10

Course Code	Course Title	Credits	Type T-P-PJ
CUIA2100	Introduction to Industrial Automation	1	1-0-0
CUIA2101	Advanced Programming & Control Blocks of PLC	3	1-2-0
CUIA2102	Control & Signal Wiring of PLC	2	0-2-0
CUIA2103	SCADA based advanced features	2	1-1-0
CUIA2104	SCADA & PLC based sequential control	1	0-1-0
CUIA2105	Human Machine Interface	3	1-2-0
CUIA2106	OPC server base data fetching & control	2	1-1-0
CUIA2107	Project	6	0-0-6
CUIA2108	Internship	4	0-0-4
	Total Credits	24	

Domain Track Objectives

- To upgrade knowledge levels needed for modern industries.
- Process & sequential control logic of industry.
- Project based training.

Domain Track Course Outcomes

- Gain knowledge on advanced industrial automation.
- Understand different types of Devices to which PLC input and output modules are connected.
- Provide the knowledge about understand various types of mobile applications.
- Industry based project & advanced learning.
- Students will develop skill of designing automatic control system and controller for a particular application.

Domain Syllabus

Course – 1: INTRODUCTION TO INDUSTRIAL AUTOMATION

- 1.1 Automation Uses
- 1.2 Automation - PLC Basics
- 1.3 Mechanical relays versus PLC
- 1.4 Functions of various blocks and working principle of advanced blocks.

Course – 2: ADVANCED PROGRAMMING & CONTROL BLOCKS OF PLC

- 2.1 CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD
- 2.2 MOV, MVM, AND, OR, XOR, NOT, CLR.
- 2.3 BSL, BSR, SQC, SQL, SQO, FFL, FFU, LFL, LFU
- 2.4 JMP, LBL, JSR, MCR
- 2.5 Connecting PLC software with SCADA software

Practice:

- P2.1 - Comparison of industry based analog signals.
- P2,2 - Detecting different product output of an industry
- P2.3 - Sequential control of an industry by using advanced blocks.
- P2.4 - Emergency control system of an industry
- P2.5 - Connecting PLC software with SCADA software

Course – 3: CONTROL & SIGNAL WIRING OF PLC

- 3.1 Control wiring of PLC.
- 3.2 PLC, Sensor and field instruments signal flow wiring.
- 3.3 Device connectivity

Practice:

- P3.1 PLC input/output wiring concept.

P3.2 Connecting relay, contactor, sensors and other field instruments.

P3.3 Controlling an industry motor using STAR-DELTA connection

Course – 4: SCADA BASED ADVANCED FEATURES

4.1 Alarms

4.2 Trends, Data base connectivity & Report generation

4.3 Recipe management

4.4 Security

Practice:

P4.1 - Data fetching and representing on graph and excel

P4.2 - Advanced controlling of industry by using SCADA

Course – 5: SCADA & PLC BASED SEQUENTIAL CONTROL

5.1 Script

5.2 Networking

5.3 Device connectivity.

Practice:

P5.1 Script

P5.2 Networking

P5.3 Device connectivity

Course – 6: HUMAN MACHINE INTERFACE

6.1 What is HMI. Use of HMI

6.2 Concept of different operational features

6.3 Connectivity of HMI and PLC.

Practice:

- P6.1 Alarms
- P6.2 Security
- P6.3 Recipe manager

Course – 7: OPC SERVER BASE DATA FETCHING & CONTROL

- 7.1 Study of Open Platform Communications
- 7.2 OPC to control PLC, SCADA.
- 7.3 OPC based different protocol concept.
- 7.4 Data handling using OPC.

Practice:

- P7.1 Installation of OPC
- P7.2 OPC protocols
- P7.3 Connectivity of PLC, SCADA & ARDUINO to OPC.

Operation and Maintenance of Electrical Grid System & Transformers

Domain Name	Code	Type of course	T-P-P	Pre-requisite
Operation and Maintenance of Electrical Grid System & Transformers	EGCU2090	Theory + Practice + Project	6-14-4	Nil

1. Track Total Credits:

Theory + Practice + Project: [6+14+4] (24)

2. Course objectives :

A] To create technically trained manpower readily available for recruitment to the power/energy Companies & Transformer Manufacturing firms in Electrical Sector.

B] Develop digital prototypes of the products and validate them and innovate for design efficiency

3. Course Outcomes :

A] Product: Manufacturing of commercially used distribution transformer

B] Project Report: Report on different Operation and maintenance procedures carried out on transmission and distribution system including Transformer Manufacturing & Testing Process

4. **Domain Structure** : The Domain will consist of following components and these components will be reflected in the grade sheet.
- a. CUEG 2090: Introduction, Power Scenario, Power Quality & Faulty clearance, [1-1-0]
 - b. CUEG 2091: Switchyard & substation Networks, [1-2-0]
 - c. CUEG 2092: Protection scheme & Switchgear, [1-2-0]
 - d. CUEG 2093: Cable system & Testing, [1-2-0]
 - e. CUEG 2094: Power Markets, [1-0-0]
 - f. CUEG 2095: Grid Safety, [0-2-0]
 - g. CUEG 2096: Transformer Manufacturing, [1-5-0]
 - h. CUEG 2097: Project, [0-0-4]

The Domain will be delivered through case studies, assignments and product development

Product Development Stack :

1. Distribution Transformer (Full product)
2. Smart Energy Meter (Modular Platform design and electric power train design , BIW)

