Further evaluation and institutional opinion may be needed

NOTE:- If any technical mistake should be reported with in corrected within 3 days after that I.A. will be held contact will not responsibility for any mistake.

THANKS FOR REFERRAL

SONOLOGIST

This report is a professional opinion & not a diagnosis. U.S.G. carries technical limitations. Correlation of U.S.G. observations with clinical features & other pertinent investigations is mandatory to arrive at a clinical diagnosis. Specificity & sensitivity of U.S.G. is different for different areas & also varies between. Exact anatomical status will be ascertained on investigation. Pathological nature of the mass lesion is established by histopathological examination. Not all the fetal anomalies can be detected by U.S.G. in case of any discrepancy, the procedure may be advised to be repeated after some time after this scan.
