**A REPORT ON  
PROCESS MANAGEMENT (USING ENOVIA)  
TOTAL NUMBER OF PARTICIPANTS: 55  
ACADEMIC YEAR: 2018-19  
DATE: 19.10.2018**

Powered by the 3DEXPERIENCE platform, ENOVIA is the Product Lifecycle Management (PLM) software that enables your innovators to benefit from the true rewards of collaboration. Easy to acquire, quick to learn and effortless to master, ENOVIA is reliable and robust enough to manage even the most sensitive and mission-critical data.

In every domain, competition is getting strong and the market is getting less tolerant of mistakes. This is why more and more companies worldwide are embracing Business Process Management (BPM). BPM is a management system which aims at improving a company's overall performance through optimization of important business processes, appropriate management, and maintaining those changes which have been made.

**Demonstration on application of ENOVIA on 19-10-2018**

**Introduction to New Product**

Lend support to your teams improving product quality, reducing rework time, meeting quality and compliance standards and, ultimately, bringing better products to market ahead of the competition.

Give team members the best tools for the task with role-based functionality and customizable dashboards. Update and review files and data anytime, anywhere with cloud-based solutions for ENOVIA on the 3DEXPERIENCE platform.

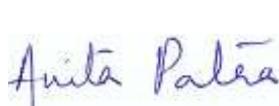

ENOVIA supports three main disciplines: Business Modelling & Planning, Quality and Compliance Management, and Product Configurations. Ultimately, its purpose is to help guide your product throughout its lifecycle.

Successful project management happens when your organization truly works together. But it's hard to imagine how a global organization might achieve this kind of dynamic collaboration between tens, hundreds or thousands of users. And that's before we even begin to consider supply chain involvement! Thankfully, ENOVIA provides exceptional, collaborative planning, development and release tools to help your organization plan your definition of success.

Connect BOMs (Bill of Materials) and other deliverables for better communication between Designers and Project Engineers. Share and discuss issues directly over your 3D designs. ENOVIA also brings powerful Sourcing and Product Management tools to the table which help you to synchronize efforts in-house and across your supply chain.

Configuration Management enables users to work together, developing product iterations harmoniously, in real-time. The ENOVIA Product Configurations discipline – covering multiple roles – provides tools for form, fit and functional analysis in a connected, collaborative context.

Give designers and engineers the power to shape business outcomes with validation functionality that provides actionable insights. And help to ensure that your products meet requirements and exceed expectations.