5. Session Plan for the Entire Domain:

Course 1: **Generation, Transmission & Distribution scenario in India**

[Interactive + Modelling], [1-1-0], [20 Hrs]

- 1.1 Types of generation: Conventional and Non-conventional,
- 1.2 Thermal Power Plant, Hydro Power Plant,
- 1.3 Gas Power Plant, Nuclear Power Plant,
- 1.4 Co-generation Various sources Non-conventional Energy Sources.
- 1.5 Role of computers in distribution system planning-Load modelling
- 1.6 characteristics: definition of basic terms and loss factor
- 1.7 Classification of loads and their characteristics.
- 1.8 Distribution Feeders and Substations: Design consideration of Distribution feeders: Radial and loop types of primary feeders, voltage levels, and feeder-loading.

Video Links

- 1.2.1 https://www.youtube.com/watch?v=lh5_7sHyLU4
- 1.2.2 Hydro Power
- 1.3.1 Gas Power Plant
- 1.3.2 Nuclear Power Plant
- 1.3.3 1.4.1 Co-Generation

Practice

- 1. Load Modeling
- 2. Substation Modeling

Course 2: Switchyard/Substation Types

[Lab Practice in Own Distribution Network, Modelling], [1-2-0], [20 Hrs]

- 2.1 Single line diagram/equipments [Equipments-transformer, CB, fuse etc.]
- 2.2 Relays, Relaying schemes and auxiliaries Wiring Diagram
- 2.3 Layout of Sub-Station(33/11KV S/S, 220/33KV S/S)
- 2.4 Indoor and outdoor busbars — bus-bar mountings and their clearances.
- 2.5 Designing Electrical Transmission Tower Types and Design

Video Links

- 2.3.1 Substation layout
- 2.5.1 Transmission Tower Design

Practice

- 1. Design 33/11 KV substation
- 2. Single Line layout of substation

Course 3: System Protection & Auxiliaries

[Field Visit+ Lab Practice in Own Distribution Network] [1-2-0] [20 Hrs]

- 3.1 CT & PTs, Local & Back-up Protection. Protection Schemes,
- 3.2 New Generation Relays, Different types of indoor and outdoor CB, Breaker Maintenance,
- 3.3 Lightning Arrestors/Surge Arrestors, Isolators And Insulators,
- 3.4 Grounding system, Auxiliary System in Switchyard/Substation

Video Links

- 3.1.1 CT, PT, Relay
- 3.2.1 Distance Protection
- 3.4.1 Grounding/Earthing

Practice

1. Design Over current Protection for sub-station Feeder.
2. Measuring Earth Insulation Resistance

Course 4: Cables in Electrical System

[Visit to Standard Testing Lab, Workshop Practice], [1-2-0], [20 Hrs]

- 4.1 Modern trends in Underground Cabling Basic Concepts,
- 4.2 Materials Used in Cables, Conductors,
- 4.3 Testing and Commissioning of cables,

Video Links

- 4.1.1 Under Ground Cable
- 4.3.1 [Cable Laying](#)

Practice

1. IR Test of Cable
2. Cable Jointing

Course 5: Power System Market, Markets For Electrical Energy, Energy Conservation

[Interactive], [1-0-0] [3 Hrs]

- 5.1 Electricity Business
- 5.2 Electricity Market Models
- 5.3 Power Transfer, Inter & Intra State
- 5.4 Energy Efficiency in Grid

5.5 Energy conservation measures

Video Links

5.1 Power Market Fundamental

5.2 Power Exchange

5.5 Energy Conservation

Practice

1. Developing Market Model for electricity trading

Course 6: GRID Safety Norms, Electrical Accidents and prevention, Electricity Costing & Audit,

[Field Survey], [0-2-0], [5 Hrs]

6.1 Safety Requirement, Hazards, Electrical Accidents and prevention, First Aid

6.2 Safety : Safety Philosophy, Safety Procedures, GRID Safety Norms, Procedures for issuing L.C.P. and cancellation, Maintenance of Safety records.

6.3 First Aid : Places of Potential Hazards, Electric Shock Treatment, Artificial Respiration, Handling Emergency Conditions, Treatment of Wounds, Injuries & Burns.

6.4 Fire Fighting: Causes of Fire, Fire Extinction, Classification of Fires, Fire Fighting, Equipment: their operation – maintenance & refilling, Fire prevention.

6.5 Energy Audit.

Video Link

6.1.1 General Grid Safety

6.2.2 Industrial Safety

6.3.1 Electrical Shock First Aid

6.4.1 Fire Extinguisher

Practice

Hazard Analysis & Mitigation

Course 7: Principles of transformer

[DS Tools, Workshop Practice], [1-5-0], [20 Hrs]

7.1 Inner & Outer Part of Transformer,

7.2 Manufacturing of Transformer,

7.3 Transformer Test,

7.4 Conditions leading to faults in Transformer,

7.5 Maintenance of transformer

Practice

1. Transformer Manufacturing

2. Transformer Testing

3. Fault Finding & Corrective action

6. List of Projects/products to be done in domain: [200 Hrs]

1. Substation layout & Placement of equipment.
2. Protection System of 33/11/0.4 KV substation.
3. O & M of distribution substation.
4. Energy Audit
5. Safety Practice.
6. Transformer Manufacturing & Testing.

EVALUATION: As per Central QA system policy
