

Automotive Design (3D experience)

Date: 12th-11-2019 to 13-11-2019

Resource person: Mr. Tankadhar Guru, Mr. Chandan J

Venue: GTM Lab ISDC block, Bhubaneswar

About the Session:

The session started with the inaugural ceremony, lighting of lamp, the students visited the number of stalls and each stall was explained by any team member present and the head.

The Automobile design Industry has a great scope for qualified automotive designers in India, especially with the massive advancements in the area of 3D modeling. 3D modeling has evolved to such a great extent that very soon automotive and automobile designing will become paperless. 3D modeling has helped engineers and automobile designers create cars that are more efficient, elegant and enable low-cost productivity. The product designer or engineer can not only visualize the product but also animate and rigorously test the product before any physical object is created with the help of 3D modeling. Advances in 3D design and engineering have already changed the way some components and systems are being designed. Experts suggest that as much as 40% of development time for a completed vehicle can be slashed with wider applications of 3D modeling.

Outcomes

Smart technology is essential for improving the environment we live in. For the past 50 years, we have been using resources on this planet faster than we can replace them. Design can help us reverse this trend by changing the process, products, and the resources used to manufacture them. People are discovering that sustainable design is pivotal for innovation and potential profits rather than doing just enough to stay within regulations.
