Mode of interaction: through email

Comments:

It is a good content where it have mentioned about the usage and need of banking in day to day activities

Points to be noted:

1. Now a day's digital banking like net banking or mobile banking is also needed so that we can transact anywhere we want.
2. We should also have the details of personal like CVV, card number, otp
3. There should some courses on excel and management accounting.

Overall Remarks on curriculum;

The overall curriculum is very dense and useful but the difference between knowing a concept is different and knowing the application and outcome of the same concept is totally different.

The are many touch points where I feel theory is nice but the practical real world application of the same id not always evident in books and hence it becomes important to add such practical applications and real world experiences into the learning phase to enable a wholesome grooming of a student.

It can be an Interesting blend of real experience and theoretical knowledge. I would like to bring a lot of value added points to this curriculum.
