

### A REPORT ON ONE DAY WEBINAR ON SOCIAL NETWORKING ANALYSIS

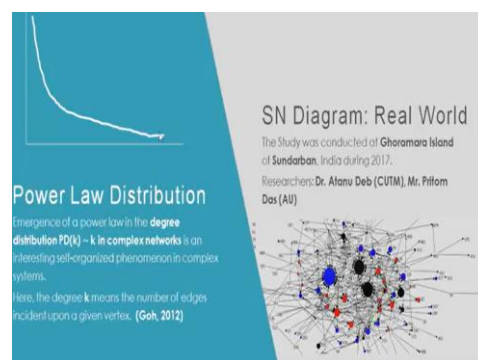

Resource Person: **Dr Ajay Kumar Prusty**

Date: **21.09.2022**

No. of Participants: **88**

School of Fisheries, Centurion University of Management and Technology, Gajapati, organized a one-day “Social Networking Analysis” webinar on 21.09.2022.

The session starts with some basics about social networking analysis. Social network analysis (SNA) uses networks and graph theory to investigate social structures. It characterizes networked structures in terms of nodes (individual actors, people, or things within the network) and the ties, edges, or links (relationships or interactions) that connect them. The programme defines and demonstrates basic and intermediate methods of analysis, including measuring network size, density, cohesion, paths, structural holes and more. We also reference more advanced approaches (e.g., exponential random graph modelling and relational event modelling). As a result of attending this webinar, participants will understand how to make sense of and draw substantive insights from social network data.
