Abstract

Mobile application, a popular ICT tool has a great potential to be used for knowledge sharing among farmers. This review study undertaken to gather the various information and types of applications available for farmer benefits derived by farmers were seeking solutions to minimise crop and livestock losses with easily available information, to carry out regular learning. The constraint may be the network and poor internet, which can be resolved by the government for the development of the farmers.

Keywords: Application, Extension, Farmer, Mobile, Smartphone.
